Here is state SERVICE OF THE HIGHEST KIND, social service that will have more wide reaching benefit to the state as a whole than any other thing that the commonwealth could do.

Only the highly organized efficiency of the highway department, coupled with its spirit of doing its best for the state, made possible the great aid that is being given so promptly in this time of need.

All California should be proud of the Highway Commission, and of the men who compose its personnel throughout the state, and grateful to it for the big thing it is doing.

Doctor: "Well, my dear, you certainly have acute appendicitis."

Patient: "Oh, doctor, don't flatter me so."

Next Ten Years in Highway Building

By C. H. PURCELL, State Highway Engineer

FOR THE past two years the State Division of Highways has been carrying on a study to determine the cost of bringing the present state highway system to a status of improvement to adequately and satisfactorily serve traffic. This study has now been completed and shows the estimated cost to improve the state highway system to adequate standard to be \$313,565,906.

Early in the study, several methods of preparing such an estimate presented themselves. An estimate of cost of immediately improving all roads to a standard required by present traffic would present a hypothetical amount which we know is not available. An estimate of cost of improving each route to some arbitrary standard to adequately serve traffic necessary to justify that standard would produce the amounts necessary for such arbitrary standards, but improvements would be carried over a variable period of time for each route and, therefore, would not present a workable basis for such a study. The method of computing these estimates finally decided upon was on the basis of providing adequate service for a definite period. It presents, as nearly as can be determined from data of present and predicted future volume and character of traffic, the amount necessary to make the highways satisfactory in location, type, width, and character for the traffic which will develop over a period of ten years: namely, from July 1, 1931, to June 30, 1941.

The estimated cost will not complete the state highway system. Completion of a highway is a relative term. It does make conservative allowance for growing traffic demands. It provides improvements adequate as measured by the traffic which may be conservatively predicted to develop within that period of time. This estimate of cost should be qualified, as future changes in conditions which can not at present be foreseen may alter probable construction costs.

Various factors influenced the selection of standard and type of road, and, consequently, the costs of providing the type of improvement which, while commensurate with the traffic requirements, will also give consistent and economical returns on the investment. These were: (1) The present facilities, their condition, salvage value, and deficiencies needing correction before an economic pro-

C. H. PURCELL

gram can be continued. (2) Present and future volume and character of traffic on each route or section thereof. (3) The type and width of pavement necessary to serve increased traffic. (4) The economic balance between cost of construction and cost of maintenance under expected traffic conditions. (5) The relative priority or importance of each route.

The volume and character of traffic using a highway is probably the best measure of the standard and character of construction required. Study of the traffic problem includes consideration of increased standards made necessary by increased legal speed limit; elimination of hazards due to alignment, grade, railroad crossings and important highway intersections; and increased strength of pavement made necessary by larger volume of heavy commercial vehicles moving at greater speed. Modern highway practice demands that increased costs require more care-

ful consideration of such factors as the value of reduced distance providing saving in operating cost and time, safety in design and in control by elimination of hazards, smoothness of pavement for comfort at higher speeds, beautification of roadside, landscape, and structures, and a regard for scenic and recreational features. Ultimate saving and preparation for future logical improvement is important. Failure to build for the future by visualizing its demands and incorporating the necessary features in each stage of the development will increase maintenance and reconstruction costs. The estimate of cost of bringing the present state highway system to an adequate standard was based on a policy developed from a study of such factors with the intent of providing economically and expeditiously the necessary improvement.

ESTIMATES OF AVAILABLE REVENUES

In connection with the preparation of the estimate of cost of bringing the present state highway system to an adequate standard within a ten-year period, estimates were also prepared of revenues which would become available for such action within the same period under the present statutory provisions.

Revenues for state highway construction, reconstruction, and maintenance, with the exception of federal aid funds contributed by the federal government, are secured by direct taxation of the users of the highways. There are four sources: (1) Motor vehicle registration fees. (2) Motor bus franchise fees. (3) The original 2-cent fuel tax effective in 1923. (4) The additional 1-cent fuel tax effective in 1927. One-half of the net income from the first three sources is apportioned to the 58 counties in California for road purposes, and one-half is apportioned to the state for state highway purposes. The entire net income from the fourth source (additional 1-cent fuel tax) is apportioned to the state.

In the estimated revenues available for state highway construction is included the amount of federal aid apportioned to California from appropriations voted by Congress. The estimated amount of this federal aid contribution is based on past appropriations and is included on the assumption that such congressional appropriations will continue. Federal aid is not a direct appropriation immediately available, but must be earned by the application of state funds to projects on the federal aid system. It is paid to the state only after work has been completed.

The estimate of total revenue available to the state for state highway purposes in the

ten-year period, July 1, 1931, to June 30, 1940, is \$422,015,334. This total revenue is for all purposes in connection with state highway construction, reconstruction, and maintenance.

In order to arrive at a figure of revenues available for actual construction and reconstruction, there must be deducted from this total amount the respective cost of administration, general maintenance, and funds set aside for joint highway district aid. The last named function is provided for by law to be not in excess of 10 per cent of secondary construction revenues. The total estimated cost of administration, general maintenance, and 10 per cent of secondary construction revenues for joint highway district contribution, is \$101,662,583.35. This amount subtracted from the total available revenue leaves a balance of \$320,352,750.65. This latter amount is the total revenue available for actual construction and reconstruction of state highways, including right of way and engineering expense.

RELATION OF EXPENDITURES TO REVENUES

The total cost of construction and reconstruction for a ten-year period to bring the present state highway system to an adequate standard for traffic developing during that period amounts to \$313,565,906. Probable revenues applicable to such construction and reconstruction during the same period total \$320,352,751. Comparison of these independently derived estimates indicates that, considering totals only and the state as an undivided unit, the state highway system could be brought in about ten years to a satisfactory status with respect to traffic demands.

Classification, however, of state roads in primary and secondary routes and statutory division of funds to state districts, constitutes a control which presents an entirely different picture. Construction revenues are divided first 75 per cent to primary and 25 per cent to secondary roads. Both reconstruction and the 75 per cent primary construction funds are divided between the north and south districts of the state on the basis of primary mileage. This division results in 54.7 per cent for the north section and 45.3 per cent for the south section. The secondary 25 per cent construction revenues are divided equally between the north and south sections of the state. Applying revenues so divided against the estimated costs so classified shows that reconstruction and construction of primary highways, both in the north and south sections, can be accomplished within the ten-year period. On secondary construction a deficit

(Continued on page 17.)

The "Braided" Crossing, Latest Phase In the Evolution of Express Highways

By COL. JOHN H. SKEGGS, District Engineer

THE first construction work of any kind undertaken by the California State Highway Department between Sausalito and San Rafael was in the year 1914, at which time a grading contract for some six miles of this highway was let.

At that time people had had no past experience with highways and were not educated to foresee the tremendous settlement and property development which would follow in the wake of highway construction, nor were they in a position to visualize the extreme growth of traffic in a short period of time upon the opening of these new roads.

For these reasons funds for highway construction, as voted by the people, were extremely limited and as a result the standards then set up, though entirely adequate to serve the needs of the times, have proven to be entirely inadequate for present day requirements. In right of way problems, in so far as possible, people forced the utilization of old county roads and poorly aligned streets through the settlements and towns. As a rule, the main streets only through the towns

were adequate to even be considered in routing the highway. Many settlements had only the one main street. As a result, business growth on those streets was accentuated, traffic demands being more or less of a local nature.

With the growth of business the parking problem came into being, and, with cars parked along the sides of these business streets the effective width of the roadway for travel was narrowed, causing congestion. This condition in the towns was emphasized by rapidly increasing traffic upon cross streets.

Another heavy factor in increasing traffic demands was the development of the automobile. The first models, with the exception of a few of the higher priced cars, could scarcely attain a speed exceeding 40 miles per hour. Due to this fact, long trips causing through traffic were rare in comparison to those of today.

TRUNK HIGHWAYS AND CITY STREETS

With the development of fast cars at a moderate price came the desire of people to

Braided crossing at Manzanita Station, showing the south end of the bridge over Richardson Bay. The picture is taken looking northerly

settle farther out from the business centers, and long trips at high speed are now an everyday occurrence. Consequently, through traffic, as far as highways are concerned, has entirely overshadowed the traffic of local demands.

With the development of through traffic came a cry from business men in some communities that trunk highways are not a benefit to them, but a damaging influence to their business; due, first, to the parking problems involved, and, secondly, to the present desire of people to keep out of any sort of traffic jams.

The people now are educated to the extreme economic influence of through roads and highways; and, with the passage of the gasoline tax, a sufficient amount of money has become available to rebuild these highways to conform to the requirements of today.

SAUSALITO-SAN RAFAEL DEVELOPMENT

This typical condition of development and corresponding reaction was particularly emphasized on that portion of Route 1 known as the Redwood Highway, between Sausalito and San Rafael, and has resulted in an entire relocation of the original highway, which passed through the towns of Corte Madera, Larkspur, Kentfield, Ross and San Anselmo to San Rafael.

That the new route is much more direct is evidenced by a saving in distance of about

four miles between the two towns, this being about 30 per cent of the original distance. All towns and settlements have been avoided, and yet are easily available to the new road. The width of the highway has been increased and provision made for still further widening, as traffic demands it. The number of curves has been reduced over 90 per cent and have been changed from short radius, oftentimes reversing turns, to long sweeping curves, heavily superelevated to conform to high speed requirements. Railroad grade crossings have all been eliminated. In short, the highway has been made into an express trunk line, functioning like a huge filling system in taking and depositing each ear at its proper destination, with an absolute minimum of delay and a maximum of safety.

THE THREE SECTIONS

The first section of this major express highway, three-quarters of a mile in length and 40 feet in width, from San Rafael to California Park, which also serves Point San Quentin Ferry to Richmond, was opened to traffic in 1929. The second section, from California Park to Alto, a distance of 4.4 miles, was opened to the public, paved 30 feet in width, in August of the present year. The third section of this highway, from Alto to Waldo, is to be let in two contracts, a combined length of two and one-half miles. Bids were taken on October 19th for grading and surfacing two miles, under the supervision of District

A three-deck structure, showing county road beneath and state highway above railroad

IV, Division of Highways; and bids for a bridge one-half mile in length over Richardson Bay and the Northwestern Pacific Railroad tracks being called for on October 26th, to be constructed under the direction of the Bridge Department, Division of Highways. This section involves but one curve of 900-foot radius, this occurring on the south end of the bridge over the bay, which has an effective roadway width of 44 feet. Between Sausalito and Manzanita, the south end of the bridge, the new road is to be paved 40 feet in width. North of the bridge it will be paved to a 30-foot width. The time limit set for completion upon both the bridge and road contracts between Alto and Waldo is 175 days, which means that this road should be opened to the public about July, 1931.

THE ROAD HOG MENACE

The road hog, who is almost altogether responsible for traffic accidents, might be likened to the small boy who was informed by his mother that if he ate another piece of cake he would burst, and received a prompt answer to please give him the cake and then get out of the way. The road hog, though

Highway approaching the braided crossing

warned by safety societies and much publicity regarding the consequences, asks us to give him the road and then get out of the way. He, however, not only endangers his own life but the lives of all with whom he comes in contact. At sixty miles per hour each, two cars from opposite directions approach each other at the rate of 172 feet per second. Such speeds are not now uncommon for short stretches, and the split second human reaction necessary to avert an accident when some road hog takes an undue advantage means the ultimate in safety precautions must be provided by the highway engineer.

Many safety measures have been used in an effort to reduce traffic accidents, among them being: stop and go signals, boulevard

stops, flashing red lights, red reflector signals, etc., warning the motorist of cross roads, intersections, sharp curves, etc. White painted traffic stripes, guard rail and guide posts, particularly in those sections of the country where heavy fogs prevail, have added much to the safety of our highways.

Later developments have been of more far-reaching importance, due to their incorporation in the basic engineering design, such as: the elimination of blind intersections, the construction of long, vertical curves and easy alignment for the sole purpose of increasing the sight distance along the highway, and the elimination of railroad grade crossings. The latest development in making our highways as nearly fool-proof as is possible is in construction of the more important highway crossings in such a way as to keep all traffic entering or leaving the highway moving in the same direction.

In the fight for reducing traffic hazard to a minimum, three major structures were built on the section between San Rafael and Alto: a triple overhead structure crossing the Greenbrae and San Quentin branches of the Northwestern Pacific Railroad and a county road at California Park; a new wide bridge over Corte Madera Creek at Greenbrae; and an overhead crossing at the Northwestern Pacific Greenbrae branch line at Detour. Two wide sweeping Ys have been provided at the California Park intersection with the Point San Quentin State Highway, and four such Y connections at the Alto-Tiburon State Highway crossing.

THE "BRAIDED" CROSSING

For the section of highway between Alto and Waldo there has been designed what might be called a "braided" crossing. Fully 80 per cent of the northbound traffic from Sausalito is expected to continue upon the main highway onto the bridge over the railroad tracks and Richardson Bay to San Rafael and San Anselmo, or diverting by connecting roads to Belvedere, Tiburon, Larkspur, Corte Madera, Kentfield, Ross and San Quentin. The other 15 to 20 per cent might be expected to swing off to the right upon a roadway passing under the bridge structure and connecting beyond and on the left to the present highway, which is later to be taken over by Marin County. Similarly, southbound traffic from Mill Valley and its adjacent territory, using the present road, will swerve to the right just before reaching the new highway junction to drive onto the new road a few hundred yards farther south.

(Continued on page 20.)

Conclusions on S. F. Bay Bridge Project

Announced by Hoover-Young Commission

COPIES of the report of the Hoover-Young San Francisco Bay Bridge Commission, with the recommendation of that body, have been released to the public through the publication of the Commission's report. This report which is addressed to President Hoover and Governor C. C. Young comprises a most complete and comprehensive analysis of the San Francisco Bay project.

Conclusions of the Commission are as follows:

(a) To meet the present and future needs of the several communities a crossing for traffic between San Francisco and the East Bay cities is necessary.

(b) Consistent with meeting the traffic needs and engineering requirements the type and location of a bay crossing should be such that it will not unreasonably obstruct future navigation nor cause serious interference with or constitute a serious menace to the operations of the Navy in time of war.

(c) Because of the limitations, cost of construction and operation a vehicular tunnel under the bay is inadvisable.

(d) As indicated by the rock explorations the only location upon which to base a high level bridge is on a line from Rincon Hill to Goat Island.

(e) A bridge on the location designated as Location No. 4, from Rincon Hill via Goat Island thence parallel to the Key Route mole, is practicable from an engineering standpoint. It is economically feasible under a proper fiscal plan and will adequately serve the needs of transbay traffic.

(f) The bridge should conform to the following specifications:

(g) The bridge shall provide at least six lanes for vehicular traffic and in addition five lanes for inter-urban and heavy automobile truck traffic.

(h) The bridge between San Francisco and Goat Island shall consist of not more than four main spans, the westerly one of which shall have a horizontal clearance of not less than 1750 feet between fenders.

(i) The vertical clearance of the two center spans shall be not less than 214 feet above M.H.H.W. at the center of the spans, and this height shall be maintained for approximately 500 feet on either side of the center of the span, and the minimum vertical clearance at the San Francisco pier head line shall be 180 feet above M.H.H.W.

(j) The main channel span in that portion of the bridge between Goat Island and the east shore shall have a minimum vertical clearance of 180 feet above M.H.H.W. and a minimum horizontal clearance of 600 feet between fenders. Consideration should be given in the final plans to a minimum clearance of 700 feet between fenders.

(k) The final design should be such that it will conform with the scenic beauty of San Francisco Bay.

(l) The details of construction of the bridge structure is the function of the State of California working through the California Toll Bridge Authority.

Consideration of traffic distribution on both sides of the bay is of prime importance and should be worked out in cooperation with the authorities of the municipalities in interest.

(m) A right of way across Goat Island must be obtained from the Navy Department and be approved by Congress.

Under the provisions of the federal law after legislative authorization by the State of California, the plans of the bridge must receive the approval of the Chief of Engineers, War Department, and of the Secretary of War before construction is begun.

The legislative authority of the state for the construction of the bridge is vested in the California Toll Bridge Authority. In order that the bridge may be constructed it is necessary that the Bridge Authority authorize and direct its construction.

The Commission having given due consideration to national defense and the needs of commercial navigation and in the light of all facts recommends the approval of a bridge upon Location No. 4 provided the clearances specified are adhered to.

Members of the Commission are:

Mark L. Regna, Chairman;

George T. Cameron, Vice Chairman;

Rear Admiral Luther E. Gregory, C.E.C., U.S.N.
Ret'd;

Rear Admiral W. H. Standley, U.S.N.;

Brigadier General G. B. Pillsbury, U.S.A.;

Lieutenant Colonel E. L. Daley, U.S.A.;

Senator Arthur H. Breed.

Charles D. Marx.

C. H. Purcell.

ESTIMATED COSTS

The estimated cost of the Rincon Hill-Goat Island location structure is \$72,000,000.

TRAFFIC FINDINGS

Relative to probable traffic that the bridge will serve, the Commission finds as follows:

The present facilities for crossing the bay between San Francisco and the East Bay district consist of automobile, passenger and freight ferries. In 1929 the auto ferries carried a total of 4,490,513 cars and 10,174,028 passengers, showing an annual increase of 8.2 per cent. Passenger ferries carried a total of 35,923,855 passengers, a decrease of slightly less than 3 per cent under 1928. The origin and destination of auto traffic in San Francisco is at the Civic Center. In Oakland it is at the intersection of Moss and Oakland avenues.

The origin and destination of commuter traffic in San Francisco is near Fifth and O'Farrell streets. In Oakland it is near Moss and Oakland avenues.

(Continued on page 20)

Director Meek Sends His Resignation to Gov. C. C. Young

B. B. Meek, director of the Department of Public Works, forwarded his resignation to Gov. C. C. Young on November 25, 1930, to become effective on or before January 5, 1931.

In his letter of resignation, Mr. Meek refers to the fact that when he first accepted the appointment from Governor Young, it was understood that he would serve only until the then newly created Department of Public Works was organized. The letter states that he continued to hold office despite a very considerable sacrifice to his private business, because of the absorbing interest that he found in the work.

Mr. Meek further writes that he has sent word to Governor-elect Rolph that in his capacity as a private citizen he will do everything in his power to aid and assist his successor in carrying on the work of the department. Because of the place that highway building has in the upbuilding of California, and its present emergency importance in providing employment, Director Meek voices the hope that there will be no interruption in the big highway program now underway. He also emphasizes the importance of aggressively pushing to completion the San Francisco Bay bridge project; of translating into a definite program of action the studies and investigations into the water resources of California and of further developing the ten-year building program for state institutions prepared by the Division of Architecture.

The letter expresses appreciation for the aid given by Governor Young in the administration of the affairs of the Department of Public Works. On this point Mr. Meek writes as follows:

If, during the last three and a half years, the department has been able to accomplish what is was designed to accomplish, it has been because of the confidence you have constantly given me. You have never in a single instance asked this department to discharge a political debt. This has made possible the building of both a very human and a very efficient organization.

As I have frequently stated it is my desire to retire to private life the day you become a private citizen. And, in spite of the intense interest, I have in the work of the department, still the opportunity to devote time to my now long neglected personal affairs is most welcome, and I might add, most necessary. At this time I desire again to thank you both for the privilege you have given me to engage in this splendid work, and for the confidence you have had in me, and once more to express my heartfelt appreciation for the wonderful support you have given me.

GRADE CROSSINGS FAST DISAPPEARING FROM ROADS

Grade separations at Glendora

The Division of Highways has, during the past year, carried on an active program of grade separation work on the heavily traveled road connecting Los Angeles and San Bernardino. A subway which completely eliminates grade crossing over the Santa Fe tracks has been constructed at Glendora. About two miles east of Upland existing subway under the Pacific Electric tracks has been remodeled to double the width of highway. At Malaga, approximately eight miles west of San Bernardino, a new wide subway which completely eliminates the highway crossing over the Pacific Electric Railway tracks is nearing completion. In each case the railroad companies contributed part of the cost of the structures.

FRONT COVER PICTURE

The front cover picture on this issue of CALIFORNIA HIGHWAYS AND PUBLIC WORKS shows B. B. Meek, surrounded by views of some of the activities over which he has had charge during his administration as Director of the Department of Public Works.

"Brederin, we'se got to do sumpin' to remedy de status quo."

"Parson, what am de 'status quo'?"

"Dat, my brudder, is de Latin for de mess we'se in."

Ten-year Building Construction Program for State Institutions

By GEO. B. McDOUGALL, State Architect

IN THESE DAYS when the wisdom and necessity of regional planning, city planning and zoning of cities have come to be generally recognized, the State of California is operating so far as the development of its institutions is concerned on the basis of a ten-year building construction program.

Up until 1925 no consideration was given to the suggestion more or less frequently made

that building development programs should be worked out for the State's institutions.

In that year the financial set up for the Division of Architecture was altered so as to make it possible to start the development of plot plans of the 26 major institutions then existing. Prior to that time the determination as to what building construction

development should be provided for at any given meeting of the Legislature was based almost wholly on isolated consideration of a particular proposed structure and its location, rather than upon a comprehensive development scheme taking into account the certain ultimate growth for each institution.

Early in his administration Governor Young, in order that he might have information needed for formulating an orderly program of building construction, requested Mr. B. B. Meek, Director of Public Works, to have made a tentative building construction program to cover a period of ten years. The director delegated this task to the Division of

Architecture. This division, with the Division of School House Planning of the State Department of Education, worked out a program which with modifications was approved and adopted by the Governor and submitted by him to the Legislature of 1929, with his budget of proposed expenditures and estimated revenues of the state.

FACTORS IN PROGRAM

The following principal factors constituted the basis of this program:

First: The ultimate capacity of each institution in patients, students or inmates.

Second: Present and future needs during succeeding bienniums for patient, student or inmate accommodations so as to bring the several institutions up to their proper ultimate capacities by the end of ten years or sooner.

Third: Probable amounts of money that can reasonably be expected to be made available for expenditure for building projects during succeeding bienniums for ten years.

Fourth: Available building sites on the various properties taking into account areas now owned by the state and areas that can be expected to be added.

CAPACITY OF INSTITUTIONS

As to the first factor, the ultimate capacity, the various state departments and institution heads, after extended careful consideration, made this determination.

ESTIMATES OF INSTITUTIONAL GROWTH

Second, figures of probable growth during the ten-year period were arrived at on the basis of the average growth during the preceding twenty years. The figures so obtained were in numerous cases checked against estimates arrived at by discussions of probable growth with the institution heads, and the two sets of figures were found to check very closely.

COST ESTIMATES

Third, it was conservatively figured that provision can probably be made for expenditure for building construction at the institutions exclusive of the state university of about

GEO. B. McDOUGALL

THE VETERANS' HOME AT YOUNTVILLE

\$5,000,000 for each biennium, or a total of \$25,000,000 during the ten-year period.

BUILDING SITES

Fourth, as to available building sites, the plot plans already mentioned which are available for 26 different institutions, show all existing buildings and the locations of all additional buildings required during successive bienniums to house the portion of estimated numerical growth during ten years which it is thought should be assigned to the several institutions. The plot plans constitute probably the most important single element in bringing about the total result in connection with the ten-year building program.

The preparation of these plans has required several years time. The Division of Architecture is retaining the originals and keeping them up to date.

OLD FAULTS CORRECTED

Following are some of the defects in earlier institution development which are being corrected by the ten-year program:

First: Provision of proper living quarters for employees in institutions where required was almost entirely neglected except in the most haphazard way. One result was increasingly serious difficulty in administration, and another now being encountered is the necessity for successive expenditures for this need which are out of proportion to expenditures required for inmate housing; a portion of this financial burden for employees' quarters should have been borne in the past.

Second: The replacement of temporary structures was given practically no consideration, resulting in too long continued use of insufficient, unsanitary and fire-inviting structures. These replacements are now requiring disproportionately large expenditures from which no increased inmate capacity is resulting.

Third: Absence of foresight has resulted in serious overcrowding in many of the institutions so that it is not possible to operate with full efficiency nor to accept as patients many who should be admitted.

Fourth: Sites for particular buildings have in numerous cases been unwisely selected because without reference to the effect of such selections on necessary future development.

A STRIKING EXAMPLE

One of the most marked examples of the effectiveness of long-time planning for the development of an existing institution based on plot plan study is furnished by the Veterans' Home at Yountville. This institution

was originally built some fifty or sixty years ago to meet conditions then existing. The old buildings in many cases contain basement, two stories and attic and are of wood frame construction. Various wooden structures have been added to the institution from time to time during the succeeding years, as isolated demands appeared to require.

After repeated requests provision was at length made to permit the Division of Architecture to make a survey of the entire institution on the basis of which the Division, with the full cooperation of the institution, has developed an approved scheme for the gradual replacement during a ten-year period of the old insufficient, unsanitary, wooden fire-trap buildings with modern reinforced concrete structures carefully designed and planned with reference to the present and future functioning of the home. The most urgent need was barracks buildings for the men. The process of reconstruction therefore started with an appropriation made in 1927 which covered one new barracks building; a second appropriation in 1929 covered two additional barracks buildings which are now completed, and a fourth barracks building is suggested in the proposed 1931 budget on which action is soon to be taken. Since each barracks building provides for 200 beds, the one last finished having an additional capacity of 30 beds, provision has already been made under the ten-year program to transfer 630 men from the old buildings to new modern fire-resisting structures.

SOME OF THE PROBLEMS

This project affecting an old institution was complicated by the necessity of so planning and timing the construction of the new structures as not to interfere with the occupancy of the old for as long as required for continuing operation. The program as a whole is being carried out with entire smoothness and with very little inconvenience to the institution.

The character of the site as to its shape, foliage and surroundings, the harmonious blending with it of architectural forms, materials and colors, and the dovetailing of the designs and plans of the structures with the function and spirit of the institutions, all are being combined and interwoven with one another so that the ultimate result will be one of the most picturesque, beautiful and practically effective institutions of its kind in the country.

The case of the Veterans' Home has been dealt with at some length as being typical and illustrative of the new life which, by the

Ultimate development of Agnews State Hospital

application of the art of architecture and as a result of the operation of the ten-year program, is being created for and injected into all of the older institutions of the state.

The state has within the last two years authorized entirely new institutions for the following: the San Diego State Teachers College; the California Institution for Women; a new state hospital for insane in southern California; and a new state prison for first offenders in southern California.

The principles underlying the ten-year

building construction program are being applied in all these cases.

In each case the Division of Architecture has been and is being asked to advise the boards or commissions responsible as to the practicability and desirability of proposed sites. The cases mentioned are the first ones in the history of the Division in which this has been done.

As soon as sites were selected in the cases of the college at San Diego and of the Institution for Women near Tehachapi, surveys

(Continued on page 26.)

Biennial Budget Is Adopted by State Highway Commission

A BUDGET recommending a state highway expenditure of \$63,322,500 for all state highway purposes and from all state highway funds for the ensuing two fiscal years was formally voted Thursday, December 18th, by the California Highway Commission. The budget was presented to the Commission with the recommendation of B. B. Meek, Director of Public Works, and C. H. Purcell, State Highway Engineer.

The budget as adopted has been transmitted to Governor C. C. Young and the State Department of Finance. Copies have also been sent to Governor-elect James Rolph, Jr., and to Colonel Walter Garrison, whom Governor-elect Rolph has selected as his Director of the Department of Public Works.

In view of the fact that final decision upon the project items included in the budget will rest with Governor-elect Rolph, Colonel Garrison, the incoming highway commission, and the legislature, it was the decision of the present commission that publicity as to the detailed projects recommended for inclusion in the 1931-1933 state highway program should come from Governor-elect Rolph rather than from the present administration.

Awards Offered for Statewide Safety Campaign Slogans

WITH the object of impressing thoughts of safety upon motorists and the general public, the California Committee on Public Safety yesterday announced that cash awards will be given for the best slogans submitted in a statewide contest. The winning phrases will be used to provide emphasis for the program of educational and enforcement campaigns to be conducted each month by the Committee throughout 1931.

There will be twelve safety subjects, one for each month. For the best set of slogans submitted for the entire series of subjects a cash award of \$100 will be given. The second best set will receive \$50, and the next ten sets will be given \$10 each. The contest will close December 15. Contestants may send their slogans to the Public Safety Department of

SOME ACCIDENT THIS; JUST WHAT HAPPENED?

The following is a verbatim copy of a letter received by the Division of Motor Vehicles:

Mr. Okamoto, my good friend, is going to Japan, so I want to see him for shaking hand with he and Mrs. Okamoto. This morning, 5 AM, got up from the bed, six started from my home, Hawthorne, came to Gardena, thought to buy gasoline more, and did repair for safety, did examined generata, choker and coil or other place, was very good condition, no trouble, after three minutes waited 3 gasoline men, 1 gasoline lady, open and gave gasoline. Then started again and come to Mr. Okamoto's house. After Mr. and Mrs. Okamoto met with, he was busy to other place first. Then after ten minutes, came out to the front of his house that is the Wilmington. Saw his car John Welch's car too was far about 405. Telephone electric post, it is not danger. Right-way, broken my car right front car wheel all broken crooked 1 or 2 time. Crooked steel piece or broken when all over the street I went. His car too much speed and too fast. Because I never such Big trouble before. His the most seed is not, it is the big accident I believe. It is all the same dream, I think. My insurance yato tell about all this, as it is better one.

the California State Automobile Association, 150 Van Ness Avenue, San Francisco.

While no limit has been placed on the number of words in a slogan, the Committee points out that the shortest are usually the most effective, such as, "Taking a chance may take a life." The list of subjects for the monthly campaigns on which the contestants may base their slogans is as follows:

January—Failure to yield the right of way at intersections.

February—Unlawfully passing standing street cars.

March—Failure to give required arm signals: failure to keep in proper lane when turning; cutting-in.

April—Excessive speed at intersections where view is obstructed.

May—Disobeying boulevard stop regulations and Stop and Go signals.

June—Endangering safety of children at play—speed or inattention.

July—Railway stop signals (wig-wags).

August—Failure to keep to the right—hogging the road.

September—Unlawful speed in school zones.

October—Inadequate brakes.

November—Glaring and illegal headlights.

December—Disobeying regulations for pedestrian protection.

Each contestant must send in original slogans, and the committee reserves the right to use any or all of the winning ones. Contestants must use a single sheet of paper and write on one side only, giving their name and address in the upper left-hand corner. The months to which the slogans are applicable must be specified.

New Bridge to Span San Luis Rey

The New San Luis Rey Bridge

REPLACING a narrow pile trestle structure which was hastily thrown across the San Luis Rey River after the disastrous flood of 1916, the Division of Highways is building a new high level, wide, modern bridge on improved alignment.

The new structure, which was designed by Bridge Engineer Chas. E. Andrew of the Division of Highways, is 927 feet long. Including sidewalks, the width is 50 feet. The main spans are each 265 feet in length. The

central piers of concrete which extend deep below the stream bed are founded on long timber piles.

Before designing the bridge, extensive explorations were made which revealed that sand and silt had filled the scoured channel of the river bed to a depth of about 175 feet.

Gutleben Brothers of Oakland, contractors, are building the structure at a contract price of \$281,542. The construction work is being supervised by Resident Engineer A. S. Kennedy.

Seek to Establish Radio Communication for Highway Patrol

Research experiments are being made by the California Highway Patrol to determine the possibility of establishing radio telephonic connection between highway patrolmen working on their beats and their district and central offices, it was announced here today.

A special type of radio telephone light enough to be carried on a motorcycle but powerful enough to have a range of several hundred miles is being considered. If successful this will enable the district inspector or squad captain to get in immediate communication with his men in case of accident or any other reason necessitating a quick move of officers from one place to another.

The preliminary plan of experiment involves the establishment of a 200-watt transmitter at the headquarters of the highway traffic school at Mather Field, near Sacramento.

Four cars equipped with receiving sets will be sent to different parts of the state to pick up the

messages sent out from the transmitter. One of these will operate in the extreme northern counties, another in the southern counties, another along the coast and a fourth in the interior valley.

These cars will make daily observations to determine where the so-called "dead spots" are located.

Information secured by the patrol indicates radio telephones are being used to good advantage by police patrols in a number of American cities, a notable success having been attained with them in Detroit.

Perfect communication, however, has thus far been possible where the distance between transmitters and receivers is relatively small.

The problem of the California patrol is to work out a system by which the officer may communicate with his superiors and receive their orders when at a considerable distance from his base.

KENTUCKY—National Representative Thatcher of Louisville advocates a park-to-park highway system in the East, similar to that linking western parks. Plans include linking the three largest national parks of the East—Mammoth Cave, the Great Smoky Mountain, and the Shenandoah National Park.

"De choir will now sing. 'I'm Glad Salvation Is Free,' while Deacon Jones passes de hat. De congregation will please 'member dat, while salvation am free, we has to pay de choir for singin' about it. All will contribute accordin' to his means, an' not for his meanness."

Teaching Californians to Drive

By FRED P. WILLIAMS, Head of the Bureau of Drivers Licenses

THE driver's license, properly issued and properly controlled, can and should be a most potent factor in the reduction of motor vehicle accidents on the highways.

No other factor in the control of the authorities offers such possibilities for weeding out the incompetent, for keeping reckless within bounds and for actually educating the person who wants to know something about the subject in the common, everyday rules of safety.

Although it is far from perfect, the legislature two years ago gave California a fair system of control of licenses. Outstanding features of the system are:

1. Provision for the examination of all new drivers, such examination to include inquiry into the applicant's physical and mental conditions and ability to drive.

2. Provision for the renewal of all outstanding licenses every two years with power for the state to demand an examination if deemed necessary.

3. Authority for the revocation or suspension of driver's licenses for cause.

When the new law became effective in the summer of 1929 we at once undertook the renewal of approximately 1,350,000 drivers' licenses issued prior to January 1, 1927. This task was accomplished in a period of three months.

Obviously, it was impossible to give this number of persons an extended examination in so short a time with the imperfect machinery that we had at that time at our disposal. The work was therefore confined, for the most part, to stressing the educational features and to weeding out those found to be actually unfit.

We were able to note some surprising results in the public reaction even in this short time. Almost immediately we noted marked improvement in the manner in which arm signals were given. We noted also that drivers paid more attention to sirens on emergency vehicles than before and apparently were more careful about keeping to the right and obeying traffic signs.

This, we believe, did not come from any fear that had been instilled into the minds of the drivers by the examinations but merely from the fact that the driving public had been informing itself concerning the law.

Our records show there are now 2,731,490 persons in California licensed to drive, inclusive of the 157,490 who operate under chauffeurs' licenses.

We are now issuing new licenses at the rate of about 31,000 every month. Examinations are given at the home office at Sacramento, at the six branch offices of the Division of Motor Vehicles, at several smaller branches, and at the county offices of all squads of the California Highway Patrol. In addition, examinations are given by some 109 branch offices of the automobile clubs and by numerous police departments and sheriffs' offices.

Under our law we must give an examination on every original application for a California license. This examination is three-fold, including an inquiry as to the applicant's knowledge of the rules of the road as set up in the vehicle act, a test of his hearing and eyesight and ability to read and understand highway signs, and an actual examination of the applicant's ability to operate a motor vehicle under the supervision of the examining officer.

The records of our own offices show that about 20 per cent fail to pass the initial examination. However, the percentage actually refused licenses is very small as it is our policy to be liberal and grant the applicant more time to study the regulations and to learn to drive. A second or third trial usually enables the applicant to pass successfully.

Those finally eliminated are usually found to be suffering from some physical or mental defect making it absolutely unsafe to permit them to drive.

We do not refuse a license because of a physical defect unless we are convinced such defect interferes with safe operation. In other words we have no objection to granting a one-armed or one-legged man a license if he can show us he is able to drive safely.

Our examinations frequently uncover minor defects which may be easily remedied to the lasting benefit of the applicant. This is notably true in our examination of the eyes of young applicants.

We have received practically no complaints that our examinations are too difficult; on the contrary many have complained that they are too easy.

Great tact is required on the part of our

examiners as applicants are frequently inclined to be nervous upon their first appearance. Careful and courteous treatment generally puts the applicant at his ease.

The examination of prospective drivers is a wide subject and one worthy of deep study on the part of our legislators. Throughout the country there is a growing tendency to tighten the regulations and to require more and more from the driver. Twelve states have adopted rigid systems for regulating drivers' licenses and many others are considering it.

The power given us to revoke licenses for cause is already bearing fruit in our war against the drunken driver. From January 1st to November 1st of this year 750 of the 1333 licenses revoked were for this cause.

Another innovation is the checking up of all persons involved in three or more accidents during any one year. When we find such cases we start an immediate investigation to determine if the driver is reckless or physically incompetent. Proceedings to revoke the licenses are started if justified by the facts.

NEXT TEN YEARS IN HIGHWAY BUILDING

(Continued from page 4.)

of over \$38,000,000 is encountered in the north section of the state; whereas, the secondary roads in the south section can be brought to an adequate standard within the ten-year period.

During the next ten years, moderate changes in the expected volume, character, and speed of traffic would not alter the type and, therefore, the costs given in the estimates. An increase above the probable estimated revenues that would accumulate a sum sufficient to bring about an adequate status of highways sooner than herein set forth, would have to be a material regular increase, which is improbable. A decrease in the estimated revenues would create a deficit, while the demand for improvement will still be as insistent and necessary as is now predicted. Such a deficit would protract indefinitely the period of attaining the satisfactory status. Such a contingency should not induce an over-optimistic attitude nor permit withdrawal from present anticipated revenues for other purposes.

The prospect of bringing the state highway system to an adequate standard does not infer either than the entire system will be completed during the stated period, or that in the immediate years revenues are sufficient to

Highway Patrol Is Commended for Courtesy and Help

The following letter was addressed to Roy H. Youngblood, Assistant Superintendent of the California Highway Patrol by John J. Crowley, Chancellor of the Diocese of Monterey-Fresno:

Press of other business has prevented me from acknowledging ere now your extreme kindness and courtesy in furnishing an escort for Cardinal Hayes during his stay in central California. The escort was one of the features of the visit of his Eminence that pleased him highly, and which also relieved the minds of Bishop MacGinley and all of us who felt responsible for his safety while in our environs.

Cardinal Hayes personally assured your officers of his appreciation, and I want to add here, on behalf of Bishop MacGinley and all of us who were in the party that the cooperation and upstanding gentlemanly conduct of officers Sloat and Farr, if it can be taken as an example of the efficiency of the reorganized State Highway Patrol, bespeaks an organization that is second to none. We were proud of them.

Again thanking you for this signal service, and with the compliments of the Right Reverend Bishop, I am,

Very sincerely yours,

JOHN J. CROWLEY,
Chancellor.

Supplied Lost Power.

The following letter was received from Ruel Baker, assistant cashier of a San Francisco bank:

I wish to thank the California Highway Patrol for the courteous assistance given me by Herbert Bolton and Thos. Taylor, state traffic officers, on the night of November 26th on the state highway between North Sacramento and Roseville.

These gentlemen very graciously pushed my car back to a garage when engine trouble developed. They refused to accept a tip and I wish to express my sincere appreciation of their kindness.

What do you do?

I keep house, scrub, scour, bake, wash dishes, cook, do the laundry, iron, sew.

And the census taker listed her: Housewife—no occupation.—*Louisville Courier-Journal*.

take full advantage of making improvements on the basis of strict economies of service to cost of service. Many roads must receive stage construction, reconstruction, and heavy maintenance, while the increase in annual revenues accumulates the necessary funds for permanent type. Some roads would still have a low type surface, although they will be of a type temporarily equal to the traffic requirements.

Highway Policy Pronouncement Made by Association of State Highway Officials

RESOLUTIONS adopted by the American Association of State Highway Officials in annual convention at Pittsburgh, Pennsylvania, in November, comes a number of matters of interest in highway circles the nation over. Among the matters on which the association expressed itself were the following:

Recommendations for ways and means of increasing highway construction as an aid to unemployment;

Methods of securing a larger measure of roadside beauty;

Recommendations relating to financing of highways of secondary importance;

Greater uniformity in gasoline taxes and motor license fees;

Expression of views on toll bridge construction;

Recommendation that funds be provided for road construction in the public domain, and that the limitation of federal aid to \$15,000 a mile be removed;

Recommendation for the coordination of the highway and airway service.

ROAD BUILDING TO AID UNEMPLOYMENT

An increased federal program for road building to aid unemployment was advocated and specific recommendations asked:

1. That prompt measures should be taken to stimulate and enlarge the present cooperative state and highway building program to the fullest extent;

2. That a substantial emergency federal appropriation be set up and be expended under the existing federal highway legislation, and only through such legislation; that in addition thereto a substantial emergency fund be set up by the federal government to be advanced to the several states, to be used by such states to match federal funds, said advances to be later repaid from state revenues or from future installments of the federal highway appropriation.

3. That the amendments necessary to expedite the placing under construction of federal highway funds be made and that the benefits of the emergency appropriation and this

recommended legislation be limited to those states which shall in no way decrease or remove from the control of the State Highway Department the present incomes or adversely change the sources of revenue.

4. That a substantial emergency federal appropriation be made to be used to expedite the completion of the forest highway system to be expended by established agencies.

FAVOR ROADSIDE BEAUTIFICATION

Roadside beautification and its varied activities are advocated as reducing highway maintenance costs by checking erosion, preventing slides and controlling drifting snow; reducing accidents; increasing adjacent property values; promoting civic pride; equalizing temperatures; opening and revealing natural beauty; advertising the state and providing a healthful recreation and enjoyment for all highway users.

Specific measures to secure more beautiful highways are outlined as follows:

1. Adequate width of highway right-of-way be acquired at the earliest time to provide for future widening and a detailed plan of beautification.

2. Conservation of natural growth be recognized of first importance and that unnecessary destruction of roadside plants be prohibited.

3. The absolute control of the right-of-way be vested in the Department of Highways.

4. Responsibility for roadside beautification be vested in a competent person to carry out the work of the department and to encourage individuals and organizations to assist in beautifying town entrances and the roadsides in their localities.

FINANCING IMPROVEMENTS FOR SECONDARY ROADS

As there is considerable agitation for improvement of secondary roads, in some cases classed as farm-to-market roads, with a resultant demand for diversion of state funds now available for state systems in the several states, the association expressed itself as follows:

1. That until such time as the primary

routes have reached an advanced stage of improvement federal funds, exclusively, and the major portion of state funds should be used entirely to expedite work on this system;

2. That when the present designated federal aid systems have been improved to an advanced degree advantage should then be taken of the provision of the Federal Highway Act to increase the mileage of federal aid system, upon which federal aid funds may be used by applying said federal money to what might now be considered secondary roads;

3. That when the primary routes have reached a reasonably advanced stage of improvement, in keeping with traffic demands, then the states should recognize their responsibility to traffic on the secondary system of highways or county trunk highways, which supplement the general traffic and farm-to-market service of the primary routes, and the states should stimulate such improvement by the allocation of a definite and reasonable proportion of state collected funds for such secondary system of highways or county trunk highways, if the state has not as yet made such funds available for such systems;

4. That the expenditure, however, of all such state funds, allotted for the improvement of the secondary systems or county trunk highways, should be made with such state supervision as will insure tangible, well planned, worth-while improvements, all administered on a sound business and economical basis;

5. That where state trunk highways, roads of the secondary system or county trunk highways pass through municipalities funds available for the improvement of such routes may logically be used under proper supervision for the construction and maintenance of such routes through such municipalities, but such funds should not become available to the municipalities to be used on thoroughfares which are not used by the traffic carried on such routes.

The resolutions recited that "in general it may be stated that approximately 10 per cent of the public road mileage in the several states composes the combined federal aid and state systems, which may be called primary roads, and an additional 20-25 per cent composes the principal county trunk or state aid highways, which may be called secondary roads, and the remaining 65-70 per cent composes purely local township or third class roads."

GASOLINE TAXES

On the subject of gasoline taxes the association expressed an opinion favoring "the prin-

ciple of a gasoline or motor fuel tax, which tax shall be considered as a charge for the use of the highway system; that this tax, however, shall not be in lieu of motor vehicle license fees or personal property taxes; and that such gasoline or motor fuel taxes shall be as uniform in rate in the several states as practical and consistent with the constitutions, road bond obligations or road needs of the individual states."

MORE UNIFORM MOTOR LICENSE FEES

It is declared desirable that the rate of taxation for motor vehicles in each of the several states should be as uniform as possible. To secure this a recommendation is made favoring "a fixed charge per annum by each state for each class or weight of motor vehicle, which charge shall be considered as a legal protection charge and as a 'ready to serve' charge for the highway system; that this may take the form of a motor vehicle license fee, which is in lieu of all other property taxes or a combination of personal property taxes and motor vehicle license fees; and that the total rate of such taxes for each class or weight of vehicle in the several states shall be as uniform in amount as practical and as consistent with the constitutions, road bond obligations or road needs of the individual states."

TOLL BRIDGES

The fact that toll bridge legislation is proposed in many states and in the Congress of the United States makes it necessary and desirable to reiterate and amplify the position of the association on toll bridge matters. This position is declared to be:

1. Enactment of the Burtness bill now before congress;

2. That in the meanwhile no franchise for privately owned toll bridges be granted which does not comply with the requirements of the Burtness bill;

3. That the several states be urged to continue the policy of either purchasing toll bridges or else erecting free bridges to replace toll bridges;

4. That no toll bridges be constructed except where urgent necessity exists and that provision in every case be made for redemption and making free of tolls.

FUNDS FOR ROADS THROUGH PUBLIC DOMAIN

A request is made that congress provide funds to make the Colton-Oddie bill effective. This bill provides for the construction of roads through the public domain, but no appropriation has been made to carry out its provisions.

REMOVAL OF FEDERAL AID LIMITATIONS

As the present limitation of \$15,000 per mile on federal participation in highway construction has no relation to the cost of any project, it was recommended that this be removed and that the Secretary of Agriculture be authorized to approve projects at 50 per cent of the cost of construction.

AIRWAYS AND HIGHWAYS

The full coordination of highways and airways is recommended, including the coordinated service of the personnel and equipment of the existing federal and state governmental agencies now having administration of highways and airways.

THE "BRAIDED" CROSSING, LATEST PHASE IN THE EVOLUTION OF EXPRESS HIGHWAYS

(Continued from page 7.)

In this way all traffic will leave or enter the highway on the right side, going in the same direction as the line of traffic it is leaving or entering, and the job of sorting out 3500 cars per day from a peak traffic of 18,000, without loss of speed and a minimum hazard of accidents, impresses upon us the importance of this safety measure.

The connecting link of this highway between Waldo and the Golden Gate Bridge will be completed by the time that structure is finished. Many reports of the commencement of private construction projects, just starting or soon to begin, show the impetus given by the strong sentiment expressed at the November 4th election in favor of this bridge. Upon consummation of the bridge and the highway serving it, traffic demands between Sausalito and San Rafael will be doubled and safety demands more than doubled. Only then will be realized the full value of the braided crossing, in sorting out without delay and with a minimum of hazard some 20 per cent of its traffic.

PARIS—An appropriation of 700,000,000 francs, or about \$27,510,000, was voted recently by the municipal council of Paris. The money will be used in widening roads leading into the city and in building new roads connecting the suburbs.

PENNSYLVANIA—Samuel Eckels, chief engineer of the state highway department and president of the American Association of State Highway Officials, recently appointed a committee of highway officials from eight states to study toll bridges for testimony before a Congressional committee.

KEEP SCRAPPIN'

When you're sick as the deuce, and you think, "What's the use?"

And you're tired out, discouraged, afraid;
And you keep asking why they don't let you die
And forget the mistakes you have made;
When you're chock full of pain and you're tired of the game,

And you want to get out of it all—
That's the time to begin to stick out your chin
And fight with your back to the wall!

When you've done all you can to scrap like a man,
But you can't keep your head up much more;
And the end of the bout leaves you all down and out,
Bleeding, and reeling, and sore;
When you've prayed all along for the sound of the gong

To ring for the fight to stop—
Just keep on your feet and smile at defeat;
That's the real way to come out on top!

When you're tired of hard knocks and you're right on the rocks,

And nobody lends you a hand;
When none of your schemes, the best of your dreams
Turn out in the way you'd planned;
And you've lost all your grit and you're ready to quit,
For life's just a failure for you,
Why, start in again, and see if all men
Don't call you a MAN through and through!

—ESTY QUINN, in *Progress*.

CONCLUSIONS ON S. F. BAY BRIDGE PROJECT ANNOUNCED BY HOOVER-YOUNG COMMISSION

(Continued from page 8.)

The traffic centers are slowly moving southward.

Growth of automobile traffic may be expected to steadily increase at the rate of 5 per cent to 6 per cent for the next eight or ten years and thereafter at approximately the rate of population growth, which is about 3 per cent per annum.

Income is computed on approximately this basis. Growth of interurban traffic can not be expected to any great extent.

Probable revenue from tolls which may be expected over a centrally located bay crossing carrying both auto and electric line passengers in 1940 is approximately \$7,400,000 per year. It is estimated that this will increase at the rate of 3 per cent per annum.

Bill Johnson sleeps beneath this lid—
He always claimed he couldn't skid—
The fact remains, he could—and did!

Bill: It's tough when you have to pay 50 cents a pound for meat."

Will: "Yes, but it's tougher when you have to pay 25 cents a pound."

DAMS

The activities of this department have been directed during this period not only to studying and inspecting existing dams, but also to work on new construction and repairs.

To date 720 applications for approval of existing dams have been filed; 54 applications for approval of plans for construction or enlargement of dams; and 94 applications for approval of plans for the repair or alteration of dams.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR CONSTRUCTION OR ENLARGEMENT

Dam	County	Owner	Est. Cost
*Tiger Creek Afterbay	Amador and Calaveras	Pacific Gas and Electric Co.	\$350,000
*Digger Creek	Shasta	G. L. Childs & A. P. Waller	2,517
*Dennis Martin No. 2	San Mateo	A. Schilling	1,200
*Kathriner Siskiyou	Siskiyou	Frank Kathriner	9,000
**Port Costa Reservoir	Contra Costa	California Water Service Company	5,434

*New.

**Enlargement.

The Tiger Creek Afterbay is to be a variable radius arch dam on the North Fork of the Mokelumne River and will link Amador and Calaveras counties. It will be 85 feet high and store 3800 acre feet of water which will help regulate the flow and divert it for power purposes in the Pacific Gas and Electric system.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS FOR REPAIRS OR ALTERATIONS

Twenty-eight such applications have been received during this period, indicating the cooperation of owners in their desire to put their dams in the shape required by the department.

PLANS APPROVED FOR ENLARGEMENT, REPAIR OR ALTERATION

One application for enlargement and 20 for repair or alteration have been approved by the State Engineer.

Orders authorizing use pending formal approval were issued to the following owners of dams:

Dam	County	Owner
Kelly Lake	Placer	Pacific Gas and Electric Company
Lower Blue Lake	Alpine	Pacific Gas and Electric Company
Meadow Lake	Alpine	Pacific Gas and Electric Company
Twin Lakes	Alpine	Pacific Gas and Electric Company
Upper Blue Lake	Alpine	Pacific Gas and Electric Company

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

Routine maintenance work has been carried on in connection with the flood control project during this period, consisting of clearing second growth timber in the by-pass, overhauling pumping plants and structures, and other miscellaneous work. An average of fifteen men have been employed during this period.

FLOOD CONTROL PROJECT MAINTENANCE BANK PROTECTION

Construction has been commenced on one tree current retard in cooperation with Reclamation District No. 70 at the Yates place, approximately four miles south of Meridian, to cost \$2,100. Bank protection work, also in cooperation with this district, at Girdner Bend has been commenced. This will cost \$800.

At Andrus Island, on the Reardon ranch, 220 feet of bank is being protected with rock in cooperation with the Division of Highways and Reclamation District No. 556. This work will cost \$2,300. All other bank protection work under way has been completed.

Surveys were completed for bank protection work near Compton Landing, on the left bank of the Sacramento River nine miles above Colusa, for the Colusa Bank, but it has been decided that no construction will be undertaken this year.

SACRAMENTO FLOOD CONTROL PROJECT

Three crews have been engaged during the period in clearing in the Lower Sutter, Butte Slough and Tisdale by-passes, and two camps have been in operation. An average of 64 men have been employed. The five contracts for clearing in the Feather River bottoms near Marysville have been completed.

Much detail work has been done in connection with the flood control construction program for the current year, and various surveys have been made. Plans have been prepared for various units of the work and rights-of-way have been negotiated for and various rights secured.

The California Debris Commission has let contract for the Lake of the Woods extension levee, 8700 feet long, at a price of \$85,500. Bids have been called and received for various other units of the work, but contracts have not been let. The Feather River levees at Starr Bend and Lake of the Woods have been completed, and construction is now under way on Lake of the Woods extension levee. With the completion of this levee Reclamation District No. 784 will be closed and protected for the winter.

Surveys have been continued of the timber areas and cut-over areas in the by-passes.

EMERGENCY FLOOD CONTROL AND RECTIFICATION OF RIVERS

In cooperation with Andrus Island Reclamation District No. 317 the San Joaquin River levee between Seven Mile Slough and Mokelumne River has been reconstructed and protected for a length of 3500 feet. The work is complete except for the placing of 2500 tons of rock. A total of 5400 tons of rock will be used. The cost of the entire work will be approximately \$20,000.

Some additional tree protection has been installed in the San Joaquin River at Tom Paine Slough, in cooperation with California Irrigated Farms at a cost of \$700.

The channel of Big Chico Creek in Butte County has been cleared of obstructions for a length of 6000 feet at a cost of \$900, in cooperation with the Division of Parks and Butte County.

SANTA MARIA RIVER

The clearing work in the channel of the Santa Maria River near Guadalupe, which was commenced on September 22, 1930, was completed on November 8th. The channel was cleared for a length of about six miles to a width of 370 feet at a cost of approximately \$7,000, an average of 50 men having been employed during the course of the work. This was done in cooperation with the counties of Santa Barbara and San Luis Obispo.

PAJARO RIVER FLOOD CONTROL

A contract has been let to Karstedt and Karstedt of Watsonville for improvement in the channel of the Pajaro River for a length of 8600 feet at a cost of \$2,850. This work consists of clearing a width of 60 feet and loosening the bottom material.

SALINAS RIVER

Actual work in excavating the channel to connect the Salinas River with Elkhorn Slough was commenced on October 27th and continued for two days, when the work was discontinued so that the right to proceed could be determined in court. This work is being done for the Division of Fish and Game.

MOKELUMNE RIVER

A foreman and three men have been engaged in burning debris left from the clearing of last year, preparatory to proceeding with the improvement work in cooperation with the county of San Joaquin. The extent to which this work will be carried has not yet been determined.

FLOOD MEASUREMENT AND GAGES

The recording gages to be operated during the winter by this office have been inspected, repaired and put into operation, and preparations have been made for taking flood measurements in the various channels during the winter.

During the period October 15th to November 15th an average of 133 men have been employed in the above described work, exclusive of contractors' employees.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE

During the month of October 14 applications to appropriate were received; 9 were rejected and 21

approved. During the same period 19 permits were revoked and 4 licenses were issued.

ADJUDICATIONS

Shasta River (Siskiyou County). Case pending in superior court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All-American Canal from Colorado River.

North Cow Creek (Shasta County). Referee's final report being prepared.

Oak Run Creek (Shasta County). Case pending in the superior court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County). Case pending in superior court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County). Case pending in the superior court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County). Action by referee deferred awaiting the outcome of the circulation of a stipulation for consent judgment among the parties involved.

Davis Creek (Modoc County). The report of referee has been prepared for submission to the superior court of Modoc County.

Mill Creek (Modoc County). A report is in course of preparation covering the administration of the tentative schedule of allotments which was authorized for the 1930 season.

Deep Creek (Modoc County). The report covering the field investigation of water supply and use of water is being prepared.

Franklin Creek (Modoc County). The field investigation of water supply and use of water for the 1930 season was discontinued on October 15.

WATER DISTRIBUTION

Pit River (Modoc and Lassen Counties). Supervision over diversions from Pit River in Big Valley was discontinued on October 15.

CALIFORNIA COOPERATIVE SNOW SURVEY

Field work has occupied the time on this work almost entirely during the past month. This practically completes the fall work comprising the necessary arrangements for the surveys to be made in the spring. These arrangements have included the outline of plans with cooperating agencies, selection of personnel for the surveys, stocking of shelter cabins, distribution of equipment, forms, etc.

In the Tahoe-American Basin a trip was made to the Ward Creek and Rubicon Peak snow courses to clear up brush and rocks at measuring points and to more plainly mark the courses.

Arrangements for the shelter cabin near Church Meadows on the divide between Feather and Yuba Basins were completed. Plans for the Bowman Lake area surveys were checked with the Nevada Irrigation District. Arrangements for experimental precipitation observations by two separate methods, one being that of the U. S. Weather Bureau, were effected for the station at Rasers Lodge in the American Basin.

A trip was made to relocate and brush out the Snow Mountain snow course in the Pit Basin and work was completed at the snow courses in Lassen Volcanic National Park, where it was necessary to mark the courses with pipe standards.

Until the surveys at key courses begin at the end of January, the snow survey work will now be confined chiefly to the large amount of office computations necessary in preparations for the correlation of snow survey data with runoff when the data from the surveys become available.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

Regular field and office work comprising measurements of all diversions, stream flow, and return flow throughout the Sacramento-San Joaquin territory, has continued during the past month and with the submission of this report the field work will be completed except for the maintenance of salinity stations and tide gages. Future office work will be confined to the compilations necessary in the preparation of the 1930 report.

Salinity investigations have been continued through the maintenance of sampling at forty-six stations in Bay and Delta areas. With the decrease in salinity at up-river stations, it is planned to stop the sampling at a number of stations. This will only be done when the salinity remains at about three parts of chlorine per 100,000 or less. At least fifteen stations will be maintained permanently and the North San Pablo Bay stations will be continued throughout the winter.

During the past month the army engineers have taken back the maintenance of the Benicia tide gage and the water supervisor's office is therefore maintaining eight tide gage stations.

The following are comparative data for 1929 and 1930:

Station	Salinity in parts of chlorine per 100,000	
	10/28/30	10/28/29
Bullhead Point	1080	1140
O and A Ferry	240*	450*
Collinsville	100	240
Antioch	140	204
Jersey	10**	60**
Emmerton	4**	21**
Rice Pump	7	11
Rio Vista	2	2
Isleton	1	---

*October 26th.

**October 30th.

Station	Discharge in second-feet	
	10/28/30	10/28/29
Sacramento River at Sacramento	6350	5600
San Joaquin River near Vernalis	1450	1290
Combined flow to Delta	7800	6890

WATER RESOURCES

SALT WATER BARRIER INVESTIGATION

Substantial progress has been made during the past month on the investigations of the economic aspects of the proposed salt water barrier. The industrial survey of the upper San Francisco bay area with special reference to the proposed salt water barrier has been completed and a report rendered by a special committee composed of Dean W. E. Hotchkiss, Stanford Graduate School of Business, as chairman; Dean H. S. Grady, College of Commerce, University of California; and Mr. A. D. Schindler, consulting engineer. This report presents the results of about six months of intensive studies and investigations of the industries within the area which would be affected by the proposed barrier, and is one of the most important parts of the investigation of the economic aspects of the barrier.

Other special reports and investigations which have now been completed include the study of sewage and industrial waste pollution in relation to the quality and redeemability of fresh water in the proposed barrier lake, the effect of the barrier on the fishing industry, the geology of the region adjacent to the salt water barrier sites, the feasibility and suitability of the proposed salt water barrier as a highway crossing and evaporation and transpiration from the proposed barrier lake.

Detail studies have been completed on the yield of the proposed barrier lake, with special regard to its conservation value. Studies were continued on the agricultural developments of irrigation and reclamation as related to the barrier, with special investigations of the present and estimated future needs of the areas adjacent to the proposed barrier lake and studies of sources and methods of supply to take care of present and future demands. This includes a specially intensive study of a proposed conduit extending from the Delta along the south side of Suisun Bay to serve the industrial and agricultural demands in Contra Costa County and immediately take care of any shortages which now exist.

Special studies covering the design and cost of the proposed barrier at various sites have been continued during the past month with special reference to the provisions for locks and flood gates in the proposed structure. Studies have also been continued on the effect of the proposed barrier to the present reclamation developments especially in the delta of the Sacramento and San Joaquin rivers.

The results of the investigations completed up to this time were carefully reviewed by the Consulting Committee on the salt water barrier investigation at a regular meeting held on November 3. Preliminary conclusions on several of the important aspects of the investigation were under discussion by the Consulting Committee. Work is now actively under way on the preparation of the complete report of the investigation.

SACRAMENTO VALLEY INVESTIGATION

Yield Studies. Studies were made to determine the irrigation yield of the Table Mountain reservoir with three heights of dam and also to determine the irrigation yields of the Kennett reservoir operating in combination with the Table Mountain reservoir.

Studies were also made to determine the yields of the Kennett reservoir and the Table Mountain reservoir with a capacity of 3,000,000 acre-feet in each case operating for irrigation on the Sacramento River, navigation, salinity control at Antioch and irrigation supplies to the San Joaquin Valley and delta area. A similar study was started for the American River units.

Studies to determine the power output of the reservoir operating primarily for power were completed for the Auburn, Coloma and Folsom reservoirs and the Pilot and Webber Creek plants and from the Narrows and Table Mountain reservoirs.

Additional studies were made to determine the value of power from the Kennett, Narrows and Oroville plants operating both primarily for power and as initial units.

Studies to determine the economic installation at the Folsom, Pilot, and Webber Creek plants were made.

Water Requirements. A revision was made of certain of the water service areas so that they can be given a dependable supply for all of the irrigable areas from the water supply of the stream from which they are served.

Flood Flow Investigations. Studies of the flood flow concentrations of five points in the Sacramento

Valley were slightly revised and a final report covering this subject was written.

Studies for the determination of the flood frequencies at the foothill gaging stations on the main streams in the Sacramento River Basin and curves of the reservoir space required to control floods at these same points were completed.

Ground Water Studies. Measurements of the depth to water in a large number of wells over the entire Sacramento Valley floor were completed with the exception of two or three wells. These measurements have been taken to determine the ground water condition in the fall of 1930.

Storage Works. A meeting of the Sacramento Engineering Advisory Committee was held at which the detailed cost estimates for the irrigation reservoirs for the major units of the State Plan were discussed and approved. An inspection trip was also made by the committee to view the latest geological explorations at the Kennett and Table Mountain dam sites.

A thorough investigation was made by Dr. Ransome of the exploration work and the geology at both the Kennett and Table Mountain sites. Work on seven test pits and one tunnel at the Table Mountain dam site was completed by the contractor during the month and bids were called for by the U. S. Engineer Office on the drilling of nine test holes at the Table Mountain dam site.

Estimates of the cost of power features were completed for the Kennett, Oroville, Narrows, Folsom, Auburn and Coloma reservoirs.

SAN JOAQUIN VALLEY INVESTIGATION

Water Supply. Yield studies of San Joaquin River at Friant Reservoir, Kings River at Pine Flat Reservoir, Kern River at Isabella Reservoir, Tule River at Pleasant Valley Reservoir, and Kaweah River at Ward Reservoir were completed for use in connection with the solution of the economic capacities of these various developments.

An estimate has been made of the flow to the San Joaquin Delta from the San Joaquin Basin under assumed conditions of the diversion of the grass land and surplus waters.

Land Classification. Final check and summary of land classification areas of the Upper and Lower San Joaquin Basin have been completed and base map extended to cover supplementary foothill classifications. A new key map has been prepared.

Ground Water Investigation. Base map of the Upper San Joaquin Valley has been completed and a similar map for the Lower San Joaquin Valley is half finished. Maps of lines of equal total lowering for the period 1921 to 1929 for Upper San Joaquin Basin are complete. Computations of ground water depletion and graphs showing the relation between ground water fluctuation and inflow for the various Upper San Joaquin Valley divisions were made. Report of Mr. Hyde Forbes on the absorptive areas of the San Joaquin Basin was completed and computations made on the absorptive capacities of the Madera, Mormon Slough and Mokelumne areas.

Economic Studies. Economic studies of proper relation between storage capacity at Friant and canal capacity for diversion of water to Upper San Joaquin Valley and of storage on the Kings River at Pine Flat and the Kern River at Isabella have been completed. The economic capacities of power development at Friant and Pine Flat have been determined.

Reservoirs. Final plans, details, tracings and cost estimates of storage reservoir at Friant site on San Joaquin River have been completed and tracings of Windy Gap and Buchanan dam sites, and Fresno Flat reservoir have been made. Also plane table

survey of Ward Dam site on scale 100 ft. per inch, completed.

Cooperative Work with U. S. R. B. Temperance Flat dam site plane table survey scale 100 ft. per inch and differential levels from Friant to Kerechhoff Reservoir completed during the present month.

General. Folio of data covering results of studies to date, prepared and submitted to Engineering Advisory Committee at meeting held October 22d and 23d. A trip of inspection was made by members of the Engineering Advisory Committee to various dam sites on San Joaquin River tributaries November 5th, 6th and 7th.

MOJAVE RIVER INVESTIGATION

Progress report for the year 1930 was practically completed during the month. There have been many demands that this office drill a dam site on the West Fork of the Mojave and as this is the key reservoir in control of the Mojave it is important that it should be drilled, but funds are lacking.

Three new gaging stations were installed by the U. S. Geological Survey on the Mojave under cooperative agreement during the past month.

SANTA ANA INVESTIGATION

Two meetings of the Consulting Board were held on final draft of the report which has been sent to interested parties in the Santa Ana Basin for criticism. With some minor revisions the report will be complete and ready for the printer at an early date.

VENTURA COUNTY INVESTIGATION

Typing of the progress report for the year 1930 is under way in the Sacramento office.

PIT RIVER (MODOC AND LASSEN COUNTIES)

Routine field work was continued throughout the month. Plotting of the irrigated areas is about 95 per cent completed. Work on the resident engineer's progress report for the 1929-1930 season was commenced on October 20th.

NAPA VALLEY INVESTIGATION

During the month of October the wells under investigation in connection with this project were counted up with a line of levels. The wells were spotted as to location on a map to accompany the report and a second set of water levels was taken to cover the low level period.

SANTA CLARA INVESTIGATION

Office work in connection with the progress report covering the Santa Clara Investigation has proceeded and it is expected that a report covering the work during the past year will issue at an early date.

IRRIGATION, WATER STORAGE DISTRICTS AND BOND COMMISSION

The report on irrigation district activities for the year ending 1929 has been completed and is now ready for distribution. The State Engineer reviewed the contents of this report and announced its release at the meeting of the Irrigation Districts Association held in Stockton on November 20, 1930.

Data are now being prepared on irrigation and water storage districts for inclusion in the biennial report of the Division of Water Resources for the period 1929-1930.

Visits were made during the present month to the Butte Valley Irrigation District in Siskiyou County.

Hot Springs Valley Irrigation District in Modoc County, Brown's Valley Irrigation District in Yuba County, Nevada Irrigation District in Nevada and Placer counties and El Dorado Irrigation District in El Dorado County, to advise with their officers in connection with the maintenance and operation of these districts.

A conference was held with the officials of the Richvale irrigation district to consider proposals of the district relative to purchasing an interest in the Sutter-Butte Canal Company.

No meetings of the California Bond Certification Commission were held during the present month.

CALIFORNIA IRRIGATION AND RECLAMATION FINANCING AND REFINANCING COMMISSION

Meetings were held at Stockton August 28, Los Angeles September 19, Fresno October 3, and at San Francisco on October 10 and 17. These meetings were held to provide an opportunity for various irrigation and reclamation districts in different portions of the state to appear and submit financial problems affecting their operations.

LEGISLATIVE WATER COMMITTEE AND HOOVER-YOUNG COMMISSION

The eleventh hearing of the Legislative Water Committee and Hoover-Young Commission convened in Oakland October 27 and 28.

On October 27, a number of representatives from various sections of California appeared to submit water problems concerning their sections of the state. Each representative appearing was requested to file a brief covering his district for study by members of the two bodies.

The twelfth hearing of the same bodies convened in Oakland, November 10, when compendium of data including conclusions of investigations conducted by the Division of Water Resources was submitted. Experiments bearing upon the behavior of salt water in lock operation were attended by the committee and commission at the College of Mechanical Engineering, University of California, Berkeley, during the afternoon.

MISCELLANEOUS

The Imperial Irrigation District has been advised by the Secretary of the Interior that contracts for delivery of water in the All-American Canal can not be completed until this division has ruled on the amounts which shall be allocated to the different claimants in California. Presumably this is true also of the situation with regard to the Boulder Reservoir. It had been assumed by many interests using or proposing to use water from the Colorado River that the government would allocate the water.

A final report was completed on the extent of and use of water on riparian and overflow lands of the Sacramento and American rivers in the valley floor.

In continuation of the field trips which have been made from time to time during the past year by representatives of the state, the U. S. Army Engineers and the U. S. Geological Survey for the location of gaging stations, a trip was made during the past month for the location of gages on the Sacramento

and McCloud rivers. Locations were made on the Sacramento River at Antler and on the McCloud River at Baird and the Hearst Estate near McCloud. The Baird and Antler stations have been maintained previously by staff gages and observers, but provision is now made for the installation of automatic water registers. The Hearst station is entirely new. This work is a part of the program for the location of some eighteen new gaging stations and the installation of recorders at eighteen old stations throughout the Sacramento-San Joaquin drainage basin in accordance with a federal-state cooperative agreement.

NOVEMBER REPORT OF DIVISION OF MOTOR VEHICLES

FRANK SNOOK, Chief

MOTOR VEHICLE REGISTRATION GAINS

The registrations for the first ten months of 1930 compared against the same period of 1929 show a gain in registrations of automobiles 63,399, pneumatic trucks 15,738, pneumatic trailers 6719, and a loss in solid trucks of 5650, motorcycles 142, and solid trailers 1036. In the first ten months of 1929 we reported 564,379 transfers, against 492,787 in 1930. This apparent reduction of 71,592 is in reality the difference due to the reduction in transfer fees occasioned by the change in the law reducing transfers in some cases from \$2 to \$1.

As of November 1st, the Division has registered the following number of vehicles as to classification:

Automobiles	1,916,037
Solid trucks	15,442
Pneumatic trucks	81,556
Motorcycles	9,198
Solid trailers	9,477
Pneumatic trailers	38,037
Transfers	492,787

During the first ten months of 1930 the Division has issued 75,901 nonresident permits, which is 5171 more than were issued in the same period of 1929.

As of November 14, 1930, 34,894 state, county, city, public service and U. S. automobiles, motorcycles and trailers have been registered. This is an increase in total over 1929 of 2227.

DRIVE AGAINST FAULTY LIGHTS

During the past month the Bureau of Lights of the California Highway Patrol has launched another extensive drive against glaring headlights, as well as vehicles being operated with one headlight and no taillight. During the month of October, 20,837 vehicles were reported tested on testing screens by officers of the patrol. Of this number 6335 were found in violation of the law and arrest citations were issued. In Los Angeles County two inspectors were assigned for duty with the police departments of twenty-two small cities, and 8343 vehicles were tested, of which 2331 were given arrest citations. The city of Los Angeles has advised that they will use ten officers to work continuously on lights every night in the week.

BRAKE INSPECTION ACTIVITIES

The Bureau of Brakes reports shows a substantial number of cars tested last month and a slight decrease in the percentage of defective brakes. In addition to handling many questions of a technical nature concerning the mechanical and legal regulations of com-

mercial vehicles, the Bureau handled their regular routine of reports, applications, etc. The following is a resume of brake and truck activities for the month of October:

Number of new applications for brake adjusting stations.....	33
Total number of applications received to date.....	1638
Total number authorized.....	1197
Total number pending and incomplete.....	441
Number of adjusters authorized.....	2703
Total number of communications.....	101

Brake Tests.

Number found defective.....	1040
Number found satisfactory.....	8561
Total number of brakes tested.....	9601
Percentage found defective.....	10%

Trucks.

Number of trucks checked.....	1884
Number of trucks warned.....	898
Number of trucks arrested.....	544
Number of trucks arrested in October, 1929.....	170

LICENSE APPLICATIONS

During the month of October 35,637 applications for operator's and chauffeur's licenses were received. Of this number 29,144 licenses were issued. The remaining number failed to pass the examination at their first attempt.

HIGHWAY PATROL SCHOOL

The fifth class of the California Highway Patrol Training School, composed of 49 men, reported for instructions on October 4th. This class was composed entirely of new men or men appointed subsequent to the passage of the 1929 act.

Notice has been received from the War Department that the lease on the barracks and dining hall at Mather Field has been canceled. The commanding officer of the field, however, has permitted the school to remain until such time as the buildings are actually needed.

During the month of October the men in the Highway Patrol covered a total mileage of 568,592 miles.

DIVISION OF ARCHITECTURE

Awards for Month of November

AGNEWS STATE HOSPITAL.—Contract for general work on ward, kitchen and steam plant building, which includes additional wing, awarded to J. F. Shepherd of Stockton, \$207,961; contract for electrical work, to Roy M. Butcher, San Jose, for \$7,629; contract for heating, ventilating and plumbing, to Hately and Hately of Sacramento, \$11,880.

TEN-YEAR BUILDING CONSTRUCTION PROGRAM FOR STATE INSTITUTIONS

(Continued from page 13.)

were made and plot plans for the ultimate institutions developed by the Division and approved, before further steps were taken, with the result that orderly building construction programs are now under way. The college will move into \$750,000 worth of new structures during January, 1931, and the Institution for Women will move into its first new buildings, which it is expected may include some structures to be provided for by the 1931 Legislature, during the latter half of 1931.

Numerous suggested sites have been examined for the new prison for first offenders and the hospital for insane, and final selections will soon be made. Orderly, effective, long time building programs based on all the considerations involved in the ultimate institutions, will be made in these cases.

Governor Young's wise and far-seeing policy referred to at the outset of this statement has been abundantly justified by results already and so soon obtained.

War on illegal signs along the highways has been declared by the Department of Highways in Pennsylvania. Caretakers of the department have just completed the destruction of 32,225 roadside signs embodying every type of blur, daub, scrawl and tattered legend that came within the definition of illegal advertising.

An old man went to a rejuvenation specialist and asked how much it would cost to rejuvenate him.

"To make you feel like 30 again, it will cost you \$1,000," said the surgeon, "but to make you look like 25 again will cost \$2,000, and anything below that age will be \$5,000."

"I don't care about the cost; just make me 15 again," said the oldest.

The operation was a success. But when the surgeon sent in his bill, the rejuvenated one sent it back with this notation:

"You can't collect from a minor!"

NOVEMBER REPORT OF DIVISION OF ARCHITECTURE

GEORGE B. McDUGALL, Chief

During November contracts have been awarded totaling \$222,218.86. The projects included in these contracts include the construction of a ward, kitchen and steam plant building at the Agnews State Hospital; a receiving ward building and auditorium at the State Narcotic Hospital; a hatchery building, superintendent's cottage and improvements to the water and sewer system at the Alhambra Fish hatchery.

Projects now out for bids have an estimated total cost of \$295,250. These include a men's gymnasium at the San Jose Teachers College; an industrial building and a hospital building at the Stockton State Hospital; a superintendent's cottage at the Preston School of Industry, and a physician's cottage at the Agnews State Hospital.

Progress on State Highway System

MAJOR PROJECTS COMPLETED, UNDER WAY AND ADVERTISED AS REPORTED
TO GOVERNOR'S COUNCIL ON NOVEMBER 6th

C. H. PURCELL, Chief of Division of Highways.

PROGRESS OF WORK

Between October 28th and November 25th contracts have been awarded and work advertised as follows:

Work placed under contract.....	\$768,800
Contracts pending and projects advertised.....	2,011,400
Total	\$2,780,200

COMPLETED PROJECTS

Among the contracts which have been completed during the past month the following are included:

Foothill Boulevard.

In Los Angeles County the heavily traveled Foothill boulevard between Los Angeles and San Bernardino has been widened and resurfaced from Citrus avenue, in Azusa, to Glendora. This contract consisted of building up the shoulders to a roadbed width of 56 feet and placing an asphalt concrete pavement 30 feet wide, giving a three-lane pavement with 13-foot shoulders on the mile of state highway between these two cities. This improvement was made at a cost of \$44,600.

Owens Valley Highway.

Costing \$254,500, over twenty-one miles of the highway through the Owens Valley has been constructed to modern standards of desert highway improvement. The sector of this highway covered in this project extended from Coso Junction, about 68 miles north of Mojave, to Olancha, along the Haiwee Reservoir of the Los Angeles water supply. The work consisted of placing a 20-foot oil treated crushed rock surface on a standard roadbed 36 feet wide. This project completes the improvement in Inyo County from the southerly boundary to Alabama Gate, about 11 miles south of Independence.

A short section of this highway, as it traverses the high Sierra to the east of the divide, has been revised in alignment and grade at a cost of \$58,800. This improvement covered the sector from the Matty Ranch to Leeving in Mono County, a distance of about two miles. The roadbed was constructed 24 feet wide and surfaced with bituminous crusher run base 20 feet wide.

Cuyama Lateral.

The easterly end of the Cuyama lateral in Kern County has just been reconstructed on a new alignment for a distance of ten miles from the San Emigdio road to the Valley Route just south of Bakersfield.

This project is an improvement of a high standard of construction, consisting of a 30-foot graded roadbed with a surface of oil treated crushed rock 20 feet wide with an adequate drainage system to keep the road passable at all times. It will replace the old county road over this portion of the lateral, and joins the easterly end of the twelve miles of newly constructed and surfaced highway between Pentland Junction and San Emigdio road, which was completed in July of this year. The new road will afford a more direct route for traffic between the Valley road and the Maricopa and adjoining oil fields as well as being an important improvement on this connecting link between the San Joaquin Valley and the Coast Route at Santa Maria. The cost of the reconstruction of this ten miles amounted to \$144,600.

Truckee-Meyers Road.

Two miles of the Truckee-Meyers road as it traverses the rugged granite slopes along the shores of Lake Tahoe at Emerald Bay have just been reconstructed. The improvement is located between Bay View Rest and Eagle Falls, and was graded at a cost of \$193,800. Numerous hazardous curves, steep grades and narrow sections were eliminated, making this popular highway through the Lake Tahoe resort area of suitable width and grade for safe and comfortable travel over its entire length.

Pacific Highway (West Side).

Progress on the improvement of the West Side Highway in the Sacramento Valley is noted by completion of three contracts. Two of these are on that portion of this important arterial between Williams and Maxwell in Colusa County. They consist of the widening of three reinforced concrete bridges and the construction of a 39-foot graded roadbed to the west of the existing pavement so that the center line of the ultimate paving will coincide with the center line of the recently acquired 100-foot right of way. The grading of this 8.3 miles is the first of three stages of construction in the building of the highway. The second stage, consisting of placing a heavy gravel base for the new pavement, has been started, and the pavement will be laid during the next biennium. Particular care was taken in the grading project to secure adequate drainage as the road passes through heavily irrigated rice fields. The third project on this interstate highway comprised the placing of a Portland cement concrete pavement over the five miles between Logandale and Willows, in Glenn County, as the final stage of a similar improvement. The cost of these three improvements amounted to \$242,100.

Redwood Highway.

The past month has seen the completion of nearly one million dollars worth of work and \$550,000 in projects advertised and pending award on the Red-

wood Highway. The completed contracts included five projects on various portions of this scenic coastal route extending from Ignacio in Marin County to Wilson Creek in Del Norte County.

The largest of these projects consisted of the reconstruction of the highway from Ignacio, about seven miles north of San Rafael, to Potluma in Sonoma County. This work, costing \$581,700, consisted of constructing a 36-foot graded roadbed and placing Portland cement concrete pavement 20 feet wide, except over fills where settlement is expected, the surfacing consisted of twenty feet of bituminous macadam. Several necessary betterments in line and grade were made, eliminating 6 per cent grade and short radius curves, saving some 4000 feet of length, and unsatisfactory drainage conditions were remedied.

In Humboldt County the mile and a half from the southerly boundary to Richardson's Grove was graded and surfaced with untreated crushed rock on an improved alignment and grade. The contract amounted to \$55,500.

Portland cement concrete pavement was placed on about five miles of the highway in Humboldt County covering three short sections, one at Scotia and a second from Fortuna to Loleta and the third over the half mile immediately south of Eureka. The roadbed on these three sections had been previously constructed to modern standards. This work, covered by two contracts, amounted to \$190,000, and increases the concrete pavement on the Redwood Highway in Humboldt County to approximately 35 miles.

The thirteen miles from the southerly boundary of Del Norte County to Wilson Creek was surfaced with untreated crushed rock 20 feet wide. The alignment and subgrade on this portion of the road have been brought to modern standards within recent years, and the present surfacing gives a smooth riding surface along the steep mountain slopes and through the thick forests which this section of the Redwood Highway traverses. The cost was \$95,500.

A small but much needed improvement on this route will be the replacing of the timber lift span on the bridge across Eureka Slough at Eureka, for which bids were opened during the past period. To cost less than \$5,000, this project is of a temporary character, as the complete reconstruction of this structure will be made within a few years. The present bridge was constructed by the state in 1919.

The completion of construction on the new alignment of the Redwood Highway between San Rafael and Sausalito is forecast by the advertising and opening of bids on that sector between Alto and Waldo. Bids were opened on November 19th for the construction of three miles of roadway between these two points. The graded roadbed is to be 46 and 56 feet wide, and the surfacing will be a bituminous macadam pavement 30 and 10 feet wide. This project will connect at its northerly end with that portion of this new alignment from Alto to San Rafael, upon which surfacing is now being placed. As a unit of the south portion of this relocation a project for the construction of bridge and overhead crossing at Manzanita was advertised for bids on October 20th. This structure will cross the tracks of the Northwestern Pacific Railroad and an arm of Richardson's Bay. The bridge and overhead will consist of a 56-foot plate girder lift span on concrete piers with pile foundations, a 45-foot steel stringer span on concrete bents with pile foundations and 2340 feet of timber trestle on pile and frame bents; the roadway will be 44 feet wide and paved with asphalt concrete. The cost of these two projects will be approximately \$560,000. This new routing between San Rafael and Sausalito will avoid the narrow and crooked Corte Madera

grade and materially shorten the distance between these two points.

BID OPENINGS

Other important projects for which bids have been opened during the past four weeks include the following:

Cholame Lateral.

The construction of a graded roadbed 36 feet wide and Portland cement concrete paving 20 feet wide on the Cholame Pass lateral at the grade separation near Wasco in Kern County will cost \$26,000. The steel and concrete separation structure is now being built by the Atchison, Topeka and Santa Fe Railroad, and the state will construct the highway through the subway. This project will be a marked improvement on this portion of this lateral which connects the Coast Road at Paso Robles with the Los Angeles-Sacramento highway at Famosa, just to the north of Bakersfield.

Bay Shore Highway.

Further progress on the new Bay Shore Highway, which is being built between San Francisco and San Jose as an alternate route to the coast road down the peninsula, is evidenced by the opening of bids for the construction of a reinforced concrete girder bridge across Redwood Slough at Redwood City. This structure will connect the newly constructed roadway from San Mateo to Redwood City with the section, now under construction, between Redwood City and Willow road.

A project of the first magnitude will be the erection of a steel cantilever bridge across the North Fork of the Feather River at Pulga in Butte County. Bids for placing the concrete piers and abutments were opened on November 19th, and advertising for the erection of the steel superstructure was published on the fifth of November. These projects will comprise a unit of the Oroville to Quincy lateral, which is being constructed up the Feather River Canyon. Grading of the adjoining roadway to the south of this crossing is now under way along the precipitous wall of the canyon. The deck of the highway bridge will be 170 feet above high water and 130 feet above the top of the Western Pacific Railroad bridge which passes diagonally under the state's proposed structure. The project for the substructure calls for placing two reinforced concrete abutments and two reinforced concrete piers. The erection of the superstructure will include one 359-foot steel arch span, two 62-foot plate girder spans, and one 44-foot plate girder span. The roadway width of the bridge will be 24 feet. At a cost of \$280,300 another link will be added to this new all-year highway to Quincy and Plumas County.

PROJECTS ADVERTISED

Advertisements for the past period also include the following projects:

El Centro-Yuma Highway.

Construction on six miles of the transcontinental highway which enters California via Yuma, Arizona, will consist of grading a roadbed 36 feet wide and placing 20 feet of asphalt concrete pavement between the Colorado River bridge at Yuma to Arizona in Imperial County. This project will be a much needed

improvement to the most southerly entrance to California. The new pavement will be placed on a gravel subbase, which will raise the grade of the highway sufficiently to give proper and adequate drainage.

Coast Route.

Two projects of prime importance to the improvement of the heavily traveled coast route connecting Los Angeles and San Francisco were advertised for bids during the month.

The one, in Santa Barbara County, calls for the construction of a graded roadbed and the placing of a 20-foot Portland cement concrete pavement over the three miles of this road as it passes through the picturesque Gaviota Canyon 32 miles north of the city of Santa Barbara. The project will extend from Gaviota Station to Las Cruces. The existing sharp curves and adverse grades through the canyon are to be reconstructed to modern standards of highway alignment. To accomplish this end much heavy grading along the canyon walls will be necessary. Under a separate contract a reinforced concrete arch bridge will be constructed at a crossing of Gaviota Creek.

The other project comprises the grading and paving of eleven miles of the coast route in San Luis Obispo County from Paso Robles to the Monterey County line. In this instance the pavement will be asphalt concrete, and portions will be placed over the existing 15-foot Portland cement concrete pavement. The new pavement is to be placed with a "one-way crown" so that future widening may be done on the west side away from the tracks of the Southern Pacific Railroad which parallel the highway. An important phase of this improvement is the modification of the dangerous curve at the northerly entrance to Paso Robles. As a unit of the improvement between the limits of this work will be the construction of a new bridge across San Marcos Creek. This structure will be built as a separate project, and will be advertised in the near future.

Pacheco Pass.

In Santa Clara County nearly eleven miles of the Pacheco Pass lateral is to be reconstructed from San Felipe to one mile east of Bell's Station. The present improvement will involve the placing of a 20-foot bituminous macadam pavement with eight-foot shoulders on an improved alignment and grade. This lateral, connecting as it does the Valley Route at Califa with the coast road at Gilroy, carries a rapidly increasing amount of traffic, especially high speed commercial trucking, and this work is so designed that the road may better care for the travel it is called upon to bear. The improvement is estimated to cost \$274,000.

HIGHWAY BIDS AND AWARDS

For Month of November

BUTE COUNTY—Substructure of a bridge across North Fork of Feather River at Pulga. Dist. 11, Rt. 21, Sec. C. M. H. Slocum, Los Angeles, \$34,901; Gutleben Bros., Oakland, \$34,332; E. B. Boyd, San Diego, \$36,146; Lord & Bishop, Sacramento, \$37,057; Gist & Bell, Arcadia, \$39,246; Paul M. White, Santa Monica, \$43,103; Peter McHugh, San Francisco, \$36,954; Rocca & Caletti, San Rafael, \$37,281; Ward Engineering Co., San Francisco, \$38,333; Fred J. Maurer & Son, Eureka, \$44,586. Contract awarded to R. B. McKenzie, Red Bluff, \$32,370.

HUMBOLDT COUNTY—The building of a truck shed at Garberville maintenance station. Dist. 1, Rt. 1, Sec. A. Mercer-Fraser Co., Eureka, \$5,460; Oliver S. Ahlrie, Crescent City, \$5,983. Contract awarded to McCarthy & Johanns, San Francisco, \$4,188.

KERN COUNTY—Improvement of maintenance station at Delano; Dist. VI, Rt. 4, Sec. F. Currie & Duglar, Bakersfield, \$2,498. Contract awarded to R. Hodgson & Sons, Porterville, \$1,935.

KERN COUNTY—Near Wasco, about 0.2 of a mile to be graded and paved with Portland cement through underpass. Dist. VI, Rt. 33, Sec. D. Hartman Construction, Bakersfield, \$22,894. Contract awarded to Valley Paving and Construction Company, \$22,819.50.

KERN COUNTY—Four timber bridges from 17 to 21 miles west of Wasco, 1 composed of 12 19-ft. spans, 2 composed of 2 19-ft. spans and 1 composed of 4 19-ft. spans with concrete footings. Dist. VI, Rt. 33, Sec. C. Finnell Co., Inc., Sacramento, \$32,242; Donald E. Metzger & Son, Los Angeles, \$30,458; V. R. Dennis, San Diego, \$25,728; Gist & Bell, Arcadia, \$29,735; Geo. J. Ulrich, Modesto, \$26,714; R. B. McKenzie, Red Bluff, \$25,870; G. A. Graham, Bakersfield, \$25,682. Contract awarded to M. H. Slocum, Los Angeles, \$25,118.20.

LOS ANGELES COUNTY—Between La Canada and 2½ miles north, 2.4 miles to be oiled. Dist. VII, Rt. 61, Sec. A. Leonard C. Pulley, Long Beach, \$6,135; P. J. Akmadzieh, Los Angeles, \$6,338; Geo. Gardner & Sons, Redlands, \$7,135; Southwest Paving Co., Los Angeles, \$8,048; H. E. Cox & Son, Pasadena, \$12,431. Contract awarded to Charles A. Ladeveze, South Gate, \$5,633.75.

LOS ANGELES COUNTY—Reinforced concrete girder bridge over the A. T. & Santa Fe R. R. at Manhattan Beach. Dist. VII, Rt. 60, Sec. C. Bodenhamer Const. Co., San Diego, \$33,155; Herbert M. Baruh, Los Angeles, \$29,936; Houghton & Anderson, Los Angeles, \$31,196; Carpenter Bros., Beverly Hills, \$32,230; Oberg Bros., Los Angeles, \$32,509; J. S. Metzger and Son, Los Angeles, \$29,969; O. A. Gierlich, Monrovia, \$31,913; Ralph E. Hamann Co., Los Angeles, \$35,821; General Engineer Corp., Los Angeles, \$39,611. Contract awarded to Robert F. McKee, Los Angeles, \$29,785.

MARIN COUNTY—Between Alto and Waldo, 3 miles to be graded and surfaced with bituminous macadam. Dist. IV, Rt. 1, Sec. C. H. W. Rohl Co., Los Angeles, \$197,904; E. C. Coats, Sacramento, \$194,062; Lewis Const. Co., Los Angeles, \$204,012; O. A. Lindberg, Stockton, \$236,776; Peninsula Paving Co., San Francisco, \$189,725; M. J. Beyanda, Stockton, \$198,086; Skeel & Graham Co., Roseville, \$259,128; W. H. Hauser, Oakland, \$262,724; Finnell Co., Sacramento, \$293,557; D. McDonald, Sacramento, \$329,875; R. G. Le Tourneau, Inc., Stockton, \$217,986; Hemstreet & Bell, Marysville, \$239,635; Frederickson & Watson Const. Co., Oakland, \$201,586; Healy-Tibbitts Const. Co., San Francisco, \$208,850; Utah Const. Co., San Francisco, \$277,032; Guy F. Atkinson Co., San Francisco, \$253,202; George Pollock Co., Sacramento, \$223,782; J. F. Knapp, Oakland, \$225,257. Contract awarded to Granfield, Farrar and Carlin of San Francisco for \$189,633.40.

SAN LUIS OBISPO COUNTY—Repairs to San Carpojo Creek bridge. Dist. V, Rt. 56, Sec. A. Wm. Lane, Paso Robles, \$10,520. Contract awarded to San Atlas Const. Co., San Luis Obispo, \$9,483.25.

SAN MATEO COUNTY—Reinforced girder bridge across Redwood Creek, near Redwood City, consist-

ing of three 35-foot spans and one 22-foot span on concrete pile bents. District IV, Rt. 68, Sec. C. A. W. Kitchen, Piedmont, \$39,267; R. B. McKenzie, Red Bluff, \$37,141; Healy-Tibbitts Const. Co., San Francisco, \$41,800; H. C. Venson & Co., San Francisco, \$41,224; C. J. Nystedt, Oakland, \$43,633; Geo. J. Ulrich, Modesto, \$37,289; Fredrickson & Watson, Oakland, \$38,097; Ben C. Gerwick, Inc., San Francisco, \$33,117. Contract awarded to Bolenhamer Const. Co., San Diego, \$35,756.

SANTA BARBARA COUNTY. At Nojoqui Creek, about 0.3 of a mile to be graded and paved with Portland cement concrete (approaches to new bridge). Dist. V, Rt. 2, Sec. D. Cornwall Const. Co., Santa Barbara, \$31,006; W. A. Dontanville, Salinas, \$28,349; Santa Maria Const. Co., \$25,273. Contract awarded to Macco Const. Co., Clearwater, \$22,518.50.

WATER APPLICATIONS AND PERMITS

Application for Permit to Appropriate Water Filed with the Department of Public Works, Division of Water Resources, During the Month of November, 1930.

NEVADA COUNTY.—Application 6824. Gordon M. Bettles, Box 863, Nevada City, Cal., for 3.0 c.f.s. from South Fork of Poorman Creek tributary to South Fork of Yuba River to be diverted in Sec. 15, T. 18 N., R. 11 E., M. D. B. and M., for power purposes (290 h.p.). Estimated cost \$5,000.

RIVERSIDE COUNTY.—Application 6825. Edward Molitor, Keen Camp, Riverside County, Cal., for 0.05 c.f.s. from unnamed stream tributary to San Jacinto watershed to be diverted in Sec. 26, T. 5 S., R. 3 E., S. B. B. and M., for irrigation and domestic purposes (20 acres). Estimated cost \$600.

MONO COUNTY.—Application 6826. Dr. J. A. Jeffery, c/o Preston & Braucht, 309 Canal of Italy Bldg., Merced, Cal., for 1.0 c.f.s. and 300 ac. ft. per annum from Milner Creek tributary to Hamill Valley watershed to be diverted in Sec. 15, T. 4 S., R. 33 E., M. D. B. and M., for irrigation purposes. Estimated cost \$2,500.

TRINITY COUNTY.—Application 6827. Humboldt Placer Mining Co. (a corp.), by Geo. E. Waggoner, attorney in fact, 427 East McClelland Ave., Stockton, Cal., for (1) 100 c.f.s., (2) 25 c.f.s., (3) 40 c.f.s., (4) 10 c.f.s., from (1) Stuart's Fork of Trinity River, (2) Owens Creek, (3) Van Matre Creek, (4) Slate Creek, tributary to Trinity River to be diverted in (1) Sec. 20, T. 37 N., R. 9 W., M. D. B. and M., (2) Sec. 12, T. 35 N., R. 10 W., M. D. B. and M., (3) Sec. 24, T. 35 N., R. 10 W., M. D. B. and M., (4) Sec. 4, T. 34 N., R. 9 W., M. D. B. and M., for mining and domestic purposes.

PLACER COUNTY.—Application 6828. Archie L. Ward, Lincoln, Placer County, Cal., for 0.25 c.f.s. from unnamed spring tributary to Coon Creek and Sacramento River to be diverted in Sec. 1, T. 13 N., R. 6 E., M. D. B. and M., for irrigation and domestic purposes (38.17 acres). Estimated cost \$1,000.

TUOLUMNE COUNTY.—Application 6829. Turlock and Modesto Irrigation Districts, c/o R. V. Meikle, Chief Engineer, Turlock, Cal., for (1) 150 c.f.s., (2) 200 c.f.s., and (3) 27,000 ac. ft. per annum. Total from all sources not to exceed \$0,000 ac. ft. for storage from (1) Middle Fort Tuolumne River, (2) South Fork Tuolumne River, (3) Big Creek tributary to Tuolumne River to be diverted in (1) Sec. 22, T. 1 S., R. 18 E., M. D. B. and M., (2) Sec. 34, T. 1 S., R. 18 E., M. D. B. and M., for power purposes (56,951 h.p.). Estimated cost \$1,885,000.

SAN DIEGO COUNTY.—Application 6830. La Mesa, Lemon Grove and Spring Valley Irrigation District, c/o E. P. Hyatt, La Mesa, San Diego County, Cal., for 50 c.f.s. and 18,000 ac. ft. per annum, from Santa Ysabel Creek tributary to San Dieguito River to be diverted in Sec. 19, T. 12 S., R. 3 E., S. B. B. and M., for municipal purposes.

SAN DIEGO COUNTY.—Application 6831. La Mesa, Lemon Grove and Spring Valley Irrigation District, c/o E. P. Hyatt, La Mesa, San Diego County, Cal.,

for 50 c.f.s. and 18,000 ac. ft. per annum, from Santa Ysabel Creek tributary to San Dieguito River to be diverted in Sec. 19, T. 12 S., R. 3 E., S. B. B. and M., for irrigation and domestic purposes.

HUMBOLDT COUNTY.—Application 6832. Emmett Lewis, c/o Maple Creek Stage, Korb, Cal., for 0.662 c.f.s. from unnamed spring tributary to Mad River to be diverted in Sec. 7, T. 3 N., R. 4 E., H. B. and M., for irrigation and domestic purposes (3 acres).

SISKIYOU COUNTY.—Application 6833. Fred J. Blakeley, c/o Butler, Van Dyke, Desmond & Harris, Attorneys, Capital National Bank Bldg., Sacramento, Cal., for 25 c.f.s. and 4000 ac. ft. per annum, from Elliott Creek tributary to Applegate River, Oregon, to be diverted in Sec. 24, T. 45 N., R. 10 W., M. D. B. and M., for irrigation purposes (6000 acres). Estimated cost \$50,000.

SIERRA COUNTY.—Application 6834. Langdon Smith, c/o R. F. Taylor, Downieville, Cal., for 0.903 c.f.s. from unnamed spring tributary to Spanish Ravine and North Fork Yuba River to be diverted in Sec. 5, T. 19 N., R. 10 E., M. D. B. and M., for domestic purposes. Estimated cost \$500.

HUMBOLDT COUNTY.—Application 6835. Benbow Power Co., Benbow, Humboldt County, Cal., for 320 c.f.s. from South Fork of Eel River tributary to Eel River to be diverted in Sec. 36, T. 4 S., R. 3 E., H. B. and M., for power purposes (982 h.p.).

MARIPOSA COUNTY.—Application 6836. Mrs. Estelle I. Fraser of Coulterville, Mariposa County, Cal., for 39 c.f.s. from North Fork of Merced River tributary to Merced River to be diverted in Sec. 7, T. 3 S., R. 18 E., M. D. B. and M., for power purposes (161 h.p.).

MONTEREY COUNTY.—Application 6837. Henrietta T. Austin, P. O. Box 522, Salinas, Cal., for 0.075 c.f.s. from unnamed stream tributary to Carmel River to be diverted in Sec. 2, T. 17 S., R. 2 E., M. D. B. and M., for irrigation and domestic purposes (4 acres).

SAN DIEGO COUNTY.—Application 6838. Larry Dominguez, Box 27, Julian, Cal., for 1.875 c.f.s. from spring tributary to Carrizo Creek to be diverted in Sec. 24, T. 14 S., R. 7 E., S. B. B. and M., for irrigation and domestic purposes (80 acres). Estimated cost \$5,000.

Permits to Appropriate Water Issued by the Department of Public Works, Division of Water Resources, During the Month of November, 1930.

SAN BERNARDINO COUNTY.—Permit 3600. Application 6706. Geo. Thilth, Highland, Cal., November 3, 1930, for 0.003 c.f.s. from unnamed spring in Sec. 23, T. 2 N., R. 2 W., S. B., for domestic use. Estimated cost \$560.

EL DORADO COUNTY.—Permit 3601. Application 6761. John M. Ochsner, Sacramento, Cal., November 6, 1930, for 0.0003 c.f.s. from unnamed spring in Sec. 23, T. 11 N., R. 15 E., M. D., for domestic purposes. Estimated cost \$60.

LOS ANGELES COUNTY.—Permit 3602. Application 5555. John Kasper, Tat, Cal., November 6, 1930, for 25 c.f.s. from Fall Canyon in Sec. 13, T. 5 N., R. 15 W., S. B., for mining purposes. Estimated cost \$2,500.

SANTA CRUZ COUNTY.—Permit 3603. Application 5297. Felton Water Co., Felton, Cal., November 6, 1930, for 0.232 c.f.s. from Bennett Creek and Shingle Mill Creek in Sec. 21, T. 10 S., R. 2 W., M. D., for domestic purposes. Estimated cost \$5,000.

SANTA CRUZ COUNTY.—Permit 3604. Application 5298. Felton Water Co., Felton, Cal., November 6, 1930, for 0.232 c.f.s. from Bennett Creek and Shingle Creek in Sec. 21, T. 10 S., R. 2 W., M. D., for irrigation on 283.4 acres. Estimated cost \$5,000.

SANTA CRUZ COUNTY.—Permit 3605. Application 5299. Felton Water Co., Felton, Cal., November 6, 1930, for 0.232 c.f.s. from Bennett Creek and Shingle Mill Creek in Sec. 21, T. 10 S., R. 2 W., M. D., for municipal purposes. Estimated cost \$5,000.

SAN DIEGO COUNTY.—Permit 3606. Application 6360. Robert C. McCull, Imperial, Cal., November 7, 1930, for 2 c.f.s. from stream in Storm Canyon in Sec. 35, T. 14 S., R. 5 E., S. B., for irrigation and domestic uses on 120 acres. Estimated cost \$5,000.

ALAMEDA COUNTY.—Permit 3607. Application 6707. East Bay Municipal Utility District, Oakland, Cal., November 7, 1930, for 42 c.f.s. and 41,436 ac. ft. per annum from seven streams tributary to San Leandro Bay in Sec. 6, T. 2 S., R. 2 W., M. D., for municipal use. Estimated cost \$1,377,000.

SACRAMENTO COUNTY.—Permit 3608. Application 6758. A. L. White, Sacramento, Cal., November 7, 1930, for 1 c.f.s. from Sacramento River in Sec. 35,

T. 10 N., R. 3 E., M. D., for irrigation use on 50 acres. Estimated cost \$2,000.

SAN JOAQUIN COUNTY—Permit 3609, Application 6767. E. E. Hahn, Stockton, Cal., November 7, 1930, for 0.55 c.f.s. from French Camp Slough in Sec. 6, T. 1 S., R. 7 E., M. D., for irrigation use on 75.4 acres. Estimated cost \$3600.

SAN MATEO COUNTY—Permit 3610, Application 5670. Butano Land and Development Co., Los Altos, Cal., November 10, 1930, for 0.67 c.f.s. Butano Creek in Sec. 17, T. 8 S., R. 4 W., M. D., for domestic purposes. Estimated cost \$10,000.

SAN MATEO COUNTY—Permit 3611, Application 5671. Butano Land and Development Co. of Palo Alto, California, November 10, 1930, for 0.033 c.f.s. from 3 unnamed springs and an unnamed stream in Sec. 17, T. 8 S., R. 4 W., M. D., for domestic purposes. Estimated cost \$1,000.

SAN MATEO COUNTY—Permit 3612, Application 6121. Bertha A. Wildes, Piedmont, Cal., November 10, 1930, for 0.2 c.f.s. from 4 springs and Butano Creek in Secs. 19 and 20, T. 8 S., R. 4 W., M. D., for use for irrigation, domestic and maintenance of fish ponds on 200 acres.

PLUMAS COUNTY—Permit 3613, Application 6591. J. W. McKay and Merritt J. Reed, Meadow Valley, Cal., November 12, 1930, for 0.02 c.f.s. from Deadwood Creek in Sec. 28, T. 24 N., R. 8 E., for mining and domestic purposes. Estimated cost \$200.

SAN BERNARDINO COUNTY—Permit 3614, Application 6751. J. Richard Haas, Glendale, Cal., November 17, 1930, for 0.01 c.f.s. from an unnamed spring in Sec. 5, T. 2 N., R. 2 E., S. B., for domestic, stock and garden purposes. Estimated cost \$50.

SUTTER COUNTY—Permit 3615, Application 6486. Scott F. Ennis and Edward S. Brown, Sacramento, Calif., November 13, 1930, 60 c.f.s. from Sacramento River in Sec. 15, T. 14 N., R. 1 E., M. D., for irrigation use on 2432 acres. Estimated cost \$41,000.

RIVERSIDE COUNTY—Permit 3616, Application 6633. W. R. Peeler, Elsinore, Cal., November 20, 1930, for 0.0025 c.f.s. from a spring in Sec. 24, T. 6 S., R. 5 W., S. B., for domestic purposes. Estimated cost \$500.

LOS ANGELES COUNTY—Permit 3617, Application 4639. City of Arcadia, November 24, 1930, for 2 c.f.s. and 2500 ac. ft. per annum from Santa Anita Creek in Sec. 10, T. 1 N., R. 11 W., S. B. M., for municipal and domestic purposes. Estimated cost \$5,000.

LOS ANGELES COUNTY—Permit 3618, Application 4058. City of Sierra Madre, November 24, 1930, for 4 c.f.s. and 2000 ac. ft. per annum from Big Santa Anita Creek in Sec. 10, T. 1 N., R. 11 W., S. B., for domestic purposes. Estimated cost \$75,000.

LOS ANGELES COUNTY—Permit 3619, Application 2498. Security First National Bank of Los Angeles, Los Angeles, Cal., November 24, 1930, for 3000 ac. ft. per annum from Santa Anita Creek in Sec. 10, T. 1 N., R. 11 W., S. B., for domestic use. Estimated cost \$100,000.

LOS ANGELES COUNTY—Permit 3620, Application 5997. Security First National Bank of Los Angeles, Los Angeles, Cal., November 24, 1930, for 3000 ac. ft. per annum from Santa Anita Creek in Sec. 10, T. 1 N., R. 11 W., S. B. M., for domestic use. Estimated cost \$100,000.

SUTTER COUNTY—Permit 3621, Application 6726. B. P. Lilienthal, trustee, San Francisco, Cal., November 25, 1930, for 5 c.f.s. from Sacramento River in Sec. 11, T. 15 N., R. 1 W., M. D., for irrigation use on 200 acres. Estimated cost \$5,000.

MONTREY COUNTY—Permit 3622, Application 6718. El Sur Land and Cattle Co., Pebble Beach, Cal., November 25, 1930, for 12 c.f.s. from Big Sur River in Sec. 16, T. 19 S., R. 1 E., M. D., for irrigation use on 1024 acres. Estimated cost \$56,030.

RIVERSIDE COUNTY—Permit 3623, Application 1752. Temescal Water Co., Corona, Cal., November 29, 1930, for 12,000 ac. ft. per annum from San Jacinto River in Sec. 3, T. 4 N., R. 7 W., S. B. M., for irrigation of 5000 acres. Estimated cost \$100,000.

RIVERSIDE COUNTY—Permit 3624, Application 2341. Lake Hemet Water Co., Hemet, California, November 29, 1930, 18,000 ac. ft. per annum from Strawberry Creek, Dry Creek and Harthorn Creek in Secs. 23, 25 and 26, T. 5 S., R. 2 W., S. B., for irrigation and domestic use on 12,508.64 acres. Estimated cost \$665,000.

"Ma, is it right to say that you 'water a horse' when you give him a drink?"

"Yes, son."

"Well, then, I'm going to milk the cat."

DAM APPLICATIONS

AND APPROVALS

Applications for Approval of Dams Built Prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, During the Month of November, 1930.

SIERRA COUNTY—Packer Lake Dam No. 294-6. E. A. and J. O. Hayes, San Jose, owners; rock and earth, 7.7 feet above streambed with a storage capacity of 70 acre-feet, situated on Packer Creek tributary to North Fork Yuba River in Sec. 5, T. 20 N., R. 12 E., M. D. B. and M., for storage purposes for power use.

SIERRA COUNTY—Deer Lake Dam No. 294-7. E. A. and J. O. Hayes, San Jose, owners; earthfill, with a storage capacity of 70 acre-feet, situated on tributary of Salmon Creek tributary to Yuba River in Sec. 31, T. 21 N., R. 12 E., M. D. B. and M., for storage purposes for power use.

SHASTA COUNTY—Hat Creek No. 1 Diversion Dam No. 97-97. Mt. Shasta Power Corp., San Francisco, owner; rock crib, 63 feet above streambed, situated on Hat Creek tributary to Pit River in Sec. 5, T. 35 N., R. 4 E., M. D. B. and M.

TUOLUMNE COUNTY—Big Dam No. 97-102. Sierra and San Francisco Power Co., San Francisco, owner; crib dam, 35 feet above streambed with a storage capacity of 1890 acre-feet, situated on South Fork Stanislaus River tributary to Stanislaus River in Sec. 9, T. 4 N., R. 9 E., M. D. B. and M.

TRINITY COUNTY—Lower Stuarts Fork Dam No. 212. La Grange Placers, Inc., Los Angeles, owner; rock fill, 15 feet above streambed, situated on Stuarts Fork Creek tributary to Trinity River in Sec. 3, T. 36 N., R. 10 W., M. D. B. and M., for storage purposes for mining use.

SAN MATEO COUNTY—Fleishacker Dam No. 609. Mortimer Fleishacker, Woodside, owner; earth fill, 39 feet above streambed with a storage capacity of 1175 acre-feet, situated on unnamed creek tributary to San Gregorio Creek.

PLUMAS COUNTY—Taylor Lake Dam No. 288. J. L. and Elizabeth Robinson, Reno, Nevada, owners; rock and earth dam, 10 feet above streambed with a storage capacity of 200 acre-feet, situated on Hungry Creek tributary to Indian Creek in Sec. 35, T. 27 N., R. 1 E., M. D. B. and M., for storage purposes for irrigation use.

TEHAMA COUNTY—Stewart Dam No. 262. Jesse I. Selvester, Cottonwood, owner; earth dam, 11 feet above streambed with a storage capacity of 10 acre-feet, situated on drainage tributary to Cottonwood Creek.

MODOC COUNTY—Ralston Dam No. 151-2. James M. Fitzhugh, Alturas, owner; timber dam, 5 feet above streambed with a storage capacity of 50 acre-feet, situated on Pit River tributary to Sacramento River in Sec. 3, T. 41 N., R. 10 E., M. D. B. and M., for diversion purposes for irrigation use.

MONO COUNTY—Dexter Creek Dam No. 532. Wm. Symons, Hammil, owner; earth dam, 181 feet above streambed with a storage capacity of 536.68 acre-feet, situated on Dexter Creek tributary to Adobe Creek in Sec. 12, T. 1 S., R. 29 E., M. D. B. and M., for diversion purposes for irrigation use.

Applications for Approval of Plans and Specifications for Construction or Enlargement of Dams filed with the State Department of Public Works, Division of Water Resources, during the Month of November, 1930.

CONTRA COSTA COUNTY—Port Costa Reservoir No. 581-2. California Water Service Company, San Francisco, owner; earth dam, 39 feet above streambed with a storage capacity of 41.7 acre-feet, located in Sec. 3, T. 2 N., R. 3 W., M. D. B. and M., for storage purposes for domestic and industrial use. Estimated cost of enlargement \$5,434. Fees paid \$54.34.

Applications for Approval of Plans and Specifications for Repair or Alteration of Dams Filed with the State Department of Public Works, Division of Water Resources, During the Month of November, 1930.

CONTRA COSTA COUNTY—Port Costa Dam No. 581-2. California Water Service Company, San Francisco, owner; earth dam, 39 feet above streambed with a storage capacity of 41.7 acre-feet, located in Sec. 3, T. 2 N., R. 3 W., M. D. B. and M., for storage purposes for domestic and industrial use. Estimated cost of enlargement \$5,434. Fees paid \$54.34.

cisco, owner; earth dam, located in Sec. 3, T. 2 N., R. 3 W., M. D. B. and M.

CONTRA COSTA COUNTY—Cheney Dam No. 581. California Water Service Company, San Francisco, owner; earth fill dam, located in Sec. 13, T. 2 N., R. 2 W., M. D. B. and M.

MODOC COUNTY—Bayley Dam No. 128-3. Modoc Feeding Company, Likely, owner; earth dam, situated on Crooks Canyon tributary to South Fork Pitt River in Sec. 32, T. 40 N., R. 12 E., M. D. B. and M.

SIERRA COUNTY—Lower Fairplay Dam No. 296-4. W. P. Stiles, Shreveport, Louisiana, owner; earth dam, situated in T. 20 N., R. 9 E., M. D. B. and M.

SAN BERNARDINO COUNTY—Running Springs Dam No. 806. Running Springs Park, Inc., Los Angeles, owner; earth dam, situated on tributary to Deep Creek.

SAN BERNARDINO COUNTY—Chino Ranch No. 1, No. 801. Wm. Rowland Estate, Scott Investment Co. and Chandis Sec. Co., Los Angeles, owners; earth fill, situated on Branch of Brea Canyon in Sec. 13, T. 2 S., R. 9 W., S. B. B. and M.

SACRAMENTO AND PLACER COUNTIES—Baldwin Reservoir A and B, No. 324-2. North Fork Ditch Company, San Francisco, owner; earth fill, situated on unnamed creek tributary to Linda Creek in Sec. 14, T. 10 N., R. 7 E., M. D. B. and M.

LASSEN COUNTY—Lexalt Dam No. 248. Peter Lexalt, Madeline, owner; earth dam, situated on McDonald Creek tributary to Madeline Plains in Sec. 2, T. 36 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—White Reservoir No. 151. James M. Fitzhugh, Alturas, owner; earth dam, situated on unnamed gulch tributary to Pitt River in Sec. 26, T. 41 N., R. 10 E., M. D. B. and M.

MODOC COUNTY—Courtwright Dam No. 155. R. Anchordoguy, Red Bluff, owner; earth dam, situated on Happy Camp Creek in Sec. 15, T. 42 N., R. 7 E., M. D. B. and M.

SAN BERNARDINO COUNTY—Chino Ranch No. 2, No. 801-2. W. Astley, Los Angeles, owner; earth dam, situated on Branch of Brea Canyon in Sec. 13, T. 2 S., R. 9 W., S. B. B. and M.

SAN BERNARDINO COUNTY—Chino Ranch No. 3, No. 801-3. W. Astley, Los Angeles, owner; arch dam, situated on Branch of Brea Canyon, located in Sec. 13, T. 2 S., R. 9 W., S. B. B. and M.

CONTRA COSTA COUNTY—Port Costa Brick Works Dam No. 585. Port Costa Brick Works, Port Costa, owner; earth dam situated on a ravine.

SAN BERNARDINO COUNTY—Los Cerranos Dam No. 808. Davidson Investment Company, Long Beach, owner; earth dam.

RIVERSIDE COUNTY—Alvord (Sanborn) Dam No. 815. Riverside Water Company, Riverside, owner; earth fill dam, located in S², Sec. 23, T. 3 S., R. 6 W., S. B. B. and M.

RIVERSIDE COUNTY—Mocking Bird Canyon Dam No. 814. Gage Canal Company, Riverside, owner; situated in Mocking Bird Canyon in Sec. 20, T. 3 S., R. 5 W., S. B. B. and M.

PLANS APPROVED

Plans and Specifications for the Construction or Enlargement of Dams Approved by the State Department of Public Works, Division of Water Resources, During the Month of November, 1930.

STANISLAUS COUNTY—La Grange Dam No. 68-2. Turlock and Modesto Irrigation Districts, Turlock and Modesto, owners; gravity arch dam, situated on Tuolumne River tributary to San Joaquin River in Sec. 16, T. 3 S., R. 14 E., M. D. B. and M.

ORANGE COUNTY—Peters Canyon Dam No. 793-2. The Irvine Company, Tustin, owner; earth dam, 41 feet above streambed with a storage capacity of 1090 acre-feet, situated on Veters Canyon located in Block 16, Irvine's Subdivision, for storage purposes for irrigation use.

Plans for the Repair or Alteration of Dams Approved by the State Department of Public Works, Division of Water Resources, During the Month of November, 1930.

MODOC COUNTY—Payne Dam No. 143. H. G. and R. A. Payne and G. P. French, Alturas, owners; earth dam, situated on unnamed drainage tributary to South Fork Pitt River in Sec. 15, T. 41 N., R. 13 E., M. D. B. and M.

NEVADA COUNTY—Sawmill Dam No. 61-10. Nevada Irrigation District, Grass Valley, owner; rock dam, situated on Canyon Creek tributary to South Yuba River in Sec. 11, T. 18 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Middle Lake Dam No. 61-13. Nevada Irrigation District, Grass Valley, owner; rock and earth dam, situated on South Fork Canyon Creek, tributary to South Yuba River in Sec. 23, T. 18 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—Little Juniper Dam No. 136. G. M. and J. E. Clark, Alturas, owners; earth dam, situated on Little Juniper Creek tributary to Pitt River in Sec. 4, T. 40 N., R. 12 E., M. D. B. and M.

MODOC COUNTY—James Porter Dam No. 142. James C. and Phear F. Porter, Alturas, owners; earth dam, situated on unnamed drainage tributary to Parker Creek, located in Sec. 1, T. 42 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—James Flat Dam No. 121. W. O. Blasingame and Fred Huffman, Alturas, owners; earth dam, situated on Mosquito Creek tributary to Willow Creek in Sec. 25, T. 47 N., R. 16 E., M. D. B. and M.

MODOC COUNTY—Antelope Dam No. 121-3. W. O. Blasingame and Fred Huffman, Alturas, owners; earth dam, situated on Antelope Plains tributary to Pitt River in Sec. 11, T. 43 N., R. 10 E., M. D. B. and M.

MODOC COUNTY—Esse Dam No. 121-2. S. N. Ranch, Alturas, owner; earth dam, situated on Salsbury Creek tributary to Pitt River in Sec. 6, T. 42 N., R. 11 E., M. D. B. and M.

MARIPOSA COUNTY—Mountain King Dam No. 95-11. San Joaquin Light and Power Corp., Fresno, owner; gravity dam, situated on Merced River tributary to San Joaquin River in Sec. 1, T. 4 S., R. 17 E., M. D. B. and M.

LOS ANGELES COUNTY—Mulholland Dam No. 67. City of Los Angeles, Los Angeles, owner; gravity dam, situated on Weid Canyon in Sec. 3, T. 1 S., R. 14 W., S. B. B. and M.

NEVADA COUNTY—Van Geisen Dam No. 61-9. Nevada Irrigation District, Grass Valley, owner; situated on Bear River tributary to Yuba River in Sec. 2, T. 13 N., R. 8 E., M. D. B. and M.

SANTA CLARA COUNTY—Lake Ranch Dam No. 622. San Jose Water Works, San Jose, owner; earth dam, situated on Beardsley Creek tributary to Los Gatos Creek in Sec. 23, T. 8 S., R. 2 W., M. D. B. and M.

MODOC COUNTY—Bayley Dam No. 128-3. Modoc Feeding Company, Likely, owner; earth dam, situated on Crooks Canyon tributary to South Fork Pitt River in Sec. 32, T. 40 N., R. 12 E., M. D. B. and M.

SACRAMENTO AND PLACER COUNTIES—Baldwin Dam No. 324-2. North Fork Ditch Company, Sacramento, owner; earth dam, situated on unnamed creek tributary to Linda Creek in Sec. 14, T. 10 N., R. 7 E., M. D. B. and M.

SONOMA COUNTY—Lawler Reservoir No. 581-3. California Water Service Company, San Francisco, owner; earth dam, situated on North Creek tributary to Adobe Creek in Sec. 12, T. 5 N., R. 7 W., M. D. B. and M.

LASSEN COUNTY—Lake Leavitt Dam No. 236-2. Lassen Irrigation District, Standish, owner; earth dam located in Sec. 15, T. 24 N., R. 13 E., M. D. B. and M.

SAN BERNARDINO COUNTY—Running Springs Park Dam No. 806. Running Springs Park, Inc., Los Angeles, owner; earth dam, situated on tributary to Deep Creek.

MODOC COUNTY—White Dam No. 151. James M. Fitzhugh, Alturas, owner; earth dam, situated on unnamed gulch tributary to Pitt River in Sec. 26, T. 41 N., R. 10 E., M. D. B. and M.

LASSEN COUNTY—Lexalt Dam No. 248. Peter Lexalt, Madeline, owner; earth dam situated on McDonald Creek tributary to Madeline Plains in Sec. 2, T. 36 N., R. 13 E., M. D. B. and M.

SANTA CLARA COUNTY—Upper Howell Dam No. 622-3. San Jose Water Works, San Jose, owner; earth dam, situated on Rundell Creek tributary to Los Gatos Creek in Sec. 31, T. 8 S., R. 1 W., M. D. B. and M.

CONTRA COSTA COUNTY—Port Costa Brick Works Dam No. 585. Port Costa Brick Works, Port Costa, owner; earth dam situated on a ravine.

Green is not used in the color scheme of automobiles in Persia and Asia, as it is considered sacred and in Japan is reserved for members of the imperial family.

My Highway Creed

By JAMES ROLPH, JR., Governor of California

I AM INTENSELY interested in the highways of California, for it is over these highways that the life of the state is flowing.

Some think of highways in terms of traffic only; others in terms of engineering and materials; still others in terms of mileage and location. I do not minimize the importance of any of these factors. But I like to think of our highways in California as alive and vital. I like to consider them in terms of human values.

Over these highways that we have built and are building, the thoughts, the ideas, and the ideals of a whole people are flowing.

Over these highways the great traditions of our great state are flowing.

Over these highways the civilization of the past is merging into the civilization of the present, and the civilization of the present is flowing into that of the future.

The highways of California are also making every part of California the common possession of every other part.

The people of the North have the common right to enjoy with the people of the South the entrancing beaches, the spectacular deserts, the amazing cities and the wonderful communities that have made the Southland envied around the world.

And the people of the South have also the right to enjoy with the North the glory of the Redwoods, the majesty of the Sierras, and the lure and romance that have made our northern cities loved around the world.

By reason of our highways the coast belongs to the valley, and the valley to the coast.

Yosemite, Lassen, Tahoe, Shasta—all these and countless other attractions have been written into the lives of our people by reason of our highways.

Our highways are also doing an even greater work. They are acquainting our people with each other.

Lack of acquaintanceship begets sectionalism, and sectionalism begets suspicion.

Neighborliness on the other hand is the hand servant of trust, confidence and friendship.

Our highways are making the people of California neighborly, and in that they are dealing a deathblow to the spirit of selfish sectionalism.

The California state highway system has been well started. Our task is its early completion. And in doing this we should keep in mind a few simple, yet important standards to guide our endeavor and to measure our success.

The roads of California must be so built that they both are adequate for traffic needs, and that they also invite and encourage the free flow of travel from every part of the state to every other part.

The highways of California must be made as safe for travel as it is humanly possible so to do.

The highways of California, through beautification and adornment, must be made pleasant and attractive to travel.

If we build highways in this way, we can know that the lives of the people of California will be enriched many times over the cost of the highways to us.

And it is my firm determination so to build.

ROLPH INAUGURALISMS

The greatest business of the State is the business of Government.

Government should be conducted on lines of economy, but not on a basis of parsimony.

Let us face 1931 with heads up and shoulders back, looking forward with serene confidence in the destiny of our State.

I wish to imbue the people of California with my own faith in California.

All California needs right now to bring about recovery is a spirit of confidence and quick response to courageous leadership; the state of mind which says, "I will," instead of "I can not."

Build Together for California

By COLONEL WALTER E. GARRISON, Director of the Department of Public Works

THE Department of Public Works is so integrally connected with the development of California, and the growth and prosperity of its every part, that I feel a heavy sense of responsibility not only to the state but to every county and community in it, as I assume the duties of Director of the Department.

The reason for this will be apparent to all when it is remembered that the Department of Public Works deals directly with the construction, maintenance and operation of California's state highways, its water resources, and both the planning and building of its state institutions.

The completion of our highway system, the workmanlike construction of roads, and their proper location require the most careful thought, the exercise of sound business judgment, and absolute fairness to every section of California.

The growth of California depends in large measure upon the solution of the difficult water problems that confront the state.

One test of the humanity of California is the manner in which it cares for the wards of the state. Our state institutions must be planned and built to meet this test.

But the major phases of these problems have been stated. Each major problem involves a multitude of minor problems. Responsibility for their proper solution lies largely with the Department of Public Works.

If we look only at the problems, the task that confronts the Department would indeed be discouraging. Fortunately there is another side to the picture.

The history of California is written in terms of difficulties surmounted, of obstacles

overcome, of problems, apparently unsolvable, successfully solved.

The greatest legacy of the pioneer days to California is the genius of its people for accomplishing the seemingly impossible, and of achieving the seemingly unachievable.

This heritage still remains with our people. We largely pioneered the construction of improved highways in the nation. We have done much pioneering in our water development. The same ability of our people to solve highway and water problems in the past, will enable us to solve these problems in the future.

My own work is first to gather information and to collect, assemble and analyze facts. With these facts as a foundation, policies and programs for constructive action can then be formulated.

California is a large state. The highway problems of the whole

world are found in its mountains and deserts, in its valleys and along its coasts. The water problems of the world are also found here, with a few peculiarly our own thrown in for good measure.

The solution of these problems is too large a task for any one man. It is too large a task for any staff of experts, however skilled such staff may be. It requires the collective wisdom and the constructive thought of the people of the whole state.

It is this assistance that I want, and I know that Governor Rolph wants the same.

During the coming four years it is my hope that the Department of Public Works will be the clearing house for highway, water and institutional information from every community in California. I want also to be

COLONEL WALTER E. GARRISON

Appointed by Governor Rolph as Director of the Department of Public Works, brings to the department a long experience in matters with which the department is chiefly concerned. As one of the most extensive vineyardists in California, Colonel Garrison knows the water problems of this state from the point of view both of a practical irrigationist, and of one who has been active in the development of water for irrigation. In highway matters Colonel Garrison has been a prominent proponent of the cause of good roads since the earliest state highway days. He has been particularly active in the development of improved highways in Stanislaus and San Joaquin counties, where he has made his home since his birth.

Colonel Garrison has had extensive business experience both in growing grapes and in their marketing. His vineyards are in the Lodi district.

Colonel Garrison also brings to the administration a distinguished war record. He served with honor in the Philippines during the Spanish-American War. He was wounded twice in action in the World War, and his valor on the field of battle won for him an award from the French Government of the greatly coveted Croix de Guerre. He is now an active officer with the 181st Brigade, attached to the 91st Division.

COLONEL WALTER E. GARRISON

told the hopes and the ambitions of these communities for their own growth and development. By such cooperation in constructive endeavor, these four years can be made

outstanding in California as a period of sound and prosperous expansion, and as an era of comfort, contentment and well-being on the part of its people.

The Task Before The California Highway Commission

By EARL LEE KELLY, Chairman of the California Highway Commission.

THE state highways of California have contributed so largely to making California what it is today that it is, indeed, a great privilege to be assigned an active part in building and maintaining these roads.

I know that I speak for all the members of the California Highway Commission when I say that we are determined that the period for which Governor Rolph has entrusted us with responsibility in state highway matters shall be years of active development.

It is, of course, impossible for newly appointed members of a commission to speak in anything but general terms of either state highway policies or state highway plans. This becomes very apparent when it is realized that state highway activities on the one hand are as far reaching as California itself, and, on the other hand are so detailed that they cover by minute specifications and order every foot of highway in the state system.

There are some general features of the work, however, that have impressed themselves on me.

There is a need for a balanced development of our highway program. The roads in the rural sections of the state must be developed both to take care of their own traffic needs, and also to provide transportation facilities in and out of the metropolitan centers. Governor Rolph expressed this thought in his very able inaugural address.

California is rapidly becoming the playground for the nation and the development of recreational highways is, therefore, a matter in which the whole state has a very direct financial and social interest. Accordingly, the measure of support given these roads cannot be judged by census figures of population living along them, but must be determined by the recreational service to the whole state that their improvement will make possible.

Commercial highways in California must be both located and designed to enable both present traffic to be served and future traffic to be cared for without undue and unnecessary cost in expansion of highway expenditures.

We must be ever watchful that the revenues of the California highway system be protected against diversion to other than highway uses. Fairness to motorists, who are paying the highway bill, requires this. Fair-

Earl Lee Kelly

ness to the highway system makes the same demand. Unless these revenues are so protected, the completion of our state system will be delayed for many years to the consequent injury of the whole state.

In a period of unemployment such as we are having at the present time, it is the duty of those in charge of public works through an expansion of their program, to point out the path to private industry and to lead the way to a larger volume of employment, with its resultant relief of both public and personal distress.

These are some of the tasks to which the California Highway Commission has committed itself.

I desire to say that our every effort will be exerted to reflect credit upon our new Governor and to assist him in making the next four years outstanding in the history of California—an era of friendly, sound and economical businesslike administration.

(Continued on page 5.)

The New State Highway Commission

Chairman of Highway Board Well Versed In Road Matters

Earl Lee Kelly, chairman of the California Highway Commission, lives in Redding, where he is president and general manager of the Shasta County Title Company. He spent his boyhood days in Humboldt County, graduating from the Eureka High School. He is a graduate of the law department of the University of California with the class of 1915.

After returning from service in the World War, Mr. Kelly engaged in the title and insurance business in Redding, making an outstanding success of this business.

Mr. Kelly has served Redding both on the City Council and as Mayor of the city. He has also been prominent in state political affairs, and is an active member of the Republican State Central Committee.

During his life-long residence in Northern California, Mr. Kelly has become exceptionally well versed in state highway problems and policies, especially as they affect the northwestern coastal counties and the valley and mountain counties of northeastern California. He brings to these problems a seasoned and successful business judgment, gained both in the conduct of his own business, and in the course of his official service as Mayor and City Councilman of Redding.

THE TASK BEFORE THE CALIFORNIA HIGHWAY COMMISSION

(Continued from page 4.)

Therefore, on behalf of the California Highway Commission, I ask that cooperation in state highway matters so aptly described by Governor Rolph in his inaugural address as

"a disposition among all of our people to bear with one another in the differences which naturally exist among us in order that we may all cooperate in the many matters in which we are or should be in full accord. If we take counsel among ourselves in a spirit of true charity we are certain to be an harmonious and happy people."

Banker: I suppose that is the hired man."

Farmer: "No, that's the fourth Vice President in charge of Cows."

Road Interests of Central State are In Expert Hands

Harry A. Hopkins, selected by Governor Rolph as a member of the California Highway Commission, has long been a prominent figure in the development of the San Joaquin Valley.

Harry A. Hopkins

His home for the past twenty-seven years has been in Kern County, and for twenty-one years in Taft. Mr. Hopkins served as the first postmaster of Taft, he naming the city after President Taft. He served this city as its mayor from 1912 to 1914, and as councilman for eight years, and since retiring from public office to private business as manager of the Taft Ice Company, he has worked unceasingly in public affairs. His interest in these matters has included not only Taft and

Kern County, but the state as a whole, and has covered a wide range from civic promotion and betterment activities to service in patriotic organizations, particularly the Red Cross.

Mr. Hopkins brings to the new work to which he has been appointed a successful experience both in private and public business affairs. He also brings an exceptionally intimate knowledge of the highway needs both of the San Joaquin Valley and the central portion of the state generally.

Timothy A. Reardon Is Heir to Pioneer Qualities of Parents

Few men in California have had greater experience in the conduct of public work than Timothy A. Reardon, appointed by Governor Rolph as a member of the California Highway Commission from San Francisco.

Mr. Reardon was born of pioneer parents, his father coming to California in 1850 and his mother in 1852. The qualities of unflinching courage, shrewd intelligence and unbounding energy, characteristic of the pioneers, were the invaluable legacy that these pioneer parents left to their children. Beginning his life as a mechanic apprentice, these qualities enabled Mr. Reardon to fight his way to the presidency of the powerful and important Board of Public Works of San Francisco. These same qualities lead Governor Rolph to name Mr. Reardon as a member of the California Highway Commission.

As president of the Board of Public Works, and appointed to that position when Governor Rolph was first selected Mayor of San Francisco, Mr. Reardon has been in active charge under Mr. Rolph of the rebuilding of San Francisco. Under his administration as President of the Board of Public Works, over \$411,000,000 has been expended. The operations of the Board of Public Works, which include operating as well as construction activities, involve annual expenditures approximating \$30,000,000.

Before his appointment to the presidency of the Board of Public Works of San Francisco, Mr. Reardon served that city as Superintendent of Public Works. It was the service performed in that capacity that lead to his promotion to the presidency of the board having public works in charge.

Mr. Reardon's appointment to the California Highway Commission makes the vast

Timothy A. Reardon

fund of knowledge and experience he has gained in over twenty years of active control of San Francisco's building and operating program available to the whole State of California. This appointment came as a complete surprise to him. He was in Sacramento congratulating Governor Rolph upon the latter's active assumption of the duties of chief executive. Mr. Reardon was about to leave for home when the appointment was made. As he stepped up to shake hands with Mr. Rolph, the Governor placed the commission in his hands.

New Commissioner Has Had Big Part in Building Southland

FRANK A. Tetley of Riverside, appointed by Governor Rolph to the California Highway Commission, is outstanding in the development of southern California. Born in Moscow, Russia, of English parentage, he came to the United States when three years of age. He celebrated his coming to majority by immediately moving to California, locating in Riverside.

In Riverside Mr. Tetley found his first employment with Frank A. Miller of the Mission

Philip A. Stanton has Long and Distinguished Record of Achievement

Philip A. Stanton of Anaheim, appointed by Governor Rolph as a member of the California Highway Commission, has won, through public service and personal achievement, the distinguished honor of a place in "Who's Who in America." Born in Ohio, Mr. Stanton came to California in 1887, then a youth of nineteen years. Three towns in southern California, Huntington Beach, Seal Beach and Stanton, were founded through his vision and constructive genius.

Mr. Stanton is president of four important water and land companies. In addition to

Frank A. Tetley

Inn. Later he entered the real estate and insurance business.

Believing in the California citrus industry, Mr. Tetley started in 1900 in the citrus nursery business. He has continued in this business for over 30 years. During this time he has produced and sold over 1,000,000 trees, and has improved and reclaimed over 1250 acres of land by installing wells and pumping plants.

Mr. Tetley has been in the banking business for thirty years and is at present a director in the Citizens National Trust & Savings Bank of Riverside, vice president of the Security Savings Bank of Riverside and a director in the Citizens Bank of Arlington, California. He served for several years on the Board of Public Utilities of Riverside.

Philip A. Stanton

"Lapland is the most thinly populated country in the world," says a contemporary. It doesn't say how many Lapps there are to the mile.—*The Passing Show*.

Single Gent: "What's the best month to get married in?"

Married Person: "Octemburary."

Single Gent: "Why, there's no such month."

Married Person: "Just so."

this he qualifies as an 'honest to God' farmer, as the greater part of his time is now spent on and in the active management of his 250-acre ranch at Stanton, which is largely planted to oranges and walnuts.

(Continued on page 12.)

State Highway Budget For 1931-1933 Biennium Presented to State Legislature

THE biennial state highway budget recommending expenditures of \$63,322,500 upon the state highway system for the ensuing two fiscal years was presented to the State Legislature on Monday, January 12th, by Governor Rolph.

The budget covers contemplated expenditures for all state highway purposes including construction, reconstruction, maintenance, purchase of rights of way, engineering and administrative costs. The distribution of the money between northern and southern counties, and between primary and secondary highways is in accordance with the provisions of the Breed Bill.

While the budget is for the fiscal years of July 1, 1931, to June 30, 1933, if previous rulings are followed, the funds provided in the budget will be available for expenditure upon adoption by the Legislature and approval by the Governor. This will enable state highway work to proceed without interruption, a course greatly desired by Governor Rolph and Colonel Garrison, director of the Department of Public Works.

Construction and reconstruction projects included in the budget, as submitted to the Legislature by Governor Rolph are as follows:

REDWOOD HIGHWAY

(San Francisco to Oregon Line Near Monumental)

Grading, structures, 17.3 miles, Cloverdale to Hopland (Mendocino and Sonoma counties), \$900,000. Beginning of construction on new line along the Russian River between Cloverdale and Hopland which will eliminate the present steep and crooked existing road. This section was never undertaken before through fear of slide conditions. The design of the road to be built there provides for these conditions, shortens the distance over $1\frac{1}{2}$ miles, substitutes a light water grade for a long mileage of steep maximum grades.

Grading, structures, armor rock surfacing, 1.4 miles, Little Dam Creek to Leggett (Mendocino County), \$85,000.

Cedar Creek and Dann Creek (Mendocino County), 2 bridges, concrete and steel, \$284,000.

Crescent City to Elk Valley (Del Norte County), 5.3 miles, grading, structures, oil rock surfacing, \$249,000. This completes the present Redwood Highway gap in Del Norte County and locates the road via Crescent City, settling a long existing controversy.

Dyersville bridge and approaches (Humboldt County), \$196,400.

Bridge and approaches over east branch of Eel River at Ben Bow (Humboldt County), \$111,000.

Grading and trestle approaches, Robinson Ferry bridge (Humboldt County), \$51,400.

Slope protection, Hiouchi Bridge to north boundary of Del Norte County, \$50,000.

Grading, structures and armor rock surface, 5.5 miles, Pepperwood School to Farm House Inn (Mendocino County), \$561,000. This provides for the reconstruction of the present narrow, steep and tortuous Rattlesnake Grade in Mendocino County.

Grading and macadam shoulders 11.3 miles, South Scotia bridge to Fortuna (Humboldt County), \$135,600. The present 15-foot pavement will be widened and made safer for the increased traffic using this section of the road.

Grading and oil surfacing, Arnold to Pepperwood School, portions (Mendocino County), \$85,000.

Oil surfacing, Loleta to 2 miles north of Beatrice, 5.3 miles (Humboldt County), \$60,000.

PACIFIC HIGHWAY

(Section from Red Bluff to Oregon Line)

Bridge at Clear Creek (Shasta County), \$57,800.

Bridge at Cottonwood Creek (Siskiyou County), \$18,500.

Oiling surface, 7 miles, 1.3 miles north of Yreka to Klamath River (Siskiyou County), \$22,400.

Grading, oil surfacing, Cottonwood Creek bridge, approaches (Siskiyou County), \$27,600.

PACIFIC HIGHWAY

(East Side—Sacramento to Tehama Junction via Marysville)

Grading and shoulders, 6.3 miles, Shasta Union School to 6 miles north (Butte County), \$28,350.

Grading and pavement, 8.4 miles, Lincoln to Sheridan and Wheatland to Dry Creek (Placer and Yuba counties), \$63,000.

Bridge at Coon Creek (Placer County), \$27,500.

PACIFIC HIGHWAY

(West Side—Tehama Junction to Benicia)

Grading, structures, paving 0.5 of a mile in Wilks (Glenn County), \$25,000.

Oil rock surfacing, 8.9 miles, Williams to Maxwell (Colusa County), \$100,000.

Grading, gravel base and small structures, 4 miles, Williams to 4 miles south (Colusa County), \$80,000.

All three of these projects constitute the progressive improvement of the West Side Highway.

GOLDEN STATE HIGHWAY

(Valley Route—Sacramento to Los Angeles)

Merced River Bridge and approaches (Merced County), \$275,000.

Berenda Slough Bridge (Madera County), \$38,000.

Grading structures and pavement, 0.7 of a mile, Madera city limits northerly, \$40,500.

Bridge over Fresno River (Madera County), \$60,000.

(Continued on page 33.)

James I. Herz, Newly Named Deputy Director Knows His California

James I. Herz, newly appointed Deputy Director of the Department of Public Works, brings to the work a background of experience in administrative and financial affairs and a knowledge of California that will prove

James I. Herz

of great value to the department. He was born in San Francisco, has lived all his life in California, and has at one time or another visited every county in the state. Accordingly he knows his California.

His administrative experience was gained as a member of the San Francisco Board of Supervisors. As deputy director he will have largely to do with the finance of the department. To this he brings a knowledge of financing methods gained in the stock and bond business, and supplemented by legal training.

Mr. Herz is thirty-five years old and is a graduate of the University of California and of Hastings College of the Law. He is a veteran of the World War, and is president of

TRAFFIC OFFICERS ARE GIVEN PRAISE FOR INAUGURAL ASSISTANCE

CITY OF SACRAMENTO
STATE OF CALIFORNIA

January 8, 1931

Motor Vehicle Department,
Sacramento, California.
Gentlemen:

I desire to thank you for your cooperation during the Rolph Inaugural in Sacramento on January 6 and 7.

Please convey to the men who were detailed to assist this Department our sincere thanks. Their work was well done, and many favorable comments were received.

It is only through cooperation such as we received that big affairs of this nature can be properly handled and in closing I wish to again thank you for your assistance.

Very truly yours,

(Signed) W. M. Hallanan,
Chief of Police.

Editorial Lauds Purcell's Retention as Highway Engineer

The fact that C. H. Purcell will remain as State Highway Engineer has been the subject of many congratulatory editorials in the press throughout the state.

The following excerpt from the San Francisco Chronicle, published prior to the inauguration of Governor Rolph, indicates the tenor of many of these editorials.

Mayor Rolph is to be congratulated on his statement that as Governor he will reappoint State Engineer Purcell. This official has given excellent service in the many and highly technical duties of the place, particularly in connection with the San Francisco Bay bridge project. His value to the state has been vastly enhanced by his intimate experience with the fine points of that very delicate matter. If for no other reason than his value to the bay bridge project it would be nothing short of a calamity for the state to lose Engineer Purcell's services at this critical juncture.

State-wide realization of Mr. Purcell's peculiar fitness for the problems at hand brought the importance of retaining him to Mr. Rolph's attention. The Mayor was quick to see the merit of the case and to declare his intentions.

the 91st Division Association and past vice commander of the American Legion.

In addition to electing him a member of the Board of Supervisors, San Francisco has further honored Mr. Herz by selecting him as a member of the War Memorial trustees.

Employment Measures Signed

Governor Rolph signs building employment bill; seated, left to right, Edgar C. Levey, Speaker of the Assembly; Arthur H. Breed, President pro tem of the Senate; Lieutenant Governor Frank C. Merriam; Governor James Rolph, Jr. Standing, left to right, James I. Herz, Deputy Director of the Department of Public Works; Dr. J. M. Foner, Director of the Department of Institutions; Colonel Carlos Huntington, Director of the Department of Professional and Vocational Standards; Assemblyman Robert L. Patterson; Assemblyman Harry F. Sewell, Harold E. Smith, Superintendent of Accounts, Department of Finance; State Architect George B. McDougall, Colonel Walter E. Garrison, Director of the Department of Public Works; C. H. Purcell, State Highway Engineer; Rolland A. Vandegrift, Director of the Department of Finance.

A total of \$10,000,000 in state institution and state highway construction will be under way in California within the next ninety days, Colonel Walter E. Garrison, director of the Department of Public Works, has announced.

Colonel Garrison's statement was made as Governor Rolph signed the bill appropriating \$5,109,600 for state institutional construction. The director lauded the action of the chief executive in signing this bill as an emergency measure. He assured Governor Rolph that the money thus provided would find its way into the hands of labor and trade under orders of full speed ahead.

RED TAPE SLASHED

A new record is being established in placing this program under construction, Colonel Garrison further stated. Red tape has been

ruthlessly slashed in order that the work provided through Governor Rolph's signature to the appropriation bill may be made immediately available to the people of California.

Instanting the manner in which this program is being speeded up, the director stated that the suggestion of Governor Rolph, advertisements for bids on some projects included in the bill signed today by the Governor, had been started even before the Legislature had passed the measure. In this way fully thirty days had been gained in starting actual construction on the projects thus advertised. To speed up the work of preparing plans and specifications for other projects included in the bill signed by Governor Rolph, so that they will be available for contract within six months, Colonel Garrison announced that

architects other than those in the Division of Architecture will be employed.

DISTRIBUTION OF WORK

Included in the \$10,000,000 program scheduled to be under way within ninety days, are \$3,500,000 in building projects for state institutions, and \$6,500,000 in highway projects. The total of \$3,500,000 for state institution projects is in addition to \$988,000 in projects at these institutions, work upon which was started during the present month.

Colonel Garrison estimates that the work at state institutions will provide employment for 900 men during a period of thirteen months. Its wide distribution over the state adds to its value. The highway construction will give additional employment to 2500 men.

"EMPLOYMENT PREPAREDNESS"

"I have been instructed by Governor Rolph to get the state building program under way without a day's unnecessary delay," said Colonel Garrison today. "This is in accordance with the Governor's policy of providing the largest possible amount of public work at this time as a means of relieving unemployment and bettering business conditions. To accomplish this we have been forced to cut red tape and forget precedents. We are inaugurating a policy of 'employment preparedness,' which we believe will relieve unemployment to a very measurable extent, and point out a path for private business to follow. We intend to increase the amount of public work in the succeeding three-month period and instructions to this effect have been given both to the Division of Highways and the Division of Architecture of the State Department of Public Works."

STATEMENT BY GOVERNOR ROLPH

In signing the bill, Governor Rolph stated that the action of the Legislature in making possible the beginning of his building program constitutes a new precedent in appropriation measures for construction at the various institutions, and speeds up the building program at least six or eight months in advance of that which would have been possible had the appropriations taken their regular course in the general appropriation bills.

"Waiter, this pork chop has a piece of steel in it."
"Yes, sir, it came from a razor-back hog."

"I think there is just one thing which keeps you from being a bare-faced liar."

"What's that?"

"Your whiskers."

Hugh K. McKevitt Is Named Attorney for Highway Commission

At the first session of the California Highway Commission, Hugh K. McKevitt, San Francisco attorney, was selected by the commission as its attorney, vice Harry A. Eneell, whose resignation was presented to the commission and accepted by that body.

Hugh K. McKevitt

Mr. McKevitt has been a prominent member of the California bar for many years, and has been closely associated with Governor Rolph in many matters affecting the welfare and upbuilding of San Francisco. Mr. McKevitt has been particularly active in civil service matters, and under appointment by Governor Rolph, then mayor of San Francisco, has served with distinction as a member of the civil service board of that city.

NEW YORK—This state plans for a width of more than 40 feet on all highways by 1940, according to Superintendent of Public Works, Col. Frederick Stuart Greene. The Department of Public Works has adopted such an ultimate road-width map, based upon a traffic survey made in August, 1929.

Captain Cato Heads State Highway Patrol; Outlines Policies

Captain E. Raymond Cato

E. Raymond Cato, superintendent of the California Highway Patrol, succeeding Eugene Biscailuz, has had a long and successful experience in the Los Angeles Police Department. Mr. Cato joined that department in 1910 and by the merit of his service rose to the important position of captain of detectives.

In assuming the office of superintendent of the California Highway Patrol, Captain Cato said:

"I intend seeking for the patrol the full cooperation of police departments, sheriff's offices and law enforcement agencies throughout the state. I want my men to continue the policy of courtesy to motorists and to treat each case on its own merits.

"I aim to make the highways safe by keeping accidents at a minimum through a relentless drive against reckless and intoxicated drivers.

Colonel Garrison Asks U. S. Permit for S. F.-Oakland Bridge

The United States Government has been asked officially to grant a permit to the State of California for the construction of the \$72,000,000 San Francisco-Alameda County bay bridge along the Rincon Hill-Yerba Buena-Alameda mole route.

A request for the permit was sent to the War Department on January 16th by Colonel Walter E. Garrison, director of the State Department of Public Works.

Colonel Garrison acted as a member of and for the California Toll Bridge Authority, consisting of Governor Rolph, Lieutenant Governor Merriam, Highway Engineer Purcell, director of Finance Vandegift.

Simultaneously with the request for the War Department permit came the presentation of a bill in congress by Congresswoman Kahn asking for a permit from that body for the construction of the bridge.

The toll bridge authority, created by the 1929 Legislature to handle the toll bridge problems of the state, held a hurried early morning meeting in Governor Rolph's office and decided to make application for the War Department permit at once so that hearings could be held by the board of army engineers to be appointed from Washington, as soon as the thirty-day period of advertising necessary before the meeting can be called, has elapsed.

PHILIP A. STANTON HAS LONG AND DISTINGUISHED RECORD OF ACHIEVEMENT

(Continued from page 7.)

Mr. Stanton's ability has won for himself a distinguished place in California's political life. He was a member of the state Assembly from 1903 to 1909, serving both as chairman of the Ways and Means Committee and as speaker of the Assembly. During this period much notable legislation was passed including the legislation abolishing race-track gambling and the direct primary law. From 1912 to 1916 he was one of California's representatives in the Republican National Committee. He was also a candidate for the governorship on the Republican primary election of 1910, his candidacy receiving widespread support in all parts of California.

The California System of Compiling Motor Vehicle Accident Statistics

By VICTOR W. KILLICK, Statistician, Division of Motor Vehicles and California Highway Patrol

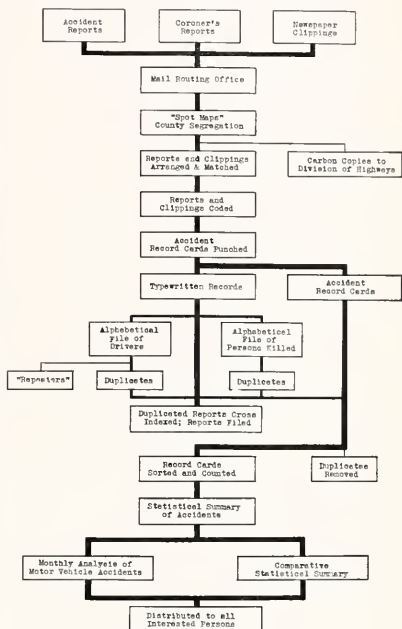

DURING the year 1930 the Division of Motor Vehicles of California introduced a new, complete and practically serviceable statistical system for studying motor vehicle accidents. This improved system has attracted so much attention throughout the United States and in Canada and England that it has become a burden to the statistical bureau adequately to describe the system in responding to hundreds of inquiries. The present purpose is to completely describe the system in a form which can be promulgated readily.

It is a source of gratification, not only to the statistical bureau, but to the heads of the Division of Motor Vehicles, that six other states in the Union are either reorganizing their motor vehicle accident statistical work to conform with the California system or are applying essential phases of it. A marked interest has also been taken by various safety organizations, city and county departments, auto clubs, insurance companies and the public schools.

The outstanding feature of the new California system is its usefulness. To many persons statistics mean only so many figures. As difficult and complex as it is to secure good, consistent and reliable data on traffic accidents, the matter of getting the full use of such statistics in a practical way appears to have been even a greater problem with the states and various organizations. It really requires technically trained persons to fully comprehend the meaning and the limitation of statistical data. Gross misinterpretation, costly and sometimes fatal experiments occur when the use of statistics is attempted by others.

BUREAU OF RESEARCH AND STATISTICS CREATED

In December, 1929, there was created a Bureau of Research, Statistics and Traffic Safety as a subdivision of the California Highway Patrol. Among the functions of this bureau were the gathering of traffic accident statistics throughout the state as required by Section 142 of the California Vehicle Act, together with the application of direct research in addition. The gathering

Routing Diagram of Accident Reports

of the statistics is, of course, fundamental but the application of research puts the statistics to use. These two functions combined form the back-bone of the California system.

The next important step in the organization of the system was the securing of well-trained, thoroughly experienced workers.

As at present constituted, the bureau is subdivided into four sections as follows:

1. Accident statistics
2. Motor vehicle driver statistics
3. Internal administrative statistics
4. Research

No discussion will be made in this article of the administrative statistical section which functions independently of the accident statistical section and is not directly related thereto.

The accident statistical section is under the direct management of an especially trained assistant selected chiefly for his thoroughness and constant vigilance. Securing reliable statistics from numerous sources in a large state like California requires perpetual vigilance. A good system once inaugurated will run automatically. Alert and virile management is constantly required to make it work.

GATHERING THE DATA

The gathering of motor vehicle accident statistics begins with the obtaining of an accident report of each individual accident. It is required by law that such a report be made by the driver of every motor vehicle involved in such an accident where either death or injury to human beings occurs. California does not require reports of accidents in which property damage only occurs. The law makes it optional with the driver to report motor vehicle accidents to either the Division of Motor Vehicles at Sacramento, its branch offices, the officers of the California Highway Patrol, the police departments, sheriffs or constables of local jurisdiction. Reports first received by city police departments and other agencies are in turn sent to the Division of Motor Vehicles at Sacramento monthly.

The first objective in the gathering of these reports is to get a report on absolutely every accident. This is not a simple matter to bring about. The mere fact that it is a legal requirement does in no way guarantee the Division of Motor Vehicles a report on each accident. Everywhere drivers are negligent in making reports and the division is obliged to consider this a question of law enforcement when cases of negligence are detected. The ability of the statistical bureau to detect such negligence, however, is naturally limited, but we have installed a scheme, now functioning more or less automatically, which enables us to get reports on more than 99 per cent of all accidents.

THE ACCIDENT QUESTIONNAIRE

The first feature of this reporting system is the blank upon which a report is made. It would be very surprising to the layman to

realize how much bearing this apparently insignificant form has upon the reliability of the data received as well as upon the effect it has in securing a report in every instance.

Several years ago a very carefully prepared letter-size form was introduced calling for 249 statements concerning the accident. Experience after operating with this for many months clearly showed that it was physically impossible for people to answer the questions consistently in all instances and furthermore the size of the report form made it unhandy for officers to carry the blanks with them when on patrol duty. Such officers frequently made casual notes on a handy piece of paper which often became lost or which did not fully answer the required questions in the questionnaire. The inadequacy of the old report blank was the subject of study for a period of twelve months involving consultation with representatives of the State Railroad and Highways Commissions, the auto clubs and the Division of Motor Vehicles. The present report blank which is approximately half the size of the former blank and which reduces by 50 per cent the volume of questions asked, was the development of a series of conferences. Every individual question asked was carefully considered before being adopted. Our present accident report form has greatly facilitated obtaining consistent and reliable data. In its application for over a period of six months it has greatly advanced the statistical work. Copies of this blank form and all others used in the system will be mailed to any interested persons upon request.

The outstanding features of the revised accident report form include a more specific description of the location with the idea of making it possible to effect the correction or repair of road conditions contributing to an accident. Certain items of engineering interest have also been incorporated to aid in describing dangerous sections of the highways. Numerous items of general interest contained in the old report form, but upon which no basis for remedial action could be taken, were omitted. After a field survey,

(Continued on page 23.)

FORMS USED IN CALIFORNIA MOTOR VEHICLE ACCIDENT STATISTICAL SYSTEM

The illustrated samples are the report blank forms used in the California accident statistical system. On the right-hand side the first two top forms illustrate the front and reverse side of the general report blank. On the left-hand side is a coroner's monthly report of deaths. Two small cards—one the record of driver's accident and the other the death record are referred to in detail in the text. The balance of the illustrations show the tabulating card used in the mechanical tabulating machine, the comparative statistical summary and the general statistical summary. Copies of any or all of these forms will be mailed upon request to interested persons.

NOTE Based on preliminary research on East

The Red Rock Canyon Highway

By E. K. GUION, District Office Engineer

THE marvels of nature through the famous Red Rock Canyon are being, in part, rearranged by the handy-work of man, as a splendid new State Highway is being constructed by the George Herz Company, which will make this wonder-spot available to the ever increasing number of nature loving tourists.

Red Rock Canyon is situate in Kern County on the Midland Trail approximately 24 miles north of Mojave.

The State Highway traverses Red Rock Canyon for a distance of about 2.3 miles following the westerly wall.

To nature lovers the desert offers a certain unexplainable enchantment. The desert country traversed by the Midland Trail in reaching Red Rock Canyon is by no means an exception, as this stretch is dotted with Joshua trees and occasional cactus. The air is filled with the fragrance of the familiar sagebrush. The tourist travels northward from Mojave over the improved State Highway by long tangents and easy rolling grades to a spur from the Tehachapi range, through which ready access is given by Red Rock Canyon. This canyon was doubtless formed by a fault generations ago and accentuated by cloudburst run-off. The action, together with the winds, has laid bare a most unique strata formation.

Mother Nature has laid this strata in nearly horizontal formation, being supported by occasional columns and spires, colored most enchantingly in many shades and hues.

The bed of the canyon proper averages about 100 feet in width. Inasmuch as this area is frequented by cloudbursts of considerable proportion, a rather unique construction problem was presented. This was met by locating the State Highway some 15 feet above the floor of the canyon and setting the roadway well into the walls by what is commonly called "contour construction." The excavation material thus obtained was used to support a portion of the roadbed on embankment. This in turn called for special protection work in order that the material might not be lost by erosion.

The outer five feet of the embankment was constructed entirely of rock which was carried down below the bed of the wash about six feet into a trench, which was also given

Relocation of State Highway in Red Rock Canyon

a five foot width beyond the toe of the extended embankment. The rock was then carried out on a $1\frac{1}{2}$:1 slope to the bed of the creek, which in turn gives a supporting foundation of considerable proportion consisting entirely of rock.

The outer face of the rock on the embankment was all hand-placed and arranged to present a smooth face to the flow.

The picture above gives a general view of the canyon. On the right the existing traveled way may be observed, occupying a grade approximating that of the wash area which is shown in the view. Any flow immediately puts this whole road under water and out of service. On the left is shown the new State Highway now under construction. A close study will reveal the rock protection for the embankment. In the background of this view is a striking illustration of strata formation typical of the Canyon. The view, of course, does not do justice as the color is not apparent.

Governor Rolph Outlines Policies Governing Public Works Program

THE inaugural message of Governor Rolph dealt both forcefully and directly with activities of the state, the administration of which is vested in the Department of Public Works.

The following article comprises excerpts from the message dealing with these subjects, and setting forth in detail the views of Governor Rolph on these matters and the policies governing them he will initiate and support.

STATE HIGHWAY SYSTEM

The economic distribution of our products from farm, factory and mine to market, is a problem of general interest. The main arteries and laterals of our great highway system tap the places where our products are produced.

The increase in tourist travel through California is an example of the great service our highway system, as developed to the present date, has rendered. The motoring public has assumed the obligation of constructing and maintaining the state system of highways, and also of assisting our county systems with one-third of the total gas tax revenue and one-half of the motor vehicle fees. California's highway system, as now established, consists of a total of 6590 miles of which there are 4287 miles of primary roads and 2303 miles of secondary roads.

For the maintenance and expansion of our highway system, the state highways receive from the motor vehicle revenues, fuel tax, and federal aid an allotment of approximately thirty-one and a half millions a year, and the counties also receive from the motor vehicle revenues and fuel tax about one-half that amount per year. The state highway fund is expended under the terms of the Breed act. I will not occupy you now with a statement of details showing the allocation and application of that fund.

Federal aid which has been available by act of congress since 1921 is for projects on the federal aid system, only, the federal aid system being state highways selected by the federal government in 1921 as the federal aid system. This amounts to approximately four and a quarter million per year under the existing authorizations.

I believe that we should continue our program of building and improving the state highway system and that the development should be carried out on a balanced program, both in the sparsely settled mountain and desert areas as well as in the rich valley and urban regions. It is essential to the proper development of our state that a fair distribution of mileage commensurate with the funds for this purpose be made. The development of our system either north or south is a benefit to the entire state. I am in accord with the principles laid down by the last legislature in considering the addition of new highways to the state highway system, as this recognizes the lack of balance between the mileage of secondary roads in the south and in the north.

I expect to ask our highway authorities to cooperate in the construction of roads inside incorporated cities that are logically direct connections and a part of our state system to the extent possible with the funds available under existing law, without jeopardiz-

ing the carrying on of the state highway program. Necessarily, at the start, this class of work will be limited to points where the conditions are most acute with respect to passing traffic in and out of towns and cities, and where communities are least able to bear the burden. Where the highway system does damage to the smaller towns in passing through them, justice demands our aid. Such aid is compulsory in towns under populations of 2500 and optional above that.

The highway work should be expanded as rapidly as funds can be provided, in order that during this temporary period of unemployment the greatest number of our citizens can be put to constructive work as soon as possible. Approximately eighty-five per cent of each dollar expended on highways goes directly or indirectly to labor. It is important that the legislature proceed to make the funds available at the earliest possible date for carrying out the program of highway construction.

TRANSBAY BRIDGE

Ever since the earliest days, traffic between San Francisco and Oakland has been by ferries; at all times this has created a serious traffic problem. Industrial science and improved construction methods now afford us a solution of this traffic problem by building a bridge connecting the counties of San Francisco and Alameda.

The history of this bridge begins some ten years and more ago, when private capital sought franchises from the city and county of San Francisco, under the old Toll Bridge act, for permission to build a bridge between San Francisco and Alameda counties.

There was a rush of applicants for this permission and after years of hearings before the supervisors, the city appropriated a sum of money and appointed an engineering board consisting of the City Engineer of San Francisco, John Galloway, and Robert Ridgway, who in an exhaustive report found that it was feasible to build such a bridge.

They approved several tentative sites, numbering them in the order of their approval, but stated that they could not definitely approve any site owing to the lack of foundation data.

In 1928 it became apparent that the state should assume the obligation of building this tremendous undertaking, and to this end the legislature in the 1929 session passed the necessary legislation placing this projected bridge under state control.

The war department had continuously refused permission to build such a structure north of Hunter's Point, but during the early part of last year, President Hoover and Governor Young appointed a joint bridge commission consisting of navy, army and civilian

membership, and this commission in a signed report unanimously approved the feasibility of such a structure, conserving both the interest of navigation and national defense.

In 1930, the Hoover-Young bridge commission made its report to the President and the Governor. This report cleared the way for the actual construction of the bridge. Under the auspices of the state highway engineer and after exhaustive borings were made, plans and estimates for a double-deck bridge were submitted to the commission, accommodating motor vehicle traffic, and interurban cars. The estimated cost was seventy-five million dollars, which money was to be found by the sale of revenue bonds. The report showed that these bonds could be retired and interest paid on them by anticipated traffic, as shown by traffic surveys.

All toll bridges in the state should, I believe, be freed from tolls as soon as economically possible and be made a part of the highway system. The highway commission is charged with the determination of the location and routing of roads, and in my judgment should stand squarely behind this movement to insure the completion of this bridge, serving one-quarter of the state's population, resident to the San Francisco bay area.

This bridge will be the most stupendous undertaking of its kind in the world. Under proper financing and safe and economical construction, and under the able direction of the state authorities, in cooperation with the world's best engineers, it will prove a boon to the State of California, and fill a long felt want of the great metropolitan area of San Francisco bay.

The necessary additional legislative measures are now under way. There is pending a case before the Supreme Court to determine the validity of the bonds and bill to be presented to congress and to the state legislature in order to facilitate the early starting of the work, with the hope that it will commence before the close of this year.

It is extremely important, in my opinion, that these two great communities be afforded modern methods of communication with each other, and this at the earliest possible moment.

THE WATER PROBLEM

Only a brief reference to the water problems of California is possible in this message. I assure the legislature and the people, however, that I am not unmindful of those problems; the problems of flood control in the northern valleys and in the Santa Ana river system, of saline encroachment in the lower reaches of the Sacramento river, and of the drying-up of the lands in certain southern sections of the San Joaquin Valley. A coordinated solution of these problems has long and earnestly been sought. Surely, in California, where water is so precious, the state must devise a general unified plan for the conservation and use of its water against the increasing needs of its increasing population and the demands of the coming generations whose stewards we are. No complete or satisfactory solution has been found yet although the elaborate and expensive studies heretofore made will doubtless aid in the ultimate determination of a plan. The difficulties are mainly financial. Economically, the cures proposed thus far seem about as bad as the disease. We may not rob or wreck one section, industry, or group in order to sustain another. We must not spend more in salvaging lands than the lands will be worth when salvaged. We cannot impoverish the farmers of any section in

order to bring under cultivation lands whose yield will merely augment the existing over-production of farm products. As the Joint Committee of the senate and assembly said in its final report, submitted January 18, 1929 (p. 15) "development should not proceed more rapidly than economic needs of the state require." We must be sure we are right before we go ahead with any plan. Yet we should not permit any section, industry or group to languish and suffer unduly for lack of energetic action on the state's part. I stand ready as Governor to give the legislature and the distressed localities all the assistance in my power toward finding a practicable solution of these pressing problems. We must not approach these problems in a narrow or sectional spirit. While the benefits sought may primarily effect certain localities, the evils we seek to cure have been brought into being by causes that are not local. Every irrigationist along the upper stretches of the Sacramento, the Feather and the American rivers, has contributed to the slow salting of the distant delta by tidal trespass. We cannot heal these real woes by sympathy or fair words, however sincere. Distinctly, the duty of relieving the acute situation caused by the uneven distribution of our water resources and the growing demand on them is mainly the business of the state and not solely of the affected localities. The Hoover-Young commission has submitted a report. To give that report the serious consideration which it merits will be one of your duties and mine during the current session of the legislature.

Fortunately, definite progress has been accomplished toward the construction of the Colorado river dam and thereby toward relief of the great and populous coastal plain of Southern California from the menace of a water famine. All the forces of the state government will be constantly available to aid in smoothing out the obstructions that still lie in the way of the completion of the Boulder dam.

Nor must we forget that water is not the only natural resource of California calling for conservation. Our wealth of natural gas must not be wasted. The water will continue to flow so long as the snow and rains continue to fall, but natural gas once escaped cannot be recaptured and the supply is not inexhaustible and cannot be replenished. So, too, our forests, which, once destroyed, cannot be replaced for ages, present an acute problem. They must have adequate protection from destruction by fire through wise, preventive measures.

RECLAMATION AND FLOOD CONTROL

I have inherited from previous administrations a tremendous and pressing problem in the reclamation and flood control projects in which the State of California is interested. It would be impossible at this time to review in detail the many ramifying aspects which are presented and, therefore, I shall advert only to the principal policies which shall govern my administration regarding them. The importance of the subject is readily apparent when it is understood that the Sacramento and San Joaquin drainage district, a state agency, comprises 1,115,000 acres in the Sacramento and San Joaquin valleys, and that the California debris commission has estimated that the project completed will cost \$51,000,000.

The above estimate grew out of the commission's report of 1925, sometimes referred to as the "Grant Report," and sometimes as the "Revised Report," which was adopted by congress and approved by President Coolidge, February 28th, 1928. This report has also been adopted by the State of California,

and is the basis for the participation of the state government, and the landowners affected, with the federal government. It recommended that the annual appropriations from the federal government be increased from \$500,000 to \$1,000,000 per year, the limit set by the existing law, which recommendation was adopted by congress in the enactment of the Curry bill in 1929, under which the federal government appropriated \$1,000,000 as its yearly contribution, whereupon the State of California matched this amount by appropriating \$1,000,000 for each of the 81st and 82d fiscal years, the latter ending June 30, 1931.

The basic understanding behind these appropriations was that the costs of the great works of flood control and reclamation should be borne one-third by the government of the United States, one-third by the State of California, and one-third by the landowners living within the defined area. The program for the fiscal year ending June 30, 1932, so far as the federal government is concerned, already has been approved by the chief of engineers and is based upon the federal appropriation of \$1,000,000 for work during that fiscal year. The obligation of the State of California to make equal appropriations with the federal government has been many times definitely stated and publicly recognized, and in order that the State of California shall do its full part I have caused to be inserted in the budget of my administration for the 83d and 84th fiscal years an appropriation of \$2,000,000, and I have no hesitation in stating as a definite policy that the State of California during my tenure of office will continue to go forward in step and in alignment with the government of the United States toward the completion of the tremendous works of improvement contemplated by the report of the California debris commission.

There is another problem involved in these policies which appeals to me as being of even greater importance and concern. I refer to the pressing plight of the landowners and farmers whose holdings are situated not only within the boundaries of the Sacramento and San Joaquin drainage district but also within the confines of separate and distinct reclamation and irrigation districts superimposed as it were upon the land of the greater district.

The homes, the holdings, and the very existence of these landowners are imperiled by the appalling underlying reclamation and irrigation tax burdens upon their lands. It is now a matter of common occurrence that banks in many cases have refused originally to grant, or, in other cases, to renew, mortgages upon these country lands because of the staggering liens from reclamation and irrigation taxes which would be anterior to the ordinary land mortgage. In many cases the ruin of a life's work and the destruction and loss of all he possesses stare the landowner in the face.

The state should find some means of assisting these farmers and citizens. In the Sacramento and San Joaquin drainage district alone in November, 1930, as evidenced by assessments No. 2, No. 6 and No. 7, there was still outstanding against affected lands the large sum of nearly \$7,000,000 in underlying liens. The unfortunate part of the situation is that in addition to this huge sum the lands involved are in turn again situated in smaller districts, and the lands have again been saddled with large underlying liens imposed for the purpose of creating and completing the local problems of reclamation and irrigation.

As I said before, this phase of the reclamation tax problem appeals to me most strongly, and I shall do everything in my power during the coming years of my administration to lessen and alleviate it. I hope that with careful study and intensive analysis some

means will be found whereby the state itself can be of aid in refunding and refinancing the reclamation and irrigation liens and encumbrances. I pledge myself and my administration to use every means at our disposal not only to fulfill the obligations of this state in the completion of its great reclamation and drainage projects, but also to aid and assist by every means possible the landowners and agriculturists who are so vitally threatened.

STATE INSTITUTIONS

The greatest business of the state is the business of government, and it is the least understood. Government should be conducted on lines of economy, but not on a basis of parsimony.

Real economy consists in honest and reasonable expenditure of the people's money in return for general advancement of the public welfare. Any economy which denies to the state's unfortunates the comforts due to human beings is false economy.

As Governor I stand for an economical administration of the state's affairs. But I shall refuse to make a political record through starving the state institutions. I shall refuse to recommend inadequate appropriations for the relief of state institutions merely to gain the plaudits of those who do not understand the crying needs of the state. This state may well be proud of the great institutions which have been built for the shelter of the unfortunate and the care of the needy. Many of these institutions are in need of immediate repair, as well as extensions. Their facilities must keep pace with the growth of our population.

The poor, the stricken and the unfortunate shall have a first claim on the consideration of my administration. Every poor creature, bereft of reason, should have a bed in which to sleep, comfortable habitations in which to live, decent and sanitary surroundings and wholesome food. This is the very least that humanity has a right to demand.

I shall consider my administration a failure if, through parsimony or neglect, the poor state's unfortunates shall fail to receive the ordinary comforts of life. What means the wealth of the State if those who have faltered by the wayside of life do not receive the common charity due to all men?

Many of our state institutions are in need of enlargement to keep pace with the demands of public growth. There, should be no waste of funds, no needless expenditures, but there should be an adequate building program to tenderly care for all the state's unfortunates. Furthermore, some of our state buildings are approaching the point of decay. They should be promptly and immediately modernized in order to protect the lives of their unfortunate inmates. Fire in any of these institutions would be an appalling disaster. A record in tax economy would stand as a feeble answer to the appalling charge of neglecting the safety of the unfortunate wards within this and other buildings. Disaster such as has confronted the public institutions of other states would leave a blot upon our history that no record of false economy could make us forget.

Our state prisons present one of the great problems of modern society. Owing to the complexity of our laws, the enactment of innumerable statutes and other causes, our state prisons are becoming overcrowded. Penal institutions should not by overcrowding be made into houses of torture to break the spirits of men. While discipline and punishment are necessary to those who break the law, an opportunity should be afforded to all to reform and to rebuild their lives.

While I do not believe in nurturing or mollycoddling criminals, I believe that vast numbers of men who have been led astray can, by proper effort, be reformed.

Our state prison system does not permit of the segregation of criminals. The petty offender is too frequently made the constant companion of the cut-throat and the gunman. An enlightened system of penology points to the classification of criminals where those of milder degree are not thrown in constant contact with the vicious and degraded type. Our overcrowded prisons are a breeding place for future crimes. Broken, dispirited men, merely plot against their fellows. Soured and embittered, they plot against society. Our state prisons should be so enlarged that they will give opportunity for segregation and for constant and wholesome employment for the inmates.

The state, at least, owes the duty to society of trying to lessen the crimes of the future. Discipline, rigid and even severe, must be imposed on those who break the law, but these violators of the laws of their country are men, within the breasts of whom there must be some spark of human good. Be that instinct toward good, small or great, we should encourage its development in order to lessen the prospects of future crime. Relief from crowded and intolerable conditions, even at the expense of building added prisons, should be looked to to solve this problem.

The institutions for the blind and for the feeble minded should have our especial care. I commend to the Legislature enactments which will give to the sightless unfortunate of the state the last possible need of encouragement and support. We, who have eyes to see, should, in return for our blessings, stint no effort to give to the blind every possible opportunity for education, wholesome surroundings and congenial occupations. I shall consider that my administration has some claim to remembrance if it shall make the cause of these poor but proud and dependent wards of the state, the special object of our care.

Little does it comfort us, though the public at large be prosperous and happy, if our less fortunate, broken, sightless or demented kindred are forgotten and neglected. The cry of human need is the first call that we must answer.

Courtesy Wins Commendation for Highway Patrol

Many letters are received by the Division of Motor Vehicles commending officers of the California Highway Patrol for courtesies extended to and assistance given motorists. The following letters are typical of scores of others received:

A. C. Powers of Sacramento thanks Officer Warren for assistance given in a wreck near Livermore in which one life was lost. The letter says:

"Officer Warren was on the scene a few moments after the distressful accident occurred, and I wish to attest the efficiency, skill and human kindness he displayed in handling the situation. I am sure that if the personnel of the Highway Patrol possesses the tact, good judgment and human understanding that

Officer Warren showed that we Californians may be proud of having the best Patrol to be found anywhere."

Mayor Herman Logan, Vancouver Barracks, Washington, writes to express appreciation of the kind and courteous treatment received from Officer Richard White, during an automobile accident close to Empire on the Redwood Highway, Monday, December 15, 1930.

Leland S. Weeks of Stockton writes of assistance received from Officer Thomas Sheldon and Donald Haldeman when his car skidded from the highway near Merced. The letter concludes:

"I am not eloquent enough to say what I would like to say about your California Highway Patrol. Without doubt all of your other officers are of the same caliber as the young men I have just mentioned. Motorists are beginning to look upon the Patrol as an agency of friendship and assistance, worthy of full cooperation. I am glad to subscribe to this opinion. The continuation of such a spirit of helpfulness on the part of your officers will rapidly make of the Patrol a service with a tradition.

L. F. Hockley of Oakland thanks State Highway Patrolman Tony Rose, Alameda County, for assistance given when his car was stalled on the highway and he faced the probability of an all-night stay there.

Floyd Colbert of Sacramento thanks Captain Reynolds, Officer Essenhuth and other officers whose names were not obtained for aid given when his car was wrecked.

There are scores of letters from women motorists, expressing appreciation of aid given by patrol officers in changing tires, etc. Many other letters tell of courteous, but firm manners in which the officers have corrected autoists for some inadvertent infraction of motor vehicle rules.

Here are just a few excerpts from these letters:

"It is indeed a pleasure to travel the highways of California knowing that you have these guardians within a few miles all of the time to give you aid and assistance."

"Conduct and courtesy of this kind is commendable, and a credit to you and your department."

"I want your Bureau to know that your officers are adding kindly assistance beyond and above their duties."

"I shall always have a kindly feeling in my heart toward every man who wears the uniform of the California Highway Patrol."

"You certainly are to be complimented on your efficient and capable organization."

A slow-pay customer sent the following note to his grocer: Please send six dozen eggs; if good, will send check."

The grocer, however, was not doing any business on such risky terms, so he wrote back: "Send check; if good, will send six dozen eggs."

Ratio of Motor Vehicle Deaths to Gasoline Consumption Is Told

AT LEAST nineteen states of the Union have motor vehicle death rates based on gasoline consumption that are higher than California.

This was revealed today in a comparison of motor vehicle accidents of states prepared and released by the bureau of research, statistics and traffic safety of the Division of Motor Vehicles.

The rate for California is 1.81 deaths for every million gallons of gasoline consumed. Of the thirty-four states included in the bureau's study, California is fifteenth on the list. The bureau concludes that this puts California in a relatively favorable light inasmuch as the death rate is well below the general average of other states.

The study shows an average death rate of 1.99 for the thirty-four states included, North Dakota being lowest with 0.80 and West Virginia being highest with 2.62. The figures are all based on motor vehicle fatalities and gasoline consumption for 1929. California motorists consumed approximately 1,241,000,000 gallons of gas for the year and there were 2,244 deaths.

The bureau regards death rates based on gasoline consumption as the fairest basis for comparing fatalities between states inasmuch as a motor vehicle is exposed to accident hazard in direct proportion to the number of miles it is driven.

"It follows that motor vehicle death rates created by computing a ratio of deaths to the consumption of gasoline in each of the states will be quite truly comparative, statistically speaking," the bureau's statement said.

"The gasoline consumption ratio reduces the motor vehicle deaths to a common denominator by which we may compare one state with another without incorporating errors of unknown quantities as may be done when comparisons are made on other bases. The vehicle that travels twice as far as another is naturally exposed to twice the hazard. This condition is equally true in all states."

The bureau points out further that the California vehicle is likely to be exposed to greater traffic hazard than cars driven in almost any other state since favorable weather

conditions here permit the all-year use of motor vehicles.

A table showing the death rates computed for the various states, based on gasoline consumption, follows:

**MOTOR VEHICLE DEATH RATE BY STATES
BASED ON GASOLINE CONSUMPTION FOR
1929**

A	B	C	D	D/C
State	Gasoline consumed, million gallons 1929	Total motor vehicle deaths 1929	Rate per million gallons	
1 North Dakota -----	124.3	100	.80	
2 Iowa -----	335.6	403	1.20	
3 Kansas -----	360.9	439	1.22	
4 Nebraska (A) -----	387.3	235	1.81	
5 Oregon -----	163.6	237	1.45	
6 Oklahoma -----	316.3	478	1.51	
7 Rhode Island -----	77.8	128	1.52	
8 Dist. of Columbia -----	71.8	112	1.56	
9 Massachusetts -----	501.9	786	1.57	
10 Maine -----	96.0	151	1.57	
11 Montana -----	79.1	125	1.58	
12 Idaho -----	55.1	93	1.69	
13 Wisconsin -----	393.3	701	1.78	
14 Missouri -----	392.9	706	1.80	
15 California -----	1,240.9	2,244	1.81	
16 Delaware -----	32.5	61	1.83	
17 Arizona -----	72.8	140	1.92	
18 Michigan -----	785.2	1,541	1.96	
19 Arkansas -----	134.6	272	2.02	
20 New York (B) -----	1,000.4	2,044	2.04	
21 Wyoming -----	34.5	71	2.06	
22 New Mexico -----	45.7	94	2.06	
23 Florida -----	223.8	464	2.07	
24 Connecticut -----	202.3	426	2.16	
25 Illinois (C) -----	338.6	840	2.16	
26 Virginia -----	208.3	475	2.28	
27 North Carolina -----	265.1	614	2.32	
28 Ohio -----	953.5	2,278	2.39	
29 Kentucky -----	154.8	376	2.43	
30 Indiana -----	432.0	1,054	2.44	
31 Pennsylvania -----	900.4	2,198	2.44	
32 New Jersey -----	498.0	1,275	2.56	
33 Alabama -----	178.1	467	2.62	
34 West Virginia -----	126.5	332	2.62	
Total for 34 states -----		11,033.9	21,970	1.99

(A)—Estimated for 10 months.

(B)—Estimated for 8 months.

(C)—Estimated for 5 months.

Census Bureau Reports Show Increased Danger in Auto Traffic

AN INCREASE of more than 3000 deaths from automobile accidents in the United States last year was indicated in a statement by the Bureau of the Census, Department of Commerce.

This estimate was based on actual figures from the death registration area, comprising more than nine-tenths of the country.

Four states of heavy population—New York, Pennsylvania, Ohio and California—recorded the greatest number of fatalities from this cause, although a state of small population—Nevada—had the highest death rate, it was stated.

The statement, made public by the Department of Commerce, follows in part:

"The Department of Commerce announces that in the death registration area in continental United States accidents in which automobiles were involved caused 29,531 deaths in 1929 with a death rate of 25.4 per 100,000 population. Of this total, collisions of automobiles with railroad trains and with street cars were responsible for 1958 and 507 deaths, respectively, which, if excluded, would leave 27,066 deaths with a death rate of 23.3.

The death registration area in 1929 was composed of 46 states, the District of Columbia, and nine registration cities in nonregistration states, and included 95.7 per cent of the total population of continental United States. Assuming that the same death rate would hold true for the remainder of the continental United States, the number of deaths in 1929 from accidents in which automobiles were involved is estimated at 30,858 for the whole country, as compared with an estimate of 27,618 for the year 1928. These figures indicate an increase of over 3000 deaths from this cause in a single year.

Comparing the states, the greatest number of deaths occurred in New York (3192), followed by Pennsylvania (2331), Ohio (2320), and California (2271). Nevada has the highest death rate per 100,000 population (51.1). Next in order are California (41.2), Arizona (36.2), Florida (35.5), Ohio (35.3), Indiana (34.1), and Wyoming (33.7).

It is gratifying to observe, however, that if collisions with railroad trains and street cars are excluded the following eight states, Delaware, Idaho, Illinois, Montana, Oregon, Rhode Island, Vermont, and Wisconsin, had fewer deaths than in the previous year.

The number of automobile deaths reported for each state and city includes those due to accidents outside of the limits of the city or state. If these and collisions with railroad trains and street cars are excluded, the cities would rank as follows: New York City, with 1328 deaths, Chicago (729), Los Angeles (390), Detroit (369), and Philadelphia (356). Other cities with over 100 deaths are Cleveland (294), St. Louis (152), Pittsburgh (150), Baltimore (143), Buffalo (136), Boston (133), Cincinnati (121), Newark (121), Indianapolis (107), San Francisco (107), and New Orleans (103). Cities with the highest death rates per 100,000 population, however, are Youngstown (42.4), Gary (40), Camden (37.6), Long Beach (36.7), Miami (35.7), Cleveland (32.9), Los Angeles (32.8), Canton (32.6), and Columbus (30.4). The lowest rate shown is that for New Bedford (7.9).

Chicago had the greatest number of deaths from collisions of automobiles with railroad trains (26) and with street cars (30). Next in order are Gary with 14 deaths from collisions of automobiles with railroad trains and Los Angeles with 19 deaths from collisions of automobiles with street cars.

An interesting phase of the report is the extent to which accidents outside of the city limits form of the total crude death rate. In the case of Albany, Camden, Fort Wayne, Grand Rapids, Hartford, Springfield, Mass., and Trenton, the number of these accidents play a very important part in the total number of deaths from automobile accidents."

The census figures distribute deaths from automobile accidents in California for 1929 as follows:

Total number of deaths.....	2271
Total number of deaths in collisions with railroad trains.....	117
Total number of deaths in collisions with street cars.....	54

THE CALIFORNIA SYSTEM OF COMPILING MOTOR VEHICLE ACCIDENT STATISTICS

(Continued from page 14.)

reduction of the size of the report to $8\frac{1}{2} \times 5\frac{1}{2}$ " was determined to be highly desirable due to the ease with which it can be carried in the saddle bag of a motorcycle, or when once folded, in the inside coat pocket of a pedestrian officer. It is important that the report blank be carried to the scene of the accident if full information is to be obtained.

PROCESS OF COMPILING

After the accident reports come to the Division of Motor Vehicles at Sacramento they pass through a mill of scrutiny. At every point in the operation of this process certain information is abstracted from the reports which is at once put to work and also forms the basis of the statistical accounting. The accompanying diagram illustrates the routing of the reports through the statistical bureau and indicates the action which is taken at each step.

All of the accident reports fall into two major groupings: Those in which deaths occur and those in which injury only occurs.

Principal attention is given those reports in which a death occurs. In fact the bureau individually investigates every such case. It is required by law that coroners report all traffic deaths once a month to the division. These reports form an official and authentic record of the number of motor vehicle deaths. The coroners' reports furthermore serve as a basis to check, in part, the total amount of all accident reports.

A commercial newspaper clipping service of traffic accidents is used. The newspaper clippings are compared with the accident reports received from individuals as a check on the total number. If a coroner reports a death on which no accident report has been received, the bureau immediately investigates the reason for the non-receipt of the original report. The same process is employed when newspaper clippings reveal that accidents have occurred on which the department has not received a formal report. These investigations are conducted with the aid of the various captains of the California Highway Patrol.

THE ROUTING THROUGH BUREAU

In studying the accompanying diagram it will be noted that the reports issuing from the three sources of information consisting

of the accident reports, the coroner reports and newspaper clippings, come into the office through the mailing room. At this point all mail relating to the statistical bureau is segregated from the general mail of the Division of Motor Vehicles and sent to the bureau.

On arrival at the bureau the accident reports are received at the desk of a clerk whose duty it is to maintain spot maps by counties, a few of the largest cities, and for the state as a whole. On these maps pins are inserted for deaths and accidents according to geographical location. The purpose of the maps is to indicate the relative congestion of accidents so as to attract attention to any location in which a local hazard may exist otherwise unnoticed.

COORDINATION WITH HIGHWAY WORK

At this point also carbon copies of certain highway accidents are made and dispatched to the State Division of Highways so that division is made aware of those locations on the highways in which accidents are happening and re-occurring and in which it may be possible that constructional engineering features may in part be responsible.

The next step consists of matching the reports and newspaper clippings. At this point a clerk is engaged in noting and weeding out the duplicates and in noting the absence of reports in cases on which a newspaper clipping is received only. Reports for each county as a unit are arranged by date of occurrence. The newspaper clippings go through the same procedure. The clippings are attached to the report to which they refer. All clippings of accidents not reported by police and other agencies, etc., are mounted on blank report forms and placed in order by county and date. Duplicates found during this procedure are brought together and attached.

From this point the next step is to one of preparation for mechanical tabulating. It consists in numerically coding the items in the accident reports and clippings. This facilitates the work of a key punch operator who immediately thereafter receives the reports and punches on a machine a card for the accident according to the code as a permanent record.

The only information not coded is the age of the drivers and the age of the injured or killed. These ages are punched directly on the card as this has the advantage of permitting studies being made by any desired age groupings for either regular or special reports. The punching is performed with the aid of an automatic key punch machine, per-

forations being made at certain points on the card. Each original card in the California system represents one accident and one person killed or injured, giving all information pertaining to the accident. A duplicate card is made for each additional person injured or killed in which the accident information is repeated, but those items referring to the individual injured or killed are changed according to his or her age, sex, extent of injury, action and physical condition. Such duplicate cards are used only for the information they contain in reference to the individual.

The accident record cards are punched by county units according to the alphabetical arrangements of counties and numbered consecutively. This gives a natural sequence by which the original reports may be referred to by number without knowing the date or location of the accident. During the punching of these cards the "Coroner's monthly report of motor vehicle deaths" is used to verify the age, date of accident and death, etc., of each person killed.

SPOTTING THE BAD DRIVER

It will be noted on the diagram that the main routing line breaks immediately after the record cards of the accident are punched. The diagram indicates that typewritten records are set up on one hand and accident record cards are set up on the other hand. The typewritten records refer to the making of special card files relating to drivers of cars involved in accidents and for those killed. These two files are alphabetical. One is based on the names of the drivers involved in accidents, providing spaces for five accidents. It gives the accident number, date and county of occurrence, whether fatal or non-fatal. This will show how many times an individual driver may have been involved in accidents. This file is presided over by a clerk who is constantly searching for "repeaters." When a card is detected for a driver who has been involved in three or more accidents the name and record of this driver is immediately turned over to another bureau of the California Highway Patrol for the direct investigation and possible re-examination of such a driver with the view of revoking operator's license should that appear advisable. The alphabetical drivers' file serves the purpose of a cross-index to the general file. It is one of the most valuable and important, practical features of the whole system. To emphasize the important features of this file the following points should be noted:

1. It indicates "repeaters" (persons having several accidents)
2. It eliminates the possibility of duplicate reports occurring in the same month or any two or more months.
3. It provides a means of determining whether or not a particular accident has been reported.
4. It provides the quickest and most complete accident record of any driver under investigation.
5. It serves as an auxiliary function in aiding locating or tracing "missing persons."

At the time the "Record of Driver's Accident" cards are typed, another card is also made. It is an alphabetical file of persons killed. This file was established for the following reasons and has proven of great value:

1. Eliminates the possibility of duplicating deaths. (The same individual has been reported killed two consecutive months by the same coroner).
2. Provides a means of locating reports of fatal accidents when the driver's name is unknown. (Example—"hit and run" cases).
3. Provides a means of determining whether a "missing person" (or others) was killed in a motor vehicle accident.

It further serves as a cross-index to the general filing system.

TABULATING

After all the typewritten records are prepared as above, duplicates removed and destroyed, the accident record cards are ready to be sorted and counted. They are then passed into the tabulating room where they are run through a mechanical tabulating device and automatically sorted and counted.

The mechanical counting-sorter is used for this purpose and the totals obtained in each item are written in the space provided on the statistical summary sheet or office record. In the process of this operation another search for duplicates is made and if an occasional one is found it is weeded out to make the final statistical count a net total.

MONTHLY STATISTICAL SUMMARY

This summary is a compilation of the accident reports involving personal injury or death. A full description of the arrangement and plan of this summary is explained on the reverse side of the form. The general plan includes four sections as follows:

Section 1: Statistics on persons involved in accidents.

- (1) Those killed and injured
- (1a) Drivers involved
- (1b) Pedestrians involved

Section 2: Statistics on vehicles involved

- Types of vehicles
- Conditions of vehicles

Section 3: Statistics on time of accidents

- Hour of occurrence
- Light conditions
- Day of occurrence

Section 4: Statistics on roads and weather

Road location
 Road surface
 Road conditions
 Weather conditions

This summary is prepared once a month and is recapitulated annually and semi-annually. Upon the completion of the monthly summary sheet certain outstanding items are abstracted from the report for publication. These items consisting of six in number set forth the total number of accidents during the month, the persons killed, the persons injured, the drivers involved, the pedestrians involved and the vehicles involved.

The report is issued promptly in mimeo-typed form designed to show a comparison with the corresponding figures of the same month a year ago; the total for the year to date compared with the corresponding total of the year previous.

Accompanying this comparative statistical summary each month there is a written analysis prepared by qualified statisticians explaining other more technical features of the complete statistical summary. The distribution of these reports is made in relatively a large volume but is very carefully directed to individuals and institutions which are actively engaged in promoting traffic safety conditions. Frequent revision of the mailing list is made in order to avoid sending these reports to those who are not actively engaged in such safety matters.

RESEARCH

Upon the completion of the monthly statistical summaries, the reports are finally scrutinized by the chief statistician. At this point the technical research begins. All outstanding features of the statistical summaries are carefully charted and various experimental technical studies are being continually carried on with a view of more adequately explaining conditions which may not be at once apparent to the statisticians themselves. When the figures indicate that possibly some important significant matter is escaping attention a field research study may be made to determine more precisely the nature of the problem. In this work a district in the state may be selected and the traffic officers of the Highway Patrol instructed to report in very specific detail additional matters to those contained in the ordinary accident report. Extended correspondence with drivers involved in accidents and direct investigation of wrecked cars and injured persons are also employed. Photography is resorted to. Much practical and enlighten-

ing information has been developed during the last twelve months from these field research studies. In some cases the results of such research work have been quite startling, revealing the fact that the accident reports in themselves although being a reliable indication of volume of certain accident classifications, seldom reveal the controllable causes of the accidents. These controllable causes have been largely exposed through the field research operations rather than by the statistics themselves. On the other hand the statistics have indicated the need of the field research in a definite direction.

Upon finding useful facts in the research studies, every possible effort is made to set such facts to work. Reports carrying recommendations are sent direct to every agency or organization of the state which can directly employ them. The findings are further disseminated to other states. The research section maintains a consultation service for all who seek its advice and handles a large volume of correspondence in this work.

In conclusion the development of the California system of motor vehicle accident statistics is the outcome of a gradual evolutionary process. Many outside influences have contributed to the success of the system. We would be derelict in duty were we not to recall the influence which the National Conference on Street and Highway Safety of Washington, D. C., and the work of the National Safety Council of Chicago have played in creating an appetite for good and sufficient traffic accident statistics throughout the country. These institutions together with the auto clubs of the state, the California Committee on Public Safety, the State Chamber of Commerce, and dozens of insurance companies, have all contributed advice and assistance of inestimable value in perfecting the California system. The responsibility for the development of the system is vested with the statistician but he in turn has enjoyed the very best kind of cooperation and assistance of the officials of the California Highway Patrol and the Division of Motor Vehicles. If the system has won distinction the credit for its success is due to all of these contributing elements combined.

"Do you know a fellow down your way with one leg named Oliver?"

"I'm not sure," returned the other doubtfully.

"What's the name of the other leg?"

Auto Driver: "Have you some of that gasoline that stops knocking?"

Attendant: "Yes, sir."

Auto Driver: "Then, give my wife a glass."

IRRIGATION, WATER STORAGE DISTRICTS

1. A conference was held with the officials of the Palo Verde Irrigation District and others interested in its welfare for the consideration of plans in furtherance of the future economic development of the district.

2. Visits were made to the El Dorado Irrigation District, located in El Dorado County, in connection with construction work in progress and to the Richvale Irrigation District, located in Butte County, in connection with the proposed water supply for that district.

3. The following matters were reported upon by the State Engineer to the California Bond Certification Commission:

Lindsay-Strathmore Irrigation District, Tulare County—Approval of contract for expenditure of \$13,500 for purchase of water stock.

Paradise Irrigation District, Butte County—Approval of an expenditure of \$2,854 for repairs of the outlet of Magalia Dam.

Richvale Irrigation District, Butte County—Approval of agreement for purchase of water rights and certain canals and laterals from the Sutter-Butte Canal Company for a consideration of \$750,000, and approval of a bond issue in the amount of \$515,090 in connection with the proposed purchase.

El Nido Irrigation District, Merced County—Approval of agreement for the purchase of water from the Merced Irrigation District.

IRRIGATION AND RECLAMATION FINANCING AND REFINANCING

A complete technical study of the methods of financing and refinancing reclamation, irrigation and other related districts in this state has been made by this Commission and a report of their findings is now being prepared in which will be incorporated recommended legislation which it is believed will assist these districts in financing and refinancing their projects on a sound basis.

DAMS

During this period the efforts of the department have been directed toward directing repairs of existing dams and enlargement of spillways prior to the winter season of high water, as well as to further inspection and study of new and old dams.

To date 733 applications for approval of existing dams have been filed, 54 applications for approval of plans for construction or enlargement, and 113 applications for approval of plans for the repair or alteration of dams.

Applications received for approval of plans for repair or alteration.

Dam	Owner	County
White Reservoir,	James M. Fitzhugh,	Modoc County.
Courtwright,	R. Anchordoguy,	Modoc County.
Chino Ranch No. 2,	W. Astley,	San Bernardino County.
Chino Ranch No. 3,	W. Astley,	San Bernardino County.
Port Costa,	Port Costa Brick Works,	Contra Costa County.
Los Serranos,	Davidson Investment Company,	San Bernardino County.
Alvord,	Riverside Water Company,	Riverside County.
Mocking Bird Canyon,	Gage Canal Company,	Riverside County.
Porter,	Pearl F. Porter,	Modoc County.
Culbertson,	Pacific Gas and Electric Company,	Placer County.
Lower Feeley,	Pacific Gas and Electric Company,	Nevada County.
Lower Lindsey,	Pacific Gas and Electric Company,	Nevada County.
Meadow Lake,	Pacific Gas and Electric Company,	Nevada County.
Middle Lindsey,	Pacific Gas and Electric Company,	Nevada County.
Rucker Lake,	Pacific Gas and Electric Company,	Nevada County.
Upper Feeley,	Pacific Gas and Electric Company,	Nevada County.
Dinger,	East Bay Municipal Utility District,	Alameda County.
Webb Flat,	Gerig Bros.,	Modoc County.
Antioch,	Town of Antioch,	Contra Costa County.

Plans approved for construction: Plans have been approved for the construction of the Peters Canyon Dam in Orange County, to be built by the Irvine Company of Tustin. This will be an earthen dam 41 feet in height with a storage capacity of 1090 acre-feet, the water stored by it to be used for irrigation.

Plans approved for repair or alteration: Fifteen such applications have been approved by the State Engineer during the period.

Order authorizing use pending formal approval was issued for the North Battle Creek Dam located in Shasta County and belonging to the Pacific Gas and Electric Company.

FLOOD CONTROL AND RECLAMATION

Maintenance of Sacramento and San Joaquin Drainage District: During this period only routine maintenance work has been carried on, consisting of clearing second growth timber in the by-pass, servicing the pumping plants, and other miscellaneous work. An average of twenty-five men have been employed during this period.

Flood control project maintenance—Bank protection: The construction of one tree current retard in cooperation with Reclamation District No. 70 at the Yates place, approximately four miles south of Meridian, is about one-half completed, and bank protection work at Girdner Bend, also in cooperation with this district, is well under way.

The work on Andrus Island at the Reardon ranch has been completed, with the exception of a small amount of dredger work. All other bank protection work for this season which has been definitely programmed has been completed. There is under consideration a small job in cooperation with Levee District No. 3, Glenn County, but the season is now so late it is not known whether or not this will be undertaken.

Sacramento flood control project: The work of clearing the lower Sutter-Butte Slough, and Tisdale by-passes was continued to about December 7th when the available funds were exhausted. The camp at Robbins was dismantled and moved on December 8th, and the crew at Fremont Weir housed in our floating camp was reduced to a working force of 16 men. No men were discharged by reason of discontinuing the camp at Robbins, as they were transferred to other work. The reduction in force has been made gradually by not taking on new men.

At Starr Bend on the Feather River, two openings have been made to permit the flood waters to occupy the widened flowage area, and one cut has been made in the Bear River levee for the same purpose west of the recently completed Lake of the Woods levee. This work was done directly by this office with a bulldozer hired by the hour from Le Tourneau of Stockton, who was the contractor on the Starr Bend and Lake of the Woods levees.

The deputy in charge of flood control and reclamation attended one meeting of the Reclamation Board and one meeting of the flood control construction committee.

Much detail work has been done in connection with the flood control construction program for this year, particularly as to securing rights-of-way. Plans have been prepared for most of the various construction units.

The California Debris Commission has let contract for the construction of the west levee of the Yolo By-pass, four miles in length, along Reclamation District No. 2068, the estimated cost of which is \$25,680. The Commission has also received bids for the construction of the West Yolo By-pass levee on Liberty Farms and Sullivan, Sullivan and Roche, but the contracts have not yet been let. The estimated cost of these two units is \$36,960 and \$31,640, respectively.

Emergency flood control and rectification of rivers: The bank protection work on Andrus Island in cooperation with Reclamation District No. 317 has been completed at a cost of \$21,000. This consisted of reconstructing about 3400 feet of levee and protecting it from wave wash with a quarry rock toe and blanket.

Work will be commenced about December 20th on protection of Twitchell Island, consisting of a rock facing 600 feet long.

Santa Maria River: The clearing work in the channel of the Santa Maria River near Guadalupe, in cooperation with Santa Barbara and San Luis Obispo counties, has been completed at a cost of \$7,600. Additional work at one point is contemplated, consisting of the excavation of a short channel, to cost approximately \$1,200.

Pajaro River flood control: The improvement in the channel of the Pajaro River for a length of 13,750 feet has been completed under contract with Karstedt

and Karstedt of Watsonville at a total cost of \$4,537. This work consisted of clearing a width of 60 feet and loosening the bottom material to a depth of two feet to promote erosion and channel rectification during flood.

Salinas River: No work has been done during this period on the Salinas River channel excavation, as the right to perform the work has not yet been decided by court. The dragline excavator is still on the ground and will resume work as soon as a favorable decision is rendered. This work is being done by the Division of Fish and Game.

Mokelumne River: The improvement of the flood channel of the Mokelumne River has been commenced, in cooperation with San Joaquin County. A total of \$12,500 is available for this work, one-half of which is furnished by San Joaquin County. The work is in charge of our foreman and a crew of 30 men is at work. The men in this crew work for a period of four days and are laid off four days to allow a second crew to work. In this way 60 men are provided with four day's of work each week. The work so far undertaken is clearing brush and timber.

Russian River Jetty: The recent heavy winter storms have caused some damage to the jetty on the Russian River at Jenner. The Fish and Game Commission has provided \$5,000 for the repair and maintenance of the structure and to continue the addition of rock during the winter.

Flood measurements and gages: The recording and staff gages operated by this office have been placed in condition and in operation, and preparations have been made for taking flood measurements in the various channels during the winter. An automatic tide gage has been installed in the lower Yolo By-pass at the Liberty Reclamation.

During the period November 15th to December 15th, an average of ninety-five men have been employed in the above work, exclusive of contractor's employees. Since December 10th all employees on construction and maintenance have been working on a three-day week basis, which permits us to provide half-time work for twice the number of men.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE

During the month of November fifteen applications to appropriate water were received, eleven were canceled, and twenty-five approved. Twelve permits were revoked and seven licenses were issued.

Among the more important applications received were those of Humboldt Placer Mining Company to appropriate 175 second-feet from Trinity River and tributaries in Trinity County for mining purposes; Turlock and Modesto Irrigation districts to appropriate 350 second-feet and 80,000 acre-feet per annum from Tuolumne River and tributaries in Tuolumne County at an estimated cost of \$1,885,000 for power purposes; La Mesa, Lemon Grove and Spring Valley Irrigation District to appropriate 50 second-feet and 18,000 acre-feet per annum from Santa Ysabel Creek in San Diego County for municipal, irrigation and domestic purposes; and Fred J. Blakeley to appropriate 25 second-feet and 4000 acre-feet per annum from Elliott Creek in Siskiyou County for the irrigation of 6000 acres at an estimated cost of \$50,000.

Among the more important applications approved were those of East Bay Municipal Utility District to appropriate 42 second-feet and 41,436 acre-feet per annum from the San Leandro Creek and tributaries in Alameda County at an estimated cost of \$1,377,000 for

municipal purposes; Scott F. Ennis and Edward S. Brown to appropriate 60 second-feet from Sacramento River in Sutter County for the irrigation of 2482 acres at a cost of \$41,000; cities of Arcadia and Sierra Madre to appropriate a total of 6 second-feet and 4500 acre-feet per annum from Santa Anita Creek and tributaries in Los Angeles County at an estimated cost of \$80,000; Security First National Bank of Los Angeles to appropriate 6000 acre-feet per annum from Santa Anita Creek for domestic purposes at an estimated cost of \$100,000; El Sur Land and Cattle Company to appropriate 12 second-feet from Big Sur River in Monterey County for the irrigation of 1024 acres at an estimated cost of \$56,030; and Temescal Water Company to appropriate 12,000 acre-feet per annum from San Jacinto River in Riverside County for the irrigation of 5000 acres at an estimated cost of \$100,000.

ADJUDICATIONS

Shasta River (Siskiyou County)—Case pending in Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties)—case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All-American Canal from Colorado River.

North Cow Creek (Shasta County)—Referee's final report has been completed and is ready for submission to the Superior Court of Shasta County.

Oak Run Creek (Shasta County)—Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County)—Case pending in Superior Court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County)—Case pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County)—Action by referee being deferred awaiting the outcome of the circulation of a stipulation for consent judgment among the parties involved.

Davis Creek (Modoc County)—The report of referee has been completed and is ready for submission to the Superior Court of Modoc County.

Mill Creek (Modoc County)—A report is in course of preparation covering the administration of the tentative schedule of allotments which was authorized for the 1930 season.

Deep Creek (Modoc County)—The report covering the field investigation of water supply and use of water made during the 1930 irrigation season is being prepared.

Franklin Creek (Modoc County)—The data collected in the field during the 1930 irrigation season is being studied and analyzed preparatory to fixing a schedule for trial distribution during the 1931 irrigation season.

WATER DISTRIBUTION

The report on water master service on North Cow Creek for the 1930 season has been completed.

Reports on water master service for the 1930 irrigation season on Davis, Emerson, Mill, Owl and Soldier creeks (Modoc County), Burney, Clover, Hat and Oak Run creeks (Shasta County), and Lower Shasta River and Little Shasta River (Siskiyou County) are in the course of preparation.

CALIFORNIA COOPERATIVE SNOW SURVEYS

Office work has included the preparation of sketch maps of newly located and relocated snow courses, revision of the key map showing all courses, and con-

tinued computations necessary in preparation for the correlation of snow survey data with run-off when the data from the surveys become available.

A field trip was made to the snow course at Lake Alpine in the Stanislaus Basin to locate a new observer. The latter will be stationed at Lake Alpine throughout the winter which will permit of monthly surveys at this location beginning in January. On the recent trip it was still possible to travel by automobile to within fourteen miles of the lake. The remainder of the trip was made on skis.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

The regular field work has been completed and the work of the past month except for salinity observations and gage maintenance, has been confined to the office work in compiling the report for the 1930 season covering all diversions, stream flow, return flow, etc., throughout the Sacramento-San Joaquin territory.

Salinity investigations are being continued through the maintenance of sampling at 37 stations in the bay and delta areas. During the past month the sampling at nine stations was discontinued as the salinity at these locations had reached a constant minimum and further observations were not required. Maintenance of eight tide gages has been continued. These are located at Sacramento, Walnut Grove, Georgiana Slough, Sacramento and San Joaquin ends of Three Mile Slough, Mossdale, Antioch, and Collinsville. The following are comparative salinity data for 1929 and 1930:

Station	Salinity in Parts of Chlorine per 100,000	
	11-30-30	11-30-29
Bullhead Point	1080	1140
O and A Ferry	(1) 225	(3) 450
Collinsville	(2) 60	285
Antioch	36	255
Jersey	7	55
Emmaton	(2) 2	23
Webb Pump	5	12
	(1) November 18th	
	(2) November 26th	
	(3) November 22nd	

WATER RESOURCES

Ventura County Investigations. The progress report on Ventura County Investigations for the year 1930 was completed during the present month.

South Coastal and other Southern California Investigations: Work on the South Coastal and other miscellaneous investigations in Southern California has been continued throughout the present month.

Napa Valley Investigation: Gaging stations on Conn Creek and Napa River have been maintained during the month and readings of wells in the south-westerly and northerly parts of the valley have been repeated.

Santa Clara Investigation: The office work in connection with the Santa Clara Investigation has proceeded during the present month and the report covering work done during the past year is now being typed.

Pit River (Modoc and Lassen Counties): Routine field work was continued throughout the month. The survey of the irrigated lands was completed except for

a few disconnected areas located on small tributary streams. The survey was stopped for the season on November 20, due to weather conditions. A contour survey has been made of Essex Reservoir to determine its capacity and a water stage register installed for the purpose of securing intensity of run-off data on the area tributary to the reservoir.

WATER RESOURCES INVESTIGATIONS

The water resources investigations being carried on in the Sacramento and San Joaquin Valleys and in portions of Southern California, and the investigation of the salt water barrier and salinity conditions in the delta, in furtherance of a coordinated plan for the conservation, development and utilization of the water resources of this State, as provided in Chapter 832 of the Statutes of 1929, are now drawing to completion and practically the entire staff engaged in this work has been concentrated upon the preparation of reports covering the results of the investigations made by the Division of Water Resources.

The bulletins of the Division of Water Resources to be prepared and published covering the results of the investigations made are twelve in number as follows:

- (1) Bulletin 25—Report to the Legislature of 1931 on State Water Plan.
- (2) Bulletin 26—Sacramento River Basin.
- (3) Bulletin 27—Salinity Control in Sacramento-San Joaquin Delta and Upper San Francisco Bay.
- (4) Bulletin 28—Economic Aspects of a Salt Water Barrier Below Confluence of Sacramento and San Joaquin Rivers.
- (5) Bulletin 29—San Joaquin River Basin.
- (6) Bulletin 30—The Pacific Slope of Southern California.
- (7) Bulletin 31—Santa Ana River Basin.
- (8) Bulletin 32—South Coastal Basin.
- (9) Bulletin 33—Rainfall Penetration and Consumptive Use of Water in Santa Ana River Valley and Coastal Plain.
- (10) Bulletin 34—Permissible Annual Charges for Irrigation Water in Upper San Joaquin Valley.
- (11) Bulletin 35—Permissible Economic Rate of Irrigation Development in California.
- (12) Bulletin 36—Cost of Irrigation water in California.

REPORT OF DIVISION OF MOTOR VEHICLES

FRANK SNOOK, Chief

LICENSE RENEWAL PERIOD IS ON

On December 15th, the Division counters were opened to the public for the distribution of 1931 license plates. New offices were opened at Pasadena, San Bernardino, San Jose and Stockton.

REGISTRATION FIGURES

As of December 1st, the Division has registered 1,929,428 automobiles, 15,476 solid tire trucks, 82,816 pneumatic tire trucks, 9,326 motorcycles, 9,543

solid tire trailers, and 38,658 pneumatic tire trailers, making a total of 2,085,247 fee paid registrations. In addition to the fee paid registrations exempt license plates have been issued to 32,361 automobiles, 911 motorcycles and 3,961 trailers, or a total of 37,233 exempt cars have been registered. The total fee paid and exempt registrations as of December 1st, is 2,122,480.

LIGHT AND BRAKE ENFORCEMENT ACTIVITIES

The Inspector in charge of the Bureau of Lights and the California Highway Patrol has continued the drive against glaring headlights as well as vehicles with one headlight and no taillight. We feel that a great benefit has been derived from the work done so far. An extensive program has been outlined for this work which will be followed as closely as possible.

The Bureau of Brakes report a substantial number of cars tested last month. The Inspector in charge with the Attorney for the Division has spent much time in preparing data for the Motor Vehicles Conference meetings. Three meetings of the Conference have been held to date and some very valuable information has been obtained.

REPORT OF DIVISION OF ARCHITECTURE

GEORGE B. McDOUGALL, Chief

During the month of December, 1930, contracts totaling \$247,745 were awarded. These contracts included work at the following institutions:

Stockton State Hospital.
San Jose State Teachers College.
Preston School of Industry.
Patton State Hospital.
San Diego Teachers College.
Agnews State Hospital.

Right of Way Agents Receive Appointments

Appointments of right of way agents for the Division of Highways have been announced as follows:

San Francisco—John Howard, Herbert Forbes, Frank F. Webb, Halloway Jones, and Jay J. Herz.

Eureka—Philip C. Eastman.
Redding—Leland L. Rose.

Los Angeles—Adolph N. Sutro.

Sacramento—Charles S. Smith, Bradford Perry, George Pulich, and Louis Malatesta.

San Bernardino—J. A. Gregory and Charles L. Flack

Fresno—Henry Sellers.

Lady: "Doctor, I want to reduce. What exercises should I take?"

Doctor: "Push yourself away from the table three times a day."

Progress on State Highway System

MAJOR PROJECTS COMPLETED, UNDER WAY AND ADVERTISED,
AS OF JANUARY 1, 1931—OTHER ACTIVITIES OF DEPARTMENT

C. H. PURCELL, Chief of Division of Highways.

DECEMBER AWARDS

During December, 1930, contracts were awarded and work advertised as follows:

Work placed under contract-----	\$1,111,100
Contracts pending and work advertised	\$96,600

Total -----	\$2,007,700
-------------	-------------

Unemployment Activities

Reports as of Saturday, December 20, 1930, shows that the program for unemployed relief upon the state highway system is affording employment to 3107 men who otherwise would be without work.

On that day 1732 men were at work on relief maintenance crews working out from over 200 centers in California. These men are working upon a three-day-a-week basis and are paid \$4 per day. They provide their own board and lodging, and are organized in addition to the regular maintenance organization.

In order to afford relief to unemployed labor in the metropolitan areas of California five labor camps have been established and are now carrying their full quota of 250 men each. These camps are respectively located in Plumas County on the Feather River lateral; on the alternate ridge route and on the Arroyo Seco Highway in Los Angeles County; on the Yosemite lateral in Mariposa County and on the Carmel-San Simeon Highway in Monterey County. A special relief construction crew of 125 men is working on the latter highway south of Monterey.

The men employed in labor camps are selected by the state free employment agencies and are again selected on the basis of their great need for labor and ability to qualify as bona fide residents of California. They are paid \$3 a day and provided with board and lodging. The special construction crew working out of Monterey and Carmel provide their own board and lodging.

COMPLETED CONTRACTS

Contracts were completed during December on the following important projects:

Rose Canyon Work

In San Diego County five and one-half miles of Portland cement concrete pavement, 30 feet wide, have been placed, through Rose Canyon, on the recently graded roadbed over the new alignment of that portion of the main route between San Diego and Los Angeles from Balboa Ave. to Torrey Pines Road, within the city limits of San Diego. This new route

is an improvement over the old road, via La Jolla, shortening the highway between Los Angeles and San Diego by some $4\frac{1}{2}$ miles. As a unit of this rerouting of the state highway was the construction of a reinforced concrete girder bridge, 210 feet long, completed last June. The cost of this new route, including the grading, paving and construction of the bridge, amounted to \$319,500.

San Bernardino-El Centro Lateral

A contract has just been completed for constructing uniform 8 foot shoulders along each side of the existing 20 foot concrete pavement over the six miles between the San Bernardino County line and one mile west of Beaumont in Riverside County. Construction on this route, carrying much heavy produce-trucking from the fertile Imperial Valley, as well as a large portion of transcontinental tourist traffic entering Southern California, is being pushed forward to modern standards as rapidly as possible. Besides the contract just completed in Riverside County, the 13 miles between Arroyo Salado and the northerly county line in Imperial County are now under construction, a 20 foot asphalt concrete pavement being placed on a 36 foot graded roadbed. Also a project was advertised for bids on December 23d, which calls for placing a 20-foot asphalt concrete pavement over the existing 16-foot Portland cement concrete pavement and grading the roadbed to a full 36-foot width between Trifolium Canal and Kane Springs in Imperial County. The cost of the widening in Riverside County amounted to \$41,100, and the proposed six miles of paving between the Trifolium Canal and Kane Springs is estimated to cost \$185,000.

Redwood Highway

Progress on the new alignment of that portion of the Redwood Highway between San Rafael and Sausalito in Marin County is noted by the completion of the contract for placing a 30-foot bituminous macadam pavement on the recently constructed roadbed from San Rafael to Alto. Another unit of this work to be completed during the past month was the erection of a bascule span and 855 feet of timber trestle across the tide lands near the mouth of Corte Madera Creek at Greenbrae, the bascule span crossing the navigable channel of the creek. This bridge has a clear roadway width of 44 feet and a 5-foot sidewalk. The southerly sector of this rerouting of the Redwood Highway is now under construction between Alto and Waldo, where it will connect with the existing road. Bids were opened on November 26th for the construction of a bridge across the tracks of the Northwestern Pacific railroad and an arm of Richardson's Bay at Manzanita within the limits of this southerly section. This structure will consist of 2340 feet of timber trestle on pile and frame bents with a 56-foot plate

girder lift span on concrete piers with pile foundations and a 45-foot steel stringer span on concrete bents with pile foundations. This structure also will have a 44-foot roadway. Upon its completion the highway over this new alignment will materially shorten the distance between Sausalito and San Rafael and will also eliminate from the route the dangerous Corte Madera grade. The cost of the surfacing between Alto and San Rafael amounted to \$95,600 and the Corte Madera Creek bridge was erected at a cost of \$170,000. The Manzanita bridge will cost \$346,150.

Cosumnes River Bridge

A timber bridge across the Cosumnes River connecting Amador and El Dorado counties has been completed as a unit of the construction of the historic Mother Lode Highway through the heart of early California mining districts. This new structure cost \$23,000 and was built on a straightened alignment at this river crossing, replacing the old light steel bridge with its serpentine approaches which was erected by the counties in 1895.

Victory Highway

Further progress on the reconstruction of the Sacramento to Reno road via Auburn is noted by the completion of nine and one-half miles of grading on new alignment between the airport at Emigrant Gap and Indian Springs in Placer and Nevada Counties. This new alignment is a great improvement, both as to line and grade, over the old road. Two grade separations, an underpass at Emigrant Gap and an overhead at Yuba Pass, which will eliminate the dangerous Emigrant Gap and Crystal Lakes grade crossings, are now under construction. Surfacing over this section has already begun and has been completed from the South Fork of the Yuba River over the 11 miles to Soda Springs, easterly from the grading project just completed. The cost of the completed grading and surfacing contract was \$605,800. The improvement of this highway is of great interest to thousands of California motorists who seek their recreation in the many vacation spots around Lake Tahoe and in the high Sierra, as well as to the many transcontinental tourists who enter California by this beautiful mountain highway.

Valley Route

Reparing of the Los Angeles to Sacramento highway north of Stockton is rapidly progressing. During the past four weeks seven miles of Portland cement concrete pavement twenty feet wide with eight foot shoulders between Stockton and Lodi have been completed and accepted, from Cherokee Station to Harney Lane between Stockton and Lodi. This pavement cost \$278,600, and replaces the old 16-foot bituminous macadam pavement which was built by the county. At a cost of \$63,500, a 20-foot asphalt concrete pavement was placed between Forest Lake and the San Joaquin-Sacramento county line and work is nearing completion on the paving from Houston School to Forest Lake north of Lodi.

BIDS RECEIVED

Projects upon which bids have been received since November 24th include the following:

Yuma Highway

In Imperial County an asphalt concrete pavement twenty feet wide is to be placed over the six miles from Yuma to Araz. This project will be the improvement of the most southerly highway entrance into California. Construction on this transconti-

ental highway will begin at the Colorado River bridge at Yuma. The new pavement is to be placed on a gravel subbase which will raise the grade of the highway sufficiently to give proper and adequate drainage. The cost of the improvement will be \$245,000.

Coast Route

Two projects of prime importance to the improvement of the heavily traveled Coast Route connecting Los Angeles and San Francisco will be the following: The one, in Santa Barbara County, calls for the construction of a graded roadbed and the placing of a 20-foot Portland cement concrete pavement over three miles of this road as it passes through the Gaviota Canyon. The project will extend from Gaviota Station to Las Cruces, and will cost \$231,700. The existing sharp curves and adverse grades through the canyon are to be reconstructed to modern standards of highway alignment. To accomplish this end much heavy grading along the canyon walls will be necessary. Under a separate contract a reinforced concrete arch bridge will be constructed at a crossing of Gaviota Creek.

The other project comprises the grading and paving of eleven miles of the Coast Route in San Luis Obispo County from Paso Robles to the Monterey County line. In this instance the pavement will be asphalt concrete, and portions will be placed over the existing 15-foot Portland cement concrete pavement. The new pavement is to be placed with a "one-way crown" so that future widening may be done on the west side away from the tracks of the Southern Pacific Railroad which parallel the highway. The cost of the grading and paving of this project is \$290,200.

Pacheco Pass Lateral

In Santa Clara County nearly eleven miles of the Pacheco Pass lateral are to be reconstructed from San Felipe to one mile east of Bell's station. The present improvement will involve the placing of a 20-foot bituminous macadam pavement, with eight foot shoulders, on an improved alignment and grade. This lateral, connecting as it does the Valley Route at Califa with the Coast Road at Gilroy, carries a rapidly increasing amount of traffic, especially high speed commercial trucking, and this work is so designed that the road may better care for the travel it is called upon to bear. The improvement is estimated to cost \$245,000.

Feather River Lateral

A project of the first magnitude will be the erection of a steel cantilever bridge across the North Fork of the Feather River at Pulga in Butte County. The work of placing the concrete piers and abutments is under way, and bids for the erection of the steel superstructure were opened on the 3d day of December. The deck of the highway bridge will be 170 feet above high water and 130 feet above the top of the Western Pacific Railroad bridge which passes diagonally under the State's proposed structure. The project for the substructure calls for placing two reinforced concrete abutments and two reinforced concrete piers. The erection of the superstructure will include one 350-foot steel arch span, two 62-foot plate girder spans, and one 44-foot plate girder span. The roadway width of the bridge will be 24 feet. At a cost of \$181,700 another link will be added to this new all year highway to Quincy and to Plumas County.

Her: "Was that your new girl I saw you with last night?"

He: "No, just the old one painted over."

Civilization Moulded By Highways

By LEO G. LAUCK, Economist, Washington, D. C.*

NO OTHER movement is more closely related to many phases of present-day civilization than that of highway development and transportation. It touches the life, directly and indirectly, of every man, woman and child throughout the universe. It has many angles—social, economic and financial.

The real movement for expansion is of comparatively recent origin. It came with the advent of the automobile and the motor truck. Originally the speed of the horse was the measuring rod by which the roads of the past were developed. Today the speed of the automobile and the weight of the motor truck have become the gauge on which development must proceed.

Just as the various countries were unprepared for participation in a World War, so they were unprepared for the Aladdin-like spread of the automobile to every corner of the world. Motor development, with its rapid strides in the space of the past ten years, has run far ahead of highway development, and the world is now straining to catch up.

In spite of the fact that the Romans, almost two thousand years ago, built some roads that still exist; that Napoleon gave not only his code but many hundreds of kilometers of excellent roads to France, and that there are many other scattered examples of good road building, highway development as a science and as a fact has made greater advances in the past thirty years or less than in all previous history.

Invention has made the highways of the past as useless to modern civilization as a coat of armor would be to the present-day soldier. Pioneer highway engineers would all have changed their predictions with regard to the lines of commercial and industrial development which their respective countries would take if they could have looked forward a few years to the invention of the steam engine, or still further to the coming of the automobile and the motor truck, supplementing, as they do, the railway in the commercial and social life of the world.

People everywhere have become impatient of restraint and adventurous in spirit, and as a consequence industrialization and standardization have shown rapid progress

throughout the world. They have their values, but they are prison bars to one phase of the modern temperament. The automobile has furnished the release.

This fact is emphasized most vividly by a survey of the world's highways recently prepared by the United States Department of Commerce. It discloses a total of 7,805,629 miles of roads distributed by continents as follows: America, 3,727,393; Europe, 2,450,439; Asia, 1,014,014; Australia and Oceania, 350,863, and Africa, 262,920 miles.

The United States, not including Alaska and the outlying possessions, has the greatest actual mileage of highways, with 3,016,281, or 38.7 per cent of the world total. Russia ranks second with 776,712 miles and is followed by Japan with 575,325 miles; France, 405,028 miles; Canada, 381,977 miles; Australia, 300,000 miles; India, 283,506 miles; Germany, 216,672 miles; United Kingdom, 179,095 miles, and Poland, 139,631 miles.

The fairest basis on which to compare highway mileage seems to be the proportion of road mileage to area. One country large in area may have a greater road mileage than a smaller country and yet be less adequately provided with roads it needs. Considering the area and total mileage, Japan leads the world with three miles of road to the square mile, followed by Luxemburg with 2.6; Northern Ireland, 2.5; United Kingdom, 2; Denmark, 1.9; France, 1.89; Irish Free State, 1.75; Belgium, 1.43; Lithuania, 1.28; Germany, 1.19; Netherlands, 1.18; Hungary, 1.05; and the United States in twelfth place with 1 mile of road to the square mile of area.

As the population of the world continues to grow in number and as further development of industry results in increased production, the demand for more roads is certain to increase still further. It is up to the individual countries to meet that increase. During the past few years individual effort nearly everywhere has kept pace with the increased demand for additional highways; yet their capabilities have scarcely been tried.

As the ancients believed the roads lead to a liberal education, so the governments of this great world of ours have rested conclusively in their upward progress upon the slender path of the aborigine, swelled to the well defined trail of the caravan, broadened into the cart and wagon road, all to be supplanted by a vast network of macadam, concrete and brick. What will follow it? Time alone can tell.

Definition: A pedestrian is a man looking for the place where he parked his car.—*Life*.

STATE HIGHWAY BUDGET FOR 1931-1933 BIENNIUM PRE- SENTED TO STATE LEGISLATURE

(Continued from page 8.)

Grading, structures, pavement and oiled shoulders, Turner's Station to Stockton (San Joaquin County), \$319,400. This provides for the improvement of the so-called "Hogan" Road from Stockton south.

Nine timber bridges (San Joaquin County), \$95,600.

Grading, filling borrow pits, pavement and structures, Cosumnes River bridge to 1.4 miles north of McConnell (Sacramento County), \$26,600.

McConnell grade separation, subway (Sacramento County), state's share, \$66,500.

Stanislaus River Bridge and approaches (Stanislaus County), \$105,300.

Grading and structures, 5.3 miles, Canton Creek to Piru Creek, Ridge Route Alternate (Los Angeles County), \$500,000.

Grading and structures, 3.9 miles, Los Alamos Divide, Ridge Route Alternate (Los Angeles County), \$1,000,000. This item and the one immediately above provides for continuation of construction upon the Alternate Ridge Route.

Grading, structures, pavement, 3.1 miles, Fresno to Fancher Creek (Fresno County), \$216,200. This completes the widening of pavement immediately north of the city of Fresno.

Grading, oil rock shoulder, 29.8 miles, Bakersfield to Grapevine (Kern County), \$360,000. This widens the roadbed and improves conditions upon the "seventeen mile tangent."

Grading and resurfacing, 11.8 miles, Goshen to Kingsburg (Tulare County), \$473,000. This provides for widening the 15-foot pavement in Tulare County.

Five bridges over Cross Creek, widening; bridge over canal near Traver (Tulare County), \$60,000.

Grading, structures, oil shoulders, pavement, 5.5 miles, Plaza Garage to Goshen; grading, structures, oil shoulders, Plaza Garage to 0.3 of a mile westerly (Tulare County), \$272,000. This with other work will complete the widening of the 15-foot pavement in Tulare County and provide a grade separation at the junction of the Golden State Highway and the Hanford lateral.

Plaza Garage grade separation (subway) Tulare County, state's share, \$50,000.

Grading, structures, oil shoulders, pavement 2.9 miles, Union avenue to Beardsley Canal (Kern County), \$236,000. This provides for improving and widening pavement at the north city limits of Bakersfield.

Bridge over Kern River (Kern County), \$400,000.

Bridge over Beardsley Canal (Kern County), \$16,000.

COAST HIGHWAY

(San Francisco to San Diego)

Grade separation with S. P. tracks at Madrone (Santa Clara County), state's share, \$110,000.

Soledad Grade separation and approaches (Monterey County), \$96,000.

Bridge over San Benito River (San Benito County), \$140,000.

Santa Clara River bridge (Ventura County), \$410,000. The original was washed out by the flood following the failure of the San Francisquito Dam. The new bridge is on new alignment, and is an improved structure.

Grading, structures, widening pavement, Fullerton to Los Angeles County line (Orange County), \$164,500. This will complete the 30-foot width of pavement on the Coast Highway between Los Angeles and Santa Ana.

Grading, surfacing and structures, 3.9 miles, Wigmore, to Los Alamos (Santa Barbara County), \$150,000. This provides for widening the existing 15-foot pavement.

Repairing floor, Santa Ynez River bridge at Buelton (Santa Barbara County), \$18,000.

Grading, pavement, structures, widening, 5.1 miles, Serra to San Diego County line (Orange County), \$382,500. This project increases the present 20-foot pavement to 30 feet in the southern part of Orange County between the junction of the Coast Highway and the Oxnard-Capistrano Highway.

Grading, structures, pavement, widening 4.5 miles, Ventura to El Rio (Ventura County), \$100,000. This provides for a 30-foot pavement south of Ventura to the junction of the Coast Highway and the Oxnard-Capistrano Highway.

Bridge and approaches, San Dieguito River bridge (San Diego County), \$224,500. This corrects alignment and substitutes an improved bridge for the present trestle.

Grading, structures, pavement, 16.8 miles, Santa Rita to San Benito River, 16.8 miles (Monterey and San Benito counties), \$1,046,700. This provides for grading and paving of the relocated San Juan grade.

Bridge over San Juan Creek (San Benito County), \$10,000.

VICTORY HIGHWAY

(Roseville to Nevada Line via Auburn)

Grading, pavement and small structures, 4 miles, Newcastle to Auburn (Placer County), \$335,000. This project provides for correction of alignment and widening of 15-foot pavement.

Oil rock surfacing, Airport to Soda Springs, 20 miles (Placer and Nevada counties), \$93,000.

Oil rock surfacing, Colfax to Gold Run, 8.9 miles (Placer County), \$125,000.

Grading, structures, oil rock surfacing, Gold Run to Airport, 12 miles (Placer County), \$780,000. This completes the remaining unimproved section east of Auburn.

Towle Grade separation (subway beneath S. P. tracks) (Placer County), state's share, \$20,000.

Oil rock surfacing 1.8 miles near Bay View Rest (El Dorado County), \$7,200.

Myers to Nevada Line via Truckee River

Oil rock surfacing, Tahoe Junction to Hinton, 9 miles (Nevada County), \$135,000.

Oil surfacing, Bay View, northerly, 1.8 miles (El Dorado County), \$7,200.

TAHOE-UKIAH HIGHWAY

Armor top surface, Nevada City to Washington Road, 11.8 Miles (Nevada County), \$41,000.

Bridge over Russian River (Mendocino County), \$30,000.

PLACERVILLE-TAHOE HIGHWAY

(Sacramento to Nevada Line via Placerville)

Grading and structures from Brighton to Mills (Sacramento County), \$339,000. This provides for placing a concrete pavement on the first section of the Placerville road from Sacramento easterly.

Grading, structures, paving in Placerville (El Dorado County), \$40,000. (Cooperative project.)

Oil rock surfacing Riverton to Kyburz, Strawberry to Phillips (El Dorado County), \$51,200.

Oil rock surfacing, Mays to state line (El Dorado County), \$50,200.

Grading, structures, oil rock surfacing, Placerville to RR Xing (El Dorado County), \$59,000. This provides for grading and surfacing a section of the road immediately east of Placerville hitherto unimproved except for maintenance.

Oil surfacing, Clarks Corner to Placerville, 1.7 miles (El Dorado County), \$5,450.

MOTHER LODE HIGHWAY

(Auburn to Sonora)

Grading, structures, armor top surfacing 1.2 miles, San Andreas to 1.4 miles north of Calaveritas Creek (Calaveras County), \$35,000.

Armor top surfacing north and south of Calaveritas Creek, 2.9 miles (Calaveras County), \$13,300.

Armor top surfacing, 7.2 miles, Dry Town to Martell (Amador County), \$29,500.

FEATHER RIVER LATERAL

(From Pacific Highway to Quincy via Oroville)

Grading, structures and oil rock surface from Pulga to East Butte County line (Butte County), \$483,400. This continues construction on the Feather River lateral from the crossing at Pulga east to the Plumas County line.

Bardees Bar bridge (Butte County), \$41,000.

Grading, structures and oil rock surfacing 1.2 miles, Spanish Creek to Keddie (Plumas County), \$135,000.

Spanish Creek and W. P. tunnel, bridge and portal structures (Plumas County), \$100,000.

Bridge over West Branch Creek (Butte County), \$45,000.

Oiled surface, Oroville to Feather River, 4.1 miles (Butte County), \$16,600.

TRINITY LATERAL

(Redding to Arcata via Weaverville)

Oiled surface, Weaverville to Tower House, 32 miles (Trinity and Shasta counties), \$69,100.

Clear Creek bridge approaches (Shasta County), \$9,300.

Bridge at Browns Creek and approaches (Trinity County), \$9,700.

Bridge at Clear Creek (Shasta County), \$17,700.

Oil rock surfacing, 9 miles, Humboldt Creek to Willow Creek (Humboldt County), \$58,500.

DOWNIEVILLE LATERAL

(Nevada City to Downieville)

Grading, structures and surfacing, Nevada City to Downieville (Nevada, Yuba and Sierra counties), \$50,000. This starts the redevelopment and widening of the old highway originally built by convicts on standards not satisfactory for present traffic.

ALTURAS LATERAL

(Redding to Nevada Line via Alturas)

Oiled surface, Fall River to Hot Creek, 66 miles (Shasta, Lassen and Modoc counties), \$243,600.

Oiled rock surfacing, Diddy Hill to Old Round Mountain, 8.7 miles (Shasta County), \$115,000.

Oiled surface, 3 miles east of Alturas to railroad crossing, 1.4 miles (Modoc County), \$5,000.

Oiled rock surfacing, Main Street to East City Limits of Alturas (Modoc County), \$5,500.

RED BLUFF-SUSANVILLE LATERAL

(Red Bluff to Nevada Line near Purdy's via Susanville)

Oiled surfacing, Mineral to Chester, 31 miles (Tehama and Plumas counties), \$55,600.

Oiled surfacing, Westwood to Willards, 12.8 miles (Lassen County), \$32,000.

Grading, oil rock surfacing, structures, 9.2 miles, Willards to Susanville (Lassen County), \$296,800. This provides for reconstructing and improving a section that is difficult both of maintenance and snow removal.

Oiled rock surfacing from 2 miles east of Dales to Paynes Creek, 7.3 miles (Tehama County), \$96,700.

Oil rock surfacing, 11.4 miles, Lake Almanor to Westwood (Lassen and Plumas counties), \$97,700.

Oil surfacing, Doyle to Long Valley Creek, 7.5 miles (Lassen County), \$18,800.

KLAMATH RIVER LATERAL

(Redwood Highway near Klamath River to Pacific Highway)

Walker bridge and approaches (Siskiyou County). Cooperative project, state's share, \$19,000.

Beaver Creek bridge and approaches (Siskiyou County), \$48,300.

Grading and bridge replacements, Weitchpec to Happy Camp, \$165,000 (Siskiyou and Humboldt counties).

UKIAH TO MENDOCINO STATE HOSPITAL

Bridge over Russian River (Mendocino County), \$30,000.

BAYSHORE HIGHWAY

(San Francisco to San Jose)

Bituminous macadam pavement from Fifth Avenue, San Mateo to Willows Road, 11.4 miles (San Mateo County), \$315,200.

Grading, structures and bituminous macadam pavement, 9.3 miles, Willow Road to Alviso Road (San Mateo and Santa Clara counties), \$716,850.

Bridge over San Francisquito and Stevens Creek, \$65,000.

Concrete pavement, Broadway to Fifth Ave., 3 miles (San Mateo County), \$272,450.

These projects continue present pavement activities to San Mateo and provide for construction and surfacing of the remaining sections of the road to a connection with the Alviso Road, 6 miles from San Jose.

SKYLINE BOULEVARD

(San Francisco to Glenwood)

Grading, structures and bituminous macadam, Saratoga Gap to Black Road, portions, 4 miles, (Santa Clara and Santa Cruz counties), \$300,000. This continues the construction of the Skyline Boulevard southerly.

SACRAMENTO-OAKLAND HIGHWAY

Grading, pavement, structures and oil shoulders, 1.7 miles west of Cordelia to 1.7 miles west of Fairfield (Solano County), \$294,600. This will eliminate the last piece of 15-foot pavement existing on this highway.

Bridges over Ledwood, Suisun and Knightson creeks (Solano County), \$25,000.

Filling borrow pits, pavement, and oil shoulders, 1.3 miles, west of causeway (Yolo County), \$70,000.

ALBANY TO MARTINEZ

Grading, structures and pavement, San Pablo Creek to Crockett, excepting Phiole; "A" Street subway, Crockett (Contra Costa County), \$396,000. This project provides for a 30-foot asphaltic and concrete pavement on the existing macadam highway between Richmond and Crockett.

STOCKTON TO SANTA CRUZ VIA OAKLAND

Grading, structures and pavement, Castro Valley Road (Alameda County), \$50,000.

Grading, armor top surface, structures, French Camp via McKinley Avenue to Stockton (San Joaquin County), \$50,000. This completes the improvement of the south approach to Stockton through Altamont Pass.

Bridges, over Homestead Canal and Walker Slough (San Joaquin County), \$16,500.

Grading, structures, pavement and shoulders, 5 miles, Greenville to Livermore (Alameda County), \$166,100. This project constitutes an improvement of the westerly side of the Altamont Pass.

Grading, structures, pavement, shoulders, 3.5 miles, Meridian Road to Ware Avenue (Santa Clara County), \$70,000. This will correct reverse curves near Johnson's Corner south of San Jose.

Grading, structures, surfacing (Santa Cruz County), Santa Cruz to 1 mile west, \$60,000.

Grading, structures, surfacing, 6.5 miles, Inspiration Point to Vine Hill Road, portions (Santa Cruz County), \$360,000. This with the item immediately preceding constitutes the first unit in the relocation of the present highway congested Los Gatos-Santa Cruz highway.

SALIDA TO ROUTE 23 AT JUNCTION

(Salida on Valley Route North of Lodi, Through Sonora, Over Sonora Pass to Junction north of Bridgeport)

Grading, armor top surface, structures, Sonora to one-half mile east (Tuolumne County), \$27,400.

Grading, structures, and oil rock surfacing, Long Barn to Stoddard Springs (Tuolumne County), \$97,000 (note an additional \$30,000 will be spent on this section from Forest Highway Funds). This continues the improvement from the end of the surfaced road at Long Barn.

SAN ANDREAS LATERAL

(From Golden State Highway, Valley Route, Near Lodi to Route 23, Near Silver Creek, Calaveras County)

Grading, structures and surfacing, 7.1 miles, Waterloo Road to 1.3 miles east of Clements (San Joaquin County), \$213,000. This project provides for the pavement of the present county built macadam east of Lodi, taken over by the state when the road was admitted into the state system.

Grading, structures, oil rock surfacing, Big Trees to Dorrington, 3 miles (Calaveras County), \$104,000. (This is a cooperative project and \$36,000 of Forest Highway funds will be added to the state construction of \$104,000.)

Grading, structures, surfacing near Lake Alpine, 5 miles, portions (Alpine County), \$50,000.

MANTECA TO ROUTE 5**NEAR MOSSDALE SCHOOL**

Grading, pavement and structures, 4.2 miles, Mossdale to Manteca (San Joaquin County), \$174,000.

Grade separation, underpass, Western Pacific RR. (San Joaquin County), state's share, \$30,000.

This provides for paving the remaining unpaved portion of the road with a grade separation structure beneath the tracks of the Western Pacific tracks.

PACHECO PASS LATERAL

(Califa, on the Valley Highway to Gilroy on the Coast)

Three timber bridges with approaches over High-

line Canal and San Joaquin overflow (Merced County), \$51,500.

REDWOOD PARK ROAD

(Saratoga Gap Near Redwood Park to Blooms Mill)

Grading, structures and armor top surfacing, 3.6 miles, Saratoga Gap to Waterman Switch (Santa Cruz County), \$271,600. This completes the grading to a connection with the improved county road in San Lorenzo Canyon.

SAN LUCAS TO SEQUOIA NATIONAL PARK

Grading, structures and 20-foot bituminous macadam pavement from 1 mile west of Merryman to 3 miles east of Lemon Cove, 10.4 miles (Tulare County), \$350,000. This constitutes an improvement of the present unsatisfactory county paved road which was taken over by the state when this road was admitted into the state system.

Grading and oil shoulders west of Plaza Garage to county line, 3.5 miles (Tulare County), \$12,000.

CARMEL-SAN SIMEON HIGHWAY

Grading, structures and oil rock surfacing, 5.4 miles, San Remo Divide to Carmel (Monterey County), \$214,000.

Bridge over Carmel River, San Jose and Wild Cat Canyon Creeks (Monterey County), \$85,000.

Bridge over Granite Creek (Monterey County), \$45,000.

Bridge over Garrapata Creek (Monterey County), \$35,900.

Grading, structures and oil rock surfacing, 8.6 miles, Cambria to San Simeon (San Luis Obispo County), \$210,000. This completes the present state highway at southerly end connecting with convict construction to the north. These projects will complete the grading and surfacing of the highway with the exception of a 25 mile gap between convict camps.

Bridge over San Simeon Creek, Pico Creek, Little Pico Creek, near San Simeon (San Luis Obispo County), \$90,000.

EAST OF SIERRA HIGHWAY

(Saugus to Route 11 at Alpine Junction)

Grading, structures and oil rock surfacing, Yerbys to McGee Creek, 7.3 miles (Mono County), \$243,600.

Grading, structures and oil rock surfacing, Convict Creek to Casa Diablo Hot Springs, 5.5 miles (Mono County), \$120,450.

Grading, structures and oil rock surfacing, Casa Diablo Hot Springs to Deadman Creek, 8.8 miles (Mono County), \$234,950.

Grading and structures from 1 mile north of Bridgeport to Sonora Pass Junction, 15 miles (Mono County), \$261,000.

Bridge over Walker River (Mono County), \$15,000.

All of these projects are in Mono County and located north of Bishop.

EL RIO TO SAN JUAN CAPISTRANO

(Portion of the Coast Route)

Grading, structures and pavement, 7.4 miles, Los Flores Canyon to Santa Monica (Los Angeles County), \$510,200. This provides for widening pavement to 40 feet.

Widening pavement, Topanga Canyon to Los Flores Canyon, 3.2 miles (Los Angeles County), \$50,000.

Santa Ana River bridge, widening (Orange County), \$80,000.

Shore protection, Santa Monica to Pt. Mugu, 7.2 miles (Los Angeles and Ventura counties), \$240,000.

diverted in Sec. 6, T. 17 S., R. 6 E., S. B. B. and M., for recreational purposes.

TRINITY COUNTY—Application 6846. Grunman and Slack, c/o Chas. A. Slack, Tracy, California, for 10,00 c.f.s. from Little Boulder Creek tributary to Coffee Creek and Trinity River to be diverted in Sec. 14 or 22, T. 37 N., R. 8 W., H. B. and M., for placer mining purposes.

COLUSA COUNTY—Application 6847. Mary E. Porter Gleason, c/o Rutledge and Rutledge, attorneys, Colusa, California, for 1.92 c.f.s. from Sacramento River tributary to Suisun Bay to be diverted in Sec. 7, T. 14 N., R. 1 E., M. D. B. and M., for irrigation purposes on 173.58 acres. Estimated cost \$2,515.00.

RIVERSIDE COUNTY—Application 6848. Grace L. Williams, Lake Arrowhead, California, for 1½ gallons per minute from unnamed spring tributary to San Joaquin River watershed to be diverted in Sec. 2, T. 6 S., R. 2 E., S. B. B. and M., for domestic purposes. Estimated cost \$250.00.

HUMBOLDT COUNTY—Application 6849. Salyer Consolidated Mines Co., Salyer, Trinity Co., California, for (a) 25, (b) 10 and (c) 15 c.f.s. from (a) Campbell Creek, (b) Four Mile Creek and (c) Martin Creek including all intercepted water along the line of the conduit tributary to (a) and (b) South Fork of Trinity River and (c) Trinity River to be diverted in Sec. (a) and (b) 20, T. 6 N., R. 5 E., H. B. and M., (c) Sec. 16, T. 6 N., R. 5 E., H. B. and M., for Mining purposes. Estimated cost \$200,000.00.

HUMBOLDT COUNTY—Application 6850. Geo. H. Bergin, Weaverville, California, for 125 c.f.s. from Horse Linto Creek tributary to Trinity River to be diverted in Sec. 15, T. 7 N., R. 6 E., H. B. and M., for mining purposes. Estimated cost \$200,000.00.

EL DORADO COUNTY—Application 6851. John J. Scherrer, box K, Placerville, California, for 0.05 c.f.s. from unnamed stream tributary to Hangtown Creek to be diverted in Sec. 18, T. 10 N., R. 11 E., M. D. B. and M., for domestic and irrigation purposes (0.5 acres).

SAN BERNARDINO COUNTY—Application 6852. Robert M. Stapp, P. O. box 5, Lake Arrowhead, California, for 0.008 c.f.s. from unnamed spring tributary to Burnt Mill Canyon and Little Bear Creek to be diverted in Sec. 28, T. 2 N., R. 3 W., S. B. B. and M., for domestic and recreational purposes. Estimated cost \$200.00.

TRINITY COUNTY—Application 6853. W. E. Campbell, c/o J. Emerson Gee, 211 South Berendo St., Los Angeles, California, for 100 c.f.s. from Canyon Creek tributary to Trinity River to be diverted in Sec. 17, T. 35 N., R. 10 W., M. D. B. and M., for hydraulic mining purposes.

MENDOCINO COUNTY—Application 6854. C. D. & Anna D. Flowers, c/o Hale McCowen, Jr., attorney, Ukiah, California, for 0.50 c.f.s. from Russian River tributary to Pacific Ocean to be diverted in Sec. 4, (projected) T. 14 N., R. 12 W., M. D. B. and M., (in Lot 66, Yokayo Rancho) for irrigation purposes (24 acres). Estimated cost \$2,800.00.

MENDOCINO COUNTY—Application 6855. J. C. Crawford, c/o Hale McCowen, attorney, Ukiah, California, for 0.60 c.f.s. from Russian River tributary to Pacific Ocean to be diverted in Sec. 4, (projected) T. 14 N., R. 12 W., M. D. B. and M., (in Lot 66, Yokayo Rancho) for irrigation purposes (52 acres). Estimated cost \$2,800.00.

SAN BERNARDINO COUNTY—Application 6856. John L. McKee, Twenty-nine Palms, California, for 15 gallons per minute from Surprise Springs to be diverted in Sec. 15, T. 3 N., R. 7 E., M. D. B.

and M., for irrigation and domestic purposes (25 acres). Estimated cost \$1,500.00.

Permits to Appropriate Water Issued by The Department of Public Works, Division of Water Resources During the Month of December, 1930.

SAN BERNARDINO COUNTY—Permit 3625. Application 6778. William T. Elliot, Summit, California, December 1, 1930, for .062 c.f.s. from Little Horseshief Canyon in Sec. 27, T. 3 N., R. 5 W., S. B. for irrigation and domestic use on 5 acres.

EL DORADO COUNTY—Permit 3626. Application 6756. Ida M. Scott, Los Angeles, California, December 1, 1930, for .065 c.f.s. from unnamed stream in Sec. 30, T. 11 N., R. 16 E., M. D., for domestic use. Estimated cost \$300.00.

SAN JOAQUIN COUNTY—Permit 3627. Application 6802. Western Pacific Railroad Co., San Francisco, California, December 2, 1930, for .885 c.f.s. from Potato Slough in Sec. 13, T. 3 N., R. 4 E., M. D. M., for industrial use. Estimated cost \$11,500.00.

EL DORADO COUNTY—Permit 3628. Application 6765. J. R. Taylor, H. Derr and George Horshtinger, Sacramento, California, December 2, 1930, for 600 g.p.d. from unnamed stream in Sec. 19, T. 11 N., R. 16 E., M. D., for domestic use. Estimated cost \$150.00.

SHASTA COUNTY—Permit 3629. Application 6746. J. J. Vokal and Mary Vokal, Redding, California, December 8, 1930, for 5 c.f.s. from Olney in Sec. 24, T. 31 N., R. 5 W., M. D. M., for power purposes. Estimated cost \$250.00.

SHASTA COUNTY—Permit 3630. Application 6746. J. J. Vokal and Mary Vokal, Redding, California, December 8, 1930, for 5 c.f.s. from Olney Creek in Sec. 24, T. 31 N., R. 5 W., M. D. M., for irrigation and domestic use on 27 acres. Estimated cost \$250.00.

TRINITY COUNTY—Permit 3631. Application 6578. New River Mining Co., Los Angeles, California, December 8, 1930, for 40 c.f.s. from Quimby Creek in Sec. 29, T. 7 N., R. 7 E., H. M., for mining use. Estimated cost \$10,000.00.

SHASTA COUNTY—Permit 3632. Application 6786. August L. Cox and W. E. Winston, Big Bend, California, December 9, 1930, for .93 c.f.s. from Nelson Creek in Sec. 29, T. 37 N., R. 1 E., M. D. M., for irrigation and domestic use on 75 acres. Estimated cost \$1,200.00.

SUTTER COUNTY—Permit 3633. Application 6743. McGrath Bros. et al., Meridian, California, December 9, 1930, 131 c.f.s. from Butte Slough in Sec. 35, T. 16 N., R. 1 W., M. D., for irrigation use on 5,295.53 acres.

ROUTE COUNTY—Permit 3634. Application 6723. E. O. Cullen, Glendora, California, December 11, 1930, for 3 c.f.s. and 9 acre feet per annum storage from Empire Creek in Sec. 20, T. 23 N., R. 4 E., M. D., for mining purposes. Estimated cost \$200.00.

LAKE and MENDOCINO COUNTIES—Permit 3635. Application 6594. Snow Mountain Water and Power Co., San Francisco, California, December 11, 1930, for 50 c.f.s. and 14,500 acre feet per annum storage from South Eel River in Sec. 6, T. 17 N., R. 11 W., M. D., for irrigation use on 4905.9 acres. Estimated cost \$2,000,000.00.

NEVADA COUNTY—Permit 3636. Application 6597. South Yuba Co., Ltd., San Francisco, California, December 11, 1930, for 40 c.f.s. from Scotchman Creek in Sec. 18, T. 17 N., R. 11 E., M. D., for mining use. Estimated cost \$7600.00.

CLAYVILLAS COUNTY—Permit 3637, Application 6764, State of California, Division of Highways, District X, Sacramento, California, December 7, 1930, for .016 c.f.s. from an unnamed spring in Sec. 32, T. 7 N., R. 17 E., M. D., for domestic purposes. Estimated cost \$800.00.

SIERRA COUNTY—Permit 3638, Application 6798, Kate Hardy Mining Co., Downieville, California, December 17, 1930, for 2 c.f.s. from two unnamed ravines in Sec. 19, T. 19 N., R. 10 E., M. D., for mining and domestic use. Estimated cost \$650.00.

MONO COUNTY—Permit 3639, Application 6519, W. O. Garner, Pomona, California, December 18, 1930, for 150 g.p.d. from unnamed spring in Sec. 9, T. 4 S., R. 27 E., M. D., for domestic use. Estimated cost \$100.00.

BUTTE COUNTY—Permit 3640, Application 6790, Edward Steadman, Oroville, California, December 18, 1930, for 3 c.f.s. from Feather River in Sec. 27, T. 18 N., R. 3 E., M. D., for irrigation and domestic use on 253.117 acres. Estimated cost \$8000.00.

YUBA COUNTY—Permit 3641, Application 6731, W. C. Cunningham and A. Cunningham, Camptonville, California, December 22, 1930, for 0.2 c.f.s. from Mosquito Creek in Sec. 22, T. 18 N., R. 8 E., M. D., for irrigation and domestic use on 40 acres. Estimated cost \$1000.00.

TRINITY COUNTY—Permit 3642, Application 6596, Fred W. Ruhser, Weaverville, and Hayfork, California, December 31, 1930, for 80 c.f.s. from Big French Creek in Sec. 17, T. 5 N., R. 8 E., H. R., for hydraulic mining.

DAM APPLICATIONS AND APPROVALS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of December, 1930.

MODOC COUNTY—Pope Dam No. 165, Lizzie D. Pope, Canby, California, owner; timber crib dam, 8½ feet above streambed with a storage capacity of 400 acre feet, situated on Pit River tributary to Sacramento River in Sec. 2, T. 41 N., R. 9 E., M. D. M., for diversion purposes for irrigation use.

MODOC COUNTY—River Dam No. 148-3, John O. Cummings, Alturas, California, owner; concrete dam, 7 feet above streambed, situated on Pit River tributary to Sacramento River in Sec. 18, T. 42 E., R. 12 E., M. D. M., for storage purposes for irrigation use.

SAN MATEO COUNTY—McMahon Gulch Dam No. 608, Dante Dianda and Giovanni Patroni, Halfmoon Bay, California, owner; earth dam, 41 feet above streambed with a storage capacity of 25 acre feet situated on McMahon Creek in T. 5 S., R. 6 W., M. D. M., for storage purposes for irrigation use.

MODOC COUNTY—Lindauer and Meckfessel Dam No. 152-2, Lindauer and Meckfessel, Alturas, owners; wooden crib dam, 7½ feet above streambed, situated on Pit River, for diversion purposes for irrigation use.

MODOC COUNTY—Meckfessel Dam No. 152-3, Gus Meckfessel, Alturas, owner; wood crib dam, 6.25 feet above streambed, situated on Pit River tributary to Sacramento River, for diversion purposes, for irrigation use.

MODOC COUNTY—Seven Bar Dam No. 153-2, F. W. Caldwell, Canby, owner; crib dam, 7.2 feet above streambed with a storage capacity of 125 acre feet, situated on Pit River tributary to Sacramento River in Sec. 29, T. 42 N., R. 10 E., M. D. M., for diversion purposes for irrigation use.

LASSEN COUNTY—Watson Dam No. 160-2, Peter Gerig, A. Babcock, et al., Bieber, owners; log dam, situated on Pit River tributary to Sacramento River in Sec. 3, T. 38 N., R. 7 E., M. D. M., for diversion purposes for irrigation use.

ALAMEDA COUNTY—Dingee Dam No. 31-14, East Bay Municipal Utility District, Oakland, owner;

earth dam, 18 feet above streambed with a storage capacity of 15½ acre feet, situated on unnamed draw tributary to Temescal Creek, for storage purpose for municipal use.

EL DORADO COUNTY—Lower Cleese Dam No. 468, John P. Cleese, Placerville, owner; earth dam, 18 feet above streambed, situated on North Canyon Creek tributary to South Fork American River in Sec. 35, T. 11 N., R. 11 E., M. D. M., for storage purposes for irrigation use.

EL DORADO COUNTY—Upper Cleese Dam No. 468-2, John P. Cleese, Placerville, owner; earth dam, 21 feet above streambed, situated on North Canyon Creek tributary to South Fork American River in Sec. 35, T. 11 N., R. 11 E., M. D. M., for storage purposes for irrigation use.

MODOC COUNTY—Hughes Dam No. 166, H. C. Hughes, Canby, owner; timber crib dam, 4 feet above streambed with a storage capacity of 170 acre feet, situated on Pit River tributary to Sacramento River in Sec. 30, T. 42 N., R. 10 E., M. D. M., for diversion and storage purposes, for irrigation use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of December, 1930.

LOS ANGELES COUNTY—Chatsworth Dam No. 6-4, City of Los Angeles, Los Angeles, owner; earth dam, 40 feet above streambed with a storage capacity of 10,500 acre feet, tributary to Los Angeles River in Ex Mission San Fernando for storage purposes for municipal use. Estimated cost \$861,228. (Amending Application of Feb. 15, 1930.)

ORANGE COUNTY—Santiago Creek Dam No. 75, Serrano and Carpenter Irrig. Dist. and the Irvine Company, Orange, owners; earth dam, 110 feet above streambed with a storage capacity of 25,000 acre feet, situated on Santiago Creek tributary to Santa Ana River in T. 4 S., R. 8 W., S. B. M., for storage purposes for irrigation use. Estimated cost \$700,000. Fees paid \$4,000.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of December, 1930.

MODOC COUNTY—Porter Dam No. 162, Pearl F. Porter, Alturas, owner; earth and rock dam, situated on tributary of Parker Creek in Sec. 12, T. 42 N., R. 13 E., M. D. M.,

NEVADA COUNTY—Culbertson Dam No. 97-17, Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Texas Creek tributary of So. Yuba in Sec. 15, T. 18 N., R. 12 E., M. D. M.,

NEVADA COUNTY—Lower Feeley Dam No. 97-35, Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam situated on Fall Creek tributary to South Yuba River in Sec. 29, T. 18 N., R. 12 E., M. D. M.,

NEVADA COUNTY—Lower Lindsey Dam No. 97-76, Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Texas Creek tributary to South Yuba River in Sec. 20, T. 18 N., R. 12 E., M. D. M.,

NEVADA COUNTY—Meadow Lake Dam No. 97-40, Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on a small creek tributary to Fordyce Creek in Sec. 27, T. 18 N., R. 13 E., M. D. M.,

NEVADA COUNTY—Middle Lindsey Dam No. 97-41, Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Texas Creek tributary to South Yuba River in Sec. 21, T. 18 N., R. 12 E., M. D. M.,

NEVADA COUNTY—Rucker Lake Dam No. 97-44, Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Rucker Creek tributary to South Yuba River in Sec. 8, T. 17 N., R. 12 E., M. D. M.,

NEVADA COUNTY—Upper Feeley Dam No. 97-45, Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Fall Creek tributary to South Yuba River in Sec. 28, T. 18 N., R. 12 E., M. D. M.,

ALAMEDA COUNTY—Dingee Dam No. 31-14, East Bay Municipal Utility District, Oakland, owner; earth dam, situated on unnamed draw tributary to Temescal Creek.

MODOC COUNTY—Webb Flat Dam No. 160. Gerig Bros., Bieber, owners; earth dam, situated on Webb Flat tributary to Egg Lake in Sec. 5, T. 41 N., R. 7 E., M. D. M.

CONTRA COSTA COUNTY—Antioch Dam No. 3. Town of Antioch, Antioch, owner; earth dam, situated on unnamed creek tributary to San Joaquin River in Sec. 36, T. 2 N., R. 1 E., M. D. M.

SAN MATEO COUNTY—McMahon Gulch Dam No. 608. Diarda and Patroni, Halfmoon Bay, owners; earth dam situated on McMahon Creek in T. 5, S., R. 6 W., M. D. M.

PLACER COUNTY—Lower Peak Dam No. 97-37. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam situated on small creek tributary to South Yuba River in Sec. 30, T. 17 N., R. 14 E., M. D. M.

PLACER COUNTY—Upper Peak Dam No. 97-47. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on small creek tributary to South Yuba River in Sec. 32, T. 17 N., R. 14 E., M. D. M.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of December, 1930.

CONTRA COSTA COUNTY—Chenery Reservoir No. 551. California Water Service Company, San Francisco, owner; earthen dam, situated on tributary to Sacramento River in Sec. 13, T. 2 N., R. 2 W., M. D. M.

RIVERSIDE COUNTY—Alvord Dam No. 815. Riverside Water Company, Riverside, owner; earth dam.

MODOC COUNTY—Lower Roberts Dam No. 157-2. H. M. Roberts, Lookout, California, owner; earth dam, situated on Antelope drainage tributary to Pit River in Sec. 11, T. 35 N., R. 7 E., M. D. M.

MODOC COUNTY—Porter Dam No. 162. Pearl F. Porter, Alturas, owner; earth and rock dam, situated on tributary of Parker Creek in Sec. 12, T. 42 N., R. 13 E., M. D. M.

ALAMEDA COUNTY—Dingee Dam No. 31-14. East Bay Municipal Utility District, Oakland, owner; earth dam, situated on unnamed draw tributary to Temescal Creek.

SANTA CLARA COUNTY—Lower Howell Dam No. 622-2. San Jose Water Works, San Jose, California, owner; earth dam, situated on Rundell Creek tributary to Los Gatos Creek in Sec. 31, T. 8 S., R. 1 W., M. D. M.

NEW HAMPSHIRE—Definite progress in beautifying roadsides has been made this year, according to Frederick A. Gardner, State Highway Department Engineer. Grass, trees and shrubbery planted along the roadside and at intersections have greatly enhanced highways.

Simplified Spelling

The new church treasurer wrote a letter, and 50 per cent of the members paid up. He wrote another and all but one paid. Finally he wrote one more and the last man sent in his check. Shortly afterwards the pastor dined at the man's home.

"You have a new treasurer?" inquired the host.

"Yes," answered the minister.

"He writes a nice letter," remarked the host, "except that he can't spell."

"Is that so?"

"Yes, he ought to be corrected on that. He spelled 'skunk' with a 'c' and had two 's's' in 'lousy.'"

THE FROG

Speaking of school teachers, one of them sent in an essay on the frog, written by a Japanese student: "What a wonderful bird the frog are! When he stand, he sit, almost. When he hop, he fly, almost. He ain't got no tail, hardly, either. When he sit, he sit on what he ain't a, almost!"

CALIFORNIA HIGHWAYS AND PUBLIC WORKS

Official journal of the Division of Highways of the Department of Public Works, State of California; published for the information of the members of the department and the citizens of California.

Vol. 9. JANUARY, 1931 No. 1

RESTORATIVES

When I grow tired of seeking pelf, and feel so sorry for myself,

I wander down to Limping Lane, where begging folk hold sway;

And there I watch the halt and lame play on at this Existence game.

And hear the beggars whine and moan when once you look their way.

I see the blind and crippled man who deftly shakes his money can;

The legless one who rides upon a cart with tiny wheels;

The twisted creature with a leer; the scarred and maimed, who know no cheer;

And when I hear a laugh at all, it comes in nervous peals.

And when at last I stumble back and find my daily beaten track,

I breathe a prayer so fervent that it can not be ignored—

I quite forget my selfish woes—I have my fingers and my toes—

I have my eyes, and, through it all, my Hope has been restored!

—Selected.

In the days before oil was discovered in Texas, a traveling man stopped for the night at a dry-laid ranch near Wink. As he discussed the affairs of the country with his host he became more inquisitive as to how the ranch paid its way. At last he ventured the question:

"How in the world do you make a go of things at all?"

Indicating the hired man, who was sitting at the far end of the supper table, the host replied: "You see that feller there? Well, he works for me and I can't pay him. In two years he gets the ranch. Then I work for him till I git it back."—*Dravo Bulletin*.

Don't hunt for trouble

But look for success.

You'll find what you look for,

So don't look for distress.

If you see but your shadow,

Remember, I pray,

That the sun is still shining,

But you're in the way.

Mary Lee: "Bill is an awful pest—he never seems to know when to stop."

Mary Lou: "That's strange. I was riding with him last night and he found a dandy place."

Buying Power of Public Works Is Factor in Business Restoration

By JAMES I. HERZ, Deputy Director, Department of Public Works.

MUCH attention has been given, and properly so, to the very large part that the Department of Public Works is playing in relieving unemployment in California. It is indeed a great privilege given to those in charge of the public works to be able to provide a larger volume of employment for the labor of this state, and thus, by its example, to encourage private industry to do likewise.

But public works in California are not only a large factor in relieving the distress of the unemployed, but they also constitute a more important factor in creating a market for California commodities than the public generally realizes. Both labor and business, directly and indirectly, are thus the beneficiaries of the large public works program that Governor Rolph has launched throughout the State, and that various counties, cities and other governmental units have undertaken in their respective jurisdictions.

The largest purchases in the Department of Public Works are those made by the Division of Highways. These highway expenditures are ordinarily considered in terms of labor and of so-called highway materials, that is the materials that we actually see going into the road—cement, crushed rock, asphalt, steel, oil and so forth. These materials, however, are but a part of the purchases that are necessary in building a highway system.

Camps and maintenance crews must be maintained, and accordingly the purchase of groceries and supplies becomes necessary.

The work covers an enormous detail, and with each ramification, new supplies, varied in quantity and distinctive in character, become necessary.

Space will not permit an analysis of the score of items that make up the category of these supplies. They enter into every branch of industrial and agricultural life, and range from totals of millions paid during a biennium for such materials as gasoline, oils, and greases; asphalt and rock and fuel oils; cement and crushed rock, sand and gravel; explosives; timber; automobiles, trucks and equipment; to a few dollars expended for some minor item of camp use.

JAMES I. HERZ, Deputy Director of the Department of Public Works and Governor JAMES ROLPH, JR.

Not including materials and supplies purchased by contractors to whom state jobs are awarded, the cost of which was annually far into the millions, the purchases made directly by the Department of Public Works make it one of the largest single buyers in California.

The purchases made for building such portions of the highway as the Division of Highways may be directly constructing and for maintenance of the highways; the purchases of the Division of Architecture for construction and repair work at the state institutions; equipment bought for traffic work on the highways by the Division of Motor Vehicles and for automobile registration and supplies incidental thereto; the supplies needed for various activities carried on directly by the Division of Water Resources; all these approximate \$500,000 per month.

I have been impressed with the similarity that the distribution of materials purchased in highway work bears to the distribution of labor. One of the chief reasons that highway work is particularly valuable in relieving unemployment lies in the widespread distribution of the work. Roads must be built and maintained all over California. Hence labor must be employed in every county of the

State. The beneficial effects of this employment are thus automatically distributed.

Similarly with goods purchased. The spread is over the whole field of industry, and the stimulating effect of the market thus supplied is exceedingly far reaching.

There are a few general considerations governing the purchase of supplies that I know reflect the opinion and desire of Governor Rolph's administration and which I believe constitute sound business for the people of California. These are:

First, the buying power of the Department of Public Works should be used to promote the general prosperity of California as far as possible. Supplies capable of purchase locally and at reasonable price should be purchased locally. This applies to purchases for work, whether carried on by the State directly or indirectly through contractors. In this way a spread of prosperity over the widest possible base is secured.

Second, the buying power of the state should be used to encourage the development of industry in California. Buying at home is good business both for the state and the individual.

Third, preference should be given wherever possible to the use of native California material.

Both Governor Rolph and Colonel Walter E. Garrison, director of the Department of Public Works, have requested me to give close and analytical attention, not only to the cost and quality of materials and supplies, but to the wide distribution of this business over the State, and the encouragement of the use of California manufactured, California produced and California grown goods. Governor Rolph feels, and the Department of Public Works is in full accord with this view, that this is a most important phase of his policy of bringing prosperity back to California on a basis that offers promise of permanence through the firmness of its economic foundation and the soundness of its business structure.

FRONT COVER PICTURE

The picture on the front cover gives a construction view of Shasta River Crossing No. 3 on the Pacific Highway. The bridge is a reinforced concrete arch structure of spectacular proportions and design.

Modern child (seeing rainbow for the first time) — "What's it supposed to advertise, dad?"—*Passing Show.*

Registration Fees Are Apportioned to State and Counties

BASED on the registrations of motor vehicles to be found on page 22 of this issue, the Division of Motor Vehicles announced that the total apportionment of motor vehicle fees for the year 1930 to the State Highway Department and the various counties to be used for reconstruction and maintenance of highways totaled \$6,775,073. Of this sum, \$3,387,536 goes to the State Highway Department and the remaining half or \$3,387,536 goes to the counties, each county receiving its share in proportion to the number of vehicles registered shown below:

County	Total registrations	Counties share of apportionment
Alameda	148,381	\$239,435 90
Alpine	97	156 53
Amador	2,619	4,226 17
Butte	15,040	24,269 39

Bridging Shasta Canyon Marks Monumental Highway Undertaking

ONE of the most monumental highway undertakings now under way in the United States is the relocation of the Pacific Highway along the Shasta River in Siskiyou County, California.

This project is of particular interest for these reasons:

First, it completes on the California side

View showing Cantilever Steel Deck Truss at Shasta Crossing No. 2. The deck of this bridge is 260 feet above the stream bed. The picture shows the present State highway beneath the new bridge.

an adequate interstate connection with Oregon. This is of importance to travel.

Second, from the point of view of the engineers, the project is symbolic of the new era in highway construction, an era in which the expenditure of very large sums of money in short distance projects is justified by rea-

View of Shasta Bridge No. 2 showing anchor arm in place, the beginning of a construction of the cantilever and the highline used in construction.

CHARLES E. ANDREW, Bridge Engineer, Division of Highways.

son of heavy traffic, the large total savings that the improvement will afford to travel, and the increased measure of safety that the betterment will assure.

The Shasta River project is $7\frac{1}{2}$ miles in length and, except for the first two miles, lies entirely in the Shasta and Klamath River canyons.

A PUZZLING IMPROVEMENT PROBLEM

The original state highway built in 1915 had become entirely inadequate for travel. Although built to what were considered satisfactory standards at the time of its construction, traffic of today found its short tangents, short radius curves, adverse grades and width of only 16 feet both inadequate and

dangerous. Its improvement, however, presented a puzzling problem to engineers.

On the one hand, reconstruction of the road to present day standards on the alignment of the old road was prohibited by the natural restrictions of the Shasta River Canyon.

On the other hand, the relocation of the road involved enormous expenditures because

267 feet above the river bed, and is of sufficient height above the river to clear the State Capitol were it placed beneath it. The cost of grading and surfacing the connecting road is estimated at \$608,400.

The average per mile cost of the project, including highway and bridges, accordingly will approximate \$150,000.

SOME INTERESTING COMPARISONS

Compensating for the cost of the project is the improvement that it affords. Here are some interesting comparisons:

	Old Road	New Road
Length-----	9.37 miles	7.46 miles
Total angles-----	3659 degrees	1205 degrees
Number of curves-----	137	25
Maximum radius-----	1500 feet	5000 feet
Minimum radius-----	50 feet	400 feet
Maximum grade-----	7 per cent	4.14 per cent
Adverse grade-----	248 feet	146 feet

Added to this is the vastly greater scenic attractions of the new location.

Placing a column form on Shasta Bridge No. 3.
The reinforced arch has been partly poured.

of the rough and precipitous nature of the country, its high cliffs and rock so hard that it was both difficult to drill and extremely destructive to grading equipment.

The engineers had to choose between a low grade road involving the construction of tunnels, or a higher grade line, cutting with bridges across both the lateral canyons and the main canyon of the Shasta River. The latter plan was chosen.

Under the plan as adopted, five bridges across these canyons have been completed or are now in course of construction together with the connecting highway. The total cost of these bridges will approximate \$467,000. The deck of the highest of these bridges is

Constructing false work for the arch on Shasta Bridge No. 3.

HOW TRAVEL WAS DETOURED

One of the important features of early construction was the preparation of suitable detours. Insofar as possible, the old road was used. In several locations, however, it was necessary to leave the old road and cross to the other side of the Shasta River. This not only required the construction of a new

Placing a center pier form on Shasta Bridge No. 3. This form contains reinforcing steel in place. The weight of the form with the steel is 8 tons.

road, two miles in length, 16 feet in width and with an oiled rock surfacing, but it also made necessary the construction of three temporary detour bridges across the Shasta River. These detour roads and bridges have served traffic in a most satisfactory manner.

After the road has been thrown open to travel, which it is believed will be about June, 1931, the old road will be cleared of debris, and left for the use of fishermen and local residents.

The beauty of the design of the bridges now being erected across the canyons of the

Shasta River has attracted widespread comment. Some details of these bridges will be of interest.

The first of these bridges to be constructed is known as Shasta No. 1 and crosses the Shasta River at a point about five miles north of Yreka. It is a reinforced concrete structure consisting of five girder spans supported by concrete piers and abutments. The total length is 250 feet and the roadway width 24 feet. This bridge was completed in November, 1929, at a total cost of \$28,200.

The second in the series crosses high above a narrow rock ravine known as Dry Gulch which feeds into the Shasta River location and is about five and one-half miles north of Yreka. This is also a reinforced concrete structure but of a different type than Shasta No. 1. The main span is a 200-foot open spandrel arch founded on concrete abutments resting on solid rock well up on the steep slopes of the ravine. Forty-foot girder spans on both ends connect the arch span with the roadway approach fills. The cost of the bridge was \$70,000. It was completed in December, 1930.

CLEARANCE FOR THE STATE CAPITOL

For the second crossing of the Shasta, about six miles north of Yreka, a structural steel bridge is being erected. This structure will consist of two cantilever arms, two anchor arms and a suspended span, each 138 feet long. In addition, 52-foot steel stringer spans at each end extend from the anchor piers to concrete bents set in the approach fills. The clear span between the main supporting piers of the cantilever span is 414 feet. The finished concrete roadway on the bridge will be about 267 feet above the river and 220 feet above the present highway. Between the roadway of this bridge and the river there is sufficient clearance to place the State Capitol.

The third and most northerly bridge over the Shasta River is about $7\frac{1}{2}$ miles north of Yreka and $2\frac{1}{2}$ miles above the mouth of the river. The reinforced concrete, open-spandrel arch type was selected for this crossing. The bridge consists of two 200-foot arch spans, two 40-foot and two 32-foot reinforced concrete girder spans. The construction of both this bridge, and that across the Klamath River about $2\frac{1}{2}$ miles north, was featured by rapid and careful work. It is expected that all work on both bridges will be finished in February. The estimated cost of Shasta River bridge No. 3 is \$98,000.

The Klamath River bridge is about 10 miles north of Yreka, just above the mouth of the Shasta River and near the northerly end of

State Patrol Officers Are Given Widespread Praise for Courtesy

A. B. Saroni of Oakland writes the following letter to the headquarters of California Highway Patrol at Sacramento:

As I am a firm believer in giving credit where credit is due, I can not restrain myself from writing to advise you of the kindness of one of your State Patrolmen. On Wednesday, January 14th, was on my way to Sacramento where I was due at the U. S. Federal Court at 2 p.m. Between the town of Davis and the Causeway I blew out a tire. Just as this happened one of your State Patrol cars passed and I flagged it with the view of getting a ride into Sacramento in order to keep my appointment. However, the officer was not going into Sacramento but cheerfully volunteered to help me change my tire as I had explained to him the circumstances of my anxiety to be there on time, as I was a witness in a Federal case and I had been courteously granted a one-day leave of absence so that I might avail myself of the last duck hunt of the season, but only on the promise that I would return for the afternoon session of court on Wednesday.

This willingness and kindness on the part of your officer enabled me to reach Sacramento at the appointed time. The officer in question was State Patrolman Jacobs, and I wish to tell you at this time that I deeply appreciate his courtesy. It is highly praiseworthy that your men should be a little more than just interested in police work alone.

TRAFFIC OFFICER HELPED

The following appreciation of the manner in which Traffic Officer C. H. Nissen of Contra Costa County handled a traffic violation case was written by E. N. Deering of Dunsmuir:

We had occasion to be stopped by your Traffic Officer Number 98 for an infraction of the traffic regulations. It happened in Contra Costa County near Pinole. Now, in behalf of Mr. 98 I want you to know that he disposed of our case in a most gentlemanly and pleasing manner. I certainly believe him to be a credit to your department and I shall be very high in my praise for him and your department at all times. I should like to know what his name and address is if that isn't asking too much.

THANKS FROM STOCKTON

Under date of January 8th, the Down Town Association of Stockton writes as follows:

On behalf of the members and Directors of the Down Town Association of Stockton, I wish to thank you for the quick action that you took, to grant us permission to move the large Community Christmas tree to Stockton, and for assigning the two traffic officers to accompany it.

Words can not express our sincere appreciation, for your wonderful spirit of cooperation.

APPRECIATION FROM AMERICAN LEGION

This letter is from J. M. Yoakim, adjutant of the San Diego Council of the American Legion.

COL. GARRISON CHOOSES "363," ARMY NUMBER FOR HIS LICENSE PLATE

(From the Stockton Record)

SACRAMENTO, Jan. 27.—Is there luck in numbers? Colonel Walter E. Garrison of Lodi, now heading the important Department of Public Works in Governor Rolph's cabinet, thinks there is, and his choice is 363.

Going overseas with the famous 363d of the 91st Division in the World War, Garrison won rapid promotion and the *croix de guerre*.

Now prepared to go over the governmental top on good roads, a mammoth State building program, and schemes to meet the unemployment crisis, Garrison has chosen as his auto license number 363.

The San Diego County Council American Legion takes this opportunity to thank you, in behalf of the Legionnaires of San Diego County, for the motorcycle escort to the area meeting at Riverside January 11th.

We feel this was an honor shown us by the California Highway Patrol, and again we most heartily thank you.

AIDED HIGH SCHOOL BAND

The following letter is from the Board of Trustees of the Ventura Union High School District:

On behalf of the Board of Trustees of the Ventura Union High School District I wish to thank you for the fine services your department rendered on January 1st in conducting our School Band from Ventura to Pasadena. I assure you that we greatly appreciate this service and commend both you and your department very highly for it.

AID GIVEN IN ACCIDENT

S. M. Keene of Sacramento testifies in the following letter to aid given his wife:

My wife met with an automobile accident while driving between Sacramento and Folsom. Tom Taylor and Herb Bolton were on patrol at the time and rendered such wonderful service that I feel they are both worthy of a word of commendation to you, their superior officer. The efficient as well as courteous way in which they handled the emergency probably saved my wife much discomfort and there is nothing I can say that will express my appreciation to them, but I feel that such fine officers are what we need on the highways.

A. L. BANKS IS APPOINTED ASSISTANT TO MR. HERZ

A. L. Banks, for many years a prominent newspaperman of the San Joaquin Valley and recently city clerk of Stockton has been appointed assistant to James I. Herz, deputy director of the State Department of Public Works.

He: "My brow is lily white."

Her: "Yes, ivory is white, I know."

Pacific Highway Bridge Is Dedicated

AMID A fanfare of trumpets, the beat of drums, and the strains of music the half million dollar Cottonwood creek bridge was dedicated on January 17th, accepted by the State and thrown open to the traveling public.

State and county officials, civic leaders and 3000 citizens of all northern California counties gathered for the elaborate ceremony of dedication.

Earl Lee Kelly, chairman of the California State Highway Commission, accepted the bridge on behalf of Governor James Rolph.

In accepting the structure, Mr. Kelly spoke in part as follows:

We are assembled here today to dedicate this magnificent structure which shall be known for all time as the Cottonwood bridge.

This bridge forms one more link in the chain which binds the people of Redding, Anderson, Cottonwood, Red Bluff and Corning more closely together. It not

The New Cottonwood Creek Bridge.

works to expand their program. This we intend to do, which will result in the relief of the personal distress of large numbers of our deserving citizens.

I desire to say that our every effort will be exerted to reflect credit upon our new governor and to assist him in making the next four years outstanding in the history of California—an era of friendly, sound and economical businesslike administration.

And in the building of our highways, and particularly in the dedication of this bridge which event we are celebrating today, I am reminded of

Subway at end of North Approach to Cottonwood Creek Bridge.

only brings the people of our own local communities more closely together, but it forges another link in the chain which connects the ends of the Pacific highway and extends from the Canadian line to the Mexican border.

I am proud today to stand before my friends and neighbors and, speaking as the chairman of the California State Highway Commission, accept this bridge on behalf of Governor Rolph and his administration.

I deem it a privilege to be assigned an active part in building and maintaining the roads of our State which roads and highways have contributed so largely to making California what it is today.

I know that I speak for all members of the California Highway Commission when I say that we are determined that the period for which Governor Rolph has entrusted us with responsibility in State highway matters shall be years of active development.

In a period of unemployment such as we are having at present it is the duty of those in charge of public

"The old man, traveling a lone highway,
Came at the evening, cold and gray,
To a chasm vast and deep and wide.
The old man crossed in the twilight dim,
The sullen stream had no fear for him.
But he paused when safe on the other side
And built a bridge to span the tide.
'Old Man,' said a fellow pilgrim near,
'You are wasting your time with building here;
You've crossed the chasm vast and wide,
Why build you this bridge at evening tide?'
The builder lifted his old gray head,
'Good friend, in the way I've come,' he said,
'There followeth after me today.
A youth whose feet must pass this way;
This stream that has been as naught to me,
To that fair haired youth might a pitfall be;
He, too, must cross in the twilight dim—
Good friend, I'm building this bridge for him.'"

And so it is with us my friends, we are building these beautiful highways and magnificent bridges, not only for ourselves, but for those who are coming and are yet to come. And hope that you and they, may be able to say of Governor Rolph and his administration that we have built wisely and well.

Governor Rolph Telegraphs Regrets

In a telegram expressing his regret at being unable to attend the dedication exercises, Governor Rolph said:

I greatly appreciate the invitation which your board, through you, has extended to me to participate in the opening and dedication of the Cottonwood Bridge, connecting Shasta County with Tehama

(Continued on page 19.)

Don't Tamper with Gasoline Tax Moneys

By COLONEL WALTER E. GARRISON, Director of the Department of Public Works

The following article was written by Colonel Garrison in response to a request by the California State Automobile Association for an expression of Colonel Garrison's views for publication in *Motor Land*, on the subject of suggested diversion of gasoline tax funds to uses other than to which they are not devoted. The article appeared in the current issue of *Motor Land*.

THE question has been asked me by the California State Automobile Association as to my attitude toward suggested changes in the allocation of revenues derived from gasoline taxes.

My answer is that I am opposed to using any part or portion of the three-cent gasoline tax for any purpose other than that for which it is being used at the present time.

The reason for my position in this matter can be stated very briefly: The highways of California need every cent of income that they are now getting from gasoline taxes, and this need will continue for some years yet to come.

I do not think that the need of the counties for the funds they receive from the one-cent gasoline tax apportioned to them for use upon local roads will be seriously disputed.

The study that has just been concluded of the requirements of the state highway system for the next ten years furnishes convincing proof that gasoline funds can not be diverted from the state highway system without serious delay and impairment of the road building program with consequent injury to the whole state.

It may be well to summarize again the findings of this important investigation.

Thus during this ten-year period, concluding with 1940, it is estimated that \$313,565,906 must be expended for construction and reconstruction projects on the state highway system. This sum is exclusive of maintenance or the improvement of roads that will undoubtedly come into the system at this session of the Legislature. These additional roads alone will ultimately cost \$71,387,655 for their improvement. The total income for construction and reconstruction of eleven miles same period is estimated at \$320,352,175. Certainly there is no undue surplus here.

I fully endorse the statement of State Highway Engineer C. H. Purcell, who, in commenting on this study, said:

Comparison of these carefully prepared estimates

of cost and revenue, derived independently of each other, leaves no doubt that, with revenues as now made available, a very cautious and conservative program must be pursued in state highway improvement and that any other course or a diversion of highway funds to other purposes will jeopardize the program of improving and constructing the state highways to a capacity adequate to take care of traffic developing during this ten-year period.

The public mind has not yet fully adjusted itself to the fact that highway construction and highway expenditures must be relative to the traffic demands to serve which highways are built.

We hark back to the days of the early bond issues, and think that because of the greatly increased revenues that the gasoline taxes are giving us, that there must be a surplus of highway funds.

We fail to remember that in a twenty-year period automobile registration in California has increased from slightly over 10,000 registered motor vehicles to over 2,000,000, and this huge increase in the use of our highways has made it necessary to build and maintain roads to standards of safety and traffic capacity both undreamed of and unnecessary in the days of lighter travel and lesser financing. We forget that were it not for the larger and continuous income that the gasoline tax funds have given state highways, the system would have completely collapsed years ago.

This is not a plea for more money for our state highways. I realize the heavy burden of taxes under which the people of California are laboring. I believe that our present revenues are adequate to do the work required within a reasonable period of time. I know, however, that the revenues now going to the highways can not be decreased by diversion of funds or otherwise, without serious injury to the state. Today, as never before, the growth and prosperity of California are dependent upon adequate highway transportation.

Nor do I mean to minimize the desirability of some of the purposes to which it has been suggested that gasoline tax funds be diverted. The more important of these purposes are now being cared for in an orderly manner out of present highway income. Others are and should be secondary to the big job now before us, that of completing our state highway system.

In this connection it may be of interest to know the status of the state highway system in

(Continued on next page.)

Architects at Work Speeding Up State Building Activities

IN PURSUANCE of the policy of Governor Rolph to speed up the construction of public buildings as a means of bettering business and relieving unemployment, Colonel Walter E. Garrison has appointed architects in private practice throughout the State to prepare plans and specifications for a number of projects included in the institutional building program. The appropriation bill providing funds for the work was passed by the Legislature at the request of Governor Rolph before the legislative recess. The employment of private architects will make plans available for contract many months in advance of the time that would be required had all these plans to be prepared by the Division of Architecture.

Architects who have been thus appointed up to February 15th and the buildings upon which they are preparing plans and specifications are as follows:

Russell Guerne De Lappe, Oakland; dairy unit, Preston School; appropriation, \$40,000.

Fred L. Swartz and C. J. Ryland, Fresno; library, Fresno State Teachers College; appropriation, \$125,000.

William H. Wheeler, San Diego; gymnasium and pool, San Diego State Teachers College; appropriation, \$155,000.

Peter L. Sala, Stockton; remodel kitchen, etc., Stockton State Hospital; appropriation, \$65,000.

Franklin T. Georgeson, Eureka; training school, Humboldt College, Arcata; appropriation, \$170,000.

Ralph Wyckoff, San Jose; training school, San Jose State Teachers College; appropriation, \$202,000.

Charles F. B. Roeth, Oakland; primary unit and dining room, California School for Deaf, Berkeley; appropriation, \$422,000.

Frederick H. Meyer, San Francisco; hospital, Veterans Home, Yountville; appropriation, \$500,000.

Charles F. Dean, Sacramento; California National Guard, Yuba City Armory; appropriation, \$25,000.

Chester Cole, Chico, library and class rooms, Chico State Teachers College; appropriation, \$117,000.

Frederick H. Eley, Santa Ana; superintendent's cottage and ward building, Narcotic State Hospital, Spadra; appropriation, \$55,000.

G. Stanley Wilson, Riverside; dairy unit, Patton State Hospital; appropriation, \$25,000.

Gilbert Stanley Underwood Company, Limited, Los Angeles; ward building at the farm, Norwalk State Hospital; appropriation, \$75,000.

Walker and Elisan, Los Angeles; dairy unit and patients farm cottage, Pacific Colony, Spadra; appropriation, \$75,000.

Bennett and Haskell, Pasadena; National Guard Armory, Pasadena; appropriation, \$50,000.

No one is useless in the world who lightens the burden of it for anyone else.—*Dickens*.

Ask Grade Crossing Driving Law Be More Vigorously Enforced

THE need for a more vigorous enforcement of section 114, of the California Vehicle Act, requiring motorists to stop before crossing railroad tracks when a danger signal is being displayed indicating the immediate approach of a train by municipalities throughout the state as a means of reducing grade crossing accidents, was stressed by the Railroad Commission in a decision rendered by Commissioner Leon O. Whitsell in a proceeding involving crossing protection in the city of Burlingame.

A recent report of Mr. Joseph G. Hunter, chief transportation engineer of the Railroad Commission, points out the fact that over one-half of the grade crossing accidents in California occur at protected crossings, including many accidents at grade crossings protected by gates. A large proportion of the accidents at crossings result from motorists trying deliberately to beat the train over the crossing.

DON'T TAMPER WITH GASOLINE TAX MONEYS

(Continued from page 8.)

terms of improved and unimproved mileage. The following table tells this story, and depicts the task yet before the people of California:

Type	Mileage	Percentage of System
Cement concrete.....	1607,315	25.3
Asphalt concrete.....	573,788	9.1
Bituminous macadam.....	410,148	6.5
Oil-treated armor, crushed oil mix, gravel or stone miscellaneous....	1502,165	23.7
Rock surface.....	388,406	6.1
Earth.....	1830,688	28.9
Bridges.....	24,565	0.4

With this whole picture before us I feel certain that the motoring and taxpaying public of California will agree with me that any diversion of gasoline tax funds from their present uses would be most unwise and would serve to injure rather than advance the well-being of California.

CAN PARK IN THIS TOWN

Ground plans for the town to be built near the site of the Hoover Dam on the Colorado River have been worked out along lines providing ample parking space for automobiles with the object of keeping idle cars entirely off the streets.

New Bridge Entrance Into San Diego

The Rose Canyon Bridge.

ROSE CANYON BRIDGE, 50 feet wide and 210 feet long, recently completed at a contract cost of \$30,515, lies on the newly constructed Rose Canyon line change north of San Diego. This line change reduces travel distance approximately five miles and corrects slow speed alignment

between Los Angeles and San Diego sufficiently to reduce travel time approximately twenty-five minutes. It is roughly estimated that the present yearly saving to traffic is equivalent to 5 per cent interest on \$7,000,000, which latter sum is more than twenty times the total cost of building the road.

Highway Worker is Drowned; Companions Have Narrow Escape

AVIGILANT search was being made along the rocky coast line of Lime Kiln Canyon, north of Willow Creek, Saturday, for the body of Albert B. Castro, 28, who drowned trying to beach a boat near the Roosevelt highway convict camps, says the *San Luis Obispo Telegram*, under date of January 24th.

He was one of the engineering crew for the California Highway Commission which has been making surveys for a new San Simeon-Carmel road camp about 10 miles north of Willow Creek. He was swept out to sea by an undercurrent while attempting to swim to shore.

Accompanied by Kenneth Ackley, Tom Neff, Lloyd Jackson and William Owens, the young man had been at San Simeon since Wednesday, waiting for favorable tides before attempting sail by motor launch up to the canyon site and land supplies for the new camp.

They were warned by C. R. Burns, locating engineer, to await calm weather before making the trip; he continued on horseback to the isolated camp to await the boys' arrival by launch.

At about 5 o'clock Friday morning they left from San Simeon Bay by launch with weather and tide favorable.

According to highway officials, Castro had been working with the Commission for the past eight years and had proved himself particularly adept at making difficult landings among the rocky and treacherous shores which extend along the north coast into Monterey County.

SEA ROUGH

However, when the five boys reached the canyon landing the sea had turned rough and waves were lashing the little cove where they had planned to land.

A landing had been successfully made at the same place once before and Castro and Kenneth Ackley decided to swim ashore.

Burns was above the launch on the hillside watching the boys in their efforts, and threw a rope to their assistance. Ackley made the first dive but missed the rope and was caught with the tide and carried into the cove where he grasped a rock, to which he clung.

Castro saw Ackley go into the cove and began swimming towards him when he was suddenly caught in an undertow and his body swept from sight.

ACKLEY RESCUED

Ackley was rescued from the rock and is receiving treatment at the prison camp from the shock and exposure. Search for Castro's body has been continued since the fatal accident, but little hope is held for its recovery along the desolate and rocky coast.

Although exhausted from their battle with the waves and horrified at the tragic ending of their trip, the three remaining boys turned the launch back toward San Simeon to make a report of the accident. They reached San Luis Obispo about 5 o'clock and notified highway officials here.

A young salesman whose wife was making a prolonged visit at the home of her parents became quite excited on receiving the following telegram: "Twins arrived, doing fine, more later."

He rushed to the nearest telegraph office and wired to his wife:

"My gosh, kid, countermand later order, two is plenty."

Electrical Systems In State Institutions

By WALTER M. CALLAHAN, Electrical Engineer, Division of Architecture

A VISIT to any one of the major institutions of the State of California is in most instances quite interesting and novel to one on his initial visit. The impression formed is obviously contingent upon the type of institution; *i.e.*, whether it be a hospital for the insane, a prison, a juvenile mental hospital or corrective institution, or a State

Teachers College. The individual inclinations of the visitor are also to be considered, as one visitor may be interested in the style of architecture of the buildings, another may particularly note the arrangement of the buildings, roads and walks, while still another may

WALTER M. CALLAHAN

observe the actions of the patients, inmates or students. Whatever the impression may be, it will doubtless be prompted by certain definite visible objects which we might refer to as being "on the surface."

THE THINGS NOT SEEN

Within the structures and under the ground of all State Institutions, as well as any other centralized group of buildings or buildings of similar functions, there are items which are necessary to insure safety of building structures, modern conveniences for the occupants, sanitary and other indispensable features, which promote the efficient performance of the functions of the institution. These items are often unobserved by the visitor in spite of the fact that considerable forethought and engineering study is involved in the original design. Such items as a safe structural design, water development and its distribution

for both irrigation and domestic usage, sewage disposal, heating and its distribution, electricity for lighting and power, are all essentials, and all are necessary in making up a complete plant.

ELECTRICAL INSTALLATIONS

Electrical installations in a major State institution consist of many branches, each of which requires considerable study to adapt the system to the routine functions of the institution. The particular application of any electrical system depends largely upon the type of institution. It is in this connection that the Division of Architecture is frequently called upon to develop special systems of electrical apparatus and control in order that a definite function desired by the institution authorities may be accomplished. The past experiences of the Division of Architecture in this regard, together with a general knowledge of the routine functions of the particular institution involved, is of material importance and results in a satisfactory and efficient installation at a minimum cost to the State.

THE VARIED WORK OF LIGHTING

To convey a general idea as to the varied items involved in the numerous branches of the electrical installations, it will be enlightening to briefly consider some of the cases in detail:

1. General illumination is provided in practically every building structure. The type of equipment and intensity of illumination is governed by the type of structure as well as the need of the occupants. This portion of the electrical installations is probably the most diversified of all the branches, as it involves problems in lighting of cell blocks in prisons, class rooms in schools, hospital wards, children's study rooms, and recreational rooms. Floodlighting is, in many instances, used for precautionary purposes in penal institutions and for artistic applications on or around monumental buildings and surrounding grounds. A complete system of grounds lighting is usually provided for all major institutions. Modern stage equipment and lighting is an integral part of all auditoriums in which motion pictures and theatrical performances are shown. Drafting rooms and various testing laboratories which require high intensity, properly diffused, and equal distribution of illumination, are given thorough study and treated so that the eye will function at the maximum degree of efficiency. In fact, every problem of artificial illumination is given thorough consideration and study before a final decision as to the type of installation is reached.

2. The pumping of water, both for domestic purposes and water for irrigation and fire protection,

involves the installation of electric motors and their automatic control equipment.

3. Refrigeration plants play an important role in all institutions for the reason that in practically every instance the institution is somewhat isolated from the centers of population, thus necessitating the storage of food and perishable commodities. It is essential that the electrical equipment used in conjunction with refrigeration be installed in such a manner as to reduce the possibility of failure to a minimum.

4. Laundry machinery and equipment involves a multiplicity of electrical controls for efficient operation.

5. Various local industries which are carried on in the Institutions each require individual investigation. Fruit and vegetable canneries, jute mills, broom and basket weaving factories, shoe shops, printing plants and other minor industrial activities have certain definite requirements for electrical drives and controls.

6. Provisions for telephone, fire alarm and miscellaneous signal systems are provided as required.

7. The item which requires the greatest forethought and study is that which involves the distribution of power, telephone and signal systems throughout the institution grounds, interconnecting all buildings and isolated units under a common main distribution service, originating at a central source of supply. These

Ward-Kitchen-Steam Plant Building at Agnews State Hospital.

services are, however possible, installed underground in fiber ducts encased in concrete which eliminates the expense incurred by the deterioration of overhead pole line construction.

PLANNING FOR THE FUTURE

In contemplating the layout for an underground distribution system, it is advantageous to be aware of the future development of the institution. The ten-year building program, under which the Division of Architecture is now operating, anticipates the future requirements of the various institutions and furnishes pertinent information to be used as a basis for the design of a distribution system. With this information in mind, it is possible to design and provide facilities of sufficient capacity for the ultimate project. This prevents the installation of a series of small individual services to care for the immediate needs, the combined costs of which would far exceed the cost of a single service of sufficient capacity.

Highway Patrol Asks Medal for Brave Rescue by Checker

BECAUSE of heroic conduct displayed in rescuing two persons from drowning in the waters of Donner Lake, Tony Beard, Sacramento Junior College student, employed last summer by the State as a border checker, has been recommended for a Carnegie award from the Carnegie Hero Fund Commission by the California Highway Patrol.

The application of the patrol on behalf of the 21-year-old student has been signed by Governor Rolph, Lieutenant Governor Merriam and other prominent persons and is now being considered by the commission.

Young Beard risked his life on two occasions last summer to pull drowning persons from the lake. On the first occasion he rescued Mrs. Leida Brown from

drowning and revived her after several hours of resuscitation. Evidence was not presented to the commission in this case, however, as witnesses could not be found.

The second incident occurred on August 8th when John Van Ek, Oakland insurance agent, and another man named Warner began struggling in the lake while swimming and sank to the bottom. Beard sprang into the water with his clothes on, broke the two men apart and was dragging Van Ek out when a Negro boy who had arrived in a boat to assist in the rescue sprang into the water and lost control of himself. Beard was then compelled to drag both the Negro and Van Ek to the bank.

The Negro revived but several hours of resuscitation failed to revive Van Ek and he perished, as did Warner.

After applying artificial respiration for an hour Beard collapsed and was unconscious for four hours.

The design of a distribution system also requires negotiations with the public utility companies in order that the rate upon which the cost of electric energy is based will be the one most favorable to the State.

Shade Trees Are Saved in Highway Widening Operations

HERE are news items concerning shade trees along the State highway system that will meet with enthusiastic approval.

The first article, an editorial in the *Stockton Independent*, reads as follows:

Here is cheering news to all tree-lovers of San Joaquin County and particularly those residing in the Lockeford-Clements section.

State Highway Department has announced that it seems likely that not ten of the fine trees along the Lockeford-Clements highway will have to be disturbed in the work of widening and improving the road, which runs from the Waterloo Road to a point one mile east of Clements. Mr. Pierce states that it is the policy of the Highway Commission to preserve trees whenever possible.

Nearly all Stockton people will remember the fine old trees on the Lockeford-Clements road running in front of the W. S. Montgomery place, where about 1000 splendid trees makes a magnificent avenue.

It is gratifying to know that but a very few of the trees will be disturbed, as they are a valuable asset to the county and every means should be taken to preserve them.

The second article is a news dispatch from Bakersfield, and tells the following story:

BAKERSFIELD, Feb. 2.—The Board of Supervisors today, by unanimous vote, made possible the consummation of a plan to adorn with shade trees the highway from the north line of the county to the Famosa crossing, a distance of ten miles, this being the first step in the creation of a shaded avenue from Delano to Bakersfield.

The matter was presented to the board by Alfred Harrell, who reviewed briefly the history of the movement, which he said had its inception in a resolution passed by the Woman's Club of Bakersfield something more than a year ago. In their behalf, the speaker said he had taken up the project with the State, ascertaining that tree planting was stopped because of the narrowness of the right of way, it being necessary to increase the width of such right of way from sixty to ninety feet.

I like to watch the rooster crow,
He's like so many men I know
Who brag and bluster, rant and shout,
And beat their manly chest without
The first damn thing to brag about.

NATIONAL—Traffic planning, regulation and control are advocated by the National Safety Council in speeding up traffic in metropolitan districts during the busy hours of the day.

COLORADO—Over one hundred road building projects involving the expenditure of more than \$6,000,000 are under way in this state. The projects, part of the largest road building program ever outlined in Colorado, are being pushed by highway officials to relieve unemployment.

"ALIMONY SAM," BUDDY OF DIRECTORS IN FRANCE, RENEWS ACQUAINTANCE

(From the San Francisco Call.)

Colonel Walter Garrison, director of public works, and James Herz, his deputy director, were reminiscing over wartime days in France when a man walked into their office and shouted the greeting:

"Hello buddies!"

It was Sam Reid of Willows, former buck private in the 363d Infantry, in which Director Garrison served as major and Herz as sergeant-major.

Reid gained national attention two years ago when he went to jail for several months as an alimony martyr in Glenn County, and since then he has borne the sobriquet of "Alimony Sam."

"Buddies," Sam proclaimed, "I'm broke. I've hardly eaten for the last two weeks. I don't want charity; I want work—anything."

"Sam," Colonel Garrison answered, "all we have is road work, at \$4 a day, and only three days' work a week at that. It's hard labor—pick and shovel—"

"I'll take the job, and mighty glad to get it!" interrupted Sam Reid.

Accident Percentage Higher In Country; Speed Is Cause

INDICATIVE of the fact that excessive speed is a contributory cause to fatal motor accidents, the California Highway Patrol today made public the results of a survey showing that while more accidents occur in cities of the state, the percentage of deaths in the rural districts on the open road is greater than in the cities.

Pointing out that the greater the speed, the greater the chance of death if an accident occurs, the patrol's survey shows that although 50.8 per cent of all fatal motor accidents occurred in cities during the last two years, these accidents account for but 48.9 per cent of the total number of persons killed.

On the rural roads, where the motorist is tempted to exceed the speed limit, 49.1 per cent of the accidents account for 51 per cent of the deaths. The figures show that in cities 1,049 persons were killed per accident where a fatality occurred, while in the country where speeding is indulged in, 1,131 persons were killed per accident.

Collisions at speeds less than 40 miles an hour may or may not result in fatalities, it was stated, but collisions at greater speeds are almost sure to result fatally.

Traffic Enforcement Must Be Consistent If It Is To Be Effective

By E. RAYMOND CATO, Superintendent of the California Highway Patrol

Captain E. Raymond Cato of the Los Angeles police department was appointed recently by Governor Rolph as superintendent of the California Highway Patrol. Captain Cato brings to his new position the experience of more than twenty years as a peace officer and police executive. In this article, he outlines some of the policies by which he will be guided in his new position.

STEADY, consistent enforcement of the traffic laws, unmarked by spasmodic "raids" and "campaigns," will be the policy we shall strive to carry out in administering the affairs of the California Highway Patrol.

Captain E. RAYMOND CATO

We have no sure cure remedies or specifics to offer as a solution of our traffic problems. We believe that as long as motor vehicles continue to run on the public highways we will have traffic problems. At best we can only hope to mitigate the evils that exist by studying these problems carefully and by giving the best that is in us toward making the highways safe.

Therefore, we will "carry on," doing the best we can, hopeful of receiving the cooperation of the motoring public, knowing that 90 per cent of the fight is to awaken the individual driver of a motor vehicle to a sense of his responsibility.

Personally, I can see little merit in emphasizing one kind of enforcement at the expense

of another. We have a tremendous problem in headlight enforcement but we cannot devote all of our time to headlights and let reckless and intoxicated drivers escape. A mixed program with officers on the alert for all types of violations is better, in my opinion.

This does not mean that we are going to ignore the headlight problem. We shall continue to devote one night a week to this work. It is my hope to be able to augment the various squads in time so that we may have sufficient men to keep a regular night patrol on duty all the time.

There is a vast field for study by specialists in the construction of lights. Nothing absolutely satisfactory has been evolved as yet but some one may find a way to keep headlights from getting out of adjustment so easily. When that day comes the problem will have been solved to a large extent.

It will be our policy to keep the major part of our forces on the main-traveled highways. We will work on the theory that more men are needed where there is more travel. In extraordinary cases, such as fiestas, football games, etc, we will not hesitate to avail ourselves of the provisions of the law permitting us to move our men from one point to another.

I do not agree with those who would remove all speed restrictions from our laws and allow the motorists to run wild. I regard a maximum speed limit as absolutely essential. It is too important a matter to be left open for discussion as to what constitutes a safe speed and what does not.

It is possible that some plan might be worked out by the legislature whereby higher rates of speed than are now permitted might be allowed on the open road under some conditions. I do not know whether 40 miles an hour is the maximum that should be allowed but I know some maximum should be established.

As for the patrol, we shall enforce the speed laws as set down in the motor vehicle act.

We shall insist that our officers exhibit the utmost courtesy toward the motoring public. But in doing so they must not overlook offenses endangering life and property. Many cases will arise where it will be entirely up to the officer's judgment to determine

(Continued on next page.)

Model State Highway Maintenance Yard

THE WORK of Highway Maintenance Superintendent L. C. Evans in beautifying the Douglas City, Trinity County, maintenance yard deserves especial commendation.

The yard occupies a site that was originally nothing but a rock pile. In four years Super-

intendent Evans has turned it into a veritable garden. This improvement has been practically no expense to the State and is, for Mr. Evans, a work of love.

The above photographs illustrate, the beauty of this yard. The daughter of Mr. and Mrs. Evans appears in the center.

TRAFFIC ENFORCEMENT MUST BE CONSISTENT IF IT IS TO BE EFFECTIVE

(Continued from page 14.)

what course he shall take. He must be guided by circumstances but in the main his guide is the motor vehicle act and he must deal with violations in a stern manner.

To the men themselves I will say that I am one of your organization in the California Highway Patrol and am for you when trying rightfully to perform your duty.

One thing I will insist upon and that is that members of the patrol keep themselves out of local political fights. The men are servants of the state and not political bosses. As members of the patrol they should have no interest in local politics.

We shall insist that the men pay careful attention to their personal appearance and condition of equipment. An efficient officer

can be noted by the exhibition of his personal pride in this manner.

The patrol has an ideal to attain, a tradition to live up to for it is an intricate part of our state government. We are not living up to the patrol standard if uniforms are allowed to become unkempt or if duties are performed in a slovenly manner.

We ask the cooperation of the men and the motoring public.

STOP, LOOK, LISTEN

He heard the toot, but tried to scoot
And bent the choo-choo to it.
The poor galoot now twangs a loot,
Take heed that you don't do it.

New Yorker (incredulously)—"And you mean to say that in California you have 365 days of sunshine a year?"

Man from Los Angeles—"Exactly so, sir, and that's a mighty conservative estimate."—*Stray Bits.*

Recommendations Made for Irrigation District Financing and Refinancing

AS a result of the study by a commission appointed in the spring of 1929 for the purpose of securing a definite method whereby the financing and refinancing of irrigation, reclamation and other public improvement districts may be put on a better credit basis, recommendations have been submitted to the Legislature which, if approved, should be of the utmost importance to the entire irrigation situation, both from a financial and a public standpoint.

Members of the commission signing the report are Will C. Wood, former State Superintendent of Banks; Edward Hyatt, State Engineer; U. S. Webb, Attorney General of California; Fred W. Kiesel, Sacramento banker; Charles E. Maclean, San Francisco banker; W. P. Jeffries, Los Angeles banker.

Charles L. Childers, El Centro attorney, also a member of the Commission, approved the report with certain reservations. These reservations will be found at the conclusion of this article.

Of primary importance in the majority report is the recommendation for the enactment of legislation which will assist in the refinancing of distressed districts organized under existing statutes and, secondarily, the elimination of such defects in future district organizations as have contributed to failures in the past.

One of the most important recommendations of the commission is that legislation be enacted creating a state irrigation and reclamation bond fund, to which \$5,000,000 shall be appropriated.

STATE RELIEF FUND PROPOSED

This money is intended to be used for the purchase, under certain conditions, of refunding bonds of reclamation and irrigation districts in amounts that will enable the districts to take up that amount of maturing bonds found to be in excess of the district's ability to pay during a year, and which likely would be the chief cause in necessitating a refunding issue. The mechanics of the operation of the bond fund would be placed in motion by application to the California Bond Certification Commission by any irrigation or reclamation

district for relief, on account of a too heavy program of bond maturities.

While the commission finds that fundamentally the present laws are sound, difficulties have been encountered in the operation of these statutes, traceable principally to their application and the lack of adequately supported agencies or means to make them effective, and changes in the laws are strongly advised:

1. To prevent as far as possible unwarranted depreciation in the credit standing of irrigation and reclamation district securities;
2. To establish the confidence of the investing public in these securities, and,
3. To strengthen the individual borrowing power of the land owners within such districts.

LACK OF PUBLIC CONFIDENCE

Primarily, depreciation, lack of borrowing power and loss of confidence may be accounted for by the abnormally depressed conditions of agriculture. This situation has brought to light faults in economic analysis and legislation which under normal conditions would not have developed. The confidence of the investing public in these securities, therefore, has been shaken and the ability of even sound districts to finance through the sale of bonds, under present conditions, is impaired seriously. This skepticism is due largely to the experience of the investor with defaulting securities and is attributed in part, the commission in its report to the governor and the legislature says, to the following:

1. In case of default the laws provide no practical recourse or remedy;
2. Periodical reporting is either not required or is so irregular that accurate district information is frequently unobtainable;
3. Certification by the bond commission or approval by the superintendent of banks, due to lack of personnel, finances, and authority, has not always carried the assurance of a comprehensive study of economic soundness.

Rectification of these difficulties in the case of future bond issues, the commission reports, may be accomplished through legislation supported by adequate appropriation, but the amount of these securities now outstanding, their loss of credit and the rapidly approaching necessity for refunding in many instances,

makes solution or alleviation of existing district difficulties the major problem.

AGRICULTURE HELD BASIC

The commission urges that as agriculture is so basic to this state's prosperity that its success is vital to the welfare of every community within its boundaries, every assistance, other than subsidy, that can be legally given should be rendered.

Details of the commission's recommendations follow:

1. That the California Bond Certification Commission be given power to extend to reclamation districts any privileges now accruing to irrigation districts and that any new privileges added through legislation be applicable to both irrigation and reclamation districts.

2. That personnel of the commission be increased by two members, to be appointed by the Governor, with approval of the Senate, for a period of four years.

3. That \$100,000 for the next biennial period be appropriated for the use of the commission.

4. That the commission be authorized to employ a secretary and executive officer and such experts and assistants as it may deem necessary.

5. That the commission be given wide discretion in certifying any bond issue and not limited in its considerations to the specific factors named in the present laws.

ANNUAL REPORT TO BE MADE

6. That the commission be empowered to make an examination at least once each year, of records, financial affairs and physical properties of districts under its supervision and to publish or require the districts to publish, at least once a year, a report of their affairs, so that district residents, creditors and others may have authentic data concerning the districts.

7. That the commission be authorized to cooperate with any district in working out a refunding program, in case the commission deems refunding necessary.

8. That the commission be empowered to make a thorough investigation and report on the physical, financial and economic conditions of each district going into default, and to take the necessary steps and be charged with the duty of bringing together all interests in a plan of reorganization when it appears that the district will be unable to cure the default within a reasonable length of time.

9. That in case of a default continuing for a year, the commission may, subject to approval of a judge of the superior court of the county in which the district, or greater portion of it, lies, appoint a special agent to keep the district works in order and in operation and to raise money for such purposes in a way to be specified by law.

LEGAL CHANGES OUTLINED

Specific changes in existing statutes are recommended as follows:

1. That the California Irrigation District Act be amended to allow under proper safeguards the redemption of a portion of the land sold for delinquent assessments, in the case of a large tract sold in one block. (This is permissible with county taxes and should assist in clearing up delinquencies.)

2. That the act be amended to allow under proper safeguards the establishment of district sinking or surplus funds and permitting their use for the purchase of unmatured bonds.

3. That the act be amended to allow the district

under proper safeguards to enforce payment of assessments by the refusal to deliver water.

(Public utilities and municipal bureaus now employ this method.)

4. That the act be amended to allow the establishment of a depreciation fund for the replacement of irrigation works.

(This provision was suggested to aid districts with pipe lines and such other works as are comparatively short lived.)

POLITICAL CODE CHARGES URGED

5. That the Political Code be amended to provide that no reclamation district warrants shall be issued unless covered by assessments and that no assessments except for the payment of interest charges and current expenses shall be levied without the approval of the commission.

(The present statute providing for the issuance of warrants is not clear as to the precise status of the warrant, though it is apparent that they are, or may be made, a lien on the properties of the district and to all intents and purposes are in the same status as the bonds. When issued in excessive amounts, they dilute seriously the securities of the bond. In case of foreclosure by the bondholders, the outstanding warrants, if supported by assessments, remain as a lien against the property, which in effect places the warrant in a prior position to the bond.)

6. That the Political Code be amended to provide for the semiannual payment of interest on reclamation district warrants.

(The lack of an interest payment date is a serious banking objection.)

7. That the Political Code be amended to authorize a reclamation district to take possession of, farm and operate or lease such land to which the county treasurer, as trustee of the bond fund, has taken title after sale for delinquencies.

(In case of default in the payment of assessment, the delinquent lands in lien of other bidders are sold to the county treasurer as trustee of the bond fund. The statute now is not clear as to what may be done with the lands thereafter. The treasurer has no power to lease the lands, nor authority to operate them, nor is he provided with funds to prosecute a suit for possession. This situation leads to a loss of revenue to the district and eventually to the bondholders.)

8. That the Political Code be amended to reduce the 20 per cent penalty imposed by reclamation districts which attaches upon delinquency to 10 per cent.

(This penalty has not resulted in the payment of additional taxes, but is almost confiscatory in its severity.)

BOND FUND PROVISIONS

Any refunding bonds purchased through the state irrigation and reclamation bond fund may be sold at any time by the Commission, through which the bond fund will be administered, but in no case for an amount less than the purchase price, and the money received from such sale will revert to the fund. Until the purchased bonds are sold, they will be held in the fund, and all interest received thereon shall be retained in the fund to be used again by the commission for the purpose of assisting other districts to refund their bonded obligations in case of demonstrated need.

When it appears to the commission, after it makes a full and thorough investigation of the affairs of any district that applies to it for relief on account of too heavy a program of bond maturities, that the district can, with a readjustment and extension of the program of maturities, pay off its entire bonded indebtedness within a period of 40 years after voting of the refunding issue, the commission will consent to assist the district through the bond fund. The commission will grant the district permission to vote a refunding issue

Road Crew Fight Cloudbursts; Forget Hours to Keep Road Open

FIGHTING CLOUDBURSTS

Oxnard, California January 11, 1931.

Mr. S. V. CORTELYOU,
Dist. Engr., Div. of Highways,
Los Angeles, California.

Dear Sir: The following is a report of storm damage and performance of maintenance crew during the storm of January 7 and 8, 1931. We started with the storm at noon Wednesday, January 7th, to patrol the cliff section, draining water-holes along the pavement and removing falling rocks. At about 3.30 p.m. the storm changed to a cloudburst, and I noticed at the Miller quarry site a large volume of water coming off the portion of the hill that burned early this fall. As there was a large amount of debris along with this water, I stationed one man at this culvert to keep it from becoming clogged with brush and rocks. I took two men and started for Decker Road, as all of my section from the Los Angeles-Ventura line to Decker Road was in the path of the run-off from the burned area.

At Station 158+88 we found the culvert unable to carry the volume of water. We turned as much as possible of the water down the hill to keep from washing the fill opposite the culvert. As the water was subsiding, we left to see what other damage had been done. An average of 18 inches of mud and rocks had been deposited on the pavement for about 60 feet, but was passable for one way traffic.

At Station 221+25 I found the traffic halted. I was informed that the first one

there had been there for nearly one-half hour. There were rocks and mud to the depth of about four feet across the pavement. It took us about 10 minutes to get the largest of the rocks out, and we were able to get the passenger cars through. The trucks had to wait another half hour. I sent word back for all of my men to come over towards Decker Road. At Station 223+86 the traffic had to use the shoulder, and was for one way traffic only. I sent one man back for lanterns and

barriades; the other men I put to cleaning off one half of the pavement. At 10 p.m. I had the road so one way travel could get by all places without difficulty, so I then let part of my men go for supper and the rest of us worked until the others had had their supper and returned. We then went to supper and came back. I had two trucks hauling rocks and mud off the worst places; caterpillar and grader grading the mud to both sides of the pavement where it wasn't as deep.

At 3.30 a.m. Thursday, January 8th, another storm with thunder and lightning came up. At 3.45 a car stopped and said there was a regular river crossing the highway near the county line. I left two flagmen where we were working and took the rest of the crew. We found rock, brush, mud and fencing about 5 feet deep across the pavement and traffic blocked. In one hour we had one way traffic moving on the shoulder; at 7 a.m. we had one-way traffic on the pavement. I then put the crew to cleaning the pavement of rocks too large for the patrolman to get off.

I took the six relief employment men out to improve the one-way passages we had. At

OFFICIAL COMMENDATION

Sacramento, California,

January 27, 1931.

Mr. Glenn H. Cheeseman
Maintenance Foreman
Oxnard, California

Dear Mr. Cheeseman:

District Engineer Cortelyou has informed this office of the efforts made by your crew in keeping a portion of our coast highway open during the severe storm of January 7th and 8th.

I wish at this time to express the appreciation not only of myself but the entire organization for the untiring efforts of yourself and crew in displaying a spirit which should be and is typical of our organization where the care and safety of travel is concerned.

Yours very truly,

C. H. PURCELL,
State Highway Engineer,

By
T. H. DENNIS,
Maintenance Engineer,

9 a.m. my boys met Sullivan's crew cleaning the pavement (they had cleaned from Point Mugu to Pelican Point). I sent the men that had worked all night home for some sleep and to show up at 1 p.m. as it had been raining since we opened one way traffic. At some points more mud had been washed on. We worked until 10 p.m. Thursday, January 8th. The storm was over and we called it a day. Myself and crew that was on worked from 7 a.m. Wednesday, January 7th, to 10 p.m. Thursday, January 8th, with the exception of about 2 hours the boys had for sleep.

The following are the places the mud washed over the pavement, with the station number and approximate amount of mud:

Station 158+88—60 ft. pavement covered at approximately 18 inches deep. Graded to both sides. One-way traffic.

Station 179+52 to station 160+50—Pavement covered 2 feet deep, mud and rocks off Rindge property. One-way traffic.

Station 216+00 to Station 219+00—Average depth rocks and mud 1 foot.

Station 219+50 to Station 221+25—Average depth of rocks, brush and mud 4 feet. Traffic halted 45 minutes.

Station 223+86—Average depth of rocks and mud 3½ feet. One-way traffic.

Station 254+13 to Station 255+13—Mud to depth of 8 inches, washed off Decker Road.

Station 107+00 to Station 107+95—Average depth 4 feet. Traffic halted 1 hour.

Rocks were removed that were 3½ feet in diameter. This damage was due to the burned off area, as in very few cases did this dirt and rocks come near a culvert, but new washes were formed and considerable drainage work will have to be done to keep drainage from every rain from coming on the pavement instead of to the culverts that are already installed.

Yours very truly,

GLENN H. CHEESEMAN.

DISTRICT ENGINEER'S REPORT

Los Angeles, California,

January 20, 1931.

MR. C. H. PURCELL,
State Highway Engineer,
Sacramento, California.

Dear Sir: Attached hereto for your information is copy of report dated January 11th from maintenance foreman G. H. Cheeseman, regarding the emergency work of himself and his crew in keeping open the El Rio to San Juan Capistrano State highway (route 60),

during the severe storm of January 7 and 8, 1931.

You will recall that last summer there was a very severe forest fire which burned all of the forest cover on a very large area in the mountains to the north of this highway. As a result, the storm of January 7th and 8th, which under normal conditions would have caused little trouble, resulted in washing down large quantities of debris over our pavement. Foreman Cheeseman and his crew worked continuously from 7 o'clock Wednesday, January 7th, to 10 p.m., January 8th, 39 hours, with the exception of about two hours off for sleep.

This is the kind of men and kind of spirit which gives such a high standing to our maintenance organization. I think Foreman Cheeseman and his crew are certainly to be commended for this additional example of their fidelity to and interest in their work.

Yours very truly,

S. V. CORTELYON,
District Engineer.

PACIFIC HIGHWAY BRIDGE IS DEDICATED

(Continued from page 7.)

County, I would like very much to have been able to participate in the completion and dedication of this bridge, which marks constructive progress in your two counties and adds another link to our great highway chain.

I take a keen interest in the welfare of your two fine counties. Please give my compliments to all the people attending the ceremonies and say to them that I shall as early as possible return to your counties and visit my fellow citizens who welcomed me so delightfully when I visited them in the recent campaign.

My compliments and good wishes.

Telegram from Colonel Garrison

Colonel Walter E. Garrison, Director of the Department of Public Works, wired Mr. Kelly as follows:

I am indeed sorry that stress of business here makes it impossible for me to be present at dedication of Cottonwood Bridge today. Please convey my regrets to those who attend the ceremony. This bridge will add another scenic feature to Pacific Highway and it will perform a two-fold service hindering the counties and communities of that section closer together and serving outside travel in a better and more attractive manner. Congratulations to you and your friends through whose efforts this important betterment was obtained.

"What became of that unpaid bill Dunn sent to us?" remarked the bank clerk to his wife.

"Oh, that?" she asked. "I sent it back marked 'insufficient funds.'—*Portland Express*.

State Highway Commission Speeds Up Governor Rolph's Highway Building Program

THE California Highway Commission at its meeting in Sacramento on January 29th authorized the necessary appropriations for engineering and right of way expenditures necessary to put Governor Rolph's highway program into immediate effect. The Commission directed State Highway Engineer C. H. Purcell to proceed at once with the preliminary work.

Present at the meeting of the California Highway Commission were Earl Lee Kelly, chairman; Commissioners Frank A. Tetley, Riverside; Philip A. Stanton, Anaheim; Harry A. Hopkins, Taft; Timothy A. Reardon, San Francisco; Colonel Walter E. Garrison, director of the Department of Public Works, and C. H. Purcell, State Highway Engineer.

HIGHWAY ALLOCATIONS

The following allocations were made for highway projects designated for construction upon advice from State Highway Engineer C. H. Purcell that preliminary engineering for these projects was ready for advertising.

Coast Highway: \$931,600 for grading and paving 18 miles between Los Alamos and Santa Maria in Santa Barbara County, including the construction of the Los Alamos Creek Bridge.

Tahoe-Ukiah Highway: \$242,000 for placing oil surface for 19.1 miles between the Abbott Mine and 5 miles west of Williams. This work lies in Lake and Colusa counties, and will complete the improvement of the section of the Tahoe-Ukiah Highway between Calpella on the Redwood Highway and Marysville on the Pacific Highway, with the exception of the Lucerne-Upper Lake section.

San Diego-El Centro Highway: \$240,000 for grading and paving 5 miles between Claydelle Station and west end of Bostonia line change, Las Caches line change and the Flynn Springs line change. This will materially improve the alignment of this highway between El Cajon and Flynn Springs.

San Bernardino-El Centro Highway: \$481,400 for grading and paving 8.3 miles between a point 6 miles north of southerly county line of Riverside County and Avenue 62. With work underway, this project will complete the work of widening the old 15-foot pavement south of Indio to the standard 20-foot width.

El Centro-Yuma Highway: \$150,000 for grading and widening to 20 feet between Highline canal and Sand Hills in Imperial County, a distance of 20.7

miles. With this project and all appropriations of the state highway budget as presented to the legislature by Governor Rolph, the work of widening the entire pavement from El Centro to Yuma to 20 feet will be completed.

Pacific Highway (East Side): \$77,300 for grading and surfacing shoulders for 19.4 miles between Yuba City in Sutter County and Biggs in Butte County. This allocation provides for grading, shoulder work and bituminous surfacing that will provide a 20-foot surfaced roadway in place of the existing 15-foot pavement.

San Fernando-San Bernardino Highway: \$150 for grading and paving the west entrance to San Bernardino, including provision for pavement of state's share of a viaduct. This will greatly improve the state highway entrance to San Bernardino from Los Angeles.

Golden State Highway (Valley Route): \$635,000 for grading and paving 7.5 miles between Tipton Crossing and Tulare in Tulare County. This appropriation also provides for the construction of bridges across Elk Bayon River, Tulare River and Canal. This project with others authorized will complete the work of widening the old 15-foot pavement in Tulare County to 20 feet and will leave only a very small mileage on this route yet to be widened.

San Diego-El Centro Highway: \$106,000 for the construction of the Boundary Creek bridge and approaches and for the Jacumba grade separation, all in San Diego County. This improvement will provide a wider highway on a better and safer alignment through Jacumba with an overhead crossing over the tracks of the San Diego and Arizona railroad.

El Rio-San Juan Capistrano Highway: \$281,300 for grading and paving 3.7 miles between Newport Beach and Corona del Mar in Orange County together with a bridge across the North Channel of Newport Bay. This project will greatly improve the alignment of the section it covers on this very heavily traveled highway.

ADOPTION OF ROUTES

Formal adoption of routes was announced by the commission as follows:

The long mooted question of whether the East-of-the-Sierras highway would pass directly through Bridgeport or bypass that town about 3 miles to the west was settled by the adoption of the Bridgeport routing.

The question of whether the Redwood Highway should pass directly through Crescent City or be routed to Grants Pass about a mile south of the Del Norte County seat was settled in favor of the Crescent City routing.

Address communications to California Highways and Public Works, P. O. Box 1103, Sacramento, California.

Vol. 9 FEBRUARY, 1931 No. 2

Right of Way Men Find Prospects in Dire Need; Aid Given

THE following letter written by George W. Pulich, right of way agent in State Highway District X to Colonel Walter E. Garrison, director of the Department of Public Works, is self-explanatory:

A very kind and gracious act came to my notice a couple of days ago and I feel it only fair to the men whom you have employed that I give this information to you.

In the work of securing rights of way, Messrs. Malatesta and Perry, respectively, were engaged in their duties and called upon certain people within the outskirts of Stockton for the purpose of signing them on a deed for rights of way being secured on the Hogan Road, between Mariposa Road and Turner Station.

In one particular case the people they interviewed were very poor and at the present time very much in distress. The boys observed the situation and it appealed to their sympathy. Upon coming into Stockton they informed certain friends of theirs and appealed for help for this family. The result was that the next day the family received a sack of potatoes, a sack of onions, half a sack of beans, a gallon of milk, a suit of clothes and pair of shoes for the husband, a dress and pair of shoes and stockings for the wife, and some clothes for the children. Inasmuch as the husband was a member of the American Legion the boys also interviewed the American Legion at Stockton and I am quite sure that further relief will be given this particular family.

I mention this instance because the situation and promptness in which relief was given this particular family appealed to me personally very strongly, and I feel that these boys are deserving of a great deal of credit.

ACTION COMMENTED

The letter was referred by Colonel Walter E. Garrison to C. C. Carleton, Chief of the Division of Contracts and Rights of Way, who addressed the following letter to Louis J. Malatesta and B. J. Perry, as follows:

The attention of Col. Walter E. Garrison, Director of Public Works, has been called to an act of helpfulness rendered by you and your coworker in obtaining

STATE HIGHWAY PATROL TO HAVE MILAN EXHIBIT

THE California Highway Patrol will be represented at the International Exhibition for Safety of Highway Traffic at Milan, Italy, April 12th to 27th of this year.

E. Raymond Cato, superintendent of the patrol, announced today that the patrol had responded to the invitation of the Royal Automobile Club of Italy to participate and would send an inexpensive exhibit.

The exhibit will consist largely of manuals of the patrol, statistical pamphlets and photographs depicting the work of the officers in uniform.

STATE HIGHWAY COMMISSION SPEEDS UP GOVERNOR ROLPH'S HIGHWAY BUILDING PROGRAM

(Continued from page 20.)

The route, as adopted by the commission, provides that the highway shall enter Crescent City at 9th and L Streets.

The Prunedale route for the San Juan Grade relocation was formally adopted.

INCLUSION OF SECONDARY HIGHWAYS

The following resolution was adopted:

Resolved, That the California Highway Commission hereby approves and endorses Senate Bill No. 46, "An act establishing certain additional State highways and classifying them as secondary highways," introduced by Senators Edwards, Breed, Allen, Baker, Cassidy, Duval, Harper, McCormack, McKinley, Riley, Swing and Wagy, and the secretary is hereby directed to transmit copies of this resolution to the Senate and Assembly, respectively.

The highways included in this bill are those recommended by the Division of Highways after a study made under a joint resolution adopted by the last Legislature.

RIGHT OF WAY AGENT

Frank B. Durkee has been appointed right of way agent, Division of Highways, attached to headquarters staff.

prompt relief for certain property owners near Stockton, whom you went to interview concerning right of way but whom you found to be lacking the necessities of life.

The Director has requested me to commend you for the thoughtful and sympathetic initiative taken by you in this situation as such acts do much to "humanize" the routine of State work, besides being of personal satisfaction to yourselves.

Motor Vehicle Registration Shows Three Per Cent Gain in 1930

DESPITE a rather adverse business year, California motor vehicle registrations showed a net gain of 62,325 in 1930. The year's total reached well over the two million mark, being 2,099,293, inclusive of motorcycles and trailers.

The figures show a 3 per cent gain over 1929, not including approximately 36,000 cars registered under the license exempt classification nor the 91,247 cars registered from other states.

Registrations for the year were announced as follows:

Passenger cars, 1,941,969. Solid trucks, 15,500. Pneumatic trucks, 83,887. Motorcycles, 9,405. Solid trailers, 9,563. Pneumatic trailers, 38,969.

The official totals will be used as a basis for apportioning the motor vehicle license fund, half of which goes to the State Highway Department and half to the counties for road building purposes after deductions are made for the expenses of the division and of the California Highway Patrol. Total fees for apportionment will amount to a figure close to \$7,000,000.

First 1931 Snow Survey Data Announced

THE first regular monthly surveys of the 1931 season at the "key" snow courses throughout the State were completed in the last few days of January, and a report issued to present the results of these surveys as well as all of the available data to February 1st from those precipitation stations of the U. S. Weather Bureau, the State, districts, and public utilities located in the mountainous portions of the various stream basins.

It is to be noted that the main survey of all snow courses as a basis for forecasts of stream flow is made in the latter part of March and the present surveys cover only selected or key courses to furnish data in the nature of a progress report. The table printed below presents the results of the snow surveys and affords an opportunity for comparison with the snow pack as shown by the surveys of February 1, 1930, the latter being the first season of the State's entry upon work of this character. In some instances where snow surveys were made for a period of years prior to 1930 by agencies now cooperating with the State, it has been possible to develop tentative "normals" and in these cases the water content of the snow as measured at the first of February is given also in percentage of these seasonal normals.

In so far as generalizations for entire stream basins can be made from the as yet somewhat scattered and limited snow courses, the surveys indicate a water content on February 1st of this year in per cent of the water content at the same time last year, as follows:

Upper Sacramento, and McCloud (one course) 60 per cent.

Pit (one course) 80 per cent.

Feather (3 courses) 50 per cent.

Yuba (3 courses) 105 per cent.

American (3 courses) 90 per cent.

Mokelumne (one course) 60 per cent.

Stanislaus (3 courses) 85 per cent.

Tuolumne (6 courses) 75 per cent.

Merced (6 courses) 100 per cent.

Mono (2 courses) 55 per cent.

Kings (2 courses) 80 per cent.

Kaweah and Kern (one course each) 85 per cent.

Reviewing the data from the precipitation stations, the precipitation to February 1st in per cent of normal is shown for the various stream basins about as follows: Upper Sacramento, Pit and McCloud, 60 per cent; Feather and Yuba, 55 per cent; American, 60 per cent; Mokelumne, 65 per cent; Tuolumne and Merced, 70 per cent; Mono (one station), 60 per cent; Upper San Joaquin and Kings, 60 per cent;

Kaweah, 65 per cent; Kern, 75 per cent; Owens (one station on Bishop Creek), 85 per cent; Upper Valley (one station), 50 per cent; Lower Valley (3 stations) ranging from 10 to 50 per cent; Santa Ana, 70 per cent; San Gabriel and Los Angeles (Mt. Wilson station only, January data for other stations not available to date), 60 per cent.

HUMAN SIDE OF SNOW SURVEYS

The following clipping from the *Redding Searchlight* of January 31st, reveals the method by which these snow observations are obtained:

Breaking in on the solitude of the bleak slopes of Lassen Peak with crunching skis, Norman Brown of the State Highway Department and A. G. Holmes, park ranger, negotiated a level just 600 feet from the top of Lassen Peak yesterday to make a snow survey for the State Division of Water Resources of which H. M. Stafford is director at Sacramento.

Brown and Holmes set out from the checking station about 9 o'clock and took 34 soundings of the snow depth before returning. At Lake Helen there was a level of 86 inches, while at the foot of the volcano peak the measurements showed 96 inches. The density of the snow tested about 45 per cent water.

On the return trip, the men made the distance from Lake Helen to Mineral in just four hours, the total time being 26 hours including their period of sleep at the checking station.

DUG INTO CABIN

Brown stated yesterday that they made a brief stop at Lake Helen, where a cabin was left by the road contractors last summer. They dug their way in and heated a cup of coffee for refreshment. Only one end of the cabin eave was visible when they came upon it.

The men reported only a few snow slides and encountered only one fallen tree on the park highway.

The trip made this week is the first one for the year and the men will make their second visit the latter part of February. The snowfall is not yet equal to last year's total.

"Iceland," said the teacher in the geography class, "is about as large as Siam."

"Iceland," wrote John at examination time, "is about as large as teacher."

BRIDGING SHASTA CANYON MARKS MONUMENTAL HIGHWAY UNDERTAKING

(Continued from page 5.)

the section of highway being reconstructed. It consists of four 80-foot and two 72-foot reinforced concrete girder spans supported by concrete piers and towers. No unusual features were encountered in the construction of this bridge with the exception of the daily rise and fall of five or six feet in the stream flow. This variation added to the hazards and expense of constructing the footings and piers. This bridge when complete will cost approximately \$80,000.

DEDICATIONS TO PIONEER STAGE DRIVERS

An interesting feature of the project is the plan to dedicate these bridges to the memory of the pioneer stage drivers of Siskiyou County. The project accordingly not only links together the great states of the Pacific Coast in a closer bond, but it also serves as a fitting monument to the brave men who, driving over rough, rocky, steep and dangerous roads, blazed the trail for the modern highways over which, daily, thousands of automobiles now travel in complete comfort and with perfect delight.

Insurance companies last year paid out approximately three hundred million dollars as a result of highway crashes. Casualty, life and fire insurance companies all contributed to this huge sum, with casualty companies bearing the heaviest part of the burden. A large part of the total was paid out as a result of personal injuries, fatal or otherwise.

Road Machinery is Playing Larger Role in Road Building

By C. H. PURCELL, California State Highway Engineer *

THE work of the California contractors on highway construction during the past year has been of especial interest as a study in the use of modern machinery and its possibilities in economical highway construction operations.

To state that the financial depression is the sole cause of lower bids now received on construction work indicates a lack of knowledge of the modern contractor's method of operation.

Our contractors today are doing more work with less labor and getting a greater output than ever before with far greater effects on production costs than Wall Street could ever exert; new records for output are being made not for one day's run to be followed by a profit-destroying breakdown, but time after time the average daily production for a whole project is exceeding figures considered impossible a few years ago.

RECORD IN ASPHALT PAVING FIELD

In the asphalt paving field, we have the record made last year of more than one thousand tons daily output by a four thousand pound mixer on the production of some forty thousand tons. This was made possible in the first place by the use of the mechanical spreader and raker, originally developed in California, to take care of the tonnage, and second by the elimination of all lost motion in plant operation. The time clock with its bell was originally brought out to insure full mixing time on concrete paving machines. Last year, a California firm attached one of these timers onto the asphalt plant with the result that not only were all batches correctly timed but production immediately jumped and now, on most of the contracts this device is being installed although its use has never been specified.

On Portland cement paving work, a run of over four hundred yards with a six-sack mixer is not the exception but rather the rule. Improved batching and charging with properly organized mechanical finishing has insured continuity of operation. An unusual example

of efficient operation was shown this year when two mixers in tandem averaged well over 800 cubic yards per day.

In grading operations, a total of twelve hundred yards or more in eight hours for a yard and a quarter shovel has become a common occurrence rather than a record breaking performance. In connection with this, it should be remembered that the excavated material is not merely pushed over a bank as was once done, but when hauled to the fill is spread in thin layers, watered and rolled.

BEST IN MACHINERY NECESSARY

Such productions are the outcome of the finest organization using the best machinery that can be had. To secure them, everything must "click" from start to finish of the work. They have never been secured in any case by sacrifice of quality of the work, deviating from the specification requirements, or deduction from the value of the finished product. Each year shows more value given, our pavements are built smoother and our laboratory tests show increasingly excellent results.

It has been a source of satisfaction that throughout the enormous volume of work handled by the contract method, the Division of Highways has received the full cooperation of the contractors doing the work. With two hundred twenty-five contracts in the past year and a half totaling about twenty-eight million dollars, the disputed claims on the work have been at a minimum. This condition, so essential to the successful carrying out of California's highway program, requires the harmonious effort of all parties concerned. Every contractor properly labors to conduct his work to produce the greatest possible profit; our work today demonstrates that, in striving to improve himself to produce that profit, he has not only worked for his own advantage but also for the benefit of the people whom he serves.

At a time when economical quantity production of work by the use of the highest type of machinery is so essential to a contractor's welfare, as well as the economical production of work for the State, it becomes of vital importance that a contractor earn a net

(Continued on page 28.)

* This article was written for Pacific Constructor and appears in the A. G. C. Convention Number of that magazine.

Court Okehs Revenue Bonds Issued Under Joint Highway District Act

THE DECISION of the appellate court upholding the action of the board of directors of Joint Highway Number Six in issuing revenue bonds is reprinted below. The decision of the court has been awaited with interest by counties all over California, who are interested in road construction through Joint Highway District Act.

Joint Highway District Number Six is made up of Kern, Ventura and Santa Barbara counties. It was organized to build a highway from Maricopa to Ventura.

Revenue bonds in the sum of \$550,000 were issued, to be repaid over a period of eight years, from taxes levied by the counties in the joint highway district to meet the cost of constructing the road. These revenue bonds were attacked as invalid. The validity of the bonds was upheld in the superior court of Ventura County and the decision of this court was affirmed in the following decision of the appellate court:

IN THE DISTRICT COURT OF APPEAL OF THE STATE OF CALIFORNIA, IN AND FOR THE FIRST APPELLATE DISTRICT, DIVISION TWO.

J. M. SHARP, Plaintiff and Appellant, vs. JOINT
HIGHWAY DISTRICT No. 6, etc., et al, De-
fendants and Respondents.

Claiming that the defendants were about to issue a series of illegal "revenue bonds," the plaintiff commenced this action to obtain an injunction against the defendants restraining them from further proceeding with the issue. The defendants answered and a trial was had before the trial court sitting without a jury. The trial court made findings in favor of the defendants and from a judgment entered thereon the plaintiff has appealed and has brought up typewritten transcripts. The case arises under an act of the legislature known as "Joint Highway District Act," Chapter 52, Statutes 1917, as amended in 1921, 1925, and 1927. (Here follows a detailed description of the operations of the act.)

The first point which the plaintiff makes is that he adopted the proper remedy. The defendants do not dispute the claim except to assert that the plaintiff has no cause of action.

In his second point the plaintiff claims that the bond issue is void because it is prohibited by the provisions of section 18, Article XI of the State Constitution. A State Legislature has such powers, in these matters, as are not prohibited by the constitution. A bare reading of the section cited shows that it does not contain any prohibitions directed to such an entity as the defendant district. (See also *In re Madera Irrigation District*, 92 Cal. 296, 342-343.)

In his third point the plaintiff claims that the issuance of bonds can not be justified under the authority of a special assessment district because the proceedings would deprive the plaintiff of his property without due process of law. He quotes many of the provisions of the statute which we have epitomized and then he cites *Gadd vs. McGuire*, 69 Cal. App. 347, and contends that the statute gives him no opportunity to state his objections, gives him no hearing, and operates

to deprive him of his property without due process of law. The defendants reply that if the statute provides for due notice and a hearing at some time in the proceedings the parties interested may not complain (*Henshaw vs. Foster*, 176 Cal. 507, 514-515). They also assert that the plaintiff was represented in the legislature that enacted the enabling act and he was represented by his supervisors, one of whom acted as a member of the local board which initiated the proceeding, and that he has had all of the notice that the law requires (*Gadd vs. McGuire*, 69 Cal. App. 347, 363; *Allied Amusement Co. vs. Bryan*, 201 Cal. 316). Furthermore the power to build and pay for roads is one of the powers which is vested in the local board of supervisors. Many county roads are built to the county line, there to be met by a road to be built by the adjoining county; however, no taxpayer would claim the right to be given any notice, regarding such construction, different than the notice regarding other road expenditures. Continuing the defendants claim that Joint Highway District No. 6 is a quasi municipal corporation and not an assessment district and therefore no additional notice was necessary. (*In re Orosi Public Utility District*, 196 Cal. 43, 50.) With this claim we understand the plaintiff disagrees. He claims the statute is but a subterfuge, that the powers to be exercised are merely those powers which, under general statutes now rest with the several boards of supervisors, and that the entire statute is but a sham for giving some support to the issuance of the bonds. But we can not so hold. Let us consider a supposititious set of facts. Let us assume that the total mileage is twenty-five miles; that ten miles lie in the county of A and that the cost of construction is \$5,000 per mile; that ten miles lie in the county of B and that the cost of construction is \$4,500 per mile; and that five miles lie in the county of C and that the cost of construction is \$150,000 per mile; and, that if constructed, such road would be highly valuable as an outlet to each and every one of said counties. It is clear that, as to the county of C the cost may be prohibitive. However, spreading the cost over three counties the cost may not be prohibitive, and the benefits may greatly outweigh the pro rata costs of construction. Under such

facts it is clear that a statute authorizing cooperation is not necessarily a subterfuge. The solution of the doubt, if any, rested with the legislature and not the courts. (*In re Madera Irr. Dist.*, 92 Cal. 296, 309-310.)

Finally the plaintiff asserts that the defendant district has no valid existence as a taxing agency and therefore it has no authority to issue bonds based upon a nonexistent taxing power. This is not a proceeding in quo warranto and there are no allegations showing that the defendant district has not complied with every provision of the statute. The point is, therefore, but another claim that the statute is invalid. The plaintiff cites and relies on *People vs. Van Nuys Lighting District*, 173 Cal. 792. The case is not helpful. In that case the court held that the defendant was not authorized to operate beyond the confines of certain towns and villages and that the relator's property did not lie within the confines of such towns and villages. He also quotes from *Fallbrook Irrigation Dist. vs. Bradley*, 164 U. S. 112, 174, showing that after the organization of the Fallbrook District would be completed it would " * * * almost necessarily be followed by and result in an assessment upon all the lands included within the boundaries of the district." That feature is not present in the instant case. The statute before us does not necessarily imply that assessments will be levied on individuals and the record discloses that the defendant board has passed a resolution that none will be made. For the purposes of this decision we must assume that said resolution is true and that it was passed and adopted in good faith. When assessments in fact are to be made on private holdings, the statute provides that notice must be given and a hearing must be held to ascertain the amounts of benefits if any.

We find no error in the record. The judgment is affirmed.

STURTEVANT, J.

We concur:

NOURSE, P. J.
SPENCE, J.

RECOMMENDATIONS MADE FOR IRRIGATION DISTRICT FINANCING AND REFINANCING

(Continued from page 17.)

for such part of the outstanding bonded indebtedness as the commission estimates should be refunded. The refunding bonds will bear interest not exceeding 6 per cent and will be exchanged at par or be sold at a price approved by the commission.

Refunding problems of meritorious reclamation or irrigation districts should be greatly simplified if the irrigation and reclamation bond fund is voted and with the recommended tightening of the supervisory structure in operation, the credit standing and position of the entire irrigation and reclamation system should be placed on a more dignified level.

Reservations by Mr. Childers to Charles L. Childers made certain reservations to the report in the following statement filed by him:

I concur generally in the report of the majority of the commission but can not concur in recommendations 1-5 and 1-6 and the statements based upon them.

Recommendation No. 1-5:

An examination of the defaulting districts discloses that most if not quite all of them should not have

been organized in the first place and in the light of the information that has been acquired over the last twenty years mistakes in this regard are not likely to be made in the future, particularly if the Bond Certification Commission has sufficient authority to consider every phase of a new district. It does not seem practicable to make a thorough and exhaustive investigation of all conditions of such a district prior to organization, but when the district first applies to the commission for certification of its bonds the commission can and should make an exhaustive study of the new district and consider all questions that might lead to success or failure and certify its first bond issue only after the commission is thoroughly satisfied that the district has within it the necessary elements of success.

After the district is organized and has passed the commission on its first bond issue and is an active going concern, then the powers that the commission has at the present time are quite ample for all purposes. The people in a district once in a going condition are ordinarily better qualified to determine its ability, its limitations, and its needs than a commission wholly out of touch with the district excepting through its representatives and investigators.

At the present time the commission is required to report on nearly every phase of district activity when a proposal is submitted to it for the issuance of bonds and it is authorized to certify such bonds only after the commission shall have found that the irrigation system of the district and the specific project for which the bonds under consideration are desired are feasible and that the aggregate amount of the bonds under consideration, together with all other outstanding bonds, including those authorized but not sold, does not exceed 60 per cent of the aggregate market value of the lands within the district and of the water, water rights, canals, reservoirs, reservoir sites and irrigation works owned or to be acquired by the district. These are broad powers. They are sufficiently broad to prevent an improvement or excessive bond issue and yet sufficiently limited so as not to wholly deny to the people within a district that is an active going concern, the right of self-government.

Recommendation No. 1-6:

I believe the commission should have authority to make, verify and approve reports of the several districts in addition to those now required by law. I doubt the wisdom of making such general reports compulsory. Whether or not the district's credit standing might be injured for lack of such report should be left to the district to decide so long as it is an active going district, meeting its obligations. If the district goes into default, that is covered by recommendations 1-8 and 1-9.

As a substitution for recommendations 1-5 and 1-6 of the commission, I would suggest:

Recommendation No. 1-5:

That the commission be given wide discretion in certifying the first bond issue of any district and not be limited in its considerations to the specific factors named in the present law, but the powers of the commission remain as now provided by law in the consideration of any bond issues after the first.

Recommendation No. 1-6:

That the commission be authorized and empowered upon the written request of any irrigation district to make an examination of the records, the financial affairs, and the physical properties of such district and to publish or authorize such district to publish a report of its affairs approved by the commission.

Unique Highway Sector is Opened With Celebration

THE opening of a section of the Foothill Boulevard through Claremont, a co-operative State and County project, was the occasion for a community celebration.

Approaching Claremont from the east and Indian Hill Boulevard from the west the motorist is introduced to a spacious boulevard with two highway lanes approximately a mile

District Engineer Cortelyou preparing to break the tape, opening the road.

and a half long, separated by a mall between 13 and 20 feet in width. This project extends from the Los Angeles-San Bernardino county line, through the city to Mountain avenue on the west.

UNIQUE FEATURE

But the unique feature in the project is the provision made for handling local traffic.

Speaker: Mr. Gill. Claremont High School girls on left and Boy Scouts on right.

Although two streets with the mall in the center have been constructed, the city has

been given setbacks by property owners on both sides of the boulevard, providing room for additional streets to be built when traffic needs demand them.

The present two thoroughfares are constructed to the ultimate width of Foothill Boulevard as a State highway, which is 76 feet of paving. Setbacks for local roads were established in order that no building will be erected which later would prevent construction of by-passes when needed.

The plan is said to be the only one of its kind in this region, highway engineers state. The local project was started nearly a year ago and has been finished only a few weeks. The cost was approximately \$100,000.

It is pointed out by S. V. Cortelyou, State Highway Commission engineer, that when the entire project is completed Claremont will have a four-lane highway with two by-passes 35 feet wide, separated from the main 38-foot-wide arterials by two planted safety aisles 10 feet in width. The two main traffic arterials are separated by a mall 16 to 20 feet in width.

A unique and beautiful planting program for the highway has been evolved by Ralph D. Cornell, landscape architect of Pomona College.

The central mall will be planted to low shrubs with ornamental lights located in this section. The two smaller malls separating through traffic ways from local by-pass streets will be planted to low shrubs and eucalyptus trees. This program will result in a beautiful highway of four lanes with four rows of eucalyptus trees with the central mall planted to low shrubs, offering southern California one of its most scenic boulevards in any incorporated area.

ROAD MACHINERY IS PLAYING LARGER ROLE IN ROAD BUILDING

(Continued from page 25.)

amount on his work that he is able to take advantage of the rapid development and improvement of machinery. A contractor who does not properly amortize his equipment and accumulates used equipment, which has not been written off, will not be able to compete and remain in this business any length of time.

I do not believe there was ever a time since the original development of the steam shovel when it has been so essential for a contractor to take into consideration his equipment account and to be certain that he is not exaggerating his net profit statement on each project by failure to make the proper equipment write off.

Highway Interests Seek Uniformity in Specifications for Asphalt Road Oils

By THOS. E. STANTON, Research Engineer, Division of Highways

ON February 2 and 3, 1931, Maintenance Engineer T. H. Dennis and the writer attended a conference of the United State Bureau of Public Roads, State Highway Department Officials, and asphalt producers in Salt Lake City. The meeting, one of a series of five throughout the United States, was arranged by the United States Bureau of Public Roads and the Asphalt Institute for the purpose of reaching an agreement on uniform methods of specifying the liquid asphalt products commonly known as

THOMAS E. STANTON

road oils and cutback asphalts.

An analysis of the 1929 eastern state specifications for materials of this class brings out strikingly the needless and uneconomical lack of uniformity in the specifications in use and suggests forcibly the great desirability of a concerted effort to correct the condition that has developed by the uncoordinated action of the various states.

In the west, which is the mother territory of light oil road construction, a number of conferences have been held during recent years between state highway representatives and the asphalt producers. These conferences have brought about a greater uniformity in specifications and methods of test than exists

in the east. However, there are still a number of points in controversy which can probably be settled through concerted action on the part of all parties interested.

There is no doubt but that conferences of this nature are very beneficial, particularly as they afford an opportunity for the technical staff of our road building bodies to get together and go over mutual problems with the producers of the materials used in construction.

The conference unanimously agreed that:

1. All producers should submit to the states prior to March 1, 1931, samples of their products to meet state specifications in which they, the producers, are interested.
2. The states to, as soon as possible thereafter, test the samples submitted for conformity with their state specifications and also according to the approved scheme of analysis.
3. The states prior to September 1, 1931, to test according to the approved scheme a sufficient number of deliveries of materials meeting their own specifications to cover the range in characteristics likely to occur in each type of material.

Following the conference a meeting was held of the Western Section of the Committee on Materials of the American Association of State Highway Officials, of which the above signed is chairman. This committee meeting was attended by members from the following western states represented at the conference: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, Utah and Wyoming.

Representatives of the following oil companies were also in attendance: Standard, Union, Shell, Gilmore and Richfield companies of California, Standard Oil Company of Indiana, Utah Oil Refining Company of Salt Lake City, Utah, and White Eagle Oil Company of Casper, Wyoming.

A general discussion was had of the light asphaltic road oil and cutback plant and road mix construction problems of the west.

All present were very much interested in the extensive investigational work which is being carried on in California in this line of work. California as the pioneer in light oil mix road construction is looked to as a sort of father adviser in such matters by most of the western states.

California is kept on its toes, however, by the work which is being done by Arizona, New Mexico, Oregon, Utah, and in fact, all of the western states which are taking a very live interest in the subject.

Parson: "Why do you desire to join the church?"

Rastus: "Pahson, I've got a job puttin' Mule-Hide on a chicken coop and fencing a watermelon patch, and I needs strengthenin'."

Progress Report of Activities

In the

Division of Water Resources

AS OF FEBRUARY 1, 1931

EDWARD HYATT, Chief of Division

Irrigation District Activities

Applications for
Approval of
Dams

Flood Control and Reclamation

Reductions in Re-
quests for Water
Permits

IRRIGATION, WATER STORAGE DISTRICTS

Preparations have been completed for assembling and correlating data relating to the activities of California irrigation districts during 1930.

The El Dorado Irrigation District, located in El Dorado County, was visited in connection with the progress of construction work made on the Webber Creek dam. Visits were also made to the El Camino Irrigation District, located in Tehama County, and the Oakdale Irrigation District, located in Stanislaus County, for the purpose of consulting on matters connected with the economic operation of these districts.

The petitions of Nellie Blayney et al., for the exclusion of a total of 1584 acres of land from the Tulare Lake Basin Water Storage District, were denied by the State Engineer.

Contract between the Richvale Irrigation District, Butte County, and the Sutter-Butte Canal Company, for the purchase from the latter of certain water rights and properties, has been approved by the California Bond Certification Commission and consent given to proceed with a bond election in an amount of \$515,000 to furnish funds for consummating the deal.

The commission has also recommended for certification a bond issue of the El Nido Irrigation District, Merced County, in the amount of \$135,000.

DAMS

The activities of the department have been directed during this period not only to studying and inspecting existing dams, with a view to their approval, but also very largely to new construction and repairs.

To date 735 applications for approval of existing dams are on file; 58 applications for approval of plans for the construction or enlargement of dams; and 120 applications for approval of plans for the repair or alteration of dams.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS FOR SPECIFICATIONS FOR CONSTRUCTION

Dam	County	Owner	Estimated Cost
Chatsworth	Los Angeles	City of Los Angeles	\$861,228
Santiago Creek	Orange	Soriano and Carpenter Irrig. Districts and the Irvine Company	700,000
Rye Grass Swale	Modoc	W. B. Graves	1,750

The Santiago Creek Dam will be an earth fill structure, 110 feet in height with a storage capacity of 25,000 acre feet.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS FOR REPAIR OR ALTERATION

Seven such applications as have been received during this period are in response to suggestions relative to work necessary to put dams into shape for approval.

PLANS APPROVED FOR REPAIR OR ALTERATION

Dam	County	Owner
Lower Roberts	Modoc	H. M. Roberts
Porter	Modoc	Pearl F. Porter
Dingee	Alameda	East Bay Municipal Utility District
Lower Howell	Santa Clara	San Jose Water Works
Webb Flat	Modoc	Gerig Bros. et al.

The department is taking final steps toward issuing certificates of approval for a large number of dams under its jurisdiction. Final checks are being made on the spillway capacities, adequacy of design and actual condition of the dams as they exist today. Within a short time certificates on such dams as have met all requirements will be issued.

* Amending application of February 15, 1930.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

The work of clearing second growth timber in the by-passes has been proceeding with an average of thirty-four men, employed three days per week each. Repairs to the current controlling structure in the upper Tisdale by-pass have been completed. This consisted of driving about 100 feet of sheet pile and timber wall and strengthening and guying portions of the existing timber structure. In the Sutter-Butte by-pass a small barrier in a cross slough has been completed, involving the driving of 22 piles. Routine maintenance work on other portions of the project has been carried on.

FLOOD CONTROL PROJECT MAINTENANCE—BANK PROTECTION

The construction of one tree current retard in cooperation with Reclamation District No. 70 at the Yates place approximately four miles south of Meridian, and the timber mat protection at Girdner Bend for the same district have been completed.

Bank protection work on Andrus Island at the Reardon ranch in cooperation with Reclamation District No. 556 and the Division of Highways has been completed.

Work is now under way on a small job in cooperation with Levee District No. 3 in Glenn County, consisting of placing tree and brush protection.

A similar job in cooperation with F. E. Biggs on the Feather River at Hamilton Bend has been completed.

With the completion of the work for Levee District No. 3 in Glenn County, all bank protection work contemplated for this season has been completed.

SACRAMENTO FLOOD CONTROL PROJECT

Clearing in the Sutter, Butte-Slough and Tisdale by-passes in connection with the flood control project construction terminated about January 1st, when the available funds were exhausted.

The deputy in charge of flood control and reclamation attended one meeting of the Reclamation Board and one meeting of the flood control construction committee. Several reports on applications have been rendered to the Reclamation Board.

EMERGENCY FLOOD CONTROL AND RECTIFICATION OF RIVERS

At Twitchell Island the bank has been sloped ready to receive protecting rock, which will be placed this week along a length of 600 feet. This is in cooperation with Reclamation District No. 1601.

SALINAS RIVER

The suit as to the right of the State to excavate a channel from the Salinas River into Elkhorn Slough is now in court and a decision is not expected before March. The dragline excavator has been released, but another machine will be brought in if a favorable decision is obtained. This work is being done for the Division of Fish and Game.

MOKELUMNE RIVER

Work is being continued on the improvement of the flood channel of the Mokelumne River, in collaboration with San Joaquin County and in charge of our foreman. A crew of thirty men is operating, each working four days per week. A choke in the flood channel is being relieved by the construction of a small levee 1000 feet long and the removal of the existing levees on the McCauley estate.

RUSSIAN RIVER JETTY

The unusually heavy winter storms have continued during the past month and have caused additional damage to the jetty and track on the Russian River at Jenner. Five timber bents at the outer end of the jetty have been removed and the track was damaged. The work of repair has proceeded with the fund furnished by the Fish and Game Commission, involving the relocation of the track to a higher position. The track is now in order and delivery of rock to the jetty will commence at once.

FLOOD MEASUREMENTS AND GAGES

Preparations are complete for taking flood measurements in the various channels during the winter and the recording gages operated by this office are functioning. An automatic water stage recorder has been installed in the Cosumnes River at the State highway.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE

The general financial depression during the past year has been reflected in the reduced number of

applications to appropriate. Only 336 applications were received during the year as compared with an annual average of 537 over the preceding ten years. This falling off in applications received has afforded an opportunity to clear up back work and the close of the year found only 493 pending applications as compared with an average of 761 at the close of each of the ten years preceding.

During December, 1930, 18 applications were received, nine canceled and 18 approved; nine permits were revoked and 18 licenses issued.

Preparation of inspection reports covering projects inspected during the past season is progressing. Of the 181 inspections made reports have now been completed covering 89.

The annual reports of permittees covering progress are coming in satisfactorily. Upon the 1313 requests for reports which were mailed 1052 returns have already been made, and upon the 259 requests for reports addressed to licensees 232 returns have so far been made.

In order to obviate in so far as possible the issuance of permits which might conflict with the purposes contemplated in applications filed under the provisions of chapter 286, Statutes of 1927, in support of the general coordinated plan for the development of the State's waters, a map has been completed showing in detail the layout proposed under State filings and a procedure has been developed for checking all other applications received prior to permit against this map for determination of possible conflicts.

ADJUDICATIONS

Shasta River (Siskiyou County)—Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties)—Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All-American Canal from Colorado River.

North Cow Creek (Shasta County)—Referee's final report was filed in the Superior Court of Shasta County on December 18, 1930. This case is now awaiting the court's pleasure in placing it on the calendar.

Oak Run Creek (Shasta County)—Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County)—Case pending in Superior Court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County)—Case pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County)—Action by referee being deferred awaiting the outcome of the circulation of a stipulation for consent judgment among the parties involved.

Davis Creek (Modoc County)—The report of referee was filed January 10, 1931, in the Superior Court of Modoc County. The court has fixed February 2, 1931, as the date for filing exceptions to the report of referee, and February 23, 1931, as the date for hearing exceptions.

Mill Creek (Modoc County)—The report covering the administration of the tentative schedule of allotments which was authorized for the 1930 season is approximately 40 per cent completed.

Deep Creek (Modoc County)—The report covering the field investigation of water supply and use of water made during the 1930 irrigation season is approximately 90 per cent completed.

Franklin Creek (Modoc County)—The data collected in the field during the 1930 irrigation season

have been assembled and analyzed, and a schedule for trial distribution during the 1931 irrigation season is being prepared.

WATER DISTRIBUTION

The reports on water master service on Clover and Oak Run Creeks (Shasta County) for the 1930 irrigation season have been completed.

Office work in connection with the reports on water master service for the 1930 irrigation season on Davis, Emerson, Mill, Owl and Soldier Creeks (Modoc County), Burney and Hat Creeks (Shasta County), and Lower Shasta River and Little Shasta River (Siskiyou County) has proceeded during the month.

CALIFORNIA COOPERATIVE SNOW SURVEYS

During the past month the work on this project has been confined entirely to the office. As previously reported, all plans have been made, the personnel has been selected, shelter cabins stocked, equipment and forms distributed, etc., in complete readiness for the 1931 surveys.

The office work has comprised compilations and computations necessary to keep all precipitation records to date (these come in regularly once a month from all stations) and to prepare for the correlation of snow survey and precipitation data with run-off when the data from the surveys become available.

Monthly surveys at the "key snow courses" will commence at the latter part of January and the first of the monthly snow survey bulletins will be issued early in February. Similar to last year this bulletin will present all of the snow survey data for the key course surveys and all precipitation data to date as received from all stations.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

Except for the regular salinity observations and tide gage maintenance, the work of the past month has been confined entirely to the office. As previously reported, the regular field work was completed early in November. The office work covers all computations necessary in the preparation of the report for the 1930 season covering all diversions, stream flow, return flow, etc., throughout the Sacramento-San Joaquin territory.

Salinity investigations in the Sacramento-San Joaquin delta and bay regions have been continued through the maintenance of sampling at 31 stations. During the past month the sampling at six stations was discontinued as the salinity at these stations had reached a constant minimum and further observations were not required. Maintenance of eight tide gages has been continued. These are located at Sacramento, Walnut Grove, Georgiana Slough, Sacramento and San Joaquin ends of Three Mile Slough, Mossdale, Antioch, and Collinsville. The following are comparative salinity data for 1929 and 1930:

Station	Salinity in parts of chlorine per 100,000	
	12/30/30	12/30/29
Bullhead Point.....	980	560
O. and A. Ferry.....	440	21
Collinsville.....	125	4
Antioch.....	45	5
Jersey.....	7	5
Emmaton.....	7	2
Webb Pump.....	7 1/2	10 1/2

¹ December 10th.

WATER RESOURCES

VENTURA COUNTY INVESTIGATION

This investigation continued in a routine way throughout the month. Arrangements were made with the U. S. Geological Survey to aid in placing a better grade of registers at five of the important gaging stations. Preliminary arrangements were made also for a geological examination and drilling of the 12 to 15 reservoir sites in the headwaters of Piru, Sespe and Ventura Rivers and for the survey of such sites as have not yet been surveyed.

MOJAVE RIVER INVESTIGATION

The cooperative work of the division of Agricultural Engineering, Department of Agriculture, on transpiration was begun. This will make possible an estimate of the amount of waste without waiting a number of years for actual records of stream waste.

SOUTH COASTAL BASIN INVESTIGATION

Heretofore due to lack of funds this work has been carried on with only two men in the field but with funds now available the force is being increased immediately to about twelve engineers and geologists.

SANTA CLARA INVESTIGATION

Wells previously measured in connection with this investigation were remeasured during the month and seven new wells were established and read in the vicinity of Palo Alto and Los Altos.

The progress report for the past year was completed and will be available for distribution within a few days.

NAPA VALLEY INVESTIGATION

Measurements for the purpose of determining accretions and percolation were made during the month on both Napa River and Conn Creek, and the reading of wells was completed for the low stage of this season.

PIT RIVER (MODOC AND LASSEN COUNTIES)

Routine field work was continued throughout the month. The progress report for the year ending September 30, 1930, has been completed.

WATER RESOURCES REPORTS

Practically the entire staff of the division formerly engaged on investigations in the Sacramento and San Joaquin Valleys, the salt water barrier and salinity conditions and in portions of southern California, in furtherance of a coordinated plan for the conservation, development and utilization of the water resources of the State, as provided in chapter 832 of the Statutes of 1929, has been concentrated for the past two months upon the preparation of reports covering the results of investigations made by the Division of Water Resources. Every effort is being put forth to complete these reports at the earliest possible date.

MISCELLANEOUS ACTIVITIES

A final check is being made in connection with the investigation of lands riparian to the Sacramento and American rivers. This includes a careful comparison between the riparian areas as determined and the original Spanish Grants, Swamp and Overflow Surveys, and Land Office patents.

Progress on State Highway System

MAJOR PROJECTS COMPLETED, UNDER WAY AND ADVERTISED,
AS OF FEBRUARY 1, 1931—OTHER ACTIVITIES OF DEPARTMENT

C. H. PURCELL, Chief of Division of Highways.

PROGRESS REPORT FOR THE MONTH

The following statement indicates the progress of State highway work for the portion of the current month up to January 22d:

Work placed under contract.....	\$947,400
Contracts pending and advertised.....	\$67,500
	\$1,014,900
Work anticipated to be advertised during the coming month.....	\$3,817,400

CONTRACTS COMPLETED, PROJECTS ACCEPTED

During the past month nearly twenty major contracts have been completed and accepted for the Division of Highways. Included in these contracts were the following:

San Diego-El Centro Highway—Just west of Coyote Wells in Imperial County a new steel and concrete subway has been constructed under the tracks of the San Diego and Arizona Railroad on the new alignment of this lateral, made after the cloudburst in 1926, which completely destroyed the old road.

Coast Route—An improvement on the Coast Route is noted by the construction of a new bridge across Nojiqui Creek, in Santa Barbara County. This new structure is built on a new alignment of the highway at this point and replaces the old narrow structure built many years ago by the county on an alignment which was dangerous to present high speed traffic.

Valley Route—The widening and paving of the eight miles between Fowler Switch Canal and Fancher Creek on the Valley Route just south of Fresno has been completed. The improvement cost \$283,200 and was carried through the town of Fowler.

Bayshore Highway—Progress on the Bayshore Highway, in San Mateo County, is seen with the completion of the final stage of construction on the five miles between South San Francisco and Burlingame. A 40-ft. Portland cement concrete pavement was laid on the graded roadbed which was completed about two years ago, extending from the grade separation under the S. P. tracks in South San Francisco to Broadway in Burlingame where it connects with the recently completed pavement between Burlingame and San Mateo. Pavement is now being poured on the portion of the route through South San Francisco. The present project was constructed at a cost of \$436,400.

Tiburon Work—An improvement of interest to motorists of the bay area is the reconstruction of the

State highway from the ferry slip at Tiburon to the Belvedere railroad crossing in Marin County.

McDonald-to-the-Sea Highway—In Mendocino County three short sections of the State highway, which extends from the Redwood Highway at McDonald, just north of Cloverdale, to the coast at Navarro Head, have been graded and surfaced with untreated crushed rock on improved alignment and grades.

Victory Highway—Another unit in the reconstruction of the trans-Sierra highway which leads from Central California to Reno via Auburn and Truckee, is added by the completion of the overhead grade separation at Yuba Pass in Nevada County. The new structure will eliminate the use of the present dangerous grade crossing near Crystal Lake.

Feather River Bridge—A project of widespread interest which has been completed and accepted during the past period, is the 500 foot bridge across the Feather River and the Western Pacific R. R. tracks, about $4\frac{1}{2}$ miles east of Oroville in Butte County. This bridge is a unit in the construction of the new all year Oroville to Quincy lateral which will follow the Feather River Canyon.

Shasta Canyon Bridge—The second of five bridges to be constructed on the new alignment of the Pacific Highway between Yreka and the Klamath River, in Siskiyou County, has been completed at a point $5\frac{1}{2}$ miles north of Yreka. Construction on the remaining three bridges and the grading of the roadway is being pushed forward and all work should be completed on this section by the beginning of summer.

Trinity River Bridge—A large steel bridge has been erected on the Eureka-Redding lateral across the South Fork of the Trinity River about two miles west of Salyer in Humboldt County.

LIST OF HIGHWAY BIDS AND AWARDS

For month of January

IMPERIAL COUNTY—Bet. Trifolium Canal and Kane Springs, grading and surfacing with asphalt concrete 6.3 miles. Dist. VII, Rt. 26, Sec. B., Clark and Henry Const. Co., San Francisco, \$159,523; Steele Finley, Santa Ana, \$143,845; Basich Brothers, Torrance, \$158,285; R. E. Hazard Const. Co., San Diego, \$151,635; Daley Corporation, San Diego, \$181,926; Southern Calif. Road Co., Los Angeles, \$162,613; Contract awarded to Griffith Company, Los Angeles, \$142,323.

LOS ANGELES COUNTY—Widening Topango Creek Bridge, eight 27-foot timber spans and Las Flores Creek bridge, two 26-foot concrete spans and

surfacing approaches. Dist. VII, Rt. 60, Sec. B. & A., Oberg Brothers, Los Angeles, \$33,341; Paul M. White, Santa Monica, \$31,524; Sidney Smith, Los Angeles, \$33,796; Frank A. Weller, San Diego, \$28,916. Contract awarded to Owl Truck Company, Los Angeles, \$27,369.

ARCHITECTURAL AWARDS

For month of January, 1931

AGNEWS STATE HOSPITAL—Physician's Cottage, contract awarded to The Minton Company of Palo Alto for \$7,325. Contract for elevator work awarded to Spencer Elevator Company of San Francisco for \$3,326.

ATTORNEY GENERAL'S OFFICE, State Building, San Francisco—Alterations and additions, awarded to Vogt and Davidson of San Francisco for \$4,480.

CALIFORNIA SCHOOL FOR DEAF, Berkeley—Boys' and Girls' Dormitory Building, and Kitchen and Commissary Building; contract for general work awarded to Monson Bros. of San Francisco, \$172,740. Contract for Heating and Ventilating Work awarded to Geo. A. Schuster of Oakland for \$35,791. Contract for electrical work to George Woolf of Oakland for \$8,192.

VETERANS HOME, Yountville—Installation of water tube boiler awarded to Walter S. Leland of Oakland, \$12,000.

WATER APPLICATIONS AND PERMITS

Applications for permits to appropriate water filed with the Department of Public Works Division of Water Resources during the month of January, 1931.

KERN AND VENTURA COUNTIES—Application 6857. Florence Louise Cuddy, Lebec, Kern County, California, for 100,000 g.p.d. from three unnamed springs tributary to San Joaquin Valley, to be diverted in Sec. 32, T. 9 N., R. 20 W., S. B. E. and M., and Sec. 19, T. 8 N., R. 20 W., S. B. E. and M., for domestic purposes. Estimated cost \$3,000.

MOHOC COUNTY—Application 6858. T. A. Sommi, c/o J. T. Sharp, Attorney, Alturas, California, for 0.02 c.f.s. from an unnamed spring tributary to Pit River, to be diverted in Sec. 9, T. 41 N., R. 9 E., M. D. B. and M., for domestic purposes.

EL DORADO COUNTY—Application 6859. Magnus Jensen, Camino, California, for 0.025 c.f.s. from Fill Canyon tributary to Little Iowa Canyon, Big Iowa Canyon, S. Fork American River, to be diverted in Sec. 33, T. 11 N., R. 12 E., M. D. B. and M., for irrigation and domestic purposes (4 acres). Estimated cost \$200.

INYO COUNTY—Application 6860. W. C. Parcher, Bishop, California, for 2.5 c.f.s. from Green Creek tributary to Bishop Creek and Owen's River, to be diverted in Sec. 2, T. 9 S., R. 31 E., M. D. B. and M., for power purposes, 1.6 h.p. Estimated cost \$250.

INYO COUNTY—Application 6861. W. C. Parcher, Bishop, California, for 0.047 c.f.s. from Green Creek tributary to Bishop Creek and Owen's River, to be diverted in Sec. 2, T. 9 S., R. 31 E., M. D. B. and M., for domestic purposes. Estimated cost \$265.

NEVADA COUNTY—Application 6862. John K. Williams, Nevada City, California, for 2.0 c.f.s. from Windup Canyon tributary to Greenhorn Creek, the ce Bear River, to be diverted in Sec. 5, T. 16 N., R. 10 E., M. D. B. and M., for mining purposes. Estimated cost \$150.

LAKE COUNTY—Application 6863. Leavitt Mead McQuestion, c/o Division of Pomology, University Farm, Davis, California, for 0.31 c.f.s. from Clover Creek tributary to Middle Creek, to be diverted in Sec. 6, T. 15 N., R. 9 W., M. D. B. and M., for irrigation purposes on 25 acres. Estimated cost \$250.

SAN DIEGO COUNTY—Application 6864. Coleman M. Gray, c/o George H. Stone, Attorney, San Diego Trust & Savings Bldg., San Diego, California, for 0.06 c.f.s. from Castro Creek tributary to San Luis Rey River, to be diverted in Sec. 18, T. 9 S., R. 1 W., S. B. E. and M., for irrigation purposes on 6 acres. Estimated cost \$1870.

ALAMEDA COUNTY—Application 6865. Sisters of the Sacred Names of Jesus and Mary, a corporation, c/o Rathel, Wood & Kilkenny, Attorneys, Chancery Building, San Francisco, California, for 0.1 c.f.s. from Laurel Spring and Sulphur Spring tributary to Agua Caliente Creek, to be diverted in Sec. 8, T. 5 S., R. 1 E., M. D. B. and M., and Sec. 18, T. 5 S., R. 1 E., M. D. B. and M., for domestic purposes. Estimated cost \$8,000.

ALAMEDA COUNTY—Application 6866. Sisters of the Sacred Names of Jesus and Mary, a corporation, c/o Rathel, Wood & Kilkenny, Attorneys, Chancery Building, San Francisco, California, for 0.2 c.f.s. and 43 ac. ft. per annum, from Laurel Creek and Arroyo Agua Caliente Creek tributary to San Francisco Bay, to be diverted in Sec. 7, T. 5 S., R. 1 E., M. D. B. and M., and Sec. 18, T. 5 S., R. 1 E., M. D. B. and M., for irrigation and domestic (stockwater) purposes on 53 acres and 200 head of livestock. Estimated cost \$525.

RIVERSIDE COUNTY—Application 6867. F. W. Sheffield and Chas. Harnack, c/o R. V. Shedd, Redlands, California, for 3.0 c.f.s. from Falls Creek to be diverted in Sec. 33, T. 3 S., R. 3 E., S. B. B. and M., for irrigation and domestic purposes on 150 acres. Estimated cost \$3200.

INYO COUNTY—Application 6868. Harry J. Halliday, Bishop, California, for 0.0035 c.f.s. or approximately 2260 gallons per day from small unnamed stream tributary to Bishop Creek and Owen's River, to be diverted in Sec. 2, T. 9 S., R. 31 E., M. D. B. and M., for domestic and recreational purposes. Estimated cost \$155.

SISKIYOU COUNTY—Application 6869. Elliott Creek Mines, Inc., c/o W. L. Cobb, Pres., Box 668, Roseburg, Oregon, for 20 c.f.s. from Elliott Creek tributary to Applegate River, to be diverted in Sec. 19, T. 48 N., R. 10 W., M. D. B. and M., for power purposes (181.8 h.p.).

NEVADA COUNTY—Application 6870. Charles Thompson, c/o John F. Hoffman, Agent, Box 307, Grass Valley, California, for 50 c.f.s. from (a) Steep-hollow Creek and (b) South Fork of Little Greenhorn Creek tributary to Bear River, to be diverted in (a) Sec. 32, T. 17 N., R. 11 E., M. D. B. and M., and (b) Sec. 16, T. 16 N., R. 10 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$50.

TRINITY COUNTY—Application 6871. Stanley G. Shepard and associates, Denny, Trinity County, California, for 30 c.f.s. from Slide Creek (and Emigrant Creek at its mouth) tributary to New Creek, to be diverted in Sec. 19, T. 8 N., R. 8 E., H. B. and M., for mining purposes.

PLUMAS COUNTY—Application 6872. Max Paul Boehme, 809 Kearny Street, San Francisco, California, for 1.0 c.f.s. from Mill Creek tributary to East Branch of the N. Fork of Feather River, to be diverted in Sec. 27, T. 25 N., R. 8 E., M. D. B. and M., for irrigation and domestic purposes on six acres.

HUMBOLDT COUNTY—Application 6873. Thomas Nelson McDaniel, 312 Byington Building, Reno, Nevada, for 150 c.f.s. from Willow Creek tributary to Trinity River, to be diverted in Sec. 10, T. N., R. 4 E., H. B. and M., for mining and domestic purposes.

PLUMAS COUNTY—Application 6874. Oscar T. Schumacher, Quincy, California, for 1.0 c.f.s. from unnamed spring tributary to Dixon Creek, thence Nelson Creek, thence Middle Fork Feather River, to be diverted in Sec. 32, T. 23 N., R. 10 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$350.

SAN DIEGO COUNTY—Application 6875. Crowell D. Eddy and Florence I. Eddy, c/o Crowell D. Eddy, 1322 1/2 13th Street, National City, California, for 0.25 c.f.s. from a Spring in unnamed stream tributary to Sweetwater River, to be diverted in Sec. 31, T. 16 S., R. 2 E., S. B. B. and M., for irrigation and domestic purposes on 20 acres. Estimated cost \$500.

EL DORADO COUNTY—Application 6876. Mrs. Bertha Stover, c/o A. E. Carette, 1279 Temple Street, Los Angeles, California, for 1/3 miner's inch c.f.s. from

School House Spring tributary to Mosquito Creek, thence S. Fork American River, to be diverted in Sec. 15, T. 11 N., R. 11 E., M. D. B. and M., for irrigation and domestic purposes on 8 acres. Estimated cost \$75.

SAN JOAQUIN COUNTY—Application 6877. J. L. Blossom and F. M. Lamb, c/o Ohm & Rabb, 109 E. Weber Avenue, Stockton, California, for 15.15 c.f.s. from North Canal tributary to Middle River Branch of San Joaquin River, to be diverted in Sec. 35, T. 1 N., R. 4 E., M. D. B. and M., for irrigation purposes on 121.26 acres. Estimated cost \$14,000.

DEL NORTE COUNTY—Application 6878. Walter G. Muncey, P.O. Box 378, Crescent City, California, for 2000 gallons per day from Kelly's Gulch tributary to Smith River, to be diverted in Sec. 27, T. 17 N., R. 2 E., H. B. and M., for irrigation and domestic purposes on two acres.

MONO COUNTY—Application 6879. Edith Raymer, Bishop, California, for 0.005 c.f.s. or approximately 3250 g.p.d. from Convict Creek tributary to Owen's River, to be diverted in Sec. 14, T. 4 S., R. 28 E., M. D. B. and M., for domestic purposes. Estimated cost \$500.

TULARE COUNTY—Application 6880. J. H. Garner, Box 666, Springville, California, for 1.0 c.f.s. from Bear Creek tributary to Tule River to be diverted in Sec. 3, T. 20 S., R. 30 E., M. D. B. and M., for irrigation and domestic purposes on 34 acres. Estimated cost \$500.

ORANGE COUNTY—Application 6881. Mrs. C. C. Cravath, Box 43, Laguna Beach, California, for 360 gallons per day from spring tributary to North Fork San Juan Creek, to be diverted in Sec. 33, T. 6 S., R. 6 W., S. B. B. and M., for domestic purposes.

LOS ANGELES COUNTY—Application 6882. Clarence A. and Wm. Harvey Cruzan, c/o Clarence A. Cruzan, 915 E. 105th Street, Los Angeles, California, for 2.0 c.f.s. (1.0 c.f.s. from each of two springs) from (1) Warm Spring and (2) Whiskey Spring tributary to Mint Canyon, thence Santa Clara River, to be diverted in (1) Sec. 4, T. 5 N., R. 14 W., S. B. B. and M., and (2) Sec. 17, T. 5 N., R. 14 W., S. B. B. and M., for mining purposes. Estimated cost \$5000.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during January, 1931.

YUBA COUNTY—Permit 3643, Application 6412. Issued to Maurice E. Lawton, Strawberry Valley, Calif., January 12, 1931, for 0.05 cubic foot per second from Stickner Spring in Section 20, T. 20 N., R. 8 E., M. D. M., for power purposes. Estimated cost \$600.

INYO COUNTY—Permit 3644, Application 2787. Issued to The Southern Sierras Power Company, Riverside, California, January 13, 1931, for 2999 acre feet per annum from Middle and North Forks Bishop Creek in Sections 8 and 6, T. 9 S., R. 31 E., and Sections 35 and 25, T. 8 S., R. 30 E., M. D. B. and M., for power purposes. Estimated cost \$60,000.

INYO COUNTY—Permit 3645, Application 4549. Issued to The Southern Sierras Power Company, Riverside, Calif., January 13, 1931, for 2000 acre feet per annum from Green Lake Creek in Section 11, T. 9 S., R. 31 E., M. D. M., for power purposes. Estimated cost \$10,000.

INYO COUNTY—Permit 3646, Application 2788. Issued to Nevada-California Power Company, Riverside, Calif., January 13, 1931, for 2999 acre feet per annum from Middle and North Forks of Bishop Creek in Sections 8 and 6, T. 9 S., R. 31 E., M. D. M., for power purposes. Estimated cost \$60,000.

MENDOCINO COUNTY—Permit 3647, Application 6805. Issued to L. A. Howie, Redwood Valley, Calif., January 27, 1931, for 0.16 cubic foot per second from Redwood Valley Creek in Section 32, T. 17 N., R. 12 W., M. D. M., for irrigation and domestic purposes on 12.9 acres. Estimated cost \$500.

MONTEREY COUNTY—Permit 3648, Application 6725. Issued to Samuel R. and C. C. Avila, King City, Calif., January 14, 1931, for 0.19 cubic foot per second from Carrizo Spring in Section 29, T. 21 S., R. 5 E., M. D. M., for irrigation and domestic purposes on 15 acres. Estimated cost \$2500.

MENDOCINO COUNTY—Permit 3649, Application 6805. Issued to L. A. Howie, Redwood Valley, January 27, 1931, for 0.16 cubic foot per second from Redwood Valley Creek in Section 32, T. 17 N., R. 12 W., M. D. M., for irrigation and domestic purposes on 12.9 acres. Estimated cost \$500.

MARIPOSA COUNTY—Permit 3650, Application 6762. Issued to John J. Fiske, Coulterville, Calif.,

January 27, 1931, for 0.011 cubic foot per second from an unnamed spring in Section 26, T. 2 S., R. 17 E., M. D. M., for irrigation and domestic purposes on 4 acres. Estimated cost \$100.

VENTURA COUNTY—Permit 3651, Application 6589. Issued to Julius Olender, Fresno, Calif., January 31, 1931, for 0.039 cubic foot per second from unnamed spring, in Section 25, T. 7 N., R. 19 W., S. B. B. and M., for mining purposes. Estimated cost \$100.

SAN JOAQUIN, STANISLAUS AND CALAVERAS COUNTIES—Permit 3652, Application 6522. Issued to Linden Irrigation District, Stockton, Calif., January 31, 1931, for 40,000 acre feet per annum and 154 cubic feet per second from Calaveras River in Section 5, T. 2 N., R. 9 E., M. D. M., for irrigation and domestic purposes on 12,330 acres. Estimated cost \$105,000.

DAM APPLICATIONS

AND APPROVALS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of January, 1931.

LASSEN COUNTY—Avilla Dam No. 253. Antone Avilla, Red Bluff, owner; lumber and rock, 93 feet above streambed with a storage capacity of 440 acre feet, situated on Pit River tributary to Sacramento River in Sec. 1, T. 37 N., R. 7 E., M. D. B. and M., for diversion purposes for irrigation use.

MODOC COUNTY—Willow Creek Flat Dam No. 121-4. Bixby Hoffman Cattle Co., Ltd., Alturas, owner; earth fill, 10 feet above streambed, situated on Willow Creek tributary to Clear Lake in Sec. 11, T. 46 N., R. 11 E., M. D. B. and M., for storage purposes for irrigation use.

MODOC COUNTY—Lookout Dam No. 164. Lookout Dam Company, Lookout, owner; 10 feet above streambed with a storage capacity of 200 acre feet, situated on Pit River tributary to Sacramento River, for diversion purposes for irrigation and stock use.

LASSEN COUNTY—Thompson Dam No. 257. S. J. Thompson, Bieber, owner, earth and timber dam, 8 feet above streambed with a storage capacity of 45 acre feet, situated on Pit River tributary to Sacramento River in Sec. 11, T. 37 N., R. 7 E., M. D. B. and M., for diversion purposes for irrigation use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of January, 1931.

MODOC COUNTY—Rye Grass Swale Dam No. 150. W. B. Graves, Alturas, owner; earth, 30 feet above streambed with a storage capacity of 2000 acre feet situated on Rye Grass Swale tributary to Pit River in Sec. 25, T. 41 N., R. 11 E., M. D. B. and M., for storage purposes for irrigation use. Estimated cost \$1750, fee paid \$20.

RIVERSIDE COUNTY—Bailiff Dam No. 824. R. E. Bailiff, Cabazon, owner; rock fill, 28 feet above streambed with a storage capacity of 5 acre feet, situated on a creek tributary to Whitewater River in Sec. 18, T. 3 S., R. 2 E., S. B. M., for storage purposes for domestic and irrigation use. Estimated cost \$4500. Fee paid \$20.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of January, 1931.

MODOC COUNTY—Rye Grass Swale Dam No. 150. W. B. Graves, Alturas, owner; earth dam, situated on Rye Grass Swale tributary to Pit River in Sec. 25, T. 41 N., R. 11 E., M. D. B. and M.

MONTEREY COUNTY—Black Rock Dam No. 643. Monterey Stock and Game Association, Monterey, owner; earth dam, situated on Black Rock Creek tributary to Carmel River in Sec. 32, T. 17 S., R. 2 E., M. D. B. and M.

LOS ANGELES COUNTY—Lower Franklin Dam No. 6-14. City of Los Angeles, Los Angeles, owner; earth, located in Sec. 12, T. 1 S., R. 15 W., S. B. M.

LOS ANGELES COUNTY—Porter Estate Dam No. 775. B. F. Porter Estate, San Francisco, owner; earth dam located in Sec. 9, T. 2 N., R. 16 W., S. B. M.

MODOC COUNTY—Toreson Dam No. 153. F. W. Caldwell and Mrs. J. V. Caldwell, Canby, owners; earth dam, situated on Tom's Creek tributary to Pit River in Sec. 16, T. 41 N., R. 10 E., M. D. B. and M.

NEVADA AND PLACER COUNTIES—Bear River Dam No. 97-11. Pacific Gas & Electric Co., San Francisco, owner; gravity, situated on Bear River tributary to Yuba River in Sec. 22, T. 15 N., R. 9 E., M. D. B. and M.

MONO COUNTY—Upper Twin Lake Dam No. 531. G. B. Day Estate and Plymouth Land and Livestock Company, Wellington, Nevada, owners; rockfill, situated on Robinson Creek tributary to East Walker River in Sec. 5, T. 3 N., R. 24 E., M. D. B. and M.

MONO COUNTY—Lower Twin Lake Dam No. 531-2. Hunevill Land and Livestock Company; Day Estate and F. W. Simpson, Wellington, Nevada, owners; rockfill, situated on Robinson Creek tributary to East Walker River in Sec. 33, T. 4 N., R. 24 E., M. D. B. and M.

MONO COUNTY—Dexter Creek Dam No. 532. Wm. Symons, Laws, California owner; earthfill situated on Dexter Creek.

PLANS APPROVED

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of January, 1931.

ORANGE COUNTY—Santiago Creek Dam No. 75. Serrano and Carpenter Irrigation Districts and The Irvine Company, Orange, owners; earth, 110 feet above streambed with a storage capacity of 25,000 acre feet, situated on Santiago Creek tributary to Santa Ana River in N. W. corner Blk. 70, Rancho Lomas de Santiago, for storage purposes for irrigation use.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of January, 1931.

MODOC COUNTY—Webb Flat Dam No. 160. Gerig Bros. et al, Bieber, owners; earth, situated on Webb Flat tributary to Egg Lake in Sec. 5, T. 41 N., R. 7 E., M. D. B. and M.

CONTRA COSTA COUNTY—Antioch Dam No. 3. Town of Antioch, Antioch, owner; earth, situated on unnamed creek tributary to San Joaquin River in Sec. 36, T. 2 N., R. 1 E., M. D. B. and M.

NEVADA COUNTY—Culbertson Dam No. 97-17. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on Texas Creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Lower Feeley Dam No. 97-35. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on Fall Creek tributary to South Yuba in Sec. 29, T. 18 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Middle Lindsay Dam No. 97-41. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on Texas Creek tributary to South Yuba River in Sec. 21, T. 18 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Upper Feeley Dam No. 97-45. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on Fall Creek tributary to South Yuba River in Sec. 28, T. 18 N., R. 12 E., M. D. B. and M.

DEER ARE CAUSE OF WRECK IN HIGHWAY

(From the Roseville Press)

J. A. Lundey of Y street, Sacramento, saved the lives of three deer on the state highway near Weimar Sunday afternoon, but caused a traffic tieup, bruised heads, broken bumpers and bent fenders. Lundey stopped suddenly on the highway when traveling about 35 miles per hour. The cars following him from the snowline did not have an opportunity to stop in time.

The three deer crossed the highway and climbed the bank, disappearing in the darkness.

HIGHWAY BEAUTIFICATION AIMS ARE ANNOUNCED

The committee on beautification of highways, San Joaquin Valley Tourist and Travel Association, at the annual meeting of the association held during January in Bakersfield reported the following recommendations, which were unanimously adopted:

Elimination of objectionable road signs on scenic highways.

Due to the fact that exotic plants are not permitted introduction into the national parks, the beautification of these areas must be along the line of protection of natural growth and in cleaning up debris in those areas.

That shade trees be planted along all state highways in the Valley to provide shade and beauty.

Conservation of wild flowers by discouraging the picking of all varieties along the roadsides, through education and legislation.

REPORT OF DIVISION OF MOTOR VEHICLES AS OF FEBRUARY 1, 1931

FRANK SNOOK, Chief

PATROL MAY UTILIZE RADIO

For the past two months, quite an extensive research study has been made with a view of establishing the radio as a means of communication for the California Highway Patrol. A transmitting set was established at Mather Field, Sacramento, through which it was capable of contacting men in the patrol as far south as El Centro, to whom orders were given. The station was simultaneously heard in the northern part of the State, New York City, and other distant points. It was conclusively demonstrated by these tests that it is quite feasible to send short wave signals by radio to all parts of the State from a single station. I believe this means of communicating with the men, when perfected, will prove very beneficial and much cheaper for the State than other methods that have been proposed. Today approximately forty-two cities in the United States have radio employed in police service.

(For 1930 motor vehicle registration figures, see page 22 of this issue.)

HIGHWAY WORKER IS HIT BY AVALANCHE

The following news article is from the *San Bernardino Sun*:

A. J. Taylor, employee of the State Highway Department, who was injured in a landslide near Strawberry flats, was reported slightly improved at the Ramona hospital last night.

Taylor suffered several broken ribs, injuries to his right arm and cuts and bruises about the body when a landslide caused a rope to break which he had tied around his body while working on the side of the mountain highway, causing him to drop into a canyon below.

Dr. Ross C. Martin, his attending physician, said last night that Mr. Taylor appeared slightly improved although his injuries are serious.

"I am sorry," said the dentist, "but you can not have an appointment with me this afternoon. I have eighteen cavities to fill." And he picked up his golf-bag and went out.—*Juggler*.

What Are Our State Highways Worth?

By EARL LEE KELLY, Chairman of the California Highway Commission

PROBABLY no governmental undertaking in California has contributed so directly to the development of California as has the State highway system.

It is a significant fact that the period of California's greatest growth parallels the period of its State highway building.

Thus the three bond issues totaling \$73,000,000 for the creation and construction of a State highways system were approved by the voters of California in the 1910-1920 decade. During this decade California experienced phenomenal population increase, the census for this decade showing a population growth for the State of 44.1 per cent over the preceding decade.

In the 1920-1930 decade, State highways were financed through unspent bond funds and gasoline taxes. The increase in the population of the State during this period was 65.7 per cent.

There were of course other factors entering into this great population growth. Well at the head of the list, however, stands the State highway system.

The contribution of the State highways to California growth and prosperity may be briefly summarized as follows:

1. The expenditures have been spread over the entire State, resulting in a balanced development of rural and urban areas.

2. The highways have facilitated as easy and economic movements of produce from farm to market, and of manufactured goods from maker to consumer.

3. The highways have encouraged a free flow of tourist travel into every part of the State. They have made recreation one of the principal and most profitable industries of the State, and have resulted in bringing untold millions of dollars of "outside" money annually into California.

4. The State highway system has effected directly the living and spending habits of every individual in California.

5. The State highways have "desectionalized" California, and thus to a very large extent eliminated the lost motion and the lost values that inevitably accompany sectional strife and jealousy.

Not only has industry of every kind felt the stimulating influence of State highway con-

EARL LEE KELLY.

struction, but the social life of the State has also reflected this same influence.

I believe that some idea of the value that the people of California place upon their State highway systems can be gleaned if we would consider for a moment their sale value.

Their cost to date to the State has been \$238,815,782.

If we can invade the field of the impossible, and imagine that a monetary offer be made for California's State highways, with the condition attached that once sold, these roads should neither be duplicated nor be open to the use of the public, how much would we take for them?

I can not conceive of an offer large enough to even tempt consideration for a moment.

The reason is that California and its State highways are now one, inseparable both in the thought and in the lives of its people. Without its State highways, California would not be California.

State Water Plan Recommendations Are Given Governor and Legislature

STATE ENGINEER EDWARD HYATT on March 4th transmitted to Governor Rolph and the Legislature the report of the State Water Plan.

The report recommends as an initial construction project to meet present needs.

EDWARD HYATT.

quinn Valley.

A reservoir on the San Joaquin River at Friant, north of Fresno, with a canal leading northward therefrom into Madera County and another southward to the Kern River, with an additional unit south of Bakersfield.

The Colorado River aqueduct and the Santa Ana flood control and conservation project. The capital cost of the plan is approximately \$374,000,000. The salt water barrier is not recommended.

The report is entitled "Bulletin 25, Report to the Legislature of 1931 on State Water Plans," and presents the conclusions of eleven other bulletins which deal with different phases of the Water plans in great detail. It covers the entire subject of the water resources of California, and is a report result-

Kennett reservoir on the Sacramento River near Redding.

An industrial and agricultural canal leading from the neighborhood of Antioch to Martinez.

A system of dams and pumping plants to transport surplus waters from the Sacramento River watershed into the San Joa-

ing from ten years of investigation of the State's water resources and problems of development. It gives the engineering, economic and legal phases of the developments recommended, but does not pass on methods of financing nor organization required to bring them into being. However, it does recommend a constitutional amendment relative to revision of eminent domain procedure, with respect to water rights and rights of way, to facilitate adjustment of water rights and rights of way necessary to execution of the proposed construction program.

WATER NEEDS OF STATE

The report analyzes the water supply and water needs in all parts of the State, and recommends major units of an ultimate State plan for complete conservation of its water supplies, and also an initial or immediate plan to relieve existing shortages.

DEFICIENT WATER AREAS

The investigation has disclosed that there are three large and important areas of the State which are deficient in supply for their present needs. These are: the Sacramento-San Joaquin Delta and Upper San Francisco Bay region, the upper San Joaquin Valley, and the coastal counties of Southern California.

In the delta and bays the invasion of saline water is a problem needing immediate attention, while in the upper San Joaquin Valley there is a shortage of water on 400,000 acres, which if not relieved will result in abandonment of lands and in damage to the whole area.

In Southern California, and particularly in the Santa Ana Basin there is a serious overdraft on underground waters and along the coast this condition is resulting in the intrusion of saline water from the ocean, and there is the further problem of flood waste which if checked would give relief to that area.

The report states that in these three main sections of the State the need for an augmented water supply is vital and for their immediate relief recommends the \$374,000,000 construction program, including the Kennett

that investigations have either not been made in these sections or have not proceeded to the point where a plan could be designed. The three sections for which the plan would provide relief are the largest, most important and in the greatest need.

SACRAMENTO VALLEY WATER

The feasibility of transporting Sacramento River water into the San Joaquin Valley in the future is demonstrated conclusively in the report, which reveals that there is a large usable surplus of water in the Sacramento watershed, over and above the ultimate future needs of that area, even in the driest years.

SALT WATER BARRIER

In disapproving the salt water barrier as a unit for the program, the report states that the fresh water releases from Kennett reservoir, when constructed would control salinity in the delta, would provide irrigation water for that region, and also would meet the industrial needs of the territory adjacent to Suisun Bay, all at a cost less than half that required for equivalent service with a barrier.

COST OF VARIOUS PLAN UNITS

The plan as recommended by the State Engineer in the Sacramento and San Joaquin Valleys and upper San Francisco Bay area as an initial development would cost approximately \$158,900,000, of which \$19,000,000 need not be expended in immediate construction, but which should be included in the financing as an insurance feature. These deferred items are a channel across the delta to provide for carrying the Sacramento River water into the neighborhood of Stockton and dams and pumps to transport this water to the San Joaquin Valley.

COLORADO RIVER AQUEDUCT

The cost of the Colorado River aqueduct is given as \$198,600,000, and that of the Santa Ana River flood control and conservation project as \$16,200,000.

DETAIL OF COST ESTIMATES

The itemized cost estimate of the plan is as follows:

Great Central Valley:

Kennett reservoir -----	\$84,000,000
Sacramento - San Joaquin Delta cross channel (construction deferred)	4,000,000
San Joaquin pumping system (construction deferred) -----	15,000,000
Friant reservoir -----	15,500,000

Upper San Joaquin Valley conduits -----	29,900,000
Contra Costa County conduit -----	2,500,000
Rights of way, water rights and general expense -----	8,000,000

Sub-total Sacramento-San Joaquin Valley -----	\$158,900,000
--	---------------

Southern California:

Colorado River Aqueduct -----	\$198,600,000
Santa Ana River flood control and conservation works -----	16,200,000
Total Southern California -----	214,800,000

Total for State -----	\$373,700,000
-----------------------	---------------

SUMMARY OF CONCLUSIONS

The report of the State Engineer is summarized in the following conclusions:

1. A large surplus of water exists in the Sacramento River Basin over and above the ultimate needs of a total net irrigable area of 3,784,000 acres in the basin if the run-off were properly controlled and regulated. By the utilization of the physical works proposed herein for the Sacramento River Basin, including the Trinity River diversion, regulated supplies without deficiency in amount in any year and dependable in time could be made available in the principal streams to irrigate all of the net irrigable lands, 2,640,000 acres, in the Sacramento Valley, after allowing a gross diversion of 3,241,000 acre-feet with a net use of 1,945,000 acre-feet per year for the irrigation of a net area of 1,234,000 acres of foothill and mountain land in the Sacramento River Basin and further provide a flow into the Sacramento-San Joaquin Delta of 10,292,000 acre-feet per year on the average during the period of subnormal run-off, 1918-1928. Even in the driest year of record, 1924, there would have been 5,759,000 acre-feet of flow into the delta. After providing 1,200,000 acre-feet for the needs of the entire delta and 2,390,000 acre-feet for salinity control, there would still have been a 2,169,000 acre-feet in the driest year. (The Trinity Diversion proposes transportation of Trinity River water through a tunnel into the Sacramento River to augment the regulated flow of the Sacramento River from Kennett Reservoir under the ultimate plan for full conservation and development of the water supply of the Sacramento River Basin. However, it is not a unit in the initial development program.)

2. The invasion of saline water in the upper San Francisco Bay and Sacramento, San Joaquin Delta could be effectively and positively controlled to the lower end of the delta by fresh water releases from mountain storage reservoirs.

3. A salt water barrier located at any of the three typical sites investigated, below the confluence of the Sacramento and San Joaquin rivers would not be necessary or economically justified as a unit of the State Water Plan.

4. The industrial, municipal and agricultural developments of the upper San Francisco Bay region could be adequately and dependably supplied with their fresh water requirements from the fresh water controlled channels of the Sacramento-San Joaquin Delta at a cost of less than half that required for equivalent service with a barrier. The proposed

State Edifices in South Dedicated; Governor James Rolph is Chief Speaker

1 1 1 1 1 1

WHILE some 2000 persons stood with heads uncovered Governor Rolph on Thursday, March 5th, sealed in its place the great granite corner-stone of the new State Building, now under construction in the Civic Center of Los Angeles. With a silver trowel he spread cement over the seams of the ponderous block, locking securely beneath it a copper box containing miscellaneous documents that will give to future generations a picture of Los Angeles as it is today.

gotten; days of depression will have passed and we will have ushered in a new day.

"Times are getting better daily—there is evidence on every hand. The railroads are carrying more freight and the steamships more cargo than they were thirty days ago. Yesterday Uncle Sam opened bids for construction of Boulder Dam—and the diversion of the Colorado River will bring new and greater prosperity to California by quenching the thirst of those arid lands and paving the way for vast industrial enterprises.

"And now, as I help to put this stone in place, I ask the blessing of God on the great State of California."

The New Armory at Long Beach

Encouragement for the immediate future was the keynote of Governor Rolph's address. In fact, during the course of it, he alluded to the stone as "the cornerstone of better times."

"We have witnessed in our lifetime many corner-stone layings such as this," he said, "but how often have we thought of the significance attaching to the laying of the corner-stone of this great universe by the Maker? And what lesson have we derived therefrom?"

"This is indeed a happy occasion, for it witnesseth another milestone in the completion of this mighty edifice of the people. * * * And may I tell you that the people of California have set aside \$5,200,000 for other State buildings, nine of which are to be erected in your midst. And with the commencement of work I am confident dull times will have been for-

In the copper container that now lies under the corner-stone are copies of the plans of the building, photographs of the architect's drawing, portraits of Governor Rolph, Lieutenant Governor Merriam, Director of Public Works Garrison and Mayor Porter; pictures of the State Capitol at Sacramento; copies of the State budget and Governor Rolph's inaugural address; yesterday's editions of all Los Angeles newspapers, copies of the Native Sons of the Golden West Magazine, the Grizzly Bear, and of the Women's Christian Temperance Union organ, the Signal, and thirteen telephone directories containing the names of all subscribers in Los Angeles County.

Governor Ralph Speaking at the Dedication of the Long Beach Armory; Seated to the right of Governor Ralph is Lieutenant Governor Merriam; others on the speaking stand (reading from left to right) are Col. Charles S. Lincoln, U. S. A.; Bragadier General Seth E. Howard, Adjutant General, N. G. C.; John Chamness, President, Long Beach Chamber of Commerce; Lieut. Col. Cross, U. S. A.

The inset is a view of the gubernatorial salute, fired in Governor Ralph's Honor, when he arrived in Long Beach.

The actual cornerstone laying was conducted under auspices of the Grand Parlor of the Native Sons of the Golden West.

The formal ritual read by the Native Sons brought out the fact that the sand, cement and water used in the process had been obtained from widely separated sections of the State, thus constituting "the very essence of her being."

John C. Austin, architect of the new building, presided on the speakers' platform, on which were seated State, county and city officials and a number of prominent laymen. After an invocation by Bishop Cantwell, brief addresses were given by Mayor Porter, Councilman President Sanborn, Henry W. Wright, chairman of the Board of Supervisors; J. A. H. Kerr, president of the Chamber of Commerce; Mrs. Lillie Dyer, founder of the Native Daughters of the Golden West; Chief Justice of the Supreme Court Waste and Associate Justice Seawell.

LONG BEACH ARMORY DEDICATED

On Saturday, February 21, 1931, at Long Beach two elaborate functions marked the dedication of the National Guard armory building recently completed in that city by the Division of Architecture.

The first of the two functions was a luncheon that was given in honor of Governor Ralph and Adjutant General Howard at the Pacific Ocean Club. The second was the formal dedication ceremonies.

The arrival of Governor Ralph at Long Beach was announced by a salute of seventeen guns.

The guests besides the Governor and the Adjutant General, included numerous high ranking officers of the Regular Army and of the National Guard. The large dining room of the club was filled to capacity with prominent citizens of Long Beach. Lieutenant Governor Merriam presided as toastmaster.

Owing to the shortness of time the speak-

(Continued on page 28.)

Highway Patrol Squads to Compete in Lowering California Motor Death Rate

HOPEFUL of making material reductions in the toll of deaths and accidents on the highways of California, the new management of the California Highway Patrol has hit upon an unique system for measuring the efficiency of the various county squads operating as units of the patrol.

Under the new plan each squad will be charged with the responsibility of keeping the death rate down in its respective territory and formal citations will be issued to each squad able to show a reduction in deaths at the end of each year over the previous year.

The squads showing a reduction at the end of each year will be placed upon an honor roll in the order of the amount of such reduction when related to other factors.

In determining the order in which the honor roll squads will appear consideration is given to the number of officers in the squad, the county area, the road mileage, population, and motor vehicle registration.

The efficiency of the men will thus be rated upon the decreases in the death rate shown rather than upon the number of arrests for motor vehicle violations.

The new management of the patrol hopes to stimulate a spirit of competition in this manner among the squads for high places on the roll.

The squad making the best record each year will be awarded place No. 1 on the roll and will be given a loving cup donated by the safety conference of the California State Chamber of Commerce.

This trophy will be presented the winning squad with appropriate ceremonies by Governor James Rolph, Jr., each year. It will become the permanent property of the squad winning it three times.

The initial awards for reductions in deaths in 1930 under 1929 put eighteen squads on the honor roll.

The Riverside County squad with a decrease in deaths of 33 per cent takes place No. 1 on the roll. The loving cup has been presented to Captain J. R. King and his squad and will remain in the custody of this squad unless won by some other squad next year.

The other seventeen squads appear on the honor roll in the following order:

MOTOR SQUAD HONOR ROLL				
Award Number	County Squad	Squad Captain	—Deaths—	
			1929	1930 Reduction
1	Riverside	J. R. King	39	26 13
2	Ventura	S. M. Flynn	33	22 11
3	San Joaquin	L. S. Davis	55	45 10
4	Fresno	W. L. McCarty	51	41 10
5	Kern	L. F. Gaylen	69	59 10
6	Merced	W. A. Burch	27	19 8
7	Del Norte	Edgar Huffman	8	2 6
8	Butte	G. C. Mitchell	11	7 4
9	Imperial	A. F. Oswalt	29	25 4
10	Colusa	D. Ins. R. L. Shelden	10	7 3
11	San Benito	Chesley Joyce	6	4 2
12	Lassen	A. W. Lamme	4	2 2
13	Sutter	G. W. Brown	3	1 2
14	Glenn	E. Breuss	2	0 2
15	El Dorado	E. A. Brewster	8	6 2
16	Solano	Frank Silva	20	18 2
17	Sierra	Insp. A. J. Ponta	2	1 1
18	Kings	A. J. Overstreet	15	14 1

Ventura, San Joaquin, Fresno, Kern, Merced, Del Norte, Butte, Imperial, Colusa, San Benito, Lassen, Sutter, Glenn, El Dorado, Solano, Sierra and Kings.

Ventura County had the same amount of decreases as San Joaquin but took second place because consideration was given to the greater percentage of decrease,

the smaller size of its squad, heavier traffic and other factors. Fresno and Kern counties showed equal reductions in deaths but the percentage of reduction being greater in the case of Fresno coupled with the fact that it has fewer patrolmen per mile of its highways gave that county its position above Kern on the roll.

It is significant to note that marked increases in deaths occurred in such counties as Trinity, Plumas, Nevada and Inyo, where, due to a shortage of men, little or no patroling was possible during the year.

Neatly arranged citation certificates displaying the great seal of California and showing the position of each squad on the honor roll have been presented to each of the squads on the roll.

E. Raymond Cato, superintendent of the patrol and sponsor of the new plan has this to say for it:

"We hope by this system to put the men on their

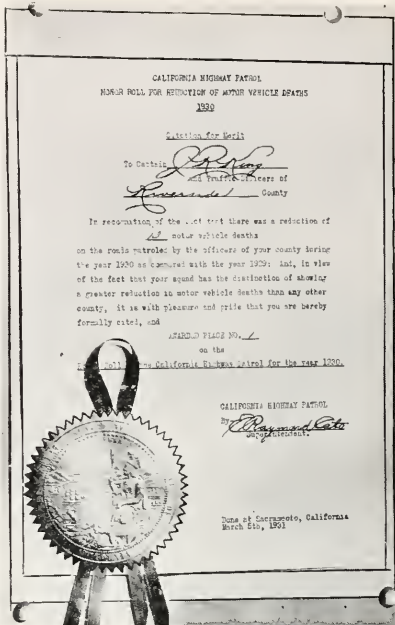

mettle, to create among them a sense of responsibility for the lives of the persons using the highways they patrol.

"It is a basic principle that the real purpose of all motor law enforcement is the protection of life and property. Using this as a conclusion, it follows that the real measure of the officer's efficiency is not the number of arrests he makes but the number of lives he is able to save.

"By stimulating a spirit of competition among the squads for high places on the honor roll it is our hope that the men may be induced to study traffic conditions in their respective districts and to take steps to eliminate traffic hazards thereby reducing accidents."

The citation system put into effect will be augmented by an improved system of record-keeping in the headquarters of the patrol at Sacramento. In this system will be kept the record of every person convicted of a major violation of the Motor Vehicle Act in the State and of every driver involved in a major accident.

It will thus be possible for the patrol to check against the habitual violator. When the same person is found to be involved in two or more accidents within a short period of time, the patrol will make an investigation to determine if the circumstances were merely coincidental or due to some basic fault of the driver. The same system will be employed in checking the records of persons convicted of two or more major violations within a short period.

A Citation for Merit.

West, Charles Gandy, George Baker, George Atkins, R. E. Dillon; second row, A. R. Hastings, E. F. Nelligan, S. R. Tyson, T. F. Wilson, G. R. Redwine, Gene Henderson, O. E. Townsend.

Closing the East-of-the-Sierras Gap

By F. G. SOMNER, District Engineer, District Nine

ON FEBRUARY 22d "Closing the Gap" in the State highway improvements, Mojave to Sherwin Hill in Mono County, distance 200 miles, was celebrated.

The celebration was held under the auspices of the High Sierras Recreational Association and took place in Red Rock Canyon in eastern

Kern County, 24 miles north of Mojave, a fitting place for the scene of this celebration and an appropriate section chosen to mark the completion in the last link in this thoroughfare. The

completion on January 31, 1931, of the George Herz contract from Cinco to seven miles north of Ricardo,

ers addressed the gathering, extending the felicitations of Governor Rolph and the California Highway Commission upon the happy occasion that the day celebrated.

Above the canyon portions of Red Rock the creekbed widens, with consequent decrease of both velocity and depth of the flood waters, admitting of the crossing and recrossing of the waters in order to secure proper alignment. The crossings are accomplished by means of concrete paved dips. As a substitute for expensive bridges this type of construction was deemed advisable by reason of the freakish character of the cloudburst floods, including indeterminable flow, together with impending treacherous channel changes.

Red Rock is presided over by Rudolph

F. G. SOMNER.

length 15 miles, sets at rest forever the terrors of Red Rock Canyon, the greatest barrier to travel within District IX, owing to the old road having occupied the floor of the canyon, subjecting travelers to the dangers of being caught in roaring currents from periodical cloudbursts originating within a vast drainage area at the head of the canyon. The new highway, 36 feet wide, is constructed on excellent alignment, well above the flood waters of the creek. Portions of embankments exposed to the flood have been protected by rock slope pavement well anchored below the creek bed.

State Highway Commissioner Harry A. Hopkins of Taft was the official representative of Governor Rolph at the celebration. Earl Lee Kelly, chairman of the Commission, was also present. Both commission-

The highest and the lowest points in the United States: The upper view shows the summit of Mt. Whitney, elevation 14,496 feet; the lower view is in Death Valley, 310 feet below the sea level; both are served by the highway, of which this article tells.

Hagen, who has lived there some thirty years and who jealously guards from vandalism the fantasies of nature's handiwork engraved on the canyon's walls, intermingled with glistening and varying colors. The canyon is extremely popular as a week-end sojourn, the visitors gazing in awe at these tremendous formations. Much has been written of its scenic specialties, such as the White Chapel,

State Highway Department. Such conjectures were set aside by State Highway Engineer Purell, who gave the assurance that the Organ Rock would not be disturbed by the highway construction. This monument of nature's handiwork stands intact but the injured little "Lady at the Organ" sits in mute appeal to the passersby for restoration of her former self.

View at the Dedication Ceremonies in Red Rock Canyon.

Sand Temple, Capitol Rock, Liberty Dome, Royal Gateway, etc. The Iron Canyon, a tributary from the west, affords equal attractions, a result of the most peculiar freaks of nature's erosions.

The outstanding scenic feature is the Organ Rock, with the "Lady at the Organ," now a pathetic figure, having been disfigured by vandals. Organizations interested in the preservation of nature's handiwork, and feeling that the erection of the State Highway in such close proximity to the Organ Rock would result in its destruction, made protests to the

THE LAST LINK

Route 23 of the California State Highway extends from Saugus, in Los Angeles County, to Markleville, county seat of Alpine County.

The "Closing the Gap" relates to the last link in the completion of a hard surfaced road constructed to modern standards on Route 23, from Mojave, distance 200 miles, to the Sherwin Hill summit in Mono County, entrance to the extensive recreational area, and far beyond.

When the first California State Highway fund of \$18,000,000 was created, effective

January 1, 1912, there were many demands for the limited allocation of funds to District Six, which covered an extensive mileage. Sand, interminable sand, was the problem east of the High Sierras, accompanied by narrow roadway, crooked alignment and poor drainage. It was imperative that the limited funds be devoted to removal of actual barriers to travel, and very little could be done in the way of permanent improvement. An eight-mile stretch of oiled macadam, together with eight miles of concrete pavement eight feet in width, comprised the hard surfaced roads at the creation of District Nine in October, 1923.

Very little relief was afforded by subsequent bond issues or the Two-Cent Gas Tax

an oiled rock surface. Between Sherwin Hill and George's Creek, ten miles north of Independence, distance 73 miles, the road mix method was employed, the work having been accomplished by day labor. From George's Creek north to Mojave, distance 124 miles, the plant mix method prevailed, and the work all done by contract, divided into eleven jobs, with strict adherence to the precepts of the Research and Material Departments insisted upon.

The roads were built at a reasonable expense. The result is a road reputed to be as fast as any in California.

The trip from Bishop to Los Angeles is no longer a task but a pleasure, and to be added

More views along the highway in Red Rock Canyon: At the upper left are the Pillars of Hercules; upper right, the White House Cliffs; lower left, The Organ Rock; lower right, the Worshippers; inset, Crevice in the Palisade Glacier, the farthest southwest glacier in the United States.

Measure enacted in 1923. The "two ruts in the sand," as the conditions then existing may best be described, received little attention prior to the One-Cent Gas Tax Measure in 1927. Meantime every effort was made to facilitate travel over the whole of the district, and despite the lack of funds a noticeable transition from very bad to easy travel conditions was effected.

"CALIFORNIA MIX" PAVEMENT

The type of pavement employed in the improvements is the well-known California Mix, consisting of a crushed rock base with

is the decreased cost of operating motor busses and freight lines, with corresponding reduction in tariffs.

"SOMETHING OF EVERYTHING"

"Something of everything" is nature's dispensation to the travellers along the State Highway from Mojave to the summit of Sherwin Hill, distance 200 miles. Across the Mojave Desert and through Red Rock Canyon, described in the first chapter of this narrative, and on to Indian Wells Valley. Try the bass fishing, quail and duck hunting at Little Lake, then through Rose Valley past

Cowan Station and Olancha. Look to the left when you reach Lone Pine, at snow capped Cathedral Peaks of the High Sierras, including towering Mount Whitney, the highest mountain in the United States, elevation 14,496 feet; continuing on alongside the Los Angeles city aqueduct and through Owens Valley, cultivated landscapes of hills and valleys, peaceful towns, including Independence, the county seat of Inyo County, and Big Pine.

State Highway Commissioner Harry A. Hopkins, who officially represented Governor Rolph at the Red Rock dedication.

Just to the west lies the Palisades Glaciers, notable as the most southerly glaciers of the United States. You have passed the Panamint Range on the right, bordering on Death Valley, lowest point in the United States, elevation—310 feet, wonderland of thrilling adventure, with all the attributes that make up desert appeal. Still along the base of the High Sierras and passing through Bishop, the metropolis of Inyo County; on twenty miles further, ascending the summit of Sherwin Hill, the gateway to the vast amphitheatre of recreational area, a wonderland of unsurpassed granduer, known until a few years ago only to disciples of Isaac Walton and nimrods. Look in all directions, snow-capped Cathedral

COMMISSIONER REARDON TAKES PUBLIC WORKS REARDON TO TASK OVER FENCE

(From the Oakland Tribune)

Timothy A. Reardon, State Highway Commissioner and President of the San Francisco Board of Public Works, today is conflicting with himself over the repair of a worn out fence on Twin Peaks Boulevard.

According to the story, Reardon, as Highway Commissioner, inspected the worn out fence and decided that himself as President of the Board of Works should do something about it.

As President of the Board of Public Works, he told himself that he was too busy to attend to the job.

"I almost came to blows with myself," he said, "but anyway, the fence will be built. I've promised that to the State Highway Commissioner."

Peaks of the High Sierras, over the summit the famous Minarets overlooking the Thousand Islands at the head waters of the San Joaquin River, home of the golden trout. Also the Mammoth Lakes and thousands of other lakes and streams. This virgin country which man has done nothing to wreck, free from litter and stench, goes on and on as far as eye can see. Those "weary of the roar of the great cities, the fretful stir, unprofitable, and fever of the world" may spend a lifetime of vacation periods reveling each year in new scenes amidst the quiet of mountains, lakes and streams, and their slogan will ever be "See the High Sierras first."

So much for the recreational value of this improvement to the traveling public and commercial interests of Inyo and Mono counties. The closing of the gap is a not unworthy chapter in the epics of the accomplishments of the State Highway organization. Route 23 through eastern Kern County, Inyo and Mono counties furnishes the following interstate connections: From Big Pine to Goldfield, Nevada, via Oasis; from Bishop north to a connection with the Nevada Highway over the Montgomery Pass and on to the east and to the boundary between Mono County, California, and Nevada at the north limits of District 1X. A connection extends from the Mono Basin over the Tioga Pass to the San Joaquin Valley, and also from a connection with the Sonora Road, 18 miles north of Bridgeport.

OF MILITARY IMPORTANCE

The relations between Route 23 and the munitions plant under construction at Haw-

(Continued on page 18.)

Will Buy Interstate Highway Toll Bridge

ANNOUNCEMENT that an agreement had been reached between California and Arizona and the owners of the Ehrenberg toll bridge over the Colorado River near Blythe in Riverside County for the joint purchase of this structure by the two states, was made on Saturday, March 7th, by Governor James Rolph, Jr.

Negotiations between the bridge owners and representatives of California and Arizona have been in progress in Sacramento for several days. California was represented in these negotiations by Colonel Walter E. Garrison, director of the Department of Public Works, and State Highway Engineer C. H. Purcell. Arizona was represented by State Highway Engineer W. W. Lane. These negotiations were instituted upon instructions from Governor Rolph, following a conference that Governor Rolph held with Governor Hunt of Arizona, and are a phase of the announced policy of Governor Rolph to foster

View of Ehrenburg Bridge.

Map showing location of Ehrenburg Bridge.

and promote a closer friendship with and cooperation between California, Arizona and other neighboring states.

The acquisition of this bridge by California and Arizona will eliminate the present unhappy situation of travelers into California coming from the east via Phoenix being compelled to pay a toll upon their first entrance into California. State highway officials here stated that under the agreement the bridge would be a free structure by September 1st.

Both California and Arizona contemplate spending large sums of money out of their present budgets on roads leading to this

bridge. The expenditures proposed by Arizona were from Federal funds. Objection was made by the Federal government to the fact that the highway upon which the expenditures were to be made lead to a privately owned toll bridge. Under the agreement completed today these objections will be withdrawn and Arizona permitted to undertake the proposed improvements. These improvements consist in general of a relocation of a large part of the highway from Phoenix to the Colorado River. This work will transform the present desert road into a high speed, well aligned highway. California is relocating its highway leading to this bridge in many places and converting it into a fine, modern road.

Governor Rolph and the people of California are rejoiced at the renewal of friendship between Governor Hunt and the people of Arizona.

WEBSTER IS WRONG AGAIN

Draftsman: A man who puts his ideas on paper for the boss to change.

Checker: A man with a blue pencil but no conscience.

Tracer: A slave, who, knowing himself, never understands what the draftsman thinks he knows.

Last but not least.

Engineer: A mechanical (?) genius who spends his time thinking up ideas which he refuses to recognize when he meets them on a drawing.—*Professional Engineer.*

Text of Report of Governor Rolph's State Water Conservation Committee

THE following is the text of the report made to Governor Rolph by his Water Conservation Committee upon its return on February 23d from Washington, D. C., where it conferred with President Hoover and members of Congress relative to the California State Water Plan. Attached to the report is also the text of the Committee's address to President Hoover.

The complete text of these reports is found herein:

REPORT TO GOVERNOR ROLPH

Sacramento, February 24, 1931.

HONORABLE JAMES ROLPH, JR.,

Governor of the State of California,
State Capitol,
Sacramento, California.

MY DEAR GOVERNOR:

The committee appointed by you to proceed to Washington, D. C., to confer with officials of the United States on the California State Water Plan, begs leave to submit the following report:

Membership of Committee.

The personnel of the committee was:

Colonel Walter E. Garrison, Director of Public Works, Chairman.

Edward Hyatt, State Engineer.

Major A. M. Barton, Chief Engineer, State Reclamation Board.

W. B. Mathews, General Counsel, Metropolitan Water District.

State Senator B. S. Crittenden, Chairman Legislative Water Committee.

State Assemblyman Robert P. Easley, Member State Legislative Water Committee.

W. M. Wiley, Secretary Kern County Water Commission.

Objectives.

The first recommendation of the California Joint Federal-State Water Resources Commission, whose report was presented in January, was that "a Commission authorized to represent the State be appointed to go to Washington and endeavor to come to a definite understanding with the executive department of the Federal Government" on these matters.

While the main objectives of your committee were well expressed in this report, the committee also had in mind the arranging, if possible, for an inspection on the ground of the California water project by subcommittees or members of Congress next summer, and for the transmittal to Congress and making public by the Army Engineers the report of the War Department on this project. Minor objectives were conferences with many Federal departments relative to cooperation with the State in various matters not directly con-

nected with the water plan, if time permitted.

Appointments with the President, the Secretary of the Interior, members of Congress and others were made before leaving California.

Conference with President Hoover.

The committee arrived in Washington February 16th, and met with President Hoover that morning. We were very cordially received by the President and pre-

sented to him your message of greeting. After an opening statement, a brief written resume of the mission of the committee and of the California Water Plan was presented. This statement covers the entire subject and a copy is attached to this report as Exhibit A.

Conferences With Other Federal Officials.

During the next two days your committee

RECOMMENDATIONS

The following recommendations were made to Governor Rolph upon the return of his Water Conservation Committee from Washington, D. C.:

1. Immediate action by the California Legislature as recommended in the Federal-State report, in putting before the people of California the three constitutional amendments necessary for the execution of the plan. Detail of those amendments are given on page fifteen of the Federal-State report.
2. The informing of Congress of the water problems of California and the proposed plan by Congressional inspection trips, by furnishing to it data and information, and in all other ways possible.
3. Close and continuous contact with all Federal agencies interested.

called upon Dr. Ray Lyman Wilbur, Secretary of Interior; Dr. Elwood Mead, Commissioner of Reclamation; General George B. Pillsbury, Assistant Chief of Engineers, War Department; the Board of Engineers of the War Department, consisting of seven members; and officials and engineers of these and other executive departments.

Your committee also discussed the California Water Plan with Senators Johnson and Shortridge. A meeting was arranged with the California house delegation, which was attended by all California members except Congressman Clarence Lea, who was sick, at which meeting the whole plan was explained with the aid of a relief map sent to Washington for this purpose.

Your committee also called on Congressman Murphy, of Ohio, chairman of the Interior Department Subcommittee on Appropriations, relative to having his committee inspect the California water project next summer.

Final Conference President Hoover.

Before leaving Washington another meeting with the President was arranged, attended by Director of Public Works Garrison and State Engineer Hyatt, at which the progress made was explained to him. As before we were most graciously received.

Accomplishments.

The pressing water needs of California and the project to relieve present shortages with Federal-State cooperation as recommended in the joint Federal-State report were competently presented to both executive and legislative branches of the United States Government. In the executive departments a clear understanding of our water problems was found and effective cooperation received. Our congressional representatives, while helpful in every way possible, seemed unadvised of the plan and took the view that California must press the plan locally and enact the necessary constitutional amendments before definite action could be had from the United States.

Senators Johnson and Shortridge assured us that they would jointly request the Senate to appoint a Senate committee to inspect the area involved during the coming summer and report its findings to the next Congress, provided, that the report of the Army Engineers of the War Department is presented to Congress during the present session. The War Department has assured us that its report will be given to Congress before its adjournment, March 4th.

The California House Delegation passed a

resolution requesting all Congressmen visiting California during next summer, to avail themselves of the opportunity of investigating the California Water Conservation Plan. Congressman Murphy assured us that he and his subcommittee would visit California during the summer of 1931 and would devote at least four days to the inspection of this project. Dr. Wilbur, Secretary of the Interior, stated that he would accompany this committee during a part of that time. Dr. Elwood Mead, Commissioner of Reclamation, also signified his intention of accompanying this committee during its inspection of the project.

It is desired particularly to point out the importance of the report of the War Department and the progress made in expediting its transmittal to Congress. As soon as this report reaches Congress it is not only publicly available, but is officially before the Congress for action. Due to the telegrams sent by yourself, the assistance of our Senators and Congressman, and by the appearance of this committee before the Assistant Chief Engineer and the Board of Engineers, we believe that this report will reach Congress and the California Legislature promptly and afford material basis for action by the Legislature during its second session.

Conclusions.

Your committee believes that the recommendations of the Federal-State Commission have been carried out as far as possible at this time. With the information and assurances received by your committee from the executive and legislative departments of the United States the way is open for the State of California, through its Legislature, to proceed further by preparing and submitting to the vote of the people of the State the constitutional amendments necessary before the State can act.

In arranging for inspection of the project by congressional committees and members and by expediting the War Department report, much has been accomplished. The executive departments are well informed and are sympathetic to Federal cooperation on the California Water Plan. Congress, on the other hand, is not informed and much educational work will be necessary. Close and continuous cooperation between the State and Federal departments, both executive and legislative, will be necessary to put the plan into execution.

Recommendations.

1. Immediate action by the California Legislature as recommended in the Federal-State report, in putting before the people of

California the three constitutional amendments necessary for the execution of the plan. Detail of these amendments are given on page 15 of the Federal-State report.

2. The informing of Congress of the water problems of California and the proposed plan by Congressional inspection trips, by furnishing to it data and information, and in all other ways possible.

3. Close and continuous contact with all Federal agencies interested.

Other Accomplishments of Trip.

While in Washington it was possible to take up with various Federal departments many other matters of interest to California, particularly those affecting the Department of Public Works and the Reclamation Board. Conferences were held with officials of the Federal Power Commission; U. S. Geological Survey, both water resources and topographic branches; National Forest Service; Department of Agriculture; and War Department.

Arrangements were made whereby a \$5,000 additional Federal allowance will be made available during the present year for stream gaging in California, and a commitment secured for an allowance of \$100,000 for topographic mapping in California during the next biennium, contingent on being matched by the State, as compared to \$35,000 formerly obtained. Other important decisions, impossible of determination by correspondence were also arrived at. In view of the multiplicity of cooperative interests of the State and the United States along those lines, and the availability of Federal assistance, it is also recommended that much closer contact between State and Federal departments on these matter be maintained in the future than has been had in the past.

Accompanying this report are three exhibits as follows:

Exhibit A—Statement to President Hoover, February 16, 1931.

Exhibit B—Report of California Joint Federal-State Water Resources Commission.

Exhibit C—Small Map of California Water Plan as recommended by the State Engineer.

Respectfully submitted,

WALTER E. GARRISON,
Director of Public Works,
Chairman of Committee.

ADDRESS TO PRESIDENT HOOVER

The text of the committee's address to President Hoover, follows:

Willard Hotel, Suite 836,

Washington, D. C., February 16, 1931.

To the President of the United States.

Subject: *California Water Resources Commission.*
Members of the Commission:

Col. Walter E. Garrison, Director of Public Works, Chairman.

Edward Hyatt, State Engineer.

Maj. A. M. Barton, Chief Engineer, State Reclamation Board.

W. B. Mathews, General Counsel, Metropolitan Water District.

State Senator B. S. Crittenden, Chairman Legislative Water Committee.

State Assemblyman R. P. Easley, Member Legislative Water Committee.

W. M. Wiley, Secretary Kern County Water Commission.

MR. PRESIDENT:

This Commission is here to ask your advice and help concerning a program of California water development, and as to how the United States can be interested in this subject which we think is of National importance.

Mr. President, I know that there are few, if any, men who personally know more about the California water situation than yourself, and, therefore, the engineering presentation need take but little of your time. We have heard and read your past public expressions regarding such great water storage projects as are proposed in California.

The California Water Plan has passed the visionary stage and is now definitely up for decision and a very potent factor in such progress has been your own interest and help in initiating the California Joint Federal-State Water Resources Commission and appointing thereon able and qualified representatives of the Federal departments concerned.

This Commission's report was made to you and to the Governor of California early in January and the first recommendation of the report was as follows:

First, that a Commission authorized to represent the State be appointed to go to Washington and endeavor to come to a definite understanding with the executive department of the Federal government as to the terms upon which it will recommend to Congress that Federal aid be extended, and also endeavor to arrange for the introduction in Congress of bills in conformity with such understanding. The importance of this can not be over-emphasized. There is reason to believe that there is in process of formulation a new policy with respect to the Federal relationship to the states as to water development. A Federal Commission is now studying this very question. Here there is a project most carefully investigated both by State and Federal agencies which should go ahead and to which any new policy to be adopted may well be related.

I may say, Mr. President, that Governor Rolph is keenly aware of the importance of water problems in California and in his inaugural address in January said that he stood ready as Governor to do everything in his power toward finding a practical solution of these pressing problems. Therefore, Mr. President, this delegation representing the whole State of California is here at the direction of Governor Rolph to follow up the report of the Federal-State Commission and to attempt to obtain information which will permit the California Legislature, which will meet again this month, to take the necessary forward steps.

As you well know, Mr. President, the main water problem in California is water shortage, shortage during summer and fall in many places and all year in others. The second problem is flood control. There is enough water to fill all requirements and what is needed and what must be had is regulation and distribution. The character of water problems differs somewhat in different sections, but all parts of the State have such problems.

The California Water Plan as recommended by the Federal-State Commission is essentially a relief project. It does not propose irrigation of new lands with consequent increase of the overproduction situation, but is limited to the relief of developed areas, facing retrogression or abandonment, unless help can be obtained. Relief is possible but only with the assistance of both the State and the United States.

The most pressing urgency in which the aid of the Federal government is believed justified and necessary is that in the Southern San Joaquin Valley. Here the stream flow is small and irrigation from wells

(Continued on page 30.)

Highway Moved to Save Historic Landmark

By L. E. McDUGAL, District Office Engineer

SOME 70 or 80 years ago there was built as a ranch house on the Rancho de Rios near San Miguel in San Luis Obispo County a two-story adobe building which was recently threatened with destruction in the widening of the main Coast Highway. As this was generally a reconstruction project, the survey crew were following the present pavement most of the way and due to the proximity of this adobe, which has stood close to the highway and partly on the right of way

of the building instead of following the present course.

Discussion by local and State-wide organizations when they were fearful of the destruction of this old building brought forth some interesting facts regarding this adobe and its connection with the early history of California.

The date of the building of this former ranch house is variously given as 1835 to 1858, but investigation would seem to discredit the earlier date. At that time a Spaniard, Senor Rios and his American partner, Mr. Reed, were the owners of the rancho south of San Miguel and even laid some claim to the mission with the result that adobe bricks from the ruins of the old mission were used to construct this two-story ranch house with walls twenty-four inches thick.

Some time early in the sixties, this ranch was purchased by George Butchart, a Scotchman, who turned the adobe into a roadside tavern and patriotically named it the "Caledonia Inn." It was made a regular stop for the stages and continued for at least the next twenty years to be a popular hostelry. When the railroad was built to San Miguel, the Caledonia Inn undoubtedly knew its most stirring scenes and events as the heads of some of the bandit gangs at various times made their headquarters here.

The first school in this section was held in one end of the inn, while at the other end was the barroom so essential to roadhouses of those days.

For many years, it was more or less abandoned during which time vandalism of various sorts brought destruction to portions of the old inn, but there still remain some of the handmade doors and easements, hand-hewn beams still support the second floor and roof and the typical balcony on the front is intact. The tile roof was taken down years ago, and now adorns a millionaire's bungalow in Catalina Island—so report has it.

So, though many a modern house or building may fall before the march of progress in the construction of highways throughout the State, every effort is made to preserve for future generations the few remaining landmarks connected with the earlier history of the State.

View of Historic Caledonia Inn.

since the road was paved, it was evident that the widening could not proceed without the destruction of this old building as the railroad adjoined the highway on the opposite side.

It is the policy of the Division of Highways to conserve natural scenery areas and historical landmarks, and as soon as the matter was brought to the attention of the District Office, ways and means of preserving this edifice were studied. It was suggested that a retaining wall might be constructed under the front of the building, or that the building be moved back, but upon investigation of the structure, it seemed doubtful whether either of these methods could be carried out without seriously endangering the old adobe toward which time and the elements had not been too kind. It was finally decided that the only way of being certain of retaining intact this old landmark would be to curve the highway around in back of it which could be done without seriously sacrificing alignment. The future highway will therefore go to the west

Accident Record of Young Drivers Alarmingly High

MORE rigid enforcement of the operator's license law to curb reckless youths operating motor vehicles has been recommended to the courts and the various police departments of the State and the California Highway Patrol by the Bureau of Research, Statistics and Traffic Safety of the Patrol.

This follows a study of accident statistics made by the bureau indicating that youths between the ages of 14 and 19 are involved in twice as many accidents as would be the same number of older drivers.

A study of the records for the first six months of 1930 shows boys of this age group were responsible for more than 1600 accidents involving death or injury to themselves and others.

The bureau believes that if the reckless youth persists in endangering his life and the lives of others there is only one thing to do and that is to cancel his license.

Reports of accidents among this group of drivers show a greater variety of surprising causes than in many of the groups of older drivers.

"The immature youth is inclined to be indiscreet and often does the most irrational and unusual things in his driving," the bureau's report said.

"The courts can aid materially in effecting a correction by promptly revoking or suspending the youthful driver's license in flagrant cases. After the license has been revoked, the courts should demand substantial proof from each driver whose license has been revoked that he has not driven a motor vehicle during the period in which his license was suspended.

"Unless a youth can drive as prudently and as carefully, as an adult, he should not be permitted to drive."

CLOSING THE EAST-OF-THE SIERRAS GAP

(Continued from page 12.)

thorne, Nevada, are set forth in an article by W. G. Scott, a member of the American Society of Military Highways, who played an important part in the promotion of State highways east of the High Sierras. In a comprehensive report on the proposed Military Highway from the munitions plant at Hawthorne to tidewater, he dwells upon its relations to Owens Valley as follows:

"As to the importance to Owens Valley of a highway between the munitions base and

tidewater open all the year, the advantage both to the naval depot and to the valley are so self-evident that little need be said. Allowances must be made for several distinct classes of traffic; that resulting from active operations by Los Angeles at the Mono Basin and other sources of water supply; traffic that will be inevitable between the naval depot and tidewater; commercial traffic by motor truck along the route; the stream of motor buses both ways; stage traffic and the possibilities of an increased traffic; important traffic occasioned by hydroelectric systems. All of these features point to the absolute necessity of a distinct two-way traffic system, which will place the towns of Owens Valley on one of the most important highways of America.

DREAMS OF FUTURE REALIZED

The closing of the gap is the bright spot in the lives of the people of this country. The dreams of many years of a smooth thoroughfare reaching for 200 miles along the base of the High Sierras has been realized, resulting in a tendency of a better understanding of the citizenship with each other, with corresponding closer relationship in both social and business life. There is sure to come a closer bond of understanding and neighborliness between Inyo and Mono counties and the southland.

This sportsman's paradise and remarkable scenic area unsurpassed is an everlasting heritage. The thoroughfare, which increases in popularity from year to year, will play a greater part from now on in the lives and happiness of the citizenship of Inyo and Mono counties.

Thus endeth the story of the "Closing the Gap." Fate will some time decree that the writer shall leave these parts, whether the journey be long or short, but his sojourn can be looked upon with great satisfaction. It has increased his respect and confidence in men, and sad will be the parting from a people virile, of high character and appreciative qualities, whom one learns to be fond of and enjoy.

It lies where Nature spread it,
Bringing gladness to our eyes,
Like a jeweled flame of tapestry
Beneath the azure skies;
The Owens Valley below it,
Where creeks and rivers swirl,
Just the High Sierras stretching
Down the middle of the world.

Revised classic: Hush, little ash dump, don't you cry—you'll be a golf course by and by.—*Virginia Pilot.*

Governor Rolph Tells Legislature Progress of Public Works Program

AT THE reconvening of the Legislature in its second session, Governor Rolph submitted the following report to the State Legislature, showing the progress made in advancing the State highway and State institutional building program:

In accordance with my request to the Department of Public Works, that all public works be speeded up as a measure of affording a larger measure of employment to labor and a larger market to business, very substantial progress has been made in making these policies immediately effective. This is true both in construction and maintenance operations of the Division of Highways, and in the building activities of the Division of Architecture.

Generally speaking, the State highway situation may be summarized as follows: State highway projects financed from the July 1, 1931-June 30, 1933, budget have been advanced as follows:

4 contracts awarded, total-----	\$491,200
3 projects now advertised for bids, total-----	1,011,500
32 projects to be advertised for bids April 1st, total-----	4,976,000

Grand total of advanced highway construction program-----\$6,478,700

In addition to the construction, the specific State highway maintenance program has been advanced as fast as seasonal conditions permit. This specific maintenance program includes such work as spraying roadside vegetation; dust oiling; contract and day labor work for furnishing rock for base reinforcement and oil surfacing.

The cost of this work, which will be well under way by April 1st, will approximate \$577,500.

By May 1st a program of specific shoulder improvement on sections of highway in Imperial and Riverside counties will be started, expenditures upon which will approximate \$256,000.

It should be noted that this specific maintenance program is in addition to routine maintenance work and upkeep upon the State highways, which totals nearly \$300,000 per month.

Special unemployment relief work upon the State highway system is affording employment to 3056 men. Of this number 1200 men are employed in the five unemployment relief labor camps; 175 men are employed on the special relief projects out of Monterey, the men living in Monterey; 1681 men are employed on the special relief maintenance crews. These latter men work on the basis of three days a week.

It is of interest to note that a careful check made on the men employed on the Monterey project showed an average of four dependents to each man employed.

Detailed information as to the construction and specific maintenance program is attached to this report.

The State institutional building program also has been advanced in a most gratifying manner. I feel that the detailed progress reports attached hereto fully justifies the action of the Legislature in acceding to

the request made by me during the first half of the legislative session that the State Institutional Building Bills be passed in emergency preference order.

The following summary gives the status of building construction projects handled since January 5, 1931, by the Division of Architecture, Department of Public Works:

1. Total work put under way in field-----	\$ 973,185
2. Total work pending contracts being executed-----	307,000
3. Total work now being advertised for bids-----	294,000
4. Total work drawings under way-----	2,464,000
5. Total work awaiting securing of sites or information-----	1,124,000
6. Two projects awaiting appointment of architects in private practice-----	50,000

Total value of projects-----\$5,512,185

MECCA-BLYTHE TOLL BRIDGE ACQUISITION

Upon my instructions, the Department of Public Works has thoroughly investigated the stability, the suitability, and the value of the Blythe toll bridge. Engineers of both states and the bridge company participated in this investigation, which has just been completed. A full report of the findings of this investigation will soon be ready for submission.

The importance of this structure as a part of the interstate highway system of California and Arizona was such that I felt it my duty to personally contact the Governor of Arizona and other officials of that state regarding this bridge. I found their attitude in this matter to be extremely cordial and agreeable. The State of Arizona is willing to cooperate with California to the fullest extent. Officials of that state expressed their willingness to participate to the amount of 50 per cent of a fair and just cost; the cost to be determined by joint action of the highway department engineers of the respective states and the bridge company.

The bridge company officials on their part have expressed their willingness to sell the bridge at a fair price. By agreement with Arizona officials, Colonel Garrison, Director of the Department of Public Works, and State Highway Engineer C. H. Purcell, have entered into negotiations with the bridge officials.

In connection with the bridge, it will be necessary to add to the State highway system a piece of now existing county road adjacent to the bridge, and about four miles long.

The reports and proposed methods of purchase will be completed in ample time for the Legislature to take action during the present session.

The acquisition of the bridge by California and Arizona will eliminate the present unhappy situation in which travelers from the East find themselves compelled to pay a toll at their first entrance into California.

In order that a complete picture may be shown, I might further state that this bridge crosses the Colorado River at a point near Blythe. The desirability of making it a free structure to travel can be seen in the fact that it forms a direct interstate connection between Route 64 (Mecca to Blythe State highway) in California and the Wickenburg-Ehrenburg

road in Arizona. It forms an important gateway into California for transcontinental traffic through Phoenix from the East.

The states of California and Arizona contemplate, in their present budgets, to spend large sums of money on the roads leading to this bridge. The state of Arizona proposes to relocate a large part of the present road between Phoenix and the Colorado River. In so doing, it will transform the present desert road into a high speed, well aligned highway. Likewise, California is relocating its Route 64 in many places and transforming this important road into a high speed highway. The budget for the 1931-1933 biennium carries an appropriation of \$300,000 for this road. It is certain this route is destined to become one of the most important and heavily traveled roads leading into southern California and Los Angeles from the East, and that traffic over this route will be increased to many times its present travel.

DETAILED REPORT OF ADVANCED PROJECTS—DIVISION OF HIGHWAYS

Attached is a list of the projects included in the advanced program of the Division of Highways:

CONTRACTS AWARDED.

State Highways

Redwood	-----	148-foot timber bridge across Mark West Creek, Sonoma County; \$22,200.
Carmel-San Simeon	-----	Grading 8.6 miles, Rocky Creek to San Remo Divide, Monterey County; \$160,000.
Valley Route	-----	Concrete paving 7.8 miles, Stockton to Calaveras R. and Harney Lane to Houston School, San Joaquin County; \$284,000.
Redwood	-----	Grading portions, Arnold to Pepperwood School, Mendocino County; \$85,000.
		Total work under contract \$491,200 WORK ADVERTISED.
Bayshore	-----	Concrete bridge across San Francisco Creek, San Mateo County.
Valley Route	-----	Bituminous treated shoulders, 30.3 miles, Grapevine to Bakersfield, Kern County.
Redwood	-----	Grading and surfacing 12.5 miles, Pepperwood School to Little Dann Creek, Mendocino County.
		Total work now advertised ----- \$1,011,500

WORK TO BE ADVERTISED BY APRIL FIRST

Carmel-San Simeon	-----	156-foot concrete arch bridge across Garapata Creek, Monterey County.
San Diego-El Centro	-----	Concrete paving 9.3 miles, La Posta Creek to Tecate Divide, San Diego County.
Coast Route	-----	Grading and concrete pavement, 11.1 miles, 2 miles east of Salinas to north boundary, Monterey County.
Red Bluff-Susanville	-----	Rock surfacing, 7.3 miles, Dales to Paynes Creek, Tehama County.
Saratoga-Blooms Mills	-----	Grading and surfacing 3.5 miles, Waterman Switch to Saratoga Gap, Santa Clara County.
Bayshore	-----	Concrete paving, 3 miles, Burlingame to San Mateo, San Mateo County.
San Diego-El Centro	-----	Grading and paving 0.5 of a mile, east of El Cajon, San Diego County.
Arroyo Seco	-----	Grading 5.1 miles, 4 miles north of La Canada and Colby Canyon, Los Angeles County.
East of Sierras	-----	Grading 14.2 miles, Bridgeport to Sonora Junction, Mono County.
Coast Route	-----	146-foot concrete bridge across Carnadero Creek, Santa Clara County.
Redwood	-----	Bituminous macadam surface 10.1 miles, Loleta to Eureka, Humboldt County.

Nevada City Lateral	-----	Grading 1.4 miles, Wise Power House to Auburn, Placer County.
Coast Route	-----	Asphalt paving 3.7 miles, Wigmore to Los Alamos, Santa Barbara County.
Valley Route	-----	Asphalt pavement 12.1 miles, Goshen to Kingsburg, Tulare County.
Redwood	-----	Grading near County line, Mendocino County.
Pacific Highway (West Side)	-----	Grading and graveling 4 miles, Williams to 4 miles south, Colusa County.
San Marcos-Sequoia Park	-----	Oil rock shoulders, 0.3 of a mile, Plaza Garage to 0.3 of a mile westerly, Tulare County.
Valley Route	-----	Grading 5.2 miles, Canton Creek to Pirn Creek, Los Angeles County.
Coast Route	-----	30-foot asphalt pavement, 3.2 miles, Serra to San Clemente, Orange County.
San Diego-El Centro	-----	Bridge and concrete pavement, approaches, across Boundary Creek, San Diego County.
El Centro-Yuma	-----	Asphalt pavement widening 20.9 miles, Highline Canal to Sand Hills, Imperial County.
Redwood	-----	Bridge across Eel River at Dyer-ville, Humboldt County.
Alturas Lateral	-----	Crushed gravel surfacing 66.1 miles, Fall River to Hat Creek, Shasta and Lassen counties.
Pacific Highway	-----	Bridge across Clear Creek, Shasta County.
Feather River Lateral	-----	Grading 1.2 miles Spanish Creek to Keddie, Plumas County.
Placerville-Tahoe	-----	Paving 0.4 of a mile, Placerville city limits to Clark and Main Streets, El Dorado County.
Placerville-Tahoe	-----	Paving 6.8 miles, Brighton to Mills, Sacramento County.
Pacific (East Side)	-----	Bridge across Coon Creek, Placer County.
Stockton-Santa Cruz	-----	Bridge across Walker Slough, San Joaquin County.
Stockton-Santa Cruz	-----	Bridge across Homestead Canal, San Joaquin County.
Valley Route	-----	Paving 7 miles, Turner Station to Stockton, San Joaquin County.
Placerville-Tahoe	-----	Oil surfacing 1.6 miles, Placerville to railroad crossing, El Dorado County.
		Total to be advertised by April 1st ----- \$4,976,000
		Grand total of contracts awarded, work now being advertised, and work to be advertised by April 1st ----- \$6,478,700

SPECIFIC MAINTENANCE PROJECTS

In addition to the routine maintenance work of upkeep to the State highways which totals nearly \$300,000 each month, the Maintenance Department is making every effort to advance the specific program as fast as the seasonal conditions of the road will permit.

The spraying of roadside vegetation is already under way in some sections and will be well completed during March. This work will cover some 1150 miles and represents an expenditure of \$80,000.

Specifications are being prepared covering the dust oiling work, which is one of the important seasonal programs from a motorist's point of view. This type of work is programmed for 1040 miles of roadway and 330 miles of shoulders at an expenditure in excess of \$300,000. The greater part of this work should be advertised and under way the latter part of April, although road and weather conditions must always be considered in this work.

Preliminary reports are prepared and specifications

under way for contract and day labor work for furnishing rock for base reinforcement and oil surfacing. The base reinforcement, etc., is estimated to cost \$225,000 and the armor coat and oil processing work about \$160,000. Approximately one-half of the rock will be produced under contract, and work will be under way as soon as contracts can be let, which should be by the middle of April. The balance of the rock will be purchased from commercial plants and hauled with rented or State-owned equipment. The oil work will follow the production of the rock, and is planned to start by May 15th. In addition to this work plans are under way for shoulder improvement in Imperial and Riverside counties totaling \$256,000. This work should start about May 1st.

DETAILED REPORT OF ADVANCED PROJECTS—
DIVISION OF ARCHITECTURE

In the preliminary paragraphs of this statement, a summary was given showing a total of \$5,512,185 in State building projects, which have been advanced in accordance with the administration's program. The following pages show the detail upon which the foregoing summary was based:

STATUS OF PROJECTS BEING HANDLED BY THE DIVISION
OF ARCHITECTURE—1929 APPROPRIATIONS

1. Hospital building, Stockton State Hospital-----	\$92,000 00
Industrial building, Stockton State Hospital-----	22,500 00
Work under way in field.	
2. Physical education building, San Diego State Teachers College-----	10,000 00
Work under way in field.	
3. Unit for infirm patients, Patton State Hospital-----	45,000 00
Work under way in field.	
4. Dormitories and kitchen, School for Deaf-----	285,000 00
Work under way in field.	
5. Hospital building, Pacific Colony-----	98,000 00
Administration building, Pacific Colony-----	26,000 00
Industrial building, Pacific Colony-----	10,000 00
Bids received February 17, 1931.	
6. Administration building, California Institution for Women-----	100,000 00
Two ward buildings, California Institution for Women-----	106,000 00
Drawings 90 per cent complete.	
7. Pathological laboratory, Agnews State Hospital-----	80,000 00
Drawings started.	
8. Science building, Santa Barbara State Teachers College-----	110,000 00
Drawings 15 per cent complete.	
9. Warehouse, San Quentin State Prison-----	50,000 00
Work under way in field.	
10. Laundry building, San Quentin State Prison-----	45,000 00
Drawings 70 per cent complete.	
11. Cannery building, Folsom State Prison-----	20,000 00
Drawings completed.	
Work under way in field.	
12. Remodel old administration building, Folsom State Prison-----	20,000 00
Drawings 20 per cent complete.	
13. Ward building, Pacific Colony-----	55,000 00
Drawings 20 per cent complete.	
14. Office building at San Luis Obispo, Division of Highways-----	43,000 00
Drawings 100 per cent complete, but must be revised to reduce the cost of project.	
15. Ward unit, Southern California State Hospital-----	320,000 00
Drawings 100 per cent complete. Must wait for confirmation of site title or selection of new site.	
16. Miscellaneous minor construction work-----	56,185 00
Work under way in field.	

Chapter

19-31	1. Ward unit No. 2, Agnews State Hospital-----	\$320,000 00
	Work under way in field.	
20-31	2. Completion of ward No. 7, Mendocino State Hospital-----	60,000 00
	Contracts awarded.	

Chapter

	Drawings 20 per cent complete.	
21-31	18. Remodel dining room and kitchen, Napa State Hospital. Remodel amusement hall, Napa State Hospital-----	40,000 00
	Drawings started.	
57-31	19. Completion of San Francisco State Building-----	210,000 00
	Drawings 40 per cent complete.	
6-31	20. Rifle range at Oakland, California National Guard-----	7,500 00
	Work in field to start at once.	
4-31 & 248-31	21. Detention building, California Institution for Women-----	106,000 00
	Drawings started.	

STATUS OF PROJECTS TO BE HANDLED BY ARCHITECTS IN
PRIVATE PRACTICE—1931 APPROPRIATIONS

Chapter

S. B. 100	1. Dairy unit, Preston School of Industry-----	\$40,000 00
	Architect appointed: Russell Guerne de Lappe.	
	Conference held in State Architect's office and at Preston School. Instructions given. Preliminary studies being made. Project involves purchase of land.	
8-31	2. Library building, Fresno State Teachers College-----	125,000 00
	Architects appointed: Swartz & Ryland.	

Chapter

Chapter

Conference held in State Architect's office and at Fresno State Teachers College. Instructions given. Preliminary studies being made. Project involves purchase of land.

12-31 3. Gymnasium units, San Diego State Teachers College. 155,000 00

Architect appointed: William H. Wheeler. Conference held in State Architect's office and at San Diego State Teachers College. Must wait for program of requirements as furnished by Mr. Hill of the Department of Education. Requirements to be available February 25, 1931.

24-31 4. Remodel kitchen building, etc., Stockton State Hospital. 65,000 00

Architect appointed: Peter L. Sala. Conference held in State Architect's office and at Stockton State Hospital. Instructions given. Mr. Sala has submitted written recommendation that appropriation be increased to properly carry out the project.

15-31 5. Training school, Humboldt State Teachers College. 170,000 00

Architect appointed: Franklin T. Georgeson. Conference held in State Architect's office. Must wait for program of requirements as furnished by Mr. Hill of the Department of Education. Requirements to be available February 24, 1931.

10-31 6. Science building, San Jose State Teachers College. 202,000 00

Architect appointed: Ralph Wyckoff. Conference held in State Architect's office. Must wait for program of requirements as furnished by Mr. Hill of the Department of Education. Requirements to be available March 3, 1931.

11-31 7. Primary unit and dining room, California School for Deaf 242,000 00

Architect appointed: Charles F. B. Roeth. Conference held in State Architect's office and at California School for Deaf. Instructions given. Preliminary studies being made.

5-31 8. Hospital unit, Veterans' Home 500,000 00

Architect appointed: Frederick H. Meyer. Conference held in State Architect's office and at the Veterans' Home. Instructions given. Preliminary studies being made.

6-31 9. Armory at Yuba City, California National Guard. 25,000 00

Architect appointed: Charles F. Dean. Conference held in State Architect's office. The project involves the donation of a site to the State. No action can be undertaken with drawings until site is secured. Adjutant General Howard has been so advised.

14-31 10. Library and classrooms, Chico State Teachers College. 117,000 00

Architect appointed: Chester Cole. Conference held in State Architect's office. Must wait for program of requirements as furnished by Mr. Hill of the Department of Education. Requirements to be available February 23, 1931.

7-31 11. Superintendent's cottage and ward buildings, State Nar-

cotic Hospital. 55,000 00

Architect appointed February 12, 1931: Frederick H. Eley. Conference held in State Architect's office and conference being held today at Narcotic Hospital, instructions to be given and preliminary studies will commence immediately.

23-31 12. Dairy unit, Patton State Hos- 25,000 00

pital. Architect appointed February 13, 1931: G. Stanley Wilson. Conference held in State Architect's office and conference being held today at Patton Hospital, instructions to be given and preliminary studies will commence immediately.

22-31 13. Ward building, Norwalk State 75,000 00

Hospital. Architect appointed February 11, 1931: Gilbert Stanley Underwood Co. Conference held in State Architect's office and at Norwalk State Hospital. Instructions given and preliminary studies being made.

28-31 14. Ward building and dairy unit, 60,000 00

Pacific Colony. Architects appointed February 11, 1931: Walker & Eisen. Conference held in office of Walker & Eisen with State Architect. No action on drawings can be undertaken until selection of sites is determined by Department of Institutions.

6-31 15. Armory at Pasadena, California National Guard. 50,000 00

Architects appointed February 11, 1931: Bennett & Haskell. The project involves the donation of a site to the State. No action can be undertaken with drawings until site is secured. Adjutant General Howard has been so advised.

20-31 16. Ward building, Mendocino 90,000 00

State Hospital. Architect selected February 17, 1931: Martin A. Sheldon. Conference held in State Architect's office. Mr. Sheldon to confer with Dr. Crowley, who, we understand, will be appointed the new Medical Superintendent at the Mendocino State Hospital, effective March 1, 1931. Mr. Sheldon expects to confer with Dr. Crowley in San Francisco, if possible, immediately.

13-31 17. Additional classrooms, San 100,000 00

Francisco State Teachers College. Architect appointed February 17, 1931: S. Helman. Conference held in State Architect's office. Must wait for program of requirements as furnished by Mr. Hill of the Department of Education. Requirements to be available February 28, 1931.

16-31 18. Training school, Santa Bar- 70,000 00

bara State Teachers College. Architect appointed February 19, 1931: Wm. A. Edwards. Conference held in State Architect's office. Project involves a layout of roads and walks of campus surrounding building site as decided by Department of Education and Division of Architecture. This will be started immediately.

6-31 19. Armory at Salinas, appoint- 35,000 00

ment not made. Architects appointed: Powers & Ahnden, San Francisco. Appointment made February 20, 1931.

29-31 20. Cottage for boys, Sonoma 75,000 00

State Home. Architects appointed: Powers & Ahnden, San Francisco. Appointment made February 20, 1931.

(Continued on page 25.)

Commission States Policy Relative to Highway Additions

AT THE meeting of the California Highway Commission on February 26th, upon unanimous vote of the members of the Commission, the following statement of policy was issued to the press:

"The California Highway Commission at its meeting on January 29, 1931, passed a resolution by unanimous vote approving and endorsing Senate Bill No. 46 providing for the orderly addition of highways after proper engineering study to the secondary State highway system.

"It is the opinion of the California Highway Commission that additions of highways to the State system in an orderly manner after proper study and consistent with the financial ability of the State to improve and maintain its roads, is imperative if the State highway system is to be adequately developed and protected.

"The California Highway Commission accordingly reaffirms its support of Senate Bill No. 46 and its companion measure in the Assembly, and expresses the hope that these measures will be enacted into law without amendment."

NEWSPAPER COMMENT ON HIGHWAY MATTERS

Plans For Roadside Buildings.

This is from the *Santa Barbara News*:

Free architectural assistance will be given by the county planning commission to property owners who are planning commercial buildings along the State or county highways outside of the incorporated cities of the county, according to L. Deming Tilton, executive officer of the Commission.

Some weeks ago the Commission announced free architectural assistance to ranchers who were planning to build new homes or remodel old ones. The announcement aroused interest among property owners interested in other development in the rural parts of the county and their inquiries led to the offer of assistance in building store structures and other commercial improvements.

It is Tilton's hope that by establishing a high type of rural architecture in the county its development can be influenced and eventually the rural part of the county may become as famous as Santa Barbara city for attractive and harmonious architecture.

"The Rocks" Protected

The following item is from the *Watsonville Register*:

With the view of reassuring residents of this vicinity of the intention of the Highway Commission to preserve the natural beauty of "The Rocks," scenic spot on the Watsonville-San Juan road, in the proposed highway routing through that section, L. H. Gibson of San Luis Obispo, District Engineer of the

HIGHWAY COMMISSIONERS PRESENT GOVERNOR WITH MINIATURE OF CAPITOL

(United Press News Article)

A tiny wooden shack, painted blue and gold and equipped with a miniature dome, is California's State Capitol whenever Governor Rolph goes to his ranch in San Mateo County.

The building was donated to the Governor by members of the State Highway Commission after the Governor had presented the State with a strip of land through his property for the Bayshore highway.

It is now equipped with lights, heat and telephone, and one of the Governor's ranch hands has painted a large sign, reading, "Governor's Office," above the entrance.

State Highway Commission, was in the city yesterday with John T. Porter for a conference with the Pajaro Valley Chamber of Commerce and newspapermen.

According to Gibson, considerable misunderstanding has arisen as to the fate of "The Rocks" in the proposed highway construction, as a result of which F. E. Barney of Gilroy, a "Rocks" property owner, is said to have circulated a petition in Gilroy and vicinity to have the road routed to the north, missing "The Rocks" entirely.

"Regardless of what has been said or done," said Gibson, "our purpose is to put the road through in a manner that will in no way mar the beauty of the spot. The proposed route will follow practically the same course as the existing road, in keeping with the necessity of straightening out curves and filling in. The route we favor follows along the edge of oak groves without destroying them and scratches only one rock on the whole route."

Gibson expressed himself as opposed to the petition advocating a routing north of "The Rocks."

"By following such a course," he said, "The Rocks" would be shut off from view from the road entirely, which we do not believe would coincide with the wishes of the majority of interested parties in this vicinity."

Highway Bottle Breakers Fined.

The *Pacific Palisades* prints the following article:

Throwing glass bottles from a moving automobile upon a public highway endangering the lives and property of other people is an expensive pastime when apprehended.

Dana C. Henry, 1332 Sixth Street, Venice, found that out when he was taken in to Malibu Justice Court on a complaint sworn to by James A. Stauff, in charge of the Maintenance Department of the State Highway. Henry pleaded guilty to the charge, and inasmuch as the bottle contained liquor Judge Webster fined him \$50.

Highway Tree Planting.

The *Indio Date Palm* publishes the following article:

E. W. Campbell, who has been in the service of the State Highway Department during the past two

years, is in charge of the planting of trees in the three counties of San Bernardino, Riverside and Imperial. Of late he has been giving personal attention to the planting of Arizona ash along the highways in the Coachella Valley. The Arizona ash is said to be a very fine tree, and is adapted to this location.

Order Wings Built on L. A. State Building.

State Finance Director Rolland A. Vandegrift announced tonight he has directed John C. Austin, Los Angeles architect, to proceed with plans for wings of the Los Angeles State Building now in process of construction.

This is in line with the Finance Director's belief that a material saving to the State can be effected by building the proposed wings along with the main structure, instead of waiting until a later date, as previously had been planned. He estimated the saving at \$200,000.

To Rebuild Famous Pioneer Highway Sections.

The following article is from the *Placer Gold* at Loomis:

The State Highway Commission is planning to get to work early on all road work as an aid to the unemployment situation, and one of the first pieces of work will be on the course of more than a mile of the historic Auburn Ravine, where gold was first discovered in this county.

It was at the head of Auburn Ravine Forks, just about where the new highway will end, that Claude Chana in May, 1848, found gold in the Auburn district. At that time what is now known as Auburn was called Wood's Dry Diggings.

The finding of gold by Chana started the mining boom that resulted in the founding of the city of Auburn.

Highway Worker Injured.

The *Redding Searchlight* prints the following article, which illustrates the peril of highway building:

A broken right arm and a wrenched back were suffered by Earl E. Miller, powder man for the State Highway Commission, when he slipped on a bluff near Ingot and was struck by a rock as he fell. Miller was employed on construction work near Ingot.

Congress Saves Scenic Spots in Orange County.

Passage of the bill introduced by Congressman Phil D. Swing to reserve for public ownership all rocks, reefs, pinnacles and small islands off the Orange County coast, was announced here today in a telegram from Con-

Maintenance Men Are Commended for Aid in Accident

The following letter received by State Highway Engineer C. H. Purell, from C. G. Bulli of Los Angeles is self explanatory. The letter reads:

I want to take this opportunity as a disinterested bystander of expressing my sincere appreciation of the very fine work done by your foreman, Mr. V. S. Ver Bryck, whom I understand is foreman of a San Bernardino division.

I happened to be instrumental in summoning aid for two boys who skidded on a wet pavement and went over the embankment from Cajon Pass. It just so happened that the house where I called was the residence of Mr. Ver Bryck. He summoned his crew in a most skillful, expeditious manner, got the car up the seventy-five foot embankment to the highway, straightened it out, adjusted the boys' lights, etc., so they could continue on their trip into Los Angeles. This was done to help these two 16-year-old boys and without any pay or reward to Mr. Ver Bryck whatsoever.

I think it is unjust that such a splendid spirit of community helpfulness and such a fine impression of the duties of his office should go unnoticed, even though as I say, the gentleman is an entire stranger to me. It materially increased my already warm admiration for the efficiency and personnel of the State Highway Department.

A MOTORIST'S PRAYER

One enthusiastic motorist apparently believes that safety driving rules are applicable for all of life's conduct, it is indicated in a communication reaching the Automobile Club of Southern California. This motorist suggests that the following prayer be pasted on all windshields where the driver might constantly have it in view:

"O, Lord, teach us to drive through life without skidding into other people's business. Preserve our brake lining, that we may stop before going too far. Help us to hear the knocks in our motors and close our ears to the clashing of other people's gears. Keep alcohol in our radiators and out of our stomachs. Absolve us from the mania of trying to pass the other fellow on a narrow road. Open our eyes to the traffic signs and keep our feet on the brakes. Amen."

The motor vehicle industry of the United States and the various affiliated enterprises employed a total of 4,700,000 persons last year.

gressman Swing to Postmaster T. E. Stephenson, Santa Ana, says the *Anaheim Bulletin*.

The bill passed the Senate with minor amendments, in which the house concurred today, Swing's message said, and the bill now will go to President Hoover for his signature.

The measure was prepared after private parties attempted to assert ownership of certain rocks along the coast at Laguna Beach.

Vol. 9 MARCH, 1931 No. 3

Motor Violators' Record To Be Kept By Highway Patrol

COMPLETE records will be kept hereafter by the California Highway Patrol of all persons convicted in California of major violations of the Motor Vehicle Act.

These records will be kept in alphabetical order thus enabling the patrol to keep a check on the habitual violator by noting each new offense committed.

The records will be taken from abstracts of convictions forwarded to the patrol by court officers as provided under section 156 of the act. Should two or more major violations by the same person be recorded within a short period, the patrol will make an investigation and either warn the offender or cause his license to be canceled.

A similar system of records covering drivers involved in major accidents was inaugurated some time ago and is functioning satisfactorily, it was announced.

Working under the supervision of Superintendent E. Raymond Cato, the Bureau of Statistics is now checking the records of the 119,879 convictions of violations or forfeitures of bail reported during 1930. The officials estimate this is about 80 per cent of the total number of convictions during the year, many Justices and court officers failing to report their abstracts as required by law.

Of the total reported, 49,300 were from Los Angeles County courts, 7835 from Alameda, 6697 from San Diego and 5631 from Riverside.

Court officers were urged to assist in increasing the efficiency of the new records by reporting all convictions as required by the act.

Iowa built 1000 miles of road in 1930.

A REAL EXPERT WITNESS

A young foreigner was being tried in court and the questioning by the lawyer on the opposite side began.

"Now, Laszky, what do you do?"

"Ven?" asked Laszky.

"When you work, of course," said the lawyer.

"Y, work—"

"I know," said the lawyer, "but what at?"

"At a bench."

"Oh!" groaned the lawyer. "Where do you work at a bench?"

"In a factory."

"What kind of a factory?"

"Brick."

"You make bricks?"

"No; de factory is made of bricks."

"Now, Laszky, what do you make in that factory?"

"Eight dollars a week."

"No, no! What does the factory make?"

"I dunno; a lot of money, I think."

"Now listen! What kind of goods does the factory produce?"

"Oh," said Laszky, "good goods."

"I know; but what kind of good goods?"

"The best."

"The best of what?"

"The best there is."

"Of what?"

"Of dose goods."

"Your honor," said the lawyer, "I give up!"

CHINA'S HIGHWAY PROBLEM

With more than four hundred million people living in an area somewhat larger than the United States, China has only 35,000 miles of road, with only about 2000 miles paved. In the whole country there is less than 8000 miles of railroad and only 30,000 motor vehicles.

Chinese engineers who attended the recent International Road Congress in Washington presented the situation as a problem of world importance. Handicapped by lack of funds, China faces the necessity of getting food through to starving millions.

Government funds are so limited that the national program as now laid out calls for only 25,000 miles of main roads in a period of twenty years.

The average retail price of passenger automobiles sold in the United States during 1930 was \$800.

STATE WATER PLAN RECOMMENDATIONS ARE GIVEN GOVERNOR AND LEGISLATURE

(Continued from page 4.)

Contra Costa County conduit will adequately and economically serve the present needs.

5. The water supply in the San Joaquin River Basin is insufficient to meet the ultimate water requirements in that basin. Importation from the Sacramento River Basin, the logical source of a supplemental supply, would be required for full development. By the utilization of the physical works proposed herein, including underground storage capacity in the upper San Joaquin Valley, and operated in conjunction with the physical works in the Sacramento River Basin, an adequate and dependable supply could be made available to all the net irrigable lands in the lower San Joaquin Valley, 1,810,000 acres and all the good lands (classes 1 and 2), 3,135,000 acres in the upper San Joaquin Valley, after allowing 688,000 acre-feet annually for the irrigation of 246,000 acres of net irrigable area in the eastern foothills, a total net irrigable area of 5,191,000 acres.

6. There are approximately 402,000 acres of highly developed irrigated land in the upper San Joaquin Valley which are overdrawing the water supply locally available. In order to prevent retrogression in this region, supplemental water must be imported from an outside source. These lands have not the financial capacity to bring in such a supply.

7. The construction of the works proposed herein for the Santa Ana River Basin would save about 90 per cent of the water now wasting into the ocean.

8. The units proposed for initial development in the Great Central Valley could not be financed from revenues which could be obtained from the sale of water and electric energy. Income from other sources must be obtained in order to finance the development.

9. Many interests would be substantially benefited through the consummation of the Great Central Valley and San Francisco Bay project. If these benefits were assessed to those interests benefited, sufficient income might be derived therefrom to carry the additional financial burden not capable of being carried by revenues from the sale of water and electric energy.

10. The flood control and navigation benefits which would result from the operation of the units of the initial development in the Great Central Valley would be so substantial that financial participation may well be expected from the Federal government.

11. The execution of a State water plan under the present status of the law, might be long delayed by injunction suits by many claimants in many courts and might be made utterly burdensome by awards of excessive compensation in condemnation proceedings. A constitutional amendment should be drawn to provide a revised law of eminent domain administered by an agency having State-wide jurisdiction and properly constituted and empowered so that those entitled to compensation could be speedily and fairly provided for without undue difficulty, delay, or expense in the prosecution of the plan.

SUPPORTING BULLETINS

Six of the supporting appendices to the final report also were transmitted with it to the Governor and the Legislature. These were:

Bulletin 28A, "Industrial Survey of Upper San Francisco Bay Area."

Bulletin 31, "Santa Ana River Basin."

Bulletin 32, "South Coastal Basin."

Bulletin 33, "Rainfall Penetration and Consump-

Accidents at Grade Crossings in 1930 Decrease 6 Per Cent

GRADE crossing accidents in California decreased 6 per cent, and the casualties resulting from such accidents were 10 per cent less during 1930, than in 1929, President Clyde L. Seavey of the Railroad Commission has announced.

This record is remarkable, President Seavey points out, in view of the fact that there was an increase of approximately 20 per cent in the number of traffic accidents of all kinds occurring on the highways of the State during 1930.

In pointing out that the number of grade crossing accidents and casualties during 1930 did not keep pace with the sharp increase shown by general highway accidents, President Seavey made the following statement:

"The decrease in grade crossing accidents and casualties during 1930 may be attributed to a number of reasons, such as additional protective devices at grade crossings by order of the Commission, more careful observation by drivers of vehicles of the provisions of section 114 of the Motor Vehicle Act, which requires motorists to stop before crossing railroad tracks when a danger signal is displayed, indicating the immediate approach of a train; or to the general education and special work of various public and civic organizations which are making special drives to reduce all classes of highway accidents. However, the reduction in grade crossing accidents alone is an indication that our work is bearing results."

According to a report filed with the Railroad Commission by Joseph G. Hunter, transportation engineer of the Commission, there were 2755 grade crossing accidents during 1930, resulting in 204 deaths, and the injury of 877 persons. In 1929 the grade crossing accidents numbered 2929, with 213 persons killed and 993 injured. These figures include all grade crossing accidents, whether at public or private crossings, or accidents occurring between crossings.

According to records compiled by the State Division of Motor Vehicles the number of traffic accidents increased from 26,921 in 1929, to 31,019 in 1930. The number of persons killed in motor accidents increased from 2244 in 1929, to 2384 in 1930, while the number of persons injured in highway accidents jumped from 25,443 in 1929, to 41,237 in 1930. The number of vehicles involved in accidents in 1930 showed a new high record of 47,965, as against 40,877 in 1929.

Use of Water in Santa Ana River Valley and Coastal Plain."

Bulletin 34, "Permissible Annual Charges for Irrigation Water in Upper San Joaquin Valley."

Bulletin 36, "Cost of Irrigation Water in California."

Of the seven reports sent to the Governor and the Legislature, four are printed and available to the public at this time. These are numbers 28A, 31, 32 and 34. Bulletin 25 is expected to be received from the printing office in about ten days.

Courtesy of Highway Patrol Wins Praise From Motorists Aided

AUTO SHOW EXHIBIT APPRECIATED

From James A. Myers of Oakland: This is just a note commending the very interesting and excellent exhibit of the State Highway Patrol at the Automobile Show at the Civic Auditorium in San Francisco, under the direction of District Inspector Charles Reade and Captain Arthur O'Connor. I also noted during the time I spent there, the courteous attention given to the public by the several officers in attendance at the exhibit. I trust that next year may give us an opportunity for a similar inspection of State work.

AID GIVEN AUTOIST

From E. L. Jameson, Redding: Jointly with my wife, I wish to extend my kindest thanks to the California Highway Patrol for the courtesies extended to my wife by J. R. Franck, who so kindly brought her home to Redding, sick, when the car she was riding in was broken down and unable to come further.

KINDNESS TO INJURED DOG

From Mrs. D. F. Spangler, Encinitas: We want your Bureau to know that your officers are not only rendering assistance to human beings, but to "our four-footed friends" as well, and we wish to heartily commend the action of Officer H. N. Coates of Oceanside, for the humane service rendered when he found our police dog "Princess Pat" seriously injured, on the highway near Encinitas.

To the passing public, she was "only a dog" and they had neither time nor inclination to render assistance, but to Officer Coates she was "somebody's pet" and suffering, and could not voice her complaint that she had two badly broken legs, to the people who stopped, looked at her and only said "Poor dog." Due to this officer's timely aid, Princess Pat is recuperating in the hospital and joins us in most sincere appreciation of your efficient organization.

COURTEOUS WARNING BRINGS THANKS

From Mark A. Hall, Los Angeles: On January 17th, I was driving with my family south on the highway leading from Santa Ana to Balboa. I failed to notice, until too late, a 15-mile zone sign, and ran past it at a speed in excess of that rate. Presently I was accosted by Traffic Officer Bradford, No. 169, who called my attention to the violation.

Officer Bradford was very courteous, but at the same time showed a commendable zeal in cautioning me against violations of the law. I wish to commend him both for his politeness and his efficiency. If all officers would adopt such an attitude in the performance of their duty, I am sure that motorists as a class would be more cooperative in obeying the law.

AIDED WINTER SPORTS CARNIVAL

From F. E. Wadsworth, Superintendent of Recreation Camps and Playgrounds, Los Angeles County: I want you to know that we, of the Los Angeles Big Pines Recreation Camp, greatly appreciate the fine cooperation your motorcycle officers gave us during the Fifth Annual Winter Sports Carnival, in handling the traffic over the Cajon Pass and Lone Pine Canyon.

We had in excess of 30,000 people during this carnival and as far as we can learn, the traffic was handled without an accident. A great part of this is due to the fine work your men did in patrolling the roads and I want you to thank each and every one of them for me. Assure them that they are always welcome at the Big Pines Camp and we are glad to have them drop in at any time.

From Leonard Taylor, Sacramento: Last Monday, while motoring, I had some trouble with my distributor at Del Paso Park, and discovered a broken part.

At that time a highway patrolman came along and stopped to inquire of my trouble and then very gladly offered to procure one part which was broken at Roseville as he was on his way there, and bring it back with him, which he did for me.

I did not ask his name but got his star number, so I wish to thank Patrolman No. 89 for his very kind attention shown me and to comment on the efficiency of your State highway patrolmen.

From Joseph M. Murphy, Portland: I am writing you in regards to one of your officers, Mr. John S. Shopper. On February 2d, 1931, I was coming from Greenville, California, to Red Bluff, California, and about two miles south of Mineral I met with a little car accident on account of the icy roads, run off the highway and struck a tree.

A car passed me and went on by, and he met Mr. Shopper some few miles down the road. And reported the accident to him. In a few minutes Mr. Shopper drove up in his car and gave me first-aid, as I had quite a severe cut on my right hand. He then took me in his car and drove to Mineral where I had the garageman come and pull my car back on the road, and I got into Red Bluff all right.

I feel that I owe this to Officer Shopper, as he certainly gave me some wonderful help in the predicament I was in. And I would like to have you let him know his help and courtesy, to the extent that his superior officer should know about same.

STATE-WIDE CONTEST FOR BETTER ROADSIDE BUILDINGS SUGGESTED

(From the Santa Barbara News.)

The proposal for a state-wide architectural competition for roadside commercial structures, which was made some time ago by the planning committee of the Community Arts Association, has been received enthusiastically by individuals and organizations in all parts of California, according to Miss Pearl Chase, chairman of the branch.

The Santa Barbara chapter of American Institute of Architects has approved the proposal and an announcement of the competition will be published and distributed up and down the coast.

The state highways throughout California, attracting, as they do, hundreds of thousands of tourists every year and millions of motorists, have developed property fronting on them into valuable commercial sites. The plans committee of the local association appreciates that commercial development of this property will continue to increase as the population of the state grows. It hopes that by this competition prospective builders of roadside establishments will be convinced that an attractive building is a great commercial value and important to the success of any roadside venture.

New York established the first state highway department in 1891.

STATE EDIFICES IN SOUTH DEDICATED: GOVERNOR JAMES ROLPH IS CHIEF SPEAKER

(Continued from page 6.)

ing at the luncheon was confined to the address by the Governor. Governor Rolph captured the gathering with a characteristic address, which combined good humor and optimism with a close analysis of present conditions.

At the close of the Governor's address the assemblage adjourned to the Armory building at California Avenue and Seventh Street for the formal dedication ceremony. An improvised platform was occupied by the Governor and his party, and a large audience occupied chairs arranged in the open court at the rear of the building.

Lieutenant Governor Merriam continued as presiding officer, and at once introduced Governor Rolph who delivered the dedicatory address.

Governor Rolph was followed by General Howard whose address dealt with the National Guard and its various aspects.

Following General Howard several guests including State Architect George B. MacDougall were called on for brief remarks.

Major Harris of the National Guard of Long Beach, who with his coworkers is largely responsible for obtaining the armory, was presented and in turn presented to the assemblage various members of his organization.

Architecturally the Long Beach armory represents a free military design clearly expressive of its purpose. Its large drill hall is emphasized as the important unit of the plan. It is connected to the wing containing clerical and other offices by the interposition of a dignified and vigorous tower.

The building is of reinforced concrete. The exterior of the rough concrete walls has been tooled to produce a very rugged texture and an effect specially appropriate to a building having a military function. The building has a capacity for four companies of the National Guard, the drill hall itself being 71 by 98 feet. There is a basement extending through the entire area of the office wing. The grounds about the building are being landscaped. The cost of the building with its equipment is approximately \$150,000. The fine corner property which constitutes the site was provided free of cost to the State by the city of Long Beach.

This building is the first of a group of comparatively small armory buildings soon to be erected throughout the State. Financial pro-

March 1st Report Shows Snow Light on Mountain Courses

THE March report of the Division of Water Resources' monthly bulletin of snow and precipitation data furnishes the results of snow surveys made in the latter part of February at the "key" snow courses throughout the state and presents all of the available data to March 1st from those precipitation stations of the U. S. Weather Bureau, state, districts, and public utilities located in the mountainous portions of the various stream basins.

The water content of the snow as determined at the various snow courses on March 1st of this year in per cent of the water content on March 1, 1930 varies throughout the Sierra from 50 to 95 per cent and by stream basins is as follows: Upper Sacramento and McCloud (one course) 55 per cent; Feather (2 courses) 50 per cent; Yuba (4 courses) 75 per cent; American (3 courses) 70 per cent; Mokelumne (2 courses) 70 per cent; Stanislaus (3 courses) 65 per cent; Tuolumne (6 courses) 70 per cent; Merced (6 courses) 95 per cent; Mono (2 courses) 60 per cent; Upper San Joaquin (one course) 95 per cent; Kings (one course) 70 per cent.

In those few areas where snow surveys have been made a sufficient number of years to permit the development of "normals" the water content of the snow in per cent of the normal water content for the entire season (as of April 1st) is found to be: Yuba Basin (3 courses) 50 per cent; American and Mokelumne Basins (one course each) 45 per cent; Mono Basin (2 courses) 30 per cent; Upper San Joaquin Basin (one course) 40 per cent.

In the South Yuba Basin the records permit a comparison between this year's snow and that in 1924, the driest year of record. An average of two courses in this area indicates a water content of the snow on March 1, 1931, amounting to 145 per cent of the water content on March 1, 1924.

The data from the precipitation stations show the average precipitation to March 1st in per cent of the normal to the same date varying throughout the state from 50 to 85 per cent and by stream basins as follows: Upper Sacramento, McCloud and Pit, 50-60 per cent; Feather and Yuba, 55 per cent; American, 60 per cent; Mokelumne, 65 per cent; Stanislaus, 80 per cent; Tuolumne and Merced, 65 per cent; Mono, 60 per cent; Upper San Joaquin, 55 per cent; Owens, 50 per cent; Kings, 55 per cent; Kaweah, 65 per cent; Kern, 70 per cent; Santa Ana and Los Angeles, 75 per cent; and San Gabriel, 85 per cent.

vision has already been made for other armories at Pasadena, Salinas and Yuba City and additional similar projects at San Jose and Fresno are under consideration.

The importance and dignity of the National Guard is by this practical means getting continuously increasing recognition from the State.

Data is Asked on Grade Crossing Cost Distribution Practices In Other States

FOR the purpose of obtaining comprehensive information as to the policies and practices of other states in the protection of grade crossings, and as to how the cost of such protective equipment and construction is provided for, the Transportation Division of the Railroad Commission has sent a questionnaire to all regulatory bodies having jurisdiction over grade crossings throughout the country.

The object of the Commission is to ascertain how California compares with other states in this important work. An important feature of the questionnaire is an inquiry as to the apportionment of the cost of grade crossing protective work between the railroads and the political subdivisions, and especially in the case of grade separations.

In transmitting this questionnaire the Commission enclosed answers to the various questions as they relate to California conditions, showing the number of grade crossings in the State with special protective devices, and the general policies of the Commission in handling grade crossings and grade separation problems.

The following data in regard to California is furnished in the questionnaire:

Number of crossings protected with wigwags: with audible signals, 1,563; without audible signals, 36.

Number of crossings protected with flashing lights: with audible signals, 7.

Number of crossings protected by rotating stop-flash light signals: with audible signals, 3.

In the absence of an agreement between the parties the expense of constructing and maintaining grade crossings and installing protective devices generally is apportioned by the Commission between the railroad and the interested political subdivision as follows:

<i>At existing crossings:</i>	<i>Railroad</i>	<i>Political subdivision</i>
Cost of improving or widening a crossing -----	100% of crossing proper	-----
Cost of installing protective devices -----	100%	-----
Cost of maintaining protective devices -----	100%	-----
<i>At new crossings—railroads over highways:</i>		
Cost of constructing the crossing -----	100%	-----
Cost of maintaining the crossing -----	100%	-----
Cost of installing protective devices -----	100%	-----
Cost of maintaining the protection -----	100%	-----

At new crossings—highways over railroads:

Cost of constructing the crossing -----	100%	-----
Cost of maintaining the crossing -----	100%	-----
Cost of installing protective devices -----	-----	100%
Cost of maintaining the protection -----	100%	-----

The cost of grade separations in California is apportioned in most cases, except when covered by an agreement between the parties, as follows:

<i>At existing grade crossing to be separated:</i>	<i>Railroad</i>	<i>Political subdivision</i>
Cost of constructing the separation -----	50%	50%
Cost of maintaining the separation -----	-----	-----
	Track and supporting structure	Remainder

At new grade separations—New railroad and existing Highway:

Cost of constructing the separation -----	100%	-----
Cost of maintaining the separation -----	-----	-----
	Track and supporting structure	Remainder

At new grade separations—New highway and existing railroad:

Cost of constructing the separation -----	25%	75%
Cost of maintaining the separation -----	-----	-----
	Track and supporting structure	Remainder

At locations where existing separations are to be enlarged or improved:

Cost of construction -----	50%	50%
Cost of maintenance -----	-----	-----
	Track and Supporting structure	Remainder

IT'S ALL IN THE STATE OF MIND

If you think you are beaten, you are:

If you think that you dare not, you don't;
If you'd like to win, but you think you can't
It's almost a "cinch" you won't.

If you think you'll lose, you've lost,
For out in the world you'll find
Success begins with a fellow's will,
It's all in the state of mind.

Full many a race is lost

Ere even a step is run,

And many a coward fails

Ere even his work's begun.

Think big, and your deeds will grow.

Think small and you'll fall behind.

Think that you can and you will;

It's all in the state of mind.

If you think you're outclassed, you are;

You've got to think high to rise;

You've got to be sure of yourself before

You can ever win a prize.

Life's battles don't always go

To the stronger or faster man.

But soon or late the man who wins

Is the fellow who thinks he can.

—Clipped.

He: Yes, I changed schools.

She: Oh! I'm so glad. I never did like engineers, for they always leave blueprints on your neck.—
Aggievator.

TEXT OF REPORT OF GOVERNOR ROLPH'S STATE WATER CON- SERVATION COMMITTEE

(Continued from page 16.)

has badly overdrawn or exhausted the underground water supplies. In this area about 400,000 acres now under irrigation of a high type and supporting a large population are seriously short of water, and it is estimated in the Federal State report that unless new water can be brought in 200,000 acres of highly developed land worth \$50,000,000 and producing crops of an annual value of more than \$20,000,000, must largely go back to desert conditions. The Commission finds the Sacramento-San Joaquin relief project economically sound and goes on to state:

The Commission reached this conclusion without giving weight to the sentimental consideration that relief is essential if a large, highly developed and heretofore prosperous section is to be preserved. But that consideration is entitled to weight. Putting aside the loss of labor and capital already invested, it is not possible for these sections to go back in a large part to their original desert condition without a great toll of human misery and suffering. This misery and suffering will just as surely be present as if the calamity were one of earthquake or flood, and the occasion is as truly one which justly calls for governmental assistance if the communities themselves can not bear the burden alone. In this case we believe they can bear the burden, if this burden is thrown on all the portions of the State benefited and not entirely on the lands directly assisted. Even if this were not so, our recommendation would still be that the project was one worthy of State and Federal aid.

In Tulare County, about the center of this distressed area, some 10,000 acres have already been abandoned and assessed valuations are decreasing.

We believe, Mr. President, that a project of this kind, economically sound, involving no material increase in production, but rescuing 400,000 acres of valuable irrigated land from depreciation or destruction should be of more interest to the United States than an entirely new land project.

New water can best be brought into the Southern San Joaquin Valley by means of the storage of an equivalent amount in the Sacramento water shed. This brings us to new areas of distress with different problems.

While the Sacramento drainage produces more water than the Colorado and far more than the ultimate needs of its own basin, in its present unregulated condition the summer flow has dropped so low that salt water from Suisun Bay has worked up the channels of the Sacramento-San Joaquin Delta. This condition has resulted in curtailing irrigation to some extent and in endangering the whole delta section of over 300,000 acres of extremely fertile lands which produce crops valued annually at \$30,000,000, as well as creating a fresh water shortage in the industrial section along Suisun Bay. This situation has been brought about by several causes, chiefly upstream diversions for irrigation. For the same reason navigation has been badly impaired in the upper Sacramento River and more so in the San Joaquin River above the delta. At the same time flood control is a necessity in the Sacramento Valley and there is an existing project under way at this time to cost \$51,000,000 in which the United States, the State, and local interests each pay one-third.

The Government of the United States is as we feel directly concerned in the solution of the pressing water

problems of these areas, particularly because of its interest in navigation, flood control, reclamation and the rescue of existing developments from threatened destruction.

For ten years past the State has studied these water problems in great detail, and a general Sacramento-San Joaquin Valley plan to best overcome them has been presented. This plan has been reviewed by the best engineers of California, and by the engineers of the War Department and the Reclamation Bureau and there is substantial agreement as to its being the best solution.

Large storage on the Sacramento River at Kennett near the head of the valley would be provided. The stored water when released would flow down the river to the Delta and be available for transmission into the San Joaquin Valley. Storage would be necessary on the San Joaquin River at Friant, 30 miles north of Fresno, from which point a high line canal would be taken south 157 miles to the Kern River.

This plan, if executed, would solve all of the problems mentioned and have other advantages. It would materially assist navigation and flood control on both rivers, would eliminate the salinity trouble and would rescue and relieve the southern San Joaquin Valley from the destructive effect of water shortage.

This project is estimated to cost about \$160,000,000 total. The construction of certain items essential to the program costing approximately \$20,000,000 can possibly be safely deferred some years, however, the entire program should be authorized at one time.

Revenues from sale of water are calculated on the basis of the reasonable ability of the lands to pay and from sale of power at competitive prices. While these revenues are large they are not sufficient to meet the total annual costs, and the Federal State Commission concluded that the project could not be undertaken without State and Federal aid.

Basing computations on an interest rate not to exceed 3½% the project was found economically sound if all benefits direct and indirect were taken into consideration. The Commission then stated:

It is manifest that the Federal government alone can obtain money at 3½ per cent interest. It may well be that it can obtain or be willing to advance the money at a less rate of interest. It may also be that the Federal government will be willing to advance funds for construction of certain portions of the project without interest.

The Commission recommended that the project be financed and built by the United States and operated by the State as far as practicable, the State of California to guarantee the United States payment of interest and principal as due, less such amount as the United States would contribute on account of flood control and navigation. The difference between the annual costs and the revenues would be taken care of within the State.

The conclusions of the State reports are now completed. Reports are under way by the War Department and Bureau of Reclamation which we understand will be available shortly.

Mr. President, we are seeking your counsel and advice on all phases of this subject. Advice at this time will be particularly valuable since the California Legislature reconvenes late this month, will adjourn in April, and will not meet again until 1933. Without better information relative to the participation of the United States in this project than is now available it is doubtful if much can be accomplished in the 1931 Legislature.

We have available detailed information and would be happy indeed to explain any items further.

Washington, D. C., February 16, 1931.

Budgeting Is Urged for Highways

WASHINGTON, D. C.: In order to successfully carry out the mandate of the people in the great enterprise of road building, state highway officials are turning their attention more closely than ever to the proper budgeting of highway expenditures. This they conceive to be the first and most essential step toward keeping the road dollar at work where it logically belongs.

First, the necessary capital for highway construction, and second, the best and most effective and far-reaching use of that capital, according to a bulletin issued by the American Association of State Highway Officials, is the goal set for the new period upon which road builders are now entering.

At the recent annual meeting of State highway officials at Pittsburgh, the bulletin states, the matter of proper budgeting of highway expenditures was taken up as one of the important subjects for consideration and definite action.

A highway budget, it was agreed, should be defined as the total annual amount available for expenditures in each state for highway purposes, and should be adjusted to meet the annual requirements of maintenance and construction contemplated. Further, all road improvements should be made on a basis of present and probable early future earning capacity. No public works should be measured by immediate financial return, though this should be a major consideration in the selection of the character of improvement.

The wide variance in the present status of highway development in the several states, members of the Association agreed, prevents the adoption of uniform policies for securing the funds necessary for the annual budget. Generally speaking, however, these principles may be set forth as follows:

"States in the initial stage of highway development should issue bonds to defer that portion of the annual charge for construction which would overburden either the property or the road user.

"States where original construction programs are well under way can, in the main, finance normal new construction from current funds, utilizing bond issue funds to defer the cost of special projects.

"States where original construction is

largely completed are concerned chiefly with maintenance and reconstruction, and should depend on current funds save in cases of emergency.

"State highway bond issues should be serial in form and should mature over a period not exceeding 30 years.

"Highway bonds issued by a political subdivision of a state should be serial in form and should mature over a period not exceeding 20 years.

"Serial maturities should be arranged so that the annual requirements of principle and interest will be as nearly uniform as practicable.

"Sound financing requires that the retirement of state bonds, as well as the interest thereon, be provided for from the receipts of motor vehicle license fees and gasoline taxes, but the full taxing power of the state should be authorized to guarantee the principle and interest, not only as a provision in case of failure of these special levies, but also to secure a lower rate of interest from the purchasers of the bonds."

The above statements constitute the revised principles of highway administration and finance and may be taken as a safe guide for such work as may come up in the various states.

SOME COMPARISONS

Recent announcement of the crossing of the continent from New York to Los Angeles by "Cannonball" Baker in 60 hours and 51 minutes, reducing the previous record time by almost seven hours, suggests a comparison. The first trip between the same cities in an automobile was made in 1903 by Tom Fetch and required 61 days.

There were less than 25,000 automobiles in the country 25 years ago, while today there are more than 26,000,000. There were 153,000 miles of improved road a quarter of a century ago, of which but 144 miles had a high type of surface; today there are more than 600,000 miles of improved highway and another 500,000 miles of usable dirt road.

A new watchman had been employed to sit up nights by the road construction job and see that nobody made away with the red lanterns or other paraphernalia. When he was due to be relieved after his first night on the job, the foreman approached and asked him if everything was all right.

"Well, boss," said the new hand modestly, "I don't want to brag about myself, but I don't think I've done so bad for a beginner. I checked up on everything just before you came, and there's only one thing missing—the steam roller."

Romance for the Civil Engineer

By FRED GRUMM, Engineer of Surveys and Plans

TO A LARGE number of people there is a certain romance connected with engineering. In literature, other than the technical, the engineer is often clothed in glamorous surroundings more or less exaggerated as measured by the author's knowledge of such things. Aside from the exact and scientific nature of the work and methods, there is for many, however, a fascination about engineering work. Exploration, reconnaissance and investigation in new country, the search for feasible routes and favorable conditions necessary toward effecting new development of various kinds, such as highways, railroads, reclamation of land and water, power development, perhaps furnishes the most likely opportunity for the engineer in the development of his romantic urge. This may account for the particular attraction which the survey party offers to the younger engineer.

The surveys of our state highways, especially in new locations and in the heavier mountain areas, are an attractive endeavor for those of us who have the romantic turn sufficiently strong to survive the effect of time and the more prosaic and tedious work. Not only the newness of both country and experience constitute the attraction, but also the difficulties and hazards which the work entails. The difficulties are a challenge to the more venturesome, and overcoming them while contending with the hazards offers a sense of superiority and achievement.

The survey line often leads across and through deep, rugged canyons, over high mountains or runs along precipitous cliffs. Swift and dangerous streams must be crossed. Densely wooded or brushy country is encountered. The lives of several survey party members have been lost in recent years where such conditions prevailed. Crawling for three or four hours on hands and knees through growth so dense that a flashlight is necessary is an experience not soon forgotten. Hanging on the side of a 300-foot cliff taking measurements with only the unsteady support and security of a rope from above should provide

WHAT THE PICTURE SHOWS

Lines indicate some surveying problems and perils along the Feather River Highway, now in course of construction.

a thrill for anyone. Forging a swift treacherous stream of ice-cold water up to the waist on slippery granite rock or shifting sand brings fleeting thoughts of the insecurity of life.

The Horseshoe Bend section of the Kings River Canyon is so inaccessible that to properly carry on the survey it was necessary to first construct miles of trail up the canyon. The deep, rapid waters rush through this canyon between vertical walls sometimes rising to several hundred feet. Even the most venturesome and ambitious young "S. L." up in the Feather River Canyon will have had an opportunity to cut his eye teeth before he gets a chance to negotiate the famous "Onion Peel" cliffs.

To many of our engineers this hazardous feature of the work is appealing, to others just something in the course of a day's work. All of it is to one end: to accumulate the data and facts which will lead to the proper, economic road improvement to serve the traveler. These preliminaries are only incidental to the more prosaic work, the drudgery, the infinite detail study, the close application of attention and care necessary to produce the finished product.

Romance? Yes, we have it in our highway work. To those who know and understand the methods, there often comes a vision, as we drive along some spectacular road, of those who came before, who struggled with the wilderness, its difficulties and dangers, doing their share to provide the safe, wide way we now traverse in comfort.

HOW READING CAN HELP YOU

"Link up reading and action—that is the efficient way to read. Lord Kelvin bought a book on Heat, by a French scientist—Fourier—and it changed his whole life and led to many of his great discoveries. Faraday bought a book on chemistry and became the founder of the present Electrical Age. Westinghouse bought an English magazine and found an article on compressed air that gave him the idea of his air-brake that is now used in all the railways of the world. Henry Ford, too, bought a magazine and saw an article on 'Horseless Carriages' that started him on his way to become the most successful of all manufacturers. The man who does not read, in these days of quick changes and irresistible progress, drops behind and becomes an obsolete and insignificant unit in his trade. Reading is a ladder. You must read if you want to climb."—Herbert N. Casson.

"So you asked Geraldine to marry you?"

"Yes, but I didn't have any luck."

"Why didn't you tell her about your rich uncle?"

"I did. Geraldine's my aunt now."—*Humorist*.

"Sambo, I don't understand how you can do all your work so quickly, and so well."

"I'll tell you how 'tis, boss. I sticks de match ob enthusiasm to de fuse ob energy—and jes natchurally explodes, I does."—*Nashville Tennessean*.

Architects Named To Prepare Plans for Institution Buildings

ADDITIONAL architects since the announcement in the February issue of CALIFORNIA HIGHWAYS AND PUBLIC WORKS have been appointed by Colonel Walter E. Garrison, director of the Department of Public Works, to prepare plans for buildings in state institutions. This is in accordance with the policy of Governor Rolph to speed up the construction of public buildings as a means of bettering business and increasing employment. Appointments made between February 15th and March 15th and the buildings for which they will prepare plans are as follows:

Gilbert Stanley Underwood Co., Ltd., Los Angeles; Ward Building at farm, Norwalk State Hospital; Appropriation, \$75,000.

Walker & Eisan, Los Angeles; Dairy unit and patients farm cottage, Pacific Colony, Spadra; Appropriation, \$75,000.

Bennett & Haskell, Pasadena; National Guard Armory, Pasadena; Appropriation, \$50,000.

Martin A. Sheldon, San Francisco; Ward for untidy, Mendocino State Hospital, Talmage; Appropriation, \$90,000.

Sam Heiman, San Francisco; Additional class rooms, San Francisco State Teachers College; Appropriation, \$100,000.

Wm. A. Edwards, Santa Barbara; Training School, Santa Barbara College; Appropriation, \$70,000.

Powers and Ahnden, San Francisco; School and Gymnasium, Sonoma State Home; Appropriation, \$40,000.

Charles E. Perry, Vallejo, Laundry Building, Mendocino State Hospital; Appropriation, \$60,000.

Guy Koeppe, Salinas and Carmel; New Armory, Salinas; Appropriation, \$35,000.

A lion met a tiger

As they drew beside a pool.

Said the tiger, "Tell me why

You're roaring like a fool."

"That's not foolish," said the lion,

With a twinkle in his eyes;

"They call me king of all the beasts
Because I advertise."

A rabbit heard them talking

And ran home like a streak;

He thought he'd try the lion's plan,

But his voice was but a squeak.

A fox, come to investigate,

Had luncheon in the woods.

So when you advertise, my friend,

Be sure you've got the goods.

—*Metropolitan Mirror*.

On the old-fashioned, narrow highways, just wide enough for two cars to pass, many a time a couple of cars would collide. But now they're building highways much wider, enabling three or four cars to smash at one time.—*Judge*.

Progress Report of Activities

Approval of
Dams

Flood Control and
Reclamation

Reductions in Re-
quests for Water
Permits

IRRIGATION, WATER STORAGE DISTRICTS

Returns have been received from about one-third of the questionnaires sent out to irrigation districts requesting information for the purpose of assembling and correlating data relating to the activities of California irrigation districts during 1930.

Conferences were held with officials of the Hot Springs Irrigation District, Modoc County, the El Camino Irrigation District, Tehama County, and the Linden Irrigation District, San Joaquin County, for the purpose of consulting on matters connected with the economic operation of these districts.

The Richvale Irrigation District, Butte County, voted favorably on January 24 for a bond issue in the amount of \$515,000. Funds are provided in this issue for the purchase of an interest in the water rights and irrigation system of the Sutter-Butte Canal Company, a public utility serving a large area of land in Butte and Sutter counties.

The following matters were referred to the California Bond Certification Commission and favorable action taken by the Commission at its meeting held on February 7, 1931:

1. Approval of an expenditure by the Carpenter Irrigation District, Orange County, in the amount of \$17,960.58 for preliminary work on Santiago Creek storage dam.

2. Approval of an expenditure by the Serrano Irrigation District, Orange County, in the amount of \$17,297.38 for preliminary work on the Santiago Creek storage dam.

The Lindsay-Strathmore Irrigation District, Tulare County, has been given consent to enter into an agreement for the purpose of acquiring certain water rights necessary to the district.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

Maintenance clearing of timber in the by-passes has been completed for the season as the money available has been exhausted. All of the major repair work to structures in the by-passes has been completed. The maintenance force has been reduced to eight men exclusive of pump operators, and they are engaged in miscellaneous routine maintenance such as inspecting bridges and structures and making minor repairs, cleaning drainage ditches, etc. The drainage pumps have been operated for short periods during the recent storms.

FLOOD CONTROL PROJECT MAINTENANCE—BANK PROTECTION

All jobs of bank protection designed to protect against floods of the current winter have been completed. The last job completed was done in cooperation with Levee District No. 3 in Glenn County at a cost of \$1,400.

SACRAMENTO FLOOD CONTROL PROJECT

No actual construction work is now under way by this Department in connection with the flood control project construction. Plans and estimates are being prepared for project units to be constructed in the future.

The deputy in charge of flood control and reclamation attended one meeting of the Reclamation Board and one meeting of the Flood Control Construction Committee.

EMERGENCY FLOOD CONTROL AND RECTIFICATION OF RIVERS

Bank protection work at Twitchell Island in cooperation with Reclamation District 1601 has been completed. Fourteen hundred tons of quarry rock riprap were placed in a length of 600 feet at the junction of Seven Mile and Three Mile sloughs.

Arrangements have been completed for channel rectification work at the mouth of Little River in Humboldt County in cooperation with the Little River Redwood Company and the county of Humboldt. This work is designed to restore the mouth of the river to its original position and is estimated to cost \$5,025.

Funds have been provided for rectification work on the San Jacinto River near San Jacinto in cooperation with various landowners and the county of Riverside, amounting to \$3,150. A fence barrier supported on driven steel pipes, about 2100 feet long, will be constructed, the work to commence at once.

MOKELUMNE RIVER

The work of improving the flood channel of the Mokelumne River in collaboration with San Joaquin County has been discontinued. A small levee 1000 feet long on the McCauley Estate has been completed, eliminating a choked condition. The channel is now clear and in fairly good condition to receive the possible winter floods. About \$8,000 has been expended on this work by the State and county.

RUSSIAN RIVER JETTY

Repairs to the jetty structure have proceeded with funds furnished by the Division of Fish and Game. The quarry and railroad have been operating during the entire period placing additional rock in the jetty wall. The damage sustained by the structure during the winter storms consisted of breaking away of about

150 feet of track and timber wall, and damaging to some extent about 100 feet additional. The rock placed in the jetty originally is still in place and will be effective in completing the wall. In fact, the storms have improved this portion of the work by settling the rock to a foundation which will probably be permanent. An additional sum of \$22,500 has been made available for this work under chapter 60, Statutes of 1931, passed as an emergency measure. An average of twelve men has been employed during the past period.

SANTA MARIA RIVER

The county of Santa Barbara has contributed an additional \$1,000 for work on the Santa Maria River, making a total fund of \$10,000 of which \$7,750 has been expended in clearing the channel of tree growth to a width of 375 feet for the length of six miles. No work is now under way, but the balance of the money will be expended in the near future in additional clearing and channel rectification.

FLOOD MEASUREMENTS AND GAGES

The streams of the Sacramento and San Joaquin valleys have not yet reached a stage which would require flood measurements. All preparations for this work are complete and all gages maintained by this Division are now in operation.

DAMS

During this period the activities have been directed toward final inspection of existing dams with a view to their approval. Supervision has also been maintained on the construction and repairs of dams.

To date 742 applications for approval of existing dams are on file; 59 applications for approval of plans and specifications for construction or enlargement, and 128 applications for approval of plans for repairs or alterations of dams.

Applications received for approval of plans for repair or alteration:

Dam	Owner	County
Porter Estate	B. F. Porter Estate	Los Angeles
Toreson	F. W. and Mrs. J. V. Caldwell	Modoc
Upper Twin Lake	G. B. Day Estate and Plymouth Land and Live Stock Company	Mono
Lower Twin Lake	Hunewell Land and Live Stock Company, et al	Mono
Dexter Creek	Wm. Symons	Mono
Silva Flat	Homer C. Jack	Lassen
Sardine Lake	Archibald Farrington	Mono
Orr Creek	Pacific Gas and Electric Company	Placer

Plans approved for construction:

The plans and specifications for the Santiago Creek Dam in Orange County, under the joint ownership of the Serrano and Carpenter Irrigation Districts and The Irvine Company were approved.

Plans approved for repair or alteration:

Dam	Owner	County
Antioch	Town of Antioch	Contra Costa
Culbertson	Pacific Gas and Electric Company	Nevada
Lower Feeley	Pacific Gas and Electric Company	Nevada
Middle Lindsay	Pacific Gas and Electric Company	Nevada
Upper Feeley	Pacific Gas and Electric Company	Nevada
Bear River	Pacific Gas and Electric Company	Nevada and Placer
Dexter Creek	Wm. Symons	Mono
Los Serranos	Davidson Investment Company	San Bernardino

A large number of existing dams have been critically examined both as to design and actual construction conditions and have been found to meet the requirements of safety. Certificates of approval on these dams will be issued shortly.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE

Twenty-six applications to appropriate were received during January, 1931. Sixteen applications were canceled and nine were approved. Fourteen permits were revoked and thirty licenses were issued.

Among the permits issued was one to Linden Irrigation District allowing the appropriation of 154 cubic feet per second and 40,000 acre-feet per annum by storage on Calaveras River for the irrigation of 12,330 acres in San Joaquin, Stanislaus, and Calaveras counties, at an estimated cost of \$105,000 and two to the Southern Sierras and Nevada-California Power Companies allowing the appropriation of 4999 acre-feet for power purposes by storage on Green Lake and Bishop Creek in Inyo County, at an estimated cost of \$70,000.

ADJUDICATIONS

Stanislaus River (Alpine, Calaveras, San Joaquin, Stanislaus and Tuolumne counties). In accordance with the provisions of Section 36d of the Water Commission Act, a Certificate of Water Right was issued to each owner of a right as set forth in the decree entered in the Stanislaus River Adjudication Proceedings.

Shasta River (Siskiyou County). Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). Case pending in the Superior Court of Shasta County, awaiting the Court's pleasure in placing it on the calendar.

Oak Run Creek (Shasta County). Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County). Case pending in Superior Court of Shasta County awaiting the Court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County). Case pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County). Special effort was made during the month to secure the remaining signatures to the stipulation for consent judgment. Action by the referee is being deferred awaiting word from the parties involved.

Davis Creek (Modoc County). Two exceptions to the report of referee in the Davis Creek case have been filed, and will be heard by the Superior Court of Modoc County on February 24, 1931.

Mill Creek (Modoc County). The report covering the administration of the tentative schedule of allotments which was authorized for the 1930 season has been completed and is in the hands of the State Printer.

Deep Creek (Modoc County). The Report on Water Supply and Use of Water on Deep Creek and Tributaries has been completed. This report covers the results of the field investigation made by the Division during the 1930 irrigation season and is being circulated among the Deep Creek water users prior to a conference to be held at Cedarville on March 17, 1931.

Franklin Creek (Modoc County). The tentative schedule of allotments for trial distribution during the 1931 irrigation season has been completed and will be submitted to the Franklin Creek water users at a conference to be held at Alturas on March 16, 1931.

WATER DISTRIBUTION

Reports on water master service for the 1930 irrigation season were completed for Little Shasta and Lower Shasta rivers (Siskiyou County) and Soldier Creek (Modoc County).

CALIFORNIA COOPERATIVE SNOW SURVEYS

During the early part of the last month a field trip was made to Yosemite, Sequoia, and General Grant national parks, for the purpose of instructing the new men of the Park Service to be used on the surveys during the present season. The standard methods for making the surveys were demonstrated at representative snow courses.

The office work during the past month on this project has comprised the compilations necessary to keep all precipitation and snow survey records to date, and the correspondence and computations required in the preparation and publication of the first monthly bulletin of snow survey and precipitation data. Arrangements were made with all cooperating agencies so that snow surveys were made the latter part of January at all of the key courses and the results of these surveys and the data to February 1st from all those precipitation stations of the U. S. Weather Bureau, the State, districts, and public utilities located in the mountainous portions of the various stream basins, have been incorporated in the monthly bulletin which was placed in the mail on February 10th.

It is to be noted that the main survey of all snow courses as a basis for forecasts of stream flow is made in the latter part of March and the present surveys cover only selected or key courses to furnish data in the nature of a progress report. The bulletin presents the results of the snow surveys and affords an opportunity for comparison with the snow pack as shown by the surveys of February 1, 1930, the latter being the first season of the State's entry upon work of this character. In some instances where snow surveys were made for a period of years prior to 1930 by agencies now cooperating with the State, it has been possible to develop tentative "normals" and in these cases the water content of the snow as measured at the first of February is given also in percentage of these seasonal normals.

In so far as generalizations for entire stream basins can be made from the as yet somewhat scattered and limited snow courses, the surveys indicate a water content of the snow on February 1st of this year in per cent of the water content at the same time last year, as follows: Upper Sacramento and McCloud (one course) 60 per cent; Pit (one course) 80 per cent; Feather (3 courses) 50 per cent; Yuba (3 courses) 105 per cent; American (3 courses) 90 per cent; Mokelumne (one course) 60 per cent; Stanislaus (3 courses) 85 per cent; Tuolumne (6 courses) 75 per cent; Merced (6 courses) 100 per cent; Mono (2 courses) 55 per cent; Kings (2 courses) 80 per cent; Kaweah and Kern (one course each) 85 per cent.

Reviewing the data from the precipitation stations, the precipitation to February 1st in per cent of normal is shown for the various stream basins about as follows: Upper Sacramento, Pit and McCloud, 60 per cent; Feather and Yuba, 55 per cent; American, 60 per cent; Mokelumne, 65 per cent; Tuolumne and Merced, 70 per cent; Mono (one station) 60 per cent; Upper San Joaquin and Kings, 60 per cent;

Kaweah, 65 per cent; Kern, 75 per cent; Owens—one station on Bishop Creek 85 per cent—Upper Valley (one station) 50 per cent—Lower Valley (3 stations) ranging from 10 to 50 per cent; Santa Ana, 70 per cent; San Gabriel and Los Angeles (Mt. Wilson Station only—January data for other stations not available to date) 60 per cent.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

The work of the past month under this project has been confined chiefly to the computations necessary in the preparation of the report for the 1930 season covering all diversions, stream flow, return flow, etc., throughout the Sacramento-San Joaquin territory. The small amount of field work has included regular salinity observations, tide gage maintenance, and maintenance of tanks being used in a determination of the consumptive use of water of aquatic plants.

The salinity sampling has continued at thirty-one stations and tide gages have been maintained at eight points between Collinsville and Sacramento. The following are comparative salinity and stream flow data for 1930 and 1931.

Station	Salinity in parts of Chlorine per 100,000		
	January 30, 1931	January 30, 1930	
Bullhead Point -----	850	380	
O. & A. Ferry -----	61	5	
Collinsville -----	9	4	
Antioch -----	6	5	
Jersey -----	6	6	
Emmerton -----	2	3	
Webb Pump -----	5	8	
Discharge in second-feet			
Station	February 13, 1931	February 13, 1930	
Sacramento River at Sacramento -----	11,200	26,200	

WATER RESOURCES

VENTURA COUNTY INVESTIGATION

Work on this investigation has continued throughout the month. The placing of a better grade of registers at several of the important gaging stations referred to in last month's report is being done by the United States Geological Survey in conformity with the arrangements made by this Division for the placing of these registers.

SOUTH COASTAL BASIN INVESTIGATION

While not as yet fully under way considerable progress has been made in organizing this work during the past month and there are now ten engineers and geologists employed, mainly on two phases of the work, one being a digest of well measurements and coordination of the well measurements in progress and the other a study of the geology of the underground basins. A beginning has also been made in getting the quality of underground water through an agreement as yet not entirely completed in detail, between the Department of Agriculture and this office, whereby the laboratory of the department at Riverside is made available for analyses of samples. The work is to be done by the State but under the advice of the department and with the expectation that the scientists of the department will make interpretation of the results.

MOJAVE RIVER INVESTIGATION

This has progressed in a routine way during the month and the new work on determining evaporation and transpiration of water along the flood plains of

the river has been started in cooperation with the Division of Agricultural Engineering, U. S. Department of Agriculture. A progress report to September 1, 1930, has been written and will be available shortly. This of course incorporates only data and interpretation of such data.

NAPA VALLEY INVESTIGATION

Measurements of stream flow were made on Napa River, Rector Creek and Conn Creek. A reconnaissance was made of Dry Creek, Mill Creek, North Fork Napa River, and Carneros Creek in search of possible reservoir sites. A site on upper Dry Creek was the only one found which merits further study. Gages have been installed on Rector Creek, and it is expected a fairly accurate record of the discharge of that stream will be available at the close of the year.

SANTA CLARA VALLEY INVESTIGATION

A progress report covering this investigation was completed and mailed to interested parties early in the month. In addition thereto, a member of the staff attended a public meeting in San Jose called for the purpose of discussing the state and local water problems. No field work was required during the month because of the fact that rainfall was insufficient to start the streams flowing.

PIT RIVER (MODOC AND LASSEN COUNTIES)

Routine field work was continued throughout the month. All water stage recorders were overhauled and adjusted in order to assure their proper operation.

Copies of the Progress Report on Pit River Investigation for the year ending September 30, 1930, were distributed to the Boards of Supervisors of Modoc and Lassen Counties, the Hot Springs Valley Water Users Association, the Big Valley Water Users Association, and to each member of the Permanent Committee of Pit River Investigation. The Permanent Committee has called a meeting of all interested parties to be held at Lookout on February 25 for a discussion of the contents of the report and other matters pertaining to the investigation.

WATER RESOURCES REPORTS

Rapid progress is being made upon the completion of reports of the water resources investigation covering a State water plan for the coordination, development, conservation and utilization of the water resources of the State as provided in Chapter 832 of the Statutes of 1929. Practically the entire staff of the Division formerly engaged on investigations in the Sacramento and San Joaquin Valleys, salt water barrier and salinity conditions has been concentrated upon the preparation of these reports covering the results of investigations made by the Division of Water Resources.

MISCELLANEOUS ACTIVITIES

1. A continuation of the check being made in connection with the investigation of lands riparian to the Sacramento and American rivers has indicated that the first figures reached for the riparian acreage will be reduced by about 25%. The reduction is due to further data afforded as to the original Spanish Grants, Swamp and Overflow Surveys, and Land Office patents, and to severance due to railroad rights-of-way held in fee simple rather than as easements.

2. A field trip was made during the past month by representatives of the State, the U. S. Army Engineers and the U. S. Geological Survey to locate gaging stations in the San Joaquin Valley. Locations were made on the San Joaquin River near Vernalis, and Newman, and on Oristimba Creek near Newman. The

Newman station has been maintained previously by staff gage and the Vernalis station by weekly recorder. The new installations will provide for long period water registers. The station on Oristimba Creek is entirely new. Locations were inspected at the debouchure of Los Banos and Banoche creeks, but suitable sites were not found. This work is a part of the program for the location of some eighteen new gaging stations and the installation of recorders at eighteen old stations throughout the Sacramento-San Joaquin drainage basin in accordance with a Federal-State Cooperative Agreement.

STATE HIGHWAY PROGRESS REPORT as of March 1, 1931.

C. H. PURCELL, Chief.

During the past period, contracts have been awarded, work advertised and plans and specifications commenced as shown in the following table:

Work placed under contract.....	\$1,477,000
Contracts pending—projects advertised.....	2,573,000
Work anticipated to be advertised during March	5,086,300
Total	\$9,136,300

PROJECTS COMPLETED

The contracts which have been completed and accepted during the past four weeks include the following:

San Bernardino—Barstow Highway: A new bridge has been erected across the Mojave River near Victorville. This bridge was placed on an improved alignment of the highway at the river crossing; the grading of the approaches to the structure having been completed in November of last year. The structure consists of one 270-foot steel truss span, five 51-foot and one 48-foot reinforced concrete girder spans, and has a clear roadway width of 34 feet. The new bridge replaced the old inadequate 250-foot span built by the county, some twenty years ago, on an inferior standard of alignment. The bridge and approaches were constructed at a cost of \$146,800.

Valley Route: On the Ridge Route in Los Angeles County, 12.5 miles of State highway has been widened and straightened by the paving of crescent shaped areas, adjacent to the existing concrete pavement, with bituminous macadam. This project was located at the southerly end of the Ridge Route between Castaic School and fourteen miles north, on the Los Angeles to Sacramento artery. The crescent shaped areas were the result of the continuous work of the State's highway forces in cutting back the mountain sides on the many blind curves of this mountain highway. The actual effect of placing these crescent sectors adjacent to the existing pavement is to straighten the alignment of the highway generally. The cost of this paving amounted to \$148,400.

East of Sierras Highway: On the Mojave-Owens Valley Road 15 miles, from Cinco to seven miles north of Ricardo, in Kern County, has been graded and surfaced with oil treated crushed rock. This project brings the last unimproved section between Mojave and the Owens Valley to a high standard of grade and alignment, with an adequate type of surfacing and carries the improvement to within five miles of Independence. Traffic is now afforded some 200 miles of

improved highway through Kern and Inyo Counties to recreational areas of the Sierra Nevadas with the hazards of desert travel minimized and distance and time materially decreased. The section just completed passes through the wierd and scenic Red Rock Canyon, a favorite winter recreation spot for many people from Southern California cities. This project was completed at a cost of \$277,900, much attention being given to desert drainage problems and protection of the roadbed from damage by cloudbursts.

Walker Pass Highway: The progress on another State Highway, in Kern County, which leads into the Owens Valley is noted by the completion of a contract for placing an 18-foot oil treated crushed rock surface on 14 miles of the Kern River Road between Cottonwood Creek and Democrat Springs. This surfacing cost \$147,800. The Kern River Road extends from Bakersfield to the Owens Valley via Walker Pass. The present improvement completes the surfacing of this road from Bakersfield to Democrat Springs. Until the time when this road is adequately constructed through the pass the bulk of traffic will remain recreational in character, travel being between Bakersfield and the various resorts in Kern River Canyon.

Redwood Park Highway: The construction of a graded roadbed 24 feet wide on two and a half miles of the beautiful mountain road which traverses California Redwood Park in Santa Cruz County was completed at a cost of \$136,600. This work was located between Waterman Switchback and Saratoga Gap and it is planned to complete the grading and surface the entire distance between these two points this year. Recently completed construction on the Skyline Boulevard and its lateral connections makes this Redwood forest accessible to one and one-quarter million people within less than three hours driving time.

Bay Shore Highway: The continued progress on construction of the Bay Shore Highway is noted by the completion of the paving with 40 feet of Portland cement concrete that portion of this route through South San Francisco. The five miles immediately south of this project was recently paved and the distance from Broadway in Burlingame to Fifth Avenue in San Mateo will be advertised for bids in the near future. The cost of the paving through South San Francisco amounted to \$103,500. Another step in pushing this alternate route down the peninsula from San Francisco to San Jose is accomplished by the advertising on February 11th of a project for the construction of a reinforced concrete girder bridge composed of three 27-foot spans and having a clear roadway width of 100 feet. This new structure will connect San Mateo and Santa Clara Counties by spanning San Francisquito Creek at Palo Alto.

BID OPENINGS

Bids were opened during the past four weeks on the following projects:

National Old Trails: The continued improvement of the trans-continental highway which enters California at Needles is noted by the opening of bids for the construction of a graded roadbed 36 feet wide and placing an oil treated crushed rock surfacing 20 feet wide along a new alignment 29 miles long between Essex and one mile south of Klinefelter. The cost of this section of this desert road will be \$548,000. A reinforced concrete overhead crossing over the tracks of the Santa Fe Railroad about two miles east of Essex was advertised for bids on February 11. Work on this route has been steadily pushed eastward from San Bernardino and by the completion of the present

project, this desert highway will present a modern standard of alignment and grade from San Bernardino to 11 miles from Needles.

Valley Highway: Bids for the reconstruction of nearly eight miles of the Los Angeles to Sacramento Highway, between Stockton and Houston School were opened on February 21, 1931. This project calls for the placing of a Portland cement concrete pavement 20 feet wide and widening the roadbed to 36 feet. The pavement will be placed on the graded roadbed between Stockton and Cherokee Station which was constructed on a revised alignment in 1927. At Cherokee Station this improvement will connect with the southerly end of the recently completed seven miles of concrete pavement between Cherokee Station and Harney Lane. From Harney Lane, through Lodi to Houston School, the old county road is to be reggraded and paved with Portland cement concrete. With the completion of this project, which will cost \$284,000, this important arterial will present a wide, modern, high-speed highway from Stockton to Sacramento.

HIGHWAY BIDS AND AWARDS FOR MONTH OF FEBRUARY

COLUSA COUNTY—Between Maxwell and the north boundary, 1.5 miles to be surfaced with pit run gravel. Dist. III, Rt. 7, Sec. C. A. Teichert & Son, Sacramento, \$12,446; D. McDonald, Sacramento, \$11,049; contract awarded to Harms Bros. Galt, \$9,715.

PLUMAS COUNTY—Between Paxton's and Keddie, 0.7 of a mile to be graded (line change), Dist. II, Rt. 21, Sec. B. F. C. Coats, Sacramento, \$52,663; Hemstreet & Bell, Marysville, \$51,433; Larsen Bros., Galt, \$55,200; Granfield, Farrar and Carlin, San Francisco, \$61,810; Finnell Co., Sacramento, \$53,475; H. H. Boomer, San Francisco, \$69,966; Young & Son, Berkeley, \$64,129; Chigris & Sutso, San Francisco, \$52,968; W. H. Hauser, Oakland, \$51,518; Chas. N. Chittenden, Napa, \$67,753; contract awarded to Morrison-Knudsen Co., Boise, Idaho, \$48,791.

SAN BERNARDINO COUNTY—Between 1½ miles east of Essex and 1 mile SW. of Klinefelter, grading and oil surfacing. Dist. VIII, Rt. 58, Sec. LMN. Jahn and Bressi Construction, Los Angeles, \$557,412; George Herz & Co., San Bernardino, \$521,325; Allied Contractors, Inc., Omaha, Nebraska, \$692,067; K. F. Knapp, Oakland, \$554,073; Isbell Const. Co., Carson City, Nevada, \$599,084; New Mexico Construction Co., Albuquerque, N. M., \$644,603; Hemstreet & Bell, Marysville, \$606,687; Merritt Chapman & Scott Corporation, San Pedro, \$559,814; A. Teichert & Son, Inc., Sacramento, \$567,324; Contract awarded to H. W. Rohl Co., Los Angeles, \$496,246.

SONOMA COUNTY—About 4½ miles north of Santa Rosa, timber bridge across Mark West Creek, consisting of six 19-ft. spans, two 16-ft. spans, surfaced with Portland cement concrete approaches and bridge. Dist. IV, Rt. 1, Sec. B. A. T. Howe, Santa Rosa, \$22,743; W. C. Colley, Santa Rosa, \$23,455; Ralph Hunter, Sacramento, \$19,551; Fred J. Maurer, Eureka, \$22,255; Smith Bros., Eureka, \$22,791; J. W. Hoopes, Sacramento, \$21,287. Contract awarded to Peter McHugh, San Francisco, \$19,366.

SAN JOAQUIN COUNTY—About 7.7 miles to be graded and paved with Portland cement concrete between Stockton and ½ mile north of Houston School (two sections, part between Stockton and Lodi and the other between Lodi and Houston School). Dist. X, Rt. 4, Sec. C. D. Clark & Henery Co., San Francisco, \$274,521; C. M. Ball, Porterville, \$264,817; Fredrickson & Watson Const. Co., Oakland, \$264,700;

Basich Bros. Construction Co., Torrance, \$256,197; Hanrahan Company, San Francisco, \$252,602; C. W. Wood, Stockton, \$260,058. Contract awarded to Jahn & Bressi Construction Co., Los Angeles, \$249,598.

ARCHITECTURAL AWARDS FOR MONTH OF FEBRUARY

AGNEWS STATE HOSPITAL—Ward Unit No. 2 at Farm, contract for general work awarded to J. P. Shepherd, San Francisco, \$194,500; contract for electrical work, same building, to Guilbert Bros. Electric Company, San Jose, \$7,229; contract for plumbing, heating and ventilating work, same building, to Hateley and Hateley, Sacramento, \$40,572.

MENDOCINO STATE HOSPITAL—Talmage Ward No. 7, contract for general work, to A. Nelson, San Francisco, \$41,435; contract for electrical work, same building, to Decker Electrical Company, San Francisco, \$826; contract for plumbing and heating, same building, to Ukiah Plumbing and Heating Company, Ukiah, \$7,171.

PACIFIC COLONY—Spadra Girls' Industrial Building, Administration Building, Hospital Building, contract for general work to Louis A. Geisler, Huntington Park, \$76,574; contract for plumbing, heating and ventilating work, same buildings, to Cooney and Winterbottom, Los Angeles, \$15,495; contract for electrical work, same buildings, to Baty Electric Company, Long Beach, \$4,100.

STOCKTON STATE HOSPITAL—Cottage for employees, contract for general work to Samuel Eyre, Tracy, \$19,339; contract for electrical work, same building, to Hild Electric Company, Stockton, \$1221; contract for plumbing and heating work, same building, to Jos. C. Black, Stockton, \$6,600.

DAM APPLICATIONS AND APPROVALS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources during the month of February, 1931.

LASSEN COUNTY—McArthur Dam No. 256. Rod-erick McArthur, McArthur, owner; wooden dam, 8 feet above streambed with a storage capacity of 500 acre-feet, situated on Pit River tributary to Sacramento River in Sec. 36, T. 38 N., R. 7 E., M. D. B. and M., for diversion purposes for irrigation use.

SAN JOAQUIN COUNTY—Gilmore Dam No. 571. Dan M. Gilmore, Linden, owner; earth dam, 20 feet above streambed with a storage capacity of 505 acre-feet, situated on Unnamed Creek tributary to Mormon Slough in Sec. 9, T. 2 N., R. 9 E., M. D. B. and M., for storage purposes for irrigation use.

ORANGE COUNTY—Orchard Reservoir No. 794. Mrs. Susanna Bixby Bryant, Los Angeles, owner; earth dam, 24 feet above streambed with a storage capacity of 20 acre feet, situated on Santa Ana River in Sec. 28, T. 3 S., R. 3 W., S. B. B. and M., for storage purposes for irrigation and domestic use.

LASSEN COUNTY—Bieber Dam No. 254. E. G. Babcock, Bieber, owner; timber crib dam, 5 feet above streambed with a storage capacity of 100 acre feet, situated on Pit River tributary to Sacramento River in Sec. 22, T. 38 N., R. 7 E., M. D. B. and M., for storage and diversion purposes, for irrigation use.

LASSEN COUNTY—Fulcher Dam No. 156-3. West Side Irrigation Company, Bieber, owner; crib dam, 16 feet above streambed with a storage capacity of 50 acre feet, situated on Pit River tributary to Sacramento River in Sec. 3, T. 38 N., R. 3 E., M. D. B. and M.

SOLANO COUNTY—Lake Madigan Dam No. 14-2. City of Vallejo, Vallejo, owner; earth fill dam, 35 feet above streambed with a storage capacity of 1800 acre-feet, situated on Wild Horse Valley Creek tributary to

Green Valley Creek in Sec. 4, T. 5 N., R. 3 W., M. D. B. and M., for storage purposes for municipal use.

SOLANO COUNTY—Lake Frey Dam No. 14-3. City of Vallejo, Vallejo, owner; earth dam, 71 feet above streambed with a storage capacity of 983 acre-feet, situated on Wild Horse Valley Creek tributary to Green Valley Creek in Sec. 9, T. 5 N., R. 3 W., M. D. B. and M., for storage purposes for municipal use.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of February, 1931.

LASSEN COUNTY—Silva Flat Dam No. 232. Homer C. Jack, Bieber, owner; earth dam, situated on Juniper Creek tributary to Pit River in Sec. 23, T. 36 N., R. 9 E., M. D. B. and M.

MONO COUNTY—Sardine Lake Dam No. 532-2. Archibald Farrington, Mono Lake, owner; rock dam, situated on Walker Creek in Sec. 15, T. 1 S., R. 25 E., M. D. B. and M.

PLACER COUNTY—Orr Creek Dam No. 97-42. Pacific Gas and Electric Company, San Francisco, owner; rubble dam, situated on Orr Creek tributary to Dry Creek in Sec. 18, T. 13 N., R. 8 E., M. D. B. and M.

SHASTA COUNTY—Lake Grace Dam No. 97-92. Pacific Gas and Electric Company, San Francisco, owner; earth dam, in Sec. 4, T. 30 N., R. 1 E., M. D. B. and M.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of February, 1931.

SHASTA COUNTY—Garner No. 1 Dam No. 222. G. L. Childs and A. P. Waller, Manton, owners; earth dam, 21 feet above streambed with a storage capacity of 34 acre-feet, situated on dry ravine tributary to Digger Creek in Sec. 8, T. 30 N., R. 2 E., M. D. B. and M., for storage purposes for recreation use.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of February, 1931.

NEVADA AND PLACER COUNTIES—Bear River Dam No. 97-11. Pacific Gas and Electric Company, San Francisco, owner; gravity dam, situated on Bear River tributary to Yuba River, in Sec. 22, T. 15 N., R. 9 E., M. D. B. and M.

MONO COUNTY—Dexter Creek Dam No. 532. Wm. Symons, Laws, owner; earth dam, situated on Dexter Creek.

SAN BERNARDINO COUNTY—Los Serranos Dam No. 808. Davidson Investment Company, Long Beach, owner; dry rubble dam, situated on Orr Creek tributary to Dry Creek, in Sec. 18, T. 13 N., R. 8 E., M. D. B. and M.

LOS ANGELES COUNTY—Lower Franklin Dam. No. 6-14. City of Los Angeles, Los Angeles, owner; earth dam, located in Sec. 12, T. 1 S., R. 15 W., S. B. B. and M.

PLACER COUNTY—Orr Creek Dam No. 97-42. Pacific Gas and Electric Company, San Francisco, owner; dry rubble dam, situated on Orr Creek tributary to Dry Creek, in Sec. 18, T. 13 N., R. 8 E., M. D. B. and M.

LASSEN COUNTY—Silva Flat Dam No. 232. Homer C. Jack, Bieber, owner; earth dam, situated on Juniper Creek tributary to Pit River, in Sec. 23, T. 36 N., R. 9 E., M. D. B. and M.

ANYTHING TO ACCOMMODATE

Owing to a big rush of job printing and for lack of space, a number of births and deaths will be postponed till next week.—*Stockville Ledger*.

An infernal machine is the one that ambles along the middle of the road in front of you at about ten miles an hour.

WATER APPLICATIONS AND PERMITS

Applications for permits to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of February, 1931.

MONO COUNTY—Application 6883. O. P. Dyar, 325 South Los Robles, Pasadena, California, for 150 gallons per day from Unnamed Stream tributary to Lake George and Owens River. To be diverted in Sec. 17, T. 4 S., R. 27 E., M. D. B. and M., for domestic purposes. Estimated cost, \$50.

CONTRA COSTA COUNTY—Application 6884. Associated Oil Company, c/o Humphrey, Seals, Doyle and McMillan, Attns., Standard Oil Bldg., San Francisco, California, for 20,000 gallons per minute from Hastings Slough tributary to Suisun Bay. To be diverted in Sec. 11, T. 2 N., R. 2 W., M. D. B. and M., for industrial purposes. Estimated cost, \$30,000.

SISKIYOU COUNTY—Application 6885. W. A. Sargent, Dorris, California, for 2.0 cubic feet per second from Cottonwood Creek tributary to Lower Klamath Lake. To be diverted in Sec. 7, T. 47 N., R. 2 E., M. D. B. and M., for irrigation purposes on 160 acres. Estimated cost, \$50.

SISKIYOU COUNTY—Application 6886. W. S. Hart, L. I. Herrington, John Tiedemann and C. D. Jones, c/o W. S. Hart, 520 K St., Sacramento, California, for 800 gallons per day from Unnamed Spring tributary to Kelsey, thence Scott, thence Klamath River. To be diverted in Sec. 21, T. 44 N., R. 11 W., M. D. B. and M., for domestic purposes.

BUTTE COUNTY—Application 6887. Shelley E. Lee, Biggs, California, for 3.0 cubic feet per second from Lateral "A," Reclamation District 833 tributary to Butte Creek and Sacramento River. To be diverted in Sec. 18, T. 18 N., R. 2 E., M. D. B. and M., for irrigation purposes on 160 acres.

HUMBOLDT COUNTY—Application 6888. C. H. Barkall, 5646 26th Avenue South, Seattle, Washington, for 25 cubic feet per second from 6 or 7 small streams, tributary to South Fork of Trinity River. To be diverted in Sec. 24, T. 5 N., R. 5 E., H. B. and M., for mining and domestic purposes.

TRINITY COUNTY—Application 6889. Donald K. Can and Joseph O'Donnell, c/o Donald K. Can, Burnt Ranch, California, for 1.0 cubic foot per second from Gray Creek tributary to Trinity River. To be diverted in Sec. 32, T. 6 N., R. 6 E., H. B. and M., for mining purposes. Estimated cost, \$500.

LASSEN COUNTY—Application 6890. Western Pacific Railroad Company, Mills Bldg., San Francisco, California, for 0.4 cubic foot per second from Horse Creek, to be diverted in Sec. 15, T. 35 N., R. 7 E., M. D. B. and M., for industrial and domestic purposes. Estimated cost, \$16,700.

EL DORADO COUNTY—Application 6891. N. L. Apollino, Camino, California, for 0.044 cubic foot per second from Bush Creek, to be diverted in Sec. 4, T. 10 N., R. 11 E., M. D. B. and M., for irrigation and domestic purposes on 5 acres. Estimated cost, \$400.

SUTTER COUNTY—Application 6892. Andraec C. H. Schmidt, c/o Lawrence Schilling, Attorney, Yuba City, California, for 1.1 cubic feet per second from Feather River tributary to Sacramento River, to be diverted in Sec. 11, T. 14 N., R. 3 E., M. D. B. and M., for irrigation purposes on \$1.65 acres. Estimated cost, \$1,500.

SAN DIEGO COUNTY—Application 6893. Harry E. Cansey, Aguanga, California, for 5 gallons per minute from Unnamed Spring tributary to Tecmela Creek, thence Santa Margarita River, to be diverted in Sec. 20, T. 9 S., R. 2 E., S. B. B. and M., for irrigation and domestic purposes on 2 acres. Estimated cost, \$300.

STANISLAUS COUNTY—Application 6894. E. B. Henry, Route 3, Box 947, Modesto, California, for 0.7 cubic foot per second from Tuolumne River tributary to San Joaquin River, to be diverted in Sec. 7, T. 4 S., R. 8 E., M. D. B. and M., for irrigation and domestic purposes on 53 acres. Estimated cost, \$1,000.

TUOLUMNE COUNTY—Application 6895. W. C. Lehane, P. O. Box 94, Modesto, California, for 280 cubic feet per second from Stanislaus River, tributary to San Joaquin River, to be diverted in Sec. 10, T. 1 S., R. 12 E., M. D. B. and M., for irrigation purposes on 100,000± acres.

INYO COUNTY—Application 6896. Leo Kikut,

Olancha, California, for 2 cubic feet per second from Small Spring to be developed, tributary to Owens Lake watershed, to be diverted in Sec. 26, T. 18 S., R. 36 E., M. D. B. and M., for irrigation and domestic purposes on 80 acres.

SAN BERNARDINO COUNTY—Application 6897. Mrs. Effel Rudy, Fenner, California, for 0.2 cubic foot per second from Fenner Spring, to be diverted in Sec. 28, T. 8 N., R. 18 E., S. B. B. and M., for domestic purposes.

EL DORADO COUNTY—Application 6898. United States El Dorado National Forest, Placerville, California, for 800 gallons per day from Unnamed Stream tributary to Lake Tahoe, to be diverted in Sec. 21, T. 13 N., R. 17 E., M. D. B. and M., for domestic and fire protection purposes. Estimated cost, \$100.

EL DORADO COUNTY—Application 6899. United States El Dorado National Forest, Placerville, California, for 800 gallons per day from Doane Springs tributary to Lower Echo Lake, to be diverted in Sec. 2, T. 11 N., R. 17 E., M. D. B. and M., for domestic purposes. Estimated cost, \$150.

EL DORADO COUNTY—Application 6900. United States El Dorado National Forest, Placerville, California, for 3200 gallons per day from Bryant Creek tributary to South Fork of American River, to be diverted in Sec. 15, T. 11 N., R. 17 E., M. D. B. and M., for domestic and fire protection purposes. Estimated cost, \$500.

KERN COUNTY—Application 6901. Sophus D. Gunderson, Brown, California, for 0.25 cubic foot per second from Grapevine Canyon and seven springs or seeps tributary to Grapevine Canyon, to be diverted in Secs. 14, 15 and 23, T. 25 S., R. 37 E., M. D. B. and M., for irrigation, domestic and stock watering purposes.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of February, 1931.

EL DORADO COUNTY—Permit 3653, Application 6797. Issued to G. E. White, Woodland, California, February 5, 1931, for 200 gallons per day from Forni Creek, in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes. Estimated cost, \$50.

SUTTER COUNTY—Permit 3654, Application 6670. Issued to H. S. Fasig and W. H. Saylor, Knights Landing, California, February 5, 1931, for 3.46 cubic feet per second from Sacramento River, in Sec. 14, T. 13 N., R. 1 E., M. D. B. and M., for irrigation on 276.81 acres. Estimated cost, \$4,000.

INYO COUNTY—Permit 3655, Application 6508. Issued to W. E. Gray, Beatty, Nevada, February 13, 1931, for 5.0 cubic feet per second from (1) Jail Spring, (2) Birch Spring and (3) Tuber Spring, in (1) and (2) Sec. 21, (3) Sec. 9, T. 20 S., R. 45 E., M. D. B. and M., for mining and domestic purposes.

PLUMAS COUNTY—Permit 3656, Application 6800. Issued to S. E. Colburn and A. E. Banks, Crescent Mills, California, February 19, 1931, for 1 cubic foot per second from Unnamed Spring, in Sec. 35, T. 26 N., R. 9 E., M. D. B. and M., for power and domestic purposes. Estimated cost, \$2,000.

SAN DIEGO COUNTY—Permit 3657, Application 6845. Issued to Division of Highways, Department of Public Works, Sacramento, California, February 19, 1931, for 0.012 cubic foot per second from La Posta Spring in Section 6, T. 17 S., R. 6 E., S. B. B. and M., for recreational purposes.

COLUSA COUNTY—Permit 3658, Application 6847. Issued to Mary E. Porter Gleason, Grimes, Calif., February 19, 1931, for 1.92 cubic feet per second from Sacramento River in Section 7, T. 14 N., R. 1 E., M. D. B. and M., for irrigation on 153.58 acres. Estimated cost, \$2,575.

MONO COUNTY—Permit 3659, Application 6742. Issued to Sarita Mining & Power Company, Bridgeport, Calif., February 19, 1931, for 1 cubic foot per second from Masonic Creek and 15 springs in Sections 15 and 16, T. 6 N., R. 26 E., M. D. B. and M., for mining and domestic purposes. Estimated cost, \$750.

MONO COUNTY—Permit 3660, Application 6759. Issued to Alley Age Products Company, Ltd., Whittier, California, February 24, 1931, for 3 cubic feet per second from Laurel Lakes, in Sec. 29, T. 4 S., R. 28 E., M. D. B. and M., for power purposes. Estimated cost, \$1,200.

DEL NORTE COUNTY—Permit 3661, Application 6446. Issued to C. J. Dumbolton, Holland, Oregon, February 25, 1931, for 12 cubic feet per second from West Fork Althouse Creek, in Sec. 32, T. 15 N., R. 6 E., H. M., for mining purposes. Estimated cost, \$1,000.

“Not an Ugly Highway in California”

By FRANK A. TETLEY, Member, California Highway Commission.

CALIFORNIA is a beautiful State. There is a glory in its mountains and valleys; an attraction of coasts and beaches; a lure to its rivers, its lakes, its forests and its deserts that has made California a name to conjure with among the people and the nations of the world.

Probably because of long years of association with the trees and shrubs, the vines and the flowers of California, the beautification of our State highway system carries a peculiar appeal to me. I regard the preservation and the protection of the beauty of our State almost as a religious duty, imposed by a Divine Providence upon us. The enhancement of its beauty is a responsibility equally as great.

Each in his particular field is responsible for the manner in which this duty is performed in the field of State highway affairs. A particular heavy responsibility rests upon those of us who are immediately charged with the control of and supervision over these roads.

BASIC BEAUTIFICATION PRINCIPLES

In making our State highways beautiful, and at the same time practical as to maintenance expense, there are certain definite principles and policies that appeal to me as fundamental. These are:

First, our planting should be characteristic of California's plant life. We should use as far as is possible, trees, shrubs, vines and flowers that are native to and symbolic of the State.

I believe that all highways on which trees are to be planted and maintained by the State of California should be at least sixty feet wide, and all main arteries should be one hundred feet wide; this because traffic is becoming greater and greater, and it is certainly a great loss that on account of the narrow highways, to have all trees on at least one side of the highway destroyed at some future time so that the highway can be widened.

Second, great care and study should be made of the varieties of trees to be planted in the different locations. It would be foolhardy to plant trees that would make a success in a desert country in a district that has moisture or elevation. We have a great many wonderful trees for highway planting to select

FRANK A. TETLEY

from, and if planted in the right locations, where they are native, wonderful and beautiful results can be obtained. This also will make diversification of trees.

Care should also be exercised in the cost of maintenance of trees. The eucalyptus tree, although a native of Australia, is just as indigenous to California as it is to its home land. There are many varieties of this tree, and after once started, from my experience, they can be maintained for less money than any real tree on the highway. In most places in the State, after these trees are planted and

watered for a few years, they will take care of themselves as far as irrigation is concerned. The flowering eucalyptus is really not strong enough to be planted as a highway tree. It is a beautiful thing, and can be planted in coast districts between eucalyptus, and of the type that will be giant highway trees.

Another tree that is very beautiful, and is a native of California, is the live oak. This can be planted with success in localities where it grows naturally, and after started for a few years, can also be maintained at low cost.

We also have in the southern part of the State, many different varieties of palms, including the *Candieriensis*, *Washingtonia Robusta*, *Guadalupe*, *Cocos Plumosas*, that can be planted with success. In the northern part of the State I find a great deal of black walnut and London plane trees.

For our real desert countries, I think the most practical tree to plant, which can be maintained at low cost, is the Palo Verde. After these are started for a year or two, they require no water and care.

We also have many trees of different varieties that would make a beautiful setting in the districts they are adapted to: The pepper, elm, *Cedrus Deodara*, cork oak, Lombardy poplar, Jerusalem pine, magnolia, madrone, locust, acacia, and last, the St. John's bread tree, which I am afraid that unless watched, does not develop deep roots commensurate with the growth of the top.

Third, the method or mode of the planting should fit the individual need of the particular section of highway where the planting is to be made. In one case this outstanding need may be shade; in another case the problem may be to effectively hide a construction scar or some ugly roadside building; in still another case, trees may be planted to frame some commanding view of ocean or mountain peak, forest or waterfall.

Third, the planting along a highway should be so varied that the danger of monotony is avoided. The task is one that demands the combined cooperation of the landscape architect and the highway official. It is a task for both artist and engineer. The artist must see to it that the beauty of the highway is enhanced and emphasized by the character of the planting that is made, and that the purpose of the planting is accomplished. The highway engineer must make certain that the planting will not jeopardize the safety of the traveling public, nor interfere with the necessary expansion and development of the highway roadbed.

The task is further one in which both the State and its communities must cooperate. The whole burden cannot be thrown upon the

State. The fact must not be forgotten that the first duty of State officials charged with highway responsibility, is to move traffic with safety and dispatch, and that this in itself is a big job.

Experience has shown that the community organization lends itself in a splendid fashion to promoting planting, but generally speaking, does not function in caring for these plantings when made. Therein the State must step in.

Much must be done in California in the work of highway beautification, but there remains much yet to be done. Nor does this statement in any manner reflect critically upon those who have been in charge of State highway affairs. The pioneer builders, like all other pioneers, had little time and less money to give to the matter of highway beautification. Roads had to be built before they could be beautified.

PAST THE PIONEER PERIOD

While we are still in a highway building era (and the greatest in the history of California) we are well past the pioneer period. We can no longer justify an unattractive highway on the ground that we are too busy building roads to give thought to their adornment.

Nor should the first be forgotten, that a foundation has been laid for any enlarged program of highway beautification upon which we may now build.

State, County and communities have for years been working together in highway planting projects. This work has been limited in scope, but it has established a basis for further cooperative efforts.

The State through years of experience has established standards for roadbed widening that assure the fact that plantings can be made without danger that the trees planted will have to be cut down to make way for a widened roadbed before they have grown to maturity.

The State highway organization is thoroughly committed to the policy of preserving as far as it possibly can, the native trees and shrubs that grow along the highway right of way.

Here is a basis upon which State and County can proceed to build a more beautiful highway system.

The problem of highway beautifications, however, is not one of planting alone.

THE BILLBOARD QUESTION

The billboard question presents a difficult phase of this problem.

(Continued on page 19.)

Governor Rolph Signs Bills Providing Orderly Additions to State Highways

GOVERNOR JAMES ROLPH, JR., affixed his signature on Wednesday March 20th, to bills providing for the orderly addition of new highways to the State system. These measures have passed both houses of the Legislature by overwhelming vote.

One of the measures to which Governor Rolph affixed his signature was introduced into the Senate by Senators Edwards, Breed, Allen, Baker, Cassidy, Duval, Harper, McCormack, McKinley, Riley, Swing and Waggy.

A companion bill, also signed by Governor Rolph, was introduced into the Assembly by Assemblyman Kline of San Jacinto. The Governor attached his signature with a gold pen presented to him by a delegation of Plumas County residents headed by Superior Judge J. O. Moncur. This pen was spun from Feather River gold, and was quill shaped to symbolize the area of its origin.

The bills provide for total additions of 804 miles of secondary highways to the State system. The roads included are designated on the map accompanying this article.

The bills were based upon a report on the orderly addition to new secondary highways made by the California Highway Commission and the Division of Highways, Department of Public Works. This report in its turn was made in response to a resolution of the 1929 Legislature, instructing that much study and resulting recommendations be made.

The resolution above referred to directed the observance of the following principles relative to the inclusion of new roads in the State highway system:

1. Additions to the secondary highway system are to be made during the next two years totaling between 10 per cent and 12 per cent of the existing State highway mileage, and in the ratio of not less than three or four miles in the south to one mile in the north.

2. Additional mileage is to be included for budgetary purposes when necessary surveys are completed.

3. No change is to be made in the present statutory division of secondary funds.

The joint resolution provides qualifications for roads which might be properly included and added to the State highway system. Roads having such qualifications are:

Governor Rolph signs Edwards-Kline bills for the addition of secondary roads to State system. The bills were signed with a pen made from Plumas County gold and presented by the residents of that county. In the picture above J. O. Moncur (left) superior judge of Plumas County, and Senator A. H. Breed (right), president pro tem of the Senate, witness Governor Rolph's signature to the bills.

1. Highways now carrying a large volume of State traffic.
2. Highways affording relief to heavy traffic on present State roads.
3. Highways serving as important interstate links.

The prescribed requirements limit the additional mileage to from 10 per cent to 12 per cent of the present State highway mileage and divide same in the ratio of not less than three or four miles in the south to one mile in the north in order that a start might be made in equalizing existing discrepancy between the mileage of secondary State highways in the north and the south.

ROADS INCLUDED IN SYSTEM

The following statement shows the highways included under the bills signed by Governor Rolph and the reason for their inclusion.

A.—A highway from New Pine Creek on the California-Oregon State line to a connection with State Highway Route 28 near Alturas; 34 miles: Modoc County.

This road establishes a connection between the Oregon State Highway System and the Redding-Alturas lateral (Route 28) of the California State Highway System.

This project is a necessary link on an east of the Sierra routing. It is a designated Federal aid route. It was recommended for inclusion in the State highway system by the Highway Advisory Board in 1925. Oregon is improving its roads from Klamath Falls, from Bend and from Burns territory (the Yellowstone cut-off) to the state line at New Pine Creek. Oregon, with State and Federal funds, has practically completed a surfaced road from the Columbia River and also from Klamath Falls to New Pine Creek. They are or will be fast speedways through interesting country. The unimproved condition of the California extension is withholding from the public the potential value of these routes.

Within California the project will coordinate with the Redding-Alturas highway, and through the Alturas-Susanville route, with the Red-Bluff-Susanville-Reno lateral. In the future a connection from Lake Almanor to the Feather River road would extend recreational traffic further south.

The route qualifies as an interstate connection. Without it our present highway system lacks a direct connection to eastern Oregon.

B.—A highway from Quincy to a connection with State Highway Route 29, near Chats; 58 miles: Plumas and Lassen counties.

This project would form an addition to the Feather River road, State Highway Route 21, joining it to State Highway Route 29 near the latter's interstate connection with State of Nevada highways. Its inclusion in the State system will extend State jurisdiction over a section which must eventually be considered of State and interstate importance beyond present State highway termination. Within a few years Route 21 will provide the much advertised water grade arterial through the scenic Feather River to the county seat, Quincy. East of Quincy lies equally attractive country and favorable routing to interstate direct routes through Nevada.

National forest highway activities in cooperation with Plumas County aid, is completing on good standards a surfaced road east of Quincy as their funds permit. Limitations in county funds and in federal road designation will not enable local and federal agencies to complete the connection through Plumas and Lassen counties.

This project forms an integral part of the Feather River highway.

C.—A highway from State Highway Route 8, near Cordelia, via American Canyon to State Highway Route 14; 14 miles: Solano, Napa and Contra Costa counties.

Traffic between the Sacramento Valley and the bay cities does not find the direct and most advantageous passage from State Highway Route 8 to State Highway Route 14 over connected state highways. State Highway Route 7 is available via Martinez Ferry but a better road and the bridge facility induce almost exclusive use of the county highway from Napa wye to the Carquinez Straits. A state route should be established to serve adequately that important through traffic which changed conditions on crossing the straits have forced over county roads.

Proposed for inclusion as state highway is a favorable route from Cordelia south to State Highway Route 14 by way of American Canyon. This route is 5 miles shorter than via Napa wye and 9 miles shorter than via Martinez. It combines directness, uninterrupted travel, and safety. Through an ideal underpass site near Cordelia the one railroad crossing on the route will be separated, and grade crossings on the county route and in Vallejo avoided. The new location avoids the present disadvantageous passage over steep intersecting streets in Vallejo. Alignment and grades are excellent. The construction costs will be moderate.

The route qualifies for state inclusion because it will meet the necessity for a state highway that will serve a very large volume of state traffic now carried over a county highway. It is in the only practicable location that will provide this function with safety, directness and reasonable cost.

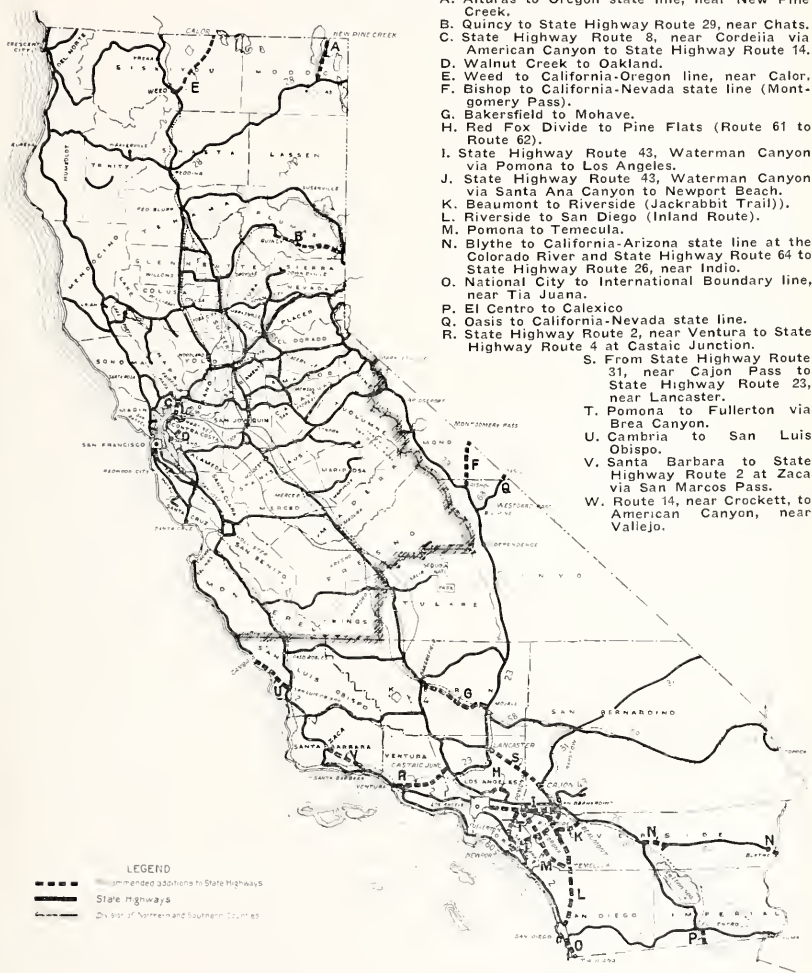

D.—A highway from a proposed Oakland tunnel to Walnut Creek; 9.6 miles: Contra Costa County.

Joint Highway District Number 13, composed of Alameda and Contra Costa counties, has organized for construction of a public highway and tunnel to supersede the present narrow, crooked and inadequate Tunnel road in Alameda County and improve the Contra Costa County road from the tunnel to the town of Walnut Creek.

Proposed for inclusion as a state highway is that portion of the route which lies in Contra Costa County between the tunnel and Walnut Creek, distance of 9.6 miles.

Basing calculations on the volume and class of traffic found on the present tunnel road and on the two State highways leading into Oak-

New Roads in Secondary State System

land, one from Livermore via Hayward and the other from Martinez through Crockett, and estimating the effect of better facilities easterly to Walnut Creek, the conservative twelve-hour traffic anticipated in 1940 on this project is equivalent to a twenty-four-hour traffic of 17,000 vehicles on Sundays and 10,000 on week days.

This route qualifies for state inclusion on volume, importance and character of present and of future probable traffic. It is logical to relieve Contra Costa County of this state traffic burden.

E.—A highway from State Highway Route 3 near Weed to the California-Oregon state line near Calor; 55 miles: Siskiyou County.

Geographic controls establish routing for the Pacific Highway through the north central portion of California. To reach the Klamath Lake Basin from this artery on improved roads requires a salient easterly through Oregon. The logical course for cutting this salient is a northeasterly diagonal departing from the Pacific Highway after the latter passes north of the summit near Mount Shasta. This diagonal has been recognized as a natural course on both railway and highway location. The highway routing proposed is 44 miles shorter than via the Shasta Canyon Highway over the Siskiyou Mountains.

It would depart from State Highway Route 3 near Weed and finds light construction conditions on a direct course to the Oregon Highway near Calor. The several intermediate summits are negotiated on moderate grades without losing direction and avoid adverse snow conditions better than on alternative routes.

The highway qualifies as an important interstate connection, as a route which will carry a large volume of state traffic and as one which is an economic alternative to another state route.

F.—A highway leading from Bishop, Inyo County, to a point on the California-Nevada state line near Montgomery Pass; 38 miles: Inyo and Mono counties.

This project is a routing from the Owens Valley to an interstate connection with Nevada state highway and is an alternative to State Highway Route 63. It is at present a county road. For a number of years the matter of decision on which of the two routes is preferable for ultimate interstate connection has been the subject of considerable investigation and discussion by California and Nevada road authorities. Neither California nor Nevada State Highway departments feel

that large outlay on the Westgard Pass Route other than by maintenance and minor improvement is warranted for the traffic served and are in accord in recognizing the superiority of the Montgomery Pass route. Nevada's procedure awaits some California state action in assuring permanent adoption of the route that must ultimately be chosen for practicable reconstruction.

The principal value of the route for state inclusion is for interstate connection, essential during winter months when it is the only practicable winter route between southern California and Nevada or the northern California and Oregon localities that are east of the Sierra. Future traffic will materially increase when the California and Nevada sections are improved. It qualifies as an interstate connection which will relieve the states of California and Nevada of expenditure of greater amounts on routes inferior in grades, directions and adaptability to serve traffic.

G.—A highway from Mojave to Bakersfield via Tehachapi Pass; 60 miles: Kern County.

Lying wholly within Kern County the road from Mojave to Bakersfield over Tehachapi Pass has been maintained as a county highway long since its serviceable condition has promoted thereon a class of traffic which readily qualifies it for state jurisdiction. It has outgrown its original function of supplying access to the county seat from the sparsely settled Mojave desert region and of giving means of egress to the several small settlements en route.

It is now considered an essential through route between the San Joaquin Valley and a wide area south and east of the Tehachapi Mountains. It joins State Highway Route 4 to State Highway Route 23 that runs north and south between San Fernando Valley and Owens Valley. At Mojave it connects with State Highway Route 58 which leads east for interstate connections via the Arrowhead Trail and the National Old Trail routes. It was recognized by the Highway Advisory Committee, in their report in 1925, as an important addition to the state system. Revision will make a marked improvement of the sharp curvature and steep grades on the present road. The distance is reduced from 66 miles to 60 miles.

The route is recommended as one important on state traffic classification. It is a passage over the Tehachapi range supplementing the Ridge route with relief thereto, is necessary for widely separated intercounty service, and is direct routing on interstate travel.

April Bulletin of Snow Survey and Precipitation Data; Seasonal Forecast

THIS issue of the Division of Water Resources' monthly bulletin presents the results of the main snow survey for the season, covering some 160 snow courses throughout the Sierra; furnishes all available data to April 1st from the precipitation stations of the U. S. Weather Bureau, State, Districts, and Public Utilities in the mountainous portions of the various stream basins; and gives, based upon these data, the seasonal forecast for 1931 water supply.

Forecasts of stream flow are made at this time as the end of March is normally the period when the major storms have occurred and melting of the snow has barely commenced. Snow survey data at this time may therefore be taken as indicative of the April-July stream flow with later modification of estimates in accordance with subsequent storms, temperature and conditions.

A general summarization of all data shows:

1. The water content of the snow on April 1st of this year in per cent of the water content on April 1, 1930, varying from about 30 per cent for certain Owens Valley courses to about 70 per cent at courses in Merced basin with a general average throughout the Sierra of about 55 per cent.

2. For those few areas where snow surveys have been made for a sufficient number of years to permit the development of "normals," a water content of the snow in per cent of normal to April 1st almost as low as 10 per cent for one or two Owens Valley courses, nearly up to 50 per cent for Yuba basin courses and a general average of about 40 per cent.

3. The average precipitation to April 1st in per cent of normal to April 1st varying throughout the Sierra from 42 per cent for one station in Owens Valley to about 75 per cent for stations in Stanislaus basin with a general average of about 60 per cent, and an average for Los Angeles, San Gabriel and Santa Ana basins of 60 to 65 per cent.

4. The estimated 1931 seasonal stream flow in per cent of the 40-year mean (1889-1929) varying from 25 per cent for the Kings basin to 40 per cent for the Tuolumne basin with a combined figure of 33 per cent for the entire Sacramento and San Joaquin basins.

The data and estimates indicate for the Great Central Valley a water supply only better than the record low of 1924 by a small margin. It is to be anticipated, therefore, barring storms of most unusual magnitude and duration within the next few weeks, that

conditions of minimum stream flow with resulting salinity encroachment in the case of the Sacramento-San Joaquin Delta, may approach those of 1924.

FORECAST OF STREAM FLOW (APRIL 1, 1931)

FROM SNOW SURVEYS

These forecasts are made for those few basins or partial basins where the snow surveys have been conducted, according to the standard methods adopted, for a sufficient number of years to make it possible. (State of California Surveys began in 1930.)

YUBA BASIN

Area tributary to South Fork at Lungs Crossing (Lake Spaulding).

Water content of snow in weighted per cent of normal for area (using Lake Spaulding, Cisco, Furnace Flat, Lake Fordyce, Soda Springs, Meadow Lake, Red Mountain, Sawmill Flat, Lake Sterling, Summit and Webber Peak snow courses)

38%

Normal April-July run-off of South Fork at Lungs Crossing----- 249,000 acre-feet

Estimated 1931 April-July run-off... 95,000 acre-feet

Area tributary to Bowman Lake.

Water content of snow in weighted per cent of normal for area above Middle Yuba at Milton and mouth of Jackson and Canyon Creeks (using Bowman Lake, Findley Peak, English Mountain, Meadow Lake and Webber Peak snow courses) -----

37%

Normal April-July run-off for combined Jackson and Canyon Creeks and Middle Yuba at Milton (above Milton-Bowman tunnel diversion) 104,000 acre-feet

Estimated 1931 April-July run-off... 38,000 acre-feet

TRUCKEE, TAIHOE, CARSON AND WALKER BASINS

The forecasts for these eastern slope basins are compiled by the Forecast Committee of the Nevada Cooperative Surveys and have not been completed with this issuance of the bulletin.

FROM PRECIPITATION AND SNOW DATA

All available precipitation and snow data for the various basins have been analyzed to derive an estimate of the seasonal (October to September) stream flow in per cent of the 40-year average, 1889-1929, and these estimates are compared to the similar percentages

(Continued on page 24.)

Contractors Told Rolph Labor Program

THE employment of United States citizens on public works, who have been residents of California for at least a year; preference to married men in such employment; the maintenance of prevailing wage scales—these are cardinal points in the labor program of the Rolph administration, as outlined by Colonel Walter E. Garrison, director of the Department of Public Works.

Every contract signed by Colonel Garrison is accompanied by a letter to the successful contractor, requesting cooperation in making this program effective. Contractors as a whole have responded in a whole-hearted manner to Colonel Garrison's request.

The letters sent to contractors, in which this policy is definitely set forth, read as follows:

The enclosed contract, like most of the other contracts we are awarding at this time, is ahead of schedule. The object is to aid the unemployment situation in every possible way and to help to alleviate the present business depression.

Governor Rolph is very much concerned with this matter and has requested me to urge you to favor married men in the employment of your labor, as the burden of hard times falls heaviest on them. In this connection, we favor the policy of employing citizens of the United States who have been residents of the State of California for at least one year, and your efforts in this regard will be appreciated. It is also urged that you expedite this work as much as possible in order to lend your efforts in the recovery of business prosperity.

Another matter of much concern to the State at the present time and to the future prosperity of the nation is the matter of wage scale. It is our belief that the wages paid on this and other State contracts should be the prevailing wage in the locality, and we ask your serious consideration in dealing with this problem.

Your support in these respects will be very much appreciated.

COLONEL WALTER E. GARRISON

1930 FOREST FIRE RECORD

The fire-fighting organization of the forest service established a new record in 1930 in California by holding down the total area burned in the eighteen national forests in California to 35,000 acres. This was less than 20 per cent of the average annual loss from forest fires.

The average acreage burned annually in the California national forests is 188,000 acres, based on records for each year since 1909. The most disastrous year was 1924, when 551,000 acres were swept by fires. The only season that can be compared with 1930 for a low fire record is 1915, when only 41,000 acres burned.

"Do you know how to make a peach cordial?"
"Sure. Send her a box of candy."

HANDLING A WOMAN BY ELECTRICITY

A reader in New Jersey submits the following:

If she talks too long—Interrupter.
If she wants to be an angel—Transformer.
If she is picking your pocket—Detector.
If she will meet you half way—Receiver.
If she gets too excited—Controller.
If she goes up in the air—Condenser.
If she wants chocolates—Feeder.
If she sings inharmoniously—Tuner.
If she is out of town—Telegrapher.
If she is a poor cook—Discharger.
If she is too fat—Reducer.
If she is wrong—Rectifier.
If she gossips too much—Regulator.
If she becomes upset—Reverser.

—Hardware Dealer.

Lake Almanor Fish Hatchery

By CARL E. BERG, Engineer of Estimates and Costs, Division of Architecture

A FEW miles north of Lake Almanor, near Chester, Plumas County, stands the most recent of the Division of Fish and Game's fish hatcheries. This very appropriately has been named the "Lake Almanor Hatchery." From now on it will add its yearly quota of approximately four million trout fry to the many, many millions planted every year in California's streams and lakes by the Division of Fish and Game.

CARL E. BERG

Designed by the Division of Architecture to be built of California lumber to harmonize with its setting in California's highland, it provides not alone the best facilities for successful fish culture, but also comfortable quarters for

the man in charge and his family. The Red River Lumber Company of Westwood, California, who were the contractors, are to be complimented not alone for turning out a splendid job, but also for the speed with which it was done. Their construction force

under Mr. George Peltier, though carrying on the work in the winter months, completed their task in thirty working days, making it possible to have the hatchery finished in time for this year's hatching.

The hatchery itself is a frame building 40 feet wide and 150 feet long, well lighted, and affording ample room for 96 hatching troughs in which from early February, eggs from Rainbow, Lock Leven, Eastern Brook and Black Spotted trout will be hatched and the fry reared until ready for transplanting either into large rearing troughs or into streams and lakes of the surrounding country.

The all important cool, fresh water, without an abundance of which no fish hatchery can operate, is supplied by a never failing stream and, from behind a small concrete intake dam. A thousand feet of 10-inch riveted steel pipe carries by gravity 1000 gallons of water per minute into a screened and covered settling tank from which, after being freed from sand, leaves, etc., it flows into the hatchery head trough from where it is distributed through adjustable orifices into the hatching troughs.

Close to the hatchery is a comfortable cottage containing four rooms and bath, with running hot and cold water and wired for electricity, for the foreman in charge, and another cottage to house additional helpers will be erected later. A three-car garage pro-

Lake Almanor Fish Hatchery.

vides ample storage for the hatchery's trucks and automobiles, it also has a large storage room in one end for wood, etc.

The Lake Almanor Hatchery is the ninth large hatchery designed and built by the Division of Architecture for the Division of Fish and Game. The other eight are located throughout the State as follows:

Mount Whitney Hatchery, near Lone Pine, Inyo County.

Kaweah Hatchery, Kaweah, Tulare County. Yosemite Hatchery, Yosemite National Park.

Lake Tahoe Hatchery, Tahoe City, Placer County.

Feather River Hatchery, Clito, Plumas County.

Big Creek Hatchery, near Swanton, Santa Cruz County.

Cold Creek Hatchery, near Ukiah, Mendocino County.

Mount Shasta Hatchery, Mount Shasta, Siskiyou County.

All these hatcheries are open to the public. The Division of Fish and Game invites everyone to visit them and see how the work of keeping up the supply of game fish in California's streams and lakes is carried on.

Already hundreds of thousands of people avail themselves of this invitation every year and the Lake Almanor Hatchery will undoubtedly attract a large number of visitors. It is located but a few miles from Chester on the Red Bluff-Susanville highway, and easily reached over a good road.

One night, just before closing up time, Ole Olsen came running into the general store, hatless, coatless and breathless, and dropping on his knees yelled: "Yon, Yon, hide me, hide me! Ye sheriff's after me!" "I've no place to hide ye here, Ole," Yon Yonson, the proprietor, said.

"You moost, you moost," screamed Ole. "Crawl into that gunny-sack, then," said Yon. He had no sooner gotten hid than in ran the sheriff. "Seen Ole?" he asked.

"Don't see 'im here," said Yon, without lying. Then the sheriff went nosing around and pretty soon he spotted the gunny-sack over in the corner. "Whats in here?" he asked.

"Oh, joost some old harness and sleighbells," said Yon.

With that the sheriff gave the sack an awful boot. "Yingle, yingle, yingle!" moaned Ole.—*Pathfinder Magazine*.

A woman arriving in this country after a short visit to the continent was asked the usual question by the customs official at the landing port: "Anything to declare, madam?"

"No," she replied, sweetly, "nothing." "Then, madam," said the official, "am I to take it that the fur tail I see hanging down under your coat is your own?"

POEM IS MADE PART OF BID OF CONTRACTOR ON DESERT ROAD JOB

When bids were opened by the Division of Highways recently, the following poem was found attached to a bid upon a Mojave Desert highway project:

THE MOHAVE SINK

The Devil in Hell one time was chained,
And there a thousand years remained,
He never complained, nor did he groan;
Just decided to have a Hell of his own
Where he could torture to like degree
All living things, and watch with glee.

So he asked the Lord, "Have you land to spare
That you would sell at a price that's fair?"
The Lord said, "Yes, I have plenty, I think;
I left it all down around the Mohave sink.
In fact, Old Boy, the stuff is so poor
I doubt it could be used as a Hell any more."

The Devil examined it closely and well,
But reported the country too dry for Hell.
So the Lord, to get it off his hands,
Told the Devil He'd water the lands,
As He had some water no longer of use—
Stagnant old bog holes that stunk like the deuce.

The Devil, tickled, danced round and round
In the place that's called "The Devil's Playground."
The trade was made, the deed duly given,
The Lord went back to His home in Heaven.
"Now," the Devil said, "this is all I have needed
To make a Hell," and at once he proceeded.

He piled the sands in queer ridges and drifts,
Shattered the rocks into ragged sharp rifts;
Scattered in places, a sparse growth of brush,
Caused hot winds to dance with a staggering rush;
He put ugly bugs in the stale water holes,
Made the sun shine down like a bed of hot coals.

With foot-evil he troubled the long-horn steer,
And with ticks infested the poor creature's ear;
He crazed the bronco with the loco weed
And poisoned the feet of the centipede;
He hid chuckwallas in crevice and cracks—
Ugly old lizards with scales on their backs.

To the jackrabbit he gave unbelievable speed,
Told kit fox to starve or on jackrabbit feed.
Through miles of country where one can't make a road
He put thorns on the foliage and horns on the toad;
He filled the sands with scorpions and ants,
You can't sit down 'thout half-soles on your pants.

With colonies of tarantulas he peopled the hills,
Made turtles eat cactus in spite of its quills;
Over rough, rocky crags caused big horns to roam,
Made the canyon cave the lynx cat's home.
The howl of the coyote through the dead of night
Makes the wanderer long for the morrow's daylight.

With mirages he fools the thirsty one's eyes,
Till he's lost in the wastes and in agony dies.
One can't describe the fear that prevails,
Snakes walk on their bellies and talk with their tails.
Round through the hills he scattered some ore,
Put false signs here and there to indicate more.

"THE DESERT RAT."

Officer is Cited for Unusual Services

1 1 1 1 1 1 1

STATE Traffic Officer L. T. Torres of the Santa Clara County squad has been formally cited for unusual service rendered as an officer in a special order issued by E. Raymond Cato, Superintendent of the California Highway Patrol.

The service performed by the officer included the arrest of two notorious "stick-up" men on February 25th and a man wanted for murder on March 7th.

On the first occasion, the citation order said: Torres, unassisted, arrested Homer Cooper and C. W. Carson on a stolen auto charge. Questioning developed that both had engaged in 29 holdups in Los Angeles in one of which three hotel guests were wounded. They are also alleged to have confessed membership in a gang of five criminals in Kansas City, Mo., which held up two banks and killed a traffic officer who attempted to prevent their escape. Torres found three loaded pistols on the men when arrested.

On the second occasion Torres arrested George Weyrauch and William Slinger on a similar charge. Questioning by Captain John Pacheco developed that Weyrauch was wanted for the murder of a Tacoma, Wash., service station attendant and the wounding of his wife. Both were identified as the men who participated in a series of burglaries in Oregon.

Torres joined the patrol in November, 1930.

Highway Patrol Courtesy Column

Testimony from Flower Festival.

Mr. Thomas F. McLoughlin, Manager National Mid-winter Flower Show, Encinitas, San Diego County: The above named association held its annual six-day show recently at Encinitas and was visited by Governor James Rolph and Lieutenant Governor Merriam.

During the six days enormous crowds visited the show and traffic on the Coast Highway in the vicinity of the show tent was heavy and congested.

I wish now to state, on behalf of the directors of this show, that no management could have had better assistance than was rendered by Capt. Otto Langer and his group of splendid officers. Not one single accident occurred and comments were heard on

TRAFFIC OFFICER T. L. TORRES

all sides about the way these officers helped the motor traveling public.

Trial Crowds Well Handled.

From A. T. Dresser, Sheriff, Santa Cruz County: I want to take this means of thanking your department for the wonderful cooperation of your Santa Cruz County squad for assistance in handling crowds during the Thornehill trial when it was necessary to have uniformed men in the court room to handle the crowds, which were handled to my satisfaction and that of Judge Pullen of Sacramento, who sat in the case during the trial.

Through Captain Payton and his men we have had cooperation in other ways as well and I want to assure you that our office stands ready to assist your department at any time you need us.

Hold-up Men Arrested.

From M. B. Driver, Sheriff of Alameda County, to Raymond E. Cato, Superintendent of the California Highway Patrol: Your letter of March 7th, making inquiries as to the arrest and disposition of three men by the name of J. L. Montgomery, J. R. Murray and Henry Melvin, who were held to answer before Judge Chas. A. Gale of Pleasanton, this county, is received.

We beg to advise that on the night of February 6, 1931, it was reported to our deputies, Mr. L. E. Van Patten and Mr. Hugo Radbruch, who live in the east end of the county, that some hold-up men were at work in Dublin Canyon at Boomer Hill, near Dublin. In their investigation of this stick-up our deputies met two of your men, Mr. C. K. Gill and Mr. C. Avellar, and gave them a description, as best they could, of the car and occupants in which the hold-ups were operating. Later on Mr. Gill and Mr. Avellar stopped the car as described and found three occupants whose names we have already mentioned. They immediately got in touch with our deputies, who took charge of the prisoners and took them to the Livermore jail. The next day the prisoners were arraigned before Judge Gale of Pleasanton and bound over to the superior court for trial. These men are now awaiting trial in the Alameda County jail.

It is my desire to thank you, and through you, your officers, who rendered such valuable service in this matter.

Your letter stating that you have instructed your officers to cooperate with all peace officers is highly appreciated. Through cooperation we can accomplish very much that it is impossible to accomplish by each group of officers working entirely independently of all other groups.

Thanking you again for your cooperative spirit, and, if you will please convey my personal compliments to the two officers mentioned, I will thank you.

Exhibit Is Praised.

From D. E. Watkins, Secretary and General Manager, California State Highway Association: Permit me to comment favorably on the exhibit of the California Highway Patrol at the recent Pacific Automobile Show in Exposition Auditorium, San Francisco. I personally noted this exhibit and the excellent manner in which your staff took the opportunity of presenting to the motoring public the message of traffic regulation and highway safety. I hear many complimentary comments on this exhibit from my colleagues and from members of the California State Automobile Association.

Another noticeable feature was the courtesy of the members of your staff, Inspectors Charles D. Reade and Robert Coffey, Captain Albert O'Connor, and Patrolmen Otto Schramm, V. E. Dwelly, Avellar and Gill, who handled this work for you.

Squad Appearance Complimented.

From Seth E. Howard, Brigadier General, C. N. G., The Adjutant General: Permit me to express my sincere appreciation for the courtesies rendered to me upon the occasion of the visit of Governor James Rolph, Jr., to Riverside and San Bernardino for the opening of the National Orange Show. May I also take this occasion to compliment the excellent appearance of your detachment of State motorcycle police together with the fine manner of performance in riding in formation.

Officer Was Right on Job.

From D. P. Eicke, Stockton: I recovered the Ford car that was stolen from Stockton last Thursday and registered in the name of Mrs. D. P. Eicke, 673 Lexington avenue, in Modesto. I started for home and didn't get five miles when I was accosted by Officer C. A. Brink, whose star is No. 347. This was about five o'clock in the evening and the traffic was thick and speedy, yet as I pulled past he gave me the once over and the windshield mirror showed him whip out a book from his pocket and in less than a minute he had me off to the side of the road.

It was splendid work picking me out of all that traffic in such a short time. I wondered if you would drop him a card so that he might know that the public is appreciating such good officers.

Motorist in Trouble Aided.

From R. M. Colecolough, Sacramento: Two weeks ago, while driving on the Auburn-Grass Valley highway, I had brake trouble and was rendered prompt, courteous and efficient service by Officer Fonyer. Please be assured that the service is greatly appreciated.

Assistance Appreciated.

From R. L. Dunn, Jr., San Francisco: I wish to call your attention to a very courteous act which was performed by one of your motorcycle officers operating out of San Luis Obispo by the name of Donnelly. On last Sunday my wife and I were returning from Los Angeles, and were stuck, due to motor trouble, on the grade about six miles out of San Luis Obispo. This officer came along, and stayed with us three hours past his regular time of duty to aid us and the party who was working on the job in a very ticklish spot on the road. I was so thoroughly impressed with this man's attitude and conduct that I want to call it to your attention.

Give First Aid.

From J. F. Stephenson, Hollister: I am writing to congratulate you on having such an efficient officer as Mr. L. Hamilton in this territory. I was changing a tire recently when the lug wrench slipped and cut my hand quite badly. Officer Hamilton, who was passing, stopped and gave me first aid in a very efficient manner, enabling me to proceed on my way.

(Continued on page 24.)

Legislative Committee Reports

On California Water Problems

THE report of the Joint Committee of the Senate and Assembly dealing with the water problems of California was submitted to the Legislature on March 23d. This committee authorized by the 1929 Legislature was made up of the following legislators:

B. S. Crittenden, chairman, R. P. Easley, Edwin A. Mueller, Will R. Sharkey, Van Bernard, Frank W. Mixter, H. C. Nelson, Ralph E. Swing.

After dealing with the history of the water problem in California, and a detailed analysis of the problems and features that it presents, the committee recapitulates its findings as follows:

The following table sets forth the units proposed, with estimates of cost:

Kennett Reservoir, Afterbay and Power Plant	\$84,000,000
Contra Costa Conduit	2,500,000
Delta Cross Channel	4,000,000
San Joaquin Pumping System	15,000,000
Friant Reservoir and Power Plant	15,000,000
Aqueducts from Friant Reservoir	29,900,000
Rights of Way, Water Rights and General Expense	8,000,000
Total Great Central Valley	\$158,900,000
Santa Ana River Flood Control and Conservation Project	30,000,000
Grand total initial plan	\$188,900,000

In the report of the legislative committee of 1929, rather a complete statement of policies were suggested in State activities along these lines. We wish to reaffirm the policies set forth in that report.

We desire to reassert with reference to Mountain Problems of Northern and Central California that the foothill sections of Northern and Central California have furnished much of the basic wealth of our State and should not be overlooked in the development of water resources of those parts of the State. It is important that the State retain such authority over the water coming within its control as will insure a sufficient supply for use within the watershed where such water originates when and as the same may be needed and reasonable provision should be made for maintaining the mountain streams of such territories in the interest of and for the protection of fish and game and for supplying the reasonable demands of outdoor recreation and sports and the demands for all other beneficial uses. Economically speaking, lands farthest from market and from centers of population and land difficult of development are among the last to be brought under cultivation and unless provision is now made for caring for the demands of these lands as well as for the other beneficial uses when and as needed, the right for use for such purposes may be lost. Of the waters brought under control of the State the right of use of such part thereof as may be reasonably antici-

pated as necessary for supplying and caring for all the aforesaid uses should at this time be reserved, and allotted for such uses as required. In supplying areas of deficiency of water from areas of surplus only such water as is not needed to serve vested or other property rights, or necessary for supplying the uses and purposes hereinbefore mentioned should be considered and no water should be diverted from the area of origin which is now or which may ever be required for any beneficial use within such area of origin.

FINANCING

Your legislative committee in 1929, on the subject of financing, reported in part as follows:

"We feel that the Federal Government is interested in the development of Kennett, upon the grounds of its well established policies regarding navigation and flood control. Therefore, every effort should be put forth toward the adoption of the program of construction hereinbefore mentioned to obtain Federal aid. Whenever such Federal aid is obtained it should inure to the benefit of the State in repayment of the amount of money which the State may have advanced or reducing the amount of bonds to be sold in the construction of Kennett and the San Joaquin Valley project.

"We recommend that the Legislature memorialize Congress to at once investigate the need for this development and to approve the same and appropriate such sum or sums as it deems just in the premises."

In considering the question of financing this development the amount of money involved at first seems overwhelming; however, when we compare that investment with that which we make for our State highway system and compare the direct economic benefit to the State as a whole as well as to great numbers of private individuals, there is little doubt that the investments for water conservation would directly return to the people generally a greater economic benefit.

The money involved should be considered on the basis of an investment, not on the basis of the expenditure of money for social, political or educational purposes. It will not impair the credit of the State; it will increase it, because it directly increases the volume of property in the State.

Considering the amount of money involved from the standpoint of investment the question to be considered is:

What is it worth in dollars and cents to the property values of the property included in the State of California to have this investment made?

The difference between a copious supply of cheap water for agriculture, industry and domestic necessity and a scarcity of water for such purposes is directly illustrated in the difference between desert or semi-desert and highly developed properties containing orchards, dairies, cities and towns. The removal of the salt water menace around the great metropolitan centers and in the delta will be reflected in millions of dollars of increased value in property. To illustrate, the difference in being able to obtain liberal bank loans on land and not to be able to obtain

them scarcely at all, to be able to have ample supply of water in the fertile lands of the counties of the southern San Joaquin or to have shrinkage of population, withdrawal of loans, decrease in all business activities. Ample supply of water will be reflected in increased transportation, increased consumption of products, increased growth in the cities, bank deposits, increased activities in everything that goes to create a healthy economic condition.

To our minds the investment of the money herein mentioned would be reflected before the construction could be completed in increased State, Federal and county taxes sufficient to justify the investment even though the entire sum were paid by the State and Federal governments.

This is not a fanciful theory or a new idea in government. Many of the oldest countries in the world have owned, operated and furnished to the public their public water developments, because of the State's interest in the same.

In the early history of California when its population was sparse it was possible for individuals to develop their own water supply or for improvement districts comparatively small in size to do the same. This condition has changed. The local supply has been depleted and now it becomes necessary in all development to take into consideration the entire picture.

Speaking more definitely in regard to northern California project we believe the State and Federal governments should each contribute heavily toward these developments, that the Federal Government is justified from the standpoint of navigation, flood control and reclamation in contributing at least \$20,000,000 toward the entire amount; that the State as it becomes necessary should match this amount; that the original money should be advanced by the Federal Government and that the State should guarantee the repayment to the Federal Government in all sums in excess of the amount of \$20,000,000.

We recommend the advancement of money by the Federal Government and the guarantee of the return of the same by the State, and the guarantee should be made when the State has succeeded in entering into contracts with responsible parties for the repayment of all of said moneys and interest within a period of fifty years or thereabouts. That the State should be given power to enter into contract with persons, corporations, cities, counties and districts, for the purchase and sale of power and water and that in general the State should take over the direction, control, management in a general way of the construction and operation of all of the units in the central basin of California. That it should be given quite liberal power in the negotiation of such contracts on such terms as the Legislature may from time to time prescribe.

We believe that the Federal Government should be called upon to furnish the money at a very low rate of interest of approximately 3½ per cent and that some money should be furnished the San Joaquin unit free.

The Santa Ana project should be worked out on the same basis as flood control and reclamation problems of the Sacramento Valley were solved. That is one-third be paid by the State, one-third by the Federal Government and one-third locally.

We recommend that suitable constitutional amendments be introduced and adopted at this session of the Legislature authorizing the carrying out of the recommendations hereinbefore made. We further recommend that a special tribunal be created for the determination and appraisal of water rights and other properties that might be involved in such development.

We recommend that great care be given to the

Governor Signs Gasoline Tax Collection Laws

LEGISLATION designed to tighten up the gasoline tax collection laws and prevent oil companies from defrauding the State out of tax has been approved by Governor Ralph.

The gasoline tax bills were introduced by Senator Arthur H. Breed, Piedmont, after the state board of equalization disclosed that approximately \$1,250,000 was due the State in delinquent taxes.

Four amendments were written into the State gasoline tax act, as follows:

1. Collections to be made by the State monthly, instead of quarterly as at present.
2. Oil firms must post bonds guaranteeing payment of the levy.
3. Tax laws strengthened to prevent the sale of gasoline in California, which previously was reported as exported.
4. Preventing unauthorized blending of motor vehicle fuel, by demanding licensing of all producers and brokers dealing in products which may be made into gasoline.

The tax evasions were caused by dealers who reported the gasoline as being sold for export, and then sold it in California, and the fact that some small firms were forced to the wall by periodic gasoline wars leaving these taxes unpaid.

Sambo, a southern darkey, married Liza. In about two weeks he came to the reverend gentleman who had tied the knot, looking as if he had lost his last friend in the world.

"What's the matter, Sambo; aren't you happy?" the preacher inquired.

"No, suh, pahson. Ah wants a divorce."

"I'm sorry to hear that, Sambo, but you must remember that you took Liza for better or worse."

"Ah knows dat, pahson, but she's wuss den ah took her fo'."

The weatherman dreamed that himself was dead; That he stood by his monument, tall, and read The message thereon—and he hung his head, For "Probably Warmer" was all it said.

protection of the present and future needs of all portions of the State where water may be stored and from or through which it may be diverted from its natural course or courses, that it be understood to be fundamental that it is not only wrong but economically unsound to injure materially one section in order to benefit another.

We urge that prompt action be taken, that in so doing great care and consideration be given to the needs of all who may be affected. We believe it to be a short-sighted policy, however, for districts not immediately benefited to fail to take interest in this State-wide plan.

State-County Road Mileage Study

The California Highway Patrol today announced the results of a survey of road mileage in California. Taken to provide the basis of studies for a more adequate and equal distribution of traffic officers.

The survey was announced as covering both paved and unpaved county and state roads in each county. The information thus secured is to be used for an index system combining factors relative to accident hazard such as population and traffic density, motor vehicle registration, etc.

The patrol's survey, based on statistics gathered by traffic officers in the various counties, showed a total of 74,492 miles of public highway in the state.

This figure, which does not include city streets or private roads is divided as follows: Paved county roads, 8970; unpaved county roads, 59,184; paved state roads, 4118; unpaved state roads, 2219.

Under paved roads are listed all concrete-asphaltum, concrete, and macadam roads. Under unpaved roads are listed all dirt, graveled, graded and oiled roads.

Tulare County with a total mileage of 4650 leads the list of counties. Fresno County is second with 4569. Other counties are shown by the following table:

County	County roads			State highways			Grand total

State of California

GOVERNOR'S OFFICE

SACRAMENTO

March 6, 1931

JAMES ROLPH, JR.

GOVERNOR

Mr. Thos. E. Stanton, Jr., President,
California State Employees' Association,
Room 404 B, State Capitol,
Sacramento, California

My dear Mr. Stanton:

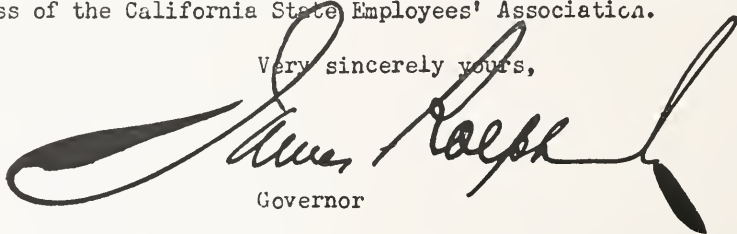

I was very glad to receive your letter of February 25th, setting forth the purpose of the California State Employees' Association, and desire to commend the employees of the State for their initiative in taking this step.

Throughout my entire period of public life, I have been most interested in the welfare of the public employees. I actively sponsored the retirement and civil service measures in the City of San Francisco.

Organizations such as yours can be a source of much good when conducted along proper lines, free from political motives and entanglements. Let me urge your Association to always maintain the high ideals set forth in your Constitution.

I sincerely appreciate your kind assurance of cooperation and support in making my administration a successful one, and in return desire to assure you of my confidence in the sincerity of your purpose. You may convey to the employees of the State my cordial good wishes for the success of the California State Employees' Association.

Very sincerely yours,

Governor

Press Comment on State Highway Affairs

Highway Commissioner Commended.

That a good public servant is not without honor even in his own country is evidenced by the following article appearing in the *Riverside Enterprise*:

Frank A. Tetley, State Highway Commissioner, was honored Monday by the Board of Supervisors with a resolution in return for the manner in which he is supporting an adequate southern California highway program, particularly in Riverside County.

Mr. Tetley is giving a great deal of his time to legislative matters affecting all of this part of the State, particularly those in Riverside County. His many years of business operations in all parts of the southern counties qualify him to understand the problems to be met better than most public officials.

The recognition by the county supervisors of just what he is doing is merited.

Illegal Signs Removed.

The article below is from the *Santa Barbara Press*:

Santa Barbara County's scenic roadsides are being partly cleaned of signboards by the district state highway maintenance crew, it was announced yesterday from the office of the County Planning Commission. Similar work is being done in other counties.

During the past few weeks thousands of signs in this county and in San Luis Obispo and Ventura counties have been taken down by the county and State road crews. Only those signs placed on ranch properties without the permission of the owners are removed. Work is concentrated on scenic sections of highway. Signs are encouraged in commercial districts.

Santa Barbara County, while relatively clean of billboards and signs, is occasionally flooded with signs, County Planning Director L. Deming Tilton said. The county crews are watching the roadsides carefully to keep the signs at a minimum in scenic sections.

Toll Bridge Purchase Praised.

The following editorial is from the *Riverside Press*:

It is good news that the states of California and Arizona have reached an agreement with the owners of the Blythe-Ehrenberg bridge for the purchase of that structure. * * *

Governor Rolph is entitled to great credit for working out this arrangement with Arizona. The achievement is one that does credit to his tact and ability to handle such a difficult problem which has been created by the antagonism toward California that has in the past existed on the part of Governor Hunt of Arizona.

Highway Commissioner Tetley of Riverside has also rendered valuable service in the matter.

Rolph Administration Vindicated.

Apropos of the above, the following editorial is from the *Redlands Facts*:

California and Arizona appear to be working toward a common purpose at last. The important incident is common purchase of the Blythe bridge that the highways connecting the two states may be taken into the Federal aid system. Governor Rolph, if he makes friendly relationship with Arizona, will have vindicated his administration at the start. The non-sense of ill feeling between the states has existed long enough, and has had a great deal to do with the persistent bitterness concerning the proposed Boulder Canyon development.

Right to the Point.

Very pertinent comment by the *Tulare Times*:

California is spending millions to do away with grade crossings. A nearby example of the huge expenditures made for this purpose will soon take place here, when the Highway Commission builds eight miles of new road to obviate two railroad crossings. With safety first as a motto, the State is expending vast sums for the protection of the careless driver. The State seems to think more about the lives of the heedless drivers than they do themselves, which of course is the right policy.

Benefit of Roadside Burning.

The following testimony of the benefit of roadside burning is given by the *Colton Courier*:

Although many of us have doubtless at various times questioned the advisability of expending money in removing the weeds from along the highways, there are figures to prove that the expenditure of money for that form of public improvement has been more than repaid in the saving of property through elimination of roadside fires.

An example of this saving is shown right here in our own county where there was formerly one fire to every ten miles of highway through grass land and brush each year. After roadside clearing had been established the fires were lessened and last year there was not a single roadside fire in the entire county where the highway had been properly cleared, irrespective of the amount of travel over many sections of the popular roadways into the mountains.

Good Road for Hot Dog Stands.

Says the *Chico Enterprise*:

The reaction of R. A. Sherwood of Chico to the aspersions of Jo Boucher and N. D. Bruce of Paradise to the effect that the Deer Creek road, as depicted in a map of northern California highways and proposed highways in Wednesday's *Enterprise* is a bologna road, is that nothing links up like a sausage.

* * * * *

Highway Policy Commended.

The *Modesto News-Herald* makes the following editorial comment:

The State Senate Committee on Roads and Highways has voted to stick to the policy of providing money only for those roads that are included in the budget prepared by the State Highway Commission.

That is the wise and sensible thing to do.

For this budget is prepared after a thorough and impartial study of the whole situation by the engineers of the Department of Public Works. It seeks to be fair to all sections; and at the same time include only such improvements as there is money in sight to pay for.

If exceptions are made to its recommendations, the bars will be down and the highway system again will become a legislative football and pork barrel.

* * * * *

Getting To Be a Habit.

The *Pacific Palisades* tells the following story:

Last Friday afternoon a rock truck belonging to the State Highway Maintenance Department, operated by Arthur C. Humphrey, went over the bank near Castellammare, severely bruising the driver about the face and shoulder, and in'uring his ribs.

Humphrey was unloading rock along the beach. The tongs held on to a heavy rock and before it could be released pulled the truck over the bank, Humphrey going down with it. He was taken to a doctor in Santa Monica by Frank Fay, the actor, who happened to be passing at the time, and later was moved to his home.

This is the sixth time Humphrey has had an experience of this kind, and each time it has happened on a Friday.

* * * * *

Commissioner Hopkins Wins Warm Praise.

This is from the *Tehachapi News* of March 20th:

The Tehachapi Highway—and we can now say that, with much pride—has an able champion in State Highway Commissioner Harry A. Hopkins of Taft. One of the first things Mr. Hopkins did on taking his seat on the Commission was to make himself vigorously heard in favor of this main artery and which has been fought through two administrations. The Commission unanimously endorsed the Edwards bill, Chairman Earl Lee Kelly declaring: "The roads in the rural sections of the State must be developed both to take

Dam Supervision by State is Commended

THE leading article in the January number of *Pacific Service Magazine* is a resume on State supervision of dams by A. H. Markwart, vice president of the Pacific Gas and Electric Company. We quote in part from this article as follows:

The failure of the St. Francis dam focused the attention of the State legislative body on the necessity for concentrating the supervision of dams under one central control. As a result, the 1929 Legislature, under the police powers of the State and for the purpose of safeguarding life and property, invested the duty of the supervision of the construction and maintenance of all dams, with the exception of those owned by the United States, in the Department of Public Works, under the administration of the State Engineer. This law repealed all other State acts governing the supervision of dams.

The new California law states that all dams in the State, whether heretofore or hereafter built or then under construction, shall be under the jurisdiction of the Department of Public Works, as administered by the State Engineer, and that it shall be unlawful to construct, enlarge, repair, alter, remove, maintain or operate any dam except with the approval of that department. All dams fifteen or more feet in height from the stream bed to the crest of the spillway, or impounding ten acre-feet or more, are subject to this control.

* * * * *

In the administration of the duties conferred upon the State Engineer by the new legislation, a fine spirit of cooperation has been evidenced at all times. Dam construction has been termed "a splendid adventure," and true it is, for unforeseen and difficult conditions arise and alteration in the original plans and decisions must be made with the least possible hindrance of the work. Such situations, as they arise, require the fullest cooperation among all parties involved. In this the State representatives have been most helpful, and have shown their understanding of their duty which, under the police power of the State, is primarily to see that public safety is assured.

care of their own and traffic needs, and also to provide transportation facilities in and out of the metropolitan centers. Governor Rolph expressed this thought in his very able inaugural address."

* * * * *

An Improved "Unimproved" Highway.

Under the heading Technically Unimproved, the *Marysville Democrat* comments as follows:

Although the Tahoe-Ukiah Highway between Marysville and Grass Valley is labeled on the latest map of the State Department of Public Works as "unimproved," the motorists who have been using it for years are of the opinion that it is vastly improved since the State took charge of it.

The designation on the map is meant only to differentiate between that type of improvement and other types in use by the State. The entire section between Marysville and Grass Valley has been improved by regrading, widening, change of alignment, removal of

COLONEL WALTER E. GARRISON.....Director
GEORGE C. MANSFIELD.....Editor

Address communications to California Highways and Public Works, P. O. Box 1103, Sacramento, California.

Vol. 9 APRIL, 1931 No. 4

Law Is Cited of Responsibility for Children Motorists

THE California Highway Patrol calls the attention of the motoring public to provisions of the law setting up the method whereby parents and others who have signed the application of a minor for an operator's license may be released from the liability they have assumed.

The Division of Motor Vehicles, it was stated, can not under the law accept an application for release from liability unless the application has been verified and properly notarized as required by law.

Persons seeking to file such release applications were advised to secure from the nearest branch office of the patrol a correct form which has been devised. These forms are now available at all branch offices of the Division and the patrol.

Under the present law no minor may obtain an operator's license unless the application is signed by both parents, if both are living, or by his guardian, employer or other person having custody of the minor. The person or persons signing the application then become liable for damages caused by the minor as a result of negligence. The only exception is when the minor is driving a vehicle as the agent of someone other than the person signing the application.

In cases in which the person signing the application of a minor makes formal request for release from liability the law requires the Division of Motor Vehicles to cancel the license.

AN IMPROVED "UNIMPROVED" HIGHWAY

(Continued from page 18.)

stones and resurfacing, yet this is not sufficient to constitute improvement as rated by the State. Formerly rough, narrow and unsurfaced, the highway easterly from Marysville is now smooth, wide and oil surfaced, with the exception of four miles that will be rebuilt this year. It is now a highly popular route into the hills and mountains, and is part of an excellent scenic loop out of Sacramento.

"Boy, whab did yon say you got wounded? In what battle?"

"In de Doggone Forest," promptly replied Rastus.

"You mean the Argonne?" someone asked.

"Well," said he, "maybe they are gone now, but they wuz there then."

"NOT AN UGLY HIGHWAY IN CALIFORNIA"

(Continued from page 2.)

Whatever the individual opinion of the reader may be, relative to billboard advertising, certainly there can be no great difference of opinion as to the need for eliminating any ill-placed signs from areas fronting on highways. This statement is made not alone with regard to the billboards erected by the larger out of door advertising concerns, but is also directed against the motley and discordant array of signs with which many local merchants litter up the landscape along the highways leading into their cities. These signs have no advertising value to the merchant, but serve only to create the impression upon travel that the particular town in which these merchants may live holds beauty in little regard.

ROADSIDE BUILDINGS

Again a highway lined with ugly, untidily planned and unattractive buildings can never be a beautiful highway. Nor is there any excuse for any such structures here, for in California the flowers, the shrubs and the trees of the whole world are available for planting. Beauty here need not cost money. It can be literally had without money and without price. It need only be desired.

AN ADMINISTRATION AMBITION

My ambition for the present highway administration is a longer program of highway beautification. Our slogan should be, "Not an Ugly Highway in California." I know of no greater contribution than this that the administration of Governor Rohph can make to the State highway system of California. It fits into the spirit of his administration. It fits into the spirit of California.

While Mark Twain was editor of a Missouri paper, a subscriber wrote to him saying he had found a spider in his paper and asked Mark whether this was a sign of good or bad luck. The following was the reply of the humorist:

"Old Subscriber: Finding a spider in your paper was neither good nor bad luck for you. The spider was merely looking over our paper to see which merchant is not advertising, so that he can go to that store, spin his web across the door and lead a life of undisturbed peace ever afterward."

The little son of a minister had been very naughty and as punishment he was not allowed to eat with the rest of the family, and a small table was set aside for him. On being given his food at this table for the first time, the little chap said very solemnly: "Lord, I thank Thee. Thou hast spread a table before me in the presence of mine enemies."

GOVERNOR ROLPH SIGNS BILLS PROVIDING ORDERLY ADDI- TIONS TO STATE HIGHWAYS

(Continued from page 6.)

H.—An extension of State Highway Route 61 from Red Box to a connection with State Highway Route 62 near Big Pine Flat; 37 miles: Los Angeles County.

This is strictly a recreational project proposed at this time because the demand for such highways within a short distance of the enormous population centered in Los Angeles County and vicinity is insistent. In this section of the south, the desire of tourists and of valley residents to make the most of every opportunity to spend leisure on recreational drives has resulted in phenomenal use of road facilities that provide such pleasure. Large local expenditures are annually made to extend the ways into the mountains. The timbered areas are few and water supply is limited. Where these are both available the incentive to reach them is strong. Their development approaches, in the south, a necessity rather than a luxury, even in face of the extreme costs of road building in these southern mountains.

Pressure for access to the cool and scenic mountain heights at the heads of the Arroyo Seco and the San Gabriel rivers accomplished inclusion in the state highway system of route 61 and route 62. The same urge initiates the present proposal to extend along the mountains a connection between these routes. It qualifies as a road which will carry such state classified traffic, as a relief for congested state roads of like nature, and as a necessary addition to justify expenditures on State Route 61.

I.—A highway from Los Angeles to a connection with State Highway Route 26, east of Colton; 42.5 miles: Los Angeles and San Bernardino counties.

In the confined territory east and southeast of Los Angeles, that widens as it approaches San Bernardino and Riverside, the nature of local arteries has broadened in function and of necessity has resolved into several principal routings to Los Angeles from individual centers east thereof: the routes near the coast, the Foothill boulevard at the base of the mountain range, and, between these, more direct passages. This route is one of the intermediate routes following in large part county roads that are ideally located. It leaves Los Angeles midway between two congested

arteries—Whittier boulevard and the Foothill boulevard—utilizes Garvey and Holt avenues through developed territory where radical changes in location would incur prohibitive right of way costs and connects with State Highway Route 26 near Colton.

The route qualifies on large present volume of state traffic carried, on relief to other state roads and as a link in interstate routing.

J.—A highway from the southern terminus of State Highway Route 43 to Newport Beach via the Santa Ana Canyon; 63 miles: San Bernardino, Riverside and Orange counties.

A line from San Bernardino to the coast through the cities lying northeast and southwest of the Santa Ana Mountains practically makes a right angle with the coast line at Newport Beach, and is, therefore, the most direct line to the coast through an area that includes Colton, Riverside, Corona, Santa Ana and Orange. This line closely follows the course of the Santa Ana River, which breaks a pass through the Santa Ana Mountains and the Puente Hills and provides the only practicable highway location along the direct line mentioned. All other main routes cross it at right angles.

This artery is well fed by local, intercommunity and intercounty traffic. Additional traffic in large quantity is of a recreational nature, those from the coast towns seeking the mountains through San Bernardino, Redlands and Riverside, and those from the interior valley making their way to the coast. By this attractive route traffic between termini or subtermini will avoid the inconvenience and congestion of longer and busier thoroughfares to the west. With the astonishingly rapid development in this area both to date and expected in the future, the routing is essential if the state is to render adequate service, protect a large initial outlay, and economize by taking advantage of the present opportunity to establish permanent routing.

The route qualifies for inclusion in the state system because it now carries a large volume of state traffic. It will form a logical unit of the state system covering this section without being supplanted by parallel service of equal value.

K.—A highway from Riverside to Beaumont; 19.5 miles: Riverside County.

The county highway between Riverside and Beaumont, commonly referred to as the Jack-rabbit Trail, is used by many as a by-pass of State Highway Route 26 in breaking across country between points east of the former city and west or south of the latter. From Beaumont but a small rise is required to the

pass in the San Jacinto Range from which the road descends to the San Jacinto Valley and through the Alessandro Valley to a junction with the Inland route. Realignment of portions will bring this route to a high standard. It would then be equal to State Route 26 in distance between Beaumont and Los Angeles points, be shorter for traffic between Beaumont and Riverside or points southwest thereof, have no interference through contact with cities en route, and be of decided advantage to commercial vehicles trucking westerly from points east of Beaumont (including the Imperial Valley) since the appreciable grades descend in a westerly direction.

It will make advantageous connections westerly through Riverside with State Highway Route 19 and the route through Pomona to Los Angeles; southwesterly with the proposed state highway through Santa Ana Canyon and to the beaches; southerly with the Inland route, Riverside to San Diego; and easterly through State Highway Route 26 to the Imperial Valley and transcontinental highways. From Beaumont easterly to the Imperial Valley is a source of supply for truck and farm produce which the Los Angeles area will absorb as fast as it can be supplied. Colorado River prospective water supply projects will create on this route a volume of new traffic of a State and intercounty character.

This route, now so well patronized as an alternative of State Route 26 even though its standards are relatively low, will continue to induce traffic. Since the majority of that traffic is intrastate in character, the volume is considerable and a relief to route 26 would be economically furnished, the route qualifies for State inclusion. By-passing the Redlands and San Bernardino highway by deflecting the trucking element over this more advantageous routing is an economic policy.

L.—A highway from Riverside to San Diego; 95 miles: Riverside and San Diego counties.

The Inland route from Riverside to San Diego is an old established county routing which passes through many settlements and towns in plains and in narrow valleys lying in a semimountainous district between the aforesaid termini. Riverside and San Diego counties have paved this route in the past, making a serviceable road for light traffic. For increased volume and speed much of the alignment is too sharp. The length of ultimate State routing from Riverside to San Diego termini would be 20 miles shorter than the existing highway.

The Inland route offers the most direct passage for traffic to and from San Diego which would lead through Riverside and any of the territory north of that city or northwest as far as Ontario, all of which is or will be coordinated by direct State highways. Resorts and attractive country en route induce a recreational traffic. It can, therefore, be classified as important for a link in the State system. Without its inclusion a county highway must assume service of a State nature, service not supplied by direct routing on the State system.

It qualifies for State inclusion by volume of intercounty and intrastate traffic it now carries, by reason of relief it will afford to present heavily traveled State roads and as an advantageous component of a comprehensive State system.

M.—A highway from Pomona to Temecula; 56 miles: Los Angeles and Riverside counties.

A valuable adjunct in state road systemization would be a short cut to the Elsinore Lake district and to the Inland route from the territory between Corona and Pomona and the territory north and west of Pomona. It would prove a convenient approach to the Inland route for the Los Angeles and Pasadena vicinity. From extreme points in Los Angeles it offers an alternative passage to San Diego which, though longer than the coast route, will avoid restrictions to speed on the coast route, caused by congestion and delays within more numerous cities.

The general course of the proposed route is very direct from the western terminus near Pomona to the Santa Ana Canyon near Prado and through Temescal Canyon to Lake Elsinore and to Temecula on the Inland route. Correct location for an economical direct highway will be possible if defined before it becomes prohibitively encumbered by improvements en route. The most favorable of existing road facilities could be utilized.

On the basis of expected increase on improved routing, on the normal increase of local development, on the value this route would give as an inland passage from eastern Los Angeles vicinity to San Diego, and on its recreational value, it is estimated the route will, by 1940, carry 6450 vehicles on Sundays and 3100 vehicles on week days, these being average twenty-four-hour daily estimates.

It qualifies for State inclusion on road systemization, on relief to the Coast route and on present and probable future volume of State traffic thereon.

N.—A highway (a) from Blythe to the California-Arizona State line at the Colorado River and (b) from State Highway Route 26 near Indio to a connection with State Highway Route 64; (a) 4 miles; (b) 19.5 miles: Riverside County.

State Highway Route 64, made a State highway by constitutional amendment, 1919, does not connect with a State highway, at Mecca on the west and terminates on the east at Blythe, 4 miles from the State line. As a link in transeontinental routing, the State route should extend from the State line to a junction with some other State route. Proposed for inclusion in the State system are the two sections which will rectify deficiency in present designation of routing and will complete the route for proper termini connections.

Approval of the requests of Arizona and California to place this route on the federal aid system has been granted by the Secretary of Agriculture. Designation of a unit with connections to the State line and to another established route in California is essential. The proposal qualifies for State inclusion as a necessity on interstate connection.

O.—A highway from National City to the United States-Mexico international boundary near Tia Juana; 10 miles: San Diego County.

There is no State highway south of San Diego to the International Boundary. San Diego and the contiguous municipality, National City, extend city limits to within 10 miles of Mexico, said 10 miles being traversed by county highways.

The recommended location would utilize portion of county road with an ultimate connection to the Mexican line that depends upon the final site for the U. S. Customs House, as yet undecided.

The routing will carry a large volume of local traffic but when the proportion of such which can be analyzed as of a transient nature is added to the number which originate at distant points we find that this routing serves principally a class of traffic of State rather than local nature.

Present traffic is sufficient to justify a first class highway and State control of same. The international connection on the Pacific coast should be a State highway. The road down the Mexican coast extends far and will undoubtedly be continued farther. The road is classified for inclusion on volume of State traffic and as an international road connection of importance.

P.—A highway from Calexico to State Highway Route 27 near El Centro; 8.5 miles: Imperial County.

between State Highway Route 27 near El Centro and Calexico on the Mexican border. Its northern terminus is near the junction of the three State highways, routes 12, 26 and 27, in the center of the intensely cultivated irrigation district of the Imperial Valley that contains the large towns of the southeast portion of the State. The southern terminus is the only important entrance from California to Mexico east of the Pacific coast. The proposed route accordingly provides direct contact for all the highways that converge in this vicinity and for all the community, development and international interests centered at this point.

This project qualifies upon its classification of international highway connection. It coordinates the present State highway system with such a connection and with highway development proposed by the county through the heart of Imperial County.

Q.—A connection from State Highway Route 63 to the California-Nevada State Line; 2½ miles: Mono County.

Oasis is the eastern terminus of State Highway Route 63. A 2½-mile gap over Fish Lake Valley intervenes between Oasis and the California-Nevada state line, where Nevada state highway proceeds northeasterly. Inclusion of this short section as a State highway will close the gap between the California and Nevada highway systems, will afford a complete interstate connection and correct an obvious error in State highway designation.

R.—A highway from Castaic Junction to a connection with State Highway Route 2 near Ventura; 39.5 miles: Los Angeles and Ventura counties.

A well traveled county highway follows the Santa Clara River drainage from State Highway Route 4 near Castaic Junction to State Highway Route 2 near Ventura. It furnishes service for the following traffic: (a) Local traffic originating along its route, comprising considerable intercourse between Ventura, Santa Paula, Fillmore and Piru and including the trucking and domestic movement from many ranches and orchards in this river valley. (b) Intercounty traffic from points along the coast between Santa Barbara and Ventura vicinities to points in the northwest part of Los Angeles County. (c) State-wide traffic whereby the best facility is offered by this route for those from or to the Coast route near Ventura to or from the State Highway over the Tejon Pass into the south San Joaquin Valley and to or from the State Route 23 northeast of Castaic. Because of the absence of appreciable grades thereon and because it

The proposed road for State inclusion is

avoids congestion on routes closer to Los Angeles, the route is taken by many who leave the coast near Ventura for San Fernando Valley and points easterly via State Highway Route 9, the Foothill boulevard through Pasadena, San Bernardino, etc. Improvement of this route to eliminate sharp unnecessary turns and hazardous rail crossings, and to provide satisfactory width and type of pavement would greatly increase through travel thereon. By 1940, traffic of 7000 and 5000 vehicles for 24 hours on Sundays and week days, respectively, would be a conservative estimate.

It qualifies for State inclusion on importance and volume of State traffic now using it and is relief for alternative State routes.

S.—A highway from State Highway Route 31 near old Cajon Station to a connection with State Highway Route 23 near Lancaster; 49 miles: Los Angeles and San Bernardino counties.

The above route is a proposal effecting a short cut from San Bernardino to the San Joaquin Valley or to the east Sierra route through Owens Valley to Tahoe and Nevada. The proposed location continues the northwesterly direction of the San Bernardino-Cajon portion of State Highway Route 31, passing over the Cajon Range through Phelan Pass and proceeding to Lancaster over level country, the whole coordinated route making a straight course which will justify it as an essential through route. Traffic on existing indirect and unimproved desert mountain roads is not representative of volume that the proposed route will carry.

Through its northern terminus it will derive traffic from State Highway Route 59, State Highway Route 23 and the Tehachapi Pass road, as well as from the fertile vicinity of Lancaster. Through San Bernardino a large adjacent area will contribute traffic, with the Inland route forming a direct passage from territory to the south and State Highway Route 26 supplying the approach from the Imperial Valley and Arizona.

This route qualifies as a favorable alternative in relief of present state routing and as an important coordinating link in the state highway system to serve the potential traffic demand at or through San Bernardino.

T.—A highway from Pomona to State Highway Route 2 near Fullerton via Brea Canyon; 15.5 miles: Los Angeles and Orange counties.

The county highway running from Pomona to Fullerton by way of Brea Canyon, a cross-connection between the inland territory surrounding Pomona and the coast territory south of Los Angeles, bears the same relation to

this vicinity as the Santa Ana Canyon route bears to the San Bernardino-Newport Beach travel. It and the Santa Ana Canyon road utilize the two available locations through the ridges separating the coast and the interior and satisfy traffic desire common to Los Angeles, Orange, Riverside and San Bernardino counties.

The Brea Canyon road joins State Highway Route 19 and State Highway Route 2 by a lateral at right angles to the course of those routes. It is geographically located about equidistant between the Santa Ana Canyon lateral and the thoroughfares to the coast on the southeastern outskirts of Los Angeles. Its course is in the proper direction for direct routing from origin to destination of traffic not as conveniently served by alternative highway facilities.

Brea Canyon will attract more traffic as the local streets and boulevards nearer Los Angeles become more crowded. It and the Santa Ana Canyon road are the two laterals southeast of Los Angeles that must carry cross traffic inland from coast, a state function not now supplied by the present state system. It qualifies as a highway now by carrying a large volume of state traffic.

U.—A highway from San Luis Obispo to a connection with State Highway Route 56 near Cambria; 36 miles: San Luis Obispo County.

At present State Route 56, from Carmel south along the coast, terminates state jurisdiction near Cambria. San Luis Obispo County highway connects it to State Highway Route 2 at San Luis Obispo. The classification of traffic on this section will change from strictly local traffic to a cosmopolitan nature when the completion of the state coast highway provides the through drive.

The Cambria-San Luis Obispo proposal qualifies for state inclusion as a unit extending to a connection with the existing system a state highway that will carry a large proportion of state traffic. It is one step toward effecting this general policy by a secondary road inclusion in the south where mileage is not in balance with the remainder of the state.

V.—A highway from Santa Barbara to a point on State Highway Route 2 near Zaca, via San Marcos Pass; 38 miles: Santa Barbara County.

State Highway Route 2 follows the coast for 30 miles west of Santa Barbara, then turns north for 18 miles to Zaca, passing through Gaviota Canyon. This proposed additional route is a diagonal of these two courses, is 10 miles shorter and lies on the direct line from Santa Barbara to Santa Maria.

The proposed route qualifies as a measure for relief to State Highway Route 2, supplying a shorter alternative that is also a scenic and recreational routing. It will indefinitely postpone radical widening of the present state highway through Gaviota Canyon and along the coast which would destroy valuable landscape and property. It coordinates with future road development north and south of its termini.

W.—State Highway Route 14, near Crockett, to American Canyon Route, near Vallejo.

This route will provide a connection from the proposed American Canyon Route to State Highway Route 14, near Crockett. It will provide a complete through road for traffic from the inland valleys to the bay area.

HIGHWAY PATROL COURTESY COLUMN

(Continued from page 12.)

Parking Made Easy For Convention.

Mrs. E. H. Brown, Durham: On February 28th, the Durham Women's Home Department entertained the Home Department from all over Butte County, 500 women attending. Mr. T. C. Bissett, Chico traffic officer, had charge of the parking. The school in which we entertained was on the highway. It was dangerous for women drivers to turn off and park. He took care of 130 cars. There was no confusion or jamming of cars coming or going. The women of the various Home Departments thought they were very fortunate in having such a capable and efficient traffic officer.

The Pruitts had the reputation of being the world's ideally married couple, so on their silver anniversary friends gathered and in the course of the evening asked Mrs. Pruitt how it happened that she and her husband never quarreled.

"It's because we understand each other so perfectly," she beamed. "If we have a difference of opinion and I am right, Chauncey gives in at once."

"And if it is he who is in the right?"

The lady drew herself up. "In our twenty-five years of married life," she declared, "that's never happened."

A curious little boy was watching a car being loaded at the station, and later inquired: "Why do they call it a shipment when it goes in a car and a cargo when it goes in a ship?"

Old Lady (to street-car motorman): "Please, Mr. Motorman, will I get a shock if I step on the track?"

Motorman: "No, lady. Not unless you put your other foot on the trolley wire."

Mrs. Blabber: "You're looking very happy this morning. Had you had good news?"

Mrs. Gabber: "Just wonderful! My husband has just had a nervous breakdown and we're going to California."

APRIL BULLETIN OF SNOW SURVEY AND PRECIPITATION DATA; SEASONAL FORECAST

(Continued from page 7.)

for the actual seasonal stream flow of 1924 (a record dry year) as follows:

Stream	Seasonal stream flow in per cent of 40-year mean (1889-1929)	
	Estimated	Actual
	1931	1924
Sacramento River at Red Bluff	35	36
Feather River at Oroville	27	25
Yuba River at Smartsville	35	23
American River at Fair Oaks	30	18
Sacramento River at Sacramento (Including tributaries)	33	30
Mokelumne River at Clements	32	22
Stanislaus River at Knights Ferry	35	19
Tuolumne River at Jacksonville	40	28
Merced River at Exchequer	38	23
San Joaquin River at Friant	30	22
San Joaquin River near Vernalis (Including tributaries)	36	24
Combined Sacramento and San Joaquin Rivers (Including tributaries)	33	28
Kings River at Piedra	25	21
Kaweah River at Three Rivers	28	22
Kern River near Bakersfield	32	28
Combined Kings, Kaweah, and Kern Rivers	28	23

Based upon past experience these estimated seasonal stream flow percentages are used to predict the minimum stream flow to be expected at certain points and these estimated minimum flows are compared with the actual minimum flows of 1924, as follows (The estimates assume a 1931 rice area approximately 10 per cent greater than that of 1930—preliminary data):

Stream	Minimum flow in second-feet		Flow Date
	Estimated	Actual	
	1931	1924	
Sacramento River at Red Bluff	2800	2810	July 6
Sacramento River at Colusa	1100	1470	July 21
Sacramento River at Sacramento	1000	705	July 17
Feather River at Nicolaus	50	0	Aug. 2
American River at Sacramento	40	0	Aug. 1
San Joaquin River near Vernalis	500	391	July 22
Combined Sacramento and San Joaquin River flow to Delta, minimum 10 day flow	1600	1280	July 10 to 19, Incl.

Based upon the relation established by past records, the estimated seasonal stream flow percentages and minimum flows are applied to predict the maximum salinity to be expected in the late summer at points in the Sacramento-San Joaquin Delta and comparison is made with the 1924 salinity records, as follows:

Delta Stations	Maximum salinity (high tide) in parts of chlorine per 100,000 parts of water		Date
	Estimated	Actual	
	1931	1924	
O and A Ferry	1250	1345	August 28
Collinsville	1050	1150	August 16
Antioch	930	1080	August 20
Emmaton	670	802	August 6
Jersey	580	708	August 30
Three Mile Slough	530	692	August 30
Rio Vista	400	608	August 12

Winter Traffic Count on State Highways

By T. H. DENNIS, Maintenance Engineer

THE REGULAR winter traffic count on State highways was taken on Sunday and Monday, January 11 and 12. This is the seventh winter count taken over the highway system. In previous years the count was made from 6 a.m. to 10 p.m. The 1931 count, however, was reduced to four hours each day, and traffic for 16 hours estimated for comparative purposes with the year 1929 as a basis. The 1929 count was selected as a basis for expanding the 4-hour counts to 16 hours because traffic during the 1930 count was generally disrupted by inclement weather and was far below normal. In making a comparison of the detailed figures which follow for 1930 and 1931 this fact must be borne in mind.

The 1931 Sunday count covered the hours from 10 a.m. to 2 p.m. The Monday count included the peak hours of travel from 8 a.m. to 10 a.m. and from 4 p.m. to 6 p.m.

The large volume of purely recreational Sunday travel, which is most pronounced in densely populated areas, precludes the use of a state-wide average for making a 16-hour estimate of traffic from 4-hour counts. On the other hand, the flow of traffic on Monday is more regular and a single average would be fairly representative. The averages obtained from the 1929 count and used in estimating the 16-hour counts for 1931 are as shown below:

Percentage Which 4-Hour Count Bears to 16-Hour Count										
DISTRICT	I	II	III	IV	V	VI	VII	VIII	IX	X
Sunday—										
10 a.m. to 2 p.m.	31	31	27	26	28	30	27	28	31	27
Monday—										
8 a.m. to 10 a.m.	31	31	32	31	30	31	30	30	31	30
4 p.m. to 6 p.m.	31	31	32	31	30	31	30	30	31	30

The hourly variation of traffic is erratic at stations registering less than 200 vehicles in 16 hours, and the 1931 estimate appears to be exaggerated at some of these stations. Excluding such cases the estimate for a majority of the stations is believed to be within a range of 10 per cent, while practically all stations fall within a range of 20 per cent. For ordinary applications this variation is not a serious matter especially for the winter count which covers, usually, the minimum traffic period of the year.

In comparing the detailed counts at the 889 stations which follow it should be noted that traffic for 1930 was below normal and the figures for 1931 therefore appear to be excep-

tionally high. If allowance is made for the fact that the 1930 Sunday traffic showed a decrease of 36.2 per cent from the 1929 figure, and the Monday traffic a decrease of 14.5 per cent, such variations will be less pronounced. Any general statement showing annual increase as a whole or by State routes and based on the 1930 count would be misleading, and has therefore been omitted from the summary.

The station by station record is as follows:

Route 1. Sausalito to Oregon Line				
District IV				
Station location	January, 1930 Sun. 12	Mon. 13	January, 1931 Sun. 11	Mon. 12

Newcastle Tunnel Project Is About One-third Complete

West portal of tunnel under Newcastle

THE Newcastle cut-off construction, consisting of a tunnel under the Southern Pacific Railroad and the north part of Newcastle and new grading and surfacing of the cut-offs from the present highway to the tunnel, which is under contract to T. M. Morgan Paving Company, is one-third completed. Driving of the tunnel is under way, construction of drainage units and reconstruction of public utilities are in progress, and grading of the new roadbed is being done as rapidly as the preliminary work connected therewith is completed.

HIGHWAY CREW AID IN FIGHTING FIRE PRAISED

COMMENDATION of representatives of the Division of Highways is voiced in the two letters printed below for co-operation in subduing a fire in the Arroyo Seco, Los Angeles County, extended by Maintenance Foreman Fred Phillips and Gray H. Cuttriss, and aid given by a highway crew dispatched by Resident Engineer A. N. George. The letters follow:

UNITED STATES DEPARTMENT OF AGRICULTURE, FOREST SERVICE, ANGELES NATIONAL FOREST

Los Angeles, California,
March 20, 1931

Mr. S. V. Cortelyou,
Division of Highways,
Los Angeles, California.

Dear Sir:

On March 11th a fire occurred in the Arroyo Seco in one of the cabins there and the fire truck in the Arroyo Seco was dispatched to the scene and, incidentally, Fred Phillips and Doc Cuttriss, who were working

close to the warehouse at the time joined our truck crew and went to the fire, working from 11.00 a.m. to 1.00 p.m. Mr. A. N. George also dispatched a crew of 10 men who worked for one hour.

This sort of cooperation, Mr. Cortelyou, is just the kind that makes it possible for the Forest Service to maintain somewhere near an adequate fire protection record, and I wish to take this opportunity to thank you for the attitude your men have in connection with this important work, and would like to have you convey my sentiments to the men who reported for work and assisted in this particular job. This type of cooperation is appreciated by every member of the Forest Service organization and goes beyond the kind of cooperation we hear so much about that is more or less inactive when an actual fire occurs.

Very truly yours,

WM. V. MENDENHALL,
Forest Supervisor.

THE GIRLS' CORNER CLUB
Frances L. Neth, Director
Los Angeles, Calif.

March 16, 1931.

Mr. S. V. Cortelyou,
Division of Highways,
Dept. of Public Works,
Los Angeles, California.

My dear Mr. Cortelyou:

The Girls' Corner Club Cottage located in the Arroyo Seco, known as Camp No. 200, was practically destroyed by fire March 11, 1931. I am taking this occasion to thank you for the valiant and faithful work that was done at that time by your men, Mr. F. V. Phillips and Mr. Gray H. Cuttriss. They worked unceasingly to attempt to save our building and contents, and we appreciate in the deepest way their unselfish efforts for us. They have been such kind, neighborly friends to us, courteous and thoughtful in every way that hence I am writing this note to you.

We regret that the main building was almost entirely destroyed, but we are planning to rebuild immediately.

Again, with many thanks, I am,

Most sincerely yours,

FRANCES L. NETH.

LETTER OF APPRECIATION

The following letter of appreciation was written by District Engineer Cortelyou to the men mentioned in the above letters:

Los Angeles, Calif.
March 23, 1931.

Mr. A. N. George
Mr. F. V. Phillips
Mr. Gray H. Cuttriss
Pasadena, Calif.

Gentlemen:

I am sending to you herewith copies of letters dated March 20th from Wm. V. Mendenhall, Forest Supervisor, and dated March 16th from Frances L. Neth, Director of the Girls' Corner Club, expressing appreciation of your help in fighting a fire in the Arroyo Seco on March 11th.

In your action on that day you have exemplified the spirit of cooperation which we wish to have permeate our organization, and I desire to commend you for your efforts along this line.

Yours very truly,

S. V. CORTELYOU,
District Engineer.

Progress Report of Activities

in the

Division of Water Resources

AS OF MARCH 1, 1931

EDWARD HYATT, Chief of Division

Irrigation District
Activities

Applications for
Approval of
Dams

Flood Control and
Reclamation

Adjudications
of Stream
Flow

IRRIGATION, WATER STORAGE DISTRICTS

The spring meeting of the California Irrigation Districts Association was held in Sacramento on February 27 and 28, 1931. The meeting was devoted to the discussion of proposed legislation affecting irrigation districts and the irrigation interests of the State. Mr. William Durbrow was reelected president and Mr. W. D. Wagner, secretary of the association.

Office work in the analysis and compilation of data for the 1930 report on the activities of California irrigation districts has been continued throughout the month.

Field visits were made and conferences held with officials of South San Joaquin, Tracy-Clover, Naglee-Burk and West Stanislaus irrigation districts in San Joaquin and Stanislaus counties; the El Dorado Irrigation District, El Dorado County; the Princeton-Codora-Glenn, Glenn-Colusa and Provident irrigation districts in Glenn and Colusa counties; the Camp Far West and Cordua irrigation districts in Placer and Yuba counties; and the Richvale Irrigation District in Butte County, for the purposes of discussing matters connected with the economic operation of these districts.

An inspection of the Salt Springs Valley reservoir, Calaveras County, was made in connection with the tentative proposal of the Linden irrigation district to purchase the same.

Notice has been received by the State Engineer from the proponents of their intention to file with the supervisors of Kings County a petition proposing the organization of an irrigation district to be known as the Empire West Side Irrigation District, covering an area of 7100 acres located along the west side of the lower Kings River.

The following matters were referred to the California Bond Certification Commission by the State Engineer for the consideration and action of the Commission:

(1) Request for approval to proceed with a bond issue in the amount of \$137,000 by the Linden Irrigation District.

(2) Request for approval of expenditures by the El Nido Irrigation District in the amount of \$87,000 for developments within the district.

(3) Request for approval of expenditures jointly by the Carpenter and Serrano irrigation districts in the amount of \$298,500 for construction of Santiago Creek dam.

(4) Consideration of the proposal of a refunding issue by the Oakdale Irrigation District affecting the bonds of the first and third issues of this district amounting to a total of \$2,000,000.

DAMS

The department has, during the above period, continued its activities, directed toward final action on existing dams which have been found to be in a satisfactory condition, with a view to their approval. Frequent supervision has been maintained on the construction and repair of dams.

To date 748 applications for approval of existing dams are on file; 59 applications have been filed for approval of plans and specifications for construction or enlargement and 131 applications for approval of plans for repair or alteration.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS FOR REPAIR OR ALTERATION

Dam	Owner	County
Lake Grace	Pacific Gas and Electric Company	Shasta
North Battle Creek	Pacific Gas and Electric Company	Shasta
Fairmont	City of Los Angeles	Los Angeles

PLANS APPROVED FOR CONSTRUCTION OR ENLARGEMENT

Dam	Owner	County
*Garner No. 1	Childs and Waller	Shasta
**Hawkins	C. N. Hawkins	San Benito
**Chatsworth	City of Los Angeles	Los Angeles
** New construction		
** Enlargement		

The Chatsworth project contemplates raising the two earthen structures at that reservoir so as to impound 10,500 acre-feet for the water supply of the city of Los Angeles.

In passing upon this project, the State Engineer has availed himself of the engineering experience of Mr. J. B. Lippincott, Consulting Engineer of Los Angeles, and of Prof. Chas. D. Marx, Consulting Engineer of Stanford University. Dr. John P. Buwalda, of the California Institute of Technology, an outstanding consulting geologist, completes the personnel of the State's consultants. After an exhaustive study by the department, and a favorable report by the consultants, the application for approval of plans for this enlargement was approved on March 24.

PLANS APPROVED FOR REPAIR OR ALTERATION

Dam	Owner	County
Lower Franklin	City of Los Angeles	Los Angeles
Orr Creek	Pacific Gas and Electric Company	Placer
Silva Flat	Homer C. Jack	Lassen
Lake Grace	Pacific Gas and Electric Company	Shasta
McMahon Gulch	Diana and Patroni	San Mateo

An order authorizing use of Salt Springs dam up to elevation 3915 was issued pending completion of the dam.

Almost 100 dams have been carefully examined as to design and actual construction conditions and have

been found to meet the requirements of safety. Certificates of approval on these dams will soon be issued.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

The maintenance force in Sutter County of eight men, exclusive of pump operators, has been engaged during the period in miscellaneous routine maintenance in connection with the by-pass structures, levees, drainage canals and pumping plants. Repairs to the Franklin road bridge, estimated to cost \$1,000, have been commenced with our own equipment. The work will consist of driving five new pile bents in the borrow pit and repairing the bridge deck. Plans are being made for the repair of the Hoke bridge, which has been closed for a year on account of its unsafe condition. There has been no high water, and therefore no occasion for the customary winter repair work.

FLOOD CONTROL PROJECT MAINTENANCE—BANK PROTECTION

All cooperative bank protection work for the current season has been completed. The river floating equipment is being repaired and painted by the caretakers.

EMERGENCY FLOOD CONTROL AND RECTIFICATION OF RIVERS

Construction is now under way by the Hammond and Little River Redwood Company, in cooperation with the State and Humboldt County, of channel rectification work at the mouth of Little river in Humboldt County. This will consist of a timber dam and the excavation and cleaning of the old river channel.

Channel rectification work on the San Jacinto river in cooperation with landowners and the county of Riverside is now under way, estimated cost \$3,150. A small levee 2100 feet long protected with a wire fence barrier is being constructed.

Russian River Jetty: The funds provided by the Division of Fish and Game for the maintenance of the jetty structure have been expended in the placing of rock, repairs to the structure and improvement of the railroad. The appropriation of \$22,500 by Chapter 60, Statutes of 1931, is now being used in placing rock in the structure. A crew of eleven men is employed in the quarry and on the railroad. On account of the severe storm conditions no attempt will be made to continue the construction seaward until May 15 or later.

Navarro River Jetty: There is now available \$500 for additional work on the Navarro River jetty, with which additional rock will be set where it was displaced by the fall and winter storms.

Flood Measurements and Gages: All gages maintained by this Division are now in operation, but all streams have been at unusually low stage throughout the winter. There have been no floods or freshets to warrant flood meter measurements, for which preparations are complete. In the office all records are being brought to date for the purpose of incorporating in a report all that have not hitherto been published for the flood seasons of recent years.

MINNESOTA—The state highway department has just rounded out its first quarter century of service, having been organized in January, 1906.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE

During the month of February there were nineteen applications to appropriate water received by the Division, eleven applications were canceled, nine permits were issued, five permits were revoked and eight licenses were issued.

During the 1930 field season 182 projects were inspected and compilation of reports covering these inspections was completed during the current month. These reports will form the basis of recommendations for license or revocation in 83 per cent of the cases, which is a better percentage of actions than in any preceding year.

Field work in connection with permit inspections during the current season has been outlined and will begin on March 29th. There are 223 projects listed for inspection scattered throughout the full length and breadth of the State.

A study has also been undertaken of the desirability and practicability of revising the practice of the Division in the matter of appropriation allowances for irrigation use. The practice has been to express direct diversion allowance (i.e., those which are made for immediate use as distinguished from storage) in terms of cubic feet per second, the rate being determined by the estimated requirement in the month of maximum demand, and expressed as the continuous flow equivalent thereof. There is some objection to this practice because in some instances the manner of use is determined rather by the availability of water (i.e., water is not always available in the source and the irrigator must divert when the supply is available rather than when the immediate needs of the crop would demand) and in other instances peculiarities of the crop demand that the whole, or practically the whole of the annual supply of irrigation water must be applied at one time or at least in a very short period and the rate of diversion is properly governed solely by the capacity of the diversion works. It is desired to ascertain to what extent the present practice of the office in the matter is inconsistent with best irrigation practice, and whether or not any modification of current practice of the office is practicable and desirable.

ADJUDICATIONS

Shasta River (Siskiyou County). Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). Case pending in the Superior Court of Shasta County, awaiting the Court's pleasure in placing it on the calendar.

Oak Run Creek (Shasta County). Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County). Case pending in Superior Court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County). Case pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County). Action by referee is being deferred awaiting receipt of a stipulation for consent judgment signed by all of the parties involved.

Davis Creek (Modoc County). The two exceptions to the report of referee which had been filed in this case were heard before the Superior Court of Modoc

County on March 9. The issues raised by these exceptions were settled by stipulation between the parties involved, and the case is now pending in the court awaiting issuance of a decree.

Mill Creek (Modoc County). A stipulation for consent judgment defining the water rights on the stream system was presented to the water users at a conference held at Lake City on March 17, 1931. Fifty per cent of the water users signed the stipulation at that time, and many of the others present expressed the desire to meet with representatives of the Division for further discussion of the stipulation before signing the same. The stipulation is now being circulated among these latter parties.

Deep Creek (Modoc County). At a conference held at Cedarville on March 16, 1931, the Deep Creek water users entered into an agreement providing for administration by the Division of Water Resources of a schedule of allotments for trial distribution during the 1931 irrigation season.

Franklin Creek (Modoc County). The Franklin Creek water users, at a conference held at Alturas on March 16, 1931, entered into an agreement providing for administration by the Division of Water Resources of a schedule of allotments for trial distribution during the 1931 irrigation season.

New Pine Creek (Modoc County). Field work on the investigation was commenced during the latter part of March, and is being conducted in conjunction with water master service on the various streams in Modoc County.

WATER DISTRIBUTION

Cedar, Davis, Deep, Emerson, Franklin, Mill, New Pine, Owl and Soldier Creeks (Modoc County). Water Master service was commenced on these streams for the 1931 season during the latter part of March, and involves the distribution of water for approximately 16,000 acres of land.

Pit River (Modoc and Lassen Counties). The water users of Hot Springs Valley Irrigation District have entered into an agreement for the 1931 irrigation season to permit supervision of their diversions from Pit River by the Resident Engineer in Charge of the Pit River Investigation. This work will be carried on in conjunction with the supervision of diversions from Pit River in Big Valley which was commenced on March 1. Administration of the two areas will involve supervision over diversions supplying water for the irrigation of approximately 16,000 acres of land.

CALIFORNIA COOPERATIVE SNOW SURVEYS

The regular snow surveys at the key courses were made through arrangements with all cooperating agencies in the last few days of February. The results of these surveys, together with all precipitation data to March 1 from the stations of the U. S. Weather Bureau, State, districts and public utilities, were published in the monthly snow survey bulletin issued early in March.

It was shown that the water content of the snow as determined at the various snow courses on March 1st of this year in per cent of the water content on March 1, 1930, varied throughout the Sierra from 50 to 95 per cent and by stream basins was as follows: Upper Sacramento and McCloud (one course) 55 per cent; Feather (2 courses) 50 per cent; Yuba (4 courses) 75 per cent; American (3 courses) 70 per cent; Mokelumne (2 courses) 70 per cent; Stanislaus (3 courses) 65 per cent; Tuolumne (6 courses) 70 per cent; Merced (6 courses) 95 per cent; Mono (2

courses) 60 per cent; Upper San Joaquin (1 course) 95 per cent; Kings (1 course) 70 per cent.

In those few areas where snow surveys have been made a sufficient number of years to permit the development of "normals" the water content of the snow in per cent of the normal water content for the entire season (as of April 1) was found to be: Yuba Basin (3 courses) 50 per cent; American and Mokelumne Basins (1 course each) 45 per cent; Mono Basin (2 courses) 30 per cent; Upper San Joaquin Basin (1 course) 40 per cent.

The data from the precipitation stations showed the average precipitation to March 1st in per cent of the normal to the same date varying throughout the State from 50 to 85 per cent and by stream basins as follows: Upper Sacramento, McCloud and Pit, 50-60 per cent; Feather and Yuba, 55 per cent; American, 60 per cent; Mokelumne, 65 per cent; Stanislaus, 80 per cent; Tuolumne and Merced, 65 per cent; Mono, 60 per cent; Upper San Joaquin, 55 per cent; Owens, 50 per cent; Kings, 55 per cent; Kaweah, 65 per cent; Kern, 70 per cent; Santa Ana and Los Angeles, 75 per cent; and San Gabriel, 85 per cent.

Since the publication of the March bulletin, a further estimate of water supply conditions for the coming summer, based upon general knowledge of the March precipitation to date and the definite data to March 1st, indicates in general a water situation closely approaching that of 1924. It is to be noted, however, that the main survey of all snow courses as a basis for stream flow forecasts, has been in progress during the last few days of March and will be completed very shortly. This will furnish the data for the April bulletin and a more detailed forecast of water supply therein.

In the office, aside from the computations necessary in the preparation of the bulletins, computations have been made of the natural run-off for the 1929-30 season at the main gaging stations of all the major stream basins and other work of this character has been done in continuation of the study of the relation between snow and run-off.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

The work of the past month under this project has been confined chiefly to the computations necessary in the preparation of the report for the 1930 season covering all diversions, stream flow, return flow, etc., throughout the Sacramento-San Joaquin territory. These computations are nearing completion and preparations will soon be under way for the commencement of the field season. It is indicated that the coming season may be one of very low water supply and it is probable that this will entail considerable extra field work. If the situation is such as to require diversion regulation or the operation of a diversion schedule, an increase in the field forces may be required.

The small amount of field work during the past month has included regular observations, tide gage maintenance, and maintenance of tanks being used in a determination of the consumptive use of water of aquatic plants.

The salinity sampling has continued at thirty stations and tide gages have been maintained at eight points between Collinsville and Sacramento. A new salinity station was established on Dutch Slough for observations in connection with the proposed Industrial Diversion. The following are com-

parative salinity and stream flow data for 1930 and 1931.

Station	Salinity in parts of Chlorine per 100,000	
	March 14, 1931	March 14, 1930
Bullhead Point -----	450	195
O. and A. Ferry -----	48	5
Collinsville -----	8	2
Antioch -----	9	5
Jersey -----	5	5
Emmerton -----	2	4
Webb Pump -----	6	5

Station	Discharged in second-feet	
	March 20, 1931	March 30, 1930
Sacramento River at Sacramento -----	24,000	39,300

WATER RESOURCES

Ventura County Investigation.—During the past month the ma, or flood of the year occurred, the peak being larger than any discharge since 1927. While the discharge was not large yet at its peak the flow into the ocean was 5500 second-feet from Santa Clara River.

South Coastal Basin Investigation.—This investigation has continued in a routine way during the month and a few additional engineers were placed on the work.

Mojave River Investigation.—This investigation has continued in a routine way during the month.

Santa Clara Valley Investigation.—This investigation has continued in a routine way during the month.

Pit River Investigation (Modoc and Lassen Counties).—Routine field work was continued throughout the month. The survey of the irrigated areas located on several small streams tributary to Pit River has been resumed. A meeting of the Permanent Committee with representatives of the Division of Water Resources and some 60 water users was held at Lookout on February 25. The Progress Report on the Pit River Investigation for the year ending September 30, 1930 was presented, and the work accomplished and the results obtained to date were reviewed. The meeting was then given over to open discussion of an outline of the field work to be accomplished prior to September 30, 1931.

Napa Valley Investigation.—Regular stream flow measurements on Napa River and Conn Creek were continued during the month and because of the peculiar State interest in the water crop of Rector Creek, which is looked upon as a possible future source of water supply for local State institutions, the investigation has been broadened to include stream flow measurements on that creek. Additional surveys have been made to determine more accurately the location of wells which are under observation and the elevation thereof.

A survey was also made to determine the location and capacity of pumps which are operated on Napa River and Conn Creek at points intervening between the upper and lower gaging stations.

A reconnaissance was made of Sulphur Spring and Pope Creeks for reservoir sites but nothing of present practicable value was found.

Water Resources Reports.—Effective progress has been made in completing the reports on the water resources investigation covering the State Water Plan for coordination, development, conservation and utilization of the water resources of the State under the provisions of Chapter 832 of the Statutes of 1929.

On March 4, advance copy of Bulletin 25, entitled "Report to the Legislature of 1931 on State Water Plan" was transmitted to the Governor and members of the Legislature. The report on the State Water

Plan presents a practical engineering recommendation providing for a system of physical works which would make available a water supply for the benefit of 75% of the agricultural area of the State. Recommendations in the report cover units to meet the most pressing immediate requirements and plans for the ultimate development of all water resources of California.

In addition to Bulletin 25, there were transmitted printed copies of the following:

- Bulletin 28A, "Industrial Survey of Upper San Francisco Bay Area."
- Bulletin 31, "Santa Ana River Basin."
- Bulletin 32, "South Coastal Basin."
- Bulletin 34, "Permissible Annual Charges for Irrigation Water in Upper San Joaquin Valley."

Also, advance mimeographed copies of the following reports:

- Bulletin 23, "Rainfall Penetration and Consumptive Use of Water in Santa Ana River Valley and Coastal Plain."
- Bulletin 26, "Cost of Irrigation Water in California."

It is anticipated a further number of bulletins will be received from the State Printer during the next three to four weeks.

MISCELLANEOUS ACTIVITIES

In completion of the field trips which have been made from time to time during the past year by representatives of the State, the U. S. Army Engineers and the U. S. Geological Survey for the location of gaging stations, a trip was made during the past month to locate stations in the Southern San Joaquin Valley. Locations were made on Caliente Creek near Caliente and on Los Gatos Creek near Coalinga. A location was inspected on Poso Creek but found unsuitable. Except for a location on the American River at Coloma, this completes the program for the location of fourteen new stations and the installation of recorders at eighteen old stations throughout the San Joaquin drainage basins in accordance with the Federal-State Cooperative Agreement.

STATE HIGHWAY PROGRESS REPORT

as of April 1, 1931.

C. H. PURCELL, Chief.

Construction Program Under Full Speed.

During the months of April, May and June, the work now in preparation indicates that we will have about 365 miles of road projects estimated to cost approximately \$10,180,000, advertised or with construction already started. The closest estimate we can make indicates that about 4500 men will be required for this construction for the normal construction crews without counting in the many hundreds of other men who are employed by commercial plants. From our experience with unemployment camps, we feel that each one of the persons employed will probably take care of two to three others so that in effect the program will care for a great many thousands. The value of this work is enhanced by its very general distribution over the whole State.

It should be noted that 84 per cent of the \$10,780,000 total referred to above comes from funds of the eighty-third and eighty-fourth fiscal years extending from July 1, 1931, to June 30, 1933. Under ordinary circumstances, this money would not be available until the beginning of the fiscal year, in this instance July 1, 1931. These expenditures have been advanced in accordance with the employment policy of Governor Rolph that public work must be speeded up to the maximum.

Record Day for Bid Openings.

Wednesday, March 25th, was a record day in State highway circles.

On that day, bids were opened on State highway projects, the total material and labor cost of which will run to \$860,000. This establishes a new high point in State highway history for projects offered to contractors on any one day.

Wednesday's record opening is followed closely by those of today (April 1st) when bids were opened on contracts, the total cost of which exceeds \$700,000.

Relief Employment.

Relief employment funds work will be exhausted shortly after April 1st in some districts, and probably by April 15th in all districts. This work has employed over 1700 men since November on a three-day-a-week basis.

Program for Maintenance Activities.

The routine maintenance work will continue at the present rate during the next three months. In addition dust oil is to be applied to 1063 miles of our earth and rock surfaced roads, and on 330 miles of shoulders along side pavement. In the Eureka district and certain other sections where employment conditions are most acute, this work will be handled by day labor forces to give the benefit to local men. In the main, however, the work will be handled under contract arrangement during April and May. This work will cost approximately \$300,000 and will provide employment for possibly 150 to 200 men.

The work of reinforcing rock surfaces and constructing oil surfacing and constructing oil rock borders in an estimated amount of \$700,000 will be started in April and should be practically completed by August 1st. This work will provide employment for possibly 300 men. Like the dust oiling, the jobs are well scattered throughout the State. The estimated labor is actual labor on the job and, of course, is in addition to labor which goes into producing and shipping of oil rock, etc.

This work of the maintenance department is largely seasonal and the volume depends entirely on available funds as set up in the Governor's budget. No special action is required to insure that this work will be started, as preliminary arrangements are now well under way.

HIGHWAY BIDS AND AWARDS For Month of March

IMPERIAL COUNTY—Between Holtville and East High Line Canal, gravel and paved with Portland concrete cement. Dist. VIII, Rt. 27, Sec. D, Central California Roads Co. & Southern California Roads Co., Los Angeles, \$209,155; Wells & Bressler, Santa Ana, \$327,551; McCray Co., Los Angeles, \$284,075; Sander Pearson, Santa Monica, \$324,642; Basich Bros. Const. Co., Torrance, \$256,929; Griffith Co., Los Angeles, \$286,978. Contract awarded to Jahn & Bressi Const. Co., Inc., Los Angeles, \$246,159.

KERN COUNTY—Between Grapevine and Bakersfield, grading and shoulders surfaced with bituminous treated crushed gravel, about 29.8 miles in length. Dist. VI, Rt. 4, Sec. B & C, Gibbons & Reed Co., Burbank, \$323,870; P. J. Akmadzich, Los Angeles, \$284,513; Fredrickson & Watson Const. Company and Fredrickson Bros., Oakland, \$272,686; G. W. Ellis, Los Angeles, \$279,514; Hartman Const. Co., Bakersfield, \$285,777; Southwest Paving Co., Los Angeles, \$319,772; Fred W. Nighbert, Bakersfield, \$275,225. Contract awarded to A. Teichert & Son, Inc., Sacramento, \$264,404.

LAKE COUNTY—Between Middletown and the Ukiah-Tahoe Highway, 25 miles. Dist. IV, Rt. 49, Sec. A B C, Peres & Gatto, Richmond, \$5,992; Chas. Knuppinger, Lakeport, \$5,292; Edward A. Peres, Richmond, \$6,888; C. F. Fredrickson & Sons, Lower Lake, \$5,544; Jack Casson, Hayward, \$5,460. Contract awarded to Basalt Rock Co., Napa, \$5,050.

MENDOCINO COUNTY—Between Pepperwood Sch. and Little Dan Cr., 13.5 miles to be paved with Bituminous treat crushed gravel of which 5.5 miles is to be graded 24 feet wide. Dist. I, Rt. 1, Sec. II-1, Hemstreet & Bell, Marysville, \$531,051; J. F. Knapp, Oakland, \$590,571; T. E. Connolly, San Francisco, \$636,309; George Pollock Co., Sacramento, \$543,207; Robinson Roberts Co., Los Angeles, \$524,478; Fredrickson & Watson Construction Co. and Fredrickson Bros., Oakland, \$558,511; MacDonald & Kahn Co., Ltd., San Francisco, \$577,980; General Construction Co., Seattle, \$636,393; Healy-Tibbitts Construction Co., San Francisco, \$527,560; Granfield, Farrar & Carlin, San Francisco, \$625,247; R. L. Crooks & Co., Portland, \$634,563; W. S. Mead, Oakland, \$581,569; Morrison, Knudsen Co., Boise, \$556,525; Kern & Kibbe, Portland, \$704,513. Contract awarded to E. C. Coats, Sacramento, \$438,470.

MENDOCINO COUNTY—From Devoy Grove and the northerly boundary. Dist. I, Rt. 1, Sec. K, Hemstreet & Bell, Marysville, \$14,223; H. H. Boomer, San Francisco, \$12,734; J. F. Knapp, Oakland, \$17,979; Smith Bros. Co., Eureka, \$15,047. Contract awarded to Chigris & Sutsos, San Francisco, \$11,297.

MONTEREY COUNTY—Between 2 miles north of Salinas and the northerly boundary. Dist. V, Rt. 2, Sec. J, about 11 miles to be graded and paved with Portland concrete cement. Jahn Bressi Const. Co., Los Angeles, \$486,913; Macco Const. Co., Clearwater, \$536,407; Healy-Tibbitts Const. Co., San Francisco, \$509,871; Fredrickson Watson Const. Co., and Fredrickson Bros., Oakland, \$436,518; J. F. Knapp, Oakland, \$509,931; Will E. Peck Co., Los Angeles, \$481,147; N. M. Ball, Porterville, \$483,589; Union Paving Company, San Francisco, \$482,586; C. W. Wood, Stockton, \$477,036; Hanrahan Co., San Francisco, \$474,300; Davis H. Ryan, San Diego, \$509,215; Basich Bros. Const. Co., Torrance, \$464,830. Contract awarded to Peninsula Paving Co., San Francisco, \$459,158.

MONTEREY COUNTY—Bridge across Garrapata Creek, reinforced concrete 1-150 arch span and 5-25 girder spans, and about 0.28 miles to be graded. Dist. V, Rt. 56, Sec. G, A. W. Kitchen, San Francisco, \$53,980; M. B. McGowan, San Francisco, \$54,223; Paul M. White, Santa Monica, \$46,298; Oberg Bros., Los Angeles, \$39,810; Geo. J. Ulrich Const. Co., Modesto, \$46,017; Rocco & Caletti, San Rafael, \$48,605. Contract awarded to Hanrahan Company, San Francisco, \$37,835.

ORANGE COUNTY—At Goliwin overhead crossing, graded and paved Portland cement concrete, 0.9 miles. Dist. VII, Rt. 2, Sec. B, P. J. Akmadzich, Los Angeles, \$42,790; Matich Bros., Elsinore, \$37,359; Wells & Bessler, Santa Ana, \$46,529; Korace-

vich & Price, South Gate, \$41,727. Contract awarded to Griffith Co., Los Angeles, \$35,807.

PLACER COUNTY—Undergrade crossing at New England Mills, 2 concrete abutments graveled and surfaced, 1000 lineal feet of roadway with bituminous treated crushed gravel. Dist. III, Rt. 37, Sec. B, C. W. Wood, Stockton, \$36,115; Fredrickson & Watson Const. Co., Oakland, \$38,768; Lindgren & Swinerton, Inc., Sacramento, \$37,104; J. W. Hoopes, Sacramento, \$45,604; C. Emil Force, Piedmont, \$40,644; Bodenhamer Const. Co., Oakland, \$39,086; P. F. Bender, North Sacramento, \$36,264. Contract awarded to W. H. Hauser, Oakland, \$32,521.

SAN BERNARDINO COUNTY—Bridge across Lytle Cr., 2 miles west of San Bernardino, 5-35' steel stringer spans concrete deck on pile bents. Dist. VIII, Rt. 9, Sec. C. Oberg Bros., Los Angeles, \$35,486; W. H. McCune, Jr., Monrovia, \$41,468; Byerts & Dunn, Los Angeles, \$33,605. Contract awarded to Robinson-Roberts Co., Los Angeles, \$33,313.

SAN BERNARDINO COUNTY—Between Cronise Valley and 6 miles west of Baker, grading and surfacing with oil treated crushed gravel, 13.6 miles. Dist. VIII, Rt. 31, Sec. J-K, Geo. Herz & Co., San Bernardino, \$255,450; O. A. Lindburg, Stockton, \$266,235; A. Teichert & Son, Inc., Sacramento, \$268,293; Robinson, Roberts Co., Los Angeles, \$279,727; Chas. U. Heuser, Glendale, \$268,510; Morrison-Knudsen Co., Boise, \$271,414; H. W. Rohl Co., Los Angeles, \$248,796; Fred W. Nighbert, Bakersfield, \$259,310. Contract awarded to McCray Co., Los Angeles, \$247,706.

SAN BERNARDINO COUNTY—Reinforced concrete Girder Bridge over A. T. & S. P. Ry., 2 miles east of Essex, 1-48', 4-34' spans on concrete bents. Dist. VIII, Rt. 58, Sec. 1, Byerts & Dunn, Los Angeles, \$24,593; Robt. E. McKee, Los Angeles, \$25,971; Johnson Const. Co., Los Angeles, \$28,892. Contract awarded to H. W. Rohl Co., Los Angeles, \$20,885.

SAN LUIS OBISPO COUNTY—Between 1.5 miles south of San Margarita and Atascadero, grading and paving with asphalt concrete 9.8 miles. Dist. V, Rt. 2, Sec. C-D, Central California Rds. & Southern Cal. Rds. Co., Los Angeles, \$250,841; Irving L. Rider, San Jose, \$229,330; A. Teichert & Son, Sacramento, \$233,620; Peninsula Paving Co., San Francisco, \$224,279; Clark & Henry Const. Co., San Francisco, \$236,749; P. J. Akmadzich, Los Angeles, \$341,389. Contract awarded to Hanrahan Company, San Francisco, \$209,700.

SAN LUIS OBISPO COUNTY—Repair bridge across Estrella River, about 12 miles east of Paso Robles, consisting of one 154 ft. through steel truss span. Dist. V, Rt. 33, Sec. B, Lord & Bishop, Sacramento, \$1,275. Contract awarded to Wm. Lane, Paso Robles, \$1,247.

SAN MATEO & SANTA CLARA COUNTIES—Bridge across San Francisquito Creek at Palo Alto, 3-27' spans on concrete pile bents. Dist. IV, Rt. 68, Sec. D-A, A. T. Howe, Santa Rosa, \$24,954; Fredrickson & Watson Const. Co., Oakland, \$22,094; J. W. Hoopes, Sacramento, \$20,270; Geo. J. Ulrich Const. Co., Modesto, \$20,220; Peter McHugh, San Francisco, \$26,387; M. B. McGowan, San Francisco, \$20,675; MacDonald & Kahn Co., Ltd., San Francisco, \$19,999; Clinton Stephenson Const. Co., San Francisco, \$22,986; Ralph Hunter, Sacramento, \$21,839; Healy-Tibbets Const. Co., San Francisco, \$24,395; A. W. Kitchen, San Francisco, \$21,506; A. J. Raich, San Jose, \$22,440; Merritt, Chapman & Scott Corp., San Pedro, \$25,462; Paul M. White, Santa Monica, \$21,279. Contract awarded to Barrett & Hill, San Francisco, \$17,218.

SANTA BARBARA COUNTY—Reinforced concrete arch bridge across Gaviota Creek, 1-100' span. Dist. V, Rt. 2, Sec. E, Byerts & Dunn, Los Angeles, \$53,062; Gist & Bell, Arcadia, \$47,637; Merritt & Chapman Corp., San Pedro, \$54,483; Oberg Bros., Los Angeles, \$43,336. Contract awarded to Paul M. White, Santa Monica, \$36,287.

ARCHITECTURAL AWARDS For Month of March

SONOMA STATE HOME—Continuous type bake oven, to Petersen Oven Company, San Francisco, \$3,450.

AGRICULTURAL PARK (State Fair Grounds), Sacramento—Additional Live Stock Building, contract for general work to F. L. Hansen, San Francisco, \$97,500; for electrical work, to C. E. Turner, Sacramento, \$2,278; for plumbing work to Carpenter & Mendenhall, Sacramento, \$8,370.

Contract for general work on Poultry Building to Yoho Dinger, Sacramento, \$43,743.

SAN DIEGO STATE TEACHERS COLLEGE—Grading athletic field, to R. A. Floyd Engineering Company, San Diego, \$2,030.

WHITTIER STATE SCHOOL—Building for Boys, contract for general work to Gene B. Foster, Los Angeles, \$25,082; for plumbing and heating, to Cooby Winterbottom, Los Angeles, \$5,060; for electrical work to R. R. Jones Electric Co., South Pasadena, \$1,355.

ATTORNEY GENERAL'S OFFICE, State Office Building, San Francisco—Alterations, to Braus Kuhn, San Francisco, \$1,740.

NORWALK STATE HOSPITAL—Installation refrigeration plant, to Baker Ice Machine Company, Los Angeles, \$5,351.

PACIFIC COLONY—Employees' Quarters and Garage No. 2, contract for general work to Louis A. Geisler, Huntington Park, \$30,986; plumbing and heating to Thos. Haverly Co., Los Angeles, \$5,999; electrical work to R. R. Jones Electric Co., South Pasadena, \$1,250.

DAM APPLICATIONS AND APPROVALS

Application for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of March, 1931.

MODOC COUNTY—Lindauer Concrete Dam No. 152-4. G. Lindauer, San Francisco, California, owner; buttress and flashboards 13½ feet above streambed with a storage capacity of 550 acre-feet, situated on Pit River tributary to Sacramento River. For Diversion and storage purposes, for irrigation and stock use.

MODOC COUNTY—Lindauer Upper Dam No. 152-5. G. Lindauer, San Francisco, California owner; crib and needle dam, 8 feet above streambed with a storage capacity of 850 acre-feet, situated on Pit River tributary to Sacramento River. For diversion and storage purposes for irrigation and stock use.

MODOC COUNTY—O'Brien Dam No. 152-6. O'Brien and O'Connell Estates, Alturas, owner; crib and flashboards, 10½ feet above streambed with a storage capacity of 1000 acre-feet, situated on Pit River tributary to Sacramento River. For diversion and storage purposes, for irrigation and stock use.

SOLANO COUNTY—Suisun Municipal Dam No. 21. Town of Suisun City, Suisun, California, owner; earth dam, 45 feet above streambed tributary to Suisun Creek in Sec. 12, T. 5 N., R. 3 W., M. D. B. and M., for storage purposes, for municipal use.

YOLO COUNTY—Moore Diversion Dam No. 391-3. Clear Lake Water Company, Woodland, California, owner; flashboards, 6 feet above streambed with a storage capacity of 40 acre-feet, situated on Cache Creek tributary to Sacramento River in T. 10 N., R. 1 E., M. D. B. and M., for diversion purposes, for irrigation use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of March, 1931.

LOS ANGELES COUNTY—Chatsworth Highline Dam No. 6-32. City of Los Angeles, Los Angeles, owner; earthfill, 49 feet above streambed with a storage capacity of 280 acre-feet, situated on a wash tributary to Los Angeles River in Sec. 9, T. 2 N., R. 16 W., S. B. and M., for regulation and storage purposes, for irrigation and domestic use. Estimated cost \$100-, 385.80, fees paid \$1,001.93.

LOS ANGELES COUNTY—Haypress Dam No. 778-3. Santa Catalina Island Company, Avalon, California, owner; earth dam, 16.9 feet above streambed with a storage capacity of 20.7 acre-feet, situated on Haypress Creek tributary to Grand Canyon in Sec. 32, T. 9 S., R. 14 W., S. B. and M., for storage purposes for domestic use. Estimated cost \$4223.77, fees paid \$42.24.

LASSEN COUNTY—Quaking Asp Gulch No. 1 Dam No. 253-2. Antone Avilla, Red Bluff, owner; earth dam, 10 feet above streambed with a storage capacity of 33 acre-feet, situated on Quaking Asp Gulch in Sec. 7, T. 36 N., R. 10 E., M. D. B. and M., for storage purposes for stock watering use. Estimated cost \$500, fees paid \$20.

LASSEN COUNTY—Quaking Asp Gulch No. 2 Dam No. 253-3. Antone Avilla, Red Bluff, owner; earth dam, 8 feet above streambed with a storage capacity of 30 acre-feet, situated on Quaking Asp Gulch in Sec. 13, T. 36 N., R. 9 E., M. D. B. and M., for storage purposes, for stock watering use. Estimated cost \$590, fees paid \$20.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of March, 1931.

SHASTA COUNTY—North Battle Creek Dam No. 97-96. Pacific Gas and Electric Company, San Francisco, owner; situated on North Battle Creek tributary to Battle Creek in Sec. 20, T. 32 N., R. 3 E., M. D. B. and M.

LOS ANGELES COUNTY—Fairmont Dam No. 6-8. City of Los Angeles, Los Angeles, California, owner; earthfill, located in Sec. 12, T. 7 N., R. 15 W., S. B. and M.

PLUMAS COUNTY—Eureka Lake Dam No. 283. Phinias-Eureka Corp., Johnsville, California, owner; situated on Eureka Creek tributary to Feather River in T. 22 N., R. 11 E., M. D. B. and M. Earth and rock dam.

TUOLUMNE COUNTY—Matelot Dam No. 97-75. Pacific Gas and Electric Company, San Francisco, owner; earth dam, located in Sec. 1, T. 2 N., R. 14 E., M. D. B. and M.

TUOLUMNE COUNTY—San Diego Dam No. 97-82. Pacific Gas and Electric Company, San Francisco, earth dam, located in Sec. 13, T. 2 N., R. 14 E., M. D. B. and M.

PLACER COUNTY—Kidd Lake Dam No. 97-25. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on a small creek tributary to South Yuba River in Sec. 29, T. 17 N., R. 14 E., M. D. B. and M.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of March, 1931.

SAN BENITO COUNTY—Hawkins Dam No. 651. C. N. Hawkins, Helister, California, owner; hydraulic fill, 67 feet above streambed with a storage capacity of 1000 acre-feet, situated on Los Viboras Creek tributary to Pajaro River. For storage purposes, for irrigation use.

LOS ANGELES COUNTY—Chatsworth Dam No. 6-4. City of Los Angeles, Los Angeles, owner; earth dam, 40 feet above streambed with a storage capacity of 10-, 500 acre-feet, situated on Chatsworth Foot Hills tribu-

tary to Los Angeles River in Ex Mission de San Fernando, for storage purposes, for municipal, domestic and irrigation use.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of March, 1931.

SHASTA COUNTY—Lake Grace Dam No. 97-92. Pacific Gas and Electric Company, San Francisco, owner; earth dam, located in Sec. 4, T. 30 N., R. 1 E., M. D. B. and M.

SHASTA COUNTY—North Battle Creek Dam No. 97-96. Pacific Gas and Electric Company, San Francisco, owner; masonry, situated on North Battle Creek tributary to Battle Creek in Sec. 20, T. 32 N., R. 3 E., M. D. B. and M.

LOS ANGELES COUNTY—Fairmont Dam No. 6-8. City of Los Angeles, Los Angeles, owner; earth dam, located in Sec. 12, T. 7 N., R. 15 W., S. B. B. and M.

SAN MATEO COUNTY—McMahon Gulch Dam No. 608. Dianda and Patroni, Half Moon Bay, owners; earth dam, situated on McMahon Creek in T. 5 S., R. 6 W., M. D. B. and M.

WATER APPLICATIONS AND PERMITS

Applications for Permits to Appropriate Water Filed With the Department of Public Works, Division of Water Resources, During the Month of March, 1931.

BUTTE COUNTY—Application 6902. R. M. and H. L. Stafford, Live Oak, Calif., for 2.0 c.f.s. from Morrison Slough (Main Drain Ditch of Dist. 2056) tributary to Sacramento River. To be diverted in Sec. 13, T. 17 N., R. 2 E., M. D. B. and M., for irrigation purposes (160 acres). Estimated cost \$2,000.

EL DORADO COUNTY—Application 6903. U. S. Eldorado National Forest, Placerville, Calif., for 3000 gallons per day from Granite Lake Creek tributary to Emerald Bay, Lake Tahoe. To be diverted in Sec. 23, T. 13 N., R. 17 E., M. D. B. and M., for domestic and fire protection purposes. Estimated cost \$450.

LAKE COUNTY—Application 6904. C. G. Haycock, 2674 27th St., Sacramento, Calif., for 0.5 c.f.s. from Middle Creek tributary to Clear Lake and Cache Creek. To be diverted in Sec. 31, T. 16 N., R. 9 W., M. D. B. and M., for irrigation purposes (40.26 acres).

BUTTE COUNTY—Application 6905. California Mutual Building and Loan Association, a corp., San Jose, Calif., for 14.78 c.f.s. from Lateral "A" Drainage Canal of Reclamation District tributary to Butte Creek, thence Sacramento River. To be diverted in Sec. 13, T. 18 N., R. 2 E., M. D. B. and M., for irrigation purposes (5912 acres of rice).

SANTA BARBARA COUNTY—Application 6906. Union Realty Co., P. O. Box 820, Santa Barbara, Calif., 7 gallons per minute from San Marcos spring. To be diverted in Sec. 11, T. 5 N., R. 28 W., S. B. B. and M., for irrigation and domestic purposes (5 acres). Estimated cost \$1,200.

LOS ANGELES COUNTY—Application 6907. U. S. Angeles National Forest, 501 Brownstein-Louis Bldg., Los Angeles, Calif., for 0.002 c.f.s. or approximately 1300 g.p.d. from Camp Spring tributary to Shake Canyon. To be diverted in Sec. 13, T. 7 N., R. 16 W., S. B. B. and M., for domestic purposes. Estimated cost \$100.

LOS ANGELES COUNTY—Application 6908. U. S. Angeles National Forest, 501 Brownstein-Louis Bldg., Los Angeles, Calif., for 0.002 c.f.s. or approximately 1300 g.p.d. from Ranger Spring tributary to Pine Canyon. To be diverted in Sec. 18, T. 7 N., R. 15 W., S. B. B. and M., for domestic purposes. Estimated cost \$50.

VENTURA COUNTY—Application 6909. Hibbard S. Williams, P. O. Box 265, Santa Paula, Calif., for 0.025 c.f.s. from unnamed spring tributary to Timber Canyon, thence Santa Clara River. To be diverted in Sec. 18, T. 4 N., R. 20 W., S. B. B. and M., for mining and domestic purposes. Estimated cost \$1,000.

MENDOCINO COUNTY—Application 6910. Fred W. Gordon, Cummings, Mendocino County, Calif., for 0.05 c.f.s. from unnamed spring tributary to South Fork of Eel River. To be diverted in Sec. 3, T. 23 N., R. 17 W., M. D. B. and M., for domestic purposes. Estimated cost \$250.

HUMBOLDT COUNTY—Application 6911. Mrs. Sarah J. Carpenter, Salyer, Calif., for 2.0 c.f.s. from

Ammon Creek tributary to South Fork of Trinity River. To be diverted in Sec. 12, T. 5 N., R. 5 E., H. B. and M., for irrigation purposes (60 acres). Estimated cost \$800.

HUMBOLDT COUNTY—Application 6912. Redwood Empire Golf and Country Club, Scotia, Calif., for 6,267 c.f.s. from Wolverton Gulch tributary to Van Duzen and Eel Rivers. To be diverted in Sec. 8, T. 2 N., R. 1 E., H. B. and M., for irrigation and domestic purposes (30 acres). Estimated cost \$4,000.

MONO COUNTY—Application 6913. A. J. Warrington, Bridgeport, Calif., for 3.0 c.f.s. from Virginia Creek tributary to East Walker River. To be diverted in Sec. 2, T. 3 N., R. 25 E., M. D. B. and M., for mining purposes. Estimated cost \$50.

MONO COUNTY—Application 6914. A. J. Warrington, Bridgeport, Calif., for 3 c.f.s. from Dog Creek tributary to Virginia Creek and East Walker River. To be diverted in Sec. 16, T. 3 N., R. 25 E., M. D. B. and M., for mining purposes. Estimated cost \$1,500.

PLUTE COUNTY—Application 6915. J. E. Carrico, Diggs, Calif., for 0.81 c.f.s. from Feather River tributary to Sacramento River. To be diverted in Sec. 4, T. 18 N., R. 3 E., M. D. M., for irrigation purposes on 65 acres. Estimated cost \$400.

SAN BERNARDINO COUNTY—Application 6916. Aubrey Wardman, Whittier, Calif., for 2.5 c.f.s. from underground (shafts with lateral drifts). To be diverted in Sec. 16, T. 1 N., R. 6 W., S. B. M., for irrigation and domestic purposes on 225 acres. Estimated cost \$25,000.

TUOLUMNE COUNTY—Application 6917. W. C. Le Hane, Box 94, Modesto, Calif., for 600 c.f.s. from Stanislaus River tributary to San Joaquin River. To be diverted in Sec. 10, T. 1 S., R. 12 E., M. D. M., for irrigation purposes on 100,000 acres of land more or less, to be irrigated.

TRINITY COUNTY—Application 6918. Trinity Loop Mining Co., Marvin B. Sherwin, Secretary, Oakland, for 10 c.f.s. from Hawkins Creek tributary to Trinity River. To be diverted in Sec. 21, T. 6 N., R. 6 E., H. M. for mining and domestic purposes. Estimated cost \$6,000.

SUTTER COUNTY—Application 6919. W. S. and John W. Saunders, Tudor, Calif., for 15.5 c.f.s. from Feather River tributary to Sacramento River. To be diverted in Sec. 2, T. 13 N., R. 13 E., M. D. M., for irrigation purposes on 400 acres.

SUTTER COUNTY—Application 6920. Grover C. Shannon, Tudor, Calif., for 3.5 c.f.s. from Feather River tributary to Sacramento River. To be diverted in Sec. 2, T. 13 N., R. 3 E., M. D. M., for irrigation purposes on 85 acres.

TRINITY COUNTY—Application 6921. Colen F. Whittier, c/o Geo. Norenholt, 6327 W. 5th St., Los Angeles, Calif., for 150 c.f.s. from Soldier Creek tributary to Trinity River. To be diverted in Sec. 25, T. 33 N., R. 11 W., M. D. M., for mining and domestic purposes.

SAN BERNARDINO COUNTY—Application 6922. Carter E. Putnam, Cucamonga, Calif., for 0.20 c.f.s. from run-off of irrigation water (water runs in ditch by side of road) tributary to Santa Ana River Watershed. To be diverted in Sec. 2, T. 1 S., R. 7 W., S. B. M. for irrigation purposes. Estimated cost \$3.

SIERRA COUNTY—Application 6923. Geo. F. Taylor, Downieville, Cal., for 50 c.f.s. from Cherokee Creek tributary to North Fork of Yuba River. To be diverted in Sec. 6, T. 19 N., R. 9 E., M. D. M., for mining purposes.

NEVADA COUNTY—Application 6924. Fletcher Hamilton, San Francisco, Calif., for 25 c.f.s. from each source, not to exceed a total of 50 c.f.s. from (1) Rob Roy (2) Deadman (3) Roscoe and (4) Logan Canyons tributary to (1) and (2) Poorman Creek (3) and (4) S. Fork Yuba River. To be diverted in Secs. (1) 25 (2) 26 (3) and (4) 34, T. 18 N., R. 10 E., M. D. M., for mining and domestic purposes.

SUTTER COUNTY—Application 6925. Boyd Farm Co., Yuba City, Calif., for 20 c.f.s. from Feather River tributary to Sacramento River. To be diverted in Sec. 14, T. 14 N., R. 3 E., M. D. M., for irrigation purposes on 1,000+ acres.

SONOMA COUNTY—Application 6926. Albert P. Kogler, San Francisco, California, for 0.05 c.f.s. from Porter Creek tributary to Mark West Creek and Russian River. To be diverted in Sec. 14, T. 8 N., R. 7 W., M. D. M., for irrigation and domestic purposes on 21 acres. Estimated cost \$750.

LAKE COUNTY—Application 6927. Peter V. Pedroncini, Ukiah, Calif., for 0.1 c.f.s. from 2 unnamed springs tributary to Spruce Canyon to be diverted in

Sec. 11, T. 15 N., R. 11 W., M. D. M., for irrigation and domestic purposes on $\frac{1}{2}$ acre. Estimated cost \$3,000.

Permits to Appropriate Water Issued by the Department of Public Works, Division of Water Resources, During the Month of March, 1931.

SHASTA COUNTY—Permit 3662. Application 6702. Elmer Gastineau, Los Angeles, Calif., March 9 1931 for .02 c.f.s. from unnamed springs in Sec. 12, T. 32 N., R. 5 W., M. D. for irrigation and domestic use on 20 acres. Estimated cost \$250.

BUTTE COUNTY—Permit 3663. Application 6700. Harvey C. Adams, Chico, Calif., March 9, 1931 for 3 c.f.s. from drainage ditch from Drainage Dist. No. 2 in Sec. 28, T. 19 N., R. 1 E., M. D., for irrigation use on 120 acres. Estimated cost \$250.

MONO COUNTY—Permit 3664. Application 6744. Raymond S. MacMillan, Los Angeles, Calif., March 3, 1931 for 200 g.p.d. from unnamed spring in Sec. 14, T. 2 S., R. 26 E., M. D., for domestic purposes. Estimated cost \$150.

SIERRA COUNTY—Permit 3665. Application 6834. Langdon Smith, Downieville, Calif., March 10, 1931 for .003 c.f.s. from unnamed spring in Sec. 5, T. 19 N., R. 10 E., M. D., for domestic purposes. Estimated cost \$500.

MONTEREY COUNTY—Permit 3666. Application 6794. Stuart Haldorn, Monterey, Calif., March 16, 1931 for 2 c.f.s. from Higuera Creek in Sec. 24, T. 19 S., R. 1 E., M. D. M., for power purposes.

MONTEREY COUNTY—Permit 3667. Application 6795. Stuart Haldorn, Monterey, Calif., March 16, 1931 for 0.12 c.f.s. from Higuera Creek in Sec. 24, T. 19 S., R. 1 E., M. D., for irrigation and domestic uses.

SAN BERNARDINO COUNTY—Permit 3668. Application 6669. Geneva Catherine Baxter, Lucerne Valley, Calif., March 15, 1931 for 0.14 c.f.s. from (1) Deep Creek Canyon and (2) unnamed spring in Sec. (1) 16 (2) 10, T. 3 N., R. 1 W., S. B. and M., for irrigation and domestic use on 20 acres. Estimated cost \$150.

EL DORADO COUNTY—Permit 3669. Application 6410. Emil E. Larsen, Placerville, Calif., March 25, 1931 for 0.5 c.f.s. from South Fork Brush Canyon in Sec. 4, T. 10 N., R. 12 E., M. D., for irrigation and domestic use on 60 acres. Estimated cost \$300.

INYO COUNTY—Permit 3670. Application 6868. H. J. Halliday, Bishop, Calif., March 25, 1931 for .0035 c.f.s. from small unnamed stream in Sec. 2, T. 9 S., R. 31 E., M. D., for domestic and recreational uses. Estimated cost \$155.

HUMBOLDT COUNTY—Permit 3671. Application 6766. E. F. Barker and Beatrice Barker, Orleans, Cal., March 26, 1931 for 0.1 c.f.s. from unnamed Gulch in Sec. 15, T. 10 N., R. 5 E., H. M., for irrigation and domestic use on six acres.

TOO MUCH IRRIGATION

The following stanza is a neat the danger of our irrigation:

Countless worn-out fields remind us
We should build our lands to stay
And departing leave behind us
Fields that have not washed away.
When our boys assume the mortgage
On the land that's had our toil
They'll not have to ask the question
"Here's the land but where's the soil?"

First came the "realtor," then the "mortician," later the "beautician," subsequently the "bootician," then the "pedicure." And the other day a large dump truck careened down the avenue in one of our large cities bearing the imposing legend: "Kelly & McGuire, truckologists."

Jim the Porter: "Boss, de ladies has finally giv' in, ain't they?"

Boss: "Give in? How?"

Jim: "Well, I just now seen a sign down the street that said, 'Ladies' Ready-to-Wear Clothes.'"

Statistics Teach "Safety First" Lesson

1 1 1 1 1 1

ILLUSTRATIVE of the imperative necessity of careful driving in thickly-populated districts and on open highway, the Bureau of Research, Statistics and Traffic Safety of the California Highway Patrol announces figures showing forty-two children killed and 511 injured in California during 1930 by vehicles striking them while they played on the roadway.

The figures show 25 per cent of all injured and 17 per cent of all killed in pedestrian accidents were children.

In this connection the bureau called attention to sections of the law requiring motorists to drive at a speed not exceeding 15 miles an hour in school zones and to stop when school buses are taking on or discharging passengers.

Of 31,019 motor vehicle accidents in California, involving injury or death during the year, 9198, or approximately 30 per cent involved collisions with pedestrians.

These collisions resulted in death or injury to 9627 persons. The actual deaths totaled 857. The injured totaled 8770.

Over one-third of the pedestrian accidents occurred at intersections and about one-fourth were due to "jay-walking." About 3 per cent involved persons walking along the highways and streets.

THE "HIT AND RUN" DRIVERS' TOLL

"Hit and run" drivers were involved in 114 accidents causing death and 1156 others causing injury in California during 1930.

As "hit and run" drivers are able to make their escape usually because witnesses fail to get their numbers, E. Raymond Cato, superintendent of the California Highway Patrol, said members of the patrol would be instructed to continue rigid enforcement of section 43 of the motor vehicle act requiring that license plates be displayed in a position clearly visible and be kept free from foreign matter such as dust and grease.

Among the convictions were 4500 for various speed violations. Four hundred thirty-four were convicted of reckless driving and 1000 were apprehended for faulty headlamps. There were but 65 drivers the month convicted of driving while intoxicated.

Famous last words: "Sure, stranger; climb in the back seat."

Rolph Signature to Secondary Highway Law Wins High Praise

(From the *San Bernardino Sun*)

THE adoption by the Legislature and the signature of Governor James Rolph, Jr., of the new secondary highway bill discharges an obligation long due California.

The bill adds 633 miles of highway to the secondary system on southern California. To the north went 171 miles of additional State highways.

The measure was designed to correct the injustice in the number of secondary highways provided for southern California.

Governor Rolph carried out his pledge to the people with his signature on this measure. It is his contribution to his determination that all sections of California shall be treated squarely. And it is easy for Governor Rolph to take the position that there is no north and no south in California, but one great State. He is a typical Californian.

There is no claim that Governor Rolph initiated the movement for justice in the allocation of State highways. But he did speedily make it a law. There was no disposition on his part to make it the subject of pork barrel politics.

Fire Wardens of Southern California Meet in Convention

THE Southern California Association of Foresters Firewardens held their second annual meeting at Avalon, Catalina Island, during the latter part of February.

The Southern California Association of Foresters and Firewardens came into being just two years ago. This was the natural result of a mutual urgency appeal among men in the fire service of the public to form an organization for their mutual benefit and education. Their motto "For Unity of Thought and Action" expresses the purpose of the Organization. Membership is open only to those in the employ of some rural or mountain Fire Prevention Agency of Southern California. Its membership totaling approximately 120 paid-up members, includes U. S. F. S. Officers, County Fire Wardens and State Fire Rangers.

In southern California there are four National Forests—three counties with their own fire organization and seven counties under the jurisdiction of State Fire Rangers. Already these groups have been drawn closer together in cooperative Fire Prevention and Control Agreement; also by holding quarterly Directors meetings, and their big annual meetings, the men in the work have a chance to get together, talk over mutual problems, and bring in outside experts to give talks to broaden their view point.

"How old are you?" inquired the visitor of his host's little son.

"That is a difficult question," answered the young Boston lad, removing his spectacles and wiping them reflectively. "The latest personal survey available shows my psychological age to be twelve, my moral age four, my anatomical age seven, and my physiological age six. I suppose, however, that you refer to my chronological age, which is eight. This is so old-fashioned that I seldom think of it any more."—*Milwaukee Engineering*.

Man (to small boy eating apple): "Look out for worms, little boy."

Boy: "When I eat an apple the worms must look out for themselves."

Public Works and Prosperity

By TIMOTHY A. REARDON, Member California Highway Commission

IT IS an ill wind that does not blow someone some good.

Out of the now departing business depression, there has come for the first time something of public realization of the part that public works can play in staying depression and in promoting prosperity.

Hitherto public works and prosperity has been largely a matter of theoretical discussion among political economists. The economists have preached, but the public has not practiced.

Today the public generally knows the expansion of public works during a time of unemployment and business depression, is a palliative and a remedy, both relieving distress and hastening a cure.

In California the extension of state highway work has proved of inestimable value to holding up business and providing an increased market for labor. One reason for this is the wide distribution of state highway activity. State highway dollars travel into every county of California. They find their way into homes in both metropolitan centers and rural communities.

Added to this is the further helping fact that the State is a cash customer. It does not ask credit.

State highway work is of further value in that it bends itself to a wide distribution among labor. There is much State highway work that requires the service of the skilled mechanic. Much must also be done by the handworker.

The work also requires large purchase of supplies both locally and in manufacturing and business centers.

In past depressions public works have not played the part in supporting business and employment that they could have taken because of the long time that of necessity elapses between the authorization of a project and actual construction. This time is not wasted, but is taken up in preliminary and final engineering, and the development of finances to pay costs.

We have learned in this depression the value of having on hand a reservoir of public improvement projects, upon which the basic engineering has been done and which are quickly available for construction activity in dull and depressed times.

TIMOTHY A. REARDON

If State Highway Engineer C. H. Purcell had not such a reservoir of projects available, it would have been impossible for the California Highway Commission and Colonel Walter E. Garrison, Director of the Department of Public Works to have speeded up the highway program to the extent that it has been advanced at the request and under the instructions of Governor Rolph.

Neither the State, the counties or the cities of California should allow their cupboards to be entirely empty of such projects.

This is the outstanding lesson that eighteen years service as president of the Board of Public Works of San Francisco has taught me. The lesson has been confirmed by my experience as a member of the California Highway Commission.

The difficulty with such a program lies in the insistence of the people concerned for immediate construction of any project that they learn is in contemplation. This can be overcome, however, by proper publicity to the

(Continued on page 7.)

Governor Rolph Opens New Unit of Bayshore Highway

By COLONEL JNO. H. SKEGGS, District Engineer

A MOST IMPORTANT LINK, in so far as the traveling public is concerned, of the Bayshore Highway, between San Mateo and Redwood City, was formally dedicated to the public by Governor Rolph, who made a special trip from Sacramento for the occasion, on the 14th day of May, 1931.

Present with the Governor were Colonel Walter E. Garrison, State Director of Public Works, and C. H. Purcell, State Highway Engineer, from Sacramento; State Highway Commissioner Timothy A. Reardon of San Francisco and Colonel Jno. H. Skeggs, District Engineer, under whose supervision the work had been completed.

Prior to the formal dedication, a group of public spirited organizations and citizens of Redwood City gave a luncheon at Emerald Lake for their honored guests; after which the assemblage proceeded to the south end of the new highway at Redwood City, where a parade of the school children of this city took place—reflecting the interest not only of present citizenship, but of the future leaders of this wide-awake community in this highway achievement. The ceremonial, in which the Governor cut the ribbon for formal opening of this 7.4-mile section of the Bayshore Highway, was started at 2 p.m.

Previous to the construction and opening of this section between San Mateo and Redwood City, the Bayshore Highway served as a fast interurban artery to a terminus at Fifth avenue in San Mateo, at which point all travel to the south was forced to proceed to the Peninsula Highway, causing great congestion and the inconvenience to motorists of cross traffic through the towns of San Mateo, Redwood City, Menlo Park and Palo Alto.

RELIEVES CONGESTION

The opening of the new link, however, by connecting at Redwood City with Washington Street and the Middlefield Road, an excellently paved county highway, gives the motorist assurance that he can travel from the heart of San Francisco to Palo Alto, or East Bay points via the Dumbarton Bridge, without being forced into the overburdened Peninsula Highway at any point. Thus, all the heavily settled urban territory in the twelve-

mile strip of the peninsula between San Mateo and Palo Alto is given the advantage of two arterial highways into San Francisco.

CONSTRUCTION DIFFICULTIES

The difficulties of constructing this important strip of highway were many, due to the fact that it traverses for almost its entire length the marshes and the many salt ponds of this territory, where gradual settlement of the roadbed can normally be expected for some years to come. That section of the Bayshore Highway between South San Francisco and Burlingame, which traverses a terrain similar to that of the new section, was first graded in 1924; but, due to gradual settlement, was not considered ready for heavy type concrete pavement until 1930. The first four miles of the new section—namely, between San Mateo and Belmont—were constructed entirely of fill material obtained from the rocky knoll located at Belmont, just west of the Bayshore Highway and south of Harbor Boulevard. The last three miles were constructed by pumping in material from the bay adjacent to the highway between previously constructed levees, a blanket fill, however, of two feet in thickness of the material from Belmont Hill being placed over the hydraulic fill.

The cost of this section of highway was \$450,000 for grading and \$135,000 for rock base and temporary surfacing, bringing the total expenditures to date upon the twenty miles of the Bayshore Highway now open to traffic, from the county line at San Fran-

California's Highway Leadership

By DR. L. I. HEWES, Deputy Chief Engineer, U. S. Bureau of Public Roads, San Francisco Headquarters*

AT A DINNER some years ago in the Palace Hotel, in honor of Dr. Swazey, who makes the chasses for the world's great telescopes, the guest of honor said the engineer bridged the gap between science and industry. That is particularly true in respect to the modern highway engineer. The roads of our country prior to 1893 had received little or no engineering. The present epoch is the epoch of highway transportation and the engineer has found his job in the application of an increasingly complex body of scientific facts to highway betterment.

This application of science to highways has been particularly successful in California. This State has always been an inspiration to the entire country in her leadership. California was first in a number of very important highway developments. It was the California State Highway Department that first established concrete as a standard State pavement. It was California that passed the first real contractor's prequalification law, recently followed by Oregon and Nevada. It was in California that the first bridges were constructed with inverted vertical grades. It was California that introduced the new asphaltic oil road mix and built such structures as the Rincon Seawall, and it is California that now dares to set up continually higher standards of design.

There are times when we have a conviction of the complete achievement. Roads such as the new three-way pavement on beautiful lines through Rose Canyon near San Diego are examples of what I mean. We almost know this highway will be adequate for all time.

I say "almost" advisedly. The march of time is an inexorable force. No man can hope for the complete survival of his ideas in time. Time is invincible. Law and science strive in vain for permanency in time. You may see much of what I mean in the films that are now being shown in San Francisco of the city of 1906—Market Street at the time of the fire. It is a remarkable scene, a living record of a quarter of a century past. You have a high sense of the progress of the years. There are the poor dirty cobble pavements, the little cable cars with a toy turntable at the Ferry

Building, the absurd two-story slow automobiles high above the street, the long skirts of women sweeping the pavement, a confused movement of slow traffic. You gaze with amazement, you recognize in a flash that inexorable law of the forward movement that time must bring.

And so we can not be too sure of our present standards. The engineers who gear science into industry must be alert and willing to progress. Law must not lag too far behind in formulating scientific discovery.

New ideas come constantly. A few days ago I had the pleasure of a call from Mrs. W. L. Lawton, who is making a study of California roadsides—a survey sponsored by the American Nature Association. We are thinking new thoughts about our roadsides. I told Mrs. Lawton of some things the California State Division of Highways was doing for roadside improvement. There is to me no more inspiring effort for roadside beauty than that struggle that is being waged to establish an avenue of trees along the highway south of Bakersfield—a struggle of years against heavy odds and now successful. Too often the landscape people try to force beautiful effects exclusively through the engineering. I think Mr. Purcell is giving a noteworthy example of how to restore roadside beauty in his work on the Skyline Boulevard. Here a log grillage against the stony slopes offers place for earth seed beds behind the horizontal logs and soon those obstinate raw cut slopes will be covered with pleasing vegetation. We may, twenty-five years hence, look back to pictures of ugly sign-littered highways with surprise and amusement. We can only strive now to move in the right direction.

The engineer dealing with facts of nature can not develop his imagination in all directions. He must follow closely scientific discovery and school himself to foresee its application. He is now in the midst of a vast new movement—this era of enormous highway traffic. His vision is primarily concerned with the realities of that action. In California, for example, highway grading is often extremely expensive. Roadbed costs here are greater than in the prairie states like Illinois and Iowa that are setting up records for yearly pavement mileage. Such mountains as ours tax the genius of the engineer in his design and in his allocation of funds.

* This article contains the substances of an address given by Dr. Hewes at a dinner given in his honor at Sacramento on April 22, 1931, at which Assemblyman George Biggar, chairman of the Assembly Roads and Highways Committee, was the host.

Federal funds have helped California in considerable measure. For National Forest highways about 9,000,000; for the Federal Highway System about 38,000,000; and several million for the four national parks. We are finding it pleasant to work with the California Division of Highways. One of the happy items in the Bureau of Public Roads is its colonization. We have supplied states with engineers. When we gave you Purcell we felt that business in still another state was on an assured sound foundation.

We engineers are not much worried in this State nor in others about details of engineering nor with the immediate construction problems. If, however, we keep our vision broad, we must realize that time is also preparing for us its inexorable test. We must realize that there is always an irresistible forward surge of economic adjustment. We must admit that an element of change similar to that which has transformed the Market Street of 1906, will operate upon our own work of 1931. We can not be too vigilant in our effort to know in what direction that change will move us. It is our duty to furnish the record of the present highway era to you of the law-making body who must deal in a broader way with the great problems of economics and the future operation of our modern highways.

Appointments Made To Highway Patrol

TEMPORARY appointment of fifteen traffic officers to serve as members of the California Highway Patrol was announced today by Superintendent E. Raymond Cato.

The men have been assigned to duty in Sacramento, Yolo, Lake, Modoc, Mariposa, Mono and Inyo counties, it was announced, and will be used to augment existing squads and to assist in working out plans for a permanent night patrol. The men were all appointed from the lists submitted by the Boards of Supervisors in the respective counties.

Superintendent Cato also announced the appointment of Clarence Warden, former foreman of the State highway maintenance shops at Sacramento, to act as traveling equipment inspector for the patrol. Warden will travel from county to county checking up equipment of the men. He will also assist in the establishing of district servicing stations. The names of traffic officers appointed follow:

Merit Citations Are Awarded to 11 Traffic Officers

Eleven members of the California Highway Patrol were cited during the month of April for services of an unusually commendable nature, Superintendent E. Raymond Cato announced today.

Seven of the men received letters of commendation because they were instrumental in capturing thirteen automobile thieves during the month. These were L. R. Frye, O. H. Ellis and W. H. Rutherford of Santa Barbara County; C. A. Loomis of San Luis Obispo County; E. L. Stuart of San Joaquin County; A. Rawles of Mendocino County, and Leo Ramsey of Monterey County.

Officer Ramsey was commended particularly because, after being called at 2 o'clock in the morning from his bed, he arose and checked hotels, hospitals and other places until two men who had stolen a car were found.

L. E. Euer, border checker in Humboldt County, was cited because he was instrumental in the arrest of a man and woman wanted for passing worthless checks.

J. L. Degnan, a border checker in the same county, was cited for apprehending two run-away boys from Portland, Oregon.

R. A. Paquette and B. H. Combs, traffic officers of Kern County, were commended for the arrest of a man engaged in the smuggling of Chinese across the border. The man arrested and the Chinese were turned over to the Federal authorities.

Building Bridges By Revenue Bonds

By CHARLES C. CARLETON, Chief, Division of Contracts and Rights of Way, State Department of Public Works *

THE recent decision of the Supreme Court of California upholding the constitutionality of the California Toll Bridge Authority Act of 1929 (*California Toll Bridge Authority et al. vs. Wentworth, etc.*, 81 Cal. Dec. 615), completes a coast-to-coast hookup of favorable court ruling sustaining the validity of the financial plan of meeting the cost of construction of large public projects, such as bridges and tunnels, through the medium of their own earnings derived from tolls paid by the actual users of such conveniences rather than by the old-fashioned method of issuing bonds secured by taxes on general property. This decision, we believe, is the first expression of a western court in a State case holding that revenue bonds retired entirely from tolls do not violate the limitations usually prescribed by state constitutions that debts or liabilities of the states exceeding a fixed amount (in California, \$300,000) shall not be created without a vote of the people; and that, as a matter of law, they do not constitute the "debts" or "liabilities" at all, for the very explicit reason that the credit of the states is not pledged in such bonds.

SOLUTION OF TOLL BRIDGE PROBLEM

Two years ago State officials of California were approached to aid in the solution of the toll bridge problem rapidly developing in this State.

Several private companies had, with an investment of about \$20,000,000, erected large toll structures in key positions in the highway system of the State, and for many years it had been the dream of San Francisco, Oakland and other municipalities bordering San Francisco Bay to span that great expanse of water with a colossal bridge.

Local officials had been swamped with applications of private promoters to construct a privately-owned bridge or tube connecting the city of San Francisco with the county of Alameda on the opposite shore.

NEW POLICY ADOPTED

While credit is due the initiative and enterprise of private capital in overcoming many obstacles and actually completing several fine toll bridges, now serving traffic, yet it seemed as if by spontaneous agreement immediately

C. C. CARLETON

prior to the 1929 session of the California Legislature, State, county and city officials and civic leaders concluded that the day of privately promoted toll bridge was ended in this State; and in the future in extraordinary cases where the cost of new structures would be so vast that it would deplete current highway funds the structures should be financed as publicly owned projects through the use of revenue bonds with the object in view of them becoming free bridges at the earliest possible time.

The Legislature of 1929 quickly grasped the proposition and by practically unanimous action passed the enabling legislation which has now been upheld by the Supreme Court of the United States.

Moreover the Legislature adopted the following ringing declaration of State policy, "It is hereby declared to be the policy of the State of California to acquire and own all toll bridges situated upon or along any part of the highways of the State, with the end in

* Reprinted from the United States Daily.

view of ultimately eliminating all toll charges thereon."

Nothing has occurred the past two years that has altered or diminished the determination of California to acquire and own the future, necessary toll bridges in its system of highways and to make them pay for and free themselves as soon as practicable.

The timely decision of our Supreme Court has given a great impetus to this movement.

SAN FRANCISCO BAY BRIDGE

The first project to be undertaken under the provisions of the California Toll Bridge Authority Act and through the California Toll Bridge Authority and the State Department of Public Works is a huge bridge about four miles and one-half in length, extending from the city of San Francisco to Goat (also known as Yerba Buena) Island in San Francisco Bay; thence to the city of Oakland, the cost of which is estimated at \$75,000,000.

The location of the bridge has been determined after a thorough survey of navigation needs, vehicular traffic movements, and terminal locations, and extensive borings made to ascertain foundation conditions, under the direction of a special commission appointed by the President of the United States and the Governor of the State of California, known as the Hoover-Young Bay Bridge Commission.

Before its recent adjournment the Congress of the United States passed an act granting a permit for the construction of the bridge. The Legislature of California now in session is passing an appropriation of \$650,000 for necessary plans and estimates which appropriation will be returned to the State Treasury out of the first sale of revenue bonds.

Governor James Rolph, Jr., of California has given orders that the California Toll Bridge Authority and the State Department of Public Works "go right ahead with the work, with no delay."

The dream of the residents of the region about the Golden Gate is about to become a reality.

THE COURT'S DECISION

The Supreme Court of California in its decision comments on the fact that the revenue bond plan of financing toll bridges has been held to be constitutional by the highest courts of the following states, citing certain leading cases in their respective jurisdictions.

West Virginia: *Bates vs. State Bridge Commission et al.*, etc. 153 S. E. 305.

Alabama: *Alabama State Bridge Corporation vs. Smith*, 116 So. 695.

Kentucky: *Estes vs. State Highway Commission*, 29 S. W. (2d) 583.

Arkansas: *Bush vs. Martineau*, 295 S. W. 9.

These states are already well embarked on large publicly-owned toll bridge enterprises.

No article on this subject would be complete without acknowledgement to The Port of New York Authority for its splendid accomplishments under the revenue bond plan of financing. The able management of that public corporation, created jointly by the States of New York and New Jersey, to carry out the terms of The Port Treaty adopted by the two states, has developed this method to the highest degree of safety and saleability.

Without ultimate cost to the general taxpayers of those states great bridges, such as the spectacular George Washington Bridge across the Hudson River, thus financed, are springing into existence, and a new tunnel under the Hudson River and an immense freight terminal building will in the not distant future become available to public use.

Vast undertakings, which, if dependent upon the issuance of property tax-secured bonds would be long deferred or, perhaps, never erected, are through their own earnings literally pulling themselves up into place by their own financial boot straps.

With such notable examples of signal success elsewhere California enters upon its own ambitious bridge programs with sanguine spirit.

The Text of the Decision of the Supreme Court of the San Francisco Bay Bridge Case will be found on page 19.

PUBLIC WORKS AND PROSPERITY

(Continued from page 1.)

purposes which the particular project is intended to serve, and by educating the people to the value of protection against depression through having always on hand a supply of immediately available improvement projects which have been thoughtfully considered in advance and upon which the basic engineering has been carefully completed.

Such a program eliminates the danger of undertaking projects, conceived in moments of hysteria, and undertaken without proper economic and engineering facts.

Such a public works policy is the best and cheapest insurance against adversity that states, counties or cities can purchase.

California Prepares for Tourist Crop

By FRANK G. SNOOK, Chief of the Division of Motor Vehicles

CALIFORNIA is ready to receive what we confidently believe will be the biggest crop of out-of-state tourists in her history.

More than ever we believe that California will continue to be the nation's motoring ground this season for already vacationists from every state have begun to pour over our borders.

FRANK G. SNOOK

Many of these will remain in California to make their permanent homes here. The majority, however, are coming simply for a good time, to enjoy the balmy weather and ideal motoring conditions that no place affords like the Pacific Coast.

Anticipating this annual influx of tourists we have put our border "courtesy" checking stations in order. These stations afford us the opportunity for giving an official

welcome to the visitors as well as to explain to them our motoring regulations and the details of our registration laws.

In southern California we have border stations at Yuma, at Daggett and at Yermo, these stations covering the principal routes into the State.

In the far north we have stations at Clam Beach and at Dunsmuir covering the Redwood Highway and Pacific Highway respectively.

By the time this is in print we will have opened our stations at Donner Lake and Myers, covering the two principal routes over the high Sierra.

At each of these stations a competent staff of checkers is maintained under the direction of an experienced traffic officer. These men have orders to treat motorists entering the State with the utmost courtesy.

Records of all cars entering the State with

license plates other than those issued by California are kept. If the motorist intends to remain in the State less than ten days he is advised to proceed.

If he expects to remain longer, he is advised to take out a visitor's permit which gives him the right to remain in the State six months without securing a California license. No other state in the Union has such extremely liberal provisions.

Our men at these stations are able to give the tourists much valuable information concerning the points of scenic interest in the State and the best roads. Our whole endeavor is to have the tourist leave the station with a feeling that he is in a friendly land where he will be well received.

Our men at the stations carry on a constant campaign of propaganda for safety and safe driving. Tourists are told of the necessity of careful driving and of keeping within the speed limit.

The automobile tourist crop is worth many thousands of dollars to California and greater numbers should be encouraged to come here for no place in the world can offer such ideal motoring conditions so many days in the year.

Much has been said about California's motor vehicle death rate and the large number of people killed and injured here every year.

While there are entirely too many accidents of a fatal nature in California and most of them could be prevented by more careful driving, comparisons made with other states will be most unfair unless the death rate be computed against gasoline consumption.

Because our climate permits all-year driving of motor vehicles, the accident hazard per car is necessarily higher than in states where driving is impossible from three to six months in the year. In other words the vehicle that travels most in a year will necessarily be exposed to the greater accident hazard.

Figured on gasoline consumption 19 states have a higher motor vehicle death rate than California. Our rate of 1.81 deaths per million gallons of gasoline consumed is well below the general average of 1.99 for 34 states.

Tourists, therefore, who come to our State are actually safer driving on our highways than in other states as the figures will show.

And factors of safety become greater every year as our splendid road-building program is developed and as more men are added to the California Highway Patrol to protect the motorists.

The importance of our tourist crop is best evidenced by the fact that we issued visitors permits for 91,247 cars last year. We estimate these cars contained at least three persons each which would give a grand total of some 275,000 persons entering the State by motor. Many thousands more of whom we have no records were visitors.

We believe the average sum spent by these tourists in our State was at least \$50 each.

In this connection it may be well to remind our own people that the "playtime" season is approaching when traffic is heaviest on roads leading to mountain and seaside resorts and to remind them of the necessity of careful preparations for the vacation motor trip and of careful driving while on the roads.

No motorist should endanger the lives of himself, his family and others by starting out with a car equipped with faulty brakes, glaring headlights or defective vulnerable parts.

Observe the law with respect to loading baggage and camping equipment. Nothing should extend farther than the hub caps on the left of the vehicle or more than six inches beyond the hub caps on the right. License plates must not be covered and spare tires may not be carried on the front of the vehicle.

Respect the law while on the highways. California now has a highway patrol second to none under the able leadership of Captain E. Raymond Cato. Cato's men are on the roads to help and protect you on your vacation trip.

When driving on steep roads in the mountains use your low and second gears. They were put on the car for that purpose. Keep well to the right at all times but particularly on the curves.

APPOINTMENT IS ANNOUNCED

Eric Cullinward, former newspaper man of Los Angeles and San Francisco, has been appointed secretary of the California Highway Commission and editor of CALIFORNIA HIGHWAYS AND PUBLIC WORKS, succeeding George C. Mansfield. Mr. Cullinward will assume his duties on June 1st.

A survey of the origin and destination of heavy traffic was made recently in San Francisco for the purpose of working out new routings for trucks plying between the city's water front and its 75 commercial and industrial areas.

Sale of "Right to View" Proposed as Billboard Solution

A PLAN for protecting rural roadside scenery against too many arguments to purchase this, that and the other thing, by putting the question up to roadside property owners instead of the police, was adopted in Washington by the second meeting of a special Conference on Roadside Business and Rural Beauty.

The plan, formally accepted by representatives of the billboard interests, and automobile and farm groups, provides that rural views can be preserved if three-fourths of the owners of certain strips of land want to keep the area cleared of billboards and other commercial uses. And in return for giving up revenues from rentals of roadside space, this plan would have state and local authorities recompense the landowners by "greatly enhancing" their properties through gifts of copious plantings of trees and shrubbery, for the purpose of creating a scenic highway system.

The plan was presented in the form of a model bill drawn and put before the meeting by Herbert U. Nelson, Executive Secretary of the National Association of Real Estate Boards that, with other national organizations, has been working for years on the question of possible control of commercial uses that destroy roadside beauty.

Called a just and sound solution of the billboard problem, by Senator George Wharton Pepper (Pennsylvania) chairman of the conference, the Nelson plan is the only plan advanced thus far that does not attack the question from the heretofore unsuccessful point of view of using the police power of the State to clear scenic spots of the "appealing" signs.

This plan, giving leeway to the billboard interests and accepted by their representatives at the conference, cites "necessary" exceptions where boards and signs may be used in scenic areas, but makes it possible for three-fourths of the owners of roadside land to petition the proper authorities to bar commercial uses. With such a petition, the majority owners of not less than a half mile or more than ten miles of roadside land would convey their "rights to the view" to the township, county or state, and the rights of the remaining one-fourth of the owners then would be taken by condemnation proceedings.

Relief Results from Relief Employment

By L. H. GIBSON, District Engineer

THE results obtained from the establishment of unemployment camps, and the enlargement of maintenance crews to take care of more of the unemployed, has demonstrated the great good that has been performed by the Department of Public Works through its policy in assisting in the nation-wide relief.

L. H. GIBSON

Announcement of the relief program did not meet with immediate enthusiastic response among the Engineers of the Division of Highways, but it must be stated that as soon as the work was started, knowledge gained of

the actual need of the men employed in the emergency, created great sympathy among all of the engineers and other employees of the Division of Highways, and it was only a short time before every individual was lending his utmost assistance to help the good work along. "Efficiency with Economy" is a rule rather than a slogan in the Division of Highways. Consequently it must be confessed that the expenditure of hundreds of thousands of dollars through the use of hand labor was at first viewed with some alarm.

With the exception of those men obtained through the State Employment Bureau at Sacramento and San Francisco, men employed in District V were hired only after submitting a signed questionnaire which detailed among other things the number of dependents; whether any other members of the family were contributing the support; the matter of sickness or disability in the family, and the period during which the individual had been without employment. References which might be used to verify statements in the questionnaire were also given. Innumerable applications for employment were made, and only those who showed the greatest need for employment were hired. It must be confessed plenty of those were found on the list.

Employment of the needy has continued through the Spring months. The character of labor furnished by these men has been excellent, and they have demonstrated that for the most part they appreciated the effort of the State to give them assistance. Men have not been allowed to shirk in any way, but are

expected to give their best efforts to the job to which they are assigned. On the other hand, the effort put forth by the individual is the chief consideration in his continued employment. No man was discharged because he can not do as much work as others in the organization. What counts is how he tries.

Most of the men employed on the maintenance crews were given three days employment per week which permitted of assisting twice as many men as would have been possible with the same funds had continuous employment been furnished.

Statistics compiled from the questionnaires of those employed were interesting. Throughout District V the number of dependents of each employee has averaged about four to the man, which means that for every man who was employed, five individuals were being clothed, housed and fed. Up to the present time District V has been taking care of about 600 of the so-called unemployed. This shows that the District has been caring for about 3000 individuals, each group of dependents receiving from \$250 to \$300 during the period employed. As District V is only one in ten highway districts in California, the extent of relief furnished by the Department of Public Works is readily seen.

FINAL PAYMENT

"Judge," said the contractor to his lawyer, "Doctor says I got about a month to live. I want to make my will.

"Fix it so my overdraft in the First National goes to my wife. She can explain it to them.

"My equity in my automobile I want to go to my son. He will have to go to work then to meet the payments.

"Give my unpaid bills to the bonding company. They took some awful chances on me and are entitled to something.

"That new-fangled machine on the job, I want the resident engineer to have. He made me buy it; maybe he can make it work.

"My retained percentage, give to the State. I never expect to get it, anyway.

"My equipment, give to the junk man. He has had his eye on it for several years.

"My keg I want to go to my bootlegger. I hope it costs him as much to keep it wet as it has me.

"I want you to handle the funeral for me, Judge. Any undertaker will do, but I want these six material men for pallbearers. They have carried me long they might as well finish the job."

—Exchange.

The Rubidoux Bridge at Riverside

The rapid increase in quantity and speed of traffic carried by the Rubidoux bridge over the Santa Ana River in Riverside County has made it imperative that major alterations be accomplished on the structure. The existing bridge was built in 1923 by Riverside County. It consists of five earth-filled barrel arches with a total length of approximately 550 feet. The roadway is but twenty-three feet wide with no sidewalks. Due to the fact that the site of the bridge is adjacent to the city limits and provides a main entrance of Riverside, great care was taken to insure an architecturally beautiful structure. A perfect balance of arch dimensions combined with carefully selected decorative details of Spanish motif have secured this result. The bridge is amply strong to carry modern loads but has become dangerously narrow and is further antedated by a sharp fifty-foot radius curve approaching its eastern end.

Consideration of the problem by the Bridge Department early lead to the conclusion that it would be highly desirable to preserve the existing structure but increase its capacity by combining it with a duplicate bridge built to one side. This construction will also permit the substitution of an approach curve of five hundred feet radius with proper superelevation for the present hazardous fifty-foot radius curve. The new roadway will be forty feet wide and two five-foot sidewalks will be provided. The estimated cost of this change amounts to \$150,000.

As completed all the desirable details of the former bridge will be preserved while complete modernization will be realized. Architecturally the enlarged structure will not differ from the existing bridge and complete harmony of appearance will be maintained. The accompanying artists sketch illustrates the completed bridge.

SALE OF "RIGHT TO VIEW" PROPOSED AS BILLBOARD SOLUTION

(Continued from page 9.)

In such restricted sections exceptions are made for signs offering the property for sale or for products manufactured or grown on the premises.

Commenting on Mr. Nelson's bill which will be taken to the various organizations comprising the conference for official action by them, and possibly presented to the next legislatures in the various states, Senator Pepper said:

"This solution is novel but sound. Many interests have sought to have the police power of the state employed to protect highway beauty by forbidding commercial uses in

scenic spots. I doubt whether the police power will be regarded by the courts in the future as extending beyond the preservation of health and safety in this connection.

"Mr. Nelson's plan seems to me to be the most feasible one, first, because it is both just and effective, and second, because it does not make a demand upon the courts greater than they are likely to respond to. It looks to me as though this is the best solution yet produced. I wonder that no one thought of this way out before."

New highways across the jungles of British South Africa are dangerous to tourists, and one driver says he was chased by four leopards and two elephants. However, he probably escaped road hogs.—*Highway Topics.*

Clearing the Highways of Snow

By J. W. VIECKREY, District Maintenance Engineer, District Three *

PLOWING snow is perhaps the most spectacular operation in connection with maintenance. It appeals most vividly to the individual imagination for it creates a very beautiful picture when accomplished with a rotary plow, and it usually means the difference between an unusable and a usable road.

Snow removal operations, to provide access to the recreational areas, where a depth sufficient to permit winter sports can be assured, has expanded tremendously in the last three years. The consequent costs have gone up at about the same angle that the snowflake comes down. The increasing flow of traffic over the roads opened in a good index to the demand, and the continuous enthusiasm of

Showing result of fast thawing shortly after removal of snow near Donner Summit, 1931.

the thousands of snow sport devotees indicates that winter sports and snow frolics, at locations accessible to automobile traffic, have become a permanent part of California's list of recreations.

A Sunday traffic count made at the Auburn ski jump, when Route 37 was open only to Emigrant Gap, showed approximately 750 machines above the snow line. On February 15, the last day of the Truckee-Tahoe Dog Derby, there were approximately five hundred machines parked on the Truckee streets. Donner Summit was closed at the time. On February 22 there were about 1000 machines at Truckee and Tahoe City. The count going

Rotary plow on dual motor-driven four-wheel-drive truck, making first cut through two feet of snow, west of Soda Springs.

east over Donner Summit that day was between 450 and 500.

Snow removal work during the winter just passed below the 5000-foot contour was of very small consequence compared with a year ago. The snow equipment provided for such areas lay idle or was moved to higher elevations where the intensity of the storms, over a smaller area, made up any deficiency in the work to be done that may have seemed apparent when viewing the situation from the valley.

The first storm of the year began on Donner Summit on November 15, and during the night became a terrific blizzard driven by a 66-mile wind. Machines attempting to get

Rotary plow on four-wheel-drive truck, widening road-way through cut on Donner Summit, February, 1931.

* The pictures for this article were furnished by D. D. Greeley, Superintendent of Equipment.

over the summit before it closed crowded in so fast that the snow plows could not operate efficiently. Any idea of keeping the road open had to be abandoned and all effort made to get out the stranded machines and occupants. At times the storm was so severe that a man could not walk through the summit cut. The maintenance men spent all one night and most of the next day getting people out of the storm. When the skies cleared on the 19th, there was five feet of snow piled up, and thirty machines were snowed in; some completely covered. The rotary plows were started again. The road was plowed out, the machines rescued, traffic was resumed, and steel gates installed on either side of the summit to prevent a recurrence.

The intensity and duration of the storms in this area have emphasized very emphatically the necessity of fast equipment for snow removal work. Experiences to date have indicated that successful and satisfactory snow removal is dependent on adequate equipment,

both quality and quantity, and that it must be designed for the locality in which it is to work.

Early in our snow removal work we discarded all tractor types of power because of lack of speed, and installed all plows on pneumatic tired trucks.

Light trucks with low moldboard plows handle the snow very satisfactorily below an elevation of 3000 feet. Above that elevation and up to 5500 feet heavier trucks with slightly higher plows are very effective, especially with a little assistance from a rotary to widen cuts. Above 5500 feet rotary plows and four-wheel drive trucks are employed practically all the time to widen trenches and dispose of windrows made by the push plows.

Each piece of equipment is kept very close to its assigned section during the entire snow season, and as soon as indications of an impending storm are apparent it is made

Dual motored four-wheel-drive truck with rotary plow, Donner Summit, 1930-31.

A typical snow fence.

ready for snow work. When the snow reaches a depth of four inches on the sections below 5500 feet the plows are started and operations carried on continuously for the duration of the storm. The gates are closed and locked and watchmen go on duty to prevent machines attempting the higher elevations. After the storm the road between the gates is cleared and traffic resumed. Barometers are kept at all maintenance stations in the snow area as an aid to determining weather conditions.

The work is very strenuous and none except the men who are accustomed to cold and severe weather can stand the strain. On the night shifts the conditions are very severe indeed, and it is not practical to attempt to operate

Snow Surveys Show Increasing Danger of Water Shortage

ALTHOUGH the principal snow surveys as a basis for run-off estimates were made in late March and early April and reported in the April 1 bulletin, additional surveys have been made in late April and early May at the key snow courses to furnish information for possible modification of earlier estimates and to indicate the extent of melting since April 1. These later surveys complete the seasonal record of monthly surveys, February to May, for the key snow courses.

The average precipitation to May 1 in per cent of normal to May 1 is about as follows for the various stream basins: Upper Sacramento, Pit, McCloud, Feather, and Yuba, 58 per cent; American, 60 per cent; Mokelumne, 64 per cent; Stanislaus, 72 per cent; Tuolumne, 65 per cent; Merced, 57 per cent; Mono, 57 per cent; Upper San Joaquin, 51 per cent; Owens, varying from 44 to 59 per cent; Kings, Kaweah and Kern 62 per cent, and Los Angeles, San Gabriel and Santa Ana from 65 to 80 per cent.

The lack of normal precipitation in April warrants a downward modification of the estimates given on April 1 for seasonal run-off. The estimated seasonal run-off for the Upper Sacramento River is reduced to 34 per cent or 2 per cent less than that of 1924; for the entire Sacramento Basin, including tributaries, the revised estimate is 30 per cent or the same as 1924, and for the entire Sacramento-San Joaquin drainage, including tributaries, 30 per cent or 2 per cent above the 1924 percentage. With a larger rice acreage in the Sacramento Valley than in 1924, these data indicate for the valley and delta even more severe conditions of water supply than in that year, and a corresponding salinity encroachment in the delta area equaling or possibly exceeding the 1924 invasion.

The Soviet government of Russia plans to spend one and a quarter billion dollars on the construction of 5,000,000 miles of roads during a five year period, largely under the direction of 38 American highway specialists.

of 1928 and 1929 there was expended in the district less than \$3,000 plowing snow; during the 1929-1930 season the cost reached \$13,500 and during 1930-1931 it will probably exceed \$18,000.

Dual motored four-wheel-drive truck with rotary plow operating east of Soda Springs, near Donner Lake summit, February, 1931.

equipment which does not provide an enclosed cab and the very best lights. The trucks at Truckee have come in off the night shifts with icicles twelve inches long hanging inside the cabs, and a solid mass of ice extending from the radiators to the plows. It has been estimated that the trucks have come off shift at times carrying from two to two and one-half tons of ice.

Steam-heated truck sheds are provided at the maintenance yards in the higher elevations, and an adequate supply of hot water is always available. The trucks are cleaned of ice and serviced at the end of each shift, and between storms they are thoroughly checked over and necessary adjustment made to prevent breakdowns on the road.

The demand for open roads is rapidly extending the snow removal work to all routes leading into the Sierra Mountains that are surfaced to withstand winter traffic, and is rapidly becoming a major item of traffic service.

The costs are increasing as rapidly as the service is being extended. During the winter

Comparative Data Show California Hospital Building Costs Reasonable

HOW DO California's costs for institutional buildings for the insane compare with those of other states?

New York recently started an investigation of the relative costs among the states of the buildings in which the insane are housed. In the course of this investigation, Governor Rolph was asked regarding these costs in California.

This information was supplied by State Architect George B. McDougall, chief of the Division of Architecture, Department of Public Works. The figures were based upon costs of buildings recently constructed to modern standards of hospitalization for the insane.

On opposite page are comparative figures.

The institutions upon which California's figures are based were the Norwalk Receiving Building, built in 1926; wards 15 and K of the Mendocino State Hospital, built in 1930; the custodial unit of the Mendocino State Hospital, built in 1928, which houses disturbed patients; the Norwalk Nurses Home, built in 1928, and the Pacific Colony Employees building, built in 1928. These buildings are all of fire-resistant construction. Meals in these buildings are served from a central kitchen.

In acknowledging the receipt of the information furnished by State Architect McDougall, Fred K. Stuart Greenes, Superintendent of the Department of Public Works for the State of New York, wrote as follows:

NOTE.—All buildings are of fire-resistant construction.

Reconstruction Problems and Projects On Redwood Highway

By F. W. HASELWOOD, District Engineer

THE REDWOOD HIGHWAY extending from San Francisco to the Oregon line is approximately 324 miles in length. About 140 miles from San Francisco the highway crosses Ridgewood Summit, the divide between the Russian and the Eel River drainages. From this divide the highway follows the Eel River or its tributaries for 135 miles. This portion of the Redwood Highway and the country it traverses are unique in many respects.

F. W. HASELWOOD

While redwood trees are found in other portions of the State they are first encountered on the Redwood Highway on this unit about forty-five miles north of Willits. For nearly seventy-five miles this highway traverses an area in which redwoods abound. The longest continuous stretch of road through redwood forests is from Miranda to near Scotia along the South Fork of the main Eel River, a distance of about twenty-eight miles. In this area are found the finest groves of redwood in existence, both as to size and quality of trees.

From Ridgewood Summit the Redwood

View of Road winding through a Redwood Grove

Highway drops on an easy grade to Willits in the center of Willits Valley and follows Outlet Creek about thirteen miles to Longvale; thence up Long Valley Creek to a low divide near Laytonville, and down Ten Mile Creek to about eight miles north of Laytonville. Here the highway climbs about two miles to Rattlesnake Summit from which it follows Rattlesnake Creek for about ten miles and then the South Fork and the Eel River, leaving the drainage at Loleta, opposite the mouth of the river.

For the greater part of the 135 miles this highway traverses mountain areas. The Coast areas of California are, geologically

View of State Highway through a Redwood Grove

Another View of the Same Highway

speaking, quite young. In the process of upheaval the strata were very badly broken and the texture of the formation was thoroughly disorganized. Formations encountered are largely sedimentary of clay or sandstone and contain little rock of volcanic origin. Some sandstone that has been altered by heat and occasional intrusions of igneous rock are encountered. In general, however, even rock formations are soft and badly faulted. This soil characteristic together with the heavy rainfall contributes to the instability which is universally manifested by a tendency of the country to slide when excavations are made, or by inherent structural weakness which frequently results in its failure by slipping or rupture and displacement when loaded with a heavy embankment. Slide removal and fill stabilization are among the major maintenance activities of District I. Reconstruction to higher standards can not do other than greatly increase the difficulties resulting from this inherent structural weakness of the country itself and the unusual climatic conditions that prevail.

The original construction of this 135 miles was accomplished during the period from 1912 to 1920. This was during a period of severe financial limitations and when traffic density and the sparsely populated areas traversed were rather weak arguments for the major expenditures necessary for a modern highway through such a country. Consequently on initial construction length of improvement was the major consideration. From 1920 to 1929 work on this highway consisted of increasing its capacity by widening and improving its surface. It was in 1929 that the traveler first found it dust free.

PROGRESS OF WORK

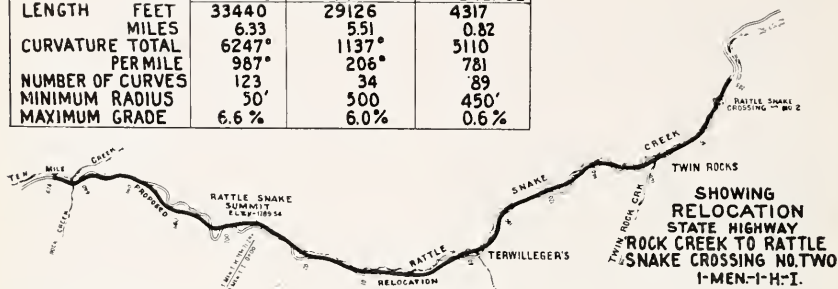

Up to 1929 limitation of funds and the necessity of completing unimproved gaps between Eureka and the State line prevented the initiation of any major reconstruction program on this section of highway. In the biennium beginning in 1929 four units aggregating 7.7 miles were reconstructed to present standards of alignment with asphalt treated crushed rock surfaces. These sections rather widely scattered are near Miranda, Hartsooks, Garberville and Red Mountain Creek north of Lane's Redwood Flat. The structural condition of the road and the inferior quality of traffic service it afforded were the reasons for their selection. Similar reasons dictated the selection of the 8.4 miles to be reconstructed in the biennium beginning this year. This process of selecting reconstruction projects unfortunately does not result in any continuous stretch of high quality road and on its face does not appear to constitute a well ordered program. However, as the units selected by this method are so outstanding in their comparative inferiority it is not probable that any other plan can be followed for several years.

MAGNITUDE OF PROBLEM

The magnitude of the reconstruction problem in District I may be visualized from a consideration of the cost of improvement. Approximately five and three-quarter millions of dollars must be spent on the reconstruction of this 135 miles, about one-fourth of the mileage in the district, to bring it to proper standards of alignment, grade and width before the placing of permanent pavement is justified. The obvious relief from such a

COMPARATIVE DATA				
LENGTH	FEET	EXISTING	RELOCATION	DIFFERENCE
		33440	29126	4317
	MILES	6.33	5.51	0.82
CURVATURE	TOTAL	6247°	1137°	5110°
	PER MILE	987°	206°	781°
NUMBER OF CURVES		123	34	89
MINIMUM RADIUS		50'	500'	450'
MAXIMUM GRADE		6.6 %	6.0%	0.6 %

dilemma is in a lesser degree to continue the improvement of the traffic service on the mileage, which can not be immediately included in major reconstruction projects, by widening the grade, removing sharp points, widening shoulders and improving the surface. This activity serves to balance what otherwise appears to be a crazy quilt method of reconstruction. In the biennium beginning in 1929 eighteen miles of this section of highway were so improved and in the biennium beginning in 1931 thirty miles will be so improved. By such a program improvement in traffic service will be constantly apparent throughout whatever period is required for complete reconstruction.

FUTURE PROGRAMS

Future programs therefore for this section of the Redwood Highway will continue the custom of containing one outstanding major project, several projects of lesser magnitude but nevertheless of outstanding necessity and supplemental development of the facilities of those portions not yet reachable as major projects.

In 1929 the major reconstruction project consisted of improving three miles between Fish Creek and Stephens Grove near Miranda about fifteen miles north of Garberville. The following comparisons offer ample justification for the selection of this unit as a major project.

	Existing road	Relocation	Difference
Length, feet -----	16,946	15,380	1,565
Length, miles -----	3.2	2.9	.3
Curvature, total -----	3769°	650°	3659°
Curvature, per mile -----	1159°	224	935°
Number of curves -----	58	17	41
Minimum radius -----	50'	400'	
Maximum grade -----	6%	5.78%	.22%

This unit was reconstructed to a graded width of twenty-eight feet with four-foot side

ditches in cuts. Surfacing was eight inches of crushed gravel with a light bituminous surface. Excavation quantities were 217,750 cubic yards or 75,000 cubic yards per mile and the gross cost was \$162,700 or \$56,000 per mile. It has for some time been the practice to remove all construction slashings and roadside debris and leave the roadsides clean and attractive. On this project was initiated the practice of restoring by appropriate planting those unused areas of the old roadway or of daylighted cuts and in some cases fill slopes. This method of treating the landscape scars resulting from construction activities greatly supplements and hastens the healing processes of nature and contributes much to the roadside beauty.

1931 RECONSTRUCTION PROGRAM

The major reconstruction project for 1931 consists of 5.5 miles improving what is known as the Rattlesnake grade. This includes the two-mile rise from Ten Mile Creek to Rattlesnake Summit and 3.5 miles down Rattlesnake Creek.

The following comparisons illustrate the qualifications of this unit as a major reconstruction project:

	Existing road	Relocation	Difference
Length, feet -----	33,440	29,126	4,317
Length, miles -----	6.33	5.51	0.82
Curvature, total -----	6247°	1137°	5110°
Curvature, per mile -----	987°	206°	781°
Number of curves -----	123	34	89
Minimum radius -----	50'	500'	
Maximum grade -----	6.6%	6%	0.6%

It will be noted that in addition to a 13 per cent saving in distance there is a reduction in curvature equal to 2.2 complete circles per mile. Thus is the traveler enabled to save time safely.

Let's make this a nineteen thirty-won!

Text of Supreme Court Decision In San Francisco Bay Bridge Case

Reprinted from California Decisions, April 24, 1931

In the matter of the controversy between California Toll Bridge Authority and the City and County of San Francisco (a municipal corporation) on the one part, proponents, vs. Benning Wentworth, as Auditor of the City and County of San Francisco, on the other part, respondent.

Application for writ of mandate prayed to be directed to respondent as Auditor of the City and County of San Francisco to compel him to audit and approve a demand for preliminary expenses in connection with the construction of a bridge across the bay of San Francisco. Writ granted.

For Proponent California Toll Bridge Authority—U. S. Webb, Attorney General; Robert W. Harrison, Chief Deputy Attorney General; Frank English, Deputy Attorney General.

For Proponent City and County of San Francisco—John J. O'Toole, City Attorney; John J. Dailey; C. C. Carleton, of counsel.

For Respondent—Frank L. Fenton.

The California Toll Bridge Authority, created by act of the Legislature (Stats. 1929, chap. 763, p. 1489), has obtained an alternative writ of mandate requiring the respondent, as Auditor of the City and County of San Francisco, to audit and approve, or show cause why he should not audit and approve, a demand for the sum of \$5,000, which amount, it is alleged, has been appropriated by the Board of Supervisors of the city and county for the purpose of aiding in meeting the necessary costs of making a survey and preparing plans, specifications and estimates for the construction of a bridge across San Francisco Bay between San Francisco and Oakland. A demand in due form for the sum of \$5,000 was presented to the Auditor, who refused to approve the claim on the ground that the appropriation is an illegal and unlawful appropriation of public funds, because it is in "aid of defraying preliminary expenses leading up to an issue of so-called revenue bonds to the extent of many millions of dollars under purported authority" of the act of the Legislature above referred to, and therefore a violation of section 1, article XVI, of the State Constitution, which provides in part: "The Legislature shall not, in any manner, create any debt or debts, liability or liabilities, which shall, singly or in the aggregate, with any previous debts or liabilities, exceed the sum of three hundred thousand dollars, except in case of war to repel invasion or suppress insurrection," without first submitting the particular proposition to a vote of the people.

The act in question, which marks a complete departure from the old system of constructing and acquiring toll bridges in connection with the State's highways, declares it to be the policy of the State of California to acquire and own all toll bridges situated upon or along any part of the highways of the State, with the end in view of ultimately eliminating all toll charges thereon. It creates the California Toll Bridge Authority, a public agency of the State, the members of which are the Governor, Lieutenant-Governor, Director of the Department of Public Works, Director of the Department of Finance and the chairman of the

California Highway Commission. The Authority has power under the act, operating through the Department of Public Works, to build or acquire toll bridges and other toll highway crossings in the name of the State of California. When the Toll Bridge Authority determines to build or acquire such toll bridges, it may authorize the issuance, in its own name, of revenue bonds to provide the funds for such acquisition or construction, and fix the rates or tolls on such bridges, and in doing so shall give due consideration to the cost of operating and maintaining the bridges, and the amount required to meet the bond obligations. The toll so fixed shall never be less than sufficient to meet the operating expenses and the bond obligations. Bonds issued under the provisions of the act "shall not constitute or be a debt or general obligation of the State, and the payment of both principal and interest of all such bonds shall be secured only by the tolls or other revenues collected from the particular bridge or bridges or other toll highway crossings for which such bonds were issued, and shall be paid from such tolls or revenues, or from such other contributions or appropriations as may be made available under the terms of this act." (Sec. 10.) The bonds must contain on their face a recital to this effect.

Finally, it is provided that political subdivisions of the State mentioned in the act may, upon the request of the Department of Public Works, or of the Authority, advance or contribute money, rights of labor, materials, and other property, toward the expense of building, acquiring, and maintaining the bridges, and for preliminary surveys and the preparation of plans and estimates of cost therefor, and other preliminary expenses. It was under this provision that the Board of Supervisors of the City and County of San Francisco, by resolution, appropriated the sum of \$5,000, which is the subject of the controversy now before the court.

Following the enactment of the statute, the President of the United States and the Governor of California appointed a commission, known as the "Hoover-Young San Francisco Bay Bridge Commission," to make a study of State and interurban traffic needs across the San Francisco Bay, with due regard to the needs of national defense and navigation. This commission rendered its final report and recommendation to the President and to the Governor, and the Department of Public Works, at the request of the commission, made its report and recommendation of a bridge site to the California Toll Bridge Authority, which latter body approved the recommendation and authorized and directed the Board of Public Works to make the necessary surveys and to prepare plans, specifications, and estimates for a bridge across San Francisco Bay as recommended. The Board of Public Works then made a request of the City and County of San Francisco that it contribute funds in aid of the cost of making the necessary surveys and preparing the plans, specifications, and estimates for the bridge, and it was in response to that request that the resolution appropriating \$5,000, payable to the Toll Bridge Authority, was adopted by the Board of Supervisors,

and the claim thereunder presented to the Respondent Auditor for approval, which approval the Auditor refuses to give.

(1) Respondent's objection rests mainly upon the finding of the Department of Public Works, in its recommendation to the Toll Bridge Authority, that the cost of the proposed bridge will be in the neighborhood of \$75,000,000. Therefore, he contends, the issuance of revenue bonds to that amount is not only greatly in excess of the \$300,000 limit placed by the Constitution, but the bonds, if issued, will constitute debts or liabilities of the State of California not authorized by vote of the people.

We are of the view that the language of section 10 of the act already quoted completely disposes of the question now before us, and that the contention of the respondent can not be sustained. The overwhelming weight of judicial opinion in this country is to the effect that bonds, or other forms of obligation issued by states, cities, counties, political subdivisions, or public agencies by legislative sanction and authority, if such particular bonds or obligations are secured by and payable only from the revenues to be realized from a particular utility or property, acquired with the proceeds of the bonds or obligations, do not constitute debts of the particular state, political subdivision, or public agency issuing them, within the definition of "debts" as used in the constitutional provisions of the states having limitations as to the incurring of indebtedness. The decisions we shall presently cite clearly establish that to be so.

While this court has had little occasion to consider the "revenue bonds" method of financing public utilities and structures, there is some precedent in this State, and we are not without ample authority from other sections of the country, where the question has, on repeated occasions, engaged the attention of other courts of last resort, notably, New York, West Virginia, Alabama, Kentucky, and Arkansas. We deem it only necessary, in support of the conclusion we have reached, to quote from the opinions of the courts in those states, and from our own decisions.

The legislature of the state of New York created the Port of New York Authority under a compact entered into between that state and the state of New Jersey. A district was created embracing the greater portion of the city of New York and a part of New Jersey across the Hudson River, and New Jersey passed a similar act relative to the construction of toll bridges across the navigable waters between the two states. These acts provide that the money needed for the construction of the bridges and incidental purposes "shall be raised by the Port Authority on its own obligations, secured by the pledge of the revenues and tolls arising out of the use of the bridges.

As security for obligations so issued and moneys so appropriated, the revenues and tolls arising out of the use of said bridges shall be pledged to the repayment of the entire issue of bonds and other securities for the construction thereof, together with interest, and the repayment of the moneys appropriated by the state; it being the declared policy of the state that the said bridges, so far as the payment of the bonds or other securities issued for the construction thereof, together with the repayment of the moneys advanced by the state, shall in all respects be self-sustaining." By agreement of the two states, the legality of such an organization as the Port Authority, and the validity of its bonds, was submitted to the Honorable Charles Evans Hughes, then practicing law in New York, and now the Chief Justice of the Supreme Court of the United States. After a close study of the provisions of the act and an examination

of the authorities, Mr. Chief Justice Hughes gave as his opinion that "this legislation places upon the Port Authority the duty to provide adequate tolls and charges for the purpose described, and the performance of this duty may be compelled by any court of competent jurisdiction." While the opinion of the learned Chief Justice does not have the force of judicial precedent, it does express the opinion of a very distinguished lawyer and an eminent jurist.

We are not, however, left without the decisions of the highest courts of several states on the exact question.

(Here follows a discussion of decisions in cases arising in West Virginia, Alabama, Kentucky and Arkansas.)

This court has not heretofore had occasion to pass directly upon the question whether or not revenue bonds secured only by the revenues of a particular utility acquired with proceeds of such bonds constitute a debt or liability in violation of section 1 of article XVI of the State Constitution, but a consideration of the exact principle involved in the case now before the court will be found in the opinion in the case of *Shelton vs. City of Los Angeles*, 206 Cal. 544, 275 Pac. 421. The water and power commission of the city of Los Angeles proposed to issue certain obligations termed short-term notes, under authority of a charter provision, the notes to be paid solely out of water revenues of the commission. In seeking to enjoin their issuance, a taxpayer claimed that the obligations, when issued, would constitute an indebtedness of the city itself, and one incurred in violation of section 18 of article XI of the State Constitution forbidding the contraction of an indebtedness by a municipality in any such manner. This court held (p. 552) that the short-term notes would not be premises on the part of the city of Los Angeles, but would constitute acknowledgments of indebtedness on the part of the department of water and power, under which the city would not be bound to do anything which might be enforced by action, there being no liability on the part of the city in the premises. In that opinion this court distinctly recognized the fact that "the incurring of such indebtedness has been held elsewhere not to be violative of a constitutional provision such as our own section 18 of article XI," citing cases, some of which have been discussed in this opinion.

The respondent auditor specified a large number of objections when asked to approve the claim for the \$5,000 appropriated by the board of supervisors. What we have already said disposes of the main objection raised; in fact is fairly determinative of all the points raised. [2] But, it is argued, the Legislature can not lawfully delegate to a subordinate body or board, such as the California Toll Bridge Authority, the right to pledge the earnings or revenue derived from property belonging to the State without approval of the Legislature or without specific approval by the voters of the State. It has not done so. The act creating the Toll Bridge Authority, and providing for the cost of the construction of toll bridges through the revenue-bonds method of financing, pledges the earnings and revenue derived from the bridge, when earned, as security for the payment of the bonds, without any liability resting on the State, and merely creates a subordinate administrative body to carry out a declared legislative purpose. (*Bates vs. State Bridge Commission*, supra.)

[3] While the parties to the controversy sought to submit it to the court without action, under the provisions of sections 1138 to 1140 of the Code of Civil Procedure, we have elected to treat it as an application for a writ of mandate, following our action in

(Continued on page 21.)

Grade Crossing Study is Inaugurated

PLANS FOR a study of the grade crossing situation in California that will cover every phase of the subject were discussed at the meeting of the Commission held in Sacramento on May 12 by Colonel Walter E. Garrison, Director of the Department of Public Works, and the members of the California Highway Commission. The study is being undertaken in accordance with a bill passed by the present Legislature and signed by Governor Rolph. It will be made cooperatively by the Department of Public Works and the California Railroad Commission.

The study will include railroad grade crossings built both upon the State and the county highway systems.

Following the conference, C. H. Purcell, State Highway Engineer, was instructed to immediately proceed in cooperation with the State Railroad Commission to gather data showing the number and location of all railroad grade crossings in California; the approximate railroad and automobile traffic at these points; protective warning designs now installed; the accident record of each of these crossings.

With this data, it is believed that a program of grade crossing eliminations can be formulated that will make possible the early removal of all dangerous crossings from all roads in the State, and the eventual removal of all crossings, other possibly than spur tracks in more or less isolated districts.

The thorough character of the study that is contemplated is indicated by the fact that its cost is estimated at \$50,000. The report will be submitted to the Legislature at its session in 1933.

Commenting on today's conference, Earl Lee Kelly, chairman of the California Highway Commission, said:

"We are going to know by 1933 just how extensive the grade crossing problem is in California. We know what this problem is in our State highway system, and are making very rapid progress in the elimination of these crossings for the State system. There has not been the careful survey made of crossings on county roads and city streets.

"It has been said that the complete elimination of railroad grade crossings in California

would cost a billion dollars. Before the next Legislature meets, we will know what this cost is, and will not have to guess at it. Moreover, we will know the practical method of proceeding to eliminate them, whether by relocation of railroad or highway, or by building underpass or overpass separation structures.

"We will also know how to better the protection of such crossings as can not be immediately eliminated.

"I feel that the bill for this study as signed by Governor Rolph constitutes a determined effort to solve the grade crossing problem in California, and marks a long step forward in the Rolph highway program."

TEXT OF SUPREME COURT DECISION IN SAN FRANCISCO BAY BRIDGE CASE

(Continued from page 20.)

In re City and County of San Francisco, 195 Cal. 426, 233 Pac. 965.

Therefore, let a peremptory writ of mandate issue to the respondent, as Auditor of the City and County of San Francisco, directing him to audit and approve the demand of the petitioner, California Toll Bridge Authority, for the sum of \$5,000, duly appropriated by the Board of Supervisors of the City and County of San Francisco, as set forth in the petition.

WASTE, C. J.

We concur:

SEAWELL, J.
CURTIS, J.
SHENK, J.
RICHARDS, J.
LANGDON, J.
PRESTON, J.

It takes a little courage,
And a little self-control,
And some grim determination,
If you want to reach a goal.
It takes a deal of striving,
And a firm and stern-set chin,
No matter what the battle,
If you're really out to win.—Anon.

"How bashful you are," a pretty girl said to a young man.

"Yes, I take after father in that respect," he said.

"Was your father bashful?"

"Was he? Why, mother says if father hadn't been so darn bashful I'd be four years older."

Good men never see temptation when they meet it.

Construction Records Made in 1930 on California State Highway System

By EARL WITHCORBE, Assistant Construction Engineer

The accomplishments of the 1930 construction program which are enumerated in the following tables indicate the progress made in better highway construction by the California Division of Highways. The following results were obtained on the outstanding projects:

PORTLAND CEMENT CONCRETE

Record for smoothness was shared by two projects. Resident Engineers, W. J. Calvin and T. W. Voss; contractors, W. F. Peck Co., at Liberty Grade in Los Angeles County and Cornwall Construction Co., one-half mile north of Santa Maria in Santa Barbara County.

Record for average concrete strength. Resident Engineer, H. B. Lindley; contractor, Matich Bros., San Clemente to San Onofre in San Diego County.

Record for cement control. Resident Engineer, T. W. Voss; contractor, Cornwall Construction Co., one-half mile north of Santa Maria in Santa Barbara County.

Record for daily yardage. Resident Engineer, F. A. Read; contractor, Jahn & Bressi, between Balboa Avenue and Torrey Pines Road in San Diego County.

ASPHALTIC CONCRETE

Record for smoothness was shared by three projects. Resident Engineers, W. T. Rhodes on the first project and H. B. La Forge on the other two; contractors, California Construction Co., between Pixley and Tipton in Tulare County, and Peninsula Paving Co., between Fowler Switch Canal and Fancher Creek and through Fowler, both in Fresno County.

Record for best hand-finished work. Resident Engineer, L. R. McNeely; contractor Ed Johnson & Sons, between Pier Avenue and Gould Lane, Hermosa Beach, in Los Angeles County.

Record for density of pavement surface shared by two projects. Resident Engineer, H. B. La Forge on both projects; contractor, Peninsula Paving Co. on both projects, between Fowler Switch Canal and Fancher Creek, and through Fowler, both in Fresno County.

Record for stability of pavement surface. Resident Engineer, J. M. Lackey; contractor, Griffith Co., between Citrus Avenue and Glendora in Los Angeles County.

Record of production. Resident Engineer, H. B. La Forge; contractor, Peninsula Paving Co., between Fowler Switch Canal and Fancher Creek in Fresno County.

SUMMARY OF 1930 PAVEMENT CONSTRUCTION

Riding quality was decidedly improved on asphaltic concrete pavement, while the average smoothness for Portland cement concrete increased slightly.

The outstanding accomplishment of the year was the decided increase in average daily production of both types of hard sur-

face pavement mixtures. The average daily output for Portland cement concrete pavement mixers was 319.2 cubic yards, and the average daily output for asphalt concrete paving plants was 582.9 tons.

The record for average daily production of Portland cement concrete per mixer has been increased from 361.6 cubic yards in 1929 to 427.3 cubic yards in 1930. In figuring these averages, each calendar day worked is treated as a full day regardless of the number of hours the equipment was operated. This record represents 92.9 per cent of the maximum output that could have been secured had there been no delays.

The record daily average of asphalt concrete tonnage has been increased from 790.7 to 1040.9 tons, which represents 89.7 per cent of the maximum obtainable without delays.

PRODUCTION COMPARISONS

A study of the riding qualities obtained on high production projects discloses very interesting comparisons and thoroughly explodes the old established theory that speed on a paving job necessitated a sacrifice in smoothness of the finished pavement.

The five Portland cement concrete paving projects having average daily production in excess of 350 cubic yards, totaling 25 miles of pavement, show an average roughness of but 6.1 inches per mile as compared to the general average for the year of 8.9 inches per mile.

The five asphalt concrete paving projects having average production in excess of 600 tons, totaling 35.1 miles of pavement, show an average roughness of but eight inches per mile as compared to the general average for the year of 10.6 inches per mile.

With such a comparison, the Construction Department does not hesitate to urge all employees of the department to cooperate with the contractor in every way, without sacrificing the interests of the State, to increase the production on the job. The department feels that our contractors will readily appreciate the efforts made in their behalf to increase production and will voluntarily equip their jobs with machinery and labor to handle

adequately the increase, thereby resulting in a better quality of work.

PORTLAND CEMENT CONCRETE PAVEMENTS

Mix. Cement content was held uniformly to six sacks per cubic yard of concrete in place except for special cases where additional cement was used to effect early hardening. The aggregate mixture was designed by the maximum density method which has been in use by this department since 1925.

Design. The thickness of the pavement section was increased from six inches to seven inches in the center portion of slab, early in 1930, the edge thickness remaining at nine inches. The details relating to reinforcing steel and joint interval remained the same as the 1929 standards. A modification of this design was used in a few instances to fit local conditions.

Construction. Methods of proportioning remained the same as in 1929.

Ten-foot width construction was generally followed during 1930 although a few of the projects were built in twenty-foot widths with a longitudinal weakened plane center joint.

Experiments with methods of finishing brought out a ten-foot ribbed, one-man float for final finishing, replacing the two-man operated light finish float. This float seems to insure an average riding job with less effort than under former methods. This device was developed by Assistant Resident Engineers W. T. Lamb and H. D. Johnson on Contract 27VC4, in Los Angeles County.

Results of Tests. The average compressive strength of concrete used in pavements during 1930 was 4942 pounds per square inch. This represents 33 projects, and of these projects 19 were selected by headquarters representatives to cast a special series of cylinders for 28-day comparisons. The average strength from the job cylinders for these projects was 4920 pounds per square inch, as compared to 5470 pounds average for the casts made by headquarters.

The 1930 general average for all the projects shows an increase of slightly more than 1000 pounds per square inch compressive strength at 28 days over the average for 1929. Likewise the casts made by headquarters representatives show an increase in 1930 of more than 1000 pounds over 1929. The uniformity of the breaks within the individual projects is marked in comparison with previous years and is attributed to the exercise of more care in fabricating and curing. The decided increase in average strength is attributed to the fact that the samples are all reduced before casting to a common maximum size of aggregate compatible with the size of specimen by passing all of the mixture through a one and one-half inch square opening screen.

ASPHALTIC CONCRETE

Mix. Mixtures are designed and controlled largely by stability tests of the mortar content.

Many substitutes for limestone dust have been used during the past year, approval thereof being based on these stability tests. The substitute filler is tested in combination with the fine aggregate proposed for use on the project and compared with a mixture of the same aggregate with limestone dust. If the substitute develops strengths equal to the limestone dust mixture it is approved for use on the individual project.

Design. Thickened edges on both new base and resurfacing has become standard practice. Surface course has been standardized at two-inch thickness. On new grade a uniform base course five inches thick with thickened edges is used, while on resurfacing

jobs the widening is placed with thickened edges of base course mixture, then brought up to within two inches of grade with a leveling course mixture.

Commercial filler is not required in either base or leveling course mixtures. In surface mixtures 8 per cent of the dry aggregate consists of limestone dust or a suitable substitute—the amount of the latter being determined on the basis of comparison with the 8 per cent of limestone dust.

Construction. The average capacity of mixing plants has not been materially increased during the past year. The marked increase in the production of asphalt concrete tonnage is due to greater efficiency in plant operation, and the handling of this increased quantity on the street is made possible by the use of mechanical finishers. As an illustration of the progress made along this line, it was suggested to the Peninsula Paving Co. on their contract 26EC3, Fresno 4-A,B, that a positive timing device on the mixing platform might add to the uniformity of mixing time and also increase production. A Koehring timing device was immediately purchased, being taken from a new concrete mixer and installed on the asphalt plant so as to operate coincidentally with the dump lever on the aggregate weigh box. The increase in production obtained was an incentive to other contractors and the timing device has since become a part of the equipment on most asphalt plants. This same contractor was operating a comparatively new 4000-pound pug mill mixer that required 14 to 15 seconds to discharge. At the end of the 1930 season this mixer was scrapped and something more than three thousand dollars was spent on a new mixer with a discharge gate having a much greater area of opening for this season's work in an attempt to save time lost in discharge and to increase production. The new mixer has been in use but a few days and with the increase in production shows a net profit of better than two hundred dollars per day over the performance of the discarded mixer on last year's work.

TABLES

The tables of the 1930 construction are complete in that they include all types of projects constructed by contract during the year, and are a true index of each district's accomplishments. In addition to the Portland cement concrete and asphalt concrete pavements above described, these tables include yearly comparisons by districts and roughness records on bituminous macadam, plant oil mix, road oil mix, and armor coat surfacing, built under supervision of the Construction Department.

For Tables of 1930 State Highway Construction Records, see page 30.

LONDON—Introduction recently of London's first traffic light at Ludgate Circus and Fleet street caused the worst traffic jam ever known at that intersection when thousands of people jammed the streets and were crowded into the roadway to view the apparatus.

To keep even with the sheriff is better than to "get even" with a competitor.

A well-regulated husband is one who can't pass a mail box without feeling in his pockets.

Analysis of Motor Vehicle Accidents Occuring During March in California

CALIFORNIA MOTORISTS reported 2808 accidents for the month of March, 1931, in which 3781 persons were injured and 196 killed. March accidents increased 345 (14%) over March, 1930; the total injured increased 528 (16.23%) and fatalities increased 26 (15.29%).

The total of March accidents is 438 accidents greater than the total reported in February this year. The mean average number of accidents daily in February this year was 84.6; the mean daily average in March was 90.6.

The number of drivers between the ages of 20-29 years who were involved in March accidents greatly outnumbered the other age groups and represents 32.72 per cent of the total stated ages.

CAUSE OF ACCIDENTS

The principal causes of accidents among the drivers were "violation of right of way," followed closely by "speeding." The third most recurrent cause was "drove off roadway." One hundred fourteen "hit and run" drivers were reported in March, seven of whom were involved in fatal accidents.

INTERSECTION DANGERS

Most pedestrian accidents occurred at intersections, with the second greatest number between intersections. This clearly indicates the necessity of crossing streets only at designated crosswalks and in accordance with traffic regulations at such crosswalks. March pedestrian accidents, though representing only 28.63 per cent of the total accidents caused 39.79 per cent of the total March deaths. Since most pedestrian accidents occur within incorporated cities (only 9.07 per cent of the March pedestrian accidents occurred outside of incorporated cities) they are an important factor that greatly affect the ratio of persons killed per fatal accident in cities.

PEAK HOUR OF ACCIDENTS

The peak hour of accidents moved from 6.01-7 p.m. in February to 5.01-6 p.m. in March. Sundays led the days of the week having the most accidents with a total of 601.

THE WEATHER FACTOR

The longer daylight hours were reflected in the March summary of accidents, when 1587 (56.51%) of the total accidents were reported as having occurred in daylight. Comparatively few accidents were reported under inclement weather conditions; out of the 2808 accidents nineteen were reported as having occurred in "fog or mist," seventy-five in "rain," two in "snow" and one in "smoke or dust."

CARS NOT AT FAULT

More passenger cars were involved in March accidents than any other single type of vehicle. Trucks were second and motorcycles third. Only 152 of the 4298 vehicles involved were definitely reported to be defective mechanically.

INCREASE OVER 1930

An analysis of the accident statistics for the first three months of 1931 disclosed that the total accidents increased 880 or 12.25 per cent over the corresponding period of 1930. According to information received from the State Board of Equalization the consumption of gasoline in California as a motor vehicle fuel increased 14.03 per cent during this period. Motor vehicle deaths during the first quarter of 1931 totaled 566. This total (566) represents an increase of 8.42 per cent over the same period of 1930.

A further analysis determined that 6501 or 80.68 per cent of the 8058 accidents reported during the first three months of 1931 occurred within the limits of the various incorporated cities and were the cause of 77.31 per cent of the total persons injured and 59.54 per cent of the total persons killed.

MONTHLY SUMMARY OF MOTOR VEHICLE ACCIDENTS IN STATE

	March, 1931 Total number reported		This year's total to date	Last year's total to date
	During March, 1931	During March, 1930		
Accidents -----	2,808	2,463	8,958	7,178
Persons killed -----	196	170	566	522
Persons injured -----	3,781	3,253	10,717	9,351
Drivers involved -----	4,254	3,712	12,051	10,693
Pedestrians involved -----	846	854	2,599	2,538
Vehicles involved -----	4,298	3,734	12,175	10,770

Highway Patrol Courtesy Letters

First Aid to Injured

From John F. Williams, Prescott, Arizona: It is with profound satisfaction and a deep sense of gratitude that I write to you regarding the conduct, efficiency, hospitality and untold ability of one of your officers in the Highway Patrol in the State of California. I refer to Officer J. O. Linthicum, or No. 364, stationed at Indio or thereabouts.

Approximately three weeks ago I, in company with two friends, Mr. and Mrs. Tipton, were forced off the road in the deep sand about ten miles from Indio. The car overturned twice and we all were somewhat painfully cut and bruised.

Officer Linthicum, by his promptness in getting us clear of the wreck and rushing us to the hospital for first aid, in all probability saved us many painful hours, and in my case in particular, saved me the loss of my left leg. I had a very severe cut which my physician tells me would have had very serious results, had I not received the prompt medical attention that I received.

In addition to the said officer's efficiency in line of duty, he also invited us to the hospitality of his own home, and allowed us to make ourselves presentable in order to continue our trip.

In closing I will say that in traveling clear across the country from Boston, Massachusetts, to Los Angeles, I have yet to meet with such whole-hearted efficiency and kindness towards strangers as manifested by one of your officers in the patrol.

I, in company with my friends, do sincerely appreciate the same and hope that all good fortune will follow in the footsteps of one of God's own gentlemen, Mr. J. O. Linthicum, No. 364.

Courtesy Commended

From E. P. Malherbe, U. S. N. Retired, Naval Hospital, San Diego: While making a trip from San Diego to Los Angeles, on Saturday, April 18, 1931, the car in which I was a passenger was stopped by Patrolman William Jensen, badge No. 396, for some infraction of the highway laws of the State.

Being blind, I do not know just what section was involved, but while I have lost my sight I still retain the sense of hearing and the conversation I heard between the officer and the driver of the car was a revelation to me, the more so as I have had some experience in stopping and searching cars myself, as a member of what some paper nicknamed "The Night Hawks," in 1927 and 1928, when the Collector of Customs had fifteen men patrolling the highways around Los Angeles, San Diego and Santa Barbara.

While we had orders to be at all times courteous, I learned, for the first time last Saturday, just what that word means.

Had the officer recognized you and your family as passengers in the car instead of sailors and myself, he could not have been more considerate of the choice of his language or treatment and I can not speak too highly of his conduct. He might be a new man on the force.

Speeder Admits Error

From H. Bedford Jones, Hollywood: Yesterday, April 13th, I was halted by an officer of the State Patrol, a couple of miles north of Carpinteria on the Coast Highway, under the following conditions:

The officer was riding along at about forty. I overhauled him and passed, going about forty-three and held this speed steadily. At times I touched forty-five but did not exceed this mark, as the officer was hanging along behind. Upon passing him I called the attention of my wife and son to the speed. Aware that the officer was gradually coming up, they kept track of the speed; when he halted me, he stated that I had been doing fifty-six for the past mile or two.

Either my speedometer must be away off, or else he had been irritated because I had passed him. The latter seemed the most logical, because the three of us could swear that the speed had never exceeded forty-five. He gave me no citation, but entered up the matter on a white ticket.

Today I have had the speedometer checked and found it to be broken.

I am sending in this report to you as an interesting example of how easily a grave injustice might have been done an officer. Apparently he was dead wrong in the matter, and a hot-headed complaint with three witnesses against him might easily have been made. As a matter of fact, I feel that his action has possibly saved me from more serious, if unintentional, speeding charges; and it serves to confirm the very friendly feeling which I believe every good motorist entertains toward your highway force.

I don't know whether you pay any attention to these communications, but I should like to commend this officer for the courtesy he displayed, when he must have felt that my family were all combined to swear falsely against him. That is about the sweetest test of a man's restraint and courtesy; and his were perfect. His number was 371 or 374—I'm not certain. It will show on his report, no doubt.

Gave Tow to Stalled Car

From D. N. Zann, Glendale: It is with pleasure that I write you regarding the following incident, which took place on the State Highway between Ventura and Santa Barbara, California.

On the eve of April 15th, about 11 p.m. we were en route to Santa Barbara from Los Angeles. Just five miles north of Ventura, my car stopped—out of gasoline. Probably you know that service stations on the particular stretch of highway are few and far between. We had been there but a very short while when one of your white patrol cars came along, offering assistance. We stated our plight and rather than leave us sitting on a narrow shoulder of the dark highway, Officers 310 and 311, insisted on towing us to the nearest station, which, incidentally was just six miles further north.

Such courtesy and protection on the part of our California Highway Patrol is certainly a real asset to the motoring public.

Report of Activities

in the

Division of Water Resources

Study

IRRIGATION, WATER STORAGE DISTRICTS

A resolution of sufficiency on petition for the organization of an irrigation district to be known as the West Empire Irrigation District was received by the State Engineer from the Board of Supervisors of Kings County, and a report favorable to the calling of an election on organization was made to the Supervisors by the State Engineer. The proposed district contains 7000 acres of land lying along the west side of the lower Kings River in the vicinity of Stratford. The petitioners submit as their principal reason for the formation of the district their desire to control and stabilize whatever water rights they are entitled to and to manage the distribution of the water which the court has allotted to their land through their own system of works. Heretofore whatever water they have obtained from Kings River has been distributed by the Empire Water Company, whose works the district proposes to acquire, and these works are to be obtained by the district without cost through a waiver of certain claims against the water company for damages.

Field visits were made and conferences held with officials of the Buena Vista Water Storage District in Kern County, the Tulare, Terra Bella, Lindsay-Strathmore and Alta Irrigation Districts in Tulare County; the Corcoran, Lemoore, and proposed Empire West Side Irrigation Districts in Kings County; and the Fresno, Consolidated and Tranquillity Irrigation Districts in Fresno County, of the purpose of discussing matters connected with the economic operation of these districts.

Inspection was made of construction work in progress in the El Nido Irrigation District, Merced County, and a field investigation was made on the Oakdale Irrigation District in connection with the proposal of the district to refund certain of its bond issues.

A compilation and preparation of data for the 1930 report on the activities of California irrigation districts have been practically completed and without doubt will be submitted to the State Printer during the early part of May for publication.

The Granada Irrigation District, located in Siskiyou County, is now before the Commission with a plan for the reorganization and refinancing of the district.

At the meeting of the California Bond Certificate Commission held on March 25, favorable action was taken on expenditure orders relating to the following districts:

Carpenter Irrigation District:

Approval of order for expenditures from the construction fund in the amount of \$149,250

Serrano Irrigation District:

Approval of order for expenditures from the construction fund in the amount of \$149,250

El Nido Irrigation District:

Approval of order for expenditures from the construction fund in the amount of \$87,442

Total approved construction fund expenditures \$385,942

DAMS

During April satisfactory progress has been made in reviewing the existing dams throughout the State which are pending approval. Frequent inspections have been made of dams under construction and repair.

To date 755 applications for approval of existing dams are on file; 64 applications for approval of plans and specifications for construction or enlargement, and 142 for approval of plans for repair or alteration.

Application received for approval of plans for repair or alteration:

Eleven such applications have been received during this month.

Applications received for construction or enlargement:

Dam	Owner	County
Chatsworth Highline	City of Los Angeles	Los Angeles
Haypress	Santa Catalina Island Company	Los Angeles
Quaking Asp Gulch No. 1	Antone Avilla	Lassen
Quaking Asp Gulch No. 2	Antone Avilla	Lassen
Donner Creek	Central Pacific Railway	Nevada

An amended application was filed by the City of Pasadena for the approval of plans and specifications for the construction of the Pine Canyon dam 50 feet lower than originally planned. This application is under consideration by the same board of consultants engaged to review the original application and immediately upon a completion of their investigations action on it will be taken by the State Engineer.

Plans approved for construction:

Dam	Owner	County
Benbow	Benbow Power Company	Humboldt

Plans approved for repair or alteration of dams:

Eleven such applications have been approved this month.

Orders have been issued authorizing the use of the following dams:

Dam	Owner	County
Swanzy Lake Dam	Calif. Hawaiian Sugar Refining Co.	Solano
Tiger Creek Reg.	Pacific Gas and Electric Company	Amador

A representative from this office, Mr. E. W. Case, has returned to Modoc and Lassen Counties where he

will remain during the coming summer. He will supervise the repairs and alterations of the many dams in that locality with a view to recommending their approval before the end of the season. Spillway studies have been completed on all these dams, and he is in a position to inform the owners of the State's requirements in this respect. Those wishing to discuss problems relating to their dams may get in touch with him at either Alturas or Susanville.

FLOOD CONTROL AND RECLAMATION

Maintenance of Sacramento and San Joaquin Drainage District: The maintenance force in Sutter County has been engaged principally in routine maintenance of the by-pass structures, levees, drainage canals and pumping plants. Repairs to the Franklin road bridge in the Sutter by-pass have been completed, and repairs have been made on a number of the smaller bridges over the drainage canals. A small crew has been engaged in cutting young thistles on the East Sutter by-pass levee, on which the thistles have been practically eliminated by the work of the past two years.

Flood control project maintenance—bank protection: No bank protection work is now under way as all the jobs for the current season have been completed. The river floating equipment is being repaired and painted by the caretakers under the direction of the river foreman. The launch "Alioth" has been repaired and a new engine installed.

Emergency flood control and rectification of rivers: Channel rectification work at the mouth of Little River in Humboldt County has proceeded and will be completed within a short time. This is being done by the Hammond and Little River Redwood Company in cooperation with the State and Humboldt County. The channel rectification work on the San Jacinto River in cooperation with landowners and the County of Riverside has been completed. This consists of a small levee 2200 feet in length, protected with a wire fence barrier.

Russian River jetty: A crew of eleven men has been employed in the operation of the quarry and railroad, placing rock in the structure. An experimental timber barrier 90 feet in length has been erected in an attempt to prevent the sand of the bar passing over the jetty and into the river channel.

Flood measurements and gages: All gages maintained by this Division are now in operation but will be discontinued on May 1. In the office the compilation of records for the flood seasons of recent years has been continued, for the purpose of incorporating in a report all the data that has not been hitherto published.

WATER RIGHTS

Applications to appropriate:

During the month of March there were received twenty-six applications to appropriate, eleven were canceled and ten were approved. Ten permits were revoked and forty-six licenses were issued.

Field work in connection with the inspection of permits was initiated for the season on March 30. The first trip involving inspection of thirty-one projects scattered throughout Inyo, San Bernardino, Riverside, Los Angeles, Orange and San Diego Counties was completed April 23.

The Division is already beginning to experience

the customary pressure of dry seasons in the way of requests for information with respect to water rights and for assistance in the settlement of controversies between rival claimants. There is at all times a demand upon the Division for assistance along these lines and this becomes accentuated during years of low stream flow.

Adjudications.

Shasta River (Siskiyou County). Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). Case pending in the Superior Court of Shasta County, awaiting the Court's pleasure in placing it on the calendar.

Oak Run Creek (Shasta County). Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County). Case pending in Superior Court of Shasta County awaiting the Court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County). Case pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County). At a conference held at Santa Maria on April 21, 1931, a stipulation for consent judgment was signed by all of the parties involved, with the exception of one.

Davis Creek (Modoc County). A tentative decree has been prepared for circulation among counsel prior to submission to court.

Mill Creek (Modoc County). Eighty per cent of the water users have signed the stipulation for consent judgment which was presented at the conference held at Lake City on March 17, 1931. The stipulation is now being circulated among the nonresident parties.

Deep Creek (Modoc County). Distribution of the waters of Deep Creek was continued throughout the month in accordance with the trial schedule of allotments which was adopted at the conference held at Cedarville on March 16, 1931.

Franklin Creek (Modoc County). Administration of the schedule of allotments for trial distribution during the 1931 irrigation season was continued throughout the month.

New Pine Creek (Modoc County). Field work on the investigation of the water supply and use of water on New Pine Creek was continued throughout the month.

Water distribution:

Cedar, Davis, Deep, Emerson, Franklin, Mill, New Pine, Owl and Soldier Creeks (Modoc County). Water master service on these streams was continued throughout the month.

Pit River (Modoc and Lassen Counties). Supervision of diversions from Pit River in Big Valley was continued throughout the month.

Supervision of diversions from Pit River in Hot Springs Valley was begun on April 11, 1931.

CCOPERATIVE SNOW SURVEYS

The main snow surveys for the season covering some one hundred sixty snow courses throughout the Sierra were completed during the last of March and first part of April, and the April 1st bulletin of snow survey and precipitation data and seasonal forecast was placed in the mail early in April.

A general summarization of all data shows:

The water content of the snow on April 1 of this year in per cent of the water content on April 1, 1930, varying from about 30 per cent for certain Owens Valley courses to about 70 per cent at courses in Merced basin with a general average throughout the Sierra of about 55 per cent.

For those few areas where snow surveys have been made for a sufficient number of years to permit the development of "normals," a water content of the snow in per cent of normal to April 1 almost as low as 10 per cent for one or two Owens Valley courses, nearly up to 50 per cent for Yuba basin courses and a general average of about 40 per cent.

The average precipitation to April 1 in per cent of normal to April 1 varying throughout the Sierra from 42 per cent for one station in Owens Valley to about 75 per cent for stations in Stanislaus basin with a general average of about 60 per cent, and an average for Los Angeles, San Gabriel and Santa Ana basins of 60 to 65 per cent.

The estimated 1931 seasonal stream flow in per cent of the 40-year mean (1889-1929) varying from 25 per cent for the Kings basin to 40 per cent for the Tuolumne basin with a combined figure of 33 per cent for the entire Sacramento and San Joaquin basins.

The data and estimates indicate for the Great Central Valley a water supply only better than the record low of 1924 by a small margin. It is to be anticipated, therefore, barring storms of most unusual magnitude and duration within the next few weeks, that conditions of minimum stream flow with resulting salinity encroachment in the case of the Sacramento-San Joaquin Delta, may approach those of 1924.

The bulletin presents the snow survey and precipitation data in detail as well as the forecast of seasonal run-off for each major stream basin. A tabulation is also included showing the water in storage on April 1 in some of the principal reservoirs.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

During the past month most of the work in compiling the data for the 1930 report was completed and the regular field work for the 1931 season was started. The gages for recording stream flow and return flow throughout the Sacramento-San Joaquin territory have been installed and the engineers have made an inspection of all pumping diversions to insure that the proper diversion records are maintained. All new installations have been noted. The inspection shows that practically all of the pumping plants on the river are already in operation due to the extreme dryness of the season. It is apparent that practically no spring run-off of any proportions may be expected and with a continuation of the present heavy draft on the river, low flows may be expected very early in the season.

The salinity sampling has continued at thirty stations and tide gages have been maintained at eight points between Collinsville and Sacramento. The following are comparative salinity and stream flow data for 1930 and 1931. Corresponding stream flow data are also shown for 1924.

Station	Salinity in parts of chlorine per 100,000	
	4/1/31	4/14/30
Bullhead point	630	235
O. and A. ferry	*45	*5
Collinsville	16	4
Antloch	16	5
Jersey	4	5
Emmaton	1	2
Webb pump	*4	*5

Discharge measurements in second-feet

Station	1931	1930	1924
Sacramento River at Red Bluff	4/12 4390	4/12 7160	4/12 4010
Sacramento River at Verona	4/20 4660	4/20 27600	-----
Sacramento River at Sacramento	4/20 6400	4/20 33400	4/20 7300
American River at H St. bridge	4/18 2130	4/18 6000	-----
San Joaquin River near Vernalis	4/2 670	4/2 2940	4/2 1370

Within the last month there have been held at Sacramento two meetings of the Permanent Committee of the Sacramento-San Joaquin River Problems Conference to receive the reports of the State Engineer relative to the water supply to be anticipated and to consider steps to meet the situation. As a result of the meetings, two letters have been sent from the committee to the water users warning of the water situation and recommending as the best conservation measure for the present, the reduction or elimination of crop plantings which will require large amounts of water in July and August. Following the first meeting of the committee a similar letter was also sent to the water users by Major J. R. D. Matheson, District Engineer, Corps of Engineers, United States Army, calling for conservation in the interest of navigation maintenance. Likewise a letter was sent from the Division of Water Resources to the junior water right permittees calling attention to the position which they occupy with respect to water appropriations and warning of the possible necessity of a regulation or suspension of diversions under the later permits in the inverse order of priority. The Division through the Water Supervisor's office is cooperating closely with the water users as represented by the Permanent Committee of the Sacramento-San Joaquin River Problems Conference and is prepared to take whatever steps may be agreed upon to effect maximum conservation and best avoid conflict. The possibility of a temporary schedule of diversions has been considered.

WATER RESOURCES

Pit River investigation (Modoc and Lassen Counties). Routine field work was continued throughout the present month.

Napa Valley investigation: Two new gaging stations have been established for the purpose of determining accretions on Dry Creek and Rector Creek, and miscellaneous measurements of flow have been made on Napa River, Conn Creek, Dry Creek and Rector Creek. Progress has been made in connection with a census of irrigated lands diverting from Napa River and Conn Creek below the upper gaging stations, and all wells which are under observation have been read.

Santa Clara Investigation: Streams have continued low without any possibility of obtaining additional data as to percolation.

South Coastal Basin investigation: This work has gone ahead in a routine way during the past month. A special investigation was made of the feasibility of determination of the possibility of salt water intrusion from the ocean into the pumping area of the Coastal Plain and effort is now being made by Orange County and the City of Long Beach to get together on a program for such work which requires extensive drilling of small wells.

Mojave River investigation: This work has continued in a routine way during the month.

Ventura County investigation: An investigation was made of the reservoir sites on Pirn Creek in connection with conflict between the Division of High-

ways and Santa Clara Valley Protective Association. The relocated ridge route will pass through two reservoir sites on Piru creek which the conservation association has regarded as necessary for conservation of the waters of that stream. A geological examination of the various dam sites and surveys of additional reservoirs have been made. The report is not yet completed.

Water resources reports: Progress has been made in completing the reports on the water resources investigation covering the State water plan for the coordination, development, conservation and utilization of the water resources of the State, authorized under the provisions of chapter 832 of the statutes of 1929.

The following publications relating to various phases of the investigation have been completed in printed form and are now available for distribution:

Bulletin 28-A, "Industrial Survey of Upper San Francisco Bay Area."

Bulletin 31, "Santa Ana River Basin."

Bulletin 32, "South Coastal Basin."

Bulletin 34, "Permissible Annual Charges for Irrigation Water in Upper San Joaquin Valley."

Bulletin 35, "Permissible Economic Rate of Irrigation Development in California."

The following bulletins are now in the hands of the State Printer and it is anticipated that they will be completed in printed form and ready for distribution within the next three or four weeks.

Bulletin 25, "Report to the Legislature of 1931 on State Water Plan."

Bulletin 33, "Rainfall Penetration and Consumptive Use of Water in Santa Ana River Valley and Coastal Plain."

Bulletin 36, "Cost of Irrigation Water in California."

The following bulletins are nearing completion and it is expected that the finished plates and text for these publications can be transmitted to the State Printer during the early part of May for publication.

Bulletin 26, "Sacramento River Basin."

Bulletin 27, "Salinity Control in Sacramento-San Joaquin Delta and Upper San Francisco Bay."

Bulletin 28, "Economic Aspects of a Salt Water Barrier Below Confluence with Sacramento and San Joaquin Rivers."

Bulletin 29, "San Joaquin River Basin."

Progress Report STATE HIGHWAY As of May 1, 1931

C. H. PURCELL, Chief.

Progress of employment Program:

Projects now under contract	101
Estimated number of men employed by construction	2217
Men employed by Division of Highways on maintenance, day labor work and contracts	4169
Total number of men employed	6386

By April 27 projects totaling \$8,013,735 were either under contract, pending award or advertised for bids, which were originally scheduled for advertisement during the coming summer.

Report for April:

Contracts awarded and pending	\$2,965,300
Projects	1,982,800

Work anticipated to be advertised during May ----- 4,685,800

Total ----- \$9,633,900

The types of construction and mileage of each type included in the above tabulation are given in the following summary:

Type	Mileage
Portland cement concrete pavement	17 9
Asphalt concrete pavement	17 6
Bituminous-treated crushed rock surfacing	103 1
Untreated crushed rock surfacing	6 5
Graded roadbed	14 8
Oiling to alleviate dust	654 6
Bridges	12
Total	814 5

Progress Report MOTOR VEHICLES DIVISION

As of May 1, 1931

FRANK G. SNOOK, Chief

Registration statistics:

Fees collected during first quarter of 1931	\$8,151,165
Total paid registrations of motor vehicles for same period	1,906,543
Total exempt registration of motor vehicles for period	35,944
Applicants of nonresident motorists for nonresident permits for period	14,759
Applicants of nonresident motorists for California registrations	35,916

California Highway Patrol report:

Enforcement activities on vehicle lights is increasing.

Monthly report of light activities show 9721 stops made, and 4513 arrests.

Brake activities during March show brakes found defective to have been 7.92 per cent of those tested.

Progress Report DIVISION OF ARCHITECTURE As of May 1, 1931

GEORGE B. McDOUGALL, State Architect, Chief

Projects in Field.

The Division of Architecture now has under actual construction in the field approximately 50 major projects representing a total valuation of \$4,451,475. This construction valuation will provide employment for 1597 persons over a period of ten months.

Contracts awarded in April	\$181,170
Bids received; contracts pending	205,247
Projects out for bids	121,000
Contracts for supplementary work awarded in April	121,803

Total ----- \$629,320

Major projects handled on basis of day labor for which drawings have been completed ----- \$371,000
Projects for which drawings have been completed for California National Guard ----- 75,738

Total ----- \$446,738

Record of Pavement

HIGHWAY BIDS AND AWARDS

For the Month of April

ALAMEDA COUNTY—Between Stanton Ave. and Foothill Blvd. About 0.6 mile to be graded and paved with Portland cement concrete. Dist. IV, Rt. 5, Section B. M. J. Bevanda, Stockton, \$39,147; contract awarded to Jones & King, Hayward, \$34,595.

AMADOR COUNTY—Treating with light and heavy fuel oil between Chapman's and Silver Lake. Thirty-four and three-tenths miles. Dist. X, Rt. 34, Section E, F, G and H. Pacific Tank Lines, Inc., Los Angeles, \$10,024; C. W. Wood, Stockton, \$9,648; Edw. A. Peres, Richmond, \$10,367; contract awarded to Basalt Rock Co., Inc., Napa, \$7,881.25.

BUTTE AND PLUMAS COUNTIES—Treating with light fuel oil, portions between Miners Ranch and Quiney, 47.8 miles. Dist. III, Rt. 21, Section A, B and C. Pacific Tank Lines, Inc., Los Angeles, \$9,888; Clyde W. Wood, Stockton, \$7,840; Basalt Rock Co., Inc., Napa, \$8,640; contract awarded to D. McDonald, Sacramento, \$7,636.

HUMBOLDT COUNTY—Between Loleta and one-half mile south of Eureka. Five and three-tenths miles to be surfaced with bituminous treated gravel or stone and 4.7 miles to be widened with bituminous treated crushed gravel or stone borders. Mercer Fraser Co., Eureka, \$71,197; Heafey Moore Co., Oakland, \$62,770; Smith Bros. Co., Eureka, \$69,762; contract awarded to Hemstreet & Bell, Marysville, \$62,685.

IMPERIAL COUNTY—In Imperial County through the S. D. & A. R. R. Co. Undergrade crossing about 0.2 mile in length, graded and paved with Portland cement concrete. Dist. VIII, Rt. 12, Section A. Martin Green, San Bernardino, \$9,469; Charles E. Farrell, El Centro, \$7,833; R. E. Hazard Contracting Co., San Diego, \$8,864; contract awarded to Matich Bros., Elsinore, \$7,520.

KERN COUNTY—Furnishing and applying heavy fuel oil as a dust palliative on 31.2 miles of State highway between Mojave and the San Bernardino County line. Dist. IX, Rt. 58, Section A and B. U. B. Lee, San Leandro, \$6,334; Fred W. Nighbert, Bakersfield, \$6,220; Pacific Tank Lines, Inc., Los Angeles, \$5,872; Basalt Rock Co., Inc., Gilmore Oil Co., Ltd., Los Angeles, \$6,960; California Road Oil Service Co., Ltd., Wilmington, \$7,786; L. C. Pulley, Long Beach, \$7,264; contract awarded to Square Oil Company, Inc., Los Angeles, \$5,220.

LAKE COUNTY—Applying light fuel oil as dust palliative on 10.9 miles. Dist. III, Rt. 15, Section B. D. McDonald, Sacramento, \$1,584; Basalt Rock Co., Inc., Napa, \$1,686; contract awarded to Chas. Kuppinger, Lakeport, \$1,314.

LOS ANGELES COUNTY—Between 4 miles north of La Canada and Colby Canyon. About 5 miles to be graded. Dist. VII, Rt. 61, Section A. Vonden Heller & Pierson, Castaic, \$195,959; M. S. Ross, Los Angeles, \$424,217; O. A. Lindberg, Stockton, \$497,640; George Pollock Co., Sacramento, \$465,684; H. W. Rohl Co., Los Angeles, \$415,372; Macco Construction Co., Clearwater, \$421,258; C. G. Willis & Sons, Los Angeles, \$486,649; Merritt Chapman & Scott Corp., San Pedro, \$597,276; contract awarded to T. M. Morgan Paving Co., Los Angeles, \$399,220.

LOS ANGELES COUNTY—Between Baileys Ranch and Neenach School. About 7.5 miles to be graded and oiled. Dist. VII, Rt. 59, Section A. C. G. Willis & Sons, Los Angeles, \$71,970; Steele

Finley, Santa Ana, \$50,254; Dan G. Munro, Los Angeles, \$62,617; McCray Co., Los Angeles, \$67,125; Frank W. Hammer, Los Angeles, \$60,032; Macco Const. Co., Clearwater, \$55,425; Hartman Const. Co., Bakersfield, \$61,940; Chas. A. Ladavege, South Gate, \$61,262; P. J. Akmadzich, Los Angeles, \$60,405; Owl Truck Co., Inc., Compton, \$55,967; Dimmitt & Taylor, Los Angeles, \$52,322; Fred W. Nighbert, Bakersfield, \$59,655; J. G. Donovan & Son, Los Angeles, \$69,785; contract awarded to Gibbons & Reed Co., Burbank, \$48,749.

LOS ANGELES COUNTY—Between Canton Creek and Piru Creek. About 7.3 miles to be graded. Dist. VII, Rt. 4, Section H and I. Fredrickson & Watson Const. Co. and Fredrickson Bros., Oakland, \$551,007; Gibbons & Reed Co., Burbank, \$678,510; Granfield, Farrar & Carlin, San Francisco, \$505,682; Vonder Hellen & Pierson, Castaic, \$534,262; H. W. Rohl Company, Los Angeles, \$530,659; George Pollock Co., Sacramento, \$539,456; contract awarded to Will F. Peck Co., Los Angeles, \$422,221.

MADERA COUNTY—At Berenda Slough. A concrete girder bridge consisting of eighteen 20-foot 6-inch spans on concrete pile bents. Dist. VI, Rt. 4, Section C. A. W. Kitchen, San Francisco, \$33,575; Mead Const. Co., Wilmington, \$36,847; Liner & Allen, Merced, \$32,515; Fredrickson & Watson Const. Co. and Fredrickson Bros., Oakland, \$36,262; Robinson-Roberts Co., Los Angeles, \$41,905; L. C. Clark and C. E. Doughty, Visalia, \$34,507; Oberg Bros., Los Angeles, \$37,582; Geo. J. Olrich Const. Co., Modesto, \$32,435; Neves & Harp, Santa Clara, \$32,114; contract awarded to Thermofite Const. Inc., San Jose, \$30,734.

MENDOCINO COUNTY—Furnish and apply light fuel oil as dust palliative between McDonald and Flynn Creek. Dist. IV, Rt. 48, Section A, B and C. Basalt Rock Co., Inc., Napa, \$8,400; Peres & Gatto, Richmond, \$9,640; Edw. M. Dearborn, Redwood City, \$10,200; Jack Casson, Hayward, \$8,640; C. W. Wood, Stockton, \$9,000; contract awarded to C. F. Fredrickson & Sons, Lower Lake, \$8,400.

MERCED COUNTY—About 2½ miles east of Merced. Overhead crossing consisting of thirty-one 40-foot spans and seven 20-foot spans with Portland concrete cement. Deck on steel-pile bents. Dist. VI, Rt. 18, Section A. J. F. Knapp, Oakland, \$108,825; Barrett & Hilt, San Francisco, \$112,684; Guy F. Atkinson Company, San Francisco, \$112,905; Mercer-Fraser Co., Eureka, \$120,280; Bodenhamer Const. Co., Oakland, \$105,481; Oberg Bros., Los Angeles, \$111,820; A. W. Kitchen, San Francisco, \$110,484; Merritt Chapman & Scott Corp., San Pedro, \$109,715; Gutleben Bros., Oakland, \$107,351; Fredrickson & Watson Const. Co. and Fredrickson Bros., Oakland, \$108,452; David G. Johns, Santa Monica, \$110,777; C. W. Wood, Stockton, \$113,383; Lingren & Swinerton, Inc., Sacramento, \$107,298; Ralph McLean & Co., San Francisco, \$113,644; Rocca & Caletti, San Rafael, \$106,789; contract awarded to M. B. McGowan, San Francisco, \$102,400.

MONO COUNTY—Between 2 miles west of Bridgeport and Sonora Junction, about 14.2 miles to be graded. Dist. IX, Rt. 23, Section J. Kennedy-Bayles Construction Co., Biggs, \$165,533; C. Emil Force, Piedmont, \$231,604; Morrison-Kaudens Co., Boise, Idaho, \$193,522; Hemstreet Bell, Marysville, \$183,306; H. W. Rohl, Los Angeles, \$188,149; Gist & Bell, Arcadia, \$197,385; G. W. Ellis, Los Angeles, \$193,837; C. G. Willis & Sons, Los Angeles, \$176,231; MacDonald & Kahn Co., Ltd., \$220,353; Triangle Rock & Gravel Co., San Bernardino, \$192,474; Nevada Construction Co., Fallon, Nevada, \$199,186; contract

awarded to Robinson-Roberts Co., Los Angeles, \$129,631.

PLACER COUNTY—About one-half mile west of Auburn. Constructing six 19-foot timber spans and one 40-foot steel span bridge across the Auburn Ravine. Dist. III, Rt. 17, Section B. J. W. Hoopes, Sacramento, \$11,543; A. Young, Yreka, \$10,898; M. B. McGowan, San Francisco, \$11,754; Clinton-Stephenson Const. Co., Ltd., San Francisco, \$11,436; F. H. Nielson, Orland, \$12,490; Robinson-Roberts Co., Los Angeles, \$11,674; Geo. J. Ulrich Const. Co., Modesto, \$9,791; W. H. Houser, Oakland, \$11,486; contract awarded to Peter F. Bender, North Sacramento, \$9,764.

PLACER AND EL DORADO COUNTIES—Treating with light fuel oil. Between Auburn and Placerville and between El Dorado and Cosumnes River, 31.9 miles. Dist. III, Rt. 65, Section A, B and C. D. McDonald, Sacramento, \$5,080; Carl Mankel, Sacramento, \$6,147; E. F. Hilliard, Sacramento, \$5,698; Pacific Tank Lines, Inc., Los Angeles, \$5,883; Basalt Rock Co., Inc., Napa, \$5,557; Clyde Wood, Stockton, \$4,912; Jack Casson, Hayward, \$4,238.

PLACER COUNTY—Across Conon Creek. Reinforced concrete girder bridge. Six 34-foot 6-inch spans on reinforced concrete pile bents. Dist. III, Rt. 3, Section B. Holdener Const. Co., Sacramento, \$20,006; A. T. Howe, Santa Rosa, \$21,198; Peter F. Bender, North Sacramento, \$21,345; contract awarded to Geo. J. Ulrich, Modesto, \$18,973.

PLUMAS AND LASSEN COUNTIES—Between Chester and Willards. About 25.3 miles to be surfaced with crushed gravel or stone. Dist. II, Rt. 29, Section A and B. Fimmel Co., Inc., Sacramento, \$121,636; C. W. Wood, Stockton, \$119,308; Hemstreet & Bell, Marysville, \$109,821; Fred W. Nighbert, Bakersfield, \$129,781; Tiffany, McReynolds, Tiffany, San Jose, \$114,675; D. McDonald, Sacramento, \$119,171; Granite Const. Co., Watsonville, \$110,717; N. M. Ball, Porterville, \$125,367; contract awarded to Irving L. Ryder, San Jose, \$96,533.

PLUMAS COUNTY—Between Spanish Creek and one mile south of Keddies. About 1.4 miles to be graded. Dist. II, Rt. 21, Section B and C. Nevada Contracting Co., Fallon, Nevada, \$91,987; C. G. Willis & Sons, Inc., Los Angeles, \$143,178; Morrison-Knudson Co., Boise, Idaho, \$84,329; Clarence Young, Oakland, \$87,746; Kennedy-Bayles Const. Co., Biggs, \$126,483; H. H. Boomer, San Francisco, \$89,561; contract awarded to Chigris-Sutcos, San Francisco, \$69,134.

SAN DIEGO COUNTY—Across San Dieguito River—R. C. girder bridge, eleven 54-foot spans on concrete piers and abutments with wing walls on pile foundations. Dist. VII, Rt. 2, Section A. Bodenhamer Const. Co., Oakland, \$140,657; Merritt-Chapman & Scott Corp., San Pedro, \$139,900; R. R. Bishop, Long Beach, \$154,379; Robinson-Roberts Co., Los Angeles, \$166,869; Lynch-Cannon Engineering Co., Los Angeles, \$157,625; Herbert M. Baruch Corp., Ltd., Los Angeles, \$143,725; J. F. Knapp, Oakland, \$139,600; Macco Const. Co., Clearwater, \$147,579; R. H. Travers, Los Angeles, \$157,452; J. S. Metzger & Son, Los Angeles, \$151,810; B. B. Boyd, San Diego, \$173,064; Owl Truck Co., Compton, \$164,844; Oberg Bros., Los Angeles, \$147,632; contract awarded to David G. Johns, Santa Monica, \$138,678.

SAN DIEGO COUNTY—Between La Posta Creek and Campo Road Junction. About 8.8 miles to be paved with Portland cement concrete. Dist. VII, Rt. 12, Section F. Sander Pearson, Santa Monica, \$308,103; Geo. H. Oswald, Los Angeles, \$286,545; Ed Johnson & Sons, Los Angeles, \$298,062; Daley

Corp., San Diego, \$285,755; Griffithy Co., Los Angeles, \$285,627; Central California Roads Co., Southern California Roads Co., Los Angeles, \$269,748; Matich Bros., Elsinore, \$269,962; Basich Bros. Const. Co., Torrance, \$242,273; contract awarded to E. Paul Ford, San Diego, \$240,751.

SAN DIEGO COUNTY—At Bostonia, about 1.5 miles to be graded and paved with Portland cement concrete. Dist. VII, Rt. 12, Section C. V. R. Dennis Construction Co., San Diego, \$43,669; Griffithy Co., Los Angeles, \$43,694; B. G. Garrot, San Diego, \$44,817; Basich Bros. Const. Co., Torrance, \$45,447; Sander Pearson, Santa Monica, \$48,400; contract awarded to Matich Bros., Elsinore, \$42,505.

SAN MATEO COUNTY—Between Burlingame and San Mateo. About 3 miles to be paved with Portland concrete cement. Dist. IV, Rt. 68, Section B-C. Hanrahan Co., San Francisco, \$217,447; Fredrickson, Watson Construction Co., and Fredrickson Bros., Oakland, \$233,029; C. W. Wood, Stockton, \$241,792; contract awarded to Basich Bros. Const. Co., Torrance, \$212,933.

SAN MATEO COUNTY—Between Rancho San Mateo and Half Moon Bay Road. About 6.6 miles to be surfaced with crushed rock and screenings to be stockpiled. Dist. IV, Rt. 55, Section B. Beerman & White, Belmont, \$33,300; contract awarded to H. E. Casey Co., San Mateo, \$30,225.

SANTA BARBARA COUNTY—Between Wigmere and Los Alamos. About 3.7 miles to be graded and paved with Portland cement concrete. Dist. V, Rt. 2, Section C. Macco Const. Co., Clearwater, \$125,235; Cornwall Construction Co., Santa Barbara, \$122,229; W. A. Dantanville, Salinas, \$138,063; contract awarded to Basich Bros. Const. Co., Torrance, \$118,066.

SANTA CLARA COUNTY—Bridge across Carnadero Creek. Four 35-foot spans on concrete bents and 0.35 mile to be graded and paved with Portland cement concrete. Dist. IV, Rt. 2, Section C. Thermolite Const., Inc., San Jose, \$51,121; A. J. Raisch, San Jose, \$51,426; A. W. Kitchen, San Francisco, \$56,008; David G. Johns, Santa Monica, \$62,500; M. B. McGowan, San Francisco, \$53,853; Barrett & Hilt, San Francisco, \$65,755; Fredrickson & Watson Const. Co., and Fredrickson Bros., Oakland, \$54,464; Peter McHugh, San Francisco, \$59,554; Neves & Harp, Santa Clara, \$55,134; contract awarded to Oberg Bros., Los Angeles, \$50,158.

SANTA CRUZ COUNTY—Furnish and apply light fuel oil as dust palliative between California Redwood Park and Waterman Switch. Dist. IV, Rt. 42, Section A. Jack Casson, Hayward, \$3,852; Basalt Rock Co., Inc., Napa, \$4,050; Granite Const. Co., Watsonville, \$4,230; Edw. W. Dearborn, Redwood City, \$3,870; C. W. Wood, Stockton, \$3,330; J. P. Holland, Inc., San Francisco, \$5,400; contract awarded to Edward A. Peres, Richmond, \$3,240.

SANTA CRUZ COUNTY—Between Waterman Switchback and Saratoga Gap. About 6.5 miles in length, three-fifths miles to be graded and surfaced with crusher run base and 6.5 miles to be paved with bituminous macadam. Dist. IV, Rt. 42, Section A. Fredrickson & Watson Const. Co. and Fredrickson Bros., Oakland, \$212,838; O. A. Lindberg, Stockton, \$222,152; Geo. Pollock Co., Sacramento, \$245,860; Granfield, Farrar & Carlin, San Francisco, \$241,733; Frank C. Cuffe, San Rafael, \$259,313; Dan C. Munro, Los Angeles, \$228,200; Robinson-Roberts Co., Los Angeles, \$265,924; Granite Const. Co., Watsonville, \$232,820; contract awarded to Healy-Tibbitts Const. Co., San Francisco, \$207,483.

SIERRA AND LASSEN COUNTIES—Treating with heavy fuel oil between 2 miles west of Milford and Doyle and between Long Valley Creek and the Nevada State line. Forty-two and two-tenths miles. Dist. II, Rt. 29, Section D, E and A. Jack Casson, Hayward, \$10,682; D. McDonald, Sacramento, \$10,682; contract awarded to Basalt Rock Co., Inc., Napa, \$10,029.75.

SISKIYOU COUNTY—Treating with heavy fuel oil. About 21 miles. Between Shasta River and Walker Station. Dist. II, Rt. 46, Section D. Basalt Rock Co., Inc., Napa, \$5,604; contract awarded to D. McDonald, Sacramento, \$5,477.

SONOMA COUNTY—At Lyllon Overhead. About 1.1 miles to be graded and paved with Portland concrete cement. Dist. IV, Rt. 1, Section A. Clark & Henery Construction Co., San Francisco, \$15,239; contract awarded to J. V. Galbraith, Petaluma, \$14,399.

TEHAMA COUNTY—Between Dales Ranch and Paynes Creek. About 7.3 miles to be surfaced with bituminous treated crushed gravel or stone. Dist. II, Rt. 29, Section A. Fred W. Nighbert, Bakersfield, \$60,060; C. W. Wood, Stockton, \$65,035; Granite Const. Co., Ltd., Watsonville, \$77,956; N. M. Ball, Porterville, \$74,884; Fimml Co., Inc., Sacramento, \$64,640; D. McDonald, Sacramento, \$64,724; contract awarded to Hemstreet & Bell, Marysville, \$59,487.

TULARE COUNTY—Between Goshen and Kingsburg. About 12.1 miles to be graded and paved with asphalt concrete. Dist. VI, Rt. 4, Section E. Geo. H. Oswald, Los Angeles, \$336,662; Peninsula Paving Company, San Francisco, \$320,722; Clark & Henery Const. Co., San Francisco, \$363,644; Gibbons & Reed Company, Burbank, \$345,166; David H. Ryan, San Francisco, \$308,256; Valley Paving and Const. Co., Fresno, \$307,506; Hanrahan Company, San Francisco, \$318,568; contract awarded to Union Paving Co., San Francisco, \$305,561.

TUOLUMNE COUNTY—About 1.9 miles new hog-tight property fence to be constructed from Keystone to 1½ miles west. Dist. X, Rt. 13, Section A. E. C. Fisher & Sons, Vacaville, \$1,499; Anchor Post Fence Co. of California, San Francisco, \$1,866; Edw. R. Jameson, Sacramento, \$1,302; contract awarded to B. C. Burnett, Turlock, \$1,299.

TUOLUMNE AND MARIPOSA COUNTIES—Treating with light and heavy fuel oil between Priest's Hotel and Yosemite National Park, 38.9 miles. Dist. X, Rt. 18-40, Section A, B, C, D, E, F and A. Pacific Tank Lines, Inc., Los Angeles, \$12,421; C. W. Wood, Stockton, \$12,359; contract awarded to Basalt Rock Co., Inc., Napa, \$11,890.

YUBA, NEVADA, SIERRA COUNTIES—Treating with light fuel oil, between 7 miles north of Rough and Ready and between Nevada City. Dist. III, Rt. 15-25, Section Yub-Nev-15-A, B and Nev-Yub-Sie-25-A. Jack Casson, Hayward, \$7,879; D. McDonald, Sacramento, \$8,015; Pacific Tank Lines, Inc., Los Angeles, \$10,336; Basalt Rock Co., Inc., Napa, \$8,917; contract awarded to Clyde W. Wood, Stockton, \$7,461.

The amount of Federal-aid funds allocated for road-building projects during February was the largest on record for any month, and was about two and one-half times the largest amount set aside in any February since 1925, according to an oral statement March 16 by R. E. Royall, senior highway engineer of the Bureau of Public Roads.

Don't throw the conversation into high until the brain is turning over.—Charles H. Barr.

WATER APPLICATIONS AND PERMITS

Applications for permits to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of April, 1930.

SAN DIEGO COUNTY—Application 6928. Victoria I. Edwards, Route 1, Box 851-D, San Diego, Calif., for 0.5 c.f.s. from Beaver Creek tributary to Sweetwater River. To be diverted in Section 25, T. 16 S., R. 1 E., S. B. B. and M., for irrigation and domestic purposes (80 acres). Estimated cost \$1,000.

TUOLUMNE COUNTY—Application 6929. F. W. and Stella G. Ross, 2253 East Church Street, Stockton, Calif., for 0.08 c.f.s. from four unnamed springs and an unnamed stream tributary to Moccasin Creek and Tuolumne Creek. To be diverted in Section 35, T. 1 S., R. 16 E., M. D. B. and M., for irrigation and domestic purposes (5 acres). Estimated cost \$100.

MENDOCINO COUNTY—Application 6930. Amanda P. Day, Cummings, Calif., for 0.087 c.f.s. from Bear Creek tributary to Dann Creek, thence S. Fork Eel River. To be diverted in Section 7, T. 23 N., R. 16 W., M. D. B. and M., for irrigation and domestic purposes (5 acres).

PLACER COUNTY—Application 6931. Fred E. Lazenby, 3065 Washington Avenue, Ogden, Utah, for 3 c.f.s. from seven unnamed springs. To be diverted in Section 1, T. 13 N., R. 6 E., M. D. B. and M., for irrigation and domestic purposes. Estimated cost \$500.

RIVERSIDE COUNTY—Application 6932. Sidney E. Bartlett, 606 Pacific Southwest Bldg., Long Beach, Calif., for 0.5 c.f.s. from unnamed seepage or waste water tributary to Santa Ana River. To be diverted in Section 36, T. 3 S., R. 5 W., S. B. B. and M., for irrigation purposes (10 acres).

SUTTER COUNTY—Application 6933. D. C. Smith, Meridian, Calif., for 3 c.f.s. from Butte Slough tributary to Sacramento River. To be diverted in Section 36, T. 16 N., R. 1 W., M. D. B. and M., for irrigation purposes (238.2 acres). Estimated cost \$1,200.

ALPINE COUNTY—Application 6934. George Hussman, Gardnerville, Nevada, for 125 acre-feet per annum from Nobel Lake tributary to Carson River. To be diverted in Section 4, T. 8 N., R. 20 E., M. D. B. and M., for irrigation purposes (300 acres).

NEVADA COUNTY—Application 6935. Central Pacific Railway Co., c/o Frank Thunen, Att'y, 65 Market St., San Francisco, Calif., for 1.5 c.f.s. and 140 acre-feet per annum from Donner Creek tributary to Truckee River. To be diverted in Section 16, T. 17 N., R. 16 E., M. D. B. and M., for industrial (General Railroad Purposes) and domestic purposes. Estimated cost \$30,000.

SAN JOAQUIN COUNTY—Application 6936. O. C. Cuts, c/o Ohm and Raab, Engineers and Surveyors, 517 E. Market St., Stockton, Calif., for 1.0 c.f.s. from San Joaquin tributary to Suisun Bay. To be diverted in Section 21, T. 1 N., R. 9 E., M. D. B. and M., for irrigation purposes (79 acres). Estimated cost \$10,000.

SISKIYOU COUNTY—Application 6937. California Oregon Power Co., Inc., c/o Brobeck, Phleger and Harrison, Att'ys., Crocker Bldg., San Francisco, Calif., for 3,000 c.f.s. from Klamath River tributary to Pacific Ocean. To be diverted in Section 9, T. 47 N., R. 5 W., M. D. B. and M., for power purposes (54,545 H.P.). Estimated cost \$4,500,000.

FRESNO COUNTY—Application 6938. Consolidated Irrigation District, Stockton, Calif., for 1000 c.f.s. and 200,000 acre-feet per annum from San Joaquin River tributary to San Francisco Bay. To be diverted in Section 5, T. 11 S., R. 21 E., M. D. B. and M., for irrigation and domestic purposes (149,500 acres).

KERN AND VENTURA COUNTIES—Application 6939. Florence Louise Cuddy, Lebec, Calif., for 200,000 gallons per day from four unnamed springs tributary to Cuddy Canyon, thence San Joaquin Valley. To be diverted in Sections 3 and 10, T. 8 N., R. 20 W., S. B. B. and M., and Section 28, T. 9 N., R. 20 W., S. B. B. and M., for recreational and domestic purposes. Estimated cost \$3,000.

PLACER COUNTY—Application 6940. Pacific Gas and Electric Co., Attention: P. M. Downing, 1st Vice President and General Manager, 245 Market St., San Francisco, Calif., for 120 c.f.s. from the augmented flow of Bear River tributary to Feather River. To

be diverted in Section 22, T. 15 N., R. 9 E., M. D. B. and M., for irrigation purposes.

PLACER COUNTY—Application 6941. Pacific Gas and Electric Co., Attention: P. M. Downing, 1st Vice President and General Manager, 245 Market St., San Francisco, Calif., for 50 c.f.s. from augmented flow of Bear River tributary to Feather River. To be diverted in Sec. 3, T. 13 N., R. 8 E., M. D. B. and M., for irrigation purposes.

EL DORADO COUNTY—Application 6942. David M. Rounds, Camino, Calif., for 0.075 c.f.s. from Iowa Creek tributary to South Fork of American River. To be diverted in Sec. 23, T. 11 N., R. 12 E., M. D. B. and M., for irrigation and domestic purposes (15 acres). Estimated cost \$7,500.

NEVADA COUNTY—Application 6943. Gaston Gold Mines, Ltd., c/o Geo. St. John, 2801 Telegraph Ave., Berkeley, Calif., for 300 acre-feet per annum from South Fork of Poorman's Creek tributary to South Fork of Yuba River. To be diverted in Sec. 21, T. 18 N., R. 11 E., M. D. B. and M., for power purposes.

SONOMA COUNTY—Application 6944. Sonoma State Home, Department of Institutions, State of Calif., c/o J. M. Toner, M.D., Director, Sacramento, Calif., for 0.55 c.f.s. and 250 acre-feet per annum from Sonoma Creek tributary to San Pablo Bay. To be diverted in Sec. 22, T. 6 N., R. 6 W., M. D. B. and M., for irrigation and domestic purposes (131 acres to be irrigated). Estimated cost \$7,500.

BUTTE COUNTY—Application 6945. K. Jacobson, Box 363, Gridley, Calif., for 3 c.f.s. from Main Drain of Reclamation District 2054 tributary to Sacramento River. To be diverted in Sec. 16, T. 17 N., R. 2 E., M. D. B. and M., Sec. 21, T. 17 N., R. 2 E., M. D. B. and M., for irrigation purposes (312 acres). Estimated cost \$300.

TRINITY COUNTY—Application 6946. Colon F. Whittier, c/o Geo. Hordenholt, 6327 W. 5th St., Los Angeles, Calif., for 100 c.f.s. from Soldier Creek tributary to Trinity River. To be diverted in Sec. 25, T. 33 N., R. 11 W., M. D. B. and M., for mining and domestic purposes.

DEL NORTE COUNTY—Application 6947. Frank Johnston, Box 298, Crescent City, Calif., for 2 c.f.s. from unnamed creek tributary to Middle Fork of Smith River. To be diverted in Sec. 18, T. 17 N., R. 3 E., H. B. and M., for mining and domestic purposes. Estimated cost \$300.

DAM APPLICATIONS, APPROVALS FOR APRIL

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of April, 1931.

LASSEN COUNTY—Permit 3672, Application 6398. Antone Avilla, Adin, Calif., April 3, 1931, for 33 acre-feet per annum from Quaking Asp Gulch in Sec. 7, T. 36 N., R. 10 E., M. D. M., for stock watering purposes. Estimated cost \$2,000.

LASSEN COUNTY—Permit 3673, Application 6417. Antone Avilla, Adin, Calif., April 3, 1931, for 30 acre-feet per annum from Quaking Asp Gulch in Sec. 13, T. 36 N., R. 9 E., M. D. M., for stock watering purposes. Estimated cost \$2,000.

PLACER COUNTY—Permit 3674, Application 6828. Archie L. Ware, Lincoln, Calif., April 3, 1931 for 0.25 cubic foot per second from (1) a spring (2) unnamed stream in Sec. 1, T. 13 N., R. 6 E., M. D. M., for irrigation and domestic purposes on 38.17 acres. Estimated cost \$1,000.

EL DORADO COUNTY—Permit 3675, Application 6650. H. V. Madden, Uacerville, Calif., April 4, 1931 for 11 acre-feet per annum from Emigrant Ravine in Sec. 4, T. 10 N., R. 11 E., M. D. M., for irrigation purposes on 35 acres. Estimated cost \$2,000.

MENDOCINO COUNTY—Permit 3676, Application 6854. C. D. and Anna D. Flowers, Ukiah, Calif., April 8, 1931 for 0.3 cubic feet per second from Russian River in Sec. 4, T. 14 N., R. 12 W., M. D. M., for irrigation purposes on 24 acres. Estimated cost \$2,800.

MENDOCINO COUNTY—Permit 3677, Application 6855. J. C. Crawford, Ukiah, Calif., April 8, 1931 for 0.6 cubic feet per second from Russian River in Sec. 4, T. 14 N., R. 12 W., M. D. M., for irrigation purposes on 53.61 acres. Estimated cost \$2,800.

BUTTE COUNTY—Permit 3678, Application 6204. Paradise Irrigation District, Paradise, Calif., April 9, 1931 for 5000 acre-feet per annum maximum rate of diversion not to exceed 50 cubic feet per second from Little West Branch in Sec. 32, T. 24 N., R. 4 E., M. D. M., for irrigation purposes on 11,000 acres. Estimated cost \$362,000.

HUMBOLDT COUNTY—Permit 3679, Application 6850. Frederick Bradshaw, Weaverville, Calif., April 9, 1931 for 125 cubic feet per second from Horse Linto Creek in Sec. 15, T. 7 N., R. 6 E., H. M. for mining purposes. Estimated cost \$200,000.

PLUMAS COUNTY—Permit 3680, Application 6784. Mt. Lassen Area Council Boy Scouts of America, Chico, Calif., April 9, 1931 for 0.2 cubic foot per second from Yellow Creek in Sec. 7, T. 26 N., R. 7 E., M. D. for recreational purposes. Estimated cost \$2,000.

LAKE COUNTY—Permit 3681, Application 6863. Leavitt Mead McQuesten, Upper Lake, Calif., April 10, 1931 for 0.31 cubic foot per second from Clover Creek in Sec. 6, T. 15 N., R. 9 W., M. D. M., for irrigation purposes on 25 acres. Estimated cost \$250.

RIVERSIDE COUNTY—Permit 3682, Application 6815. Charles A. Black, Banning, Calif., April 10, 1931 for 0.006 cubic foot per second from unnamed spring in Sec. 7, T. 4 S., R. 2 E., S. B. for domestic purposes. Estimated cost \$175.

SANTA CRUZ COUNTY—Permit 3683, Application 6833. Theodore J. Hoover, Swanton, Calif., April 13, 1931 for 4.79 cubic feet per second from Waddell Creek in Sec. 35, T. 9 S., R. 4 W., M. D., for irrigation purposes. Estimated cost \$25,000.

RIVERSIDE COUNTY—Permit 3684, Application 6825. Edward Molitor, Keen Camp, Calif., April 15, 1931 for .05 c.f.s. from unnamed stream in Sec. 26, T. 5 S., R. 3 E., S. B. for irrigation and domestic purposes on 20 acres. Estimated cost \$600.

MONO COUNTY—Permit 3685, Application 6879. Edith Raymer, Bishop, Calif., April 17, 1931 for 0.005 cubic foot per second from Convict Creek in Sec. 11, T. 4 S., R. 28 E., M. D., for domestic purposes. Estimated cost \$500.

HUMBOLDT COUNTY—Permit 3686, Application 6832. Emmett Lewis, Korb, Calif., April 17, 1931 for .062 cubic foot per second from unnamed stream in Sec. 7, T. 3 N., R. 4 E. H., for irrigation and domestic purposes.

RIVERSIDE COUNTY—Permit 3687, Application 6843. Arthur Nightingale, Hollywood, Calif., April 17, 1931 for 0.009 cubic foot per second from Onestott Creek in Sec. 10, T. 7 S., R. 5 E., S. B., for domestic purposes. Estimated cost \$500.

BUTTE COUNTY—Permit 3688, Application 6755. A. A. McMullen, Yuba City, Calif., April 18, 1931 for 0.1 cubic foot per second from branch of Ram Creek in Sec. 32, T. 22 N., R. 6 E., M. D., for irrigation and domestic purposes on 8 acres.

RIVERSIDE COUNTY—Permit 3689, Application 6848. Grace L. Williams, Lake Arrowhead, Calif., April 18, 1931 for 2160 gallons per day from unnamed spring in Sec. 2, T. 6 S., R. 2 E., S. B., for domestic purposes. Estimated cost \$250.

INYO COUNTY—Permit 3690, Application 6860. W. C. Parcher, Bishop, Calif., April 20, 1931, for 2.5 cubic feet per second from Green Creek in Sec. 3, T. 9 S., R. 31 E., M. D., for power purposes. Estimated cost \$250.

INYO COUNTY—Permit 3691, Application 6861. W. C. Parcher, Bishop, Calif., April 20, 1931 for .008 cubic foot per second from Green Creek in Sec. 2, T. 9 S., R. 21 E., M. D. for domestic purposes. Estimated cost \$265.

EL DORADO COUNTY—Permit 3692, Application 6851. John J. Scherer, Macerville, Calif., April 21, 1931 for 0.025 cubic foot per second from unnamed spring in Sec. 18, T. 10 N., R. 11 E., M. D. for domestic purposes.

ORANGE COUNTY—Permit 3693, Application 6881. C. C. Cravath, Laguna Beach, Calif., April 21, 1931 for 200 gallons per day from spring in Sec. 33, T. 6 S., R. 6 W., S. B. for domestic purposes. Estimated cost \$10.

DEL NORTE COUNTY—Permit 3694, Application 6878. Walter G. Muncy, Crescent City, Calif., April 21, 1931 for 2000 gallons per day from Kelly's Gulch in Sec. 27, T. 17 N., R. 2 E., H., for irrigation and domestic purposes on 2 acres.

MODOC COUNTY—Permit 3695, Application 6518. I. C. Exley and Roy V. Exley, Davis Creek, Calif., April 21, 1931 for 332 acre-feet per annum from (1) Fletcher Creek (2) Drainage area of Exley Reservoir in Sec. (1) 15 (2) 26, T. 47 N., R. 12 E., M. D.

for irrigation purposes on 320.6 acres. Estimated cost \$1,000.

SISKIYOU COUNTY—Permit 2696, Application 6855, W. A. Sergeant, Dorris, Calif., April 28, 1931 for 2 cubic feet per second from Cottonwood Creek in Sec. 7, T. 47 N., R. 2 E., M. D., for irrigation purposes on 160 acres. Estimated cost \$50.

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of April, 1931.

MODOC COUNTY—Barn's Dam No. 146-2. Hoy and Cristen, Alturas, owners; 12 feet above streambed with a storage capacity of 100 acre-feet, situated on Pit River tributary to Sacramento River in Sec. 8, T. 4 N., R. 12 E., M. D. B. and M., for diversion purposes, for irrigation use.

MODOC COUNTY—Spicer Dam No. 146-3. Hoy and Cristen et al, Alturas, California, owners; earth and rock, 10 feet above streambed with a storage capacity of 200 acre-feet, situated on Pit River tributary to Sacramento River in Sec. 9, T. 42 N., R. 12 E., M. D. B. and M., for diversion purposes, for irrigation use.

MODOC COUNTY—Clausen Ranch Dam No. 163. Modoc County Bank, Alturas, California, owner; rock crib dam, 4.33 feet above streambed, situated on Pit River tributary to Sacramento River in Sec. 1, T. 41 N., R. 10 E., M. D. B. and M., for diversion purposes, for irrigation use.

MODOC COUNTY—Green Dam No. 167. A. M. Green, Canby, California, owner; rock crib-flashboards, located in Sec. 2, T. 41 N., R. 10 E., M. D. B. and M., for diversion purposes, for irrigation use.

SAN JOAQUIN COUNTY—Davis Dam No. 572. Mrs. Laura M. Davis, Linden, owner; earth dam, located in Sec. 6, T. 2 N., R. 9 E., M. D. B. and M., for storage purposes for irrigation use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of April, 1931.

NEVADA COUNTY—Donner Creek Dam No. 311-17. Central Pacific Railway Company, San Francisco, owner; earthfill, 14 feet above streambed with a storage capacity of 140 acre-feet, situated on Donner Creek tributary to Truckee River in Sec. 16, T. 17 N., R. 16 E., M. D. B. and M., for storage and diversion purposes for railroad use. Estimate cost \$1,100. Fees paid \$20.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources during the month of April, 1931.

NEVADA COUNTY—Upper Rock Lake Dam No. 97-48. Pacific Gas and Electric Company, San Francisco, owner; earth and rock, situated on small creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Upper Lindsay Lake Dam No. 97-46. Pacific Gas and Electric Company, San Francisco, owner; earth and rock, situated on Texas Creek tributary to South Yuba River in Sec. 21, T. 18 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Lower Rock Lake Dam No. 97-38. Pacific Gas and Electric Company, San Francisco, owner; earth and rock, situated on Texas Creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. B. and M.

SANTA CLARA COUNTY—Williams Dam No. 622-4. San Jose Water Works, San Jose, owner; gravity, situated on Los Gatos Creek, located in Rancho Soquel Augmentation.

NEVADA COUNTY—Blue Lake Dam No. 97-12. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Rucker Creek tributary to South Yuba River in Sec. 9, T. 17 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Floriston Dam No. 305-2. Crown-Willamette Paper Company, San Francisco, owner; crib dam, situated on Truckee River in Sec. 30, T. 18 N., R. 18 E., M. D. B. and M.

SHASTA COUNTY—Coleman Forebay Dam No. 97-83. Pacific Gas and Electric Company, San Fran-

cisco, owner; earth and rock dam, located in Sec. 32, T. 30 N., R. 2 W., M. D. B. and M.

NEVADA COUNTY—Cullbertson Dam No. 97-17. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Texas Creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. B. and M.

LOS ANGELES COUNTY—Live Oak Dam No. 32-7. Los Angeles County Flood Control District, Los Angeles, owner; gravity arches dam, situated on Live Oak Creek tributary to San Jose Creek in Sec. 32, T. 1 N., R. 8 W., S. B. B. and M.

LOS ANGELES COUNTY—San Dimas Dam No. 32-10. Los Angeles County Flood Control District, Los Angeles, owner; gravity arches, situated on San Dimas Creek tributary to Puddingstone Creek in Sec. 24, T. 1 N., R. 9 W., S. B. B. and M.

LOS ANGELES COUNTY—Saw Pit Dam No. 32-12. Los Angeles County Flood Control District, Los Angeles, owner; arch, situated on Sawpit Creek tributary to San Gabriel River in Sec. 13, T. 1 N., R. 11 W., S. B. B. and M.

PLACER COUNTY—Mammoth Dam No. 97-39. Pacific Gas and Electric Company, San Francisco, owner; earth dam, located in Sec. 12, T. 11 N., R. 7 E., M. D. B. and M.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of April, 1931.

HUMBOLDT COUNTY—Benbow Dam No. 106. Benbow Power Company, Benbow, owner; ambursen, 17½ feet above streambed with a storage capacity of 780 acre-feet, situated on South Fork Eel River tributary to Eel River in Sec. 36, T. 4 S., R. 3 E., H. B. B. and M., for storage purposes, for power use.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of April, 1931.

PLACER COUNTY—Kidd Lake Dam No. 97-25. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on a small creek tributary to South Yuba River in Sec. 29, T. 17 N., R. 14 E., M. D. B. and M.

TUOLUMNE COUNTY—Matelot Dam No. 97-75. Pacific Gas and Electric Company, San Francisco, owner; earth dam, located in Sec. 1, T. 2 N., R. 14 E., M. D. B. and M.

TUOLUMNE COUNTY—San Diego Dam No. 97-82. Pacific Gas and Electric Company, San Francisco, owner; earth dam, located in Sec. 13, T. 2 N., R. 14 E., M. D. B. and M.

SANTA CLARA COUNTY—Williams Dam No. 622-4. San Jose Water Works, owner; gravity, situated on Los Gatos Creek in Rancho Soquel Augmentation.

NEVADA COUNTY—Blue Lake Dam No. 97-12. Pacific Gas and Electric Company, San Francisco, owner; earth and rock, situated on Rucker Creek tributary to South Yuba River in Sec. 9, T. 17 N., R. 12 E., M. D. B. and M.

PLACER COUNTY—Lower Peak Dam No. 97-37. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on a small creek tributary to South Yuba River in Sec. 30, T. 17 N., R. 14 E., M. D. B. and M.

NEVADA COUNTY—Meadow Lake Dam No. 97-49. Pacific Gas and Electric Company, San Francisco, owner; earth and rock, situated on a small creek tributary to Fordyce creek in Sec. 27, T. 13 N., R. 13 E., M. D. B. and M.

NEVADA COUNTY—Rucker Lake Dam No. 97-44. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Rucker Creek tributary to South Yuba River in Sec. 8, T. 17 N., R. 12 E., M. D. B. and M.

PLACER COUNTY—Upper Peak Lake Dam No. 97-47. Pacific Gas and Electric Company, San Francisco, owner; earth and rock, situated on a small creek tributary to South Yuba River in Sec. 32, T. 17 N., R. 14 E., M. D. B. and M.

NEVADA COUNTY—Floriston Dam No. 305-2. Crown-Willamette Paper Company, San Francisco, owner; crib, situated on Truckee River in Sec. 30, T. 18 N., R. 18 E., M. D. B. and M.

NEVADA COUNTY—Lower Rock Dam No. 97-38. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Texas Creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Upper Lindsay Lake Dam No. 97-46. Pacific Gas and Electric Company, San Francisco, owner; earth and rock, situated on Texas Creek tributary to South Yuba River in Sec. 21, T. 18 N., R. 12 E., M. D. B. and M.

NEVADA COUNTY—Upper Rock Lake Dam No. 97-48. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on a small creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. B. and M.

SHASTA COUNTY—Coleman Forebay Dam No. 97-87. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, located in Sec. 32, T. 30 N., R. 2 W., M. D. B. and M.

NEVADA COUNTY—Culbertson Dam No. 97-17. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on Texas Creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. B. and M.

ARCHITECTURAL AWARDS For Month of April

SAN DIEGO STATE TEACHERS COLLEGE—Club Building and Scripps Cottage; to H. Mayson, Los Angeles, \$20,958.

AGRICULTURAL PARK (State Fair Grounds), Sacramento—General work on Poultry Building, to Guth & Fox, Sacramento, \$48,826; for electrical work, to J. W. Thomas, Sacramento, \$1,750; for plumbing work to Carpenter & Mendenhall, Sacramento, \$5,974.

CALIFORNIA POLYTECHNIC SCHOOL, San Luis Obispo—General work on Boys' Dormitory No. 4, to Wigg Construction Co., Redondo Beach, \$23,195; for plumbing work to American Engineers & Contractors, Los Angeles, \$3,169; for heating work to W. A. Aschen, Oakland, \$2,629; for electrical work to Electric Company, Santa Barbara, \$1,164.

FOLSOM STATE PRISON—Mechanical equipment for four sewage aerators to Water Works Supply Company, San Francisco, \$6,000.

DISTRICT FIVE OFFICE BUILDING, San Luis Obispo—General work to H. J. Smith, San Luis Obispo, \$21,939; for plumbing work to Carl T. Doell Company, Oakland, \$2,654; for heating work to Thomas Haverly Company, Los Angeles, \$2,342; for electrical work to California Electric Company, Santa Barbara, \$1,196.

NORWALK STATE HOSPITAL—Quarters for Night Attendants, Quarters for Day Attendants and Assistant Physician's Residence—For general work to C. Haverlandt, Long Beach, \$53,861; for plumbing and heating to Coony & Winterbottom, Los Angeles, \$11,124; for electrical work to R. R. Jones Electrical Company, Pasadena, \$2,520.

Census Taker: "What is your husband's name?"

Mrs. Murphy: "Pat."

Census Taker: "I want his full name."

Mrs. Murphy: "Well, when he's full, he thinks he's Gene Tunney."

Here's how the average man spends his "three score and ten":

Sleeps 23 years and four months. Works 19 years and eight months. Plays and prays ten years and two months. Eats and drinks six years and ten months. Dresses and undresses two years. Travels four years. Sick and convalesces four years. Total, 70 years.—*Exchange.*

No. 5

GOVERNOR ROLPH OPENS NEW UNIT OF BAYSHORE HIGHWAY

(Continued from page 2.)

cisco to Redwood City, to nearly \$4,000,000. These figures are exclusive of the construction of the Bayshore Boulevard within the city limits of San Francisco, which gives access to the heart of the city at almost any point desired.

BRIDGE COMPLETED

The bridge across Redwood Slough, at Redwood City, has been completed. A bridge across San Francisquito Creek, the county line between San Mateo and Santa Clara counties, is now being constructed; and an underpass under the Dumbarton branch of the Southern Pacific Railway will be under construction inside of a few weeks. The surfacing of the section between Redwood City and Willow Road—the latter being the county highway connecting to the Dumbarton Bridge a short distance east of the Bayshore Highway—and the grading and surfacing between Willow Road and Oregon Avenue will be commenced this summer for early completion, at which time there will be another seven-mile strip opened to the use of the traveling public.

PURPOSE OF ROAD

The Bayshore Highway has been designed for the primary purpose of fast express travel between the cities of San Francisco and San Jose, and for this reason it skirts the edge of the bay by passing the business sections, in so far as possible, of all cities and towns along its route. However, the construction of the new Western Pacific line east of this highway into San Francisco, and the consummation of harbor facilities and developments already in progress, or contemplated for the near future, will assure the rapid industrial development of the entire section which this important highway traverses.

STOP *Red Menace* By *Preventing* FIRES

CITING extreme water shortage, high temperature and low humidity as alarming factors increasing the fire hazard this summer in the forests and fields of California, Governor James Rolph, Jr., coordinating all his available agencies in the State government, has organized by proclamation the California Fire Emergency Committee to combat the situation through an educational campaign.

With Governor Rolph as honorary chairman, and Charles S. Howard, San Francisco, directing chairman, the headquarters of the Fire Emergency Committee have been placed in the Division of Forestry, Department of Natural Resources, with State Forester M. B. Pratt as executive secretary in direct charge of the activities of the committee.

According to information from the secre-

Charles S. Howard

tary's office the campaign was in full swing on May 20th, the day following the issuance of Governor Rolph's proclamation. Within three days, more than 7000 men officially in direct contact with the forests and fields of California were patrolling against fires in their respective lines of duty.

In the coordinated State agencies, Col. Walter E. Garrison, Director of Public Works, was the first leader in issuing instructions to his field forces for fire prevention activities as outlined in the proclamation. This lead was quickly followed by Superintendent E. Raymond Cato, Highway Patrol; President I. Zellerbach, Fish and Game Commission; Director Daniel H. Blood, Department of Natural Resources; Avery S. Hoyt, Director of Agriculture; and Vierling Kersey, Director of Education.

(Continued on page 16.)

M. B. Pratt

San Francisco-Oakland Bay Bridge May Be Completed by July, 1937

1 1 1 1 1 1

THE San Francisco-Oakland Bay Bridge completed by July, 1937!

That's the hope held out by Charles H. Purcell, State Highway Engineer.

He anticipates that design work will proceed with sufficient rapidity to be able to determine an accurate estimate of the entire project by July 1, 1932, so that bonds may be sold immediately thereafter.

Progress toward starting actual construction of the great project has been largely along the lines of legislative action, by the recent Legislature, and on preliminary field engineering and preliminary design.

The 1931 Legislature has passed very important legislation on this subject and by so doing has assured early commencement of work on the actual design and construction of the bridge.

The legislation referred to was sponsored by Governor Rolph and his administration, together with prominent members of the Senate and Assembly.

NEW BILLS PASSED

Two new bills were passed and the former Toll Bridge laws amended in such a way as to make them more practical in their application to the problem.

Senate Bill No. 460 introduced by Senator Fellom made certain minor changes in the former Toll Bridge law which render it more workable in its application to the general toll bridge problem of the State.

Senate Bill No. 337, introduced by Senators Fellom, Tubbs, Maloney, Breed, Jones, Young, Crittenden, Sharkey, Inman and McCormack, appropriates the sum of \$650,000 out of the general fund to be expended by the Department of Public Works for the purpose of preliminary engineering and design of the bridge. This appropriation is made in the form of a loan to be repaid with 4 per cent interest out of the first bond issue.

IMPORTANT STEP

It is a very important step toward construction of the bridge and establishes beyond doubt the faith of the Legislature in the project and should be a strong influence toward favorable sale of bonds.

Senate Bill No. 336, introduced by Senators Fellom and Breed, stipulates that the Department of Public Works may accept and adopt, for purposes of maintenance only, said highway crossing as a State highway at such time as it may deem it for the best interests of the State. The wording of this bill is susceptible of broad interpretation. Under it the Department of Public Works may use State highway funds for maintenance after the bridge is completed. As a result, this action of the Legislature has a very favorable influence on the sale of bonds for the project because maintenance of the structure is guaranteed out of funds other than those received from income from tolls.

These three bills were signed by Governor Rolph May 25th. More than 70 prominent business, civic and labor leaders attended the ceremonies in the Governor's office.

SURVEYS COMPLETED

The appropriation of \$650,000 for engineering will not become available until August 15th because of the 90-day period required by law after adjournment of the Legislature. For this reason intensive effort on the design of the bridge can not go ahead until that time. There has been, however, certain small amounts available for preliminary work from the former money made available by the 1929 Legislature and the cities of San Francisco and Oakland.

Surveys of Yerba Buena Island for the necessary right of way over government property, required in the War Department permit, have been completed and right of way maps will soon be completed. Formal application for the final permit will then be made to the War Department. This permit has already been approved by the War Department with the provision that rights of way be obtained across Yerba Buena Island. The filing of the maps will comply with this stipulation. The War, Navy and Commerce departments, all of whom have reservations on the island, have given the department the fullest cooperation and no delay is anticipated in obtaining their approval.

In addition to the right of way surveys, work is being started on key maps of the

IS EVERYBODY HAPPY? They look it. It's the occasion of the signing of the three San Francisco-Oakland Bay Bridge bills by Governor Rolph, signalling realization of a dream come true. Congressman Richard Welch, E. B. de Golia, President of San Francisco-Oakland Bay Bridge Commission, the Governor and Col. Walter E. Garrison are seen in the front row as the Governor is handed the pen to sign the first measure. In the second row from left to right are: Senator Thomas Maloney, Judge George Steiger, Rolland A Vandegrift, Director of Finance, Senator Roy Fellom, Charles H. Purcell, State Highway Engineer, Earl Lee Kelly, Chairman Highway Commission, Mayor Davie of Oakland, Timothy Reardon, Highway Commissioner, and Mayor Rossi of San Francisco. And below, the happy delegation on the steps of the Capitol after the signing.

entire area affected by the bridge and approaches. This map will give all the physical data, contours, buildings, tracks and public service equipment involved and will form a basis for final studies of the entire bridge layout and approaches.

Work on preliminary triangulation has been started. Control monuments are being set and their exact locations determined. These will be used to locate borings, piers and all physical parts of the structure.

An engineering organization has been formed in the East Bay area, composed of the

various city engineers of the cities involved. This committee has made studies of the general street systems of the East Bay and has made a preliminary report on procedure. They will further cooperate with the Department of Public Works' engineers in working out a proper distribution system in the East Bay. The City Engineer's Office of San Francisco has been of great assistance in furnishing maps and data on the areas affected by the bridge approaches.

One of the first problems to be met is the moving of numerous submarine cables which

(Continued on page 5.)

Californians! Stop, Read and Heed!

By CHARLES H. PURCELL, State Highway Engineer

DESPITE the fact that California, a pioneer in highway development, has expended to date on its highway system a total of approximately \$225,000,000, we have not kept pace with the majority of states in the Union. Forty-four others have a greater per capital expenditure than California!

Further we rank only fifteenth in the United States in the percentage of paved highways!

And yet this State ranks second in motor vehicle registration and sixth in population.

And merely to serve adequately the traffic over our roads for the ten-year period ending 1940, the Division of Highways estimates \$365,000,000 will be needed for maintaining and improving the highway system.

These facts may startle the average Californian who firmly believes this State a leader in road making. So let me clear up this mistaken belief.

The present status of the California State Highway System is:

Mileage paved (concrete, asphalt or bituminous macadam)-----	2591
Mileage surfaced (rock or oiled rock)-----	1915
Mileage unsurfaced (earth)-----	1831
Total -----	6337

Only 34.4 per cent of the California Highway System is now paved, while 14 other states have a higher percentage paved.

The total mileage surfaced and paved is 4506, which ranks California nineteenth among the states for this item, and three states have their entire state highway system surfaced.

During the year 1930 California improved or surfaced approximately 550 miles of the State Highway System, while 28 states exceeded this figure.

Considering population and motor vehicle registration the present state of improvement of the California State Highway System is below the average for other states of comparable population and motor vehicle registration. Not only is this true, but the present rate of State highway expenditure is still below the average annual State highway expenditure in those states.

The Division of Highways of California has, during the past two years, completed a thorough engineering and economic study of State highway needs and finances in California for the ten-year period ending 1940. A thorough study was made of the improvements necessary to serve traffic during this ten-year period as well as of the funds which will become available during that period.

The estimated cost of maintenance and improving the State highway system, not to the ultimate standard of pavement, but to the standard adequate properly to serve the traffic during this period is \$365,000,000. The estimated revenue, under existing laws, for State highway purposes is \$320,000,000.

There can be no diversion of State highway funds without seriously damaging the improvement of our State highway system and further lowering California's position when compared to the State highway development in other states.

The modern highway is a paying investment and is essential to the social and economic development of our country.

DO YOU KNOW THAT	
California measures up against the other forty-seven States in the Union as follows:	
In population-----	Sixth
Motor vehicle registration-----	Second
Percentage of paved State highway-----	Fifteenth
Per capita expenditure for State highways-----	Forty-fifth
Mileage of highways improved in 1930-----	Twenty-ninth
Total mileage of State highways paved and surfaced-----	Nineteenth

Models to Decide Bridge Safety

ONE-HUNDREDTH the size of the actual structure to be built, but complete in every detail, miniature bridges are to be constructed by scientists as models for the gigantic San Francisco-Oakland Bay Bridge. From these models will be chosen the type of structure to cross San Francisco Bay.

This is the announcement of Charles H. Purell, State Highway Engineer, in making public the fact that Prof George E. Beggs of Princeton University, one of the foremost bridge experts in the world, had consented to work with the University of California at Berkeley in constructing models.

The effect of all loads, wind, temperature—indeed all the elements will be tested with the models.

Every detail of the mammoth bridge will be put into the structural models of the several possible types of design; even the same kind of material to be used.

Each model will be "loaded" in the same

proportion as the full-sized bridge would be, thus permitting the scientists to measure the actual stress upon the structure together with the deflections in temperature ranges.

In this way the safety of the structure is actually proved before it is built.

Dr. Beggs, leading authority on model bridge building, constructed the miniatures for the Mount Hope Bridge.

He is now in California on his Sabbatical year and had planned to take his family on a yacht cruise to Alaska. So interested, however, has he become in the mammoth task of bridging the bay, that he has given up his cruise and will begin actual scientific work this week.

He will be assisted, not only by the University of California scientists under Professor Davis, but a corps of Department of Public Works engineers under Purell and Charles E. Andrew, the department bridge engineer.

Work Being Rushed on Bay Bridge

(Continued from page 3.)

are now in the vicinity of the bridge center line. These cables must be moved before final borings are started and before pier work can proceed.

The very important detail of determining the type of structure to be used between San Francisco and Yerba Buena Island is being developed as rapidly as limited funds will permit. Studies and plans of numerous types have been made and preliminary cost estimates determined. Types studied involve cantilever and suspension type.

Studies to date indicate that a double simple suspension type with central anchorage is desirable from an economic standpoint when simplicity and safety are considered. Three span and two span continuous suspension types have been studied. These types compare in some measure with the cost of the double simple suspension with central anchorage, but are much less rigid and do not guarantee the degree of safety afforded by the central anchorage type.

However, it has been decided, tentatively, that the suspension type is desirable and further studies are being made.

A board of eminent engineers has been appointed as consultants to the Board of Public Works engineers. Mr. Ralph Modjeski is chairman and Moran and Proctor, foundation authorities, are members. It is probable that the board will be increased to include other prominent bridge engineers. All preliminary plans, studies and estimates of the department have been submitted to the consulting board and the tentative recommendations of the department have been approved, in a preliminary way, by the consultants.

All things considered, it is believed that preliminary work on the project is progressing as rapidly as possible with the limited funds available. Intensive work will begin when the larger appropriation becomes available in August.

State Road Workers Fight Blaze On Ranch; All Units to Volunteer

CALIFORNIA district highway engineers and their staffs of road workers have an enviable record for quick, thorough and efficient action in emergency.

Last month they added to their laurels by turning out as fire fighters, assisting in quelling a grain blaze which threatened to assume disastrous proportions.

Carrying out the orders of Col. Walter E. Garrison directed to Charles H. Purcell, State Engineer, the road workers throughout the

entire State have enlisted to battle this summer's fire menace. They stand ready, night or day, to assist in combating the yearly scourge of flame which takes such a devastating toll of California's wealth.

Spurred on by the proclamation of Governor James Rolph, Jr., to the citizenry of California, orders have been issued to all Department of Public Works employees to constitute themselves fire fighters in times of emergency. Already there have been results as the following letters will indicate:

LET'S HELP

May 20, 1931.

Mr. C. H. Purcell,
State Highway Engineer,
Sacramento, California.

Dear Mr. Purcell:

Governor Rolph has directed that every agency of the State be placed in cooperation with Federal and local forces engaged in the fighting of fires now raging over the entire State of California.

You will at once issue orders to all of our district highway engineers to acquaint each and every employee of this Department with the acute fire menace now existing and direct their full cooperation along these lines.

Also place all of our facilities and equipment at the disposal of fire fighting agencies.

Both Governor Rolph and myself expect the full cooperation of each and every one of the 2000 men in our employ in the field in this matter.

Very truly yours,

WALTER E. GARRISON,
Director of Public Works.

WE WILL

May 20, 1931.

To the District Engineers,
Division of Highways,
Gentlemen:

Due to the acute fire menace now confronting the State, Governor Rolph is taking an active interest in fire prevention, and has appointed Colonel Garrison as a member of a State-wide committee having as its object the prevention, suppression, and control of fires.

Colonel Garrison has requested that the Division of Highways cooperate with this committee in every way possible. We are taking this opportunity, therefore, to emphasize again the instructions contained in the 1930 Construction Department Manual and in our circular letters of April 23 and May 13 relative to fire control and burning operations.

Please make sure that your resident engineers and superintendents, as well as your entire district personnel, are fully alive to the gravity of the situation.

Yours very truly,

C. H. PURCELL,
State Highway Engineer.

AND THEY DID!

Davis, California,
May 22, 1931.

State Division of Highways, Sacramento.
Sirs:

On behalf of the West Plainfield Fire Protection District, I wish to take this means of expressing their appreciation of the help rendered by the superintendent and his men of District Ten, at a fire that burned several acres of grain on the G. W. Pierce place.

It certainly is very gratifying to the fire commissioners to know that they have such hearty support of the highway men as was shown on that day, and on their behalf wish to extend to you our many thanks.

Yours sincerely,

THOMAS W. LILLARD,
Secretary, West Plainfield
Fire Protection District.

Solemn
Warning
and an
urgent
plea to
citizens
is made

Executive Department State of California

Proclamation

To the People of the State of California:

MY FELLOW CALIFORNIANS:

I have just been informed by the State Forester's office that the thing we have been fearing for weeks has occurred—the 1931 fire season has started with outbreaks all over the State.

A genuine emergency confronts the State. Woods and fields are in powder-dry condition. The greatest drought in California history has been predicted for this year. Playgrounds and watersheds are threatened. Unless drastic steps are taken to prevent it the entire State may be afire by the middle of summer.

I am, therefore, dedicating every resource of the State Government at my command to meet this situation. The task is too great for one body such as the State Board of Forestry, or the State Forester to handle. It calls for the best efforts of every county, every civic and public body, every man, woman and child of California.

For the coordination of all State and private agencies to meet this crucial condition I am appointing a CALIFORNIA FIRE EMERGENCY COMMITTEE to consist of the following members:

Charles S. Howard, San Francisco (Chairman)
M. B. Pratt, State Forester (Executive Secretary)
Rolland A. Vandegrift, Director of Finance
Col. Walter E. Garrison, Director of Public Works
E. Raymond Cato, Superintendent, California Highway Patrol
Daniel H. Blood, Director of Natural Resources
Seth E. Howard, Adjutant General, California National Guard
Vierling Kersey, Director of Education
Avery S. Hoyt, Director of Agriculture

Jay Stevens, State Fire Marshal
I. Zellerbach, President, State Fish and Game Commission

STATE BOARD OF FORESTRY:

Swift Berry, Camano
Herbert S. Gilman, San Dimas
Ernest G. Dudley, Exeter
E. Walton Hedges, Jr., San Juan Bautista
B. A. McAllister, Piedmont
Robert C. Harrison, San Bernardino

I further wish to call upon every civic and public body in California to work with this committee, and request that similar emergency groups be formed in every county of California, with the county boards of supervisors taking the initiative.

It will be noted that this committee includes representatives of all State agencies that well might take part in this great program. The National Guard should be available in such fires as Mill Valley and Berkeley; its airplanes ready to patrol during emergency periods.

The entire California Highway Patrol will be used for establishing lines of communication on going fires, and every traffic officer instructed to enforce the law against throwing cigarette stubs or any burning material from automobiles.

Eastern tourists and visitors entering the State by automobile will be warned through the border quarantine stations of the State Department of Agriculture. Fish and game wardens will be instructed to aid forest-rangers and inspectors in every way when they are fatigued by directing fire-fighting operations.

A thorough campaign of education should be waged from now until the first rains of next fall. To this end, I am inviting the aid and suggestions of the United States Forest Service, "Stop Forest Fires" Committee, the Automobile Associations, State Chamber of Commerce, California Forest Protective Association, Los Angeles Conservation Association, American Legion, Native Sons, Service Clubs, Airplane Transportation Companies, Stage Lines and Railroads.

I have every confidence in the ability of California to meet this emergency. The first duties of the Emergency Committee will be to call it sharply to the attention of every citizen that extreme care is needed during the crucial fire period. If we can prevent fires before they are started we will be going a long way toward holding the fire loss to a low figure this year.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the Great Seal of the State of California to be affixed this 19th day of May, 1931.

James R. Rogers

Governor

\$10,000,000 Work on State Highways Planned to Relieve Unemployment

APPROXIMATELY \$10,000,000 work on highways in three months!

That's the aim of the Department of Public Works—the goal to be reached by June 30th!

Hewing close to the policy of Governor Rolph that the State government bend every effort to relieve unemployment throughout the State by pushing public work as fast as engineering limitations permit, \$2,563,300 contracts have been awarded since April 29th; \$2,754,700 projects advertised; \$4,541,400 worth of work proposed for advertising by June 30th.

Col. Walter E. Garrison, Director of the Department of Public Works, announces that the highways to be constructed with this money, will cover 1013 miles.

COUNTIES TO BENEFIT

The following counties share in the contracts awarded and pending award:

Placer, Sacramento, Orange, Lassen, Modoc and Humboldt. While projects are advertised for the following: San Joaquin, Colusa, Imperial, Mono, Nevada and Ventura. Some of the more important projects follow:

In Placer County, 1.4 miles of road is to be built from Wise Power House to Auburn on the Victory Highway (Sacramento-Truckee lateral). Constructed of Portland cement concrete, this piece of highway will cost \$160,900.

IMPROVE COAST HIGHWAY

Seven and two-tenths miles of the same type of road, to cost \$216,200 will be constructed from Brighton to Mills on the Lincoln Highway (Sacramento-Placerville-Tahoe Route) in Sacramento County.

Asphalt concrete will be used in Orange County in building five and one-half miles of road on the Coast Highway from San Mateo Creek to Serra. The cost will be \$324,100.

Forty-eight miles of bituminous treated crushed rock will stretch from Hillside to Hat Creek as part of the Redding-Alturas lateral, \$278,200 being spent on this project in Lassen and Modoc counties.

A steel and reinforced concrete bridge is to span the Eel River at Dyerville in Humboldt

County as part of the Redwood Highway link. The structure will cost \$112,300.

Among the more important projects bids for which have been opened but contracts not yet awarded, are:

Seven and one-tenth miles of road from Turner Station to Stockton in San Joaquin County, part of the Valley Route. Portland cement concrete is to be used.

In Colusa County the same type of road is to be used between Williams and Maxwell on the West Side of the Pacific Highway. Eight and six-tenths miles are to be constructed.

Asphalt concrete widening over a distance of 21 miles is to be done in Imperial County from East Highline Canal to Sand Hills on the El Centro-Yuma lateral.

NEW BRIDGE PLANNED

The Bishop-Lake Tahoe road in Mono County is to be improved from Yerby's to Casa Diablo Springs with 12.3 miles of bituminous treated crushed rock.

Eight and eight-tenths miles of the same type will be constructed between Truckee and Hinton on the Victory Highway (Sacramento-Truckee Route) in Nevada County.

ARCHITECTURAL AWARDS For Month of May

AGNEWS STATE HOSPITAL—Employees' Quarters at Farm, contract for general work to A. Nelson, San Francisco, \$56,440; contract for heating and plumbing to Hateley and Hateley, Sacramento, \$17,773; contract for electrical work to Roy M. Butcher, San Jose, \$3,000.

PATTON STATE HOSPITAL—Fourteen cottages for employees, contract for general work to Fred Walsh, San Bernardino, \$21,392; contract for plumbing and heating work to Munger & Munger, Pasadena, \$7,826; contract for electrical work to Aylsworth Electric Company, Inglewood, \$898.

CALIFORNIA INSTITUTION FOR WOMEN near Techachapi—contract for general work to Wm. Rohrbacher, Santa Ana, \$124,850.

CHICO STATE TEACHERS' COLLEGE—Addition to Assembly Building, contract for general work to A. Frederick Anderson, Oakland, \$24,153; contract for plumbing and heating work to W. H. Robinson, Monterey Park, \$4,031; contract for electrical work to Roy M. Butcher, San Jose, \$1,244.

Our highways are making the people of California neighborly, and in that they are dealing a deathblow to the spirit of selfish sectionalism. The roads of California must be so built that they are both adequate for traffic needs and that they also invite and encourage the free flow of travel from every part of the State to every other part.

—GOVERNOR JAMES ROLPH, JR.

LIKE ANTS ON AN ANT HILL—Putting the finishing touches to a \$653,424 highway, the Ridge Route Alternate which will be finished next month. The construction extends over seven miles.

ACTION SPEAKS LOUDER—There's plenty here on the Galvan line change in Orange County.

Telephone System to Help Traffic

LIKE firemen, the men of the California Highway Patrol are to be on call at all times.

On orders of E. Raymond Cato, Superintendent, a telephone communication system is being planned throughout California on all State highways. The general public will be invited to use the same in cases of emergencies, thus being able quickly to secure a traffic officer.

The system primarily will be employed to enable the patrol to be in constant touch with their police work throughout the State.

And in the offing, is the possibility of establishment of a radio system for the Highway Patrol.

RADIO SYSTEM STUDIED

Mr. Cato, in his May report of departmental activities to Col. Walter E. Garrison, Director of the Department of Public Works, states that considerable time has been spent in going over the entire radio system of the San Francisco Police Department, the Boeing Aircraft System and the Department of Forestry system with a view of working out a plan of communication for the California Highway Patrol that will add to its efficiency.

Mr. Cato further reports progress in building up the equipment of the Patrol to a high point. Fourteen old automobiles were replaced and purchase of 25 new motorcycles was recommended. Permission was granted by the Department of Finance to salvage 12 Henderson motorcycles.

EQUIPMENT INSPECTED

In this connection, announcement was made of appointment of Mr. C. C. Warden to the new position of Traveling Supervisor of Equipment. He was transferred from the California Highway Commission to the Highway Patrol. The head of the bureau, accompanied by Mr. Warden, toured the southern part of the State, going down the Valley route as far as El Centro, back up the Coast route as far as Fruitvale, and into Sacramento, stopping at all counties and inspecting equipment. The outstanding county as far as appearance of both men and equipment was concerned was Riverside, and the outstanding district that of Inspector Dunean, No. 11.

Mr. Cato's report then continues:

A further decrease in the number of applications for driver's licenses was noted during the month of April, amounting to 2428 applications. The total number of applications received was 41,189.

LICENSES DECREASE

The actual number of licenses issued was less by 1820 than the total issued in April when 35,613 licenses were issued. Of these, 59 per cent were operators, 19 per cent duplicate operators and 22 per cent chauffeurs licenses. The number of chauffeurs licenses issued was less by 2628 than the figure for March.

State examiners conducted 54 per cent of the examinations, and 46 per cent were given by the auto clubs, police and other authorized agencies.

The regular quarterly inspection of the headlight adjusting stations was made in April. Practically all stations were examined and reports made, except Los Angeles County. The enforcement work for March and April shows a substantial increase over February. During the month 16 headlight adjusters were appointed and one canceled; 17 headlight stations were appointed and 22 cancelled.

BAD BRAKES ON WANE

Increased activity in the testing of brakes showed a decrease in the number of defective brakes being found.

Alterations, changes and repairs to the school conducted by the Bureau of Traffic Education at the State Fair Grounds were completed just the day before the present class came in.

The tenth class, composed of 44 men, reported to the school on April 19, 1931. Instruction has been carried on very successfully. All the students at the school have displayed a keen desire to improve themselves.

The mailing of the annual statistical pamphlet was started during the month by the Bureau of Research, Statistics and Traffic Safety. In connection therewith announcement regarding the issuance of this pamphlet in the newspapers has brought a number of requests from the general public.

Speech Explains Building Policy

Clear exposition of the highway policy of the Department of Public Works and the California Highway Commission was expressed Saturday, June 6th, at Lucerne by Col. Walter E. Garrison, Director of the Department, while speaking on behalf of Governor James Rolph, Jr., at ceremonies commemorating opening of the Ukiah-Clear Lake-Tahoe road. While Colonel Garrison's speech deals with one locality mainly, nevertheless it definitely sets forth the aims and policies of the Rolph administration in the matter of road building and maintenance, and therefore, is of singular interest to the whole State. The speech follows, in part:

DEDICATION of this, another link in the great highway system of our beloved State, has indeed been a happy occasion. Happy because it has knit more closely the people of Lake County to its neighbors, because it helps to open up this section of the State for travel, produce and trade, and because, from my point of view as Director of the Department of Public Works, it is a promise fulfilled to the people of this section.

I am happy to be here in my official capacity, and also as a private citizen. In the first place because I feel, with the California Highway Commission, a deep sense of satisfaction over a construction job well done. In the second place because I am a fellow Californian, interested as you are, in any work or achievement which advances the interests of our glorious State. * * *

The people are paying for this highway which has been opened so appropriately, just as they pay for every unit of construction and maintenance in our entire road structure. The Department of Public Works and the Highway Commission are your agents. We are striving to serve you in ratio to the money allowed us and the limits set down for us by law.

GOVERNED BY MONEY

Therefore, I beg of you when you may feel inclined to be a little impatient, to remember that there are many equities to be considered in advancing different road units throughout the State.

We would, indeed, be in hot water, were we to build roads here and there, willy-nilly.

We must and do give each proposed route or highway improvement deep and honest thought and careful reflection. And money, ladies and gentlemen, the root of all evil, governs us too—did I say “governs us”—perhaps it would be better to say “rules us” when it comes to building highways.

Which brings you and me face to face with the situation confronting roads in northern California in general and Lake County in particular. Now please rest easy—I'm not going to bore you with a mass of figures sonorously proclaimed with appropriate gestures. Rather a few pertinent ones on roads in their relation to Lucerne, Lakeport, Lake County as a whole.

SECONDARY ROADS

First: The secondary road construction fund available for the northern section of the State in the coming biennium of the eighty-third and eighty-fourth fiscal year amounts to \$1,887,000.

Second: Lake County gets \$431,454 for maintenance and construction, slightly less than one-fourth of the total. Very fair and generous, don't you think?

Three: Total expenditures on State highways in this county up until May 1, 1931, were \$2,085,933.

Four: Route 50, the Rumsey-Lower Lake road is now under construction from the junction with Route 15 (Tahoe-Ukiah) at Bear Valley to Rumsey.

Five: A number of other important secondary roads such as Pacheco Pass, Skyline Boulevard, Placerville-Tahoe, carry a large amount of traffic, and demands for their improvement are very pressing.

GO “FAST SLOWLY”

Most of these are in mountainous country and expensive to build, requiring large appropriations to effect any appreciable improvement.

Therefore, I feel you will agree with me when I state that the amount set aside for Lake County roads seems reasonable and generous, doubly so when we bear in mind that we must, perforce, go “fast slowly” with new roads in the northern section of the State since the mileage of secondary roads already totals 1778 miles to which this Legislature has just added only 171 more miles.

Egypt, Siam, Guam; 91,247 Visit State From All Nations

All the way from sunny Italy; from the lands "down under," Australia and New Zealand; the picturesque Siam; from Egypt, Haiti, Germany, Great Britain and Guam—they all come to California!

Figures given out by the Motor Vehicle Department show that a total of 91,247 non-resident permits were issued during 1930.

California's most numerous visitors were from the state of Washington; Oregon came second during the past year; Arizona next. Illinois and Michigan lead the other states from the eastern side of the Rockies. The figures follow:

Alabama	190	Missouri	2,155
Alaska	36	Montana	1,040
Arizona	6,924	Nebraska	2,105
Arkansas	455	Nevada	1,810
Australia	1	New Hampshire	94
Canada	1,870	New Jersey	1,045
China	2	New Mexico	810
Colorado	5,490	New York	3,660
Connecticut	455	New Zealand	1
Cuba	2	North Carolina	177
Delaware	42	North Dakota	500
Dist. of Columbia	400	Nova Scotia	1
Egypt	1	Ohio	3,695
England	6	Oklahoma	2,715
Florida	720	Oregon	8,885
France	6	Panama	35
Georgia	172	Pennsylvania	1,895
Germany	1	Peru	1
Great Britain	1	Philippine Islands	14
Guam	1	Porto Rico	4
Haiti	1	Rhode Island	159
Hawaii	270	San Salvadore	1
Idaho	1,690	Siam	1
Illinois	5,420	South America	3
Indiana	2,030	South Carolina	62
Iowa	2,710	South Dakota	675
Italy	1	Switzerland	2
Kansas	2,310	Tennessee	360
Kentucky	240	Texas	4,815
Louisiana	360	Utah	1,800
Maine	140	Venezuela	1
Maryland	334	Vermont	1
Massachusetts	810	Virginia	244
Mexico	57	Washington	11,120
Michigan	4,160	West Virginia	98
Minnesota	1,950	Wisconsin	1,170
Mississippi	122	Wyoming	630
Total			91,247

One thing about the good old days, if you bought a horse you could be pretty sure the model wouldn't change next month.

Helen: "I heard that Ella had eloped with Mr. Brown. Has her mother forgiven them?"

Mable: "I don't think so—she has gone to live with them."

Bring A Friend

By ROY YOUNGBLOOD,

Assistant Superintendent Highway Patrol

There are leaden men with souls of flint,
And hearts as hard as stone,
Who live for themselves throughout this life,
Live for themselves alone.

Without a thought of another's plight,
Their only thought is of self,
To crush the weak and grind them down,
In the maddened fight for wealth.

Who never see a chance to serve,
Never a chance to aid,
Never a helping hand to lend,
To some poor devil who strayed.

Ah, it's easy to feast with those who feast,
But to fast with those who fast:
To share the hunger of him who wants;
To cheer him to the last.

To shoulder his burdens; his sorrows to bear;

To help him when he's down:
With a smile each mile
On the highway of life, with never a trace of a frown.

To see the light; to forget the gloom;
To stand by him to the end;
And shoulder to shoulder to see him through,
That's being a real friend.

REVISED FORMS PUBLISHED BY HIGHWAY DEPARTMENT

The California State Highway Department has published an announcement of interest to contractors, as follows:

"Revised forms for Contractors' Statement of Experience and Financial Condition have been mailed to all contractors who are on the qualified list for plans, specifications and proposal forms for State highway work. These revised forms provide for the affidavit of accountant to be made by a certified public accountant, but, in those cases where the contractor does not desire to qualify for above \$50,000, the accountant's affidavit will not be required. Effective April 20, 1931, no names will be retained on the qualified list except those who have filed the revised form statement or whose present statement shows the financial condition as of a date now prior to December 31, 1930.

"Accompanying the statement forms will be a limited supply of forms to be used when requesting plans and specifications. On this latter form there is a provision for a supplemental statement of contracts covering the period subsequent to the date of the filed copy of the Contractor's Statement of Experience and Financial Condition. This supplemental statement will be required in all cases."

No matter how tired we get bearing that 2 and 2 make 4, still they do.

In Which Phil Stanton is Reminiscent; And Hands Out a Chuckle or Two

By PHIL A. STANTON, Highway Commissioner

SIXTY-THREE millions to be spent by the State and \$31,000,000 by counties in the coming two years on highway construction and maintenance!

I could not suppress a chuckle when I read those figures shortly after becoming a highway commissioner. They turned my mind back through the years to 1905.

Phil. A. Stanton

As a member of the Assembly in that year I was asked to introduce the County Bonding Act which would permit the counties of California to build roads outside municipalities. The automobile was just coming into vogue then and the young swain sought egress from the narrow confines of the city. He wanted to drive far afield in this new horseless buggy.

And I was asked to father the measure which would open up the highways between towns.

DIDN'T LIKE IDEA

But I was too wise! Why should they try to hand me a lemon like that to sponsor. Roads into the country! Oh, no. The thing was absurd. I handed it to my colleague and he put the measure through.

It has been a great thing for California, this highway system. It must continue to be a great thing, great in every sense of the word. Careful thought must be given to the expenditure of every penny of the people's money in the construction and maintenance of roads.

In 1909, when I was then Speaker, the Assembly voted the very first money for a State highway system. Eighteen million dollars was appropriated for road work subject to ratification of the people at the general election in 1910. This ratification was given by a majority of ONLY 12,786 votes.

STILL NOT ENOUGH

But birth was given to the gigantic system of highways which we now enjoy and we legislators went home proud that we had secured sufficient moneys to last for MANY, MANY years to come.

However, when 1915 rolled around \$15,000,000 was voted in legislation and ratified by the people at the 1916 election by a majority of 405,132 votes, not a single county voting the bonds down.

Again in 1920, \$40,000,000 was provided by constitutional amendment, a special election being held. Only 27,992 throughout the State voted no.

The Good Roads gospel had gone over with a bang.

HERE'S A PROPHECY

And now with \$63,000,000 to be spent by the State alone during the next two years, what does the future hold?

Let me quote from the bulletin of the Board of Highways in 1896, a prophecy by R. C. Irvine:

"The influence of the bicycle upon this agitation for improved highways can not be overestimated. Millions of dollars have been

(Continued on page 24.)

Analysis of New State Legislation

By A. L. BANKS, Assistant Deputy Director

PUBLIC sentiment in California has given almost constitutional force to certain policies affecting expansion of the State's great highway system.

An orderly State-wide plan affecting primary and secondary highways guides both legislation and administration. By legislation, the primary routes have been definitely selected and are being progressively improved; and in the orderly inclusion or addition of secondary roads to the system, the test of service and equity guides official action.

The late Legislature upheld these general principles both in its acceptance of plans reflected by the budget and in its measures dealing with additions to the secondary group of highways.

In conformity with a concurrent resolution of the Legislature of 1929, the State Department of Public Works, after a comprehensive survey of the existing State highway system, submitted its findings and recommendations to the Legislature of 1931. From the inevitable mass of claims of local origin, the department selected and recommended the addition of 23 secondary highways to the State system.

Three Major Points

Three major considerations determined the selection of these particular roads, namely, the large volume of inter-county or State traffic they are carrying, and, in other instances, the relief they will bring to other over-taxed primary roads, and also their service as important links in interstate traffic.

Governor James Rolph, Jr., Col. Walter E. Garrison and the State Highway Commission gave united support to the legislation effectuating the Department's recommendations. The Legislature decisively endorsed the administration's stand. The Edwards (Senate) and Kline (Assembly) bills, companion measures, were promptly passed and as promptly signed by the Governor.

These new acts are: Senate Bill No. 46, (Chapter 82, Statutes 1931)—Senators

Edwards, Breed, Allen, Baker, Cassidy, Duval, Harper, McCormack, McKinley, Riley, Sharkey, Swing and Waggy, authors; and Assembly Bill No. 7 (Chapter 96, Statutes 1931)—Assemblyman Kline, author.

These measures are identical in language, authorizing and directing the Department of Public Works to lay out and construct as secondary State highways the following 23 highways:

(a) Alturas to Oregon State line near New Pine Creek.

(b) Quincy to State Highway Route 29, near Chats.

(c) Vallejo to State Highway Route 8.

(d) Walnut Creek to Oakland.

(e) Weed to California-Oregon State line near Calor.

(f) Bishop to California-Nevada State line (Montgomery Pass).

(g) Bakersfield to Mojave.

(h) Red Box Divide to Pine Flats (Route 61 to Route 62).

(i) State Highway Route 26 near Colton via Pomona to Los Angeles.

(j) State Highway Route 43, Waterman Canyon via Santa Ana Canyon to Newport Beach.

(k) Beaumont to Riverside (Jackrabbit Trail).

(l) Riverside to San Diego (Inland route).

(m) Pomona to Temecula.

(n) Blythe to California-Arizona State line at the Colorado River and State Highway Route 64 to State Highway Route 26, near Indio.

(o) National City to International boundary line near Tia Juana.

(p) El Centro to Calexico.

(q) Oasis to California-Nevada State line.

(r) State Highway Route 2 near Ventura to State Highway Route 4 at Castaic Junction.

(s) From State Highway Route 31 near Cajon Pass to State Highway Route 23 near Lancaster.

A. L. Banks

Relation of Laws to Highway Work

(t) Pomona to Fullerton via Brea Canyon.

(u) Cambria to San Luis Obispo.

(v) Santa Barbara to State Highway Route 2 at Zaca via San Marcos Pass.

(w) State Highway Route 14 near Crockett to American Canyon route near Vallejo.

To Continue the Study

After the foregoing legislation was passed, the 1931 Legislature, upon the recommendation of the Department of Public Works, adopted Senate Concurrent Resolution No. 10 (Chapter 58, Statutes 1931), Senators Slater and McCormack, authors. This resolution provides for a study and report by the Department of Public Works, to be ready for the 1933 Legislature, recommending another orderly addition of new roads to the secondary State highway system.

The requirements of the resolution are:

Additions recommended shall total not more than 15 per cent of the secondary State highway mileage as constituted by the Breed State Highway Classification Act of 1927, said mileage to be added in the ratio of not less than three nor more than four miles in the south to one mile in the north. The study is to be of routes, which by reason of the large volume of State traffic they are carrying, or by reason of the relief they would afford to heavy traffic upon present State highways, or as highways serving as important State links, should be added to the State system.

Basis for Inclusion

Senate Concurrent Resolution No. 18 (Chapter 50, Statutes 1931), Senator Ingels, author, is a "rider" on the resolution just summarized. It provides: "That the California Highway Commission and the State Department of Public Works when planning, constructing or improving the State highway system, shall give due consideration and regard to the development of the natural resources of the State and the improvement of agricultural marketing facilities as well as traffic needs."

Important Bridge Legislation

Bridge legislation, dealing with one of the highest phases of the State's development, received attention that will make history. The last Legislature was most friendly and

responsive to all bills prepared and submitted by the Department of Public Works for the purpose of facilitating the construction of the gigantic San Francisco Bay Bridge, which is to cross from San Francisco via Goat Island to Oakland. These bills were passed practically without dissenting votes. Legislators from every section of the State broadmindedly united in the promotion of this project.

The trio of bills which were designed to hasten the construction of the great bridge are:

The San Francisco Bridge

Senate Bill No. 337 (Chapter 400, Statutes 1931), Senators Fellom, Tubbs, Maloney, Breed, Jones, Young, Crittenden, Sharkey, Inman and McCormack, authors.

This act appropriates the sum of \$650,000 for the survey, plans, estimates, preliminary engineering and other preliminary expenses for the new San Francisco Bay Bridge to be expended through and upon authorization of the Department of Public Works. This appropriation is in effect a "loan," as the California Toll Bridge Authority is directed to return this appropriation to the State General Fund out of the proceeds of the first sale of revenue bonds issued for the construction of the bridge, with interest thereon at the rate of 4 per cent per annum.

Bridge in Highway System

Senate Bill No. 336 (Chapter 399, Statutes 1931), Senators Fellom and Breed, authors, gives discretionary authority to the Department of Public Works when the San Francisco Bay Bridge is *completed*, to make it a part of the State highway system *for maintenance purposes only*.

Revenue Bonds Validated

Senate Bill No. 460 (Chapter 401, Statutes 1931), Senator Fellom, author.

This act provides for certain technical amendments to the California Toll Bridge Authority Act of 1929 which will make the revenue bonds, issuable thereunder for the acquisition or construction of toll bridges, more readily marketable.

The Bridge Memorial

While the measure, which has since become a law, granting a permit for the construction

(Continued on page 20.)

Two Manuals Prepared For Guidance in Work Of Highway Employees

Manuals of Instruction, of intense interest to contractors, have just been issued by the Department of Public Works. One is from the Construction Department, the other prepared by the Department of Surveys and Plans.

The manuals are the guide and authority to be consulted on all features of work performed under the jurisdiction of the department and not properly pertaining to specifications.

C. S. Pope, construction engineer, in a message to the employees of the Division of Highways, says:

"These instructions are founded on experience, common sense and precedent and, in general, are the result of years of analytical thought and study on the part of many different engineers of the Division of Highways who have sought to improve construction methods and standardize the attitude of the department in many matters of public policy."

YOU CAN'T AFFORD TO OVERLOOK THIS!

AUTOMOBILE OWNERS—Who pays your insurance bill? You do, of course. But who is responsible for the increase in your rates? *You are*, if you are careless. Reduction in accidents will mean a reduction in rates.

FATHERS—The protection of your loved ones is your paramount aim. Your family does not bear a charmed life—careless actions may rob you of your dearest possession. While you are busy working for the betterment of yourself and family, others are working for their protection.

MOTHERS—The guidance and protection of your little ones is your life. An agency working for their protection is more than deserving of your active support.

TO ALL—Fifty thousand five hundred persons were killed during the time the United States was in the World War. Fifty thousand nine hundred persons were killed by automobiles during the last 18 months in the United States. This slaughter **MUST CEASE**. It is a challenge to you—will **YOU** accept it?

—From The Berkeley (Cal.) Traffic Safety Commission.

WHEN A FELLER NEEDS A FRIEND AND FINDS A FLOCK OF 'EM

When one has been accustomed to assist in sending to press a daily newspaper and then jumps into the task of preparing a monthly official bulletin, then's when he needs a friend.

And so I can not thank too much my predecessor, Mr. George Mansfield, and State Printer Harry Hammond's fine aides who have so generously and willingly assisted in this, my first publication. I refer particularly to James F. Lyon, Harry Orman, Bert Taylor and Dan Sullivan.

Many thanks.

E. C.

FOREST FIRES

(Continued from page 1.)

Governor Rolph's proclamation requests the county governments within the State to cooperate through county fire emergency committees appointed by the boards of supervisors.

With the State and the county governments organized against fire, the Governor believes a thorough campaign of education should be waged. To this end, he has invited the following agencies, well known throughout the State for their active programs each summer in fire prevention work, to assist the State: United States Forest Service; "Stop Forest Fires" Committee; the Automobile Associations; State Chamber of Commerce; California Forest Protective Association; Los Angeles Conservation Association; American Legion; Native Sons; Service Clubs; Airplane Transportation Companies; State Lines and Railroads.

Governor Rolph is the first Governor since the days of Governor Arrillaga in Spanish rule of California to issue a proclamation to his subjects to assist in stopping losses from fire in the natural wealth of the State.

In 1793, based on the reports of the missionaries traveling El Camino Real of the losses to forests and pastures from fire, Governor Arrillaga promulgated a proclamation calling upon the parishes to conduct an educational campaign among the Christian and Pagan Indians against fire.

The press representatives in Sacramento as covered by the United Press, the Associated Press and the metropolitan dailies of the State have organized and placed their services at the disposal of State Forester Pratt in conducting the campaign laid out by Governor Rolph.

Highway Commission Inspect Kings River Canyon Road Project

AT the invitation of the Fresno County Chamber of Commerce, the entire State Highway Commission and State Highway Engineer C. H. Purcell, met in Fresno at a dinner and conference on the evening of May 28th.

The announced purpose of the meeting was to discuss the Kings River Canyon Highway project which is now under construction beyond General Grant Park with convict labor.

Mr. Chester H. Warlow very ably presented statistics and data concerning the project, after which motion pictures were displayed, indicating something of the grandeur of the Kings River Canyon, together with some of the construction operations now under way beyond General Grant Park.

PARTY INSPECTS CAMP

Each of the commissioners was presented with a very attractive folio containing several large photographs of the Kings River Canyon and adjacent territory.

On the following day the commissioners, accompanied by approximately 25 members of the Fresno County Chamber of Commerce, visited Camp 19 and inspected the eight miles of completed highway, together with the construction operations which are now approaching the junction of the Middle and South Fork of the Kings River.

PLEASED WITH PROJECT

The commissioners expressed themselves as being very much pleased with the entire project.

After luncheon, which was served by the convicts, all the commissioners returned to their homes except Commissioner Hopkins, who continued on a trip into the canyon by horseback, accompanied by Mr. Warlow and a number of other members of the Chamber of Commerce.

Mr. Hopkins was much impressed by the attractiveness and magnitude of the Kings River Canyon country.

Carelessness Chief Cause of Grade- Crossing Accidents

THE following figures of grade-crossing accidents in 1930 compiled by the State Railroad Commission indicate that the great bulk of grade-crossing accidents are "avoidable."

Struck by head-end of train, 1215 accidents;
Struck by rear-end of train, 85 accidents;
Ran into standing train, 91 accidents;
Ran into moving train, 642 accidents;
Vehicles struck flagman, 5 accidents;
Vehicle ran through lowered crossing gates, 300 accidents;
Vehicle struck fixed objects, 54 accidents.
Other causes, 63 accidents.

Cloudy, foggy, or rainy weather did not result in producing more accidents than clear weather, the record showing 1379 accidents in clear weather in daylight, as against 57 in dusk, and 677 in the dark. Cloudy weather showed 95 accidents during the daylight, four during dusk, and 54 in the dark. Foggy weather evidently merely increased the caution of drivers as there were but 66 accidents during fog conditions, and 123 during rainy weather.

The fact that 1746 grade-crossing accidents occurred at crossings where the view was unobstructed would appear to emphasize the need for greater caution on the part of drivers. There were 658 accidents at crossings where the view was impaired, due to other causes than cars standing on adjacent tracks, and only 51 accidents at crossings where the view was impaired by cars standing on adjacent tracks.

The record shows that the larger the number of occupants of the vehicle the smaller the number of accidents occurred. For instance, there were 1680 accidents involving highway vehicles containing but one person, while there were 444 accidents involving two occupants, 150 involving three occupants, 86 involving four occupants, 39 involving five occupants, 14 with six occupants, three with seven occupants, and one with eight occupants, during 1930.

ROADSIDE BEAUTY COUNCIL

More than a hundred Santa Barbara and Montecito citizens have decided to form a County Council for the Preservation of Roadside Beauty for Santa Barbara County.

The fellow who does what must be done works for the fellow who does what ought to be done.

"Every man has his price."

"Yes, and every woman her figure."—*Exchange*.

Legislature Makes Many Changes In Laws Governing Automobiles

By MARSHALL A. PAGE, Chief Clerk, Division of Motor Vehicles

THE 1931 Legislature made numerous changes in the vehicle laws of California, many of which are of vital interest to the motorist.

Practically every phase concerning the ownership, registration and operation of a motor vehicle is affected by this legislation. Many sections of the present act are rewritten entirely to clear up ambiguities and to make the enforcement of the law less cumbersome.

These changes were embodied in Senate Bill 548 by Senator A. H. Breed and Assembly Bill 785 by Assemblyman W. B. Hornblower.

The Breed bill embodied the principal changes, being a redraft of the present vehicle act aimed to improve the existing act and make the highways safer, while the Hornblower bill divorces the Division of Motor Vehicles and the California Highway Patrol from the Department of Public Works and sets them up as a part of an independent department of the State government with a director in charge who shall be a member of the Governor's Cabinet.

Both these bills have been signed by Governor James Rolph, Jr., and will become effective in August.

Outstanding in public interest are the maximum speed limit changes in the Breed bill which raise the limit on the open road from 40 to 45 miles per hour; in residential districts from 20 to 25 miles per hour and in business districts from 15 to 20 miles an hour.

The present limit of 15 miles in school zones, at blind intersections, grade crossings and around curves remains unchanged.

Motorists should note carefully that the increased speeds are permissible only when conditions permit such speeds with safety.

To a degree, the new maximum limits are the results of a compromise as a very determined effort was made in the Legislature to remove speed restrictions entirely. This move

was opposed by officials of both the patrol and the division.

A new section is added making it unlawful to drive at a speed so slow that the reasonable flow of traffic is retarded. Traffic officers are given authority to enforce this provision. This is the first legislative recognition of the fact that it may be as dangerous to drive slowly under some conditions as to drive too fast.

The Legislature also recognized the fact that many cars may be operating along the highways in an unsafe condition. New provisions make it unlawful to operate such a vehicle and give traffic officers the authority to stop any car suspected of being mechanically unsafe.

Enumerated below are other important changes in the law:

Definition of semitrailer amended to permit such vehicle to have more than one axle and two wheels.

Motorcycles are included as emergency vehicles when publicly or privately owned if used by a peace officer, forest ranger or fire warden.

Division of Motor Vehicles required to furnish synopsis of California driving regulations with each registration.

Serial numbers and number of cylinders required on application for registration in addition to present data.

Provides that the Department of Public Works may issue a permit for the operation of a vehicle subject to registration when the operation is only for the purpose of crossing any highway from one property to another.

Requires that certificates of registration and ownership for out of state cars be of a different color than those issued for resident cars.

Plates must be installed at least 16 inches from the ground instead of 24.

Requires the seller as well as buyer to notify Division of Motor Vehicles of sale or transfer of his interest in a vehicle.

Nonresident cars are permitted to operate on nonresident plates as long as such plates

Marshall A. Page

Slow Driver Must Keep to Right or Receive a Ticket

are good in the state in which it registered. The present law requires a nonresident to secure a California license after he stays six consecutive months in the State.

Garage keepers required to report to police when they receive cars showing evidence of having been struck by bullets.

Division must revoke the license of a minor upon death of parent or guardian who signed application for such license.

Minimum age of person to whom license may be issued fixed at 16 instead of 14 years except upon special request of parent or guardian.

Licenses of minors under 18 twice convicted within six months for speeding, reckless driving or driving while intoxicated must be revoked by division after notification by court.

Division permitted to impose restrictions on licenses issued to physically handicapped persons.

Licenses of persons convicted of driving while intoxicated or hit and run shall be suspended unless and until they are able to give proof of financial responsibility by furnishing cash bonds, real estate or by proper insurance.

Provides a new schedule of stopping distances for commercial vehicles other than those carrying passengers.

Restricts the use of siren by officers when serving as escorts to processions.

Prohibits the operation of vehicles from which matter, other than clear water, is leaking or sifting.

Requires two red lights instead of one be placed on the rear of projecting loads.

Unlawful to display signs using terms "State Division of Motor Vehicles," or "Motor Vehicle Department."

Excessive speed not regarded as negligence in civil suits unless the plaintiff in such suits is able to establish that such driving constituted negligence.

Unlawful to maintain glaring or dazzling lights along the highway.

Business and residence districts must be posted with signs showing the legal speed limits.

AUTOISTS! ATTENTION!!

Some important points for the motorist to remember about the new California Vehicle Act are as follows:

Speed limits are raised five miles an hour but only when conditions permit such speeds with safety.

It will be unlawful to drive at a speed so slow as to retard the reasonable flow of traffic.

It will be unlawful to crowd so many persons into the front seat that the driver's view is obstructed.

No vehicle mechanically unsafe may be driven and officers have the right to stop any vehicle and examine it. Pedestrians have the right of way at cross walks.

It will be legal to pass a vehicle moving in the same direction, on the right on roads where there are two or more parallel traffic lanes running in each direction.

Drivers descending grades on one-way roads must back up to permit ascending cars to pass.

Minimum age for issuance of an operator's license raised from 14 to 16 years with provisions for issuance to minors between 14 and 16 by special application of parent or guardian.

Driver of vehicle descending grade required to back up to a place where vehicle coming up grade may pass.

Pedestrians given the right of way at cross walks.

Vehicles carrying explosives or inflammables must display signs.

Division authorized to conduct complete investigations and research concerning the cause of motor vehicle accidents.

Uniform Directional Signs Are Favored for Highway Installation

IN response to many questions from communities all over California, asking permission to erect directional signs, State Highway Engineer C. H. Purcell has prepared the following statement:

I would advise that signs can be installed on State highway rights of way only under permits issued by the Division of Highways. We endeavor to follow a single standard in making installations of warning and directional signs.

We do not favor the installation of special types of signs, as we feel that the advantage of all warning and directional sign service is in its uniformity and simplicity. The Division of Highways, of course, has no jurisdiction over the county roads in regard to this matter.

Did you know that Californians apparently would "rather ride than eat"? At least that is indicated in figures recently released by the United States Department of Commerce. It is noted that while the State's population spends 20.29 per cent of its income for food, it spends 23.56 per cent of its money for automobile purchases.

Survey of Toll Bridge Is Ordered

(Continued from page 15.)

of the San Francisco Bay Bridge, was pending in Congress, the Legislature, in January of this year, adopted Senate Joint Resolution No. 7 (Chapter 17, Statutes 1931), Senator Fellom, author. This resolution memorialized Congress to pass such enabling congressional consent to the building of the bridge across San Francisco Bay.

Toll Bridge Policy Declared

Looking forward to a possible purchase of the great Carquinez Straits Bridge (built some years ago as a privately owned toll bridge) through the medium of revenue bonds, the 1931 Legislature adopted Senate Concurrent Resolution No. 36 (Chapter 78, Statutes 1931), Senator Fellom, author. The California Toll Bridge Authority is authorized thereunder to conduct a survey and investigation of said toll bridge with a view to the acquisition thereof by the State and report thereon at the next session of the Legislature.

Ehrenburg Bridge Purchase

The Colorado River Bridge near Blythe, Riverside County, California, and Ehrenburg, Arizona, is dealt with by Senate Bill No. 530 (Chapter 149, Statutes 1931), Senator Edwards, author.

While the bridges heretofore mentioned are located in northern California, southern California had a toll bridge problem of interest to itself as well as to the remainder of the State. A privately owned toll bridge is now being operated across the Colorado River, near Blythe, California, commonly called the *Ehrenburg Bridge*. The highway departments of the states of Arizona and California had been conducting negotiations for the possible joint purchase of this bridge and making it a free interstate bridge, thereby releasing a large amount of Federal aid road moneys which otherwise would not be relinquished by the Federal Government if this bridge remained a privately owned toll bridge.

Governors Hunt and Rolph, of Arizona and California, respectively, interested themselves in the matter, and as a result of several friendly exchanges, the Legislatures of the two states passed urgency enabling acts authorizing the purchase of this property and throwing it open to the public as a free bridge. The purchase of the bridge is

expected to be consummated in the very near future and the burden of paying tolls at this State entrance removed from interstate traffic forever.

Motor Vehicle Department

Assembly Bill No. 785 (Chapter 478, Statutes 1931), Assemblyman Hornblower, author, was the only act making any important change in the organization structure of the Department of Motor Vehicles. This act removes the Division of Motor Vehicles from this department and creates a new State department to be known as the Department of Motor Vehicles. This new department will consist of the Division of Registration and the Division of Enforcement, to be known as California Patrol.

Advertising Public Work

Some change was made by Assembly Bill No. 1202 (Chapter 831, Statutes 1931), Assemblyman Easley, author, in the procedure for advertising public work. The bill amends the present State Contract Law as requested by the State Department of Public Works, providing that notice of any work to be done by contract under the direction of the State Department of Public Works shall be published once a week for AT LEAST TWO CONSECUTIVE WEEKS, instead of the inflexible period of once a week for three consecutive weeks as in the present law.

On large contracts, the Department of Public Works expects to continue the three weeks' advertisement, but in the case of urgency jobs to handle unemployment situations or readvertisement of jobs, the department will be in a position to advertise for two consecutive weeks.

Moreover, on large projects, the department desires the privilege of advertising for more than three consecutive weeks. A longer period of notice may be deemed expedient. This also has been provided for.

Interdepartment Work

Interdepartmental service charges are provided for in Assembly Bill No. 1167, Assemblyman Nielsen, author.

This act permits the Department of Public Works to do work for other State departments in its highway shop located at Sacramento

Workingman Protected by Two Bills

(Continued from preceding page.)

and in its several other shops operated by the department in various sections of the State, such work to be paid for from the funds of such other State departments.

Two Labor Regulations

Two new labor acts of interest to State highway contractors were passed by the 1931 Legislature and signed by the Governor. The first of these is Senate Bill No. 26 (Chapter 397, Statutes 1931), Senator Inman, author.

The title of this act explains itself. "An act to provide for the payment of not less than the general prevailing rate of wages on public works, and not less than the general prevailing rate of wages for legal holiday and overtime work on public works, providing for the ascertainment of such general prevailing rate by the public body awarding the contract and its insertion in the contract and the call for bids for the contract, providing for the keeping of records by the proper public officials, providing for a forfeiture for each calendar day, or portion thereof, any worker is paid less than the said rate and for a stipulation to this effect in the contract, and providing other penalties for violation of the provisions thereof."

Joint Highway Procedure

The "Alien Labor Law," or Senate Bill No. 83 becomes Chapter 398, Statutes 1931. Senator Maloney was the author.

This act prohibits the employment of aliens by contractors and subcontractors on all public work in California, except in certain specified cases of extraordinary emergency. The term "alien" is used in the act to mean any person who is not a born or fully naturalized citizen of the United States. Penalties for violations of the act are provided.

A new Joint Highway Act, set up in Senate Bill No. 578, becomes Chapter 1025, Statutes 1931. Senator Fellom was the author.

This act radically amends the present joint highway procedure. The act provides that all existing joint highway districts may continue to function under present procedure, or may elect to reorganize and come within the provisions of the new act.

Cooperative Highway Law

Assemblyman Biggar's Cooperative Highway Bill is now Chapter 463, Statutes 1931.

This act provides for cooperative construction or improvement of highways by the State and counties. It applies only to the improvement of an existent highway or the construction of a proposed highway in a county, supplying an extension of a forest highway system road or national park road *already built or under construction*, to connect with any highway which forms a part of the State highway system of California, provided that such connecting road shall not exceed 50 miles in length.

To Care for Markers

Assembly Bill No. 170 (Chapter 170, Statutes 1931) by Assemblyman West authorizes the California Highway Commission to keep in repair and to erect signs and markers upon or adjacent to State highways indicating landmarks of historical interest.

Discretionary, in Street Work

The claims of cities to street improvements for connecting highways, and the discretionary authority of the Highway Commission are set forth in Senate Bill No. 810 (Chapter 807, Statutes 1931) by Senator Breed.

This is an act reaffirming the authority of the Department of Public Works, *in its discretion*, to take over and construct links of State highway within municipalities. It also empowers the department to acquire rights of way for such purpose by purchase, condemnation or donation within municipal limits.

Grade Crossing Problem Study

The grade crossing problem received attention by Assembly Concurrent Resolution No. 23. It becomes Chapter 45, Statutes 1931. Assemblymen Biggar and Jones are joint authors.

This resolution directs the Department of Public Works and the Railroad Commission of the State of California to make a joint and complete study of the matter of grade crossings within this State and report their findings and recommendations to the 1933 Legislature.

Highway Beautification

Highway beautification is proposed by Assembly Concurrent Resolution No. 34 (Chapter 85, Statutes 1931). Assemblywoman Eleanor Miller, Assemblymen Biggar, Clouds-

(Continued on page 24.)

State Teachers College at San Jose

First to Get Modern Gymnasium

By RODERICK MILES, Architectural Designer.

THE San Jose State Teachers College is to be the first of California's normal schools to have complete gymnasium facilities for athletic training when they take occupancy, this fall, of the new men's gymnasium.

The justification of this building is by no means of recent birth, for "San Jose" has enjoyed for years the largest enrollment and the greatest number of men student-teachers in the State. Even at the time of construction of the women's gymnasium four years past the need was felt. But as the junior college and four-year courses were added, attracting a greater enrollment percentage of men, this need moved into the acutely imperative class. The remedy was not another building of limited purpose, such as the women's physical instruction program necessitated, but a structure with the potential ability to serve the entire school organization efficiently and completely by satisfactory answers to each item of a list of heterogeneous requirements demanded by existing conditions. The Division of Architecture accomplished these answers by the inclusion of features and arrangements in a plan to give an altogether multi-purpose design.

On the first consideration of the planning problem it was evident that because of the three major classifications of activities the building would take the form of three units so arranged as to be used either independently or conjointly.

The central unit contains the main gymnasium floor, 72 feet wide by 102 feet long, which makes possible a maximum size basketball court for intercollegiate matches or two minimum courts running across the width for practice, and is ample for athletic exercise classes of more than 150 students at one time. This is surrounded by bleacher type seats accommodating more than 1700 persons and along the sides are 300 more seats that can be

let out of the walls to floor level, raising the total audience to more than 2000. The arena is completed by a vaulted roof supported on steel trusses with 120 feet span that clear the playing floor 30 feet. There are four stair towers so planned that one or all may be used as entrances, and with the addition of four stairways from seat space to main floor, total eight exits. While the towers are circular the stairs are designed in straight runs with right angle turns at landings, but no corners or wall set backs which eliminate all possibility of congestion in case of panic.

The ground floor is three feet below the gymnasium floor and are those portions of the central unit covered by the arena seats.

Roderick Miles

These areas are occupied by the main men's dressing room which is equipped with lockers, shower, toilet, towel and first aid rooms and is directly connected to two of the lobbies, which in turn give into the main gymnasium floor. One of these lobbies also connects the men's dressing room with the foot bath which all swimmers must pass through to reach the pool. On the opposite side of the building, under the seat space, will be found two more lobbies, one of which connects the main gymnasium floor with the boxing and wrestling room.

This room is equipped and designed to be used as a team clubroom, and also by visiting basketball teams. A passage gives from one end of this room to the director's, secretary's, instructors' offices and to a fourth lobby, which in turn is connected to one of the aforementioned lobbies by a wide corridor that is on the same level with the main gymnasium floor and connects it to the apparatus gymnasium, which we will call the south unit of the building.

This south unit houses one large room 40 by 60 feet for instruction in the use of gymnasium apparatus and corrective physical exercises. The walls and floor are marked off

SOUND BODIES, SOUND MINDS—The thought behind construction of this attractive and serviceable gymnasium for the San Jose State Teachers College. This is a drawing of the exterior of the building which is 260 feet long.

into handball courts, et cetera. A room of ample size for the storage of apparatus not in use is provided at one end, and at the other end a pantry kitchen to provide refreshments when this gymnasium is being used for entertainment or at such times that the main gymnasium is being used for a pageant or ball.

The north unit is the natatorium with a swimming pool 35 feet wide by 70 feet long, making possible a 50-yard dash for six swimmers, by once doubling the length, which is the shortest dash now recognized in official intercollegiate meets. The pool is lined with light colored tile with lane and depth markers of a complementary color. A five-foot walk way borders the sides and the shallow end of pool, while at the deep end there is an area 14 feet wide giving the swimmers a chance for running dives and play space. Spectator seats are provided the full length of both sides of the pool, seating an audience of more than 450 persons. Under one tier of seats is the women's dressing room to be used by swimming classes only. It has the usual equipment of individual dressing stalls and showers, a towel room, hair dryer, etc. The only entrance is from the exterior directly, and its only access to the pool is through the foot bath.

The mechanical equipment of the pool, filters, sterilizer and pumps is taken care of in the space under the tier of seats on the opposite side. Then there is a small heater room for a water heater and storage tank.

Each unit of the building is heated separately by steam with individual controlled heaters which either provide fresh air or heat the air in the room by recirculation.

GROUND FLOOR PLAN

MUCH IN LITTLE—Everything, even the kitchen stove, seems to be provided in this new gymnasium.

Beautification of Highways Urged in Assembly Measure

(Continued from page 21)

ley, Kline, Head, Snyder, Easley, Quigley, Reid, Crowley, Greene, McDaniel, Patterson and Craig share in the authorship.

This resolution directs the Division of Highways of the Department of Public Works and the Division of Parks of the Department of Natural Resources to formulate a coordinated State-wide plan of highway beautification and report back to the 1933 Legislature.

These acts constitute the major results of late legislation affecting the Division of Highways. There are others of importance relating to the Water Resources Division deserving of a special review later.

ROAD PROBLEMS OF OTHER DAYS TOLD BY MR. STANTON

(Continued from page 13.)

invested in the manufacture of these easy and graceful machines of locomotion and this agitation for better roads is due more directly to the efforts of the wheelmen than to any other cause.

FORTY MILES A DAY

"Any machine which enables a man to travel with pleasure, without discomfort and practically without expense, 40 miles a day, is evidently one which has come to stay and the number of wheelmen will surely reach extraordinary proportions in the years to come."

I am not a prophet. The figures I've quoted in this article; the determination of Californians to open up every section of their State to travel and trade—these things make me fight shy of prophecy in this year of 1931.

You try.

GOLD FOR ROADS

Approximately \$1,500,000,000 is being spent for road-building in the forty-eight states during the current year on a program which calls for the improvement of around 60,000 miles of new highways, according to a report submitted to the twenty-ninth Annual Convention of the American Automobile Association held this month at West Baden, Indiana.

The report, based on a survey made by the A. A. A. National Good Roads Committee, showed that thirty-five states have enlarged their 1931 road programs, as compared with 1930, from both the standpoint of expenditures and mileage to be improved.

9 Patrol Officers Cited for Work; 10 Others Win Praise

NINE members of the California Highway Patrol were cited this month for services of an especially meritorious nature performed during May.

Ten others received honorable mention because their activity during the month resulted in the capture of 12 persons convicted of stealing automobiles.

Outstanding among commendatory acts was that of Officer J. N. Nobel of Ventura County who saved the life of a girl who had been carried out to sea, by giving her first aid and artificial respiration.

Officer Walter M. Walsh of Imperial County was commended for giving first aid and setting the broken arm of a person injured in an automobile accident.

Officer J. L. Randolph of Mendocino County was commended for taking to a physician a boy who had been shot.

Capt. E. J. Johnstone was cited for the arrest of a man wanted by the sheriff of his county on a felony warrant. It was necessary to disarm the man before he could be taken into custody.

Charles Golden and James Olsen, border checkers of Humboldt County, received mention because they removed a fallen tree from the highway. The work was done after midnight because the men were unable to locate members of the highway crew at that hour.

I. D. Christie, border checker of the same county, was commended for assisting a woman whose ankle had been sprained.

Officer Elmer King of Solano County was commended for the capture of a bad check passer wanted by the police, and Capt. G. B. Daley of Siskiyou County was commended for his cooperation after a burglary and shooting affray.

The officers given favorable mention for the capture of automobile thieves included Officers C. R. Avellar and H. T. Hendricks of Alameda County; Officers Harold McCoy and Dan Rentle of Ventura County; Capt. Fred J. Bly and Officer Sam Kirkpatrick of Humboldt County and Officer E. W. Crane of Santa Barbara County.

We are told that "this year's world output of motor cars will run into millions." We are glad of this hint, and shall try our best not to be one of those millions.

California Water Shortage Grave; Steps are Taken to Prevent Waste

By HARLOWE M. STAFFORD, Sacramento-San Joaquin Water Supervisor

IN the April and May issues of this Journal the water situation facing the State this season has been touched upon in the report of information as published in the monthly bulletins of Snow Survey and Precipitation Data of the Division of Water Resources.

Based upon the snow surveys at the end of March (beginning of the melting period) at some 160 snow courses throughout the major stream basins, and upon all available precipitation data to April 1st an estimate was made of the seasonal run-off in per cent of normal for each basin. Realization of the estimates was contingent to some extent of course upon the precipitation to occur subsequently to April 1st. At the end of May further snow surveys were made at "key courses" to show the extent of melting and the data thus derived together with the fact that another month of subnormal precipitation had gone by warranted a downward modification of the earlier run-off estimates.

FIGURES COMPARED

As estimated early in May, the 1931 seasonal stream flow in per cent of normal (mean of 40-year period, 1889-1929) is shown in the following tabulation which also shows the actual seasonal stream flow in per cent of normal for 1924, the previous driest year of record.

Stream	Seasonal stream flow in per cent of 40-year mean (1889-1929)	
	Estimated Actual	1931 1924
Sacramento River at Red Bluff	34	36
Feather River at Oroville	26	25
Yuba River at Smartsville	34	23
American River at Fair Oaks	27	18
Sacramento River at Sacramento (including tributaries)	30	30
Mokelumne River at Clements	36	22
Stanislaus River at Knights Ferry	32	19
Tuolumne River at Jacksonville	36	28
Merced River at Exchequer	34	23
San Joaquin River at Friant	26	22
San Joaquin River near Vernalis (including tributaries)	32	24
Combined Sacramento and San Joaquin Rivers (including tributaries)	30	28
Kings River at Piedra	24	21
Kaweah River at Three Rivers	26	23
Kern River near Bakersfield	30	28
Combined Kings, Kaweah and Kern Rivers	26	23

In the Sacramento Valley, next to the estimate of seasonal run-off, the rice acreage is the major factor to be taken into consideration in endeavoring to forecast what minimum stream flow is to be expected at lower river points. In the early April estimates preliminary data indicated an increase in the rice acreage of about 10 per cent over that of 1930, and based upon this assumption, certain minimum flows were predicted as well as the approximate degree of salinity to be expected at various points in the Sacramento-San Joaquin Delta due to the insufficiency of fresh water inflow to prevent the encroachment of salt water from San Francisco Bay.

By early May, however, an actual check of the rice under diversions from the Sacramento River and tributaries indicated considerably greater than 10 per

cent increase over 1930, and accordingly, the estimates of minimum flow and salinity were revised as shown in the following tabulations which give also the corresponding actual data for 1924.

Stream	Minimum flow in second-feet		Date
	Estimated 1931	Actual 1924	
Sacramento River at Red Bluff	2800	2810	July 6
Sacramento River at Colusa	900	1470	July 21
Sacramento River at Sacramento	800	705	July 17
Feather River at Nicolaus	50	0	Aug. 2
American River at Sacramento	30	0	Aug. 1
San Joaquin River near Vernalis	450	391	July 22
Combined Sacramento and San Joaquin River flow to Delta, minimum 10-day flow	1300	1280	July 10 to 19 incl.

Maximum salinity (high tide) in parts of chlorine per 100,000 parts of water

Delta stations	Estimated Actual 1931		Date
	1931	Salinity	
Oakland and Antioch Ferry	1350	1345	Aug. 28
Collinsville	1150	1150	Aug. 16
Antioch	1050	1080	Aug. 20
Emmaton	750	802	Aug. 6
Jersey	650	708	Aug. 30
Three Mile Slough Bridge	600	692	Aug. 30
Rio Vista	550	608	Aug. 12

These data indicate conditions for the 1931 season practically the same if not more serious than were those of 1924.

In the latter year it will be recalled that some 200 water users from all parts of the valley met in Sacramento late in January at the first Sacramento-San Joaquin River Problems Conference. They met to consider with State and Federal officials what could be done in the face of the extremely dry season which was indicated that year as early as January.

GOOD WORK DONE

As the result of that conference there was appointed to represent the water users, what is known as the Permanent Committee of the Sacramento-San Joaquin River Problems Conference. This committee was charged with the responsibility not only of taking every possible step to relieve the situation of 1924, but of seeking a permanent solution to these water difficulties of the valley.

The steps taken in 1924 are past history, but it should be remembered that through the splendid cooperation of all water users both in the delta and upriver, the committee, and the State and Federal agencies, the season was passed with a minimum of loss, with the greatest relief possible to the delta in its salinity encroachment, with restraint by the War Department in the strict enforcement of its authority to require that the river flow be maintained for navigation, and of tremendous importance, with active prosecution of the Delta vs. Upriver litigation, affecting practically every water user in the valley, held in abeyance.

TO PREVENT WASTE

It was in this year that the office of Water Supervisor was established to work for maximum conserva-

Water Conservation Campaign Begun

(Continued from page 25.)

tion and waste prevention and to commence the collection of records of all diversions, stream flow, return flow, salinity, and water requirements and uses throughout the Sacramento-San Joaquin territory. As one method of best utilizing existing water supplies and in lieu of any adjudication of water rights, it was considered that this collection of all data might furnish the basis ultimately for a mutual agreement as to water allocation and its distribution accordingly by a water master.

The Permanent Committee has actively continued its work in the succeeding subnormal seasons, and now with a repetition of 1924 before it in 1931 has taken action to proceed in cooperation with the State, represented by the Division of Water Resources, in much the same manner as in 1924. The Federal Government has a vital interest in the situation from the standpoint of navigation, and is, therefore, through the District Engineer, Corps of Engineers U. S. A., an active party to the cooperative effort.

WARNING TO USERS

As the result of an early meeting of the Permanent Committee with State and Federal officials on March 26, 1931, letters were sent out to all water users calling attention to the situation and recommending as the most effective step which could be taken at that time, the reduction and elimination as much as possible of crop plantings such as rice which would require large amounts of water in July and August. Letters with a similar recommendation were sent out also by the District Engineer, Corps of Engineers, United States War Department, and by the office of the California Rice Growers' Association. Junior permittees under appropriate water rights before the Division of Water Resources were also apprised of their inferior position in the event that the water shortage should require the cutting of diversions in the inverse order of priority.

There was a fair response to these letters, but in spite of every action, the check in early May indicated that the rice acreage being irrigated from the river and tributaries above Sacramento was approximately 26 per cent greater than the 1924 acreage and above Colusa, 34 per cent greater.

STREAM FLOW FIGURES

At a meeting on May 28th the facts presented to the committee showed the following stream flow:

	<i>Second-foot</i>
Sacramento River at Red Bluff.....	3300
Sacramento River at Butte City.....	2060
Sacramento River at Colusa.....	1870
Sacramento River at Knights Landing.....	1000
Feather River at Nicolaus.....	760
Sacramento River at Verona.....	1600
American River at Sacramento.....	950
Sacramento River at Sacramento.....	2300
San Joaquin River near Vernalis.....	400
Combined flow of Sacramento and San Joaquin Rivers to delta.....	*2700

* A lesser flow than that in 1924 at the corresponding time.

It was shown also that there was a draft by major projects only on the Sacramento River from Red Bluff to Sacramento of 3900 second-feet; that this was being diverted for approximately 75,000 acres of rice and 68,000 acres of general crops or a total of 143,000 acres; that water levels were such that on the section of river between Colusa and Knights Landing a drop of very little more would cause the intakes of two or more of the largest pumping plants to be out of water; that tests in the upper bay and lower delta area evidence a salinity encroachment considerably in advance of that in 1924 at the same period; and that without consideration of the delta requirements and the salinity problem, not only low levels but an actual shortage of water for upriver acreage appeared to be impending.

MOVE TO HALT WASTE

A comparison of river diversions with the waste and return water as measured in the various drainage channels indicated that there existed a waste possible of and demanding prevention, and in view of all facts as presented, the decision was reached that an intensive campaign for conservation and waste prevention should be immediately inaugurated.

Letters were sent out to all upriver water users presenting the absolute necessity for the prevention of waste and advising that the rule to be followed by the Water Supervisor would be to cut river diversions by the amount of wastage found under them. The responsibility for waste prevention by adequate provision for inspectors, water masters, etc., in their field organization was placed upon the larger projects and each of the major districts was asked to designate a Conservation Officer to patrol and represent his district in its cooperation with the State Water Supervisor and the Federal officials. Arrangements were made for the inspection of the use and regulation of water on the various projects by a representative of the War Department and the Water Supervisor in cooperation with the Conservation Officer.

These measures are being effected at this writing and the indications are for a ready and sincere response upon the part of the water users as a whole. It remains to be seen whether or not a strict prevention of waste without further and more drastic regulation, will be sufficient to meet the situation and avert conflict.

Done o'Clock

The time of day I do not tell,
As some do, by the clock,
Or by the distant chiming bells
Set on the steeple rack,
But by the progress that I see
In what I have to do.
It's either Done o'Clock to me
Or only Half-Past Through.

—John Kendrick Bangs.

A highway tree-planting program has been developed in Orange County calling for beautification of scenic roads and sections along other highways where there are no orchards.

Cato Speech Stirs Patrol Officers

Grizzly inspectors of the California Highway Patrol, many of them grey-haired veterans of police work in the State, went to school again this month. They spent nearly two weeks at the patrol school in the Fair Grounds attending classes, and they liked it. As proof, here follows an article by one of them, lauding the work done and the policies laid down.

By F. G. YODER, District Inspector and Senior Instructor

IF the enthusiasm displayed by the executive class of the California Highway Patrol, just adjourned at the State Fair Grounds, can be taken as a criterion or barometer of the future success of the patrol, that future success is assured.

We of the school have watched with considerable pride the growing confidence, not only of the public in the patrol, but of the patrol in itself. You may ask, "Why has not the patrol always had confidence in itself?" The answer is simple, and we believe you are entitled to it. They have not had complete confidence in themselves, because of dual control, because of questioned ratings, because of doubtful seniority, and because of the lack of a uniform interpretation of their duties and administration policy.

CATO MAKES HIT

The training school has, aside from instruction, done much to standardize control and responsibility through the contracting of various units throughout the State, but the big and final argument, the one that put the executive class on the "dotted line," occurred when Superintendent E. Raymond Cato stood before the class and said:

"Submit to me your ideas as to the best method of conducting the business of your district. Tell me your troubles, I want to share them with you. This is **OUR** organization, not **MY** organization. I want to make it the best law enforcement agency of its kind in the world. I can not do it, but **WE** can, and after we have agreed upon a policy that will give to the people of this State the utmost protection and service, go back to your districts, put into effect that policy and I will stand behind you."

GIVEN IMPETUS

No man has ever stood before the executives of this organization and sold them to themselves as did Superintendent Cato. No organ-

ization could expect a superior to say more, and with these thoughts and assurances fresh in their minds they set about the formulation of plans and policies that, when put into effect, will make the patrol one of the greatest agencies for the protection of life, limb and property and for the promotion of the motorists' welfare and happiness in the history of automobiles.

Governmental efficiency was very clearly explained to the executives by California's Director of the Department of Finance, the Hon. Rolland A. Vandegrift, and the motorist viewpoint was frankly discussed by Ivan E. Kelso, General Council of the Automobile Club of Southern California. Both pictures were well presented, understood and appreciated.

The department heads and district inspectors left with a spirit of unity and a desire to serve. They will carry "a message to Garcia." You Californians who have been accused of boosting things Californian, keep your eye on the California Highway Patrol.

MAKE ACTING CAPTAINS

E. Raymond Cato, Superintendent of the California Highway Patrol, announces that Otto Buer, former traffic officer of Orange County, and W. H. Rutherford, former traffic officer of Santa Barbara County, have been named acting captains in Inyo and Santa Barbara counties, respectively.

It was also announced that Officer Ernest Carr of Fresno County had been transferred temporarily to Mono County.

Wisconsin is now busily building overhead railroad grade crossings with two thoughts in mind—elimination of her most heavily traveled and dangerous grade crossings and opening up of employment. Twenty-six overhead crossings had been awarded for construction during May and bids have been received on seven more, and since then ten more have been advertised for bids. The Wisconsin program calls for the construction this year, with the cooperation of the railroads, of the 90 overheads which were to have been built in 1931, 1932 and 1933.

Millions Turned Into Trade Channels As Governor's Work Program Speeds Up

GOVERNOR ROLPH'S program for speeding up public improvements as a measure of alleviation for unemployment, is well under way and with gratifying results.

The State Department of Public Works is fully up on the schedule of activities assigned to it. The figures covering the first six months' progress are substantial evidence of accomplishment.

Employment has been provided for thousands of citizens. Millions of dollars have been turned into the channels of trade. The improvements have been well planned. They are being carried forward under careful supervision.

MANY MEN EMPLOYED

The Highway Division makes an excellent showing. The following figures speak for themselves:

Showing, as of June 10th, the number of men *exclusive of staff and office force* employed directly or by contractors on improvement work by the Division of Highways, State Department of Public Works:

District	Men employed	
	Day labor	Contract labor
1-----	507-----	225-----
2-----	438-----	314-----
3-----	276-----	274-----
4-----	405-----	262-----
5-----	228-----	289-----
6-----	297-----	66-----
7-----	599-----	410-----
8-----	220-----	602-----
9-----	113-----	20-----
10-----	247-----	169-----
Bridges-----	-----	300-----
Total-----	3330-----	2931-----

Total day labor and contract-----	6,261
Total of contracts under way as of June 1-----	\$16,117,000
Total day labor (not including penal)-----	2,237,000
Total work to be awarded next three months-----	8,150,000
Total maintenance costs for 1931-----	6,502,170

The minimum cost of labor on this class of work is 70 per cent of the total. Of the remaining 30 per cent (for materials, etc.) labor takes an equal share.

These figures do not include any staff employees nor any labor from the penal camps.

ACCELERATED PROGRAM

The Division of Architecture is carrying forward an accelerated program of construction that is at this date giving employment to 2042 men. The contracted outlay calls for \$5,868,000. About 100 projects are represented in the activities under way.

The division has a program for the next six months that will add about 80 per cent to the total of expenditures and to the number of men employed. Sixty projects, of the aggregate cost of \$4,751,000 and providing employment for 1650 men, will be launched. The average period of employment is 10 months. In other words, this division has a \$10,000,000 program for the year, and it is being advanced on schedule.

The list of projects for the next six months is about ready for announcement. Meanwhile, the list of those under way will be of much interest.

Institution	Project	Amount
Agricultural Park-----	Live stock building-----	\$140,000
Calif. Polytech. School-----	Dormitory-----	40,000
Agnews Hospital-----	Farm unit No. 2-----	355,000
San Francisco State Bldg.-----	Completion-----	210,000
Whittier School-----	Cottage for boys-----	45,000

THE START—A long trek ahead in Del Norte County. Clearing operations, these, for a new highway but a pretty bumpy spot right now.

DOWN THE STRETCH—But no stretch of the imagination to picture the top scene as looking like this one pronto. This is a finishing machine at work south of Fresno. And on the right we see how the State keeps up the good work. The man with the funny looking dingbat is plugging up small holes on an otherwise perfectly good highway.

Bridge Links Entire Pacific Coast

THE entire Pacific coast, from British Columbia to the Mexican line, joined hands on May 23 in celebrating opening and completion of the new bridge spanning the Rogue River, northern terminus of the Redwood Empire, at Grants Pass. The celebration was sponsored by the Redwood Empire Association in cooperation with the Grants Pass Chamber of Commerce and the Oregon Cavemen, Inc.

The bridge is a \$125,000 concrete structure, requiring 11 months to construct.

STRATEGIC POINT

High Federal, State, provincial, county and city officials were in attendance, together with executives of large and small community and

Garrison, Director of California State Department of Public Works, officially representing Governor Rolph of California; George W. Joseph, Jr., officially representing Governor Julius L. Meier of Oregon; C. H. Purcell, California State Highway Engineer; Edward Morris, President of the Redwood Empire Association; O. S. Blanchard, Vice President of the Redwood Empire Association and master of ceremonies; and Maj. Gen. Smedley Butler, and other dignitaries.

GREATER TRAVEL

Preceding the dedication ceremonies and celebration features, there took place in Grants Pass Friday evening, May 22d, and at Saturday noon, May 23d, a speaking pro-

HE'S A CAVEMAN—It's General Butler of the Marines in an unusual pose. The officer is being initiated as a caveman or what have you by a band of fierce looking warriors at ceremonies attending dedication of the Rogue River Bridge.

district advertising and publicity institutions, chambers of commerce, transportation executives, newspaper publishers, and others from California, Oregon, Washington and British Columbia.

The bridge was officially dedicated to "Greater Pacific coast travel," by virtue of its strategic location at a main distributing point for Pacific coast travel.

The "barrier"—in the form of a wide ribbon—was clipped by H. B. Van Dusen of Portland, Chairman of the Oregon Highway Commission, surrounded by Col. Walter E.

gram, in which presidents, directors and managers of major community and district advertising institutions, also chambers of commerce and auto club executives, presented ideas about greater interchange of travel on the Pacific coast, which movement was initiated and sponsored by the Redwood Empire Association.

Grants Pass was the objective for huge delegations from various Pacific coast points, coming in by caravans numbering 50 to 60 cars each, by airplane, by special train, and in the form of individual parties.

A THING OF BEAUTY and a joy forever—The Rogue River Bridge, northern terminus of the Redwood Empire at Grants Pass. The structure built at a cost of \$125,000 was opened May 23d with ceremonies attended by a large delegation from Pacific coast points.

“Don’t Speed” Signs Along Roads Urged To Prevent Crashes

Signs along open stretches of State highway, where the temptation to speed is greatest, warning the motorist that the maximum speed limit must not be exceeded, are being considered by State highway officials as a means of reducing the automobile’s toll of death and injured.

Believing that the major part of all fatal accidents may be traced to excessive speed, E. Raymond Cato, Superintendent of the California Highway Patrol, has made the suggestion for such signs in a letter to T. H. Dennis, Maintenance Engineer of the Division of Highways.

Conferences are being arranged between Cato, Dennis, Col. W. E. Garrison, Director of Public Works, and other highway officials to discuss the feasibility of the plan.

The new maximum speed limit of 45 miles an hour becomes effective August 14. Cato is determined that this shall be the limit in fact as well as in name and has so instructed his officers.

In going into the matter, Cato has discovered there are plenty of signs all over the State designating the maximum speed limits in business and resident districts, but that there are no signs whatever out on the open highway where many of the fatal accidents occur.

The patrol superintendent suggests in his letter that such signs be displayed at convenient points about the State calling attention to the maximum speed limit that will prevail when the new law goes into effect.

Road Builders Meet In Detroit in 1932 for Convention and Show

The twenty-ninth annual convention and road show of the American Builders’ Association will be held in Detroit, January 9 to 15, 1932.

Decision as to the location of the road show has just been made by association officers after consideration of the advantages of several large cities that made strong efforts to get the road show.

The Detroit Airport Building will be used for both the convention and the road show. All exhibit space is on the ground floor and the huge doors make possible the setting of the largest equipment without difficulty.

A new plan of housing delegates will be followed this year. An effort will be made to house all road builders whose interests are alike in the same hotel, city people to one hotel, county in another, Pan-American in still another and so on through the list. This plan will facilitate locating people at their hotels.

Headquarters hotels will be the Statler and the Book-Cadillac. Division headquarters will be maintained at these hotels.

All classes and types of equipment and material for the construction, maintenance and operation of streets and highways will be on display.

Hardly more than a score of toll roads still exist in the United States, all of them being privately owned. The total length is estimated at less than 150 miles, according to the Bureau of Public Roads, U. S. Department of Agriculture, as contrasted to the 3,000,000 miles of the public-road system. Thirty-five states have no toll roads of any kind.

Highway Bids and Awards for May

ALPINE COUNTY—Between Hangmans Bridge and the State Highway Camp. About 10.6 miles to be oil treated. Dist. X, Rt. 23, Sec. C, D and E, Pacific Tank Lines, Inc., Los Angeles, \$3,164; U. B. Lee, San Leandro, \$2,950; D. McDonald, Sacramento, \$3,181. Contract awarded to Basalt Rock Company, Inc., Napa, \$2,822.

ALPINE, CALAVERAS AND TUOLUMNE COUNTIES—Between Long Barn and the foot of Sonora Pass grade, about 25 miles; between Big Trees and Lake Alpine, about 19.5 miles, oiling. Dist. X, Rts. 13 and 24, Sec. E F G & H, F G & A. D. McDonald, Sacramento, \$12,816. Contract awarded to Basalt Rock Company, Inc., Napa, \$12,525.

EL DORADO COUNTY—Between Placerville and Railroad Crossing. About 1.7 miles to be graded and surfaced with untreated crushed gravel or stone. Dist. 111, Rt. 11, Sec. D, Fred W. Nighbert, Bakersfield, \$68,041; Force Construction Co., Piedmont, \$61,786; Tiffany-McReynolds-Tiffany, San Jose, \$74,686; Kennedy-Bayes Construction Co., Biggs, \$73,312. Contract awarded to Finnell Company, Inc., Sacramento, \$52,593.

KERN COUNTY—Oiling between Canebrake Creek and junctions with Routes 57 and 23, 11.37 miles. Dist. IX, Rt. 57, Sec. K & L, F. W. Nighbert, Bakersfield, \$4,467; Gilmore Oil Co., Los Angeles, \$3,323; California Road Oil Service Co., \$3,720. Contract awarded to Pacific Tank Line, Los Angeles, \$3,100.

LASEN AND MODOC COUNTIES—Between Hillside and Rush Creek, 24.5 miles to be surfaced with bituminous treated crushed gravel or stone. Dist. II, Rt. 28, Sec. A B A, Granite Construction Co., Watsonville, \$135,834; Fred W. Nighbert, Bakersfield, \$148,796; Hein Bros. & Basalt Rock Co., Napa, \$136,873; A. Teichert & Son, Inc., Sacramento, \$138,118. Contract awarded to Hemstreet & Bell, Marysville, \$129,646.

LOS ANGELES COUNTY—Between Santa Clara River and 0.6 mile north of Castaic School, 6.3 miles, oiling shoulders. Dist. VII, Rt. 4, Sec. A & B, Wm. P. Andrews Oil Co., Long Beach, \$1,466; The Square Oil Company, Inc., Los Angeles, \$1,533; The Petrol Corporation, Los Angeles, \$1,734; Pacific Tank Lines, Inc., Los Angeles, \$1,833; California Road Oil Service Company, Ltd., Wilmington, \$1,931; Gilmore Oil Company, Ltd., Los Angeles, \$2,227. Contract awarded to California Crane Service, Los Angeles, \$1,339.

LOS ANGELES AND ORANGE COUNTIES—Between San Gabriel River and Corona del Mar, 15.4 miles, oiling shoulders. Dist. VII, Rt. 60, Sec. E A & B, California Crane Service, Los Angeles, \$6,336; The Petrol Corporation, Los Angeles, \$6,638; Leonard C. Pulley, Long Beach, \$7,060; California Road Oil Service Co., Wilmington, \$7,483; Gilmore Oil Company, Ltd., Los Angeles, \$8,026. Contract awarded to Square Oil Company, Inc., Los Angeles, \$5,310.

LOS ANGELES AND VENTURA COUNTIES—Between Calabasas and top of Conejo Grade, 21.2 miles; between Camarillo and Telegraph Road, Ventura, 13.2 miles, oiling shoulders. Dist. VII, Rt. 2, Sec. C A B & C, C. A. Cook & J. J. Clark, Santa Barbara, \$2,487; California Crane Service, Los

Angeles, \$2,487; The Petrol Corporation, Los Angeles, \$2,587; Pacific Tank Lines, Inc., Los Angeles, \$2,587; Square Oil Company, Inc., Los Angeles, \$2,646; Gilmore Oil Company, Ltd., Los Angeles, \$3,164. Contract awarded to California Road Oil Service Company, Ltd., Wilmington, \$2,467.

LOS ANGELES AND VENTURA COUNTIES—Between Santa Monica and Calleguas Creek. Oiling shoulders, 31.6 miles. Dist. VII, Rt. 60, Sec. A and B, Square Oil Company, Inc., Los Angeles, \$8,095; California Crane Service, Los Angeles, \$9,825; California Road Oil Service Co., Wilmington, \$10,060; The Petrol Corporation, Los Angeles, \$11,004; Pacific Tank Lines, Inc., Los Angeles, \$11,161; Gilmore Oil Company, Ltd., Los Angeles, \$12,654. Contract awarded to Wm. P. Andrews Oil Co., Long Beach, \$8,017.

MODOC COUNTY—Between Rush Creek and Hot Creek, 23.5 miles to be surfaced with bituminous macadam treated crushed gravel or stone surfacing. Dist. II, Rt. 28, Sec. A and B, Finnell Company, Inc., Sacramento, \$157,260; Granite Construction Co., Ltd., Watsonville, \$135,600; U. B. Lee, San Leandro, \$142,435; F. W. Nighbert, Bakersfield, \$147,200; A. Teichert & Son, Inc., Sacramento, \$143,310; Hemstreet & Bell, Marysville, \$136,415. Contract awarded to Hartman Construction Co., Bakersfield, \$134,875.

MONO COUNTY—1.9 miles south of Coleville to 1.2 miles south of Coleville, grading. Dist. IX, Rt. 23, Sec. K, D. C. Follis, Compton, \$6,022; Robinson-Roberts Co., Los Angeles, \$6,484. Contract awarded to Kennedy-Bayles Construction Co., Biggs, \$5,290.

MONTEREY COUNTY—Between Chualar and Salinas, about 10.1 miles to be oiled 8 feet each side of existing pavement. Dist. V, Rt. 2, Sec. B, C. A. Ladeveze, South Gate, \$18,248; Fred W. Nighbert, Bakersfield, \$17,305; Cornwall Construction Co., Santa Barbara, \$17,294; W. A. Dontanville, Salinas, \$19,371; J. F. Knapp, Oakland, \$15,497; Granite Construction Company, Ltd., Watsonville, \$16,508; U. B. Lee, San Leandro, \$19,203. Contract awarded to C. W. Wood, Stockton, \$15,104.

MONTEREY COUNTY—Between San Lucas and 0.9 mile east of San Lorenzo Creek, about 14 miles to be seal coated. Dist. V, Rt. 10, Sec. A & B, Roselip Products Co., San Luis Obispo, \$8,056; Cornwall Construction Co., Santa Barbara, \$8,990; Fred W. Nighbert, Bakersfield, \$11,950. Contract awarded to Granite Construction Co., Watsonville, \$7,894.

MONTEREY COUNTY—Between San Lucas and a point 3.5 miles north, oiling shoulders. Dist. V, Rt. 2, Sec. F & G, Fred W. Nighbert, Bakersfield, \$5,616; Cornwall Construction Co., Santa Barbara, \$4,976; Roselip Products Co., San Luis Obispo, \$5,460; W. A. Dontanville, Salinas, \$5,850; Tiffany-McReynolds-Tiffany, San Jose, \$7,722. Contract awarded to Granite Construction Company, Ltd., Watsonville, \$4,976.

NEVADA COUNTY—Between Donner Lake and one mile west of Truckee, placing underdrains at various locations. Dist. III, Rt. 37, Sec. D, Martin Murphy, Berkeley, \$8,970. Contract awarded to Harms Bros., Galt, \$5,103.

Work Covers All Sections of State

ORANGE COUNTY—Between San Mateo Creek and Serra. About 5.5 miles to be graded and paved with Portland cement concrete and asphaltic concrete. Dist. VII, Rt. 2, Sec. A. C. G. Willis & Sons, Inc., Los Angeles, \$309,631; Southwest Paving Co., Los Angeles, \$298,087; Ed. Johnson & Sons, Los Angeles, \$339,260; Geo. H. Oswald, Los Angeles, \$307,999; David H. Ryan, San Diego, \$294,083; Gibbons & Reed Co., Burbank, \$338,867; O. A. Lindberg, Stockton, \$345,883; Macco Construction Co., Clearwater, \$356,571; Daley Corporation, San Diego, \$367,912; Griffith Company, Los Angeles, \$324,244. Contract awarded to Jahn & Bressi Construction Co., Inc., Los Angeles, \$282,107.

ORANGE COUNTY—Reconstructing and widening bridge across Santa Ana River 2 miles north of Newport Beach. Dist. VII, Rt. 60, Sec. A, J. S. Metzger & Son, Los Angeles, \$69,217; R. R. Bishop, Long Beach, \$71,718; Owl Truck Company, Inc., Compton, \$70,763; Merritt-Chapman & Scott Corporation, San Pedro, \$64,298; Herbert M. Baruch Corporation, Ltd., Los Angeles, \$72,549; Oberg Bros., Los Angeles, \$64,840. Contract awarded to Nead Construction Co., Wilmington, \$59,947.

PLACER COUNTY—Between Wise Power House and Auburn. About 1.4 miles to be graded and paved with Portland cement concrete. Dist. III, Rt. 17, Sec. B, Clark & Henery Construction Co., San Francisco, \$182,063; C. W. Wood, Stockton, \$174,699; Granfield, Farrar & Carlin, San Francisco, \$171,507; Gist & Bell, Arcadia, \$209,886; W. H. Hauser, Oakland, \$161,787; George Pollock Co., Sacramento, \$184,707; McCray Co., Los Angeles, \$195,121. Contract awarded to Fredrickson & Watson Construction Co., and Fredrickson Bros., Oakland, \$147,585.

SACRAMENTO COUNTY—Between Brighton and Mills, 7.2 miles grading and paving with Portland cement concrete. Dist. III, Rt. 11, Sec. B, Clark & Henery, San Francisco, \$222,076; C. W. Wood, Stockton, \$216,396; N. M. Ball, Porterville, \$200,534; Hanrahan Co., San Francisco, \$202,060; A. Teichert & Son, Sacramento, \$241,561; M. J. Bevanda, Stockton, \$222,187. Contract awarded to Basich Brothers, Torrance, \$199,365.

SAN BERNARDINO COUNTY—Between Fawskin and County Road to Pine Knot. About 6.4 miles, heavy fuel oil to be furnished and spread. Dist. VIII, Rt. 43, Sec. D, Pacific Tank Lines, Inc., Los Angeles, \$1,901; California Road Oil Service Co., Wilmington, \$2,209. Contract awarded to Gilmore Oil Company, Ltd., Los Angeles, \$1,608.

SAN BERNARDINO COUNTY—Between Kern County line and Barstow, 37.1 miles to be oiled. Dist. VIII, Rt. 58, Sec. A B C & D, Pacific Tank Lines, Inc., Los Angeles, \$7,369; California Road Oil Service Co., Wilmington, \$7,752; Gilmore Oil Company, Ltd., Los Angeles, \$7,098; California Crane Service, Los Angeles, \$7,472; Petrol Corporation, Los Angeles, \$7,121. Contract awarded to Square Oil Company, Inc., Los Angeles, \$6,257.

SAN DIEGO AND ORANGE COUNTIES—Between San Diego and San Mateo Flat and between Galivan and Irvine, oiling shoulders, 32.2 miles. Dist. VII, Rt. 2, Sec. A B C D B, The Petrol Corporation, Los Angeles, \$6,012; California Road Oil Service Co.,

Wilmington, \$6,380; Pacific Tank Lines, Inc., Los Angeles, \$6,701; Orange County Refining Co., Los Angeles, \$6,747; Gilmore Oil Company, Ltd., Los Angeles, \$6,976. Contract awarded to Square Oil Company, Inc., Los Angeles, \$5,186.

SAN JOAQUIN COUNTY—Between French Camp and Stockton, 3.5 miles, to be graded and surfaced with bituminous treated gravel. Dist. X, Rt. 5, Sec. B, Willard & Biasotti, Stockton, \$46,855; Force Construction Co., Piedmont, \$50,512; Fred W. Nighbert, Bakersfield, \$55,390; Valley Paving and Construction Co., Fresno, \$44,830; Clark & Henery Construction Co., San Francisco, \$51,813. Contract awarded to C. W. Wood, Stockton, \$44,660.

SAN LUIS OBISPO COUNTY—Between San Simeon and Piedras Blancas Lighthouse, about 6.2 miles to be oiled. Dist. V, Rt. 56, Sec. A, Tiffany-McKeynolds-Tiffany, San Jose, \$3,120; Granite Construction Company, Ltd., Watsonville, \$3,142; Brisco & Son, Arroyo Grande, \$1,971; Roselip Products Co., San Luis Obispo, \$1,981; Bradley Truck Co., Santa Maria, \$1,620. Contract awarded to W. A. Dontanville, Salinas, \$1,600.

SANTA BARBARA COUNTY—Reconstructing floor of Santa Ynez River Bridge, about 1 mile south of Buellton. Dist. V, Rt. 2, Sec. D, Oberg Bros., Los Angeles, \$24,639; Gist & Bell, Arcadia, \$19,718; Johnson Construction Co., Los Angeles, \$23,649. Contract awarded to Neves & Harp, Santa Clara, \$18,099.

SANTA BARBARA COUNTY—Between Guckhorn Creek and second crossing of Cuyama River, about 15.5 miles, to be surfaced with asphaltic treated screenings. Dist. V, Rt. 57, Sec. B, Santa Maria Construction Co., Santa Maria, \$12,375; Lang Transportation Co., \$16,160. Contract awarded to J. F. Knapp, Oakland, \$11,782.

SANTA CRUZ COUNTY—Between 1 mile north of Santa Cruz and Santa Cruz, to be graded and surfaced with crusher run base and paved with bituminous macadam. Dist. IV, Rt. 5, Sec. A, W. H. Hauser, Oakland, \$64,073; Healy-Tibbitts Construction Co., San Francisco, \$48,486; Granfield, Farrar & Carlin, San Francisco, \$50,558; J. L. Conner, Monterey, \$43,737; Granite Construction Company, Ltd., Watsonville, \$42,789; Couteaux Construction Co., San Francisco, \$48,539; Irving L. Ryder, San Jose, \$48,485; Ariss-Knapp Co., Oakland, \$52,999. Contract awarded to C. W. Wood, Stockton, \$42,084.

TRINITY COUNTY—Bridge across North Fork of Trinity River near Helena, one 150-foot through steel truss span and two 47-foot, 2-inch concrete girder spans on concrete piers and abutments. Dist. II, Rt. 20, Sec. E & F, F. J. Maurer & Son, Inc., Eureka, \$43,658; A. Young, Yreka, \$50,674; Ralph McLeran & Co., San Francisco, \$43,483; A. T. Howe, Santa Rosa, \$42,581; R. B. McKenzie, Red Bluff, \$45,700. Contract awarded to F. H. Nielson, Orland, \$39,089.

TRINITY COUNTY—Approaches to Browns Valley Creek and Trinity River Bridges. About 0.5 mile to be graded and surfaced with untreated crushed gravel or stone. Dist. II, Rt. 20, Sec. A, A. Young, Yreka, \$21,126; Chas. N. Chittenden, Napa, \$21,852.

Quick Thinking and Officers' Skill Save Lives of Two Trapped Fishermen

QUICK work on the part of two California Highway Patrolmen and the skill of a Highway Maintenance Department Foreman, saved the lives of two fishermen a few weeks ago and won the commendation of the citizens of Ventura County.

Officers R. J. Parr and Joe Nobel and Foreman Glenn Cheeseman were the principals in the thrilling rescue of Jack Eaton of Santa Monica and Byron Woodford, Venice, caught by high tide and a heavy sea on a rock 300 feet off Deer Canyon along the Roosevelt Highway.

As a result of the near tragedy, Thornhill Broome, owner of the property, has placed ropes and life savers at strategic points on his land for use of the highway patrol in the event of another emergency. The following story from the Los Angeles Times gives details of the rescue:

Two men, Jack Eaton, 31 years of age, of 18 Grant street, Santa Monica, and Byron Woodford, 31, of 811 Crestmore place, Venice, owe their lives to the California Highway Patrol as a result of a spectacular and timely rescue which occurred on the Roosevelt Coast Highway about 15 miles south of Oxnard.

A crowd of several hundred excited motorists lined the edge of the highway that skirts the rugged coast to watch State Officers Bob Parr and Joe Nobel rescue the two men from what would have been a certain watery grave.

Eaton and Woodford, with their wives, were fishing from the rocks earlier in the day. The two women retreated to the highway far above the surf at noon. The two men, intent upon catching more fish, ventured out to the end of a 300-foot strip of rock. By 3 o'clock the tide, unnoticed by anyone, had risen completely surrounding the two fishermen.

Officers Parr and Nobel, patrolling the highway, noticed the two men offshore, apparently unaware of their danger. The open ocean lay before them while a pounding surf beat on the rocks behind them. They were fishing from a high spot on the rocks not more than six feet in circumference.

The officers secured a long rope from the State Highway Maintenance Camp at Sycamore Canyon, several miles away, and with the assistance of Foreman Glenn Cheeseman, started the rescue. It was not until then that Eaton and Woodford realized the seriousness of the situation.

Abandoning their fish and lines, they tried to catch the life line. Fourteen attempts were made before Eaton was pulled from the rock to safety. The water by this time had reached the top of the rock.

Woodford was washed from the spot by mounting waves almost the instant he finally caught the weight at the end of the rope that was flung to him by one of the officers who was perched on a nearby ledge. Although badly tossed about by the heavy seas he managed to hang on and was dragged to safety.

An hour later the rock on which the men had been fishing was under water with high waves pounding on all sides.

Had they not been spotted by the two officers in time they undoubtedly would have soon been

washed away and dashed to death. Last year seven people lost their lives in similar manner along this coast, and several at this very spot.

THREE MUSKETEERS—They look happy and they should for they are the lads whose quick thinking and skill saved the lives of two anglers. From left to right—Joe Nobel, Glenn Cheeseman and R. J. Parr.

HIGHWAY CONSTRUCTION WORK AWARDED DURING PAST MONTH

(Continued from page 33.)

Contract awarded to H. H. Boomer, San Francisco, \$19,800.

TULARE COUNTY—Between Goshen and Kingsburg, constructing 4 new bridges and widening 2 bridges. Dist. VI, Rt. 1, Sec. E, Fredrickson and Watson, Oakland, \$40,767; Thermotte Construction Co., San Jose, \$37,209; Geo. J. Ulrich Construction Co., Modesto, \$37,294; Oberg Bros., Los Angeles, \$46,085; L. C. Clark & C. E. Doughty, Visalia, \$36,322. Contract awarded to J. S. Metzger & Son, Los Angeles, \$36,290.

YOLO AND COLUSA COUNTIES—Between Dunnigan and 1 mile south of Arbuckle, 8.7 miles, rock borders. Dist. 11, Rt. 7, Sec. C A, A. Teichert & Son, Sacramento, \$24,495. Contract awarded to Fred W. Nighbert, Bakersfield, \$24,140.

WHERE LIVES WERE SAVED—Above are the rocks at low tide, number 1 showing the spot at which two men were fishing. Number 2 the farthest rock out on the point at Deer Canyon, Ventura County. Below is the same scene when the tide came in and the sea whipped up. The fishermen were trapped at point 4, unable to get ashore. Number 5 is the farthest rock, or rather where it was located at low tide. Officers Nobel and Parr with Highway Foreman Cheeseman, threw a rope from point 3 to the men, a distance of 300 feet, and saved them.

May Water Applications and Permits

Applications for permits to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of May, 1931.

SIERRA COUNTY—Application 6948. William F. Biekel, c/o James D. Stewart, 138 Commercial St., Auburn, Calif., for 25 c.f.s. from unnamed springs and Mill Creek tributary to Little Canyon Creek, thence Canyon Creek and South Fork of Yuba River. To be diverted in Sec. 32, T. 21 N., R. 10 E., M. D. B. and M., for mining purposes.

MODOC & LASSEN COUNTIES—Application 6949. Big Valley Water Users Association by Peter Gerig and L. W. Kramer, Trustee, Bieber, Calif., for 500 c.f.s. from drainage, seepage and return water in Pit River from Hot Springs Valley Irrigation District tributary to Sacramento River. To be diverted everywhere along Pit River from the south line of Sec. 24, T. 40 N., R. 7 E., M. D. B. and M., to the west line of Sec. 14, T. 37 N., R. 7 E., M. D. E. and M., for irrigation and stock watering purposes (10,500 acres).

PLUMAS COUNTY—Application 6950. C. E. McGrath and R. L. Morgan, c/o C. E. McGrath, Greenville, Calif., for 2 c.f.s. from Echo Creek tributary to Rush Creek. To be diverted in Sec. 35, T. 26 N., R. 8 E., M. D. B. and M., for mining and domestic purposes.

LOS ANGELES COUNTY—Application 6951. Dr. Joseph A. Polia, 269 S. Lake St., at W. Miramar, Los Angeles, Calif., for 0.0001 c.f.s. or approximately 65 g.p.d. from an unnamed spring tributary to Mojave Desert. To be diverted in Sec. 1, T. 4 N., R. 10 W., S. B. B. and M., for irrigation and domestic purposes (1 acre).

SAN DIEGO COUNTY—Application 6952. Alice R. Hale Gaudin, Ramona, Calif., for 1 c.f.s. from an unnamed spring tributary to Dry Wash. To be diverted in Sec. 35, T. 43 S., R. 1 W., S. B. B. and M., for irrigation and domestic purposes (5 acres). Estimated cost \$500.

TRINITY COUNTY—Application 6953. L. E. Wheeler and W. W. McCumber, Burnt Ranch, Trinity County, Calif., for 1.0 c.f.s. from South Fork of East Fork of New River tributary to Trinity River. To be diverted in Sec. 7, T. 36 N., R. 12 W., M. D. B. and M., for mining purposes. Estimated cost \$700.

HUMBOLDT COUNTY—Application 6954. Peter H. Brandt, Fortuna, Calif., for 0.53 c.f.s. from Strong Creek tributary to Ed River. To be diverted in Sec. 2, T. 2 N., R. 1 W., H. B. and M., for irrigation purposes (15 acres). Estimated cost \$500.

SAN BERNARDINO COUNTY—Application 6955. William E. Wilson, 435 E. 19th St., Long Beach, Calif., for 0.1 c.f.s. from Fenner Springs (underground) tributary to Dry Sandy Wash. To be diverted in Sec. 28, T. 8 N., R. 18 E., S. B. B. and M., for mining and domestic purposes. Estimated cost \$3,760.

SAN BERNARDINO COUNTY—Application 6956. Wayne Courtney, 1318 W. 94th St., Los Angeles, Calif., for 8 c.f.s. from Arrastra Creek tributary to Lucerne Valley. To be diverted in Sec. 22, T. 3 N., R. 2 E., S. B. B. and M., for irrigation and domestic purposes.

SAN BERNARDINO COUNTY—Application 6957. Wayne Courtney, 1318 W. 94th St., Los Angeles, Calif., for 10 c.f.s., 7240 ac. ft. per annum from Baldwin Lake tributary to Lucerne Valley. To be diverted in Sec. 7, T. 2 N., R. 2 E., S. B. B. and M., for irrigation and domestic purposes (2000 acres). Estimated cost \$75,000.

SAN BERNARDINO COUNTY—Application 6958. Wayne Courtney, 1318 W. 94th St., Los Angeles, Calif., for 6 c.f.s. from Rattlesnake Canyon tributary to Lucerne Valley. To be diverted in Sec. 18, T. 3 N., R. 3 E., S. B. B. and M., for irrigation and domestic purposes.

SANTA CRUZ COUNTY—Application 6959. Maurice Bernstein, c/o G. A. Elliott, Eng., 1103-4 Merchants Exchange Bldg., San Francisco, Calif., for 1/6 c.f.s. from San Lorenzo River tributary to Pacific Ocean. To be diverted in Sec. 1, T. 9 S., R. 3 W., M. D. B. and M., for irrigation and domestic purposes (10 acres). Estimated cost \$3,000.

LAKE COUNTY—Application 6960. Oscar Terry

Boardman, Lakeport, Calif., for 1.0 c.f.s. from Scotts Creek tributary to Clear Lake. To be diverted in Sec. 12, T. 15 N., R. 10 W., M. D. B. and M., for irrigation purposes (32 acres). Estimated cost \$500.

MONO COUNTY—Application 6961. Rex M. Foster, Box 122, Bridgeport, Calif., for 0.110 c.f.s. from spring tributary to Green River. To be diverted in Sec. 23, T. 3 N., R. 24 E., M. D. B. and M., for power purposes (42 h.p.). Estimated cost \$25.

SAN BERNARDINO COUNTY—Application 6962. Gaylord, Lauder milk & Yaeckel, c/o G. B. Gaylord, P. O. Box 146, Claremont, Calif., for 0.05 c.f.s. from Cascade Canyon tributary to San Antonio Canyon. To be diverted in Sec. 31, T. 2 N., R. 7 W., S. B. B. and M., for mining purposes. Estimated cost \$100.

SAN JOAQUIN COUNTY—Application 6963. C. H. Wallace and R. A. Caswell, Rt. 4, Box 304, Modesto, Calif., for 8.94 c.f.s. from Stanislaus River tributary to San Joaquin River. To be diverted in Sec. 3, T. 3 S., R. 7 E., M. D. B. and M., for irrigation and domestic purposes (715 acres). Estimated cost \$4,000.

SAN BERNARDINO COUNTY—Application 6964. Robert M. Stapp, Lake Arrowhead, Calif., for 0.008 c.f.s. from unnamed spring tributary to Burnt Mill and Little Bear Creek. To be diverted in Sec. 28, T. 2 N., R. 3 W., S. B. B. and M., for recreational and domestic purposes. Estimated cost \$350.

SAN BERNARDINO COUNTY—Application 6965. Ralph P. Morrill, 4213 Halldale Ave., Los Angeles, Calif., for 400 g.p.d. from unnamed spring tributary to Lake Arrowhead. To be diverted in Sec. 20, T. 2 N., R. 3 W., S. B. B. and M., for domestic purposes. Estimated cost \$20.

SIERRA COUNTY—Application 6966. W. S. Coffin, Upland, Calif., for 3 c.f.s. from Rock Creek tributary to North Fork of Yuba River. To be diverted in Sec. 10, T. 19 N., R. 10 E., M. D. B. and M., for mining purposes. Estimated cost \$600.

YUBA COUNTY—Application 6967. George W. Lischer, Comptonville, Yuba County, Calif., for 25 c.f.s. from Willow Creek tributary to North Fork of Yuba River. To be diverted in Sec. 26, T. 19 N., R. 8 E., M. D. B. and M., for mining and domestic purposes.

SAN DIEGO COUNTY—Application 6968. George L. Dodds, I. P. Janssen, F. L. Cox, H. F. Beauchamp and Maurice M. Myers, c/o George L. Dodds, Escondido, Calif., for 10 c.f.s. and 10,000 ac. ft. per annum from Escondido Creek tributary to Pacific Ocean. To be diverted in Sec. 3, T. 13 S., R. 3 W., S. B. B. and M., for irrigation and domestic purposes (about 7500 acres).

HUMBOLDT COUNTY—Application 6969. Dugald McKellar, Box 756, Eureka, Calif., for 0.025 c.f.s. from unnamed stream tributary to Humboldt Bay. To be diverted in Sec. 21, T. 5 N., R. 1 E., H. B. and M., for irrigation and domestic purposes (10 acres). Estimated cost \$20.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of May, 1931.

LOS ANGELES COUNTY—Permit 3697, Application 4048. City of Monrovia, Monrovia, Calif., May 1, 1931, for 1000 acre-feet per annum from Sawpit Canyon in Sec. 13, T. 1 N., R. 11 W., S. B., for municipal purposes.

LOS ANGELES COUNTY—Permit 3698, Application 5083. City of Monrovia, Monrovia, Calif., May 1, 1931, for 10 c.f.s. from Sawpit Canyon in Sec. 13, T. 1 N., R. 11 W., S. B. M., for municipal purposes.

LOS ANGELES COUNTY—Permit 3699, Application 5959. County of Los Angeles, Los Angeles, Calif., May 2, 1931, for 0.4 c.f.s. from 4 unnamed springs in Sec. 2, T. 3 N., R. 8 W., S. B., for domestic purposes. Estimated cost \$150,000.

LOS ANGELES COUNTY—Permit 3700, Application 5960. County of Los Angeles, Los Angeles, Calif., May 2, 1931, for 0.1 c.f.s. from four unnamed springs in Sec. 2, T. 3 N., R. 8 W., S. B., for domestic purposes.

SAN BERNARDINO & LOS ANGELES COUNTIES—Permit 3701, Application 5961. County of Los Angeles, Los Angeles, Calif., May 2, 1931, for 0.4 c.f.s. from two

Vital Statistics on Dam Construction

unnamed springs, Spring No. 43 in Sec. 19, T. 3 N., R. 7 W., S. B. and Spring No. 44 in Sec. 30, T. 3 N., R. 7 W., S. B., for domestic purposes. Estimated cost \$5,000.

LOS ANGELES COUNTY—Permit 3702, Application 5962. County of Los Angeles, Los Angeles, Calif., May 2, 1931, for 1.3 c.f.s. from seven unnamed springs, No. 6 in Sec. 3, T. 3 N., R. 8 W., S. B. and Nos. 7, 8, 10, 11, 12 and 13 in Sec. 33, T. 3 N., R. 8 W., S. B., for domestic purposes. Estimated cost \$100,000.

LOS ANGELES COUNTY—Permit 3703, Application 5963. County of Los Angeles, Los Angeles, Calif., May 2, 1931, for 0.325 c.f.s. from six unnamed springs in Secs. 34, 35 and 27, T. 4 N., R. 8 W., S. B. Estimated cost \$10,000.

LOS ANGELES COUNTY—Permit 3704, Application 5964. County of Los Angeles, Los Angeles, Calif., May 2, 1931, for 0.75 c.f.s. from two unnamed springs and Prairie Fork in Secs. 23, 22 and 15, T. 3 N., R. 8 W., S. B., for domestic purposes. Estimated cost \$20,000.

LOS ANGELES COUNTY—Permit 3705, Application 5965. County of Los Angeles, Los Angeles, Calif., May 2, 1931, for 0.61 c.f.s. from six unnamed springs in Secs. 23 and 29, T. 3 N., R. 8 W., S. B., for domestic purposes. Estimated cost \$28,000.

LOS ANGELES COUNTY—Permit 3706, Application 5966. County of Los Angeles, Los Angeles, Calif., May 2, 1931, for 0.1 c.f.s. from three unnamed springs in Sec. 21, T. 3 N., R. 9 W., S. B., for domestic purposes. Estimated cost \$30,000.

EL DORADO COUNTY—Permit 3707, Application 6859. Magnus Jensen, Camino, Calif., May 4, 1931, for 0.025 c.f.s. from Fill Canyon in Sec. 33, T. 11 N., R. 12 E., M. D. M., for irrigation on 3 acres. Estimated cost \$200.

LOS ANGELES COUNTY—Permit 3708, Application 6584. John J. Johnson, Sunland, Calif., May 4, 1931, for 0.055 c.f.s. from an unnamed spring in Sec. 2, T. 2 N., R. 14 W., S. B., for domestic and irrigation purposes on 83 acres. Estimated cost \$1,500.

MONTREY COUNTY—Permit 3709, Application 6318. Sidney W. Fish of New York City, New York, May 5, 1931, for 0.2 c.f.s. from San Jose Creek in Sec. 24, T. 16 S., R. 1 W., M. D., for irrigation and domestic purposes on 165 acres. Estimated cost \$12,500.

MONTREY COUNTY—Permit 3710, Application 6555. Sidney W. Fish, New York City, New York, May 5, 1931, for 0.5 c.f.s. from Palo Corona and tributaries in Sec. 5, T. 17 S., R. 1 E., M. D., for irrigation and domestic purposes on 165 acres.

EL DORADO COUNTY—Permit 3711, Application 6138. El Dorado Irrigation District, Placerville, Calif., May 6, 1931, for 5000 ac. ft. per annum from (1) North Webber Creek and (2) South Webber Creek in Secs. 18 and 21, T. 10 N., R. 12 E., M. D., for irrigation and domestic purposes on 30,702 acres. Estimated cost \$450,000.

TULARE COUNTY—Permit 3712, Application 6880. J. H. Garner, Springville, Calif., May 11, 1931, for 0.42 c.f.s. from Bear Creek in Sec. 3, T. 20 S., R. 30 E., M. D., for irrigation on 34 acres. Estimated cost \$500.

LASSEN COUNTY—Permit 3713, Application 6523. Antone Avilla, Bieber, Calif., May 13, 1931, for 1825 ac. ft. per annum from Juniper Creek in Sec. 3, T. 36 N., R. 8 E., M. D., for irrigation purposes on 996 acres. Estimated cost \$10,000.

SANTA BARBARA COUNTY—Permit 3714, Application 4552. B. F. Barca, Harrison, Calif., May 13, 1931, for 2 c.f.s. from unnamed well from underground source adjacent to Los Alamos Creek in Sec. 20, T. 8 N., R. 33 W., S. B., for irrigation purposes on 165.4 acres. Estimated cost \$4,000.

SISKIYOU COUNTY—Permit 3715, Application 6647. Bizzard Hill Mine, Inc., Sappo, Yuba, Calif., May 13, 1931, for 2.75 c.f.s. from Bizzard Creek in Sec. 4, T. 15 N., R. 7 E., H. B. M., for power purposes. Estimated cost \$2,000.

SANTA CRUZ COUNTY—Permit 3716, Application 6218. Santa Cruz Development Co., Santa Cruz, Calif., May 14, 1931, for 3.5 c.f.s. from West Branch of Branciforte Creek in Sec. 6, T. 11 S., R. 1 W., M. D.,

for irrigation and domestic purposes on 102.5 acres. Estimated cost \$100,000.

LASSEN COUNTY—Permit 3717, Application 6890. The Western Pacific Railroad Co., San Francisco, Calif., May 16, 1931, for 0.4 c.f.s. from Horse Creek in Sec. 15, T. 35 N., R. 7 E., M. D. M., for industrial and domestic purposes. Estimated cost \$16,700.

EL DORADO COUNTY—Permit 3718, Application 6817. H. A. Linthicum and W. D. Meyers, Roseville, Calif., May 27, 1931, for 400 g.p.d. from an unnamed stream in Sec. 24, T. 11 N., R. 16 E., M. D. M., for domestic purposes. Estimated cost \$200.

SAN DIEGO COUNTY—Permit 3719, Application 6893. Harry E. Cansey, Agnanga, Calif., May 28, 1931, for 7200 g.p.d. from an unnamed spring in Sec. 20, T. 9 S., R. 2 E., S. B. M., for irrigation and domestic purposes on 5 acres. Estimated cost \$300.

LOS ANGELES COUNTY—Permit 3720, Application 6882. Clarence A. and William H. Cruzan, Los Angeles, Calif., May 28, 1931, for 2 c.f.s. from (1) Warm Spring and (2) Whiskey Spring in Secs. (1) 4 and (2) 17, T. 5 N., R. 14 W., S. B., for mining purposes. Estimated cost \$5,000.

DAM APPLICATIONS, APPROVALS FOR MAY

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of May, 1931.

ALAMEDA COUNTY—Bowles Dam No. 592. Claremont Pines Corp., Beverly Hills, Calif., owner; earth, 38 feet above streambed with a storage capacity of 213 acre-feet, situated on West Branch tributary to Glen Echo Creek in Sec. 23, T. 11 N., R. 5 E., M. D. B. and M., for diversion purposes for mining, domestic and irrigation use.

MODOC COUNTY—Caldwell Lower Pit Dam No. 156-4. G. L. Kramer, Bieber, owner; crib and flashboards, 8 feet above streambed with a storage capacity of 60 acre-feet, situated on Pit River tributary to Sacramento in Sec. 33, T. 42 N., R. 10 E., M. D. B. and M., for diversion purposes for irrigation use.

MODOC COUNTY—Caldwell Upper Pit Dam No. 156-5. G. L. Kramer, Bieber, owner; crib and flashboards, 63 feet above streambed with a storage capacity of 40 acre-feet, situated on Pit River tributary to Sacramento in Sec. 34, T. 42 N., R. 10 E., M. D. B. and M., for diversion purposes, for irrigation use.

LASSEN COUNTY—Long Canyon Dam No. 244. Mr. John M. Hagata, Susanville, owner; earth dam, situated on Long Canyon in Sec. 7, T. 31 N., R. 13 E., M. D. B. and M.

SAN MATEO COUNTY—San Vicente Dam No. 615-2. Henry Cowell Lime & Cement Co., San Francisco, owner; earth dam, 19 feet above streambed with a storage capacity of 24 acre-feet, located in Corral de Tierra Palomares, for storage purposes, for irrigation use.

HUMBOLDT COUNTY—Camp Creek Dam No. 202. E. P. Hickey, Orleans, owner; log rock fill, 12 feet above streambed.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of May, 1931.

LASSEN COUNTY—Dry Lake Dam No. 253-4. Antone Avilla, Red Bluff, owner; earth, 15 feet above streambed with a storage capacity of 1825 acre-feet, situated on Juniper Creek tributary to Pit River in Sec. 3, T. 36 N., R. 9 E., M. D. B. and M., for storage purposes, for irrigation use. Estimated cost \$500, fees paid \$20.

NEVADA COUNTY—Lower Lindsay Dam No. 97-36. Pacific Gas and Electric Company, San Fran-

(Continued on next page.)

Auto Registration in State Shows Big Gain Over Same Period in 1930

DEPRESSION or no depression the Californian must ride.

At least that's the impression gained by a perusal of the latest report of the Division of Motor Vehicles, prepared by Col. Frank G. Snook, Chief of that Division.

The report presents the amazing fact that the total registration for 1931 as of May 1st, exceeds that of the same period last year by 42,109.

And of this total the number of pleasure cars and commercial vehicles under 3000 pounds has increased 28,936.

Colonel Snook draws attention to a general move among truck owners to replace solid tires with pneumatic. The increase in regis-

tration of trucks so equipped is 11,732 and 5134 in pneumatic tire trailers, against a decrease of 3890 in solid tire machines and 1059 in the same type trailer. The Division report continues:

"As of May 1st, the Division has issued 21,104 nonresident permits, which is 493 less than the number issued in 1930.

"During the last month arrangements have been made to open a new office for registration work at Hollywood.

"Plans have been started for new offices at Salinas, San Jose and Stockton, which will include adequate quarters for the traffic offices of the California Highway Patrol, as well as registration."

VITAL STATISTICS ON WATER RESOURCES

(Continued from page 37.)

cisco, owner; earth and rock dam, situated on Texas Creek tributary to South Yuba River in Sec. 20, T. 18 N., R. 12 E., M. D. B. and M.

SANTA CRUZ COUNTY—Molino Creek Dam No. 632. Coast Dairies and Land Company, Davenport, owner; earth, 24 feet above streambed with a storage capacity of 26.3 acre-feet, situated on Molino Creek tributary to Pacific Ocean in Rancho Agua Puerca Las Trancas, for storage purposes, for irrigation use. Estimated cost \$2,650, fees paid \$26.50.

ALAMEDA COUNTY—Upper Alameda Creek Diversion Dam No. 10-9. City and County of San Francisco owner; 32 feet above streambed with a storage capacity of 15 acre-feet, slab and buttress type, situated on Upper Alameda Creek tributary to Calaveras Creek in Sec. 17, T. 5 S., R. 2 E., M. D. B. and M., for diversion purposes, for municipal and domestic use. Estimated cost \$106,000, fees paid \$1,030.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of May, 1931.

SACRAMENTO COUNTY—Folsom Dam No. 97-56. Pacific Gas and Electric Company, San Francisco, owner; gravity, situated on American River tributary to Sacramento River in Sec. 24, T. 10 N., R. 7 E., M. D. B. and M.

LASSEN COUNTY—Long Canyon Dam No. 244. John M. Hagata, Susanville, owner; earth, situated on Long Canyon in Sec. 7, T. 31 N., R. 13 E., M. D. B. and M.

BUTTE COUNTY—Round Valley Dam No. 97-9. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on North Fork Feather River tributary to Feather River in Sec. 30, T. 26 N., R. 5 E., M. D. B. and M.

LOS ANGELES COUNTY—Big Santa Anita Dam No. 32-2. Los Angeles County Flood Control District, Los Angeles, owner; arch, situated on Big Santa Anita Creek tributary to San Gabriel River in Sec. 10, T. 1 N., R. 11 W., S. B. B. and M.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of May, 1931.

AMADOR & CALAVERAS COUNTIES—Tiger Creek Afterbay Dam No. 97-105. Pacific Gas and Electric Company, San Francisco, owner; arch, 85 feet above streambed with a storage capacity of 3800 acre-feet, situated on North Fork tributary to Mokelumne in Sec. 23, T. 7 N., R. 13 E., M. D. B. and M., for diversion and regulation purpose for power use.

NEVADA COUNTY—Donner Creek Dam No. 311-7. Central Pacific Railway Company, San Francisco, owner; earth fill, 14 feet above streambed with a storage capacity of 140 acre-feet, situated on Donner Creek tributary to Truckee River in Sec. 16, T. 17 N., R. 16 E., M. D. B. and M., for storage and diversion purposes, for railroad use.

LOS ANGELES COUNTY—Chatsworth Highline Dam No. 6-32. City of Los Angeles, Los Angeles, owner; earth, 49 feet above streambed with a storage capacity of 230 acre-feet, situated on a wash tributary to Los Angeles River in Sec. 9, T. 2 N., R. 16 W., S. B. B. and M., for regulation and storage purposes, for irrigation and domestic use.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of May, 1931.

LOS ANGELES COUNTY—Live Oak Dam No. 32-7. Los Angeles County Flood Control District, Los Angeles, owner; gravity arches, situated on Live Oak Creek tributary to San Jose Creek in Sec. 32, T. 1 N., R. 8 W., S. B. B. and M.

LOS ANGELES COUNTY—San Dimas Dam No. 32-10. Los Angeles County Flood Control District, Los Angeles, owner; gravity arch, situated on San Dimas Creek tributary to Fuddingstone Creek in Sec. 24, T. 1 N., R. 9 W., S. B. B. and M.

LOS ANGELES COUNTY—Sawpit Dam No. 32-12. Los Angeles County Flood Control District, Los

Highway Patrolmen Praised

Courtesy to Motorists and Fairness in Arrests Are Cited in Letters

From John Stephen Zuckerman, Berkeley: Shades of Bill Hickock and Marshall Nix! The days of the "where the hell are you going" traffic officer seems to have passed forever, and in his place are courteous and efficient gentlemen. Surly and overbearing officiousness has been displayed by a real desire to aid the motorist.

I recently had the misfortune to have a rather bad accident between Coachello and Indio, California, and the promptness of the officers that patrol that territory in taking care of my car, and their politeness in helping us in every way possible was certainly gratifying. One of the officers, Ora E. Townsend, was especially efficient, courteous and helpful, and I wish to congratulate you in having such a fine man working for you. Under these circumstances, accidents become almost a pleasure.

With such men as this patrolling the State highways, I feel certain that the number of accidents will soon be minimized. More power to you!

* * *

ARREST IS PLEASURE

From Thomas O'Connor, San Diego: Recently one of our employees was arrested and fined for violation of a local ordinance.

I am taking this opportunity of commending the fairness and gentlemanly manners of the arresting officer, your Mr. Waite, No. 231, both at the time of arrest and in the courtroom. He is a credit to your splendid organization of officers, whose enforcement of the law must be trying enough at times.

* * *

EXAMPLE FOR OTHERS

From Arnold Klaus, Assistant Manager San Diego Chamber of Commerce: I wish to express the appreciation of the San Diego Chamber of Commerce Executive Board for the cooperation we received from you and Captain Otto Langer, of your patrol, in tendering to us the services of Mr. R. Schmoke, one of your motor officers in this division.

Mr. Schmoke proved to be a very excellent representative of your organization which is without par in this country. He proved his capabilities in many ways. First, by being consistently on the job; second, by being courteous and efficient in all his work; third, by his ability to meet people and obtain their good will, and fourth, by the capable way in which he presented the objects and purposes for which your organization is striving at the various dinners, when he was requested to take a part in the program.

I am sure that the group attending this National convention are envious of our California State Highway Patrol, and are doing everything in their power to see that a similar organization is created in their respective states. This I know is true of Texas, where their comparative division is eighteen months old, and in the newly organized Arkansas Patrol.

Child's Life Saved by Quick Work; Ventura Paper Lauds Training

From the *Ventura Free Press*.

First aid instruction, taught officers of the California Highway Patrol, yesterday was responsible for saving the life of Nancy Grosjean, 6, of 10632 Ayres avenue, Los Angeles, dragged to sea by a rip tide while bathing near Point Magu.

She was dragged from the water in an unconscious condition by her father Glenn M. Grosjean. Officer Joe Nobel of the California Highway Patrol, riding his beat on the Roosevelt highway, was summoned and administered first aid. He revived the child sufficiently to speed her to Oxnard where Officer Nobel and Austin Carpenter, member of the Oxnard fire department, applied a pulmotor and artificial respiration until the child was revived.

According to witnesses the child suffered a narrow escape and but for the timely arrival of the State patrolman possibly would have suffocated before a doctor could have been reached.

Officers of the patrol are given a thorough course in first aid to injured and drowned persons at the training course at Sacramento to which all officers of the patrol are now detailed. In addition to the State school course, all officers of the Ventura County patrol have received certificates of graduation from a course given Shell Oil Company employees here.

MARIN COUNTY OKEH

From Frank C. Sykes, State Board of Prison Directors: I could not let this opportunity go by without expressing to you the appreciation of President Neumiller, Warden Holohan, Parole Officer Ed. Whyte and myself for the courtesy shown us by three of your men in Marin County last night.

After spending two days and a night at the prison it was important that we reach San Francisco without being delayed, and thru the courtesy of Messrs. Wentworth, McClain and Monteverde we were greatly assisted in reaching the boat at Sausalito, thus avoiding a very long delay. It is a thing like this that makes a fellow feel that there are a few regular people left, and I intend to carry this message further. Let me congratulate you and your department in having such men with you.

* * *

AID IN EMERGENCY

From A. G. Dondero, San Francisco: On the night of May 8th I had some trouble with my car in the vicinity of Tracy, and I was assisted by officers A. L. Stuart and Clarence F. Brumbaugh to get to Tracy.

I wish to thank these gentlemen through you for their courtesy and civility.

If all your traffic officers are as courteous as these two gentlemen were to me on the night of my distress, I congratulate you.

Vol. 9 JUNE, 1931 No. 6

State Wins Praise For Thoughtfulness

Santa Barbarans will be grateful to the State Highway Department for its trouble in working out a plan to save as many as possible of the fine poplar trees along the highway near Goleta.

This is one of the finest shaded lanes in the State and has attracted the attention of millions of visitors, and caused enthusiastic comment from every person who has ever driven beneath the stately branches of the unique collection of beautiful trees. They are practically the only ones of the kind in the State of California. Certainly there is no other grove so large.

Their destruction would have been a distinct loss to Santa Barbara and the county, as well as to the traveling public that has enjoyed them for so long. The decision to cut out only those that are dangerous and to take steps to prevent the others falling and injuring passing motorists is a thoughtful one on the part of the engineers of the State Highway Department, and is appreciated by the citizens generally.—*Santa Barbara Press*.

* * *

When a State Highway Department moves a strip of concrete that a historic landmark may be saved, the item is worthy of mention. The thing actually happened near San Miguel in San Luis Obispo County, where a two-story building stood on the right of way and in the path of destruction under plans to widen the road. When it was found the building could not be moved back the highway was rerouted a bit to the west and the old place still stands.—*Oakland Tribune*.

First came the "realtor," then the "mortician," later the "beautician," subsequently the "bootician," then the "pedicure." And the other day a large dump truck careened down the avenue in one of our large cities bearing the imposing legend: "Kelly & McGuire, truckologists."

Marriage and Trees

Now Highway Problem

L. H. Gibson, district highway engineer, with headquarters in San Luis Obispo, does not always need a map to see the point. Indeed, he's in training to become a horticulturalist, a tree expert, forester or something.

It seems his department was busy securing rights of way for a road in District Five. In dealing with one property owner, a lady, assurance was given that an old oak tree on the property being secured from her for road purposes would be preserved. However, in the written agreement the promise was covered in this verbiage:

"It is not contemplated that the live oak tree in front of your property will be removed."

The property owner lost no time in nailing that one. Back came a letter to Mr. Gibson couched as follows:

"You say that you do not 'contemplate' the removal of the tree. Well, I seriously contemplated being an old maid, but got married the first chance I got, so that, to ME, that clause in the contract contains no assurance at all."

Needless to say, the lady got her "iron-clad" assurance.

PILGRIMAGE WINS

O. K. OF GOVERNOR

Governor James Rolph, Jr., has approved the resolution adopted by both houses of the Legislature urging and requesting the heads of the various State departments to grant extended vacations with pay to all State employees who make the Pilgrimage to France sponsored by the Ninety-first Division Association.

The Pilgrimage leaves here on August 14th and returns on September 20th. It visits England, Belgium, Germany and France, and can be made for less than \$6000 on an all inclusive expense plan. The battlefields and the American cemeteries will be the objects of special visitation.

"SLOW THE SPEED, SPARE THE CHILD"

With hundreds of thousands of school children in California released from their classrooms for the summer vacation, the California Committee on Public Safety has devoted the month of June to a State-wide campaign urging upon motorists the need for special care in driving in order to minimize child traffic casualties. State and local traffic police cooperated in making the effort of the committee an effective one. The campaign is one of a series conducted monthly throughout the year, each designed to emphasize some particular phase of safe driving rules. The June subject was that of endangering the safety of children at play through speed or inattention. "Slow the speed and spare the child," was the slogan.

The real test of will power is to refrain from applying imaginary brakes when someone else is driving.

The difference between a cow chewing her cud and a flapper chewing her gum is that a cow always looks as if she were thinking.

Report of Activities

in the

Division of Water Resources

AS OF JUNE 1, 1931

EDWARD HYATT, Chief of Division

Irrigation District Activities

Applications for
Approval of
Dams

Flood Control and Reclamation

Bulletins Issued on
Water Resources
Study

Activities of the Division of Water Resources of the State Department of Public Works for the month of May give an official picture of the Water situation throughout the State. The division, headed by Edward Hyatt, reports as follows:

WATER RIGHTS

Twenty applications to appropriate water were received during April, eight applications were rejected and twenty-five were approved. Three permits were revoked and six licenses were issued.

Applications of particular note received during the month were two by Pacific Gas and Electric Company proposing the appropriation of a total of 170 cubic feet per second from the augmented flow of Bear River in Placer County for irrigation purposes; one by Consolidated Irrigation District proposing the appropriation of 1000 cubic feet per second and 200,000 acre feet per annum from San Joaquin River in Fresno County for irrigation purposes and one from California Oregon Power Company proposing an appropriation of 2000 cubic feet per second from Klamath River in Siskiyou County, for power purposes.

Among the permits which were issued was one to Paradise Irrigation District allowing an appropriation of 5000 acre feet per annum from Little West Branch of Feather River in Butte County for the irrigation of 11,100 acres at an estimated cost of \$362,000.

A permit of unusual importance was one issued to Frederick Bradshaw allowing an appropriation of 125 cubic feet per second from Horse Linto Creek in Humboldt County for mining purposes at an estimated cost of \$200,000.

Inspection of projects under permit has proceeded during the past month in Sacramento, San Joaquin, Tuolumne, Stanislaus, San Mateo, Santa Clara, Santa Cruz, and Monterey counties.

ADJUDICATIONS

Shasta River (Siskiyou County). Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). Case pending in the Superior Court of Shasta County, awaiting the Court's pleasure in placing it on the calendar.

Oak Run Creek (Shasta County). Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County). Case pending in Superior Court of Shasta County awaiting the Court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County). Case pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County). Division's report as referee submitted to the Superior Court on May first.

Davis Creek (Modoc County). A tentative decree has been circulated among counsel and is now under consideration by the Superior Court.

Mill Creek (Modoc County). More than eighty per cent of the water users have signed the stipulation for consent judgment which was presented at the conference held at Lake City on March 17, 1931. The stipulation is now being circulated among the non-resident parties.

Deep Creek (Modoc County). Distribution of the waters of Deep Creek was continued throughout the month in accordance with the trial schedule of allotments which was adopted at the conference held at Cedarville on March 16, 1931.

Franklin Creek (Modoc County). Administration of the schedule of allotments for trial distribution during the 1931 irrigation season was continued throughout the month.

New Pine Creek (Modoc County). Field work on the investigation of the water supply and use of water on New Pine Creek was continued throughout the month.

WATER DISTRIBUTION

Cedar, Davis, Deep, Emerson, Franklin, Mill, New Pine, Owl and Soldier Creeks (Modoc County). Water master service on these streams was continued throughout the month.

Pine Creek (Modoc County). All water users on this stream have signed an agreement providing for water master service during the current season. Administration of the stream was commenced May 13.

Oak Run and Clover Creeks (Shasta County). Water master service was commenced on these streams for the current season about May 10.

North Cow Creek (Shasta County). Water master service was commenced on this stream for the current season on May 19.

Little Shasta River (Siskiyou County). Water master service on this stream was continued throughout the month.

DAMS

During May inspections have been continued on existing dams, many being inspected which have hitherto been inaccessible on account of their altitude. Frequent inspections have also been made on dams under construction and repairs.

Flood Control and Reclamation Details

Continued from preceding page.

To date, 760 applications for approval of existing dams are on file; 67 for approval of plans and specifications for construction or enlargement and 150 for approval of plans for repairs or alterations.

APPLICATIONS RECEIVED FOR CONSTRUCTION OR ENLARGEMENT

Dam	Owner	County
*Dry Lake	Antone Avilla	Lassen
**Lower Lindsey	Pacific Gas and Electric Co.	Nevada
**Molino Creek	Coast Dairies and Land Co.	Santa Cruz

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS FOR REPAIR OR ALTERATIONS

Dam	Owner	County
Live Oak	L. A. County Flood Control Dist.	Los Angeles
San Dimas	L. A. County Flood Control Dist.	Los Angeles
Sawpit	L. A. County Flood Control Dist.	Los Angeles
Culbertson	Pacific Gas and Electric Co.	Nevada
Mammoth	Pacific Gas and Electric Co.	Placer
Folsom	Pacific Gas and Electric Co.	Sacramento
Round Valley	Pacific Gas and Electric Co.	Butte
Long Canyon	John M. Hagata	Lassen

PLANS APPROVED FOR CONSTRUCTION

Dam	Owner	County
Tiger Creek Afterbay	Pacific Gas and Electric Co.	Amador & Calaveras
Donner Creek	Central Pacific Railway	Nevada
Chatsworth Highline	City of Los Angeles	Los Angeles

PLANS APPROVED FOR REPAIR OR ALTERATIONS

Dam	Owner	County
Culbertson	Pacific Gas and Electric Co.	Nevada
Live Oak	L. A. County Flood Control Dist.	Los Angeles
San Dimas	L. A. County Flood Control Dist.	Los Angeles
Sawpit	L. A. County Flood Control Dist.	Los Angeles
Mammoth Reservoir	Pacific Gas and Electric Co.	Placer

ORDERS HAVE BEEN ISSUED AUTHORIZING USE OF THE FOLLOWING DAMS

Dam	Owner	County
Lake Madrone	Mansfield and McCallum	Butte
Salt Springs	Pacific Gas and Electric Co.	Amador & Calaveras

The Lake Madrone dam is an earth-fill dam built for recreational use in the foothills above Oroville.

The Salt Springs dam is a huge rock-fill structure built across the North Fork of the Mokelumne River and is part of the Pacific Gas and Electric Company's Electric System.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

The maintenance force in Sutter County has been engaged in routine maintenance of structure, levees, canals and pumping plants. A small crew has been engaged in making fire breaks around the timber structures and in cutting noxious weeds. Emergency repairs are now being made on the Davis wier in the Sutter By-pass, at a cost of about \$4,000.

* New construction.

** Enlargement.

EMERGENCY FLOOD CONTROL AND RECTIFICATION OF RIVERS

Channel rectification work at the mouth of Little River in Humboldt County has been completed by the Hammond and Little River Redwood Company in cooperation with the State and Humboldt County.

FLOOD MEASUREMENTS AND GAGES

The gages maintained by this Division during the winter season have either been removed or transferred to other agencies for operation during the summer. The compilation of records for the flood seasons has been continued in the office, and reports will be issued shortly.

COOPERATIVE SNOW SURVEYS

Although the principal snow surveys as a basis for run-off estimates were made late in March and early in April and reported in the April 1st bulletin, additional surveys were made late in April and early in May at the key snow courses to furnish information for possible modification of earlier estimates and to indicate the extent of melting since April 1st. These later surveys complete the seasonal record of monthly surveys, February to May, for the key snow courses. In the May 1st bulletin the measured water content of the snow is given in per cent departure from the water content as shown by the April 1st surveys. This shows the extent of melting.

The snow surveys at the key courses showed a melting of the April 1st pack as measured at these courses, about as follows: Above 7500 elevation—Upper Sacramento and McCloud Basins (one course, Mt. Shasta) 25 per cent; Pit and Feather Basins (one course, Mt. Lassen) 4 per cent; American Basin (one course, Carson Pass) 34 per cent; Mokelumne Basin (one course, Blue Lakes) 63 per cent; Stanislaus Basin (one course, Lower Relief Valley) 45 per cent; Tuolumne and Merced Basins (average of six courses) 63 per cent; Upper San Joaquin Basin (one course, Kaiser Pass Meadows) 13 per cent; and Kings, Kaweah and Kern Basins (average of four courses) 68 per cent. The corresponding percentages of melting at practically the same courses in 1930 varied from zero to 48 per cent only. Below 7500 elevation—melting of 100 per cent at practically all courses.

The average precipitation to May 1st, in per cent of normal to May 1st, was about as follows for the various stream basins: Upper Sacramento, Pit, McCloud, Feather and Yuba, 58 per cent; American 60 per cent; Mokelumne, 64 per cent; Stanislaus, 72 per cent; Tuolumne, 65 per cent; Merced, 57 per cent; Mono, 57 per cent; Upper San Joaquin, 51 per cent; Owens, varying from 44 to 59 per cent; Kings, Kaweah and Kern, 62 per cent; and Los Angeles, San Gabriel and Santa Ana, from 65 to 80 per cent.

The lack of normal precipitation in April warranted a downward modification of the estimates given on April 1st for seasonal run-off. The estimated seasonal run-off for the Upper Sacramento

Rice Acreage Increase Shown in Report

(Continued from page 42.)

River was reduced to 34 per cent, or 2 per cent less than that of 1924; for the entire Sacramento Basin, including tributaries, the revised estimate was 30 per cent, or the same as 1924; and for the entire Sacramento-San Joaquin drainage including tributaries, 30 per cent, or 2 per cent above the 1924 percentage.

Work of the snow surveys for the next few months will consist, in the office, of computations to bring up long-time run-off estimates for the various stream flow stations selected to best reflect the snow run-off and all other compilations and studies necessary in determining completely the relation between precipitation, snow and run-off; in the field the usual contacts with the cooperative agencies in effecting the plans for next year's surveys and such work as may be necessary in gradually extending the scope of the surveys as funds permit. A conference was held at Yosemite on May 16th to go over the results during the past season in the Merced and Tuolumne Basins and to consider certain extensions in future work.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

The salinity sampling in the Sacramento-San Joaquin Delta has continued at the thirty stations previously maintained, with fourteen stations added during the month. The additional stations are added as necessary to keep well in advance of the seasonal salinity encroachment. A check has been made of the rice acreage under river diversions above Sacramento. This shows an increase of 26 per cent over the rice acreage of 1930 which was practically the same acreage as in 1924. In the area above Colusa, the present season's rice acreage is 34 per cent greater than the acreage of 1924. This indicates very definitely that conditions probably worse than those of 1924 are to be anticipated. The accompanying table gives comparative stream flow data for 1931 and 1924. The recent salinity tests are also shown. No comparison can be given with the 1924 salinity as the stations were not established in 1924 until the later part of May.

Within the last few days the river has dropped very rapidly above Sacramento and further measures for conservation and control will soon be required. In view of this situation an early meeting of the Permanent Committee of the Sacramento-San Joaquin River Problems Conference has been called. As one measure, the possibility of a patrol of the upriver area to effect a reduction in river diversions to the extent of controllable wastes, is to be considered.

The following are comparative stream flow data for 1931, as against 1924:

Station	Discharge in Sec. Ft.	
	1931	1924
Sacramento River at Red Bluff	5/17 3630	5/17 3240
Sacramento River at Verona	5/22 2250	
Sacramento River at Sacramento	5/22 2975	5/22 2980
American River at H Street Bridge	5/22 1050	5/22 1130

Station	Discharge in Sec. Ft.	
	1931	1924
San Joaquin River near Vernalis	5/21 470	5/21 1120
Combined flow of Sacramento River at Sacramento and San Joaquin River near Vernalis	5/21 3980	5/21 5100

Recent Salinity Tests in the Sacramento-San Joaquin Delta show:

Station	Salinity in parts of chlorine per 100,000	
	5/6/31	5/10/31
Bullhead Point	1050	900
O and A Ferry	360	
Collinsville	299	166
Emmation	5	4
Three Mile Slough Bridge	7	3

WATER RESOURCES

Napa Valley Investigation.—Measurements of stream flow on Napa River, Dry Creek, Conn Creek and Rector Creek were made during the month and data were obtained with respect to diversions to establish the facts relative to percolation losses, accretions, and the water crop. In addition thereto a selected group of 15 wells was gaged.

Preliminary investigation of streams for reservoir sites was completed from which it appears that only two sites—aside from known and hitherto explored sites on Conn Creek, Rector Creek, and Milliken Creek—offer any promise. These sites are located on Taplin Ranch about two or three miles east of St. Helena and on Dry Creek. These sites are relatively small, but would appear to justify further exploration and survey whenever storage of flood waters becomes of importance.

Ventura County Investigation.—This investigation has continued in a routine way. A special feature, however, was involved in that an investigation of possible reservoir sites on Piru Creek was made to determine whether the location of the new State highway will interfere with conservation of the waters of the creek. The proposed highway passes through two of the reservoir sites on the creek, but an additional reservoir was found several miles below where no interference with the highway could occur. At this site it is possible completely to conserve the waters of the creek, provided that drilling of the dam site discloses favorable conditions. The tentative conclusion of the geologist examining the site is favorable, but this of course might be changed by drilling explorations.

WATER RESOURCES REPORTS

Satisfactory progress has been made in completing the reports on the water resources investigations covering the State Water Plan for the coordination, development, conservation and utilization of the

Irrigationists Limit Amount of Water Used to Overcome Shortage

(Continued from page 43.)

water resources of the State, authorized under the provisions of Chapter 832 of the Statutes of 1929. The following bulletins are nearing completion and it is expected that the finished plates and texts for these publications can be placed in the hands of the State Printer during the latter part of June for publication.

Bulletin 26, "Sacramento River Basin."

Bulletin 27, "Salinity Control in Sacramento-San Joaquin Delta and Upper San Francisco Bay."

Bulletin 28, "Economic Aspects of a Salt Water Barrier Below Confluence with Sacramento and San Joaquin Rivers."

Bulletin 29, "San Joaquin River Basin."

MISCELLANEOUS ACTIVITIES

A study is being made to determine the acreage in the Delta riparian to the San Joaquin and Mokelumne Rivers and connecting channels. This study corresponds to the recent investigation made of the acreage riparian to the Sacramento River.

IRRIGATION

Compilation and preparation of data for the 1930 report on the activities of California irrigation districts have been completed and plans are being made for the publication of the report.

Office conferences have been held with a number of Sutter County orchardists who are now irrigating from wells and are looking forward to a means of supplementing their rapidly diminishing water supply.

Field visits were made and conferences held with officials of the Grenada, Big Springs and Montague irrigation districts, located in Siskiyou County, for the purpose of discussing matters connected with the economic operation of these districts.

An inspection was made of construction work in progress in the El Nido irrigation district located in Merced County. A preliminary investigation, general in character, has been made of the water situation in the orchard districts of Sutter County.

Owing to the serious water shortages which will be faced this season by nearly all the irrigation enterprises in the central and northern parts of the State, the directors and managers of irrigation districts are attempting to limit the use of water to the least amount that will mature crops.

At a meeting of the California Bond Certification Commission held on May 6, at Sacramento, action was taken on matters relating to irrigation districts as follows:

Grenada Irrigation District—Plan presented for reorganization and refinancing, approved.

Lindsay Strathmore Irrigation District—Agreement for the purchase of 200 shares of stock in the Peoples Ditch Company, approved.

Paradise Irrigation District—Transfer of \$6,742 from the construction fund to the general fund of the district, approved.

First Quarter of 1931 Opens With Greater Death Toll

CALIFORNIA motor vehicle deaths in March total 196 bringing the total for the first three months of 1931 to 566, according to a report received by Superintendent E. Raymond Cato from the Bureau of Research, Statistics and Traffic Safety of the California Highway Patrol.

The total of 566 deaths for the first quarter of 1931 is 8.42 per cent *greater* than the total for the corresponding period of 1930. This is a marked contrast to the first quarter of 1930, the total of which was 1.32 per cent *less* than the total for the first quarter of 1929.

The numerical increase of deaths in March this year over March last year was 26 or 15.29 per cent.

The report further states that in addition to the 196 persons killed in March, 3781 were injured in the 2708 accidents reported for the month.

VITAL STATISTICS ON WATER RESOURCES

(Continued from page 38.)

Angeles, owner; arch, situated on Sawpit Creek tributary to San Gabriel River in Sec. 13, T. 1 N., R. 11 W., S. E. E. and M.

PLACER COUNTY—Mammoth Reservoir No. 97-39, Pacific Gas and Electric Company, San Francisco, owner; earth, located in Sec. 12, T. 11 N., R. 7 E., M. D. B. and M.

SACRAMENTO COUNTY—Folsom Dam No. 97-56, Pacific Gas and Electric Company, San Francisco, owner; gravity, situated on American River tributary to Sacramento River in Sec. 24, T. 10 N., R. 7 E., M. D. B. and M.

CORRECTION

In the May publication of CALIFORNIA HIGHWAYS AND PUBLIC WORKS there appeared a tabulation of the Construction Record for 1930. Under the subtitle Road Oil Mix, there appeared a statement crediting E. A. Wolfe with being the resident engineer on a road job in Del Norte County with Paul Steenstrup as street assistant. This was a mistake in department records since Mr. Steenstrup was the resident engineer.

Matters now pending before the Commission which will receive consideration in the near future are:

Scott Valley Irrigation District—Request for approval of a refunding bond issue.

Linden Irrigation District—Consideration of protests against approval of a proposed bond issue.

Corcoran Irrigation District—Request for approval of an agreement between the district and Meridian Limited, a corporation, for the lease of certain wells and pumping equipment to be installed by the corporation on its own lands within the district.

SIX MILLION DOLLARS worth of contracts are to be awarded by the Department of Public Works during the next three months for highway work!

And the total contracts under way on July 1st amounted to \$17,522,969.

The total number of men employed by the Highway Division on that date was 6261.

Thus does the Department of Public Works enter the third quarter of the year with expectation of awarding additional contracts of \$2,726,500 and bringing the total for the period to the not insignificant sum of \$8,726,500.

GOES TO LABOR

Seventy per cent of this expenditure is passed on to labor.

The Division of Architecture is shaping its work so that additional employment may be given 1700 men during the July-September period. Already 2042 are at work on various projects.

Awards already made total \$5,868,010 for 100 projects. Those to be undertaken during July, August and September call for an estimated cost of \$4,858,273, involving 69 projects.

Thus it is shown that the two divisions alone will employ more than 9000 men!

LARGE INCREASE

Activities of the Division of Water Resources are largely technical, but this service comprehends work costing \$1,658,000. The regular staff of 250 trained men represents a considerable increase, made necessary by the expanding services of the division.

Summing up, the Department of Public Works is right up to its schedule of activities, drawn up under Governor Rolph's program for speeding up public improvements as a means of alleviating unemployment.

Nor must the fact be lost sight of that the employment of more than 9000 men on State projects does not nearly represent the total given work under this speeding-up

process. Considerable labor is necessary in preparing materials and machinery to be used on contracts let by the various divisions.

ENFORCE NEW LAWS

While it is impossible accurately to estimate how many are so employed, it should be noted that the Department is preparing strictly to enforce the provisions of the two so-called labor bills passed at the last session of the Legislature and signed by the Governor. One of these, Chapter 398, Statutes of 1931, provides that **NONE BUT AMERICAN CITIZENS MAY BE EMPLOYED ON STATE PROJECTS** unless in the event of extraordinary emergency. The other, Chapter 397, Statutes of 1931, assures the worker payment of **NOT LESS THAN THE GENERAL PREVAILING RATE OF WAGES** on public works.

Some idea of the work planned by the Highway Division from July to December may be gleaned from the following table, which is an estimate of the jobs to be done, although it shows the jobs which it is proposed will be advertised up until December 31st. Perusal of this list will show that the work is distributed over the entire State, thus giving employment in every section.

PROPOSED WORK

Road	Limits	Amount
I-Men—Cedar Creek and Dann Creek bridges	-----	\$284,000
V-Mon—Rocky Creek to Divide	-----	311,500
VI-Mad—At Madera	-----	40,500
II-Sha—Clear Creek approaches	-----	9,100
V-SBt—S. boundary to San Benito River	-----	344,600
IV-SM-SCL—Redwood City to Oregon Ave.	-----	561,400

State Agencies Welded into Unit In Intensive Forest Fire Battle

THAT right now is the time to start improving the State fire laws by uniting all industrial and commercial interests and tying the fire situation into the big problem—the water problem of the State—was the key message given the California Fire Emergency Committee at its first executive session, July 1, at the State Capitol, by Roland A Vandegrift, Director of Finance.

"We know," said the Director of Finance, speaking on the administration's policy of forest protection, "there will always be the necessity for spending money for forest fire suppression, and of course the best method of suppression is prevention. We listened to State Forester M. B. Pratt and other gentlemen who are particularly concerned, and I believe that we can say without fear of contradiction that the State of California is now and will be, as a result of the budget, in a better position to protect the forests and the other property in the State from fire than ever before."

ADVANCES CAMPAIGN

Vandegrift's talk, according to actual fire fighters present, not only advanced 25 years' efforts of fire prevention endeavors in California to a workable basis as long visioned by fire organizations, but also visualized a solution of the problem through the medium of such a constituted body as the California Fire Emergency Committee.

It is claimed by fire prevention leaders that Vandegrift's visualization of the fire problem as (1) a coordinated State project, (2) to become a major factor in the State's water problem, and (3) to be covered by adequate State legislation for enforcement purposes, properly installs all fire plans into the industrial development and preservation of the natural resources of the State, thereby converting the whole problem from a seasonal menace into a State economic measure of real value.

ROLPH'S MESSAGE

Unanimously supporting the contentions of the Director of Finance, the committee named three of its members as a subcommittee to study remedial legislation covering fire pre-

vention and suppression. The subcommittee consists of R. A Vandegrift, chairman; State Fire Marshal Jay Stevens and Superintendent E. Raymond Cato of the Highway Patrol.

"The presence of the members of the California Fire Emergency Committee here today is of great significance," said Governor James Rolph, Jr., in opening the executive session he had sponsored. "It means that the State government is solidly back of the preservation of California's greatest heritage—its forests and watersheds."

After reviewing the purposes for convening the session, in closing his talk to the committee, Governor Rolph said: "Now is the time for California to recognize squarely and fully its responsibility in forestry. We must search for the facts and upon these facts build a program of development which can be carried out progressively as rapidly as sound public finance permits."

COOPERATIVE AGENCIES

As executive secretary of the committee, State Forester M. B. Pratt outlined the activities of the nine distinct fire prevention campaigns being carried on in the State by cooperative agencies to the Governor's proclamation.

As a coordinating body, the California Fire Emergency Committee is expending no State funds on the consolidated fire prevention campaign this season. The costs of the campaign are contributed by the cooperative agencies.

In addition to the State Division of Forestry and the U. S. Forest Service, fire prevention campaigns are being conducted by the "Stop Forest Fires" Committee, the State Chamber of Commerce, the California Forest Protective Association, the California State Automobile Association, the Automobile Association of Southern California, the American Legion and the Conservation Association of Los Angeles County.

COORDINATED REPORTS

With an attendance of 15 out of 17 members listed in the proclamation, the major portion of the session was devoted to receiving reports of accomplishment from the coordinated State forces.

GIVE THEM THE CURE

By Rodger

State Forester M. B. Pratt and members of Governor Rolph's emergency committee have acted with commendable promptness to cope with the forest fire problem, which is more serious than ever this year because of the extraordinary light seasonal rains.

Recognizing the fact that many of the fires that are turning California's famed forests into wastes of burnt stumps are started by careless campers and motorists, the State Highway Patrol has been ordered to exercise special vigilance in making arrests for violation of fire prevention laws.

It may not be generally known, but the state law prohibits the flicking of lighted matches, cigarets and cigars from automobiles and is even more stringent in dealing with campers who fail to put out all flaming substances when breaking up camp.

The punishment following conviction may be a term in jail or a fine or both.

Supt. Cato of the patrol has assured the emergency committee that his men will not hesitate to make arrests, and is making an appeal to the courts for cooperation.

It is a matter of general knowledge that the courts in the past have dealt lightly with this type of offender.

The News has no disposition to "pull the law" on anyone. But in view of the seriousness of the situation we can see no reason why the courts should not mete out the penalties prescribed by law to those who despoil our forests.

Cooperation between the enforcement officers, and the courts, in our opinion, will reduce forest fires to a minimum.—(S. F. Daily News, June 8)

Highways First Line of Defense In Fire; Man Power Mobilized

How the Department of Public Works is making the State highways of California a natural firebreak as a means of reducing the annual toll of devastation taken each year, is told in Colonel Walter E. Garrison's report to the State Fire Emergency Committee. The report, read to the committee July 1st, follows in part:

THE department has made immediate response to the Governor's call for aid in fighting fires.

The entire man power and equipment of the department has been made ready for the field. Regular employees came first, then contractors engaged in highway work were advised that under the regulations, specifications and contracts their crews were subject to service in fighting fires.

The highway employees, motor patrolmen and contractors' crews numbered more than 3500 when the call went out.

PLAYS MAJOR PART

Now with the construction program in full swing, man power has increased to nearly 5000 and the distribution of these forces at various points in the State makes possible a quick service at any point. So, in cooperation with the Federal Forest Service and the Department of Natural Resources, the Division of Highways is able to play a major part.

In human ills, prevention is better than cure. It is equally true that the fire prevented is the only costless one. It is better business to prevent fires than to arrest them after they have taken their toll on public and private property.

The Department of Public Works has a definite program of service in reducing the fire hazard. Work of prevention is accepted as a function of the department and it is under way for several months each year.

SPRAY AND BURN

The 1931 program of the Division of Highways provides for spraying and burning roadside vegetation over 46 counties. It covers 1150 miles and represents an expenditure of \$81,000. Supplementing this is the work done in fall and winter months in the forest areas. Growths encroaching on the rights of way are burned with an annual cost of about \$20,000. More has been done this year—thanks to the emergency appropriations to relieve unemployment.

Burning of growths and vegetation along highways and rights of way was at one time regarded as an act of good housekeeping. The clean road pleased the eye. It continues to do so, but a decidedly more practical object now is sought.

This is a dry year. The State roads thread seared valleys and dry mountain roads. The work of oil spraying rights of way and burning them over and the clearing of dry brush from hill roads does two things. It removes the hazard latent on the roads and the cleared rights of way provide thoroughly effective firebreaks.

HIGHWAY A DEFENSE

Fires must not start on highways. Fires started elsewhere must stop at highways. Thus a hazard is removed and an aid to safety established.

It is not too much to say that the State highway system already has become a first line of defense against fires and will be improved yearly in this service.

If motorists using the highways and campers who go into the forests will only exercise known and obvious precautions, their contribution to the safety of lives and property will be a material one.

Work of clearing the highways is carefully planned and the plan works. Early in the season the most hazardous areas on the more than 3000 miles of highways, with nearly 700 miles in the worst forest section areas, were scouted and mapped.

UTMOST PRECAUTION

A strip nine feet wide along both sides of the right of way is sprayed with oil and early burning begun under every known precaution to prevent the spread of fire. In addition to ordinary tools for service, the men are equipped with Hauke torches and Indian type knapsack pumps. Each crew is attended by a water tank or fire truck, sentinels are posted at control points to protect traffic and the utmost care is exercised to protect trees, fences and inflammable property.

Inflammable Matter Along Rights of Way Sprayed and Burned

It is understood, of course, that only the most hazardous places are selected for protective treatment, but even under this limitation the range of the year's work, now well accomplished, includes 1150 miles in areas distributed as follows:

Along the Redwood Highway in Marin, Sonoma, Mendocino and Humboldt counties; the Pacific Highway east and west of the Sacramento River to Redding, as well as scattered sections totaling perhaps 25 miles between Redding and the State line; portions of the Tahoe-Ukiah route; between Roseville, Auburn and Grass Valley.

WIDESPREAD FRONT

The Mother Lode from Auburn to Sonoma; the mountain laterals, between Sacramento and Placerville, Clay and Jackson, Lodi and San Andreas; the all-year highway between Merced and Yosemite; the inland coast laterals, Gilroy to Califa, San Lucas to Hanford, and Santa Maria to Maricopa; the main line from Sacramento to Napa; the river lateral from Lodi to Suisun, Martinez to Richmond; the valley route from Sacramento to Bakersfield; the ridge route, Bakersfield to Los Angeles; and the coast route from San Francisco to San Diego. Work will also be done in San Diego, San Bernardino and Orange counties.

The subject of fire prevention is one of such scope as to make its detailed review impossible in a brief report, but, summarized, it may be said:

The highway system of California is becoming a first line of defense against the spread of forest and vegetation fires.

ASSURE COOPERATION

The Division of Highways is doing annually a work of highest value in fire prevention.

The Division of Highways as a cooperating unit is effective in the field both because of its superior numbers in man power and because of its distribution of men and equipment.

Associated agencies may be assured of cooperation and assistance promptly and to the full measure of the department's resources.

*Life to the Forest,
Life to the Tree;
Fire prevention—
That is the Key.*

\$100 SMILE THIS—She's Helen Nonam and that's the slogan above her picture, for writing which she received the check she holds. A student of Herbert Hoover High School, Glendale, Miss Helen won first prize in a contest conducted by the Stop Forest Fires Committee of California. Why shouldn't she smile?

COMMUNITY SPENDING

Forty-eight California counties spent a total of \$1,609,506.37 for advertising and promotion in 1930, a report issued by State Controller Ray L. Riley reveals. Mr. Riley figures the per capita cost at 30 cents. Los Angeles County was the largest single advertiser, spending \$954,297. San Francisco spent \$140,000, Alameda County \$104,779, and Riverside County \$59,786.

Uncle Sam has in his postal service alone, a total of 77,585 automobiles.

Experiments Prove Radio's Worth In Broadcasting Orders to Police

By JAMES ROCHE, Inspector in Charge, Bureau of Communication

“HELLO! This is border patrol office at ----- speaking. Please stand by and receive report on murderer somewhere on the California highway, heavily armed and driving a stolen auto.”

That might be a message sent through to all highway patrolmen in the near future should present plans for a State-wide radio system for the California Highway Patrol come into being.

The project calls for several low wave length stations throughout the State, the broadcasts from which will not interfere with regular radio programs, since the broadcast wave would be beyond the reach of commercial receivers.

START MAN HUNT

Installation of radio sets in border checking stations would completely shut off all auto entrances and exits and, with receivers located in patrol offices and on patrol cars and motorcycles, it is not hard to picture a conversation like that above being the signal for an intensive man hunt on the part of the Highway Patrol.

It has been my duty to inspect the radio systems of the San Francisco, Berkeley and Los Angeles police departments; the Boeing Aircraft and the Radio Corporation of America systems; the equipment of the Western Electric Company and the plan employed by the Department of Forestry. Consequently I am most enthusiastic over the possibilities of such means of communication for the Highway Patrol.

TALK TO CAPTAINS

A unique experiment was tried during the last class of captains, then in session at the Sacramento training school. Chief Cato talked over the air directly to the school several miles away, by means of the Boeing aircraft transmitter. He outlined to the assembled captains the policies and duties of the patrol and was heard clearly. I also had the pleasure of addressing the officers on “Communication and Radio” and was grateful to learn subsequently that the county captains are enthusiastic over this modern method of crime broadcasting.

Further tests at headquarters in Sacramento have demonstrated the feasibility of the system. A low wave length receiver was installed at Eleventh and P streets and we were able to listen in on the different police department radio broadcasts throughout the State—in some instances we heard other states as well.

Intensely interesting examples of the efficiency of police broadcasting were picked up by us in Sacramento. One in particular came from Los Angeles. We heard radio headquarters there order two patrol cars to a burglary assignment. A few minutes later we listened in as one was instructed to return to its regular beat since the other had apprehended the thieves.

WOULD AID PATROL

In passing it might be noted that Los Angeles police have increased their felony convictions 60 per cent since the installation of radio equipment. Chicago sends out an average of 3000 calls per day via low wave.

The value of this system for the California Highway Patrol will be readily recognized. Our men are spread over every strategic center of the State. Not only would our efficiency in patrolling the highways be improved; our record of cooperation with other police agencies in the apprehension of criminals enhanced; our effectiveness in time of emergency or disaster increased, but—we would go far in aiding in keeping criminals out of the boundaries of this State.

SPARE OUR BLUSHES

THE TRIP from Sacramento to Lake Tahoe by way of Auburn can be made easily in four hours without getting the automobile dusty, due to the splendid condition of the new road to the Donner summit.

* * *

THE SUMMIT GRADE from the valley side isn't anywhere near as formidable as before, and not as difficult to make as the return trip up from Donner lake to the top.

* * *

THE HIGHWAY WORK on both sides of the summit is the finest mountain road that exists anywhere this writer has been. If accidents occur there they are the fault of the drivers and not of the engineers and workmen who laid out the roadway.—(From C. J. L.'s column “Sacramento” in *Sacramento Union*, June 29th.)

EVERY SECOND COUNTS in catching a criminal. And the Highway Patrol does not wish to be caught napping. So E. Raymond Cato, the Chief, is experimenting with radio communication for his force. He sent out his first message the other day to officers in the training school, being guided over the "air bumps" by James Roche, Inspector in Charge of Communications. To use the old Amos and Andy signal: "Here they are."

Warm tribute to the tireless and successful efforts of the men of the Highway Patrol to keep traffic moving and accidents at a minimum during the July 4th double holiday has been paid by Chief Cato in a general order.

It follows:

"I desire to commend the entire personnel of the California Highway Patrol for their tireless energy and the splendid devotion to

duty shown by them during the strenuous days and nights of July 3d, 4th and 5th.

"Through your vigilance and activity the hundreds of thousands of California citizens and guests were able to enjoy our highways in safety, for, even though the highways were crowded with vehicles, never before exceeded in numbers, fatal accidents were few.

"Men, I am proud of the record you made and proud of you."

Patrolman Dazzles Man With Flashlight, Disarms, Arrests Him

COOLNESS under attack and extreme bravery were displayed last month by William C. Fouyer, member of the California Highway Patrol, who, covered with a pistol by an alleged auto thief, dazzled the man with his flashlight, disarmed and arrested him.

The story of Fouyer's quick wit is told in a story appearing in the *Morning Union* of Grass Valley under date of June 21. It follows:

Displaying plenty of cool nerve in facing an asserted Moline, Ill., gunman, Officer William Fouyer of the California Highway Patrol, outwitted George Helta at Floriston at 9:30 o'clock Friday night and landed him in the Truckee jail. Helta was captured after a wide-open chase down the River Highway from Truckee to Floriston.

ONE SHOT FIRED

Helta, it is claimed, broke into a car in Truckee and stole a revolver. Securing a ride to Lake Tahoe with a motorist "Good Samaritan," the asserted gunman forced the car driver to stop his machine, give up his valuables and also his car. One shot was fired to enforce the demands.

The car motorist was given a ride to Truckee by a passing motorist, and, while relating his story to Fouyer, recognized his machine going through town. Fouyer instantly gave chase, and when the bandit refused to stop forced the machine into the ditch. Helta jumped from his car and leveled his gun at the officer.

DAZZLES ASSAILANT

Fouyer was more quick witted, and placing his spot light on Helta jumped into the shadows and drew his own gun, calling upon Helta to drop his gun or take a charge of lead. Helta threw his revolver over the embankment and submitted to arrest and handcuffs.

Fouyer also recovered the car, the bandit's gun, and placed the man in the Truckee jail. He was taken to Auburn to face the serious charges of highway robbery with a deadly weapon.

COURTEOUS WARNING

From Chas. J. Carter, San Francisco: I respectfully wish to report that, during the enforcement of his duties, Officer Torres of San Jose found it necessary to warn the writer with respect to traffic regulations, and, in the course of such duty, exercised such unlooked for and unusual courtesy and politeness, together with a kindly attitude unsurpassed in pointing out a proper and legal observance of the laws relating to motorists' rights and what-not, that I feel it incumbent upon me, as a citizen, to acquaint you with the foregoing data.

In these days of haste and thoughtlessness, it is a great pleasure to realize that your department is so ably represented by such competent and wholly human officers as Mr. Torres, and other gentlemen in the Traffic Division whom I have met.

Louisiana to Lead U. S. in Cash Spent Upon Highway Work

REPORTS from forty-five of the forty-eight states indicate that the 1931 highway construction program will far surpass the amount of work accomplished in 1930, according to a statement by D. H. Lafferty, president of the California State Automobile Association.

"The sum of one billion dollars, in round numbers, will be spent by the states for improving some 40,000 miles of highways and in maintaining the existing systems," Lafferty said. "In addition, there will be about \$500,000,000 expended by counties on local roads.

LOUISIANA LEADS

"On the basis of reports received, Louisiana will head the list of states with the largest expenditure, which is announced as \$64,700,000. New York will be second with a \$60,000,000 highway program, and Illinois will be third with \$50,000,000. While data has not been received from Pennsylvania, that state will also be well toward the top of the list with large road expenditures.

"From the standpoint of mileage, Louisiana plans to improve the high total of 3200 miles during the current year. Texas has a program calling for the improvement of 2400 miles, and Oklahoma is third with 2300 miles.

ENCOURAGING ASPECT

"Aside from relieving unemployment and furnishing an outlet for materials, the 1931 highway programs in all states have a most encouraging aspect from the viewpoint of the years immediately ahead. In preparation to meet those future needs, the states are expending approximately \$13,000,000 for new equipment and road-building machinery.

"The increase in federal-aid appropriations from \$75,000,000 to \$125,000,000 annually and the emergency appropriation of \$80,000,000 made available for 1931 have been vital factors in stimulating the states to take advantage of the business lull to meet the demand for more highways."

Pedestrians learning—That is if figures don't lie. At any rate casualty reports for 1930 show that since 1927 the total of pedestrian deaths has increased only 5 per cent, while deaths to persons in cars have jumped to 35 per cent.

\$30,000,000 Annual Expenditure Proves 24-hr. Day Problem

TREMENDOUS SCOPE OF DEPARTMENT'S WORK COVERING ENTIRE STATE IS EXPLAINED

By JAMES I. HERZ, Deputy Director

SPEAKING jocularly, the first hundred years may be the test of a man's staying qualities; but to a new official of the State Department of Public Works, the test is accomplished in six months. At the end of the shorter period the official has become so interested in his work and accumulated so many responsibilities he is not concerned about a little matter of 99 years.

The Department of Public Works has a 24-hour day of responsibility. It has a 365-day year of planning and building. Highways, bridges, public buildings, water projects, dams, irrigation projects and related improvements—all indispensable in the mechanism of our fast moving age.

There is nothing academic in the curriculum of the department. Its duties call for material results. As the servant of the expectant taxpayer, it must return work of a character that he can literally see and feel and appraise. But by the same token, the hard work involved is made easier by the tangible and enduring results.

GOING CONCERN

 The Department of Public Works is a going concern. More than \$9,000,000 worth of work on incomplete contracts was taken over when the new department heads took office in January. The legal and moral responsibility for the expending of nearly \$30,000,000 annually falls on the Director and his staff.

In the biennium budget will be found the major plans and specifications—and the bank account. To master the budget's general principles and get a working idea of the details is a test of concentration and study.

The Legislature met in January and the members looked to this department for suggestions and cooperation on all improvement work, dealing, as that work must, in appropriations. In return for the effort made, the Legislature returned to the department a fine measure of confidence and approval.

There was real urgency in the preparations

JAMES I. HERZ

for putting into effect Governor Rolph's program for speeding up improvements for the relief of unemployment. By emergency legislation near \$10,000,000 was made available for the department, much of it to go into public buildings.

That the Governor's wishes were fully met was in evidence when within a few weeks nearly 100 projects were under way. And it should be said in passing that whenever possible the benefits of employment were distributed in the local centers of the work.

The department was successful in advancing the highway construction program. As the press has pointed out, millions of dollars have been put in circulation and thousands of families made to benefit by employment of the bread winners. Nor has the business principle of getting full value for the dollar been neglected.

The end of the first six months found nearly 100 projects of an architectural character under way, and the general highway program had been advanced by at least 90 days. The State's activity as a builder and employer has had a decidedly beneficial effect in light-

Department Gives Work to Many, but Insists on Returns

ening the period of depression, by furnishing more than 8000 persons with employment and a ready market for machinery, materials and equipment running into millions of dollars.

The Highway Commission is the legislative authority in highways affairs; that is to say, it selects roads for improvement and provides the money allocations. But once this highly important service is furnished, the responsibility passes to the Department of Public Works. The Director receives the bids, opens them and makes the awards. Specifications, contracts and supervision are under his authority. And in the case of public buildings, the responsibility from their initiation to completion rests on him and his staff.

A State agency spending so much money and employing directly or indirectly so many people can not escape a relationship to the unemployment problem, especially when the work of that department reaches into every section of the State. The department has felt the strain. In addition to those seeking employment by reason of a change of administration, thousands out of employment have turned to the State for jobs. We have done the best we could up to the full measure of our budgetary allowances. We have tried to keep the human factor in mind and at the same time secure for the State its just dues in service and improvements.

I am hopeful, too, that we have achieved a measure of success that can not be fixed by highways and building construction. In the thousands of contacts we have made with men having public and private business with the department, we have tried to be fair, candid and to the point.

It is not always easy to say No nor always possible to say Yes; but it is, in my judgment, best to use the word that provides a final answer. Frank contact with people leaves no tacks of unfulfilled promises on the record to puncture public confidence.

Looking back over my first six months in this position, I will say that it has been fine to work with Colonel Garrison and the staff; and it is especially gratifying to acknowledge the friendly cooperation of the public in solving our many-sided problems. To write a log of the six months voyage would have left no time to navigate the craft. Hence the record must be sought in the results obtained.

Toll of Auto Deaths Caused by Excessive Speed, Says Report

EXCESSIVE SPEED—that's the outstanding cause of the "appalling loss of life and personal injuries" resulting from motor vehicle accidents.

So says E. Raymond Cato, Chief of the California Highway Patrol, in his monthly report.

As a result of a special analysis of auto accidents made for the first four months of the year and compared with the same period of last year, it is noted that there has been an increase in auto accidents of 13.37 per cent with a resultant 10.71 per cent jump in deaths.

"The California Highway Patrol is particularly interested in deaths occurring outside incorporated cities," says Cato. "Therefore it is of interest to note that such deaths increased only 2.24 per cent, while those inside incorporated cities jumped 17.88 per cent during the four-month period."

As a means of cutting down this toll of life and limb, the report recounts redoubled efforts to wipe out defective brakes. During the month of May 9514 machines were tested and 9.85 per cent were found defective. In all there are 1345 stations authorized to test brakes.

A decrease in the number of applications for drivers' licenses is reported. Applications numbered 34,499, a decrease of 6690 from the April figure.

The actual number of licenses issued was less by 5908 than the total issued the previous month, the May figure being 30,605. Of these, 60 per cent were operators, 21 per cent duplicate operators and 19 per cent chauffeurs' licenses.

State examiners conducted 55 per cent of the examinations and 45 per cent were given by the auto clubs, police and other authorized agencies.

PERSONNEL CHANGES

The following personnel changes were announced this month by Highway Patrol headquarters:

Patrolman Jean S. Thayer appointed acting captain in Colusa County to replace District Inspector R. L. Sheldon, assigned to special duty.

Inspector Harvey Blackwell named acting district inspector in District No. 7, George F. Moynahan, temporarily assigned as assistant supervisor in the Bureau of Traffic Enforcement.

Inspector Paul J. Maxim assigned to Bureau of Weights and Commercial Vehicles.

ALL SMOKED UP—But it soon will be a road. This is a scene on the Arrowhead Trail on the State Highway to Boulder Dam. It shows blasting operations, the cameraman catching an explosion in full force.

He Urges Expansion Of Highway Programs

Growth of motor vehicles, both in number and speed, has far outstripped the highway facilities of the United States, and that is one of the principal reasons for the congestion, danger and discomfort of much of the motor travel of today, said W. R. Smith, president of the American Road Builders' Association.

"There is urgent need at the present time for a marked expansion of highway programs," stated Mr. Smith. "This is especially true of road bond issues which bring immediately the benefits of good roads without unduly increasing taxes. Road bond issues are usually paid for by motor vehicle taxes, which do not increase the burden on real estate. The roads are paid for by the people who receive the most benefit—the road users.

"The United States can not afford to be without safe roads. The death toll of 32,500 annually with 950,000 injured, combined with a property damage due to motor accidents estimated at a billion dollars, makes safe highways a profitable investment," declared Captain H. C. Whitehurst, engineer of highways of the District of Columbia, in discussing the same subject.

Will Earl Lee Kelly Use Gavel as Weapon?

Apparently there's a chance for a good sports writer to turn publicity man.

Riverside Junior High School has presented Earl Lee Kelly, chairman of the California Highway Commission, with a beautifully carved orange wood gavel with which to direct future meetings of the commission.

The presentation was made to the chairman by Commissioner Frank A. Tetley, who explained that the school children of Riverside under the direction of Ira Landis had made the gavel for use of the chairman in keeping order.

Mr. Kelly thanked the commissioner for Riverside's kindness and a resolution was adopted ordering a letter of thanks sent to Mr. Landis.

But—the publicity man is needed to spread tidings concerning Mr. Kelly's height, weight and reach. At that the gavel might help.

It doesn't take much of a car, at that, to last some drivers a lifetime.

Too many men are out in the back yard looking for four-leaf clovers when opportunity knocks at the front door.—*Forum*.

Spectacular Job at Bottom of Sea; 10 Boats, 33 Men Remove Phone Cables

SPECTACULAR as the building of the \$75,000,000 San Francisco-Oakland bridge, one of the world's largest, undoubtedly will be, it is being preceded by one of the most difficult jobs in western telephone history. And this job, too, has spectacular features, mostly under water!

Squarely on the sites of two of the bridge's piers, large as city blocks, are 12 huge telephone cables. They and their lesser predecessors have held this approximate route for nearly a half century, ever since the first cable of 14 wires was laid across San Francisco Bay in 1884. The 12 cables now hold well over 5000 wires, with a peak capacity of 270,000 words a minute. A 36-page newspaper of solid reading matter every minute!

TEN BOATS USED

It is the hope of Charles H. Purcell, State Highway Engineer, that the bridge can be completed in 1937. But before it can be started the pier foundations must be laid. But the foundations can not be laid until the cables are out of the way.

Desiring to cooperate, and to speed the bridge as a great community enterprise, the Pacific Telephone and Telegraph Co. assembled a fleet of 10 boats and 33 men, including a deep sea diver, a life saver, and a squad of seven code signalers. Then on June 30 began a 90-day emergency night-and-day task to move the 12 cables 1000 feet north of the bridge site.

The cables, over two miles long, are buried, for about 1000 feet of their length, under 15 feet of mud and debris accumulated through the years. Each cable must be lifted from the mud and raised 100 feet to the surface of the bay before being moved. The cables have never been disturbed in this way. To pick up one of these 100-ton cables and raise it at one point as high as a 10-story building, and then carry it 1000 feet north, puts an unanticipated strain upon it.

ONE CABLE BREAKS

The danger of splitting a cable and interrupting telephone service was early seen as grave. Extreme care was taken in planning

and executing the job. But, despite all precautions, as the second cable was raised, on the fourth day of operations, it broke in two. Fortunately, the break occurred after the day's traffic peak, and few telephones were affected. Should a larger cable break, one of the two, for instance of the world's largest size, more service would be disturbed, but only for a short time, since spare special "stand-by" lines can be connected in from 15 to 70 minutes. Immediately after the break, the telephone company appealed to patrons to bear with it in a difficult situation.

The deep sea diver engaged in the work is William Reed, a World War naval wreck diver, and one of the heroes of the raising of the American submarine S-51, which sank off Providence, R. I.

SPECTACULAR JOB

The diver's work is somewhat spectacular. One hundred feet under water, he directs the washing of the 15 feet of mud from the cables with a powerful stream of water. Reed's helmet is equipped with ear phones and a transmitter with which he talks to telephone men on the company's barge, "Pacifie," just above him. He directs the operations of derricks and winches in untangling the cables. The stream of water, under 100 pounds pressure, is played upon the cables through a hose equipped with nozzle attached to a "wagon" with runners sliding over the cable. This "wagon" was specially designed by local telephone people for this particular job.

Before the three months' job of moving the cables began, a two months' game of "hide-and-seek" was necessary to locate them under the 15 feet of mud. No one knew precisely where they were. All anyone knew was that they were "out there in the bay." Only when a ship's anchor drags across a cable and breaks it is it necessary to find a cable.

Now, however, all 12 cables must be found. A giant electric "detector" was built by the local telephone people to locate the cables and chart them on a map. This charting was done to prevent delay when the 90-day job began.

"EXCUSE IT, PLEASE!"—Shades of Jules Verne. It's a great work this—moving telephone cables from the bottom of the San Francisco Bay. No. 1 shows how they "shoot" positions; in No. 2 is a U. S. Navy hero, Diver William Reed, who took a prominent part in the rescue work of the S-51. He's getting final instructions from Superintendent F. O. Edmunds. They talk while the diver is under water through the phone around Edmunds' neck—and they're never cut off. No. 3 is the "Pacific," barge flagship of the telephone fleet; No. 4 an insignificant looking gun, but it washes the mud off the twelve cables buried fifteen feet under the waters of the bay; No. 5 gives an idea how they talk to shore.

“California Must Get Together;” Then U. S. Water Aid Seems Assured

“IF THE people of California will iron out their little differences regarding the water problem of the State, then the fight for conservation and proper disposition of this precious fluid will be over.

“I am confident that the Congressional committee which has just toured the State is ready to recommend to Congress that Federal assistance in the form of a loan to the people of this State be granted.

“But that recommendation will not be forthcoming until California appears at the National Capital with a united front, each section of the State agreed upon a program.”

That's how Colonel Walter E. Garrison, Director of the Department of Public Works, sums up the result of the tour throughout the State just concluded by the subcommittee of the House Appropriations Committee. The Colonel and Edward Hyatt, engineer in charge of the Division of Water Resources, accompanied the visitors on their trip.

TO SELL POWER

“It is my opinion,” continued Garrison, “that it will be necessary for the voters of the State to pass a constitutional amendment which will permit the State to develop and sell power.

“In this connection I might add that it appears to be the attitude of the Congressional party that Congress will not come to the aid of this State if there be any danger of the power thus developed falling into the hands of the power trust.

“It seems we must guarantee that such sale shall not be possible.

UNITY ESSENTIAL

“In the meantime, Frank Murphy, chairman of the committee, told me that Congress will not be concerned with the location of any particular dam, the site of a power plant or the particular diversion of any stream in California,” said Colonel Garrison. “All Washington will want to know is:

“Has California a definite program for relief of its most serious problem—**WATER SHORTAGE?** Does California come before us united on a policy to be adopted which

will wipe out, for all time, the menace of water famine?

“That's what we have to do,” continued Garrison. “I think I can safely say that every member of the party which has just visited us is ready to recommend relief for this State.

GET TOGETHER

“Not only is Murphy, as the Republican chairman of the subcommittee, sympathetic, but Congressman Edward T. Taylor, Democrat of Colorado, who may become chairman should the Representatives be organized with a Democratic majority, told me that California stands an excellent chance of getting what it wants in water relief legislation. But he reiterated what Murphy said:

“‘Get together, California! Present a united front to Washington. Settle your differences and the battle is won.’”

The Congressional party arrived in California July 4th after inspecting the Boulder Dam project. A subcommittee of the House Appropriations Committee, they viewed the entire California water problem and concluded their State visit at Klamath Falls on July 14.

GOVERNOR'S PLEA

Headed by Frank Murphy, chairman, of Ohio, they were welcomed officially to the State on Sunday, July 12th, by Governor Rolph at the capital. In addressing the committee and their wives, the Governor told the visitors that California is in dire distress due to the acute water situation. He pointed out that the State's great need was to build impounding dams to store the winter flood waters.

“California is a mighty State,” the Governor continued. “If we can obtain the water which is our dire need we can continue to grow. We will come to you to borrow the money so to conserve this water like business men would. We need the money at the lowest possible rate of interest and as quickly as possible. We will repay it.”

In replying, Murphy said:

“I feel confident that the National government will be sympathetic toward California

"WATER OUR GRAVE PROBLEM!" That's Governor Ralph's message to Congressional committee studying California's gravest issue. The Governor is shown here, surrounded by the visitors as he officially says "Howdy" to Chairman Frank Murphy of Ohio.

in the solution of the serious problem now confronting the State.

"The United States will come to the rescue of California in preventing what might become an enormous calamity, I believe. But first the entire State must agree upon a unified and businesslike plan and guarantee the government that any money advanced will be repaid."

Edward T. Taylor of Colorado, ranking Democrat on the committee, supported Murphy's viewpoint.

Congressman Addison T. Smith, Idaho, Republican, chairman of the House Irrigation Committee, stressed the importance of statewide unity on the problem. He pointed out that California must concentrate on a unanimous proposal to Congress.

SHOW SYMPATHY

"Two of California's delegation in Washington, Senator Johnson and Congressman Swing, were able to obtain a \$165,000,000 Federal appropriation for the Boulder Dam

project, so I am inclined to believe that Congress will consider your appeal in a very sympathetic manner," he said.

The delegation included Congressmen Murphy, Burton L. French, Idaho; Edward T. Taylor, Colorado; William W. Hastings, Oklahoma; Don B. Colton, Utah; Addison T. Smith, Idaho; Robert Luce, Massachusetts, and Congressmen Harry L. Englebright, Clarence F. Lea and Phil D. Swing, California.

The Interior Department was represented by Elwood Mead, Commissioner of Reclamation; while F. J. Bailey, Assistant Budget Director, and William A. Duvall represented the Treasury Department.

Members of the California legislative committee in the party were Senators Crittenden, chairman; Frank Mixter, Tulare; W. P. Rich, Marysville, and Ralph Clock, Long Beach; and Assemblymen Robert Patterson, Taft; Edward Craig, Brea; Harold Cloudman, Berkeley; Frank S. Israel, Stockton; John E. Frazier, Gridley, and Robert P. Easley, Antioch.

Ho Hum! Just a Day in Life of Patrolman

A shiny white motorcycle snorted and coughed its way out of a division headquarters of the California Highway Patrol with Officer A—astride, promptly at 7 o'clock on a bright July morning.

Within an hour he had tagged a truck driver for overloading, given road directions to two tourists and reprimanded a traveling salesman for careless driving.

Two miles farther down the road a woman ran out screaming that her child had a safety pin in her throat. Officer A—took the child in his lap, drove seven miles to a doctor, had the pin removed and returned the child as good as new. Somewhat later, he found a weeping boy beside a dog whose leg had been broken by a passing car. He bound up the leg with pieces of wood and tire tape and sent the boy home happy.

Shortly after lunch Officer A—caught two motorists racing on the highway and tagged both. At 3 p.m. he passed a farmhouse and noted a barn on fire. Hurrying in, he led a cow and a goat to safety and sounded an alarm.

At 6 p.m. Officer A—reported back to headquarters.

"A quiet day," he told his Captain—.

Those are some of the things that happen to a California highway patrolman in his regular daily grind of duties. The events cited didn't all happen on the same day, of course. But they did happen over a period of a few weeks to members of the same county squad, as records of the patrol will show.

The conception the average person has of the highway patrolman is of one who rides furiously up and down the highways handing out tickets to speeders.

This is far from correct, as only a small part of his duties is handling speeders. The traffic officer is called upon to do a little of everything and the good officer is one who knows how to adjust himself to unusual situations.

Almost every officer can tell of numerous strange things he has had to do in the course of his work.

For example, Captain T. B. Myers of Lake County lists as one of his accomplishments the saving of a woman's life who was being beaten to death with the heel of a shoe by an irate husband. On another occasion Myers met an airplane bringing a doctor and a pulmotor and rushed both to Rainbow Camp on Clear Lake to save a drowned boy's life.

Sometimes it becomes necessary for the officer to abandon his motorcycle and take to the water. Captain G. W. Brown of Sutter County tells of such a case in the flood of 1929 in Marysville when he and one of his men worked for two days in a rowboat

By RUSSELL BEVANS,
Chief Inspector

Strange, Weird Gallant Deeds Some of These!

rescuing marooned families, dogs, chickens, etc., from the tops of buildings surrounded by water. One aged man was carried to safety after he had been on the top of a small building for a day and night.

Captain Fred A. Goodloe has had many a race with speeders, but the race he will remember longest was won from the stork over 17 miles of Shasta County's roughest and crookedest road. He had found a car on its side and an excited young husband standing beside a pale 18-year girl on a pile of bedding. Let Captain Goodloe tell the rest of the story:

"I'll never forget that ride to the hospital. It was 17 miles of pain and fear for the girl, 17 miles of anxiety for the man and 17 miles of curves, hills and loose gravel for me at a speed sometimes 85 miles an hour. But the old white goose outran the stork and a fine 8½-pound boy was born 10 minutes after we arrived at the hospital."

When the St. Francis Dam broke in Ventura County and sent a great flood of water down the valley, Thornton Edwards, a member of the patrol, risked his own life to ride from home to home, warning the people to escape to high ground. Edwards later received a medal for his brave deed. He is now Chief of Police of Santa Paula.

Don't think that every time an officer blows his siren for you to go to the side of the road he is going to arrest you. He may have a message for you instead.

Some years ago, Inspector W. E. Snell and Officer J. E. Reynolds caught an escaped convict at Tehachapi. While Snell was talking over the phone to the Sheriff the escapee grabbed Reynolds' gun from its holster. Reynolds dropped to the floor and yelled "Bill!" Snell turned, drew his gun and fired just as the convict fired. But Snell was the better shot and the convict is dead.

Captain G. F. Daley of Siskiyou County once noted a car parked on the roadside. Investigating, he found a mother with three young children and a man sick with tuberculosis. They were penniless and trying to get to Arizona. Daley drove six miles, brought back bread, butter, milk, bacon and beans and fed the family. He gave them a few dollars and sent them on their way happy.

Captain H. C. Meehan was recently called by a man who informed him a friend was ill in a Sawtell hospital and that he was trying to rush two men to give the patient a blood transfusion. Meehan detailed a car for the trip. The patient recovered.

Workings of Highway Commission

As Revealed by One of Its Members

Just how does the California Highway Commission operate? How does it go about handling the 7500 miles of roadway now in the State system? How are the highway problems of each section of California studied and disposed of? These are some of the pertinent questions which Harry A. Hopkins, commission member from Taft, answers and explains in the following authoritative article on the procedure and policies controlling the activities of the commission.

By HARRY A. HOPKINS, Highway Commissioner

TO attempt to write an article on the above subject after being a member of the California Highway Commission for only six months might be termed impertinence. However we live to learn and in absorbing as much as one human mind could in so short a period we find we could live several lives and not know all that is to be learned in this department of the State Administration. It is a progressive work and every day new developments enlarge our understanding.

The procedure controlling the activities of the California Highway Commission or, as the Legislature terms it, the Division of Highways in the Department of Public Works, is governed to a large extent by the legislative acts of the California State Legislature.

SCIENTIFIC BASIS

The most recent act of the Legislature is the Breed Bill of 1927. This provides a scientific basis of operation and its provisions provide for the division of revenues, classification of highways, division of the State into Northern and Southern groups of counties as well as other important provisions too numerous to mention. Its sections recite, in part, what proportion of the revenues must be used on Primary and Secondary Highways and joint highway districts as well as segregating the funds for construction, reconstruction, maintenance and repairs, administration of the department of the California Highway System.

In fact the Breed Bill provides for most of the procedure that governs the activities of the Division of Highways. However, the Commission has initiated other important procedure and policies.

If the public could be informed more regarding these provisions, under which the Commission works and the laws that make

HARRY A. HOPKINS

that body possible, it would, in a large measure, clear up much misunderstanding in reference to the details of the work. While Governor Rolph has appointed to the California Highway Commission one member from the northern part of the State, one from the north central part, one from the central part and one each from the southeast and southwest parts none represents any particular section of the State. All are appointed at large.

Public Meetings Supply Much Data

Continued from Preceding Page

Yet each naturally is more familiar with that portion of the State surrounding his residence.

Sectional favoritism is not possible both because of Governor Rolph's broad view on State Government Administration and the provisions of the Breed Bill. Yet the Chairman of the Commission has always shown the courtesy of securing the ideas and recommendations of Commissioners being nearest sections where some problem has arisen and upon which suggestions are invited.

COMPLETE UNITY

However after a matter has been fully presented and a clear understanding is had by the Commission, it immediately assumes the status of a State wide matter and Commissioners other than the one residing nearest to its origin might make and second motions for its disposal. The interests of one Commissioner are the interests of all the others.

The execution of the requirements and provisions of the laws appertaining to highways is many times misunderstood or not known to have had their origin in the Legislature. **Citizens many times are under the impression that the California Highway Commission originates the methods or the system under which the Division of Highways is working and feel that many statements and decisions affecting problems and projects are the result of a Commission policy.**

JUSTICE FOR ALL

Handling the affairs of a Commission that has the building and maintaining of ten per cent of the 75,000 miles of roads in California, or 7500 miles now in the California Highway system, naturally would call for rules of procedure in the conduct of the meetings and attending to its routine matters. Many contingencies arise that are unlooked for and many problems are presented that also necessitate some definite policy to govern those that are similar in character. The Commission must work as a unit.

Realizing that in order to do justice to all parts of the State and secure the best results there is an agreement among the members of the Commission and the Director of Public Works that the majority rule will prevail in all matters that come up for a vote. This was the first policy promulgated upon the organi-

zation of the present California Highway Commission.

In carrying out the duties of the Commissioners they are counseled by the attorney for the Commission in legal matters and by the State Highway Engineer in matters of engineering. The Director of Public Works is the directing executive. In a body comprising five men there is represented as many different lines of endeavor. Each has the experience of his own lines of business to assist in deciding the problems that come before the Commission. While none are engineers or practicing attorneys yet each has a background of experience on highway committees of Civic and State organizations as well as experience in City and State highway construction through connections in Municipal and State Governmental official life.

MEETINGS PUBLIC

The meetings of the California Highway Commission are public. Outside of the routine work that the operations of the Division bring before the meeting, covering resolutions allocating funds for contingencies and projects, votes on routes and signing of layout for the same, transferring of funds from time to time, much time is required for public hearings at regular meetings. These hearings are public and are given the citizens of the various parts of the State upon their application to the chairman of the Commission, usually through its members, and the chairman offers every opportunity for all concerned in controversial matters and otherwise to express their views and present their evidence to the Commission.

IMPORTANT POLICY

These hearings have brought to the attention of the public, policies that necessarily had to be put into effect where similar conditions prevailed. One very important policy is that in relation to routes that the smaller cities insist should go through their municipalities. **The Highway Commission desires to cooperate with all cities in the State in this respect, providing the route desired can be built to satisfactorily handle state traffic and in accordance with good engineering requirements and principles. With this understanding the Commission will adopt**

Highway Commission Working as Unit to Build up All State

such route to connect with the State highway, provided the elective body of the city adopts such route by resolution and obligates itself to provide the necessary rights of way to make the street eighty feet wide, and advising the method to be used to finance the same.

When evidence has been shown the Commission that these requirements have been met, then the Commission will build a hard surfaced strip through that street on the adopted route as wide as that outside the city that it approaches.

NUMEROUS DUTIES

Other policies or duties of the Commission, self imposed, are holding hearings in the several communities, attending Civic and State organizations, viewing projects under construction as well as different parts of the highway system, and disseminate such information as will give better understanding on the part of our citizens of the methods, requirements and laws provided in carrying out the business of this Division of the Department of Public Works.

One item that is not understood by the general public is that the Commission does not let contracts for projects. Bids are called for by the State Engineer and the Director of Public Works lets the contracts. The Commission allocates the money for these projects for which bids are called.

WORK AS UNIT

Many invitations are extended the Commission to meet with organizations and cities in almost every part of the State. An early accepted policy, presented by the chairman of the Commission, was to accept as many invitations both in a body and as individual members as consistent and possible.

In conclusion there is one thought that I would like to express. It is that the members of the California Highway Commission are working in unison and cooperating to the extent that the wishes of Governor Rolph will be carried out to the fullest in that this Commission is a Commission representing the citizens of this State and that through their procedure, duties and policies they are working for the best interest of every part and for the upbuilding of our great commonwealth, the State of California.

ISTWAY OADRAY OGSWAY! COPS ACQUIRE "CULTURE"

They are telling this one on big, genial Bert Reeves, sergeant of the Marin County State Police patrol.

"Say, Hewie," booms the ticklish one, "I understand the next class at State Highway police school in Sacramento this summer is to include a class in Pig Latin like the school kids talk."

"You don't say so," replied R. A. Hewitt, the demon bike rider. "What's the idea of learning that stuff?"

"Why simply so that we can talk to the road hogs," chortled the "Big One," as he deftly and gracefully executed a back flip.—*Sausalito News*.

Inter-American Road Progress Outlined

Progress of the Inter-American Highway was outlined to a group of Latin American diplomats and officials of the United States Government by Señor Tomás Guardia at a luncheon in Washington recently.

Sr. Guardia is President of the Inter-American Highway Commission and Chief Engineer of the Central Highway Board of Panamá. The luncheon was given in his honor by the Executive Committee of the Pan American Confederation for Highway Education. Dr. L. S. Rowe, chairman of the Committee, and Director General of the Pan American Union, presided.

The total length of the highway from Laredo, Texas, to Panamá City is 5200 kilometers, Sr. Guardia said, and of this distance two-thirds of the mileage is built, under construction, or easily passable in dry weather. The distance remaining to be built is 1850 kilometers, according to his report, and virtually all of this route has been surveyed.

In the achievement of the ultimate goal of a highway connecting the United States with the Central American countries and Panamá, Sr. Guardia sees no insuperable obstacles. The problems of financing and construction he considers as subordinate to the project of rousing the enthusiasm of the people and nations through which the highway is to pass.

"We must bring the minds of the people to a state where they will appreciate that roads, though entailing exertion, expense and perseverance, are well within the reach of all and that the benefits derived soon surpass the sacrifices involved," he said.

Did you know that: Ninety-four per cent of all automobiles stolen during 1930 were recovered?

CALIFORNIA HIGHWAYS AND PUBLIC WORKS

Official journal of the Division of Highways of the Department of Public Works, State of California; published for the information of the members of the department and the citizens of California.

Editors of newspapers and others are privileged to use matter contained herein. Cuts will be gladly loaned upon request.

Vol. 9 JULY, 1931 No. 7

"Wise Recommendation" Says Los Angeles Times

It has been recommended by the directors of the Automobile Club of Southern California to the Supervisors of Los Angeles county that the present county motor patrol of highways be given in charge of the State's traffic department, thus saving \$161,000 a year which, it is suggested, might be spent in grade separations and other highway improvements.

This seems to be sound sense. The present patrol service is good but too expensive in that it involves a duplication of work and of pay rolls. It has been pointed out to the Supervisors that the county has to pay 40 per cent of the cost of the State patrol anyway, this being its share of the taxes used for this purpose.

No complaint whatever is made by the Auto Club of the work of the men of the county patrol, in fact, they have nothing but praise for it. But the duplication of service is felt to be unnecessary. Perhaps, also, if the State patrolmen had no assistance from the county they would feel that they had greater responsibility and could perform their work with freer hands. In any event, it does not appear that they would have so much more to do that they could not render efficient service.—(L. A. Times editorial)

ROMANCE OF INSURANCE

How a business that started with less than \$100 grew into a six hundred million dollar annual expenditure is recalled by the anniversary of the first fire insurance policy ever written on an automobile, says a leading insurance publication. This policy was written June 2, 1902, by the Boston Insurance Company on a two-seated single cylinder French make car. The insured was protected only against fire in the sum of \$1,000.

The premiums paid in California last year were more than \$50,000,000.

Unemployed Given Work on Highways As Relief Measure

(From San Luis Obispo Telegram)

WITH the establishment of unemployment camps on the upper end of the San Simeon-Carmel highway where hundreds of men were employed and with the enlargement of the maintenance crews, Lester H. Gibson of San Luis Obispo, district engineer of the State Highway Department, estimates that 600 men were employed in the district.

* * *

The policy of giving positions to unemployed men on the road work of the district was a part of the plan of the department of Public Works to aid in relieving the unemployment of the nation.

* * *

The funds provided for the purpose are now spent, and the relief work is over. Mr. Gibson says that at the close of the period over which employment was furnished it was evident that unemployment situation of the winter months was considerably relieved. The men were leaving the highway department to find work in other kinds of business.

* * *

The number of dependents of each of 600 men employed has averaged about four to the man, so that the district has taken care of about 3000 individuals, Mr. Gibson estimates.

By means of questionnaires, the highway department determined the need of the individual before he was employed in order to give work to the most deserving.

* * *

The men were willing workers, eager to demonstrate their appreciation of the jobs offered. The men employed on the maintenance crews were given three days' work per week so that by employing two separate shifts, work could be furnished to a larger number of men, and a greater amount of relief given, Mr. Gibson said.

A MOTORIST'S PRAYER

Teach us to drive through life without skidding into other people's business. Preserve our brake linings that we stop before we go too far. Help us to hear the knocks in our own motors and close our ears to the clashing of other people's gears. Keep alcohol in our radiators and out of our stomachs. Absolve us from the mania of trying to pass the other auto on a narrow road. Open our eyes to the traffic sign and keep our feet on the breaks.—*Outlook*.

Gleaned From Letter Bag

Highway Patrol Wins Commendations; Courtesies and Firmness Both Praised

From Mrs. C. L. Corson, Burlingame: Having just returned from a trip to my mother's, I wish to take this opportunity of thanking Traffic Officer 418 for his wonderful service in helping to check a fire on the "Coward Place" near Arno. Had it not been for his wonderful help the fire no doubt would have taken dwelling and all frame buildings. Kindly accept my thanks for the services rendered.

* * *

SPLENDIDLY EFFICIENT

From Robert and Olive d'Erlach, Berkeley: We hereby desire to express our appreciation of the splendid and efficient aid rendered to us by Officer Eisenhuth of El Dorado when he found us injured on the Mother Lode road.

Our machine having left the road, we were helpless and Mr. Eisenhuth never left us until after he had seen us safely installed at the Placerville Sanitarium. He also communicated with my firm's district representative and took good care of our belongings.

In other words, Mr. Eisenhuth not only did his official duty, but extended courtesy and sympathetic attention to details which meant much to crippled folk in strange surroundings.

The department as a whole and Mr. Eisenhuth in particular has our sincere regard and esteem.

* * *

LODGE IS GRATEFUL

From E. Hansen, San Francisco: On behalf of Oriental Lodge, No. 144, F. & A. M., I want to express to you our thanks for the fine service you rendered in arranging escort of Captain Joe Blake and Officer Tom Taylor on our recent pilgrimage from Sacramento to Colfax. The officers handled our caravan in the most efficient manner.

* * *

HE'D EVEN TOW HIM

From L. P. Aldrick, Oregon: It is with considerable pleasure to me to be able to report to you a little incident that occurred just north of Vallejo.

I was driving to San Francisco and ran out of gas about two and one-half miles north of Vallejo. In free wheeling down a little grade, I noticed one of your highway patrolmen seated in his car watching the traffic. He evidently observed that I was well to the side of the road and going rather slow as compared to the traffic in general, sensing without a doubt that I was in trouble. My car finally stopped 300 or 400 yards beyond where he was stationed, and he immediately came down to see if he could help me and suggested if I had a tow line he would be glad to tow me to the next service station. He was very courteous and apparently willing to do what he could to assist me.

This Writer Even Likes His Arrest; Multi- farious Duties Done by State Squad

During the past year I have made seven or eight trips to California by automobile and have observed that your patrolmen are a credit to your State. It is with pleasure that I report this incident of your Officer No. 39.

* * *

From L. O. Myers, D.D.S., San Francisco: May I take this opportunity of telling you of the courtesy of one of your men. This officer gave me a tag for lack of trailer license, a matter that I was in ignorance of.

There is so much difference in some men that my friends and myself, on this trip, want you to know that an entire force made up of men of his type would be a credit to the State of California. This officer could give anybody a tag and make him like it. As near as I can read the name it is a Mr. Monteverde, No. 143.

* * *

ACCIDENTS CUT DOWN

From W. C. Parcher, Independence: Having been much concerned during the past few years over the number of serious accidents that have occurred on the State highway through Inyo County and having noted with much pleasure the marked decrease in these accidents since the establishment of the patrol system here, I wish to congratulate you upon the personnel of your Inyo County squad.

The men of this squad, under the very efficient direction of Captain Buer, are doing a fine job. This was especially noticeable during the Decoration Day week end when the heaviest traffic ever known in this county was handled without an accident or serious trouble of any kind.

* * *

FUNERALS ESCORTED

From R. L. Tudsbury, Loomis: May I not apprise you of our family's deep appreciation of the services rendered to us during the funeral of my mother last May, as well as the funeral of my father this May by your traffic officers of Placer County?

I wish to take this opportunity of commending most highly the captain of your patrol, Charles LaPorte, for the kind, efficient and understanding handling of our two caravans.

* * *

SHORT, BUT SWEET

From Bulah Baker Hughes, Davis: It affords me great pleasure to commend to you the courtesy and intelligence of Officer Burle Reynolds, who was able to help me when our car stalled above Kyburz last week.

New Labor Laws Will Be Enforced

Continued from page one

ALL IS CONFUSION to the layman, but this equipment is part of that which is being employed to rush the Newcastle tunnel job to completion. When completed, the tunnel will take highway traffic under the city and relieve considerable congestion.

PROPOSED WORK—(CONTINUED)

Total	-----	8,726,500

The Department of Architecture announces a formidable list of projects also. Those herein enumerated will be under actual construction in the field during this half year.

Institution	Project	Amount
San Francisco College	additional classrooms	\$100,000
New State Hospital in southern California	second unit for patients	350,000
National Guard	Yuba City Armory	25,000
Industrial Home for Adult Blind	superintendent's residence	15,000
Napa Hospital	improvement to wards	25,000
Mendocino Hospital	laundry	60,000
Sonoma State Home	school and gymnasium	40,000
Sonoma State Home	fire house	31,000
State Narcotic Hospital	two ward buildings	40,000
Preston School	shop building	25,000
Santa Barbara College	training school	70,000
Patton Hospital	dairy unit	25,000
Agnew's Hospital	kitchen equipment	20,000
School for Deaf	improvements	2,240
Napa Hospital	roads	6,300
Preston School	improvements	5,737
Department of Agriculture	border stations	18,000
Narcotic Hospital	service connections	3,708
Stockton Hospital	remodel laundry	5,400
School for Blind	improvements	5,400
San Diego College	sprinklers	2,700

List of New Work Projects Released

			Napa Hospital, remodeling		81,000
			Napa Hospital, improvements		25,000
			Total		\$4,858,273

DIGGING IN—The boys on this Newcastle tunnel job are out for lunch. The scene is that of the east portal of the project. The tunnel will run under the main section of the town. Three drifts are being developed which later will be consolidated into the auto subway.

Motorists' Fees Remedy Road Like This

ROUGHING IT—in Bear Valley. Here's your typical "Ozaik, Missouri," road on the route from Emigrant Gap to Nevada City. This section has not yet been reached by construction, but the road—a reminder of the early auto days—is still used.

THE Division of Motor Vehicles has accounted for its stewardship of funds collected from the motorists of the State during the first half of 1931, by apportioning the huge sum of \$6,176,513.91 to the counties of the State and to the Division of Highways for road maintenance purposes.

One half of this amount, or \$3,088,256.96, goes to the Division of Highways and will be expended by the State's road building organization. The other half is apportioned among the fifty-eight counties according to automobile registrations.

The amount apportioned is substantially greater than last year despite an augmented program of highway patrol and protection financed from license fees. The apportionment practically enables the motorist to get his money back in the form of good roads.

This total of registrations does not include cars exempt from payment of fees such as

those owned by public corporations and is a gain of 38,153 vehicles over the same period of 1930.

The apportionment is based on fee-paid registrations for the period totaling 2,006,165 for the six months period.

The registrations for the period are divided as follows: Passenger cars, 1,855,236; solid trucks, 10,514; pneumatic trucks, 85,675; motoreycles, 7,949; solid trailers, 7,737; pneumatic trailers, 39,054.

Los Angeles County with more than one-third of all the registrations will receive the largest share or \$1,265,276.11. San Francisco County will receive \$229,414.30, the second largest share. Alameda County will receive \$218,795.63.

Here's an interesting fact: Sixteen per cent of the motor vehicles made in the United States in 1930 were exported.

Stately Monarchs of Forest Preserved

LONG LIVE THE KING—This superb stand of Redwoods, on the South Fork of the Eel River, with 10,000 acres of surrounding forest, is declared by experts to be a perfect example of redwood growth, which, once destroyed, never could be reproduced. The area has been purchased and will become a part of the State Park system. John D. Rockefeller, Jr., contributed \$1,000,000 toward the purchase.

The renowned Bull Creek and Dyerville forests, acclaimed by world travelers the supreme development of California's giant redwoods, and considered of the same national importance as Yosemite, Grand Canyon and other unique national wonders, are assured of preservation as a part of California's State Park system.

This is the announcement of the California State Park Commission, which has reported through the Director of Natural Resources to Governor James Rolph, Jr., that negotiations with the Pacific Lumber Company, owner of these redwood groves, have reached a successful conclusion, and that 10,000 acres, including the watersheds of Bull Creek, Becker Creek and Cabin Creek, as well as the North and South Dyerville Flats, will be acquired.

The acquisition of these redwoods culminates a campaign of over ten years conducted by the Save-the-Redwoods League, and begun by its founders, Dr. John C. Merriam of the Carnegie Institution of Washington, Madison Grant of New York, and Dr. Henry Fairfield Osborn of the American Museum of Natural History.

Under the terms of the State Park Bond Act, passed by the Legislature in 1927, and ratified by the people of the State, half of the total cost of the project is to be borne by the State and half by the Save-the-Redwoods League. The saving of these redwoods was prominently featured in the campaign for the State Park bonds.

The Save-the-Redwoods League has announced that it has secured sufficient contributions and pledges to match State Park bond funds for the acquisition of these lands. Many public-spirited individuals and organizations throughout the United States have contributed.

John D. Rockefeller, Jr., by a gift of \$1,000,000 and a pledge of a second million to match private gifts as received, made possible the success of the project.

Organizations such as The Garden Club of America, the California Federation of Women's Clubs and the Native Daughters of the Golden West contributed substantial funds.

When Bowling Along Highways, He Gives Cheer for Builders

By J. A. GREGORY, District VIII Right of Way Agent

TODAY we seem to be at the beginning of a new era in highway building and progress. The men who are responsible for construction of the highways of today are entitled to a great deal of commendation. We get in our car and start out for the beach, mountains or desert, and as far as roadbed is concerned we ride with ease.

Little thought is given to the origination of such highways and the vast amount of field work and office work necessary before even construction work begins. As we ride over mountain roads, where the country is thick with brush and forests, little thought is given to the surveyor and locator who battled and cut his way through such places to make the location. All such surveys and locations after being made in the field are then brought in to the offices of the Division of Highways, where prints of routes, together with maps of elevations, cuts and fills, etc., are made which show exactly where that certain route is located. All such plans after completion are then forwarded to the central office, Sacramento, for approval.

After plans have been returned with an O. K. from Sacramento, in due time that certain project is advertised for bids, which are opened in the offices of the Department of Public Works.

These are a few of the high lights preparatory to the construction of the wonderful highways we have throughout the State today.

To some it would seem extravagant completely to change a dedicated roadbed to an elevated position practically paralleling the same route. This is where the maintenance cost of highways figures in. A yearly check on repairs, grading and cleaning off storm refuse from highways and the great inconvenience to motorists, commercial and others, are checked against the cost of new construction, which through the elevated grade and storm drains, practically eliminates flood damage.

Too much can not be said in commendation for the Governor who approves road construction budgets, the Legislators, who also have their part, and the Director of the Department of Public Works, who sees them through to a final conclusion, and last, but not least, the gas tax that makes it all possible.

17 Stolen Machines Recovered by Patrol; 21 Officers Cited

SEVENTEEN stolen autos were recovered and seventeen persons arrested as automobile thieves during the month of June, due to the efforts of the Highway Patrol.

In addition, several lives were saved by efforts of patrolmen.

The facts are brought out in a list of citations given out by Chief E. Raymond Cato, who names twenty-one members of the organization for good work done during the past month.

TEN GET THIEVES

Ten men were commended for their work in nabbing the auto thieves. They are Tony Rose, Joseph Lewis, C. R. Avellar and A. Larsen of Alameda County; Captain S. M. Flynn and C. A. Lunnen of Ventura County, L. N. Harvey of San Diego County, R. H. Trenbath and R. Cockerton of Contra Costa County and J. C. Shanks of Sonoma County.

Two officers, J. N. Nobel and R. J. Parr of Ventura County, received commendation for their rescue of two fishermen caught by the tide.

SAVES A LIFE

Two others, N. Vadnais and C. K. Gill of Alameda County, were cited for rendering assistance to a man and woman hurt in a plane crash.

Inspector M. F. Brown, Eureka, took pneumonia serum to an outlying point and saved a patient's life, thereby earning notice. F. Perry was commended for assistance in checking a fire in Sacramento County.

Captain M. Carter and John Shaffer of Tehama earned citations for first aid given a woman whose husband had been killed in an automobile accident.

HERE'S BRAVE ACT

W. Fonyer of Nevada County earned a citation for the capture of a bandit at night who had drawn a gun. Fonyer threw his spotlight in the man's eyes and captured him without a struggle.

L. Trenner of Monterey County was commended for assisting the police of Pacific Grove in giving first aid to persons involved in an automobile wreck.

L. Sample, a border checker of San Bernardino County, was commended for assistance given the authorities of Nevada in capturing two murder suspects.

Work is Progressing On Alternate Ridge Route Construction

S. V. Cortelyou, District Engineer, reports rapid progress on highway construction work in District 7. Extracts from his report show:

IN LOS ANGELES COUNTY—Work is rapidly nearing completion on the first grading contract of the Alternate Ridge Route. This portion is between Castaic and Canton Creek and is being constructed by Doering von der Hellen & Pierson, contractors.

The second grading contract on this route, from Canton Creek to Piru Gorge, was awarded to the Will F. Peck Company April 23, 1931. Work is now in progress on this section and the grading of the work will be completed by approximately September 1, 1932.

Bids will be opened for the third and final grading contract on this project July 15, 1931, so that grading for the entire length of the Alternate Ridge Route will be under contract shortly after that date.

IN ORANGE COUNTY—Paving work was recently completed on the Galivan line change, a distance of 0.93 mile. This new alignment crosses the Santa Fe Railroad tracks on an overhead crossing which was constructed a few years ago. A con-

THEN AND NOW—Surely a real study in contrasts. The "Before" photo is a good ad for So & So's tractor—at least one would need it to traverse that road. But the same scene depicted below, typical of highway improvement between Mojave and Bishop, is an old story to Californians—a long, level stretch of modern road.

tract has recently been awarded for widening the grading and pavement for a distance of approximately $5\frac{1}{2}$ miles along the Serra Bluffs from San Mateo Flat to Serra.

IN SAN DIEGO COUNTY—A line change at

Bostonia, which greatly improves the alignment on this section, is now under construction. Portland cement concrete pavement 20 feet wide has been completed and this portion of the highway will be opened to traffic in a short time.

Vital Statistics on Dam Construction

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of June, 1931.

VENTURA COUNTY—Los Posas Wash No. 766. J. N. Thille and Peter Connely, Santa Paula, owner; earth, 10 feet above streambed with a storage capacity of 50 acre-feet, situated on Los Posas Wash tributary to Revelon Slough, for silt storage purposes.

RIVERSIDE COUNTY—San Jacinto Dam No. 812. J. C. Agee, Artesia, owner; earth, 22 feet above streambed with a storage capacity of 60 acre-feet, located in Sec. 18, T. 3 S., R. 6 W., S. B. B. and M.

MODOC COUNTY—Dry Valley Dam No. 121-5. Bixby-Huffman Cattle Co., Alturas, owner; earth, 3 feet above streambed with a storage capacity of 100 acre-feet, situated on Dry Valley tributary to Willow Creek in Sec. 12, T. 46 N., R. 10 E., M. D. B. and M., for storage purposes, for irrigation and stock use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of June, 1931.

SAN MATEO COUNTY—Whitehouse Creek Dam No. 607. Humphrey Estate, Inc., Pescadero, owner; arch dam, 21 feet above streambed with a storage capacity of 9 acre-feet, situated on Whitehouse Creek in Sec. 8, T. 9 S., R. 4 W., M. D. B. and M., for storage and diversion purposes, for irrigation use. Estimated cost \$2,750, fees paid \$27.50.

LOS ANGELES COUNTY—Verdugo Wash Dam No. 32-4. Los Angeles County Flood Control District, Los Angeles, owner; earth, 32 feet above streambed with a storage capacity of 108 acre-feet, situated on Verdugo Creek tributary to Los Angeles River, located in Rancho San Rafael. Estimated cost \$33,182, fees paid \$331.82.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of June, 1931.

SOLANO COUNTY—Swanzy Lake Dam No. 443. Calif. and Hawaii Sugar Refining Corp., Crockett, owner; earth dam, located in Vallejo Township.

MODOC COUNTY—Spaulding Dam No. 154. R. D. Craig, Malin, Oregon, owner; earth dam, situated on unnamed drainage tributary to Tule Lake in Sec. 2, T. 42 N., R. 7 E., M. D. B. and M.

VENTURA COUNTY—Hall Canyon, Lower Dam No. 764-2. Associated Oil Company, San Francisco, owner; earth dam, situated on Hall Canyon Creek tributary to Pacific Ocean in Rancho Ex Mission San Buenaventura.

RIVERSIDE COUNTY—San Jacinto Dam No. 812. J. C. Agee, Artesia, owner; earth, located in Sec. 19, T. 3 S., R. 6 W., S. B. B. and M.

RIVERSIDE COUNTY—Lake Norcorian Dam, West, No. 820. Rex B. Clark, Norco, owner; earth, located in Sec. 12, T. 3 S., R. 7 W., S. B. B. and M.

ORANGE COUNTY—South Lambert Dam No. 793. The Irvine Co., Tustin, owner; earth, located in Lot 268 of Irvines subdivision.

MONO COUNTY—Walker Dam No. 533. Archibald Farrington, Mono Lake, owner; earth and rock, situated on Walker Creek tributary to Rush Creek in Sec. 7, T. 1 S., R. 26 E., M. D. B. and M.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of June, 1931.

LOS ANGELES COUNTY—Pine Canyon Dam No. 19. City of Pasadena, Pasadena, owner; gravity dam, 217 feet above streambed with a storage capacity of 40,900 acre-feet, situated on San Gabriel River tributary to Pacific Ocean in Sec. 13, T. 1 N., R. 10 W., S. B. B. and M., for storage purposes for municipal and domestic use.

NEVADA COUNTY—Lower Lindsay Lake Dam No.

97-36. Pacific Gas and Electric Company, San Francisco, owner; earth and rock, 113 feet above streambed with a storage capacity of 290 acre-feet, situated on Texas Creek tributary to South Yuba River in Sec. 20, T. 18 N., R. 12 E., M. D. B. and M., for storage purposes for power use.

ALAMEDA COUNTY—Upper Alameda Creek Diversion Dam No. 10-9. City and County of San Francisco, San Francisco, owner; slab and buttress dam, 32 feet above streambed with a storage capacity of 15 acre-feet, situated on Upper Alameda Creek tributary to Calaveras Creek in Sec. 17, T. 5 S., R. 2 E., M. D. B. and M., for diversion purposes, for municipal and domestic use.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of June, 1931.

LOS ANGELES COUNTY—Big Santa Anita Dam No. 32-2. Los Angeles County Flood Control District, Los Angeles, owner; arch dam, situated on Big Santa Anita Creek tributary to San Gabriel River in Sec. 10, T. 1 N., R. 1 W., S. B. B. and M.

MONO COUNTY—Sardine Lake Dam No. 533-2. Archibald Farrington, Mono Lake, owner; rock, 10 feet above streambed with a storage capacity of 30 acre-feet, situated on Walker Creek tributary to Mono Lake in Sec. 15, T. 1 S., R. 25 E., M. D. B. and M.

VENTURA COUNTY—Lower Hall Canyon Dam No. 764-2. Associated Oil Company, San Francisco, owner; earth dam, situated on Hall Canyon Creek tributary to Pacific Ocean, located in Rancho Ex Mission San Buenaventura.

BUTTE COUNTY—Round Valley Dam No. 97-9. Pacific Gas and Electric Company, San Francisco, owner; earth dam, situated on North Fork Feather River tributary to Feather River in Sec. 50, T. 26 N., R. 5 E., M. D. B. and M.

LOS ANGELES COUNTY—Devils Gate Dam No. 32-3. Los Angeles County Flood Control District, Los Angeles, owner; gravity dam, situated on Arroyo Seco, tributary to Los Angeles River in Rancho San Pascual.

RIVERSIDE COUNTY—San Jacinto Dam No. 812. J. C. Agee, Artesia, owner; earth dam, located in Sec. 19, T. 3 S., R. 6 W., S. B. B. and M.

RIVERSIDE COUNTY—Lake Norcorian, West Dam No. 820-A. Rex B. Clark, Norco, owner; earth dam, located in Sec. 12, T. 3 S., R. 7 W., S. B. B. and M.

WATER APPLICATIONS AND PERMITS

LOS ANGELES COUNTY—Application 6970. Harry M. Miller, Little Rock, Calif., for 2 miners inches or 0.05 c.f.s. from an unnamed spring tributary to Mojave Desert. To be diverted in Sec. 16, T. 4 N., R. 10 W., S. B. B. and M., for irrigation and domestic purposes (2 acres).

ALPINE COUNTY—Application 6971. State of California, Department of Public Works, Division of Highways, District X, by C. H. Purcell, State Highway Engineer, Sacramento, Calif., for 0.016 c.f.s. from an unnamed spring tributary to Middle Fork of Stanislaus River. To be diverted in Sec. 35, T. 6 N., R. 20 E., M. D. B. and M., for domestic purposes. Estimated cost \$1,000.

NEVADA COUNTY—Application 6972. C. A. Casey, Mill Valley, Calif., for one miners inch from a spring tributary to Middle Fork of Yuba River. To be diverted in Sec. 5, T. 17 N., R. 8 E., M. D. B. and M., for mining and domestic purposes.

KERN COUNTY—Application 6973. Clinton E. Albertson, Los 35, Inyokern, Calif., for 500 gallons per day from a well. To be diverted in Sec. 26, T. 27 S., R. 40 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$200.

SIERRA COUNTY—Application 6974. Minnie F. Dutton, 1053 N. Ardmore, Los Angeles, Calif., for 25 c.f.s. from South Fork of North Fork of Yuba River tributary to North Fork of Yuba River. To be diverted

June Water Applications and Permits

in Sec. 30, T. 20 N., R. 12 E., M. D. B. and M., for power purposes.

TUOLUMNE COUNTY—Application 6975. State of California, Department of Public Works, Division of Highways, c/o C. H. Purcell, State Highway Engineer, Public Works Bldg., Sacramento, Calif., for 0.616 c.f.s. from an unnamed spring tributary to South Fork of Tuolumne River. To be diverted in Sec. 35, T. 1 S., R. 19 E., M. D. B. and M., for domestic purposes. Estimated cost \$1,000.

SAN BERNARDINO COUNTY—Application 6976. Wayne Courtney, 1318 W. 94th street, Los Angeles, Calif., for 3 c.f.s. from Antelope Canyon tributary to Mojave Desert. To be diverted in Sec. 29, T. 2 N., R. 4 E., S. B. B. and M., for irrigation and domestic purposes.

KERN COUNTY—Application 6977. W. F. Elwin and Noah Adair, c/o C. L. Adair, 308 Date street, Rialto, Calif., for 3 c.f.s. from wells tributary to Goler Creek, tributary to Mojave Desert. To be diverted in Secs. 34 and 35, T. 28 S., R. 39 E., M. D. B. and M., for mining purposes. Estimated cost \$3,000.

TRINITY COUNTY—Application 6978. Edward L. Schreckengost, Douglas City, Trinity County, Calif., for 2 c.f.s. from Browns Creek tributary to Trinity River. To be diverted in Sec. 19, T. 31 N., R. 19 W., M. D. B. and M., for mining purposes. Estimated cost \$600.

HUMBOLDT COUNTY—Application 6979. Ulysses S. Grant Myers, Weott, Calif., for 0.025 c.f.s. from Pete Creek tributary to South Fork of Eel River. To be diverted in Sec. 30, T. 2 S., R. 3 E., H. B. B. and M., for domestic purposes. Estimated cost \$2,750.

TULARE COUNTY—Application 6980. Frank O. Sheldon, P. O. Box 68, Porterville, Calif., for 200 gallons per day from a spring tributary to South Fork of Middle Fork of Tule River. To be diverted in Sec. 32, T. 20 S., R. 31 E., M. D. B. and M., for domestic purposes. Estimated cost \$35.

TULARE COUNTY—Application 6981. N. N. Redford, A. M. Griggs, R. Y. Roper, c/o N. N. Redford, Exeter, Calif., for 600 gallons per day from Monarch Creek tributary to East Fork of Kaweah River. To be diverted in Sec. 15, T. 17 S., R. 31 E., M. D. B. and M., for domestic purposes.

TRINITY COUNTY—Application 6982. Basil Froloff, Weaverville, Calif., for 12.5 c.f.s. from Rush Creek tributary to Trinity River. To be diverted in Sec. 21, T. 34 N., R. 9 W., M. D. B. and M., for mining and domestic purposes. Estimated cost \$50.

PLACER COUNTY—Application 6983. Brockway Land & Water Co., a Corporation, c/o Jessie H. Miller, Atty., 712 DeYoung Bldg., San Francisco, Calif., for 1.0 c.f.s. from Griff Creek tributary to Lake Tahoe. To be diverted in Sec. 18, T. 16 N., R. 18 E., M. D. B. and M., for irrigation and domestic purposes (\$41.88 acres).

MERCED COUNTY—Application 6984. Stevenson Water District, a Corporation, c/o Hatfield, Wood & Kilkenny, Atty., 315 Chancery Bldg., San Francisco, Calif., for 175 c.f.s. from McCoy Spillway, Arena Spillway, Livingston Drain, Bear Creek, Owens Creek, Duck Creek, Deadman Creek, tributary to San Joaquin River. To be diverted in Secs. 20, 21, 22, 27 and 33, T. 7 S., R. 11 E., M. D. B. and M., Sec. 12, T. 8 S., R. 11 E., M. D. B. and M., and Secs. 19 and 30, T. 8 S., R. 12 E., M. D. B. and M., for irrigation purposes (21,695.33 acres). Estimated cost \$50,000.

TRINITY COUNTY—Application 6985. Majestic Mines Co., Weaverville, Calif., for 100 c.f.s. from Rush Creek tributary to Trinity River. To be diverted in Sec. 5, T. 34 N., R. 9 W., M. D. B. and M., for mining and domestic purposes. Estimated cost \$50,000.

DEL NORTE COUNTY—Application 6986. D. R. Morrison and W. J. Cooley, c/o Daniel M. Hunsaker, Atty., Rowan Bldg., Los Angeles, Calif., for 50 c.f.s. from Elk Creek tributary to Illinois River. To be diverted in Sec. 12, T. 19 N., R. 4 E., H. B. B. and M., for mining purposes. Estimated cost \$200.

SISKIYOU COUNTY—Application 6987. T. A. Sweeney, Ainsworth Bldg., Portland, Ore., for 2 c.f.s. 30 acre-feet per annum from Hungary Creek and unnamed springs tributary to Klamath River. To be diverted in Sec. 36, T. 48 N., R. 8 W., M. D. B. and M., for mining and domestic purposes.

EL DORADO COUNTY—Application 6988. Harold J. Smith, 602-4 Medico Dental Bldg., Sacramento, Calif., for 200 gallons per day from Rock Creek tributary to South Fork of American River. To be diverted in Sec. 18, T. 11 N., R. 17 E., M. D. B. and M., for domestic purposes. Estimated cost \$100.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of June, 1931.

SIERRA COUNTY—Permit 3721, Application 6923. Geo. F. Taylor, Downville, Calif., June 2, 1931, for 50 c.f.s. from Cherokee Creek in Sec. 6, T. 19 N., R. 9 E., M. D. M., for mining purposes.

SAN BERNARDINO COUNTY—Permit 3722, Application 6717. Geneva C. Baxter, Victorville, Calif., June 2, 1931, for 0.4 c.f.s. from Silver Creek Canyon in Sec. 17, T. 3 N., R. 1 W., S. B. M., for irrigation purposes on 180 acres. Estimated cost \$100.

MARIPOSA COUNTY—Permit 3723, Application 6336—Mrs. Estelle L. Fraser, Coulterville, Calif., June 2, 1931, for 39 c.f.s. from North Fork of Merced River in Sec. 7, T. 3 S., R. 18 E., M. D. M., for power purposes.

LOS ANGELES COUNTY—Permit 3724, Application 6511. Ernest E. Pettinger and Ralph Wagner, Saugus, Calif., June 6, 1931, for 0.05 c.f.s. from Drippy Spring in Sec. 25, T. 5 N., R. 16 W., S. B. M., for irrigation and domestic purposes on 4 acres. Estimated cost \$25.

MONTEREY COUNTY—Permit 3727, Application 6065. Florence Hogue, Los Angeles, Calif., June 9, 1931, for 3 c.f.s. from Bixby Creek in Section 15, T. 18 S., R. 1 E., M. D. M., for power purposes. Estimated cost \$9,000.

MONTEREY COUNTY—Permit 3728, Application 6067. Florence Hogue, Los Angeles, Calif., June 9, 1931, for 1 c.f.s. from (2) Bixby Creek, (3) Cross Canyon, (4) Daisy Gulch, (5) Bear Trap Canyon in Secs. 15 and 16, T. 18 S., R. 1 E., M. D. M., for domestic purposes. Estimated cost \$22,000.

MONTEREY COUNTY—Permit 3729, Application 6122. Florence Hogue, Los Angeles, Calif., June 9, 1931, for 1 c.f.s. from Sierra Creek in Sec. 21, T. 18 S., R. 1 E., M. D. M., for domestic purposes. Estimated cost \$8,000.

LAKE COUNTY—Permit 3730, Application 6927. P. V. Pedroncini, Ukiah, Calif., June 10, 1931, for 0.1 c.f.s. from two unnamed springs in Sec. 11, T. 15 N., R. 1 W., M. D. M., for irrigation and domestic purposes on 7 acres. Estimated cost \$3,000.

HUMBOLDT COUNTY—Permit 3731, Application 6911. Mrs. Sarah J. Carpenter, Salyer, Calif., June 19, 1931, for 1.2 c.f.s. from Ammon Creek, in Sec. 12, T. 5 N., R. 5 E., H. B. M., for irrigation purposes on 60 acres. Estimated cost \$800.

BUTTE COUNTY—Permit 3732, Application 6660. A. H. Dakin, Magalia, Calif., June 19, 1931, for 3 c.f.s. from Empire Creek in Sec. 20, T. 23 N., R. 4 E., M. D. M., for mining purposes. Estimated cost \$15,000.

MONO COUNTY—Permit 3733, Application 5953. Harry A. Culver, June Lake, Calif., June 20, 1931, for 0.025 c.f.s. from an unnamed spring in Sec. 14, T. 2 S., R. 26 E., M. D. B., for domestic purposes. Estimated cost \$100.

PLUMAS COUNTY—Permit 3734, Application 6874. Oscar T. Schumacher, Quincy, Calif., June 20, 1931, 1 c.f.s. from an unnamed stream in Sec. 33, T. 23 N., R. 10 E., M. D. M., for mining and domestic purposes.

EL DORADO COUNTY—Permit 3735, Application 6842. J. W. Moore and W. C. Neumiller, Stockton, Calif., June 23, 1931, for 1800 gallons per day from Forni Creek in Sec. 24, T. 11 N., R. 16 E., M. D. M., for domestic purposes. Estimated cost \$350.

PLUMAS COUNTY—Permit 3736, Application 6872. Max Paul Boehme, San Francisco, Calif., June 3, 1931, for 0.0 c.f.s. from Mill Creek in Sec. 27, T. 25 N., R. 8 E., M. D. M., for irrigation and domestic purposes on six acres. Estimated cost \$150.

SIERRA COUNTY—Permit 3737, Application 6844. Kate Hardy Mining Co., Downville, Calif., June 25, 1931, for 0.205 c.f.s. from an unnamed ravine in Sec. 20, T. 19 N., R. 10 E., M. D. M., for mining purposes. Estimated cost \$300.

Here's Hot Article on a Cold Subject

The following article on refrigeration may not be read with avidity by this journal's subscribers in Alaska, but it is particularly timely in Sacramento, where it is being edited on one of the Sacramento Valley's "unusual" days. It is an intensely interesting paper on how to keep cool and how ice and other freezy things are made.

By C. A. HENDERLONG, Assistant Engineer

ALTHOUGH refrigeration as we now know it is a comparatively modern process, it is a known fact that the ancients knew some of its secrets.

Thousands of years before the dawn of the Christian era, the Egyptians produced artificial refrigeration by means of evaporation for the cooling of wines and water. This was done by placing the liquids to be cooled in porous vessels, the evaporation of moisture on the outside cooling the liquid inside. This principle is still employed, for instance, in the desert water bag constructed of heavy canvas. Refrigeration was also obtained by the ancients by means of packed snow brought down from nearby mountains through means of fast runners.

DATES BACK TO 1873

The successful production of refrigeration by the compression system dates back to the invention of the ammonia compression machine in 1873. Subsequent to that time, other experiments produced different forms of mechanical refrigeration; however, none was entirely successful. Mechanical refrigeration was at first applied to the production of artificial ice. It was soon found, however, that ice was not suitable for the preservation of foods at low temperatures and the system of placing expansion or cooling coils directly in the cold storage boxes was developed.

Mechanical refrigeration has now become an absolute necessity in our State institutions and also in hotels, cold storage plants, etc., where it is necessary to keep supplies of perishable food on hand. When it is considered that temperature above 50° F. results in the rapid spoilage of most foods through bacteria growth, the absolute need of refrigeration is apparent. Poultry, for instance, should be kept at about 29° F. if held for any length of time; meat at 32° F.; likewise milk, eggs, etc., around 34° F., and other products at correspondingly low temperatures. Products in storage for long periods are held at somewhat lower temperatures than above.

USES BY STATE

With the development of mechanical refrigeration, its use has been extended to other fields such as the cooling and air conditioning of factories, theatres, etc., various mechanical and chemical processes and the production of dry ice or frozen carbon dioxide (CO₂), etc., besides many other widely different applications.

It is the purpose of this article to describe in a general way the type of refrigerating equipment in use at various State institutions. For the larger State institutions where a number of cold storage rooms must be cooled, the ammonia compression system with brine circulation to the cold storage room coils, is used. The production of cold by means of mechanical refrigeration is a comparatively simple process.

Briefly stated, this is accomplished by the compression of the ammonia gas to about 165-pound gauge, which raises its temperature, and the passing of this gas through a cooler which consists essentially of a series of tubes surrounded by cooling water of about 65° F. The cooling of the ammonia gas under pressure by means of cold water extracts the heat of compression and liquefies it and it is passed from the cooler or condenser to the ammonia receiver.

QUITE A PROCESS

From this receiver it is allowed to enter the expansion or cooling coils at a pressure of about 15 pounds gauge, these coils being submerged in the brine tank. The drop in pressure from 165 pounds to 15 pounds greatly lowers the temperature of the ammonia, resulting in about 0° F. inside of the ammonia coils. From the expansion or ammonia coils the gas is returned to the suction side of the compressor through piping, where it is again compressed and the same cycle repeated.

Pure anhydrous liquid ammonia is the refrigerant most universally used because it liquefies at a comparatively low temperature and its latent heat value is relatively high. It boils at 28½° F. below zero at atmospheric pressure and at sea level. Contrast this with water which boils at 212° F. under the same conditions. The brine tank consists of a steel tank containing a solution of water and calcium chloride (common salt) of sufficient strength so that it will not freeze. The brine is maintained at a temperature of about 14° F. by means of the ammonia coils submerged. Small centrifugal pumps circulate the cold brine through piping to the various coils in the storage rooms.

SIXTEEN COLD ROOMS

At the Patton State Hospital in the recently completed kitchen and bakery building, there is a total of sixteen cold storage rooms ranging in size from the smallest room, approximately 10 feet by 6 feet by 10 feet high, to the largest, 15 feet by 30 feet by 10 feet high. All of these rooms have the floors, walls and ceilings insulated with sheet cork board 4 inches thick, applied in two layers 2 inches thick, with joints staggered. Sheet cork is the insulation most generally preferred because it is impervious to moisture and has a very low thermal conductivity. The brine or cooling coils are placed overhead in bunkers near the ceiling, each room except the very small ones having two bunkers, so as to provide proper air circulation and also permit of defrosting one unit, the other remaining in operation. There are two ammonia compressors installed, one of ten tons capacity driven by a 20-h.p. electric motor and the other of fifteen tons capacity driven by a 30-h.p. electric motor. The operation of

NOT SO HOT—because it's a chilling room, a new one at Patton State Hospital. It had been hoped to cool a hot article by printing a picture showing long, white icicles hanging from pipes, but the world moves on and it is found that the above is the very latest. In other words, there are no more naked chilling pipes in modern architecture. The arrow shows the cooling chambers, enclosed in casings. More sanitary.

these compressors is entirely automatic; that is, when a certain amount of refrigeration has been supplied they automatically shut down and likewise start again when additional refrigeration is required. The correct temperatures in the cold storage rooms are automatically maintained by means of a thermostat in each storage room connected to a brine valve located in the connection to the coils which controls the supply of cold brine.

Electric refrigeration, as it is called, is used extensively in State institutions, usually in the smaller kitchen buildings, doctors' residences, ward buildings, etc. They vary in size from the small household box to larger installations involving several compressors of the remote installation type. These machines virtually all use sulphur dioxide (SO_2) as the refrigerant, because it may be used at very low pressures, considerably below ammonia, thus eliminating the possibility of leakage and other troubles.

With one or two exceptions, all operate on the compression system, the principle of operation being identical to the large ammonia machines with the exception that small units, such as the regular household box, use air circulated through the condenser by a fan to liquefy the compressed gas. Electric refrigeration has been developed rapidly in the last few years and has been installed in several sizeable installations where formerly ammonia machines would be required.

THREE TONS PER DAY

Water ice, or ice made from frozen water, is manufactured at all of the State hospitals, also at Folsom and San Quentin State prisons, the Veterans' Home, Preston School of Industry and the California School for the Deaf.

Some of the institutions are equipped to manufacture what is known as commercially clear ice. Ordinarily in freezing ice, the entrapped air results in cloudy or opaque ice. Clear ice is made by the use of certain equipment which, briefly, consists of a small rotary air compressor, a vacuum pump and a system of small piping conveying the compressed air to the water which is being frozen in each can. The small air bubbles forming on the surface of the ice attach themselves to the larger bubbles introduced by the blower and piping and are liberated from the top of the freezing cake, thus forming clear or transparent ice.

ARE YOU FIFTY-FIFTH?

There is one automobile for every 55 persons in the world. The United States has more than 11 times the average, it is indicated, as there is one vehicle for each 4.5 inhabitants. Outside of the United States the ratio is one automobile for each 216 persons.

California has nearly 100 times this average with an automobile for every 3.5 persons, or more than one to each family in the State.

How Land Is Secured for New Roads; Diplomatic Envoys in State Employ

By C. C. CARLETON, Chief, Division of Contracts and Rights of Way

THIS is the twentieth year of systematic State highway building in California.

While considerable right of way activity has from the outset been prerequisite to the highway work, yet it has only been for a few years that it has become recognized as of major importance on a parity with the engineering itself.

The cost of right of way now represents about 11 per cent of the total State highway construction disbursements.

In earlier years old county roads with their existing widths were adopted as links in the State highway system and any necessary new rights of way were obtained through the county boards of supervisors or civic organizations interested in promoting projects of particular interest to themselves.

FORTY EMPLOYEES

But with the advent of the gas tax and consequent greater State highway accomplishments and bolder treatment of highway location and construction, it became imperative that the State itself establish its own right of way organization.

The staff consists at present of about forty employees, six of whom have had legal education, the remainder possessing either a special training in right of way, real estate, or appraising practice, or such other business background as will readily adapt them for successful service in this field.

MINIMUM WIDTH

The minimum statutory width of right of way for State highway in California is eighty feet.

However, the State Highway Commission has now prescribed a minimum width of one hundred feet for the trunk lines.

It becomes obvious that, as the minimum statutory width of county roads was only forty feet, the present day widening and altering of these old roads to modern State highway standards is creating right of way problems of major proportions, as a large mileage of the State highway has now become closely built up or bordered by expensive improvements.

The policy of the State is to deal with all

owners "fairly and squarely," but it requires the "tact and contact" of forty trained and experienced men to handle the situation, nevertheless.

SETTLED BEFORE TRIAL

Condemnation proceedings are invoked only after friendly overtures have been unavailing, and even if such proceedings are instituted, a large percentage of them are settled before trial.

The constitution of California was amended in 1918 enabling the State to deposit money security into court when the condemnation proceedings are commenced and to take immediate possession of the desired right of way without awaiting results of a trial.

But despite this summary procedure the right of way agents are admonished to speed up their negotiations to the end that land-owners shall have had ample opportunity to settle before being haled into court and as little personal embarrassment as possible occasioned.

The Division of Contracts and Rights of Way is one of the bureaus of the State Department of Public Works.

HOW THEY WORK

This division is in charge of a chief, who must be an attorney at law, and who coordinates all right of way activities of the department.

The right of way staff consists of two classes; one devoting itself to work largely of a legal nature and the other to visiting those having some interest in the land sought to be obtained and getting their signatures "on the dotted line."

The court work is more directly in charge of the attorney who is usually spoken of as the Attorney for the California Highway Commission and who is aided by three assistants with legal training called "Condemnation Investigators."

The attorney handles all condemnation proceedings and passes upon the sufficiency of all land titles.

The condemnation investigators assist the attorney by acting as his field representatives in settling cases before trial, or in the event

Right of Way Agents Must be Versatile to Operate Successfully

that cases can not be settled, in visiting the localities where the cases are to be tried and preparing for the impending trials by interviewing witnesses and attending to all other necessary preliminary trial work. They must also be qualified to act as attorneys in cases should the attorney be unable personally to handle them due to stress of other duties.

FLYING SQUADRON

Practically the entire time of this legal flying squadron is engaged in the trial of the many condemnation cases in progress in the fifty-eight counties of the State.

Attached to the office of the Chief of the Division of Contracts and Rights of Way are two aides of legal training who are designated as the general right of way agent and the assistant general right of way agent, respectively.

They are the liaison agents of the Chief of the Right of Way Division in his contacts with the district right of way agents. They are subject to orders to go to any part of the State to deal with the legal or even the solicitation phases of the district right of way activities.

DISTRICT OFFICES

The State highway work in this State is handled regionally by ten district offices.

The local right of way activities such as actual field negotiations for necessary rights of way are ordinarily conducted by district right of way agents attached to the district offices. The district right of way agent is in turn aided by several assistant right of way agents.

These district right of way agents form the real backbone of the right of way organization, as upon them largely rests the success and the popularity of the State's endeavors to lay its ribbons of roadway over private property with as little private detriment as possible.

DIPLOMATIC AGENTS

They are the advance agents who, without regard to their own personal comfort or convenience, must constantly be at the wheels of their cars visiting landowners, however far off the beaten path they may find them, smilingly attempting to convince such landowners (some very redoubtable) of their sincerity of

THANKS ARE EXTENDED TO PROPERTY OWNERS

AN EXPRESSION of commendation is due the hundreds of property owners throughout California who are facilitating State highway construction by their donations of necessary rights of way.

Some frankly acknowledge the resultant benefits of the highway betterments to their property, others, at some personal sacrifice, generously contribute the use of their property for the advancement of the community welfare.

The donations have been of two types, those granting required easements without any compensation whatsoever, and those contributing valuable land on the sole condition that the State shall bear the cost of moving existing buildings or pay for any fruit trees affected by the improvement.

purpose and their desire to deal fairly with them.

The "right of way man" has now become recognized in this State as being as essential to an effective State highway organization as the engineer. In fact, a good "right of way man" in the complexities of modern highway construction must be quite a paragon.

ALL-ROUND ABILITY

He must be informed concerning the law of land titles, have at least a rudimentary knowledge of engineering and the ability to read maps and blue prints, able properly to appraise property values, a keen analyst of human nature and the possessor of an agreeable personality and an unswerving integrity.

In closing, may the writer be pardoned for the facetious observation that, despite the trials and tribulations of the "right of way men," theirs must really be a very absorbing vocation, evidenced by the fact that in California they rarely if ever voluntarily resign to enter other lines of endeavor.

IT'S A FUNNY HABIT

Some motorists are so anxious to crash into a railway train that they burst through the guard gates to accomplish this end, it is revealed in reports of the American Railway Association. Approximately one-fourth of the grade crossing accidents in the country last year were due to motorists running into trains. There were 1130 passenger automobiles hit trains last year, killing 214 persons.

Engineers and highway superintendents from Pan-American countries are being trained in American road building methods through a scholarship plan supported by the American Road Builders' Association. Two road builders from each of fifteen Pan-American countries will be appointed in 1931 for six months' study of American highway methods and equipment.

Highway Bids and Awards for June

ALAMEDA COUNTY—Erection and completion of maintenance station buildings near Livermore. Dist. IV, N. H. Sieberg & Son, San Francisco, \$6,489; R. Hodgson & Son, Porterville, \$5,490; Arthur Holyoake, Hayward, \$5,986; C. A. Bruce & Sons, Pleasanton, \$5,654; Wm. Spivock, San Francisco, \$5,828; Oliver S. Amlie, San Francisco, \$6,589; The Minton Co., Palo Alto, \$5,499. Contract awarded to Theodor Johanns, San Francisco, \$5,161.

AMADOR COUNTY—Between Drytown and Amador City. 2.7 miles 20' bituminous surface treatment to be applied. Dist. N, Rt. 65, Sec. E, A. Teichert & Son, Inc., Sacramento, \$5,821. Contract awarded to E. F. Hilliard, Sacramento, \$5,508.

CALAVERAS COUNTY—Between Murphys and Big Trees. About 15.5 miles to be bituminous surface treated. Dist. N, Rt. 24, Sec. E, Heafey-Moore Co., Oakland, \$26,516; Pereira Reed, Tracy, \$20,450; J. R. Reeves, Sacramento, \$21,823; Geo. French, Jr., Stockton, \$20,725; A. Teichert & Son, Inc., Sacramento, \$20,795. Contract awarded to William J. Schmidt, Berkeley, \$17,065.

COLUSA COUNTY—Between Williams and Maxwell. About 8.6 miles to be graded and paved with Portland cement concrete. Dist. II, Rts. 7, Secs. B & C, Basich Bros. Construction Co., Torrance, \$259,263; N. M. Bell, Porterville, \$240,941; Fredrickson & Watson Construction Co. and Fredrickson Bros., Oakland, \$259,235; Hanrahan Co., San Francisco, \$235,913; C. W. Wood, Stockton, \$249,544. Contract awarded to Union Paving Company, San Francisco, \$230,247.

COLUSA COUNTY—Between 4 miles south of Williams and Williams. About 4.1 miles to be graded and paved with Portland cement concrete. Dist. III, Rt. 7, Sec. B, C. W. Wood, Stockton, \$125,845; Matt J. Bevanda, Stockton, \$138,496; Hanrahan Company, San Francisco, \$135,673; N. M. Bell, Porterville, \$127,946. Contract awarded to Union Paving Company, San Francisco, \$124,606.

EL DORADO COUNTY—Between Clarks Corner and Placerville. Placing crushed gravel or stone and treating with cut back asphalt by road mix method. Dist. II, Rt. 11, Sec. C, Tiffany-McReynolds-Tiffany, San Jose, \$12,202. Contract awarded to Force Construction Co., Piedmont, \$9,974.

FRESNO AND KERN COUNTIES—Fresno County between west boundary to 2 miles east of Parkfield Junction. 15.4 miles. Kern County between west boundary and 2 miles west of Maricopa to be oiled as a dust palliative. Dist. VI, Rts. 10 and 57, Secs. A and A, B & C, Stewart & Nuss, Fresno, \$3,339; California Crane Service, Los Angeles, \$3,471; Wm. J. Schmidt, Berkeley, \$4,478; Hartman Construction Co., Bakersfield, \$3,777; Kern Construction Co., Bakersfield, \$4,213. Contract awarded to Pacific Tank Lines, Los Angeles, \$3,206.

HUMBOLDT COUNTY—Between Big Lagoon and Freshwater Lagoon. About 8.4 miles to be surfaced with bituminous treated gravel. Dist. I, Rt. 1, Sec. J, Mercer-Fraser Co., Eureka, \$66,184; Heafey-Moore Co., Oakland, \$73,320; W. H. Hauser, Oakland, \$69,920. Contract awarded to Hemstreet & Bell, Marysville, \$64,908.

IMPERIAL COUNTY—Between East High Line Canal and Sand Hills. About 21 miles widening extension pavement with asphalt concrete. Dist. VIII, Rt. 27, Sec. A, Steele Finley, Santa Ana, \$110,877; R. E. Hazard Construction Co., San Diego, \$111,613; Southwest Paving Co., Los Angeles, \$113,072; V. B. Dennis Construction Co., San Diego, \$122,296. Contract awarded to Griffith Co., Los Angeles, \$95,590.

MARIPOSA COUNTY—Between Lorenos on Briceburg grade and El Portal. 12.5 miles to be covered with a bituminous surface treatment of asphaltic road oil and screenings. Dist. VI, Rt. 18, Sec. E, F & G, Wm. J. Schmidt, Berkeley, \$17,225. Contract awarded to A. Teichert & Son, Inc., Sacramento, \$14,646.

MENDOCINO COUNTY—Bridge across Russian River 2 miles south of Ukiah. Two 125' timber truss spans and 8 19' timber trestle spans. 170' roadway approach to be graded and surfaced with bituminous treated crushed gravel or stone surfacing. Dist. IV, Rt. 70, Sec. A, C. Dudley DeVelbiss, San Francisco, \$31,886; W. W. Kitchen, San Francisco, \$33,570; M.

B. McGowan, \$33,596; Smith Brothers Co., Eureka, \$29,677; W. J. Beatty, Castroville, \$33,991; N. J. O'Neil, \$30,502; J. W. Hoopes, Sacramento, \$33,949; Peter McHugh, San Francisco, \$33,141. Contract awarded to A. T. Howe, Santa Rosa, \$28,725.

MENDOCINO COUNTY—Between Piercy and the northerly boundary. About 2.1 miles to be surfaced with untreated crushed gravel or stone. Dist. I, Rt. 1, Sec. K, Smith Bros. Co., Eureka, \$10,993; Tieslaus Bros., Berkeley, \$8,636. Contract awarded to Jas. W. Bertram, Hopland, \$7,131.

MENDOCINO COUNTY—Between Dry Creek bridge and Christine. About 2.3 miles to be graded and surfaced with screened gravel and a timber bridge to be constructed. Dist. IV, Rt. 48, Secs. A, B, Kennedy Construction Co., Oakland, \$75,989; H. H. Boomer, San Francisco, \$68,077; Frank C. Cuffe, San Rafael, \$67,970; Coutoules Construction Co., San Francisco, \$76,635; Chittenden & Howe, Napa, \$83,311; Granfield, Farrar & Carlin, San Francisco, \$71,209; Healy Tibbits Construction Co., San Francisco, \$75,233. Contract awarded to Peter McHugh, San Francisco, \$67,631.

MENDOCINO COUNTY—Erection and completion of maintenance station buildings near Boonville. Dist. IV, Oliver S. Amlie, San Francisco, \$8,935; R. Hodgson & Sons, Porterville, \$5,750; E. G. Hart, San Francisco, \$7,100; J. W. Cobby & Son, San Francisco, \$6,645; Chas. Swanfelt, Ukiah, \$7,000; Wm. Spivock, San Francisco, \$6,200. Contract awarded to Theodor Johanns, San Francisco, \$5,598.

MERCED COUNTY—Between the foot of Pacheco Pass and the easterly boundary. About 37.8 miles to be treated with heavy fuel oil to a width of 3' on each side of the existing pavement. Dist. VI, Rt. 32, Secs. A, B & C, A. Teichert & Son, Inc., Sacramento, \$24,514; Granite Construction Co., Ltd., Watsonville, \$23,419. Contract awarded to Stewart & Nuss, Inc., Fresno, \$12,756.

MONO COUNTY—Between Leevining and 2 miles west of Bridgeport. About 28.4 miles to be treated with heavy fuel oil and cut-back asphalt as a dust palliative. Dist. IX, Rt. 23, Secs. H & I. Contract awarded to Basalt Rock Co., Inc., Napa, \$24,364.

MONO COUNTY—Furnishing heavy fuel oil as dust layer between Deadman Creek and Leevining, and between Junction of Routes 23 and 40 and 5 miles west. 21.1 miles. Dist. IX, Rts. 22-40, Secs. F & G, E. Gilmore Oil Co., Los Angeles, \$6,679. Contract awarded to Pacific Tank Lines, Inc., Los Angeles, \$6,386.

MONO COUNTY—Between Sonora Junction and 4 miles south of Coleville. About 12.9 miles to be surfaced with crusher run base and bituminous treated crushed gravel or stone. Dist. IX, Rt. 23, Sec. K, Clark & Henery Construction Co., San Francisco, \$111,840; Hemstreet & Bell, Marysville, \$138,546; Geo. Herz & Co., San Bernardino, \$106,686; Valley Paving & Construction Co., Fresno, \$212,671; Fred W. Nishbert, Bakersfield, \$115,374; Granite Construction Co., Ltd., Watsonville, \$148,177. Contract awarded to Southwest Paving Co., Los Angeles, \$84,619.

MONO COUNTY—Between Yerby and Casa Diablo Hot Springs. About 12.3 miles to be graded and surfaced with bituminous treated crushed gravel or stone. Dist. IX, Rt. 23, Secs. C & D, George Herz & Co., San Bernardino, \$283,001; Healy Tibbits Construction Co., San Francisco, \$240,987; G. W. Ellis, Los Angeles, \$252,890; Southwest Paving Co., Los Angeles, \$226,048; C. A. Bayles, Biggs, \$259,137; Von der Hallen & Pierson, Costa, \$238,646; Clark & Henery Construction Co., San Francisco, \$274,250; Fred W. Nishbert, Bakersfield, \$288,662; Hemstreet & Bell, Marysville, \$237,226; Gibbons & Read Company, Burbank, \$243,572. Contract awarded to Macco Construction Co., Clearwater, \$235,097.

MONTEREY COUNTY—Between Priest Valley School and the easterly boundary. About 3.2 miles to be surfaced with oil treated gravel. Dist. V, Rt. 10, Sec. C, Tieslaus Bros., Berkeley, \$9,740; Roselip Products Co., San Luis Obispo, \$11,500. Contract awarded to Granite Construction Co., Ltd., Watsonville, \$7,248.

NEVADA COUNTY—Between Truckee and Hinton. About 8.8 miles to be surfaced with crusher run base and bituminous treated crushed gravel or stone (plant

Details of Work Done in Counties

min). Dist. III, Rt. 38, Secs. A & B, Clark & Henery Construction Co., San Francisco, \$179,499; Hemstreet & Bell, Marysville, \$146,622; A. Teichert & Son, Sacramento, \$139,147; Valley Paving & Construction Co., Fresno, \$199,529; Fred W. Nighbert, Bakersfield, \$122,235; Granite Construction Co., Ltd., Watsonville, \$147,395. Contract awarded to Tieslan Bros., Berkeley, \$104,164.

PLACER AND NEVADA COUNTIES—Between Airport and Soda Springs. About 20 miles to be bituminous treated. Dist. III, Rt. 37, Secs. E, F, A & B, George French, Jr., Stockton, \$70,338; Hemstreet & Bell, Marysville, \$65,006; A. Teichert & Son, Sacramento, \$85,813; Force Construction Co., Piedmont, \$69,920; Fred W. Nighbert, Bakersfield, \$79,274; Granite Construction Co., Ltd., Watsonville, \$79,329. Contract awarded to C. W. Wood, Stockton, \$66,380.

SAN BENITO, MONTEREY, SAN LUIS OBISPO AND SANTA BARBARA COUNTIES—Painting traffic stripes for designating traffic lanes. About 254.26 miles. Dist. V, Rts. 2-22, Essick & A, Force Construction Co., Piedmont, \$82,610; Valley Paving and Construction Co., Fresno, \$56,722; A. J. Raisch, San Francisco, \$63,791. Contract awarded to Granite Construction Co., Ltd., Watsonville, \$51,404.

SAN BERNARDINO COUNTY—Through Upland. About 2.2 miles to be graded and paved with asphalt. Dist. I, Rt. 2, Sec. 6, O. Hall Johnson Co., Alhambra, \$128,064; Ed. Johnson & Sons, Los Angeles, \$116,067; Steele Finley, Santa Ana, \$104,351; South-west Paving Co., Los Angeles, \$104,180; Geo. H. Oswald, Los Angeles, \$112,617. Contract awarded to Griffith Company, Los Angeles, \$99,112.

SAN JOAQUIN COUNTY—Between Turner Station and Stockton. About 7.1 miles to be graded, 4.9 miles to be paved with Portland cement concrete. Dist. X, Rt. 4, Sec. E, Clark & Henery Construction Co., San Francisco, \$223,739; Frederickson & Watson Construction Co. and Frederickson Bros., Oakland, \$211,954; Jahn & Bressi Construction Co., Inc., Los Angeles, \$211,392; Hanrahan Company, San Francisco, \$203,116; C. W. Wood, Stockton, \$196,097. Contract awarded to N. M. Ball, Porterville, \$195,801.

SAN JOAQUIN COUNTY—Between Stockton and Turner Station. 9 timber bridges to be constructed and 2 concrete bridges to be widened. Dist. X, Rt. 4, Sec. E, W. J. O'Neil, San Francisco, \$75,925; J. S. Metzger & Son, Los Angeles, \$57,615; Frederickson & Watson Construction Co. and Frederickson Bros., Oakland, \$65,645; R. B. McKenzie, Red Bluff, \$4,082; Geo. J. Ulrich Construction Co., Modesto, \$60,595; M. B. McGowan, San Francisco, \$71,098; Lord & Bishop, Sacramento, \$63,870; O'berg Bros., Los Angeles, \$73,217; Force Construction Co., Piedmont, \$65,270; Bodenhamer Construction Co., Oakland, \$72,662. Contract awarded to Thermolite Construction Co., Inc., San Jose, \$57,537.

SAN LUIS OBISPO COUNTY—About 7 miles north of Paso Robles. 2 C girder bridge across San Marcos Creek, four 40-foot spans on concrete bents and grading and paving approaches with Portland cement concrete. Dist. V, Rt. 2, Sec. A, Neves & Harp, Santa Clara, \$21,608; Oberg Bros., Los Angeles, \$21,514; Robinson Roberts Co., Los Angeles, \$22,740; Lord & Bishop, Sacramento, \$21,953; Hanrahan Co., San Francisco, \$21,929; Bodenhamer Construction Co., Oakland, \$20,692. Contract awarded to L. C. Clark and C. E. Doughty, Visalia, \$20,116.

SAN LUIS OBISPO COUNTY—Between Arroyo Grande and Pismo. About 2.8 miles to be treated with heavy fuel oil on each side of existing pavement. Dist. V, Rt. 2, Sec. E, Rosellip Products Co., San Luis Obispo, \$2,915; Cornwall Construction Co., Santa Barbara, \$3,222. Contract awarded to W. A. Dontanville, Salinas, \$2,755.

SAN LUIS OBISPO COUNTY—Between Atascadero and Paso Robles. About 9.1 miles to be treated with

heavy fuel oil on each side of existing pavement. Dist. V, Rt. 2, Sec. E, Rosellip Products Co., San Luis Obispo, \$4,488; W. A. Dontanville, Salinas, \$10,096; Granite Construction Co., Watsonville, \$10,624; Cornwall Construction Co., Santa Barbara, \$10,907; California Crane Service, Los Angeles, \$11,151; H. E. Cox & Son, Pasadena, \$12,367. Contract awarded to Cook & Clark, Santa Barbara, \$8,637.

SAN MATEO COUNTY—Undergrade crossing S. P. R. R. near Henderson Station. 2 concrete abutments with wing walls, installing drainage system and pumping equipment, grade and pave with Portland cement 0.4 miles roadway. A. J. Raisch, San Jose, \$102,031; Frederickson & Watson Construction Company and Frederickson Bros., Oakland, \$101,273; Healy-Tibbitts Construction Co., San Francisco, \$98,728; M. B. McGowan, San Francisco, \$106,234; Clyde W. Wood, Stockton, \$102,686; Hanrahan Company, San Francisco, \$107,439. Contract awarded to Barrett & Hilp, San Francisco, \$95,188.

SHASTA COUNTY—Between Redding and Fall River. About 59.1 miles to be treated with heavy fuel oil and crusher run base asphalt as a dust palliative. Dist. II, Rt. 28, Secs. A, B, C & D, Granite Construction Co., Ltd., Watsonville, \$14,860; Basalt Rock Co., Inc., Napa, \$14,373; Jack Sasson, Hayward, \$15,267; C. W. Wood, Stockton, \$15,027. Contract awarded to D. McDonald, Sacramento, \$13,154.

SISKIYOU COUNTY—Between 1.5 miles north of Yreka and the Klamath River. About 7 miles bituminous surface treatment to be applied to the existing roadbed. Dist. II, Rt. 3, Sec. C, Dunn & Baker, Klamath Falls, Oregon, \$27,245. Contract awarded to Heafey-Moore Co., Oakland, \$25,702.

SUTTER AND BUTTE COUNTIES—Between Yuba City and Biggs road. About 19.2 miles to be bituminous treated, rock borders. Dist. III, Rt. 3, Sec. A, Clark & Henery Construction Co., San Francisco, \$79,438; Southern California Roads Co., Inc., Los Angeles, \$79,703; A. Teichert & Son, Inc., Sacramento, \$86,278; Granite Construction Co., Ltd., Watsonville, \$86,783; J. E. Johnston, Stockton, \$81,253; Fred W. Nighbert, Bakersfield, \$71,363; Hemstreet & Bell, Marysville, \$86,892. Contract awarded to Jones & King, Hayward, \$68,487.

TRINITY AND SHASTA COUNTIES—Between Weaverville and Tower House. About 32 miles to be bituminous treated. Dist. II, Rt. 20, Secs. A, B & A, Geo. French, Jr., Stockton, \$61,579. Contract awarded to Heafey-Moore Co., Oakland, \$61,223.

VENTURA COUNTY—Girder deck bridge across Santa Clara River. 21 8' spans on concrete piers and abutments. District VII, Rt. 2, Sec. C, Merritt Chapman Scott Corp., San Pedro, \$38,993; Owl Truck Co., Inc., Compton, \$298,530; Oberg Bros., Los Angeles, \$320,749; Union Engineering Co., Ltd., Huntington Park, \$312,274; Macco Construction Co., Clearwater, \$304,156; General Engineering Corp., Ltd., Los Angeles, \$326,288; Herbert M. Baruch Corp., Ltd., Los Angeles, \$303,691; Robinson Roberts Co., Los Angeles, \$34,167; Lynch-Cannon Engineering Co., Los Angeles, \$317,307; H. H. Travers, Los Angeles, \$308,115; Gutleben Bros., Oakland, \$308,116; Rocca & Caletti, San Rafael, \$355,098; Bodenhamer Construction Co., Oakland, \$332,151. Contract awarded to Mitty Bros. Construction Company, Los Angeles, \$282,303.

ARCHITECTURAL AWARDS

For Month of June

CALIFORNIA INSTITUTION FOR WOMEN, near Tehachapi—Administration Building and cottages: Contract for plumbing work to Thomas Haverly Company, Los Angeles, \$17,106; contract for electrical work to R. R. Jones Electric Co., Pasadena, \$6,800.

MENDOCINO STATE HOSPITAL, Talmage—Ward Building No. 14: Contract for general work to Minton Company of Palo Alto, \$47,674; contract for plumbing work to J. A. Fazio, Oakland, \$5,989; contract for heating work to Geo. C. Bell, Oakland, \$3,800; contract for electrical work to Roy M. Butcher, San Jose, \$1,456.

Selfishness Blamed For Large Increase In Auto Accidents

ACCIDENT reports received by the Division of Motor Vehicles for the month of May, 1931, show large increases in the total number of accidents and persons injured. However, the resultant deaths increased less than 10 per cent for the first time since February, 1931.

Reports were received on 2852 accidents involving injury and death. This is 22.88 per cent greater than May, 1930. The number of persons injured in these accidents (4106) is 31.60 per cent greater than last year, while the deaths, which total 218, increased only 7.39 per cent.

For the first time since August, 1930, the number of persons killed in auto versus auto accidents exceeded the number of pedestrians killed. There were 61 people killed in May auto versus auto accidents and 52 pedestrians. These two types of accidents caused 51.83 per cent of all May motor vehicle deaths.

HAD BEEN DRINKING

A total of 4473 drivers were reported involved in May accidents, of which 3766, or 84.20 per cent, were males, 595, or 13.30 per cent, females, while the sex of 112 (2.50 per cent) was not stated.

Forty-two drivers were reported to have been "asleep at the wheel," while 214 "had been drinking."

"Violation of right of way" ranked first in the cause of accidents for which the drivers were definitely responsible. "Excessive speed" was second, "drove off the roadway" third and "driving on the wrong side of the road" fourth. These four causes, all of which are within the control of the drivers, represent 50.88 per cent of the total causes of accidents attributed to the drivers. Three other causes prominent in May accidents were "improper turning," "improper passing" and "slowing down or stopping."

TOLL OF PEDESTRIANS

Pedestrians totaling 669 were involved in May accidents, of which number 52 were killed and 617 injured. As is usually the case, pedestrian deaths were most numerous among young children and elderly people, there being only 14 such deaths between the ages of 10 and 39 years.

Commission Adjourns Out of Respect for Mrs. Toner's Memory

MRS. JAMES A. TONER, daughter of Timothy A. Reardon, California Highway Commissioner, and daughter-in-law of Dr. J. M. Toner, Director of Institutions, died June 24th.

At its regular meeting June 25th, the Highway Commission adjourned out of respect to the memory of Mrs. Toner and passed a resolution of sympathy which was spread upon the minutes of the commission and copies sent Mr. Reardon and Dr. Toner. The resolution said:

WHEREAS, The California Highway Commission, this day in meeting assembled, has been informed of the passing of Mrs. James A. Toner, the beloved daughter of our associate and fellow member, Timothy A. Reardon; and

WHEREAS, The commission desires to express its profound sorrow at the loss suffered by Commissioner Reardon; therefore be it

Resolved, That a copy of this resolution be spread upon the minutes of this commission, and the sincere sympathy and consolation of this commission be offered to Commissioner Reardon and his family in their bereavement; and be it further

Resolved, That when this commission this day adjourns that it shall do so out of respect to the memory of Mrs. Toner.

Most pedestrian accidents occurred at intersections, 247 were injured and 11 killed while crossing intersections in May, the second largest number of pedestrian accidents occurred in the streets between intersections, with 183 injured and 10 killed. Of the 669 pedestrians injured, 22 had been drinking, 3 had physical defects, 42 were confused by traffic, the view of 29 was obstructed, while 62 were reported to have been careless.

Four thousand five hundred sixteen vehicles were reported involved in the 2852 accidents. Of these vehicles 86.56 per cent were passenger cars. Only 117 were definitely reported to have been defective mechanically.

WHEN THEY OCCUR

The peak hour of all accidents during May was from 5.01-6 p.m., while the peak hour of fatal accidents only was 7.01-8 p.m. More accidents occurred on Sundays than any other day of the week. Saturdays were second in the total number of accidents.

Arizona Pays State High Tribute; Will Model After Highway Patrol

‘ ‘ ‘ ‘ ‘ ‘ ‘

CALIFORNIA has been signally honored by its sister state, Arizona.

Anxious to establish an efficient, up-to-date, thorough organization of highway patrolmen, Arizona has picked this State's police system upon which to model her force.

Following a series of conferences between Superintendent Raymond Cato and Arizona authorities, F. G. Yoder, district inspector and senior instructor of the California Highway Patrol, was chosen for this highly important organization program. He left for his temporary post last month, and will remain in Arizona until he has the new body of men functioning smoothly.

In choosing Yoder to represent this State, Governor James Rolph, Jr., and Chief Cato took into account not only the all-around ability of the inspector, but his fine record as an officer.

The recipient of this signal honor is 39 years old and comes from Orange County. He joined the Highway Patrol in 1923, previous to that time having gained detective and police experience, first with a private detective agency and second with the Santa Ana police department, where he functioned for a year as a patrolman.

Long a student and finally an authority on motor vehicle law and its interpretation, Yoder worked his way up in the State service from patrolman to senior instructor in the training school at Sacramento. There he had a lot to do with teaching officers and men of the California Highway Patrol system the meaning and usage of the State Vehicle Law.

Feeling deeply the honor conferred upon him, Yoder issued the following statement prior to his departure:

"I realize fully, and appreciate, the confidence placed in me by His Excellency, Governor James Rolph, Jr., and Chief E. Raymond Cato. I am also aware of the responsibility to the people of Arizona.

"My only hope is that I may take into the State of Arizona the spirit of the California Highway Patrol and that the friendly feeling now existing between the people of these two states may be broadened by the cooperation of their very similar patrol organizations."

F. G. YODER

Autoists and Press Praise Clean Roads

Clean and unobstructed State highways over the Independence Day holiday period have won high commendation both from autoists and newspapers.

Governor Rolph's order that oiling be stopped on State roads July 3d to permit of easy and comfortable travel during the heavy three-day vacation, aroused much favorable comment throughout the State.

Contractors handling State projects received their meed of praise, too, for their unselfish action in removing, when possible, working equipment from the roads.

Association Approves Proposals Affecting Highway Construction

TWO MATTERS of importance affecting highway construction which were urged by representatives of California—the orderly addition of roads to the State highway system and amendment of Federal Statutes regarding the right of way situation across public lands—were approved by the Western Association of State Highway Officials at its annual meeting held at the St. Francis Hotel in San Francisco on July 10th and 11th.

The subject of additions to the State highway system was presented to the meeting by C. H. Purcell, State Highway Engineer, who explained the procedure adopted in California, whereby additional roads are authorized to be included in the State highway system by the Legislature only after an engineering study by the Division of Highways. These studies, as Mr. Purcell pointed out, are carried on in accordance with certain definite principles laid down by the legislative body and permit a study of cost of construction, traffic to be served, the general development of the locality and the State and the relation of the road to the remainder of the highway system.

ASSOCIATION RECOMMENDS STUDIES

In adopting a resolution of endorsement of this plan, the Western Association went a step further and suggested that the states begin a study of additions to their respective Federal aid systems. The Association favors, before such additions are made, that an expert engineering study be made.

The subject of possessory rights acquired by mining locators on public lands which interfere with rights of way for highways was discussed by Frank B. Durkee, Right of Way Agent, from the headquarters office. The Association adopted a resolution petitioning Congress to enact such additional legislation as may be necessary to protect the rights of the public to highway rights of way, the right to take road building materials from the public domain, and the right of the Forest Service and other departments to prohibit the erection of unsightly billboards and other structures on Federal lands acquired under the

mining laws and under the guise that they are to be used for mining purposes.

Other representatives of the department who appeared before the meeting were C. S. Pope, Construction Engineer, whose paper was entitled "Pavement Construction in 1930: Portland Cement Concrete and Asphalt Concrete," and T. H. Dennis, Maintenance Engineer, who discussed Oiled Road Construction.

CHAIRMAN KELLY WELCOMES DELEGATES

Earl Lee Kelly, Chairman of the California Highway Commission, welcomed the delegates to California upon behalf of Governor James Rolph, Jr., and the Department of Public Works. Governor Rolph sent a letter of greeting, explaining that he was unable to be present because of the funeral of the wife of Lieutenant Governor Frank F. Merriam, which was being held in Long Beach on the day of the opening. A telegram of regret was also received from James I. Herz, Deputy Director, who was also in southern California attending the funeral of Mrs. Merriam.

Chairman Kelly and Commissioner Hopkins attended sessions of the convention which extended over Friday and Saturday. Colonel Walter E. Garrison, Director of the Department of Public Works, was present for a short while on Saturday morning, July 11th, in company with the Congressional delegation, then touring California for the purpose of inspecting the proposed State-wide water development. Colonel Garrison accompanied this delegation during its entire trip through the State.

VISITORS VIEW CALIFORNIA PROJECT

All of the states and territories having membership in the Association were represented except Washington and the Territory of Hawaii. Following the meeting in San Francisco, visiting engineers and officials were taken on trips over California highway projects as guests of the engineers of the Division of Highways.

Definition—A road hog is a motorist who has heard of every automobile accessory except courtesy.

Determined efforts on the part of the Division of Water Resources under Edward Hyatt further to push its water conservation campaign are pictured in the official report of that department for the month of June. Flood control and reclamation activities, tabulation of dam applications and irrigation district news are included in the report which follows:

FLOOD CONTROL

At the request of the Reclamation Board, investigation and surveys were made, design and plans were prepared, and reports submitted to the Reclamation Board on a weir to be constructed in the Wadsworth Canal of Sutter-Butte By-Pass Project No. 6. This office will construct the dam with our own equipment and force at an estimated cost of \$8,730. Materials have been ordered and construction commenced on June 23d.

This weir is to be constructed for the purpose of holding the water surface in the Wadsworth Canal to a higher level to prevent the draining out of surface waters in the territory adjacent to the canals.

Maintenance of Sacramento and San Joaquin Drainage District.—Small crews have been engaged in clearing vegetation out of certain drainage canals and noxious weeds from the levees. The emergency repairs to the Davis weir No. 2 in the Sutter By-Pass were completed on May 27th, at which time the flashboards were put in place. The water was released on April 26th in the evening, and the channel was filled to approximately the same elevation on May 28th.

Owing to the dryness of the season it has been necessary to install four small pumps to care for the willows planted for levee protection on the east Sutter By-Pass levee for a distance of about eleven miles, in connection with which the ditches were cleaned and repaired.

SACRAMENTO—SAN JOAQUIN WATER SUPERVISOR

During the past month the regular field work has continued, comprising measurements of all diversions, stream flow, and return water throughout the Sacramento-San Joaquin territory.

The salinity sampling in the Sacramento-San Joaquin Delta has been extended so that at present samples are being received from forty-seven stations. The accompanying table shows the comparison between 1931 and 1924 stream flow and salinity data. It will be noted that at some of the stations the stream flow is considerably less than it was in 1924 at the same time and also that the salinity encroachment is some-

what in advance of the similar encroachment at this time in 1924.

Station	Discharge in Sec. Ft.			
	1931	1924	1931	1924
Sacramento River at Red Bluff	6/11 2990	6/11 2980

A meeting of the Permanent Committee of the Sacramento-San Joaquin River Problems Conference was held on May 28th and the water situation was critically reviewed.

The Committee decided that all of the major projects in the Sacramento Valley should be held responsible for waste prevention and conservation and that each should be asked to appoint a Conservation Officer to effect this conservation and to cooperate with the Water Supervisor and officials of the War Department. This recommendation was carried out and the various projects have appointed their Conservation Officers and inaugurated an intensive conservation campaign.

Warnings have been sent out by the Water Supervisor to all of the individual water users under all of the largest projects and to all water users making diversions of any size from the river. These warnings have stated that the rule to be followed is that diversions shall be cut by the amount of waste found under them. During the past week a representative from the War Department and the Water Supervisor have completed an inspection of the control and use of water on nearly all of the larger projects in the Valley.

It was found that, on the whole, a sincere effort is being put forth on the part of the water users to cut down waste, and with the placing in effect of additional steps recommended to the various districts by the Water Supervisor, it is felt that

Flood Control and Reclamation Details

Continued from preceding page

everything possible of accomplishment through waste prevention and conservation will have been done.

It remains to be seen whether or not a further drop in stream flow will require other additional regulations in the nature of a schedule, prorating the supply, etc.

COOPERATIVE SNOW SURVEYS

The work on this project during the past month has comprised almost entirely office studies in relating stream flow and precipitation to run-off. In each major stream basin, the stream flow stations now being maintained which would best reflect the snow run-off are selected for the various partial areas and sub-basins. The computations are then made to obtain for each of the stations selected an estimated long-time run-off record. This estimate is made by comparison with the actual long-time record at the principal gaging stations. With an estimated long-time stream flow record at each station, tentative normals for the water content at the various snow courses can be computed by comparison with the run-off data.

Some office work has been done in taking off the areas of the elevation zones into which the various basins are divided. These areas are required in the reduction of the snow measurements to obtain a weighted mean water content for a sub-basin.

Plans for the next season's work are being formulated and a budget has been prepared which permits of the addition of a few more snow courses in some of the basins and a small extension of the work.

A trip was made for conference with the members of the Nevada Cooperative Snow Survey Committee relative to forecasts and data in connection with the eastern slope basins.

WATER RESOURCES

Napa Valley Investigation.—Napa River and Conn. Rector and Day Creeks have been measured regularly and the water levels taken in a number of wells throughout Napa Valley.

South Coastal Basin Investigation.—This investigation has continued in a routine way throughout the month. Of special interest in this work is the report which was completed on work necessary to determine the possibility of salt water intrusion along the Orange County coast and which is to be presented to the Orange County Cooperative Committee at an early date.

WATER RESOURCES REPORTS

Satisfactory progress has been made in completing the reports on the water resources investigations covering the State Water Plan for the coordination, develop-

ment, conservation and utilization of the water resources of the State, authorized under the provisions of Chapter 832 of the Statutes of 1929.

IRRIGATION

While the numerous showers during the month in the Central Valley resulted in some damage to maturing berry, fruit and grain crops, they will to a limited extent relieve the shortage of irrigation water.

Field visits for conference or inspection of works were made to the La Canada, South Montebello and Walnut irrigation districts in Los Angeles County; the Santa Fe, San Dieguito, Vista, Fallbrook, Ramona, Lakeside, San Ysidro and La Mesa, Lemon Grove and Spring Valley irrigation districts in San Diego County; the Carpenter, Serrano, Newport Heights and Newport Mesa irrigation districts in Orange County; the Beaumont and Palo Verde irrigation districts in Riverside County; the Hollister irrigation district in San Benito County; and the Merced and El Nido irrigation districts in Merced County.

About 5 per cent of the excavation and 40 per cent of the structures remained to be built on June 1st to complete the irrigation system of the El Nido irrigation district.

At a meeting of the California Bond Certification Commission held on June 17 at San Francisco, an expenditure order of \$900 by the Thermalito irrigation district was approved for developmental purposes within the district.

Agreements between the Corcoran irrigation district and Meridian Limited and the Guaranty Investment Company, corporations, for the lease of certain wells by the district to be installed and equipped by the corporations on land owned by them in the district, and to yield 32 second-feet of water, were approved.

General discussion was had by the Commission relative to the plans for refunding present bond issues by several of the irrigation districts in the State.

DAMS

During June efforts have been made to get to dams in the High Sierras which are accessible for only a few months in the year. An endeavor is being made to have repairs completed on all existing dams this season.

To date 763 applications for approval of existing dams are on file; 70 for approval of plans and specifications for construction or enlargement and 156 for approval of plans for repairs or alterations.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR CONSTRUCTION OF DAMS

PLANS APPROVED FOR CONSTRUCTION OR ENLARGEMENT OF DAMS

Dam	Owner	County
Pine Canyon	City of Pasadena	Los Angeles
Lower Lindsay	Pacific Gas and Electric Co.	Nevada

The City of Pasadena on September 30, 1930, filed application, as provided for in the law governing the supervision of dams, with the State Engineer for approval of plans and specifications for construction of a concrete dam at Pine Canyon Site Number 2 on the San Gabriel River about four miles upstream from Azusa, the reservoir back of this dam to have a storage capacity of about 64,000 acre feet.

On March 18, 1931, the city filed an amended application in lieu of the one filed in September. Under the amended application it is proposed to construct a dam of the same type at the same location but 50 feet less in height than that originally contemplated. The reservoir storage capacity would be reduced from 64,000 acre feet to about 40,000 acre feet under the new proposal.

Because of the magnitude, importance and many technical considerations involved in the proposed construction, the State Engineer appointed a Consulting Board consisting of preeminently qualified geologists and engineers to advise on the safety features of the dam and appurtenant structures. Based on the findings and conclusions of the Board together with careful study by the department, the State Engineer approved the City's amended application June 2, 1931.

The estimated cost of the dam, exclusive of conduits and other features of the project, is given by the city as \$5,770,000.

Dam	Owner	County
Folsom	Pacific Gas and Electric Co.	Sacramento
Big Santa Anita	L. A. County Flood Control District	Los Angeles
Sardine Lake	Archibald Farrington	Mono
Lower Hall Canyon	Associated Oil Company	Ventura

WATER RIGHTS

Twenty-two applications to appropriate water were received during May, thirty were withdrawn or canceled, and twenty-four were approved. Eleven permits were revoked and fifteen passed to license.

Among the applications received were seven for mining purposes, including two rather large ones—one by Wm. F. Bickel of Auburn to appropriate 25 cubic feet per second from Mill Creek in Sierra County and the other by Geo. W. Lischer of Camptonville to appropriate a like amount from Willow Creek in

Yuba County. A third application of unusual importance was received from Geo. L. Dodds et al., seeking an appropriation of 10 second feet and 10,000 acre feet from Escondido Creek in San Diego County for irrigation and domestic purposes.

Among the more important applications approved were the following:

Two by the City of Monrovia allowing 10 second feet and 1000 acre feet per annum from Sawpit Canyon for municipal purposes.

Eight by the County of Los Angeles for the benefit of Los Angeles County Park.

One by El Dorado Irrigation District allowing 5000 acre feet per annum from Weber Creek in El Dorado County for irrigation, the estimated cost of development being \$450,000.

One by Santa Cruz Development Company allowing 3.5 second feet from Branciforte Creek in Santa Cruz County for domestic purposes on summer home subdivision, the estimated cost of the development being \$100,000.

Inspection of projects under permit in Sacramento, San Joaquin, Tuolumne, Stanislaus, San Mateo, Santa Clara, Santa Cruz, and Monterey counties was completed for the current season.

ADJUDICATIONS

Shasta River (Siskiyou County). Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). Case pending in the Superior Court of Shasta County, awaiting the court's pleasure in placing it on the calendar.

Oak Run Creek (Shasta County). Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County). Case pending in Superior Court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County). Case pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County). Division's report as referee submitted to the Superior Court on May first.

Davis Creek (Modoc County). A tentative decree has been circulated among counsel and is now under consideration by the Superior Court.

Mill Creek (Modoc County). More than eighty per cent of the water users have signed the stipulation for consent judgment which was presented at the conference held at Lake City on March 17, 1931. The stipulation is now being circulated among the non-resident parties.

Deep Creek (Modoc County). Distribution of the waters of Deep Creek was continued throughout the month in accordance with the trial schedule of allotments which was adopted at the conference held at Cedarville on March 16, 1931.

Franklin Creek (Modoc County). Administration of the schedule of allotments for trial distribution during the 1931 irrigation season was continued throughout the month.

HERE'S SOUND ADVICE FOR EVERY EMPLOYEE

WE are now in the midst of the vacation season—our peak period of traffic. Those using the roads at this time are on pleasure bent, touring the coast, valley and high mountain regions.

It should be the aim of our entire organization to exercise every precaution for the safety of this traffic, and by uniformly courteous treatment contribute our share towards their thorough enjoyment of this period.

* * *

(Instructions issued June 25 by Charles H. Purcell, state highway engineer, to employees of the Division of Highways.)

REPORT SHOWS WORK DONE BY WATER DIVISION

(Continued from page 41.)

New Pine Creek (Modoc County). Field work on the investigation of the water supply and use of water on New Pine Creek was continued throughout the month.

Eagle Creek (Modoc County). The case of Arthur J. Harris et al., vs. Sarah L. Adams et al., involving the determination of the water rights on Eagle Creek, Modoc County, was referred to the Division by the Superior Court on May 13, 1931. A field investigation of the water supply and use of water from the stream was commenced immediately following the reference and has been continued throughout the month.

WATER DISTRIBUTION

Cedar, Davis, Deep, Emerson, Franklin, Mill, New Pine, Owl, Pine and Soldier Creeks (Modoc County). Water master service on these streams was continued throughout the month.

Pit River (Modoc and Lassen Counties). Supervision of diversions from Pit River in Big Valley and in Hot Springs Valley was continued throughout the month.

North Cow, Oak Run and Clover Creeks (Shasta County). Water master service on these streams was continued throughout the month.

Little Shasta River (Siskiyou County). Water master service on this stream was continued throughout the month.

Lower Shasta River (Siskiyou County). Water master service on this stream was commenced June first.

MANY MOTOR LAWS

The average citizen and his automobile received more attention during the recent sessions of various state legislatures than any other phase of human activity. This is indicated by reports received by the Automobile Club of Southern California, showing that more than 6500 bills were introduced in the 48 states, an average of more than 100 per state, pertaining to motor vehicle traffic.

A manufacturing genius is a man who makes a commodity just strong enough to hold together until the last installment is paid.—*Judge.*

Lodge Will Set Up Tablet as Marker For Historic Spot

RESPONDING to a request of the Grand Lodge of Odd Fellows, California, members of the staff of the State Highway Division have been in conference with officers of the fraternity at a point on the Kit Carson trail, near Red Lake, as to the location of a particularly interesting marker which the order proposes to erect.

It seems that in the year 1849 there was some competition between the Masons and Odd Fellows for installation of the first lodge in California. A party of Odd Fellows from the east bearing a dispensation to form a lodge, pushed over the ridge and as soon as they were satisfied that they were within the California line, they proceeded to paint the names and dates of their arrival on large rocks.

ROCKS ARE MARKED

Using what appears to be a white lead solution, they printed their names and the date, August 4th, very clearly on the rocks. Until recent years all the names were legible but they are now fading. Some, in more protected places, are fairly clear.

The Grand Lodge has, by resolution, authorized insertion of a bronze tablet in one of the rocks and erection of a large pillar where the pioneers camped. The officers asked Walter E. Garrison, Director of Public Works, to assure the location as against road changes and as to easement.

FIND PARKING SPACE

The director sent the staff members to investigate and report. They found that by providing a crossing across a small gully and clearing some space, an excellent parking place may be made at the site. It is near both Tragedy Springs and the Kit Carson marker.

ENGINEERS TO MEET

Plans are under way for the 1931 convention of the American Association of Engineers, which is to be held at Huntington, West Virginia, on September 28, 29 and 30. The Huntington Chapter will act as host to the delegates and a cordial invitation is extended to all engineers interested in the social and economic side of the profession to attend this meeting.

Read this one according to sex—"What does it mean when that man (lady) sticks his (her) hand out the way he (she) does?"

"That he's (she's) going to turn to the right, or to the left or go straight ahead."

State Prison Camps Give Hope To Men And Assist In Their Regeneration

By **FRED R. SEYMOUR**, Supervisor, Prison Road Camps

WHY DO WE put people in prison? Is it a form of collective revenge which society imposes on those who violate its rules, a studied plan for rehabilitation, or the easiest way to handle a perplexing problem? I believe the latter is the basis of our penal system, which is, perhaps, the most outstanding failure of our modern civilization. This great problem, involving a stupendous economic and social loss, is not alone a responsibility of government, but is a problem which rests on the shoulders of every citizen, and will not be solved until met squarely without evasion.

These men are not in prison of their own volition, but because we put them there, and why? To eventually release them with the expectation they will become good citizens and helpful to society, due to rehabilitation during the period of imprisonment, or release them more hardened, more resentful, and more determined to be outlaws of their kind? It seems obvious that any form of imprisonment which does not contemplate the regeneration of the criminal is but adding another crime by society to the many committed by individuals.

I believe the only panacea is work—not the mentally degrading and nonobjective toil of breaking up rocks with hammers, energizing toil over rows of noisy, dusty and unhealthful jute looms, or manufacturing commodities to be sold on the open market in competition with free labor, but rather work that takes those who have earned the privilege, by a period of good behavior inside, away from the prison walls into the great outdoors; healthful, interesting and constructive work that upbuilds physically and spiritually. I believe that worthwhile work in close contact with nature is the surest way to bring surcease to troubled, embittered and vengeful

souls, to develop self-confidence, ambition, and restore pride.

Idealistic? Yes, but practical, as evidenced by the success of California prison road camps, to which vacationists are indebted for many hundreds of miles of broad highways into wonderlands of nature. These are honor camps, where the men are well housed, well clothed and well fed. Assignment to the camps is a privilege, which must be earned by an extended period of good work and good conduct inside. A wage is paid, from which are deducted individual expenses, thus encouraging economy. The average prisoner leaves camp with \$80 to \$100, a sufficient amount to finance him in securing employment. Additional time credits, amounting to one day for each two days in camp are granted road workers.

These men, or rather boys, for most of them are under 30, are in trouble largely due to lack of training in honest labor. Many arrive at camp with considerable misgiving as to their ability to survive hard work, and later derive considerable pride from the knowledge of their physical fitness and the fact that work is not necessarily fatal.

The influence of the road camp in preserving discipline within the prisons can

not be overestimated, as the majority of the men are striving for a record which will enable them to receive road camp assignment. Unfortunately, however, the number that can be so used is but a small percentage of the total prison population, and many deserving men are doomed to lose the benefit of this experience. A possible way of extending this work of rehabilitation may be in a State plan of mountain reforestation, where honor camps could be established to supply the labor.

The individual may ask, where does my responsibility lie, and what can I do to help

FRED R. SEYMOUR

solve this problem? I would first suggest a mental readjustment to the understanding that convicts are not a peculiar species unlike ourselves, but are the brothers and sons of our friends and neighbors, with hopes, loves and ambitions such as our own. We can help by giving jobs to men paroled and discharged, and assist them with honest friendship and encouragement, without unreasonable expectations.

It is of vital importance to eliminate from the mind of the man who has "done time" a sense of persecution and continued public condemnation. He personally feels he has discharged his debt and is entitled to a fresh start.

We can help by encouraging the enactment of more enlightened legislation, and discourage foolish legislation to curtail individual liberty and responsibility.

Perhaps a little more consideration for our neighbors' problems and a little help and encouragement when most needed will contribute greatly to the reduction of our prison population.

CALIFORNIA'S RECORD IN MOTOR CAR OWNERSHIP

California stood second to New York in the number of passenger cars, taxicabs and buses licensed during the year 1930, according to a tabulation put out by the United States Bureau of Public Roads. Out of 23,000,000 registrations for these types of vehicles, California had 1,810,000, while New York had only 150,000 more.

California, too, showed one of the highest percentages of increase over 1929, the record for the Golden State being 3.4 per cent on a total increase of 67,000 over the previous year. Throughout the Nation the gain over 1929 was only .08 per cent in total motor vehicle registration.

If motor trucks are added, California and New York were the only two states to have more than two million licensed motor vehicles in operation last year. The number of trucks in California numbered 230,900, approximately 100,000 less than were operated in New York State.

CROSSING ACCIDENTS DROP

Grade crossing accidents in California during the first five months of 1931 totaled 967, a decrease of 19.6 per cent below the 1930 figure of 1202, according to report compiled by Joseph G. Hunter, Transportation Engineer of the Railroad Commission.

"The sedan," he says, "was parked at the side of the road, and as I drew near I could hear noises of a struggle within. I could hear a rustle, probably of silk, and the muffled panting of a man. The body of the car swayed slightly to and fro. I heard a curse, and then, again, the muffled panting. I crept softly around to the side, looking into the window, and saw—

"A man trying to fold a road map the same as it had been!"

New and Used Auto Sales Increase Says Col. Snook's Report

THE general public is buying both new and used cars in much greater quantity than a year ago!

That is the conclusion reached by the Division of Motor Vehicles in its monthly report to the Director of the Department of Public Works.

Colonel Snook reports that there is an increase in registrations against the first five months in 1930 of 39,515, of which 27,217 were classed as PLEASURE CARS.

An increase is also shown in the number of transfers handled as of May 31st. In 1930 there were handled by the division 462,874 transfers, whereas in the same period this year 484,736 were made, an increase of 21,862.

Altogether the division has collected for the first five months of this year \$8,638,851 in motor vehicle registration fees.

During the month of May 6637 nonresident permits were granted, bringing the total number for 1931 to 27,741, an increase of 396 over the same period of 1930.

ROAD TROUBLE IN ARIZONA

(From *Arizona Highways*)

A northern Arizona road patrol foreman, upon being relieved of his duties, was asked to turn in a report of equipment, etc., which he was turning over to the new foreman. The auditor received the following report:

Feb. 4, 1931.

"I hereby transfer to the new Patrol Foreman the following:

A miscellaneous bunch of equipment, some good, some bad, with all attachments and accessories that have not been removed or stolen.

I also transfer certain animosities not mentioned herein but later by devious means will be made known to the new Patrol Foreman.

Also a certain amount of grief caused by wrong clerical reports, indifference to the job, talking too much and jealousies among his hired help.

Also seventy-four miles of road on which he may slave, work and sweat twenty-four hours a day if he wishes, but it will be the same old road.

I also transfer to him my salary, this being the only transfer that I regret.

Signed: Old Patrol Foreman."

The average citizen and his automobile received more attention during the recent sessions of various state legislatures than any other phase of human activity, the Erskine Traffic Bureau of Harvard University showing that more than 6500 bills were introduced in the forty-eight states, an average of more than 100 per state, pertaining to motor vehicle traffic.

GOVERNOR ROLPH has announced the appointments of nine members of the California Water Resources Commission and has designated the Honorable Matt. I. Sullivan of San Francisco, former Chief Justice of the Supreme Court of California, as chairman of the commission. The other members are:

D. K. Barnell of Merced.
James M. Burke of Visalia.
Shannon Crandall of Los Angeles.
Judge Francis Carr of Redding.
R. C. Harbinson of San Bernardino.
W. B. Mathews of Los Angeles.
Jesse Poundstone of Grimes.
A. M. Tarpey of Fresno.

In appointing this commission Governor Rolph addressed a message to the People of California, calling attention to the seriousness of the water problem and the necessity for its early solution and called upon the citizenry of the State to consider earnestly and carefully the situation in order that an equitable solution be made to the end that the progress of California may continue unhindered.

His message says in part:

“I am addressing you at this time on an undebatable question that is of vital importance to each individual and every interest in California. It affects the present and future welfare and prosperity of the entire State. It is California's water problem. Nearly every section of the State has felt the effect of the water shortage that has come upon us during the long period of drought of the past several years.

“A real emergency exists. An equitable, constructive and immediate solution of the problem is essential to future well-being of the State. I consider it the paramount duty of the State and each citizen thereof to make every effort to bring about such a solution.

“During July, an important congressional committee, the House of Representatives Subcommittee on Appropriations for the Department of the Interior, spent twelve days making a study of the water needs and conditions of California and were strongly impressed with the seriousness of the water situation. At the conclusion of the trip Chairman Murphy of the committee very concisely expressed the thoughts of the committee as follows:

“I hope that you will start a campaign for the saving of the lives of the people of this State, the saving of their very estates, a campaign to save your State. It is just that serious in the minds of the members of our committee. I bespeak for you the hearty cooperation of every wide-awake citizen of the great State of California to grapple with this thing that is creeping upon you, that may destroy you.”

VISION AND ABILITY

“* * * I have given careful thought and serious consideration in selecting the members for the California Water Resources Commission, and have appointed men of broad vision and of outstanding ability in public affairs who will have the best interests of the entire State in mind when considering this most important question. * * *

22,000 Smiths, 16,000 of Jones Family Keep Girls Hopping for Auto Data

By B. A. TRAVIS, Assistant Chief Clerk, Department of Motor Vehicles

"HELLO! Is this the Department of Motor Vehicles?"

"Yes, sir."

"This is the police department of ——. We are trying to locate the owner of a car with license plates numbered ——. He ran over a man and went on without giving aid. Please tell us who he is and where he lives."

"Hold the line, please."

This little scene is repeated with variations many times daily in California. And the chances are ten to one the information will be secured and given the officer in less than a minute.

How the Department of Motor Vehicles keeps the records on more than 2,000,000 cars in the State so that information concerning the license numbers, registered and legal owners and engine numbers of any one of them may be obtained in a few seconds is a story of its own.

It was a simple matter a few years ago when the records of all cars in the State could be filed in a single room. But within a decade, registrations have leaped to such enormous proportions that an entire floor is required at Sacramento to keep the files of a single year.

The record of every car in the State, whether used for pleasure or business, owned by a private individual or public body is kept on a three-way system as follows:

1. Alphabetically, by name of the registered owner.
2. Numerically, by number of license plate.
3. Numerically, by number of engine.

In addition to the complete files kept in Sacramento, duplicate license plate files are maintained in San Francisco and Los Angeles, principally for the accommodation of peace officers interested in checking up "hit and run" drivers, stolen cars or in getting all the innumerable kinds of information about cars the officers need.

Twenty-four hour telephone service is maintained at the Sacramento and Los Angeles offices so that anyone may call in by day or night and receive the information desired. Trained operators are kept on the job so that it rarely requires more than a minute to get the information from the files and give it to the party wanting it.

The engine number file is known as the "master file" because it gives complete information concerning the owner, the license number, engine number and the legal owner of the car.

For police purposes, however, the license number file is by far the most valuable, since the officer seeking information about a given vehicle usually has only the number on the license plate. Hundreds of "hit and run" drivers are apprehended annually by this means.

"Does John Smith or Bill Jones own a car, and if so, what is the number?"

This is a question frequently asked. It might be hard to answer, for there are more than fifty John Smiths in the files and as many Bill Joneses. But usually the inquirer knows the address of the party or at least something about him that will

enable the operator to pick him out from the others.

The file will not only show the kind of car Bill Smith owns. It will also show the license number, the engine number, who Bill Smith bought it from and when.

Likewise, if Bill Smith sells his car the record will show to whom it was sold and when. Some cars change hands as many as five times in a single year. These changes are noted carefully in the record so that it would be impossible almost for anyone to impersonate Bill Smith and get away with it.

The magnitude of keeping the records is best evidenced by the fact that there are more

B. A. TRAVIS

"YOUR NUMBER?"—But it's auto license or engine numerals they're talking about when these girls of the Motor Vehicle Department answer the hundreds of "hurry-up, I-need-information" calls which are received by the department weekly. Here we have Sophie Svetich handing the query to Luella May Shubert, who rushes it to the filing cabinet workers seen below.

ALL BUT THE FINGER PRINTS—There's very little about your car that isn't on file at Sacramento. And it takes less than one minute to supply information concerning the same.

State Takes Over 722 Miles of Roads For Maintenance in Secondary System

SEVEN hundred and twenty-two miles of county roads were taken into the State Highway system for maintenance August 14.

This mileage becomes part of the secondary State Highway system under Senate Bill 46 passed at the last session of the Legislature.

Sponsored by Senators Nelson and Edwards of Orange, and Chester M. Kline of San Jacinto, the measure directs the Department of Public Works to "lay out and construct highways by the most direct and practical routes between present State Highway termini."

This clause will necessitate future abandonment of certain portions of the routes selected. Consequently boards of supervisors of the various counties in California were asked by the State Highway Commission to approve a resolution which obligates those counties to "resume full control and responsibility for such portions of county road as shall not be included within the layout of said State Highway as finally laid out, adopted and constructed."

\$1,109,600 FUND

The Highway Commission makes the point that what might at this time be the "most direct and practical" route may not be found so when general reconstruction work is begun at a future date.

There has been set aside in the budget \$1,109,600 for maintenance and reconstruction for the next two years.

"Present maintenance crews will handle the new mileage in so far as possible to the end that every available penny may be spent in maintaining a high standard of road," declares T. H. Dennis, maintenance engineer. "Future reconstruction must necessarily be carried out as the demands and funds for secondary roads will permit. One new State maintenance station will be established on the Inland Route."

Addition of these secondary roads followed passage of a Senate resolution providing, in part, that the Department of Public Works make a study of traffic on roads not then in the State Highway system which, either by

Following is a tabulation by counties, north and south, showing the mileage of secondary roads taken over August 14:

NORTH		Miles
Contra Costa	-----	10.65
Lassen	-----	4.60
Modoc	-----	37.40
Napa	-----	5.10
Plumas	-----	55.80
Siskiyou	-----	65.10
Solano	-----	4.50
Total	-----	183.15
SOUTH		Miles
Imperial	-----	10.05
Inyo	-----	9.16
Kern	-----	65.80
Los Angeles	-----	30.65
Mono	-----	37.79
Orange	-----	25.40

San Diego	-----	71.30
San Luis Obispo	-----	33.85
Ventura	-----	34.40
Total	-----	539.60

reason of the large volume of State traffic which they were carrying, or by the relief that they would afford to heavy traffic upon present State highways, or as highways serving as important interstate links, might properly be included and added to the State Highway system.

ONE YEAR'S STUDY

The resulting report, completed by the Survey and Plans and Maintenance Departments, carried definite recommendations on the roads to be included, based on a year's field study of the traffic, topographic and economic features of various routes considered.

The 1931 session of the Legislature adopted these recommendations which were embodied in Senate Bill No. 46 which provided that: "The Department of Public Works is hereby authorized and directed to lay out and con-

THERE ARE SMILES that make them happy. Immediately above are Highway Commissioners at the end of a hard day's meeting. From left to right, Harry A. Hopkins, Frank A. Tetley, Earl Lee Kelly, chairman; Timothy A. Reardon and Phil A. Stanton. Smiling because they don't have to inspect their roads as did the gentlemen on top, Messrs. R. C. Irvine in the buckboard and J. L. Maude. They were of the Bureau of Highways. The picture was taken in Riverside County in 1896, and, to quote from Ben Blow's book, "California Highways," they drove seven thousand miles in this rig inspecting roads in every county in the State. James, my sports roadster.

\$41,000,000 Cost of State Building!

Method of Laying Out Work Explained

By GEO. B. McDOUGALL, Chief, Division of Architecture

DURING the 20-year period, 1913 to 1933, the State of California will have constructed at about 50 different locations, buildings and other structures and engineering works to serve these structures, of a total value of approximately \$41,000,000 and involving about 2000 different projects.

About \$16,000,000 was expended during the first 12 years of the 20-year period and \$25,000,000 will have been expended during the last eight years.

The architectural and engineering work involved has been done by and under the direction of the Division of Architecture of the State Department of Public Works.

PROVISIONS OF LAW

The law provides three means for doing this work:

The architects in two cases, the San Francisco State Building and the Sacramento State Buildings known as the Capitol Extension Buildings, were selected by means of public competition conducted by the State Architect under the provisions of section 11 of the State Building Act.

Architects in private practice have handled and are handling 28 projects as authorized by an act of the Legislature of 1929 known as Chapter 291, 1929.

All the remainder have been and are being handled by the Division of Architecture itself.

DIVISION UNIQUE

The Division is unique as an architectural and engineering organization for building design and construction in that it includes within itself all the services involved in starting with a vacant site and developing a complete institution ready for occupancy to accommodate from 200 to 3500 persons as the case may be.

When the number of sites under consideration for a particular institution has been reduced to four or five the Division is called upon to make preliminary general surveys as to building sites, water, electric and gas supplies and possibilities for sewage disposal. When the site has been selected and surveys have been made and plotted to determine the natural contours, a plot plan showing location of all the buildings and other structures required for the ultimate institution as agreed upon with the department and institution officials affected, is made.

PLOT PLANNING

This plot planning of State institutions corresponds to what laymen are coming to understand as regional and city planning and zoning.

In addition to this work connected with new sites for newly established institutions, surveys have been made and plot plans worked out covering the ultimate development of all existing institutions.

This work is one of the most important done by the Division. As new structures are erected and changes made, the plot

plans are corrected accordingly, and so constitute a permanent and very easily accessible record of all structures and installations both above and under ground, including all roads and walks. Field surveying and office work are required to be practically continuous in connection with this plot planning.

As a basis to enable successive Legislatures to determine on provisions to be made out of current funds for continuing development to meet the needs resulting from growth of the State and obsolescence of old structures, a long-time building construction program is worked out by the Division in cooperation with

GEO. B. McDOUGALL

Warning Signs on State Highways Will be Revamped to Aid Motorists

REVAMPING of the entire sign-marking of State roads has been decided upon by the Division of Highways.

Coincident with changes in the speed laws of California, which went into effect August 14th, new markers for highway, residential and business districts were authorized by the Highway Department and erected by the California State Automobile Association and the Automobile Club of Southern California.

These signs are paid for by the State and erected and maintained by these two clubs.

In conformity with the plan to readjust road markings throughout the State, the maintenance department of the Division of Highways now proposes:

First: To make a study of the present signing on the Redwood Highway for the purpose of improving this service, particularly at curve locations.

Second: To place reflectorized standard signs at the more dangerous curves.

Third: To place unreflectorized signs at curves where the radii is less than 1500 feet.

Fourth: Reflectorized warning signs to be installed at important road intersections where a known hazard exists.

Fifth: Survey to be made in conjunction with the Auto Club of Southern California, of the Arrowhead and Old Trails Highway, with a view to establishing adequate markings on these roads.

Black figures on a white background have been used to designate the forty-five-mile-per-hour legal speed limit on highways. They are

30 inches by 24 inches in dimension and have been erected for the present only on main arterial routes over which the State has jurisdiction. While not reflectorized, they have been placed close enough to the lane of travel so that they might be picked up at night by auto lights and serve as a constant reminder that the Highway Patrol will strictly enforce the new law, as announced recently by Chief E. Raymond Cato.

Mandatory signs, made so by the recent new legislative act, have been set up at the entrance to residential and business districts to the right of the road looking toward the section into which the auto is driving. Those in residential zones are 24 inches by 30, white figures on a black background.

The first of these signs as the autoist enters a restricted district is reflectorized.

An innovation which should meet approval of the autoing public has been the posting at the end of a restricted zone of a sign informing the driver that he has now passed through the 25-mile limit area.

In the business district through which a State highway passes, a similar sign notifying the autoist he is in a 20-mile zone has been placed.

LICENSE LAWS HELP

Eight states, including California, with standard laws for licensing motor vehicle drivers, have had 29 per cent fewer traffic deaths since the passage of the laws than they would have had with increases such as have occurred in the nonlicense states, according to a report received by the California State Automobile Association.

**STATE
SPEED LIMIT
45
MILES**

Captain's Football Tackle Saves Life of Falling Worker

FOOTBALLERS, take heed! There's a mighty fine tackle wasting his spare time when he might be playing on the gridiron.

He's Captain W. L. ("Buck") McCarthy of the Fresno County Highway Patrol squad.

And he demonstrated his tackling ability two weeks ago by turning it into a life-saving stunt.

He tackled a heavy man in midair at the tag end of a 35-foot fall!

During the recent serious Alder Springs forest fire, the highway patrol turned out to assist in quelling the flames. Among those present was Buck.

Jack Muir, an easterner visiting California, was working at the top of a bluff trying to dislodge a burning log to prevent it spreading fire. While chopping, he fell, ax in hand.

As he hurtled toward the rocky ground, 35 feet below, hanging grimly to the ax, McCarthy charged into him.

As "Buck" struck the flying worker, the ax flew from Muir's hand and he hit the ground at a fast roll, the sharp weapon barely escaping him. McCarthy was struck by a rolling rock as he made his flying tackle. His ankle was badly injured.

But he saved Muir's life.

TOLL BRIDGE BOUGHT

As a result of negotiations begun by Governor Rolph only a few days after his inauguration, the Blythe-Ehrenburg Toll Bridge became a free structure July 24th.

Movement to buy the bridge from the private company operating it and collecting tolls was begun in January when the Governor, following conferences with Governor Hunt of Arizona, named a committee to handle details.

Upon recommendation of Colonel Walter E. Garrison, head of this committee, the California Highway Commission voted \$115,000 as this State's share of the purchase of the bridge and agreed to maintain California's half of the structure.

The bridge is the longest and largest over the Colorado with the exception of Lee's Ferry Bridge.

That's Fine—Officer (to couple in parked car) "Don't you see the sign: 'Fine for Parking?'"

Driver: "Yes, officer, I see it and heartily agree with it."

The average California motorist used 50 gallons more gasoline during 1929 than the average motorist throughout the United States. Each motorist in the country averaged 544 gallons of gas that year, while the California motorist used 634 gallons, or nearly 17 per cent more than the National average.

Highway Officials' Annual Meet Called Brilliant Success

CONGRATULATIONS to the Western Association of State Highway Officials.

The annual meeting of this organization was held in San Francisco, July 10-11, and was attended by more than 100 highway officials and engineers of the Pacific Coast and inter-mountain states. It was a most successful meeting of the association.

The meeting was marked by a freedom of discussion and a wide range of topics. Much good will came from it. A closer contact has been established between the 11 western states on road building subjects.

A meeting such as this is the most important gathering that can be held. These men spend hundreds of millions of dollars annually for roads. They prepare the highways upon which tens of millions of people ride. Surely no other gathering of western officials compares to this one in importance to the nation.

The officers of the association deserve to be highly commended both upon the large attendance and the real value of the program and discussions. *Pacific Street and Road Builder* predicts that henceforth, each annual meeting will assume even greater prominence and that the association will develop into one of tremendous service to the West. We also congratulate the California highway officials who were in charge of the arrangements and the entertaining of delegates.—*Pacific Street and Road Builder*.

SAN DIEGO FIGURES

Motor vehicle registration figures for San Diego County show that a total of 79,040 passenger automobiles, trucks and motorcycles were registered at the beginning of this year in that area. The number of passenger cars was 74,186.

TRIP INTO MEXICO

Motorists of California are to have an opportunity of driving over and inspecting the northernmost link of the International Pacific Highway in Mexico on Sunday, September 13. The trip is being sponsored by the Nogales, Arizona, Chamber of Commerce.

This excellent opportunity for motorists to inspect the northern section of the great international highway carries with it many privileges. The Mexican customs, immigration and public health officers will dispense with all restrictions on entering Mexico and all motorists making the trip will be presented with a windshield sticker which will serve as a passport for the occasion.

Days of the Padres; Mining Romance Linked to Present Day Road Work

Romance of the early days, of the zealous padres and the gold mining camps of California, is drawn upon in the accompanying article to trace the history of rights of way throughout the State. Read before the annual meeting of the Western Association of State Highway officials in San Francisco, the paper deals in language easily understood by the layman, with the battle of California to provide adequate highways for the people of the State.

By FRANK B. DURKEE, General Right of Way Agent

TYPICAL of the changed attitude toward all phases of highway construction, is the importance now conceded to the question of title to rights of way. We have now arrived at the time when there must be no question of the public's right to the full use and enjoyment of an adequate right of way—nothing less will suffice properly to provide for the multiplying demands of modern highway traffic.

Early history of public ways in the West is the story of pioneer trails blazed, in the Southwest, by zealous padres, who carried the banners of Spain and Mexico, and in the central and northern states by those courageous men and women, who, consciously or unconsciously, determined to possess this western country for the United States. Those early trails were located almost in their entirety across public lands. What construction there was in the years before the automobile, to a remarkable extent, located the locations sought out by the pioneers.

RULED THEMSELVES

In the days of the mining frenzy, highway improvement was left almost altogether to those individuals directly interested in keeping the roads open. The right of way, like the adjacent mining claim, was there for the taking. Thousands came to partake of the bounty of the Federal government; innumerable mining claims were located without any authority of law except that provided by the miners themselves.

More than two decades had passed after the discovery of gold in California before Congress moved to provide by law for entry upon the public domain for mining purposes.

A few years earlier, in 1866, the Congress passed an act providing:

"The right of way for the construction of highways over public lands, not reserved for public uses, is hereby granted."

This act is now referred to as **Section 2477 of the Revised Statutes of the United States**. It has remained unchanged from the day of its passage until the present. Out of this simple statute, of just twenty words, flows all the rights the public land states and their political subdivisions have to highway right of way across the unreserved public lands of the Federal government within their borders.

BRINGS LITIGATION

The act provides no maximum or minimum widths; no procedure for giving notice to either the Federal government or the public generally that the grant of right of way has been accepted. It applies, it should be clearly understood, only to the unreserved lands of the United States.

It was inevitable, as the West grew, that this statute should be the subject of litigation. Between lines of opinions of the learned men of the Federal and State courts, may be gleaned something of the fascinating story of the onward march of our western commonwealths. There is the case in which it was applied to the streets of a famous mining town of Montana; it was used to uphold the right of sheepmen in Wyoming to passage for their flocks through a certain pass in the mountains. It has been discussed and passed upon by courts in Wisconsin, Nebraska, Washington, Oregon, California and other states.

LAW'S INADEQUACY

Its meaning has been thoroughly adjudicated. To the attorney, it is a grant "*in praesentia*"; that is, "*in the present*." In other words, it was effective as a grant imme-

(Continued on Page 24)

Colorful Ceremony Held to Dedicate Bridge on Redwood Empire Highway

THE newly completed Mark West Bridge was officially presented to the traveling public July 31st by Earl Lee Kelly, chairman of the California Highway Commission, who, in his dedicatory speech, eulogized the beauties of the Redwood Empire and lauded the work of the Redwood Empire Association in building up the tourist industry within this scenic tour area.

Other speakers included: H. G. Ridgway, vice president of the Redwood Empire Association; Senator Herbert Slater of Santa Rosa; Max Schutz, master of the Healdsburg Progressive Grange; George Schmeyer, master of the State Grange; Ed Enzenauer of Healdsburg, chairman of the Sonoma County Board of Supervisors; and Joseph Talbot of Bennet Valley, who first crossed a bridge at this point in 1860.

Paul Travis was chairman of the day.

WATER FOR CHRISTENING

Following the speaking program the bridge was officially christened by Miss Esther Travis of Healdsburg with a bottle of Sonoma County mineral water, which was broken on the railing.

The "breaking of the barrier" ceremony then followed, a ribbon barrier being held by Miss Maxine Lewis as "Miss Healdsburg" and Miss Katherine Aylward as "Miss Santa Rosa," while Miss Leona Simonson of Cloverdale as "Miss Grange" cut the barrier.

The dedicatory program and ceremony was initiated by the Progressive Grange of Healdsburg, with the cooperation of the Redwood Empire Association, also the Healdsburg and Santa Rosa Chambers of Commerce.

OFFICIALS PARTICIPATE

Those participating included: County supervisors; chambers of commerce officers, directors and members; senators and assemblymen, newspaper publishers, farm bureau and grange leaders, and others from Sonoma and neighboring Redwood Empire counties.

Representatives of the California Redwood Association were also in attendance. Speakers pointed out that redwood was chosen for the main structure of the bridge because

of its everlasting and permanent physical quality.

Some interesting historic features of this Mark West Bridge site were furnished by J. A. McMinn of Healdsburg, former chairman of the Sonoma County Board of Supervisors and Sonoma County's member of the Nine Counties Highway Committee of the Redwood Empire Association.

HARDY PIONEER

A hardy pioneer named Mark West settled on the banks of Mark West Creek near the new bridge in 1840. He there erected a large adobe structure in the year 1841, the lower floor of which was used for horses, the upper floor of which had a tier of living and guest rooms, together with a tremendously large dining room. The lower floor also served as a fort for protection against Indians and highwaymen, the walls being at least three feet thick, the main structure of the adobe being made of redwood.

Around this first unit a flourishing town was built. Here the main-line stage coaches arranged stopovers and other large hotels were constructed, in addition to many stores and other commercial enterprises. The community was a center of activity for all the surrounding territory. Colorful fiestas took place annually.

BIRTH OF RAILROAD

Then in the sixties two competitive railroad companies were organized and construction commenced of two parallel lines, each in competition with the other, through Mark West. Finally one bought out the other, which is now the Northwestern Pacific Railroad.

However, since the latter railroad course was through Fulton, Mark West moved to Fulton, leaving a ghost town behind him. Nothing remains at Mark West Bridge now to indicate that there ever was a community there, for it is surrounded by peaceful, quiet orchards and farm lands.

Immediately following the bridge dedication Chairman Kelly and Eric Cullenward, secretary of the Highway Commission, were conducted over the Russian River arterial

Sonoma Celebrities Turn Out in Force At Healdsburg Fete

routings by Redwood Empire Association officials, the following making up the party:

J. A. McMin, member of the Nine Counties Highways Committee of the Redwood Highway Association; Supervisor Ed Enzenauer, chairman of the Board of Supervisors of Sonoma County; Frank McNamara, chairman of the Highway Committee of the Santa Rosa Chamber of Commerce; E. L. Finley, director of Redwood Empire Association were among those making the tour.

BEAUTY AND THE—dignitaries. It's the new Mark West Bridge dedication ceremony in Sonoma County over which Esther Travis ruled as Queen. In the rush below are the following from left to right: G. Lansing Hurd, J. A. Tedford, Harry Ridgway peeking over Tedford's shoulder; Paul M. Travis, master of ceremonies; Wallace Ware, Earl Lee Kelly, representing the Governor; Miss Travis, Max Schultz, Maxine Lewis (Miss Healdsburg), Laura Simonson (Miss Sonoma Grange), Katheryn Aylward (Miss Santa Rosa), Harry Dunbar, city manager of Santa Rosa; George Sehlmeier, master of the State Grange, and Ed Enzenauer, chairman Sonoma County Board of Supervisors. Just a happy family.

QUEEN "CROWNS" BRIDGE WITH BOTTLE OF WATER

18 in Patrol Cited For Merit; Several Capture Burglars

EIGHTEEN members of the California Highway Patrol were cited for performance of service of an unusually meritorious character during the month of July.

Six of these citations were issued to officers for services in preventing and extinguishing grain and forest fires. They were:

District Inspector J. R. Franck of District No. 2, Redding; Captain T. B. Myers of Lake County, Captain L. Wilson of Calaveras County, Officer R. P. Cornelison of El Dorado County, Officer J. Masini of Fresno County and Officer R. G. Trimble of Trinity County.

TWO CAPTAINS NAMED

Two captains, A. A. Morrison of Stanislaus County and L. S. Drais of San Joaquin County, were commended for the capture of two men wanted for burglary.

J. C. Lane, traffic officer of Kern County, caught two men engaged in smuggling two Chinese into the United States. For this he received a citation.

District Inspector E. L. Bruck was commended for detaining a man who later was found to be wanted in another state for embezzlement.

TRAPPED IN CARS

Captain E. Breuss of Glenn County was commended for extinguishing a fire in an automobile after it had overturned and endangered the occupants. T. J. Donarin, officer of Humboldt County, received a like citation for extinguishing a fire in a car that threatened three persons pinned beneath the vehicle.

J. Masini, Fresno County, was commended for catching a man wanted for murder, and L. H. Koher, Tulare County, was commended for capturing a man wanted in Washington for passing worthless checks.

C. E. Boomhower, Contra Costa County, received a citation for assistance in the capture of a bank bandit.

NABS TWO BURGLARS

T. Norwood, Sutter County, captured two burglars in a store they were robbing.

George Bray, operator's examiner working in Pasadena, was commended for attention to detail that resulted in the arrest of two men wanted for burglary and theft of an automobile.

Arrests Show Gain But Fines are Less Says Patrol Report

ALTHOUGH actual increase in personnel was but 9 per cent, officers of the California Highway Patrol increased their activities and gross volume of work 25 per cent during the first six months of 1931 as compared with the same period of the previous year.

The increase, reflected largely in the number of arrests and stops made, is shown in the semiannual report of patrol activities.

The average number of men employed on the highways during the period, including captains and patrolmen, but exclusive of inspectors, bureau heads and clerks, was 372 as compared with 340 for the same period of the previous year.

This number of officers stopped and warned a total of 162,346 persons for all types of violations for the six months, a gain of 27 per cent over the same period of the previous year.

They arrested 43,211, which number was a gain of 23 per cent. In performing their duties they rode a total of 4,380,919 miles during the six-month period, or 24 per cent more than for the same period of 1930.

Although arrests and stops show a 25 per cent increase, there was an apparent tendency on the part of the courts to be lenient with the violators. This was shown by a sharp drop in the gross amount of fines collected. Total fines for the six-month period of 1931 amounted to \$147,960 as compared with \$161,473 for 1930.

LARGE EXPOSITION

The world's largest exposition of machinery and materials—14,000,000 pounds of it—will be held in Detroit January 9-15, 1932, with the twenty-ninth annual convention and road show of the American Road Builders' Association. This event will assemble 25,000 road and street officials, contractors and manufacturers and distributors.

The American Road Builders' Association, a nonprofit organization engaged in developing highways and effecting economies in road and street construction and upkeep, was organized in Detroit in 1902, and has grown to represent all highway activities.

Six officers received honorable mention for the capture of seven automobile thieves. They are G. D. Donnelly, J. L. Brey and C. D. Dempsey of San Luis Obispo County, E. M. Axtell and G. C. Malone of Siskiyou County and C. E. Boomhower of Contra Costa County.

Cato Named Chief: Bevans Temporarily Heads New Division

E. RAYMOND CATO has been appointed Chief of the Division of Enforcement of the newly set up Department of Motor Vehicles.

In other words, he is head of the California Highway Patrol.

Daniel O'Brien, Director of Penology, has been named Acting Director of the Department of Motor Vehicles by the Governor. He will occupy this position until such time as a permanent head be selected.

HAS TWO BRANCHES

The department, formerly the Division of Motor Vehicles under the Department of Public Works, is a new one created by the last Legislature. It consists of two branches, the Division of Registration under a chief known as the Registrar of Vehicles, and the Division of Law Enforcement, known as the California Highway Patrol.

Russell Bevans, Chief Inspector of the Highway Patrol, has been named Acting Registrar of Vehicles while retaining his inspector's rank. Bevans will take over the functions previously performed by Frank Snook, whose position automatically died at midnight August 13th, when the Division of Motor Vehicles went out of existence.

NAMES NEW MANAGER

Bevans has announced appointment of William McCarthy of the Recorder's office in San Francisco to the position of branch manager of the San Francisco registration office.

He further has announced that there will be no change now in the personnel of the headquarters office. That means M. A. Page will remain as Chief Clerk and B. A. Travis, Assistant Chief Clerk.

Roy Youngblood, whose title has been Assistant Superintendent of the Highway Patrol, has been named assistant chief under the new law.

He will continue to assist Chief Cato in administration of the Patrol.

Roadside trees planted by the Los Angeles County Forestry Department numbered 13,761 in 1930. The entire forestation program for the year within the county showed field planting of 56,861 trees.

Charlie Andrew: "Say Stover, give me a speedy and brief definition of a dry dock."

H. D. Stover: "A physician who won't give out prescriptions."

Chief E. Raymond Cato

Colonel John Skeggs Weds in Santa Rosa

Colonel John H. Skeggs, division engineer, with headquarters in San Francisco, has returned to the Bay City with a bride.

She was Miss Ellanette Fagrelus of San Francisco.

The couple were quietly married July 2d at the Church of the Incarnation, Santa Rosa, the Reverend Egbert B. Clark officiating.

They left immediately for Cleveland, Ohio, where the Colonel was a delegate from Islam Temple to the imperial conclave of the Mystic Shrine.

Colonel Skeggs is one of the best known highway engineers in the West. He won war-time renown for his work in building roads under fire in France. He is scheduled to become Illustrious Potentate of Islam Temple next year.

The bride is from San Francisco, where she had been engaged in real estate activities.

OFFICIAL TRAFFIC COUNT PUBLISHED AS ADDENDUM

As an addendum to the August publication of *California Highways and Public Works*, there is being circulated with the magazine a semiannual report of a traffic count taken by the Division of Highways July 12th and 13th.

A comparison of this count with that of a year ago shows a decrease for all routes of the State Highway system of 5.6 per cent on Sundays and 0.6 per cent on Mondays. On the other hand, the gasoline tax for comparable periods of 1930 and 1931 shows increased consumption approximating 6 per cent. This paradox may be explained by the gas war which prevailed during the spring months, but which ended before the census was taken.

The supplement to the *Highway Bulletin*, mailed with this issue, gives complete details of the count in each county and road district of California.

Santa Monica Company Gives Land for Road

The most recent instance of wholehearted cooperation by property owners with State highway officials in the matter of furnishing rights of way for State highway purposes is conveyance of the required easement for a portion of the Roosevelt Highway near Ocean Park, Los Angeles County, through the property of the Santa Monica Dairy Company owned by Mayor H. Michel of Santa Monica.

The property is improved as a high-class dairy. Mayor Michel, on behalf of his company, has now signed the necessary papers for the right of way with no allowance to his company for the value of the land taken or for severance damages.

Ally that he has requested from the State is simply the cost of moving and replacing the existing facilities at the lowest figure determined by competitive bids received for such moving operations.

Forty-five states will spend more than \$1,000,000,000 for public construction in 1931, the President's Emergency Committee for Employment have announced.

Stamped: A lady was driving along a country road when she spied a couple of repair men climbing a telephone pole.

"Fools," she exclaimed to her companion, "they must think I never drove a car before."

Lost are Reunited, Stolen Cars Found By Auto File System

(Continued from Page 2)

than 22,000 Smiths alone in the files, not to mention about 16,000 Joneses and several thousand Whites and Blacks.

The files offer a quick means of stopping sales of stolen cars. As soon as a car is reported stolen, a "stop card" is placed in the engine file and duplicate cards sent to all branch offices of the division. As soon as an application is made to transfer the car, the applicant is held until he is able to explain his part of the transaction to the satisfaction of the authorities.

Lost relatives are located frequently and families reunited by means of the records, for they yield information concerning the address of more than 2,000,000 people.

It is possible also to gain considerably more specific information from the operators' file, where the records of licenses issued for drivers are kept.

These give the age and general personal description of every person holding a license to drive in the State and often show the information sought when all other sources fail.

In addition to the telephone service, the Division answers thousands of letters and telegrams every month from persons desirous of registration information.

The demand of the taxpayers of the State is so great for the information afforded that the Department employs constantly a force of 110 girls at Sacramento, San Francisco and Los Angeles, who do nothing but keep them in shape.

WAR ON TRAFFIC DEATHS

Confronted with a steadily mounting toll of traffic deaths and injuries in the State, the California Committee on Public Safety is taking steps to enlist the joint efforts of authorities and the public in a vigorous endeavor to reduce the traffic accident toll. State officials, civic leaders and representatives of organized motorism will be represented at a meeting of the executive committee of the state-wide group called for September 11 in San Francisco.

The California Committee on Public Safety consists of representatives of more than forty civic organizations and State departments interested in traffic safety. Motorists are represented by the California State Automobile Association and the Automobile Club of Southern California.

The gravity of the problem was emphasized with the recent issuance of a statistical report by the State Department of Motor Vehicles. The figures disclosed that during the first six months of this year the total number of persons killed in traffic accidents was 1216. This was 150 more than the number of deaths in the first half of 1930 and represented an increase of 14 per cent.

Rim o' World Road Partly Completed; More Work Planned

Fourteen and one-half miles of the Rim o' the World Highway, providing access to the beautiful San Bernardino Mountain region which includes Lake Arrowhead and Big Bear Lake, have been completed, as shown in the accompanying pictures. They are typical scenes along this attractive route.

The work was completed at a cost to the State of approximately \$725,000 for the last three contracts, and the road dedicated last month with appropriate ceremonies.

There is provided in the current budget, funds for completion of this route. Surveys

have been completed and five and one-half more miles of highway will be constructed at a cost of \$650,000. E. Q. Sullivan, district engineer, with headquarters at San Bernardino, will supervise the work.

This road is the most heavily traveled recreational State highway in southern California. It is thronged with traffic every week end, and, over the July Fourth period, the Forest Service reports 65,000 persons traversed it.

If you are planning on an auto trip and are looking for some good place to stop, don't overlook the railroad crossings.

Oh Yea? He was standing alone on the corner. He shook his head and mumbled: "No, no, no—no, no, no." And as the crowd grew larger his "no, no, no," grew louder.

An officer shook his arm: "What's the matter?" "Nothing at all," he replied. "I'm just a 'yes' man taking a day off."

Distinguished Men on Water Committee

Continued from Page 1

"The California Water Resources Commission will study and report upon the engineering plan proposed by the State Department of Public Works and other proposals, particularly as to economic, legal, legislative and financial phases, to the end that a definite program be submitted for consideration by a future session of the Legislature. It is my hope that such a program can be evolved and that this commission and the joint legislative committee will be able to draft such necessary legislation which can be considered favorably at a special session of the Legislature for submission to the electorate at the general election in 1932. * * *

ALL ASKED TO HELP

"Concerted and earnest effort must be made by all to the end that California continue to progress and prosper. Therefore, I appeal to you individually and collectively for your help in working out a proper and basically sound solution to our most important and pressing problem of water which confronts our State. As your Governor, I will do my part."

Governor Rolph also appointed fifteen honorary advisory committees representing all interests and localities in the State to lend their sound business judgment and experience to assist in formulating a proper plan for the development of California's waters.

The Legislature has also appointed a legislative committee of fourteen members, seven members from the Assembly and seven members from the Senate, to study the economic, legal and constitutional questions relating to the water resources and proposed plan for conservation, development and distribution thereof and prepare and submit such proposed legislation, resolutions and constitutional amendments as may be necessary to carry into effect a coordinated plan.

HERE'S COMMITTEE

Senator B. S. Crittenden of Stockton, San Joaquin County, was elected chairman of this committee; Assemblyman Robert P. Easley of Antioch, Contra Costa County, as vice chairman, and Assemblyman Robert L. Patterson of Bakersfield, Kern County, as secretary. The other members of the committee are:

SERIES OF ARTICLES ON WATER PROBLEMS WILL BE PUBLISHED

Governor Rolph has publicly announced that he will call a special session of the Legislature to consider necessary legislation on California's water resources if and when the various interests and geographical divisions of the State reconcile their differences and are able to agree upon a practicable program of development which would be fair and just to all sections of the State.

Both the Governor's Commission and the Legislative Committee are actively engaged in the study of the problem. Many local committees have been formed to present the local problems in relation to the State-wide plan to the commission and committee.

Due to the widespread and increasing interest that has developed in the water problem, it is thought that a presentation of the various phases of the problem will assist in its successful solution.

To this end this magazine will outline the individual problems and views of the different localities in a series of articles. They will cover the Sacramento Valley and Sacramento-San Joaquin Delta, Southern California, San Joaquin Valley, the financial aspects of the problem and the relationship and interest of the Federal Government.

Senator C. C. Baker, Salinas, Monterey County.

Senator Ralph H. Clock, Long Beach, Los Angeles County.

Senator Frank W. Mixter, Exeter, Tulare County.

Senator W. P. Rich, Marysville, Yuba County.

Senator Andrew R. Schottky, Merced, Merced County.

Senator Ralph E. Swing, San Bernardino, San Bernardino County.

Assemblyman Edward Craig, Brea, Orange County.

Assemblyman Harold C. Cloudman, Berkeley, Alameda County.

Assemblyman John E. Frazier, Gridley, Butte County.

Assemblyman Frank S. Israel, Linden, San Joaquin County.

Assemblyman Chester M. Kline, San Jacinto, Riverside County.

Water Held Vital Need

TOO MUCH stress could not be placed upon the vital need of southern California for a greater water supply. Growth has advanced close to the point where no further development is possible until the supply has been procured and the machinery for its distribution is functioning.

When the Owens River aqueduct was constructed many scoffed at it as a useless expenditure. Had the croakers of that day been heeded this area could not have gained in population and wealth, nor could Los Angeles have become the metropolis that it is.

Occasion for increasing the water supply is even more evident than it had been when the faith of far-seeing men brought the aqueduct into existence. Even these men deemed that in providing water for a city of 1,000,000 they were doing enough for a long time, perhaps enough for an indefinite period. Pronounced as was their optimism concerning expansion, the situation today shows that they made an underestimate of the future's imperative demands.

Southern California must have this water. The question is one of industrial life or death.—*Long Beach Sun*.

HARD AT WORK

The legislative committee has held meetings in Los Angeles, Salinas and from August 5th to 14th held public hearings in San Francisco for the various interests and localities in the State and are hard at work in their study of the problem.

The long period of subnormal rainfall and the unparalleled growth and development of the State have increased the water shortage until it is recognized by both public and private agencies as being acute.

 The problem is neither local in character nor confined to any one type of use. From Siskiyou to San Diego, not only from agricultural users, but from industrial, municipal and other consumers, demands for a solution of and relief from water shortage have multiplied year by year. In numerous cases due to continued use in excess of replenishment, supplies formerly dependable, have become seriously reduced. Population and water consumption have so increased that cheap and easily obtainable water supplies are now practically exhausted. It is, therefore, manifestly beyond the ability of community enterprises to overcome physical obstacles in securing additional water. The water which may yet be placed under control and conserved constitute the one natural resource limiting the future growth of population and wealth in California.

AGENCIES ACTIVE

Throughout the State, various agencies are actively giving the water problem their study and attention and are formulating the needs and views of the different localities. Widespread interest is shown and the people of California will successfully solve this urgent problem, as they have similarly solved great questions in the past.

The Governor's message and the names of the Governor's water commission, the legislative committee and of the honorary advisory committees have been published in a pamphlet by the Governor's office for distribution to the people of California. The pamphlet also gives a concise resume of the State water plan as recommended by the Department of Public Works with a map showing the distribution of the water resources of the State and a map showing the proposed plan.

WATCH THAT SPARK

Remember to put out cigars, cigarettes and pipe heels while on your vacation. Also the lighted match carelessly thrown on the ground. The Forest Service notes that 8,372,000 acres have been destroyed by fire in the last ten years, causing damage estimated at \$14,424,000. This is a heavy price to pay for wanton carelessness.

Nurse: "Have you ever run a temperature?"
Worse: "No, but I've driven most every other kind of car."

Orchards, Field Crops, Rice Saved By Cooperation in Lower River

By HARLOWE M. STAFFORD, Sacramento-San Joaquin Water Supervisor

ON JULY 10, 1931, the Feather River went dry at Nicolaus, about ten miles above the mouth, with a number of large irrigation pumping diversions below Marysville depending on its flow. Something had to be done to save the large area of orchards, field crops and rice which the river had been supplying.

The conditions were investigated by the Water Supervisor's office and after a number of preliminary conferences between the various water users and the State Engineer's

Canal Company, were to pass down the river by the latter company's diversion dam a short distance below Oroville, there would be needed not only voluntary cuts on the part of the two large canals, Western and Sutter-Butte, but additional storage release by the Pacific Gas and Electric Company, owner of Almanor and Bucks Lakes in the North Fork drainage of the Feather.

It was shown that the releases from Almanor were already such as to keep the Caribon power plant running continuously at full capacity. However, as a result of the Oroville meeting the power company agreed to help further and an additional release was made from Bucks Lake. This, together with the temporary cuts of Western and Sutter-Butte canals furnished a flow which sent the water to a point below Nicolaus Bridge, supplying all pumps except those of Sutter Basin Company two and one-half miles above the river's mouth.

At both the Sacramento and Oroville meetings the need was stressed for a State Water Master to insure the proper distribution of the available flow in the river and to effect such savings as might be possible through a schedule of rotation or other regulation of this nature. In fact, the additional release of storage by the power company was made contingent upon the placing of control of diversions in the hands of a State Water Master.

An agreement providing for a Water Master for the 1931 season was drawn up and presented to the water users at the Sacramento meeting with the State Engineer and the signatures were practically completed at the Oroville meeting. Fred E. Anderson, who had been covering the regular Feather River diversion measurements in connection with the work of the Sacramento-San Joaquin Water Supervisor's office, acted as Water Master beginning July 23 until shortly thereafter Wm. Allan Laffin was made Water Master, devoting his entire time to this work. A schedule of rotation among general crop water users was placed in effect and the water was conserved to the greatest possible extent.

Subsequently it was found that additional storage releases would be necessary to reach

DRY AS SAHARA—That was the condition of the Feather River at Nicolaus recently until cooperation and appointment of a water master relieved the situation. This is a view of the river showing the bridge at Nicolaus.

office, two meetings conducted by Edward Hyatt, State Engineer, one at Sacramento on July 21 and the other at Oroville on July 22, resulted in relief action.

These meetings were attended by the larger water users on the lower river, by representatives of the Sutter-Butte Canal Company, the Western Canal Company, the Pacific Gas and Electric Company, and, at the Oroville meeting, by a representative of the State Railroad Commission.

It was apparent from the facts presented that if sufficient water in addition to the natural flow, claimed by the Sutter-Butte

Rigid Conservation Helps to Save Crops Along Feather River

the pumps of the Sutter-Basin Company below Nicolaus, and through representations of this company to the Pacific Gas and Electric Company and particularly in view of the fact that a strict control of all releases would be exercised by the Water Master, the power company by-passed a large additional flow

HIGH AND DRY—Another view of the Feather River at Nicolaus. The old boat is afloat on sand, being left stranded when the river ceased to flow at this point. Release of water by power companies and rigid conservation remedied the condition.

(in excess of the capacity of Caribou power plant) from Lake Almanor, beginning July 30, 1931. This flow reached the Sutter Basin pumps.

Up to the present time, through close regulation by the Water Master and a fine cooperation on the part of all water users, the Sutter-Butte Canal Company, Western Canal Company and Pacific Gas and Electric Company, the crops and fields which would otherwise have dried up have been successfully supplied. It appears probable that the present season's Feather River situation may lead to an action for ultimate adjudication of the water rights on the river below Oroville.

WHY IS IT?

Why is it that persons who scorn to cheat at cards think nothing of cheating in traffic?

This is one of the posers asked by the National Safety Council, which finds that we have one code of ethics for driving and another for the home.

Northern Gateways To State Show Big Influx of Machines

AUTOMOBILE traffic into California through the northern gateways has been greater during the past fourteen months than the volume of travel through the southern border stations. This is revealed in an analysis by the Highways Bureau of the California State Automobile Association of official figures for the period received from the State Department of Agriculture. The department checks all incoming cars at the border.

The period covered by the study is from May 1, 1930, to July 1, 1931. The total number of vehicles which passed through all the quarantine stations was 895,001. Of this number, 522,738, or 59 per cent, were cars registered in California.

IMPOSING AVERAGES

Those with California license plates checked through at the northern stations totaled 378,588, or 72 per cent of the resident cars, leaving 144,150, or 28 per cent, for the southern gateways.

This gives an average of 37,335 vehicles with a California license entering each month, an average of 27,042 for the north and 10,296 for the south.

Cars carrying the license plates of other states which entered during the same period were 372,263, or 41 per cent of the total.

MANY "FOREIGN" CARS

Of these "foreign" cars, 208,687, or 56 per cent, entered through northern stations, and 163,576, or 44 per cent, came in through southern border points.

An average of 26,590 "foreign" cars entered the State each month. With an average number of 2.6 persons per vehicle, these cars brought an average of 69,134 people into the State every month. The monthly average of such cars entering in the north was 14,906, and in the south 11,684.

Two truck drivers were all snarled up in the traffic at the intersection at West Broadway and Chambers Street, New York City. One of the drivers lost his temper and yelled at the other one: "Why don't you look where you're going, you great, big, cross-eyed, bow-legged, knock-kneed, son of a blankity blank, blank! blank! blank!! * * * pie-eyed dumb-bell!!!"

The other driver smiling sweetly said, "You're nice looking, too, buddy."—*National Motorist*.

Roads Taken Into Highway System

Continued from Page 4

struct highways by the most direct and practical routes between the termini stated herein, which highways are declared to be, and classified as, secondary State highways. They are:

(a) Alturas to Oregon State line, near New Pine Creek.

(b) Quincy to State Highway Route 29, near Chats.

(c) Vallejo to State Highway Route 8.

(d) Walnut Creek to Oakland.

(e) Weed to California-Oregon State line, near Calor.

(f) Bishop to California-Nevada State Line (Montgomery Pass).

(g) Bakersfield to Mojave.

(h) Red Box Divide to Pine Flats (Route 61 to Route 62).

(i) State Highway Route 26, near Colton via Pomona to Los Angeles.

(j) State Highway Route 43, Waterman

Canyon via Santa Ana Canyon to Newport Beach.

(k) Beaumont to Riverside (Jackrabbit Trail).

(l) Riverside to San Diego (Inland Route).

(m) Pomona to Temecula.

(n) Blythe to California-Arizona State line at the Colorado River and State Highway Route 64 to State Highway Route 26, near Indio.

(o) National City to international boundary line, near Tia Juana.

(p) El Centro to Calexico.

(q) Oasis to California-Nevada State line.

(r) State Highway Route 2 near Ventura to State Highway Route 4 at Castaic Junction.

(s) From State Highway Route 31 near Cajon Pass to State Highway Route 23 near Lancaster.

CURVES IN STYLE? Well, They're not very popular with this gang. They are slope men beginning preliminary operations for the removal of curves on the Redwood highway south of Eureka near Pepperwood. Long range visibility prevents accidents.

County Supervisors Sent Resolution

Continued from Preceding Page

OIL RIGHT—this photo. The boys are moving in with machinery to start oiling sixty miles of road to the big hills on the Redding-Alturas Lateral. Modern equipment assures good results on this job.

- (t) Pomona to Fullerton via Brea Canyon.
- (u) Cambria to San Luis Obispo.
- (v) Santa Barbara to State Highway Route 2 at Zaca via San Marcos Pass.
- (w) State Highway Route 14 near Crockett to American Canyon route near Vallejo.

ADOPT SAFEGUARD

The provision in the bill that these secondary highways be laid out and constructed by the *most direct and practical routes* between the designated termini, will necessitate, as has been stated above, the future abandonment of certain portions of the routes selected. To guard against any misunderstanding on this score, the supervisors of the counties affected were requested by the Highway Commission to approve the following resolution, which embodied the description of the road taken over:

WHEREAS, Chapter 82 of the California State Statutes of 1931 declares the most practical and direct route between certain designated termini as secondary State highways, the California Highway Commission, under authority of section 365d of the Political Code of the State of California, will on August 14, 1931, extend State maintenance to the most practical and direct traversable county road between the designated termini. The following county road will be maintained:

Description of route then follows.

Therefore, Be it Resolved, That the County of _____, acting by and through its Board of Supervisors, does hereby consent to the California Highway Commission taking control of and maintaining the above described county road and does further agree that the State of California, acting by and through said California Highway Commission, may relinquish to this county, and this county will resume full control and responsibility for such portions of the aforesaid county road as shall not be included within the layout of said State Highway as finally laid out, adopted and constructed.

DO NOT QUALIFY

While the total mileage of these secondary roads, when laid out and constructed, will total 804 miles, the mileage actually taken over for maintenance is but 722.75 miles. This is due to the fact that certain portions of the routes considered did not qualify within the meaning of the act in being the most direct route, while on several routes no traversable route existed.

In these cases, the amount which would have been spent for maintenance, providing the routing was available, will now augment the maintenance funds set aside for the remaining new secondary roads in that particular county.

Keeping Pace With Road Improvements

A resume of work being done in many counties is given herein by two district engineers of the Division of Highways. The nature of the projects and the progress being made is reported.

From L. H. GIBSON, District V

SAN BENITO COUNTY: Plans are complete for a change of line from a point near the San Benito River north of San Juan Bautista to the Monterey County line. This is part of the change of line via Prunedale, a portion of which is now under construction in Monterey County to eliminate the San Juan Grade. On the lateral highway from three miles north of Hollister to the Pacheco Pass road progress is being made on resurfacing the road with asphaltic macadam. The Granite Construction Company is the contractor. On the Coast Highway throughout the district and on the Hollister lateral center line traffic stripe is being painted. McEverlast Company, Incorporated, is the contractor.

MONTEREY COUNTY: Progress is being made on the bridge across the Salinas River at Bradley. H. E. Dorring is the contractor under the supervision of the Bridge Department.

On the Coast Highway from two and one-half miles north of Salinas to the Monterey-San Benito County line, a new road is being constructed through Prunedale. The roadbed is 36 feet wide and it will be paved with 20-foot Portland cement concrete. This project, with a portion of road to be constructed in San Benito County, will eliminate the old San Juan Grade from the main Coast Highway. The Peninsula Paving Company is the contractor.

The earth shoulders on the Coast Highway between Salinas and Chualar have been treated with fuel oil by the road mix method. C. W. Wood was the contractor. On the Coast Highway between San Lucas and three and one-half miles north, the earth shoulders have been treated with fuel oil by the road mix method. The contractor was the Granite Construction Company.

On the Roosevelt Highway a reinforced concrete arch bridge across Garapata Creek, including a change of line three-tenths of a mile in length, is under construction. The Hanrahan Company is the contractor.

On the Roosevelt Highway a reinforced concrete arch bridge across Granite Creek, about 14 miles south of Monterey, is under construction. Geo. J. Ulrich Construction Company is the contractor.

SAN LUIS OBISPO COUNTY: On the Coast Highway between Paso Robles and two-tenths of a mile north of the San Luis Obispo-Monterey County line, the road has been reconstructed with a 36-foot roadbed and a 20-foot asphaltic cement pavement. The contractor was the Peninsula Paving Company. Within the limits of this project a new reinforced concrete bridge is being constructed across San Marcos Creek. L. C. Clark and C. E. Doughty are the contractors.

Between Atascadero and one and one-half miles south of Santa Margarita, the road is being reconstructed with a 36-foot roadbed and a 20-foot second-

From E. E. WALLACE, District VI

KERN COUNTY: Work on widening the grade and placing cutback asphalt borders between Bakersfield and Grapevine Station on Route No. 99 is proceeding rapidly.

The portion of this job, which is 17 miles on tangent crossing the desert south of Bakersfield, lies on a very deceptive grade. It is found that many motorists travel at an excessive speed, very often not realizing that there is a continuous down grade toward Bakersfield, and many accidents have happened during the past years. By continuous vigilance and controlling the construction operations, it is believed that the accidents have been held to a lower minimum than ordinarily, had there been no contract in progress. Numerous flagmen are employed to warn and direct traffic, which has resulted in adequate protection for the traveling public. In a few instances, accidents have happened due entirely to excessive speed and disregard of warning signals.

Oiling contract on Route No. 57 from west boundary of Kern County to towards Maricopa, nine and one-half miles being done by the Pacific Tank Lines, Inc., has been completed and the outfit has moved to Fresno County, west of Parkfield Junction, for the completion of that portion of their contract.

A contract has also been awarded to Oilfields Trucking Company, Ltd., of Taft, for dust oiling approximately 30 miles from Democrat Springs to Weldon, on Route No. 57 in Kern County.

TULARE COUNTY: Union Paving Company is now making good progress on widening and resurfacing of highway on Route No. 99 between Goshen and Kingsburg. The paving plant is not yet started, but will do so about the first week of August. Many thousands of yards of earth are being hauled in from adjacent borrow pits to widen the roadbed to 36 feet and provide safe slopes for traffic. This improvement will result in considerable added safety to traffic, as about one-half of the 12 miles lies through alkali soil which is very treacherous during wet weather.

On the same contract five concrete bridges are being replaced or widened by Contractor Metzger. This work is well under way at the present time.

On July 8, advertisement was made for bids covering proposed improvement between Tipton Crossing and Tulare on Route No. 99 in Tulare County. This improvement will lie on a new location east of the Southern Pacific Railroad. The improvement will consist of a 36-foot roadbed, with 20-foot Portland cement concrete pavement. Bids are also requested for five bridges varying from 20 to 300 feet in length. This will be handled as a separate contract, but simultaneously with the road work.

This improvement, when completed, will eliminate two grade crossings of the Southern Pacific Company's main line, one at the south city limits of Tulare and

BOTTLENECKS broken. Recent widening of the heavily traveled boulevard on the Coast Highway north of Santa Monica has brought joy to motorists and relieved a serious traffic problem. The Topanga and Las Flores Creek bridges in Los Angeles County have been widened at a cost of \$26,200. Here's a view of the new road over the Topanga Creek and below the Las Flores Creek road.

New Right of Way Laws Are Urged

Continued from Page 9

diately upon its passage by the Congress and approval by the President. This grant, however, the courts point out, necessarily remains in abeyance until it is accepted by the public. Such acceptance must be by some definite act upon the part of a state or other public authority by which it takes possession of a definite parcel of right of way. As the law now stands, what constitutes acceptance is a fact to be determined in each particular case.

The inadequacy of the act as a solution of present day right of way problems on the public domain is evident when it is realized there is no agency of the Federal government that will undertake to say how much right of way may be taken under it; no department where maps may be filed; no effective way of giving notice to the public that rights have been acquired short of the actual, physical taking possession of the right of way.

It is unnecessary to urge before this body the obvious reasons why such indefinite title to rights of way does not suffice for modern highway needs—why some way must be provided to take advantage of the Federal grant between the time a new highway is projected and its ultimate construction.

MAPS ARE REFUSED

The Division of Highways of California has, on several occasions, sought to file with the United States land offices maps showing definite locations and widths of right of way across the public lands. The Land Office has refused to accept such maps for filing. A similar request, made through the Bureau of Public Roads, was definitely refused in recent months. It is the position of the Land Office that the act in question does not authorize acceptance for filing of right of way maps.

It has been pointed out that section 17 of the Federal Highway Act authorizes the submission of such maps to the Department of the Interior (which has jurisdiction over unreserved Federal lands) through the Department of Agriculture. Such procedure seems to be within the purview of this section, and, in California, we plan to take such action, if no better way can be found to protect the rights of the State.

ABUSES CITED

Section 17, however, in our opinion, is as inadequate as section 2477 of the Revised Statutes because of the length of time required to have a right of way reserved by this procedure, which is often several months. While the application is pending before the Federal departments, it is possible, and it frequently happens, that numerous mining claims are located along the line of the survey or even overlapping it. The easily accomplished staking out of a claim and filing for record of the required notice in the office of the county recorder places such mining locators in possession of that which the Federal government intended the public should have free places such locators in a position to demand tribute for that which cost them nothing, which, frequently, they have no intention of exploiting as a mine but seek to use only for private profit as sites for gaudily painted roadside-eating stands, gasoline stations, camp grounds, or other surface uses.

Under such circumstances, urgently needed highway improvements can not await determination of such questions as actual discovery of mineral deposits, valid filings, or priority of right—it is a question of the uncertainty of condemnation proceedings or paying, and, with the engineering department demanding clearance for the right of way, the right of way agent often is forced to make the best bargain he can.

MINING LOCATOR

To appreciate properly the situation, it is necessary to understand clearly the nature of the title of the locator of a mining claim. Such a locator, prior to patent, does not own the fee which, of course, remains in the United States. He has a possessory right, however, which, in California and other western states, is regarded as real property and is recognized as a legal estate of freehold. As against everyone except the United States, the locator is regarded as the actual owner. This doctrine has been upheld by the Supreme Court of the United States in a case as recent as January, 1930. This possessory right, if supported by a valid filing, dates from the time of the alleged discovery of mineral and extends to the exclusive possession and enjoyment of the entire surface included within the lines of the location, whether or not necessary for mining operations.

It is not necessary that the locator ever proceed to secure a patent from the United States; the law does not require that he do so—in fact, a patent adds little to his title. If he abandons the claim, he may return at any time to resume possession unless the claim has been relocated by another in his absence. Unless he applies for a patent, there may never be an examination to determine if mineral deposits actually exist within the claim or if a valid discovery has, in fact, been made. There is no limit to the number of claims one individual or a single corporation may locate or acquire. Land titles in California are clouded with innumerable filings of this nature.

TASK ALMOST HOPELESS

It is only when such filings are made within the national forests that an active effort is made by representatives of the Federal government to determine their legitimacy. The Forest Service, in California, has been campaigning against such locations for years, but the ease with which mining locations may be made brings a new crop with every new highway into the forest areas and, under existing laws, the task is almost hopeless.

Section 17 of the Highway Act provides also for the reservation of sites for quarries and other materials needed for the construction of highways on Federal aid and forest highway systems. But even when maps are filed and the reservation made by the department having jurisdiction over the lands in question, there is no assurance that a subsequent mining location may not be made, by a filing with the county recorder, and possession taken of the tracks desired by the State. This is equally true regarding reservations of rights of way under this section. To dispossess a locator under such circumstances may require court action and a costly delay in the highway construction program. Such a result is possible because, inconsistently, the reservation under the Highway Act is a

Proposes Changes in Mining Laws

Continued from Preceding Page

Federal record and the mining location is a State record, although both filings relate to Federal lands.

By the Leasing Act of 1920, the Congress effected a complete change of policy in respect of the disposition of lands containing deposits of coal, phosphate, sodium, oil, oil shale, and gas. Such lands are no longer open to location and acquisition of title, but only to lease. Mining in the national forests of the East is conducted under the lease system. Consistently and logically, this policy might be extended and made applicable to all forms of mining in the forests of the West. Such legislation would be, no doubt, an ideal means for overcoming the existing situation as regards highway rights of way across mining claims. Under such a system of leases or permits, the matter of rights of way could be made the subject of departmental regulation.

But we, in California, advocate no such radical remedy. We ask for nothing that will interfere with or impose a burden on any legitimate mining project undertaken in good faith. We demand relief only against those who, taking advantage of laws enacted to meet an entirely different situation in the time of our grandfathers, seek private gain by perpetrating a fraud against the government.

REVISION PROPOSED

To meet the situation herein briefly outlined, the following is suggested as desirable Federal legislation:

1. Amendment of the laws regulating the National forests to provide that the forests shall not be open to location for mining purposes; that mining within such areas shall be carried on only in accordance with rules and regulations to be promulgated by the Secretary of Agriculture. Such action will make it possible for the Forest Service to make fully effective permits granted by it for highway purposes.
2. Amendment of the Federal mining laws to provide:

- (a) That no location for mining purposes shall be valid for any purpose until notice of location is filed in the United States Land Office for the district within which the claim is located;
- (b) That no mining claim shall be located immediately adjacent to any public highway so as to interfere with the use thereof by the public or so as to be destructive of roadside values and beauties;
- (c) That every mining location shall be made subject to the right of the United States, any state, or political subdivision of a state, subsequently to enter thereon for the purpose of constructing public highways or removing therefrom road building materials, without compensation to the locator of the claim except for actual surface improvements in place within the projected right of way lines at the time the highway was laid out and established.

3. Revision of section 2477 of the Revised Statutes of the United States to provide:

- (a) For filing of maps in the respective land offices showing definite right of way locations and widths, such filing to constitute a reservation of such rights of way as against any subsequent patent, transfer or easement;
- (b) For filing of maps in the respective land offices for the reservation of sites for borrow pits and quarries or for the removal of other road-building materials for all public highways.

Such legislation is needed to remove the incentive for the filing of mining locations for other than legitimate mining purposes. Its enactment will bring the mining laws abreast of present-day conditions. It is necessary in the public interest.

Road Men Give Help In Putting Out Fire

The following letter, addressed to T. H. Dennis, maintenance engineer for the Division of Highways, needs no introduction. It speaks for itself:

Dear Mr. Dennis:

I was informed by State Forest Supervisor Nelander of Ukiah that on July 29th Road Foreman Jack Milford and three of his crew rendered valuable service on a fire about three miles south of Hopland, and that their efforts undoubtedly did much to save the valuable home of Mr. C. T. Smith, as well as to hold down what otherwise would have been a serious range fire.

I wish you would convey my thanks to Mr. Milford and his men for the valuable services which they rendered.

M. B. PRATT, State Forester.

C. R. Montgomery Named To Right of Way Post

C. R. Montgomery, Los Angeles attorney, and until recently connected with one of the large law offices of that city, has been appointed to the position of general right of way agent.

Mr. Montgomery graduated from Stanford University with the class of 1928 and was given the degree of J.D. by that university in 1930.

He was a high honor student at the university, having been elected to the legal honor society, the Order of the Coif. He also was named a member of Phi Beta Kappa and is a member of the Phi Delta Phi legal fraternity and of Beta Theta Pi.

Architectural Efficiency Explained

Continued from Page 6

each department and institution affected, and modified as necessary from time to time. The plot plans described above are an essential part of the foundation on which this long-time program is based and are indispensable for its preparation. This is one of the most important uses of the plot plans.

The ultimate plot plan of a particular institution takes into account, among other things, its site; its ultimate capacity; the speed of its development toward ultimate capacity as determined by the State's needs; the amounts of money that can reasonably be expected to be made available for expenditure on its development during succeeding bienniums.

The ultimate plot plan being available, the Division of Architecture in each of about thirty cases determines the particular structures which need to be provided during the ensuing biennium.

SKETCHES DEVELOPED

The State Architect or the Assistant Architect confers with the other State officers concerned, and, following the understanding reached at this first conference, a civil engineer makes and plots a survey of the site and preliminary sketches are developed.

In the making of the preliminary sketches the architectural designer has access for purposes of reference, to the principal architectural magazines for which the Division subscribes, to the Division's own library and to the very considerable collection of architectural works in the California State Library; he also has, as needed, the cooperation of the structural engineer, the mechanical and electrical engineer, the specification writer and the cost estimator who head their respective sections in the Division's organization. The elements of the project which are in the hands of these section heads are taken into account and scientifically incorporated in the architectural sketches as they are developed.

When the preliminary sketches and cost estimate are approved, copies of the sketches are placed in the hands of the chief architectural draftsman, who assigns various portions of the work of preparing the working drawings at small and larger scales among his staff of draftsmen. In addition to the supervision of the chief draftsman, the men pre-

paring the working drawings have particular supervision from the architectural designer and the Assistant Architect and the general supervision of the State Architect. Coordinating supervision is also available continuously as needed during the making of the working drawings from the structural engineer, the mechanical and electrical engineer, the specification writer and the cost estimator.

The administrative assistant to the State Architect, in addition to caring for the detailed business and financial administration of the Division's activities and coordinating its work with other State officers, departments and various institutions, also coordinates the entire technical program in the headquarters office so that the average of between 200 and 250 separate projects handled by the Division during each two-year period, distributed over the entire area of the State, costing between \$7,500,000 and \$8,000,000, are carried forward in an orderly, continuous and efficient fashion.

ACTUAL CONSTRUCTION

Construction work is handled either by contract or days labor. Coordination between the office and construction work in the field is maintained through the general superintendent of construction, who has immediate charge of all field work which is carried on under the continuous supervision of superintendents of building construction operating in the various parts of the State. A number of these superintendents have charge of the Division's work at two or three different institutions and have working under them an associate connected with each institution or single important project.

Governor Rolph's policy of speeding up construction work provided for by the 1931 Legislature for the purpose of relieving distress resulting from unemployment, securing the early completion of greatly needed buildings and obtaining for the State the financial benefits involved in present low construction costs, is serving also a further purpose. It is clearing the way to permit the Division of Architecture in addition to its regular work to start a year sooner than ever before to gather data needed and to do the necessary architectural and engineering work in connection with the projects in the ten-year build-

\$40,000,000 Total Building Program For 10 Year Period

ing construction program to be presented to the 1933 Legislature for consideration.

TEN-YEAR PROGRAM

This will make available for the first time in the history of the Division sufficient time for full and careful advance study of all projects, and for the completion of architectural and engineering office work by a time to permit of letting construction contracts as soon as the necessary funds are released.

It is expected that the building needs of the State during the ten years beginning July 1, 1933, will involve the expenditure of \$40,000,000. The organization of the Division of Architecture as herein indicated is such as to adequately care for this large program, taking fully into account all the great variety of services involved and giving full recognition to the highest ideals of both the art and science of the professions of architecture and engineering.

ARCHITECTURAL AWARDS For Month of July

List of projects handled by the Division of Architecture for which contracts were awarded by Colonel Walter E. Garrison, Director of Public Works, during the month of July, 1931.

July 2, 1931—Paris Brothers—Rough excavating and grading site for Hospital Building, Veterans' Home	\$10,885 00
July 8, 1931—Guth & Fox—Armory, National Guard of California, Yuba City	18,946 00
July 13, 1931—James L. Edmiston—Water well, California Institution for Women	4,798 00
Total	\$34,629 00

Horse Laugh: The true value of horse sense is clearly shown by the fact that the horse was afraid of the automobile during the period in which the pedestrian laughed at it.

Motor vehicle registration in San Francisco at the end of the first six months of this year had reached a total of 149,020. The number of passenger automobiles was 128,027, with the remainder consisting of other types of vehicles.

Only a few states have decreased their road appropriations for 1931 and the majority of them have made increased appropriations for this year, it is indicated in reports reaching the California State Automobile Association. In round numbers, a billion dollars will be spent on road construction and maintenance by State highway departments. California will maintain its budgeted expenditures of approximately \$100,000 a day in maintenance, new construction, and improving its road system.

Attention Engineers!

(From Oban, a seaport and tourist resort in Argyllshire, Scotland, this verse comes to us, through Mr. Gavin Gemmell, a director of the International Bitumen Emulsions Corporation, resident of London, who clipped it from the *Oban Times* and mailed it to the *BULLETIN*. While an interesting word-picture, it is incomplete to us on the Pacific coast, where in recent years one of the commonest phases of highway development has to do with the straightening of crooks and bends.—Editor.)—*Standard Oil Bulletin*, July, 1931.

THE GENESIS OF A ROAD

One day through the primeval wood
A calf walked home, as good calves should,
But made a trail, all bent askew,
A crooked trail, as all calves do.
Since then two hundred years have fled,
And I infer the calf is dead;
But still he left behind his trail;
And thereby hangs my moral tale.

The trail was taken up next day
By a lone dog that passed that way;
And then a wise bellwether sheep
Pursued the trail o'er vale and steep,
And drew the flock behind him, too,
As good bellwethers always do;
And from that day, o'er hill and glade,
Through those old woods a path was made.
And many men wound in and out,
And dodged and turned and bent about,
And uttered words of righteous wrath,
Because 'twas such a crooked path.
But still they follow (do not laugh)
The first migrations of that calf.

This forest path became a lane,
And bent and turned and turned again;
This crooked lane became a road,
Where many a poor horse, with his load,
Toiled on beneath the burning sun
And traveled some three miles in one—
And thus a century and a half
They trod the footsteps of that calf.

The years passed on in swift fleet;
The road became a village street,
And this (before men were aware)
A city's crowded thoroughfare;
And soon the central street was this
Of a renowned metropolis,
And men, two centuries and a half,
Trod in the footsteps of that calf.
Each day a hundred thousand rout,
Followed the zigzag calf about,
And o'er his crooked journey went,
The traffic of a continent,
A hundred thousand men were led
By one calf, near three centuries dead.

—Anonymous.

Vital Statistics on Dam Construction

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the Month of July, 1931.

ORANGE COUNTY—Taffree Dam No. 791-2. Anaheim Union Water Company, Anaheim, Calif., owner; earth dam, 8 feet above streambed with a storage capacity of 50 acre-feet, for storage purposes, for irrigation use.

SHASTA COUNTY—False Lake Dam No. 223. O. Merlo, Redding, owner; earth dam, 13 feet above streambed, situated on North Fork Jenny Creek tributary to Sacramento River in Sec. 4, T. 31 N., R. 5 W., M. D. B. and M., for storage purposes, for irrigation use.

MODOC COUNTY—Howe Dam No. 169. W. A. Howe, Alturas, owner; crib dam, 5½ feet above streambed with a storage capacity of 30 acre-feet, situated on Pit River tributary to Sacramento River, for diversion purposes, for irrigation use.

MODOC COUNTY—Duke Reservoir No. 2. No. 163-2. Royal E. Williams, Likely, owner; earth fill dam, 11 feet above streambed with a storage capacity of 20 acre-feet, tributary to South Fork Pit River, for storage purposes, for irrigation and stock use.

LOS ANGELES COUNTY—Elizabeth Lake Dam No. 781. Barkman C. McCabe, Los Angeles, owner; earth dam, 18 feet above streambed with a storage capacity of 1000 acre-feet, situated on Elizabeth Lake tributary to Elizabeth Lake Canyon in Sec. 10, T. 6 N., R. 14 W., S. B. B. and M., for storage purposes, for recreation use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of July, 1931.

SAN DIEGO COUNTY—Monte Vista No. 1 Dam. Sefton Investment Company, San Diego, owner; earth dam, 35 feet above streambed with a storage capacity of 10.8 acre-feet, situated on unnamed creek tributary to Sweetwater River in Sec. 31, T. 16 S., R. 1 E., S. B. B. and M., for storage purposes, for domestic and irrigation use. Estimated cost \$4,000, fees paid \$40.

SUTTER COUNTY—Wadsworth Dam No. 1-15. Sacramento and San Joaquin Drainage District, Sacramento, owner; flashboard weir dam, 17½ feet above streambed with a storage capacity of 162 acre-feet, situated on Wadsworth Drainage Canal tributary to Sacramento River in Sec. 15, T. 15 N., R. 2 E., M. D. B. and M., for storage purposes, for raising ground water use. Estimated cost \$8,730, fees paid \$87.30.

LOS ANGELES COUNTY—North Side Water Company No. 1 Dam No. 809. North Side Water Company, Walnut, Calif., owner; earth dam, 8 feet above streambed with a storage capacity of 12 acre-feet, situated on South Fork San Jose Creek tributary to San Gabriel River in Rancho San Jose, for storage purposes, for irrigation use. Estimated cost \$1,500, fees paid \$20.

SANTA CRUZ COUNTY—San Vicente Creek Dam No. 632-2. Coast Dairies and Land Company, Davenport, Calif., owner; concrete gravity dam, 19 feet above streambed with a storage capacity of 15 acre-feet, situated on San Vicente Creek in Ranchos San Vicente and Arroyo de la Laguna, for storage purposes, for irrigation use. Estimated cost \$3,257, fees paid \$32.57.

Application for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of July, 1931.

SHASTA COUNTY—False Lake Dam No. 223. O. Merlo, Redding, owner; earth dam, situated on North Fork Jenny Creek tributary to Sacramento River in Sec. 4, T. 31 N., R. 5 W., M. D. B. and M.

MODOC COUNTY—Duke Reservoir No. 163. Royal E. Williams, Likely, owner; earth dam, situated on Pit River in Sec. 9, T. 39 N., R. 13 E., M. D. B. and M.

PLACER COUNTY—Alta Forebay Dam No. 97-10. Pacific Gas and Electric Company, San Francisco,

owner; earth dam, located in Sec. 30, T. 16 N., R. 11 E., M. D. B. and M.

TUOLUMNE COUNTY—Lake Strawberry Dam No. 97-74. Pacific Gas and Electric Company, San Francisco, owner; rock dam, situated on South Fork Stanislaus River tributary to Stanislaus River in Sec. 15, T. 4 N., R. 18 E., M. D. B. and M.

TUOLUMNE COUNTY—Relief Dam No. 97-80. Pacific Gas and Electric Company, San Francisco, owner; rock dam, situated on Relief Creek tributary to North Fork Stanislaus River in Sec. 13, T. 5 N., R. 20 E., M. D. B. and M.

SANTA CLARA COUNTY—Lower Howell Dam No. 622-2. San Jose Water Works, San Jose, Calif., owner; earth fill dam, 30 feet above streambed with a storage capacity of 153 acre-feet, situated on Rundell Creek tributary to Los Gatos Creek in Sec. 31, T. 8 S., R. 1 W., M. D. B. and M.

NEVADA COUNTY—White Rock Dam No. 97-49. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, 10.5 feet above streambed with a storage capacity of 578 acre-feet, situated on branch of North Creek tributary to Fordyce Creek in NE¼ Sec. 22, T. 18 N., R. 14 E., M. D. B. and M.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of July, 1931.

MODOC COUNTY—Enquist Dam No. 158. Emil Enquist, Davis Creek, owner; earth and rock fill dam, 10½ feet above streambed with a storage capacity of 750 acre-feet, situated on a fork tributary to Oliver's Canyon in NE¼ Sec. 24, T. 47, R. 12, M. D. B. and M., for storage purposes, for irrigation and stock water use. Estimated cost \$1,000, fees paid \$20.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of July, 1931.

MONO COUNTY—Walker Lake Dam No. 532. Archibald Farrington, Mono Lake, owner; earth and rock dam, situated on Walker Creek tributary to Rush Creek in Sec. 7, T. 1 S., R. 26 E., M. D. B. and M.

CONTRA COSTA COUNTY—Port Costa Balancing Reservoir No. 581-2. California Water Service Company, San Francisco, owner; earth fill dam, 39 feet above streambed with a storage capacity of 41.7 acre-feet, located in SW¼ Sec. 3, T. 2 N., R. 3 W., M. D. B. and M.

MODOC COUNTY—Spaulding Dam No. 1. No. 154. R. D. Craig, Malin, Oregon, lessee; earth and rock dam, 5 feet above streambed, situated on unnamed drainage tributary to Tule Lake in Sec. 2, T. 42 N., R. 7 E., M. D. B. and M.

PLACER COUNTY—Alta Forebay Dam No. 97-10. Pacific Gas and Electric Company, San Francisco, owner; earth fill dam, 9 feet above streambed with a storage capacity of 15,122 acre-feet, situated on no stream in SW¼ Sec. 20, T. 16 N., R. 11 E., M. D. B. and M.

TUOLUMNE COUNTY—Lake Strawberry Dam No. 97-74. Pacific Gas and Electric Company, San Francisco, owner; rock fill dam, 132 feet above streambed with a storage capacity of 17,900 acre-feet, situated on South Fork Stanislaus River tributary to Stanislaus River in SW¼ Sec. 15, T. 4 N., R. 18 E., M. D. B. and M.

TUOLUMNE COUNTY—Relief Dam No. 97-80. Pacific Gas and Electric Company, San Francisco, owner; rock fill dam, 130 feet above streambed with a storage capacity of 15,122 acre-feet, situated on Relief Creek tributary to Middle Fork Stanislaus River in SW¼ Sec. 13, T. 5 N., R. 20 E., M. D. B. and M.

MODOC COUNTY—Duke Reservoir No. 163. Royal E. Williams, Likely, owner; earth dam, 10 feet above streambed with a storage capacity of 20 acre-feet, situated on a drainage tributary to Pit River in SE¼ Sec. 9, T. 39 N., R. 13 E., M. D. B. and M.

You owe so much to yourself that you can not afford to owe anyone else.

Auto Registrations Increase; \$8,823,591 Paid in Six Months

SUSTAINED increase in automobile registrations is noted in the monthly official report of the Division of Motor Vehicles. A gain is recorded of 39,563 registrations for the first six months of this year over those of 1930.

The following table reflects the gain or loss in registration by classifications:

	As of 6-30-30	As of 6-30-31	
Automobiles	1,830,096	1,855,236	25,140 gain
Pneumatic trucks	73,853	85,675	11,822 gain
Solid trucks	14,539	10,514	4,025 loss
Motorcycles	8,182	7,949	233 loss
Pneumatic trailers	32,521	39,054	6,533 gain
Solid trailers	8,821	7,737	1,084 loss
Automobiles—Exempt	30,903	32,612	1,109 gain
Motorcycles—Exempt	779	958	179 gain
Trailers—Exempt	3,861	3,923	122 gain
Transfers	263,081	269,490	6,409 gain

In the first six months of 1931, the Division collected \$8,823,591 from paid registrations, thus reflecting an increase of \$13,370 over the same period in 1930.

Apportionment of motor vehicle fees to the various counties and Division of Highways was made during the month. The sum divided was \$6,176,513. Of this amount, \$3,088,256 went to the Division of Highways and the other half was allotted each county in proportion to their registration count. Los Angeles received the largest share, with San Francisco second, Alameda third and San Diego fourth.

TO A HORSE

O Horse, you are a wondrous thing.
No horns to honk, no bells to ring;
No license buying every year,
With plates to screw on front and rear.
No spark to miss, no gears to strip;
You start yourself, no clutch to slip;
No gas bills mounting every day
To steal the joy of life away.
Your inner tubes are all OK
And, thank the Lord, they stay that way.
Your spark plugs never miss or fuss;
Your motor never makes us cuss.
Your frame is good for many a mile;
Your body never changes style,
Your wants are few and easily met—
You've something on the auto yet.

—Royal Arcanum Bulletin.

QUITE FUR

"Oh, constable, I feel so funny."

"What's the matter, madam? Have you vertigo?"

"Oh, yes, constable, about two miles."—*National Motorist*.

HERE'S HOW AUTO FEES WERE PAID TO COUNTIES

Following is a tabulation showing apportionment of motor vehicle fees to the counties for the period January 1, 1931, to June 30, 1931:

County	Total fee-paid registration	Counties' share of apportionment
Alameda	142,132	\$218,795 63
Alpine	93	143 16
Amador	2,729	4,200 98
Butte	14,561	22,414 96
Calaveras	2,165	3,332 77
Colusa	4,715	7,258 18
Contra Costa	25,267	38,895 60

L. H. Gibson Tells of Work Activity In District Five

(Continued from Page 22, Col. 1)

story asphaltic concrete pavement. The contractor is The Hanrahan Company. Between Arroyo Grande and Pismo, the earth shoulders are being treated with fuel oil by the road mix method. W. A. Dontanville is the contractor.

On the Roosevelt Highway between San Simcon and Piedras Blancas Lighthouse, the surface of the road has been treated with fuel oil as a dust palliative. W. A. Dontanville was the contractor.

On the Coast Highway between the northerly limits of Arroyo Grande and Berros Creek plans are complete for the reconstruction of the highway with a 36-foot roadbed and a 20-foot reinforced concrete Portland cement concrete pavement. This project will substitute for a right-angle turn, a curve of 1800-foot radius, in the town of Arroyo Grande, and correct alignment at other places. This will also involve the construction of a new bridge across Arroyo Grande Creek.

SANTA BARBARA COUNTY: On the Coast Highway between Los Alamos and Wignmore, the road is being reconstructed with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. The work is about 40 per cent complete. Basich Brothers Construction Company is the contractor.

Between Gaviota and one mile north of Las Cruces the road is being reconstructed with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. This work includes construction through Gaviota Canyon. Gist and Bell are the contractors. The work is nearing completion. Within the limits of this project there is being constructed a new reinforced concrete bridge across Gaviota Creek in the narrow portion of the canyon. Paul M. White is the contractor on the bridge under the supervision of the Bridge Department.

On the Cuyama lateral, between the second crossing of the Cuyama River and the Kern County line, a distance of 38 miles, the road is being surfaced with crush run base and oil rock surface 18 feet and 20 feet in width. The project is about 80 per cent complete. The Lang Transportation Company is the contractor. A portion of this project is located in San Luis Obispo County.

On the Cuyama lateral, between Buckhorn Creek and the second crossing of the Cuyama River, an armor coat is being applied to the road surface. J. F. Knapp is the contractor.

On the Coast Highway, between Gaviota Canyon and Tecolote Creek, bids have been received for the construction of oiled rock borders on each side of the pavement.

Visitor: "Who's that fellow out there who's swearing and blackguarding the workmen?"

Foreman: "That guy! He's an engineer."

Spelled DAM: Says she: "Isn't it wonderful how a single policeman can dam the flow of traffic?"

Says He: "Yes, but you should hear some of the motorists."

More Scotch: "Is there any truth in the report that Angus MacTavish bought the corner filling station?" "Well, I don't know for sure, but the 'Tree air' sign has been taken down."

District Six Reports Rapid Progress in Road Construction

(Continued from Page 22, Col. 2)

the other at Tipton Crossing at a point approximately eight miles south. It will also eliminate two right-angle turns at both crossings.

Construction of oil-treated rock borders on Route 10, about 12 miles east of Hanford, is being done by State forces and covers approximately three and one-half miles of widening the existing 15-foot pavement to 20 feet.

FRESNO COUNTY: Work on the Kings River road is proceeding in accordance with the schedule of progress. Approximately ten miles of road are completed or under construction. About five miles of new road is open to public traffic. The opening of three miles of this road recently for public traffic eliminates about four miles of old road which was very narrow and crooked.

Pacific Tank Lines, contractor for oiling work, are completing dust oiling from the west boundary to two miles east of Parkfield Junction.

MADERA COUNTY: No major road work in progress, but a contract is under way for replacing a concrete bridge crossing Bradley Slough about one mile south of Chowchilla. The old structure has been removed and the new one is in process of erection.

MERCED COUNTY: Major work in progress at this time consists of construction of an overpass separation at the Santa Fe crossing about one mile east of Merced on the Yosemite Route No. 18. This work is being performed by Contractor Mettowan. Oil-treated detours have been constructed and are in use, and the contractor has done considerable grading, besides driving a number of steel piles.

On Route No. 32 at the foot of Pacheco Pass road to the Gustine road, maintenance forces are widening shoulders to a minimum width of six feet, and constructing gravel shoulders preparatory to shoulder oiling contract, which has been awarded to Stewart & Nuss, for approximately 38 miles, from the east boundary of Merced County to the foot of Pacheco Pass on Route No. 32.

MARIPOSA COUNTY: A. Teichert and Son expect to finish their contract of sealing oil-treated crushed rock surfacing with 90-95 road oil and screenings on or about July 22. This work is on Yosemite Lateral Route No. 18, east of Mariposa. Maintenance forces have completed dust oiling from Orange Hill School to Mariposa and are now engaged in applying oil treatment to the surfacing between Mariposa and Lorene's Station on the Brieburg grade.

Bids were opened on July 15, 1931, for construction of a graded roadway from Orange Hill School to Pain Flat. This is the portion of the Yosemite Highway Route No. 18 in Mariposa County, the easterly terminus being about seven miles west of Mariposa. It lies on a new location which departs considerably from the existing road and will be built to a much higher standard.

Toll charges on the bridge across the Columbia River between Pasco and Kennewick, Washington, have been removed, it is stated, in a report received by the touring bureau of the Automobile Club of Southern California.

Steps taken by the Division of Water Resources to carry out its conservation plan, together with other activities of this department, headed by Edward Hyatt, State Engineer, are recounted in the official report for July. In other columns will be found details of the division's activities in connection with the recent visit of the Congressional Committee investigating the State's water problem. Here follows flood control and reclamation activities, tabulation of dam applications and irrigation news:

SACRAMENTO VALLEY

Early in the present year, through the medium of data secured from California cooperative snow surveys and available precipitation data of the U. S. Weather Bureau, State, districts and public utilities, the State Engineer's office prepared an estimate of the water situation, predicting that we could expect throughout the 1931 season to experience one of the driest years of record.

To prepare for all conservation of water possible, various departments of State and the water users themselves took cognizance of the situation and have been and are actively taking steps to meet the situation. The State Division of Water Resources and the Permanent Committee of the Sacramento-San Joaquin River Problems Conference representative of the water users throughout the Sacramento-San Joaquin territory are cooperating to effect conservation measures and provide for administration of the streams by a water supervisor. Letters have been sent in the name of the committee to all water users in the Sacramento-San Joaquin territory, advising them of the situation and recommending the most effective conservation measures possible.

The Rice Growers' Association of California has also forwarded a copy of the committee's letter with a supplementary recommendation to its entire membership. The Division of Water Resources likewise addressed a letter to its water right permittees calling attention to the possible necessity of regulating or suspending diversions in accordance with the priorities of the water rights. From the standpoint of the U. S. War Department, and its authority to maintain navigation, the department's representatives have also warned the water users that only with the utmost effort on their part to prevent waste and conserve water may the department be constrained to withhold drastic action in stopping irrigation diversions in order to maintain navigation.

Within the last few days the flow of the Sacra-

mento River at Sacramento has dropped to 200 second-feet or less, as shown by tidal cycle measurements, and corresponding to this record of low flow to the delta the salinity stations there have shown a very marked increase.

The intensive conservation campaign as planned early in the season among the water users above Sacramento and through the cooperation of the various conservation officers in the larger districts has continued, controllable waste has been practically reduced to nothing. There is a flow in the Colusa trough of about 200 second-feet made up mostly from seepage return and an effort is being made to reduce this by checking up the drains and installing booster pumps to lift the water from the drains to the canals, thereby permitting corresponding reductions in river diversions.

Although waste has been reduced to a minimum, the actual crop requirements appear to equal the entire in flow as well as return flow, so that the net flow at Sacramento is practically nothing. Under these conditions a present increase in the flow to the delta can apparently be accomplished only through an actual reduction in the upstream irrigated area.

The Feather River ceased to flow at Nicolaus, and negotiations entered into between the State Engineer, the lower water users and the directors of the Sutter-Butte Canal Company and Western Canal Company resulted in a voluntary agreement that these companies would limit their upstream diversion of water and thus release water for irrigation of the parched orchard lands along the lower river.

The summary of the results of this conference is that the Sutter-Butte and Western Canal Companies cut down their own use of water for a few days and diverters on the Feather River below Marysville cooperated with the State Engineer in the appointment of a water master to supervise and restrict diversions of water from the stream until the crisis passed.

The Pacific Gas and Electric Company agreed to send as much water downstream from Lake Almanor as it can use in generating electricity, thus assuring a consistent flow for the next month at least.

The water situation in Yolo County is also under discussion between the State Engineer and Yolo County officials. It may be that the county will enter upon an intensive investigation of the water resources of the county and a plan for their maximum economic utilization.

SANTA CLARA INVESTIGATION

Routine field work has been continued throughout the month on this investigation. When this investigation started in 1929, it was to be continued for three years. At the last session of the Legislature the act creating Santa Clara Conservation District was amended to allow it to issue bonds. They have now retained the

(Continued on Page 36)

Seventy-seventh State Fair Promises To be Most Colorful in its History

THE Seventy-seventh Annual California State Fair, first under the administration of Governor James Rolph, Jr., will be the most colorful in the history of California's exposition. It will be held in Sacramento, September 5 to 12.

One of the first acts of Governor Rolph on taking office last January was to program 1931 "Fiesta Year" in California. The State fair will be the crowning event of Fiesta Year.

As a result of the interest shown by the State administration in the State Fair, many improvements have been made at the Fair Grounds. The State is completing a \$200,000 building program which will give the fair two new buildings—a Sheep and Swine Building and a Poultry Building, which will be ready for the opening.

CARE OF PUBLIC

As the official governmental head of the State Fair, Rolland A. Vandegrift, Director of the State Department of Finance, has given attention to a number of improvements for the comfort and convenience of exhibitors and the public.

The State Fair this year will be colorful because of the many special attractions and features. The horse racing program is declared by racing fans to be the best in the fair's history.

The fair will display before the eyes of hundreds of thousands of visitors California's manifold products and almost limitless resources. Counties from the Mexican border to the Oregon line will display horticultural, agricultural and manufactured products as well as featuring recreational advantages.

PLAN NEW EXHIBIT

Charles W. Paine, secretary-manager of the fair, announces that exhibitors in the nineteen departments and entrants in the various contests will share in premiums and purses totaling \$125,000.

The Department of Public Works is arranging an exhibit, practically new over any heretofore shown, since nearly all its previous exhibits were destroyed by the recent fire at the fair grounds.

The entertainment program includes a daily delayed parachute drop by E. H. "Speed" Manning of Los Angeles, who will attempt to break his own world's record of falling 15,656 feet before opening his parachute.

Another feature attraction will be the personal appearance, Sunday afternoon, September 6th, of Lee S. Roberts, famous song writer, and his radio artists of the "Sperry Smiles" program. Roberts will present Governor Rolph with the original manuscript of his song "Smiles."

INCREASED EXHIBITS

The night horse show will bring increased competition, with \$20,000 in prizes to be distributed. Fifth place has been added to each class, which will increase the opportunity for the smaller stables to participate in the awards.

Under the leadership of the Tractor and Implement Club, the farm machinery show will surpass any event of this kind ever held in the State. Applications for space show an increase in the exhibits. A special entertainment program will be carried out daily in the Farm Machinery Building.

The California State Fair now has one of the finest exposition plants in the Nation. The new permanent buildings have replaced wooden structures in virtually all departments, giving the most modern exhibit facilities. Road improvements are being carried out and the parking space by which automobiles may be driven and parked inside the grounds, is being increased.

CUBA'S NEW HIGHWAY

The new Central Highway just completed in Cuba is one of the largest and most important works of its class on the American continent, stated M. A. Corcades, chief engineer, department of roads and bridges, Havana, Cuba, in a report to the American Road Builders' Association.

It has a length of 1139.5 kilometers. From the city of Pinar del Rio, in the westernmost province, to the city of Santiago de Cuba, in the easternmost province, it passes through 60 cities and towns and through vast and fertile lands, where natural dirt roads were the only means of communication.

Work began in May, 1927, was finished in February, 1931, and the highway was formally opened March 15, 1931.

FAIR ENOUGH! Knowing which section of this picture will be studied first, let it be known that the one on the left is Miss Naomi Sterling. Her aide is Miss Peggy Peterson. The scenery?—An airplane picture of the State Fair Grounds. Note the new Live Stock Building at the upper right-hand corner and the newly completed poultry structure at the bottom on the left. The Department of Public Works is planning a bigger and better exhibit this year.

Vol. 9 AUGUST, 1931 No. 8

CRAZY DRIVING

Figures on automobile accidents, fatal and otherwise, are not encouraging.

There never will be any better reason for more accidents or less, than more carelessness or greater care. When accidents increase, care is decreasing; and only greater care will produce fewer accidents.

When you see some of the driving that is visible at almost any hour of any day, there is no wonder that there are accidents. The only wonder is that there are not more.

Too many are speeding through city streets. A car at twenty-five or thirty miles an hour may be easy to control at intersections, while a car going just a little faster is beyond control when something happens suddenly.

Too many are dashing across street intersections with the drivers as stupidly heedless of contingencies as though theirs were the only cars in the world.

And some of the worst offenders are the young drivers of light delivery trucks. Drivers of big trucks for big houses go to safety school and are out for safety records. They do very well. Drivers of many smaller trucks for smaller houses obviously go to no safety school, and seem to be out for killing records.

What's the hurry?—*Texas Highways.*

* * *

Wanton wasting of water, anywhere in California, should bring reprehension of the public upon the person or corporation guilty of this waste. This State needs every gallon of available water. Shortage of precipitation through a period of several years has brought upon the State an acute water situation. There is no excuse for becoming unduly alarmed. But there is every reason for all the people to be extremely careful not to waste water.—*Long Beach Press-Telegram.*

Procession of Cars From Other States Aid to Prosperity

(From Arroyo Grande Herald-Recorder)

FEW can doubt the value of California scenery and good roads if they will spend even a short time watching the cars passing through Arroyo Grande almost any day in the week from other states of the Union.

Sunday the editor checked three cars from New York, two from British Columbia, two from Maryland, three from Texas, one from Arizona, one from Colorado, four from Oregon, four from Washington, two from Illinois, one from Minnesota and two from Nebraska, while parked for one hour on the State highway at the west city limits near the cemetery.

That should represent in a fairly accurate manner the traffic that is now passing into and through the State, for there was no reason why there should have been more out-of-state cars on a Sunday on that particular stretch of highway than on any other day on any other highway, for tourists select no particular day of the week for making their journeys.

When the number of out-of-state cars passing over this highway in this short time is considered, how many must there have been upon the thousands of miles of paved highway throughout California on that day?

These cars mean business for the communities they pass through.

* * *

Spending of \$29,000,000 this year by the State Department of Public Works is putting money in circulation. As long as the State is disbursing funds for worthy construction there can be no complaint from the taxpayers. Now is the time to build, and build wisely for the future.—*Sausalito News.*

WORLD AUTO CENSUS

World registration of motor vehicles totals 35,805,632, of which 26,697,398 were registered in the United States, according to a world census report just received by the California State Automobile Association. The census reveals a per capita registration of one motor vehicle for every 54 persons in the world, with the United States credited with one registration for every 4.59 persons against one for every 200 persons resident in all foreign countries. Another important fact is that despite the adverse economic conditions prevailing throughout the world during 1930, registration of motor vehicles increased by 678,234 over 1929.

Courtesy Monopoly Broken

Flock of Engineers Steps Into Print to Demand Word of Praise for Road Men

THE BOYS of the Highway Patrol better sit up and take notice. Their field is being invaded.

We are accustomed to turning to the Highway Courtesy Letters page for deeds of gallantry. We thought the motoreyele lads had a virtual monopoly on that kind of reading.

And now comes a flock of district engineers and upsets the apple cart.

"HEAVY DUTY" DONE

Mr. F. G. Somner of District 9 sends in a letter from Miss L. L. Norris, director of the Touring Department of none other than the National Automobile Club, itself a service organization. Miss Norris has most kind words to say of one of the brave lads of the Highway Division. "Bill" Finch, heavy duty equipment operator in Somner's district. The letter explains the "heavy duty" done by Bill. Here it is:

Dear Mr. Somner:

I wish to express to you my sincere appreciation for service and assistance rendered to me last Friday by one of your employees, Mr. Finch.

While driving over Tioga Pass, about half way to the summit, experienced motor difficulties, and my knowledge of an automobile being limited to operating it and not including its inner workings, was somewhat at a disadvantage. After sitting there about 10 minutes, Mr. Finch stopped and asked if he could be of assistance. After working very diligently, he located the trouble in the pump and soon remedied it, enabling us to continue on our way.

It was not only the fact that he rendered invaluable assistance, but the very courteous way in which it was done, that meant so much, and you are to be complimented on having such a courteous and capable employee.

AID FOR DISTRESSED

Then Mr. R. E. Pierce of District 10 gets a cheer from Dr. I. I. Lasdan of San Francisco, whose letter says:

Please permit me to express my sincere thanks and appreciation for the valuable service you have rendered in the patrol of Ebbetts Pass during the July 4th holiday.

I specially want to commend one of your men, Mr. L. O. Petersen, covering that section, for the aid he has rendered in our distress.

My automobile broke down at the summit. Mr. Petersen happened to come along about 4 p.m. For

Highway Patrol's Thunder Is Stolen When "Heavy Duty Bill" Finch Does Gallant Deed

three hours he worked and made every effort to start it; we finally had to abandon it by the wayside and were taken to Markleeville in his truck.

A warm expression of thanks for courtesy extended has been received by Mr. L. H. Gibson, district engineer at San Luis Obispo, from A. Marks of Taft, who writes:

Just recently I was the recipient of a courtesy from one of the employees of the Highway Division working out of your district. I have occasion to make the trip from here to Santa Cruz Mountains, where my home is located, many times during the year. A few weeks ago I was coming to Taft from Paso Robles and had a flat tire. I was too ill to change it myself. One of the highway trucks came along and upon my request Mr. J. R. Berry, located at Shandon, had the tire changed for me.

It is not only an object lesson that one must not lose faith in humanity, but that "He profits most who serves best," and I assure you that this courtesy on the part of one of your employees is sufficient evidence that he is the right man in the place that he occupies.

GOOD SAMARITAN

Four gentlemen, Dr. Jack Frost and Messrs. R. A. Crosby, Bob Johnston and Francis McElloeh, all of Los Angeles, report a Good Samaritan deed as follows:

Your office undoubtedly receives numerous complaints. For a change, here's one that is commendation and not a complaint.

Our party of four were fishing in Saddlebags Lake near the top of Tioga Pass. Fishing was good and we stayed until the last dog was hung. About half way down the Tioga grade near what is known locally as the "Big Blue Slide," we found the road closed and were informed by your general foreman, Mr. Paul Peak, that it would be impossible to cross before noon the next day.

One of the party was ill and we were extremely anxious to get to a lower elevation. Mr. Peak's car was trapped at the lower end of the slide, while we were above. He volunteered to use his own car, walk the party in question over the slide and haul them to Mono Lake. He furthermore extended to us the hospitality of the construction camp, such as it was.

We accepted his hospitality, were put up for the night, and both Mr. and Mrs. Peak bent every effort to make us comfortable, even to preparing breakfast the following morning.

Almost anyone may be genial and good natured when everything goes well, but when a man has put in a full day's work, several hours overtime, and is faced with the prospect of an all-night task and can still be as thoroughly polite and considerate as Mr. Peak, he certainly deserves special commendation.

Water Problems of Various Counties

(Continued from Page 31)

services of an engineer, and he is working on a plan for development of the valley, and it may be that the State's investigation will not be continued during the coming season.

NAPA VALLEY INVESTIGATION

Readings of water levels in various wells and intermittent stream flow measurements have been made on the Napa River, Rector and Conn creeks. A meeting was had with the Board of Supervisors for the purpose of arriving at some agreement with respect to future cooperation. The Board of Supervisors of Napa County feel that the investigation should be continued until there is a wet year and propose to appropriate funds for the coming biennium under the agreement between the State and the county which began in 1929. It was originally proposed to continue the investigation for a three-year period which the coming year will terminate. It is not known at the present time how intensively the investigation will be carried on during this fiscal year.

SOUTH COASTAL BASIN INVESTIGATION

A report was completed on the work necessary for determining the possibility of salt water intrusion from the ocean into the pumping area of Orange County. The cost of the most necessary part of such investigation was estimated at \$19,000 and the matter was laid before the Orange County Cooperative Committee for presentation to the Board of Supervisors of Orange County as a basis for a request to appropriate the sum of money necessary to carry on the work. This investigation was made at the request of the committee. Additional special work was done on the matter of salt water intrusion along the entire coast line of South Coastal Basin.

VENTURA COUNTY INVESTIGATION

The Board of Supervisors of Ventura County made the unexpended balance as of July 1 of the money appropriated by them last year for the investigation, available to the State to match a similar amount provided for in the budget, which requires that cooperative funds must be deposited in the State treasury before State funds can be made available. The investigation is on a fifty-fifty financial basis, the appropriation by the State for the biennial period being \$25,000, and the county proposing to appropriate a like amount.

Drilling with a Calyx drill was started at Devil Canyon site on Piru River. The reservoir sites on Piru River have been a matter of special interest to the people of Ventura County because the new highway location of the ridge route will pass through one of three possible sites. The State, with the cooperative funds provided, will investigate all three sites.

SANTA BARBARA

The Board of Supervisors of Santa Barbara County has appropriated \$15,000 to match a similar amount of State funds provided in the budget for the investigation of the water resources of Santa Barbara County during the present fiscal year. A total amount of \$25,000 has been appropriated in the budget for the investigation of the water resources of Santa Barbara County during the biennium, the county of Santa Barbara proposing to make available a similar amount. These funds will be expended in making the investigation and laying out a coordinated plan for the development and maximum utilization of the water resources of Santa Barbara County.

MONTEREY AND SAN LUIS OBISPO COUNTIES

The Board of Supervisors of Monterey County has appropriated \$2,500 and the Board of Supervisors of San Luis Obispo County has appropriated \$1,000 for the investigation of the water resources of these two counties, with the exception of that portion of San Luis Obispo County south of the headwaters of Salinas River. The State has appropriated in the biennial budget \$7,500, which will become available when matched by funds from the counties referred to above.

WATER RESOURCES REPORTS

Satisfactory progress has been made in completing the reports on the water resources investigation covering the State water plan for the coordination, development, conservation and utilization of the water resources of the State authorized under the provisions of Chapter 832 of the Statutes of 1929. Two additional bulletins have been completed during the present month and are now available for distribution. They are:

Bulletin 25—"Report to the Legislature of 1931 on State Water Plan."

Bulletin 36—"Cost of Irrigation Water in California."

FLOOD CONTROL AND RECLAMATION

Maintenance of Sacramento and San Joaquin Drainage District—Small crews have been engaged in routine maintenance work consisting of cleaning canals, cutting noxious weeds and making minor repairs to structures. Irrigation of the willows planted for levee protection on the east levee of the Sutter By-pass has continued with the operation of four small pumps.

Sacramento Flood Control Project—On June 27th construction started on the weir in the Wadsworth

Move Made to Extend Snow Surveys

(Continued from Preceding Page)

Canal which is being built for the Reclamation Board. At this time all pile driving has been completed and flume and coffer dams have been constructed to take care for the flow of water in the canal. The site has been unwatered and excavation and form work for concrete will be commenced. At this date the work is approximately 50 per cent complete. Investigations were made and reports rendered on several applications before the Reclamation Board.

DAMS

To date 769 applications for approval of existing dams have been filed; 72 for approval of plans and specifications for construction or enlargement; and 163 for approval of plans for repairs or alterations.

APPLICATIONS FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR CONSTRUCTION OF DAMS

Dam	Owner	County
Wadsworth	Sacramento-San Joaquin Recl. Dist.	Sutter
Monte Vista No. 1	Sefton Investment Co.	San Diego

APPLICATIONS FOR APPROVAL OF PLANS FOR REPAIRS OR ALTERATIONS

Walker Lake	Archibald Farrington	Mono

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

During the past month the regular field work has continued, comprising measurements of all diversions, stream flow, and return water throughout the Sacramento-San Joaquin territory.

The salinity sampling in the Sacramento-San Joaquin delta has been extended so that at present samples are being received from fifty-nine stations. The accompanying tables show the comparison between 1931 and 1924 stream flow and salinity data.

Discharge in Sec.-Ft.

Station	1931	1924
Sacramento River at Red Bluff	7/14 2,700	7/14 2,980
Sacramento River at Butte City	7/14 1,130	7/14 1,630

Discharge in Sec.-Ft.

Station	1931	1924
Sacramento River at Colusa	7/17 900	7/17 1,590
Sacramento River at Knights Landing	7/15 330	7/15 1,130
Sacramento River at Verona	7/20 300	7/20 ----
Sacramento River at Sacramento	7/20 50	7/20 919
Feather River at Nicolaus	7/20 0	7/20 32
American River at H St. Bridge	7/20 90	7/20 10
San Joaquin River near Vernalis	7/20 220	7/20 408
Combined flow of Sacramento River at Sacramento and San Joaquin River near Vernalis	7/20 250	7/20 1,330

Salinity Tests Sacramento-San Joaquin Delta

	Salinity in parts of chlorine per 100,000	7/14/31	7/14/24
Bullhead Point	1,500	7/14/31	7/14/24
O and A Ferry	980*	905	
Collinsville	810	796	
Emmattson	290*	464	
Three Mile Slough Bridge	430		
Rio Vista Bridge	315	302

Antioch	710	614	
Jersey	430	296	
Webb Pump	245	165	
Central Landing	60	56	

* July 10th.

Within the last few days, the flow of the Sacramento River at Sacramento has dropped to 200 second-foot or less as shown by tidal cycle measurements, and corresponding to this record low flow to the delta, the salinity at stations there has shown a very marked increase. The additional salinity stations have been added to record completely the encroachment of the salt, and special attention will be given to determination of the upper limits of the encroachment. Daily sampling has begun at Freeport and special traverses are being made from Paintersville Bridge to Sacramento to show the present rate of encroachment.

CALIFORNIA COOPERATIVE SNOW SURVEYS

Negotiations have been made with some of the cooperating agencies for certain extensions in the surveys involving the location of additional snow courses, shelter cabins, etc.

A conference was held at Ash Mountain, Sequoia National Park, between representatives of the Park Service, Tulare Lake Water Storage District, Kings River Association and the State, relative to future work in south and middle Kings River basins.

Arrangements were completed for the construction of a much needed shelter cabin on the route of the Blue Lakes survey.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE WATER

Nineteen applications to appropriate water were received during the month of June, nine were with-

Irrigation and Water Storage News

(Continued from Preceding Page)

drawn or canceled and nineteen were approved. Four permits were revoked and thirty-five passed to license.

Among the applications received there was one for agricultural purposes by Stevinson Water District, 315 Chancery Building, San Francisco, to appropriate 175 cubic feet per second from McCoy Spillway, Arena Spillway, Livingston Drain, Bear Creek, Owens Creek, Duck Creek and Deadman Creek, tributary to San Joaquin River in Merced County, for the irrigation of 20,698 acres at an estimated cost of \$50,000.

There were two mining applications received for comparatively large amounts of water—one by D. R. Morrison and W. J. Cooley, c/o Daniel M. Hunsaker, Attorney, Rowan Building, Los Angeles, for 50 cubic feet per second from Elk Creek, tributary to Illinois River in Del Norte County, and the other by Magestic Mines Company of Weaverville for 100 cubic feet per second from Rush Creek, tributary to Trinity River in Trinity County, at an estimated cost of \$50,000.

Following are the more important applications approved:

One by Geo. F. Taylor of Downieville, allowing 50 cubic feet per second from Cherokee Creek, tributary to North Fork of Yuba River, for mining purposes.

One by Estelle I. Fraser of Coulterville, allowing 30 cubic feet per second from North fork of Merced River for power purposes.

Three by Florence Hogue of Los Angeles for a high-class subdivision in Monterey County: One allowing three cubic feet per second from Bixby Creek for power purposes at an estimated cost of \$9,000; one allowing one cubic foot per second from Bixby Creek, Cross Canyon, Daily Gulch and Bear Trap Canyon for domestic purposes at an estimated cost of \$22,000, and another allowing one cubic foot per second from Sierra Creek for domestic purposes at an estimated cost of \$8,000.

Inspections of projects under permit proceeded during the month in Butte, Glenn, Humboldt, Lake, Mendocino, Napa, Placer, Sacramento, Siskiyou, Sonoma, Sutter and Yolo counties.

ADJUDICATIONS

Los Alamos Creek (Santa Barbara County). Division's report as referee has been submitted to the Superior Court and a decree is expected in the near future.

Davis Creek (Modoc County). A tentative decree has been circulated among counsel and is now under consideration by the Superior Court.

Mill Creek (Modoc County). All but two of the water users have signed a stipulation for consent judgment.

Deep Creek (Modoc County). Distribution of the waters of Deep Creek was continued throughout the month in accordance with the trial schedule of allotments which was adopted at the conference held at Cedarville on March 16, 1931.

Franklin Creek (Modoc County). Administration of the schedule of allotments for trial distribution during the 1931 irrigation season was continued throughout the month.

New Pine Creek (Modoc County). Field work on the investigation of the water supply and use of water on New Pine Creek was continued throughout the month.

Eagle Creek (Modoc County). Field work on the Eagle Creek investigation was continued throughout the month. A plane table survey of the ditches and irrigated lands was commenced late in June and is now nearly completed.

IRRIGATION, WATER STORAGE DISTRICTS

Office conferences were had concerning the feasibility of organizing an irrigation district in the vicinity of Arbuckle, Calusa County, and a water conservation district near Yuba City in Yuba County.

Field visits for the purpose of obtaining information, conferences or for the investigation of matters relating to their interests were made to the following irrigation districts: South Montebello, Walnut, La Canada, Palmdale and Little Rock Creek irrigation districts, Los Angeles County; Mojave River irrigation district, San Bernardino County; Alpaugh irrigation district, Tulare County; James, Stinson, Riverdale, Laguna and Fresno irrigation districts, Fresno County; Turlock and Modesto irrigation districts, Stanislaus County; South San Joaquin and Woodbridge irrigation districts, San Joaquin County; Richvale irrigation district, Butte County; El Camino irrigation district, Tehama County; Anderson-Cottonwood irrigation district, Shasta County.

At a meeting of the California Bond Certification Commission held on June 29 at San Francisco the following matters were referred to the commission and favorable action taken thereon:

Nevada Irrigation District: Approval of order validating bonds of the district in the sum of \$50,000.

Approval of emergency expenditures by the district for development work in the district, \$50,000.

Approval of refunding bond issue of the district in the total amount of \$8,100,000.

Scott Valley Irrigation District: Approval of refunding bond issue of the district in the total amount of \$69,000.

FEDERAL COOPERATION

In connection with the Federal-State cooperation for irrigation investigations, an inspection was made in the early part of this period of the work being done in the Santa Ana, San Gabriel and Mojave River areas. The work in northern California in the Sacramento-San Joaquin delta has been reviewed and an agreement reached as to its conduct in the coming season.

In connection with the Federal-State cooperation for stream gaging, the program for the 1931-1932 season has been outlined. Certain phases, such as the quality of water investigation and the new stations to be established, are under discussion. A trip was made to arrange for the maintenance of a station on Kings River near Hume, and to select a site for a new station to be established on Kings River just above the North Fork. The Hume station has been maintained up to this time by the city of Los Angeles.

Constant Reminder to Public Brings Reduction in Forest Fire Hazards

WRITING in the June edition of the CALIFORNIA HIGHWAYS AND PUBLIC WORKS, Highway Commissioner Phil A. Stanton said:

"It has been a great thing for California, this highway system."

Now comes State Forester M. B. Pratt, executive secretary of the California Fire Emergency Committee, and says:

"It is a great thing for California, this highway system."

"Moreover," says the State Forester, "it always will be a great thing for California, this highway system, for other agencies seeking solutions to several grave problems confronting the State will turn to the State highway system as a vital factor in solving their problems just as we have found the highways to be an educational medium for reaching the people in fire prevention work."

PRESS AND HIGHWAYS

"On and along the State highway system and with the press we are getting our closest contact with the people in the educational fire prevention campaign. The press reaches the people with the written word; the highways, with the spoken word."

According to forest officials, the intensive educational work on fire prevention on and along the highways is already showing good results in fire records. **Very few fires are now being reported as originating from carelessness on the part of motorists using the highways.**

Forest officials go further and declare the motorists when they scatter from the highways to the recreational areas carry with them the training received on and along the highways against causing fires.

CAUTION REQUESTED

Motorists entering the State at the border stations, both motor vehicle checking and agricultural quarantine inspection, are greeted by highway patrolmen and quarantine inspectors who courteously request them to use every caution against causing fires. Fire prevention literature is also distributed.

This highway educational work is given through the courtesy of the Department of

Agriculture and the Division of Motor Vehicles, two coordinated State agencies working under the Governor's proclamation.

As the motorist travels the highways and stops at any automobile house for sales, service, repairs or storage, he will see a copy of the Governor's proclamation conspicuously posted and will be reminded of the State campaign against fire by the attendant in charge.

CONSTANT REMINDER

Traveling the highways between automobile houses, the motorist stopping for supply at the service stations will again be reminded of the fire hazard in California this summer and cautioned against causing fire.

The State Chamber of Commerce, cooperating with large oil companies, sponsored this educational work along the highways and distributes fire prevention literature.

On May 26, Superintendent E. Raymond Cato of the California Highway Patrol issued Headquarters General Order No. 113 to all patrol officials wherein patrolmen are instructed to

(1)—Exercise special vigilance in preventing fire.

(2)—Apprehend violators of section 384 of the Penal Code.

(3)—Warn motorists to use ash receptacles.

(4)—Assist forest officials in establishing lines of communication.

(5)—Direct traffic in fire emergencies.

(6)—Caution nonresidents at border checking stations against fire.

Other than transportation facilities, State Forester Pratt points out three ways in which the highways are serving the fire prevention campaign:

1. First line of defense in both fire prevention and fire suppression as outlined by Director Walter E. Garrison of the Department of Public Works.
2. Law enforcement measure as outlined by Superintendent E. Raymond Cato of the Division of Highway Patrol.
3. Established educational centers by coordinated State agencies and cooperative organizations against fire starting.

What the Motorist Should Know

MOTORISTS of California are urged by E. Raymond Cato, Superintendent of the California Highway Patrol, to acquaint themselves with important provisions of the law relative to lights which became effective with the new Motor Vehicle Act August 14.

Outstanding in importance are the new regulations designed to promote greater safety in the transportation of loads that extend beyond the bodies of trucks. Inspector Will R. Sharkey, Jr., head of the Bureau of Lights of the California Highway Patrol, offers the following as explanatory of some of the most important phases of the new law:

Loads projecting four feet or more beyond the rear of a vehicle must display two red lights instead of one that are visible 500 feet to the sides as well as the rear.

DISPLAY RED FLAG

In daytime a red flag or cloth not less than 16 inches square must be used. Officers will have particular instructions to enforce these provisions.

Only white or approved amber-colored lights are permitted on the front of vehicles except the red lights of authorized emergency vehicles and colored lights of clearance lamps and approved signal devices.

All lights displayed from the rear shall be red except the clearance lights and approved signal devices.

Side or parking lamps shall not be lighted at the same time head lamps are burning. Parking lights may not be more than three candlepower, must be of white light and must not glare or dazzle.

WHITE OR GREEN

Vehicles may display running board or "courtesy" lights not greater than three candlepower. White or green are the only colors permissible and they must not glare or be visible except from the side.

Vehicles having a load width in excess of 80 inches shall carry clearance lights on the left side of the vehicle beginning one-half hour after sundown and at all times when there is not clear visibility for 200 feet. They must be blue, located at the front and rear with a visibility of 500 feet, and showing to the side as well as to the front or rear.

CALIFORNIA'S already extremely liberal policies toward the out-of-state motorists have been broadened and expanded materially by the new Motor Vehicle Act.

The new law, in many instances, practically doubles the time the nonresident may drive in California without paying for a California license.

Under the old legislation drivers of out-of-state cars could operate for a period of six months in California without taking out a license if such six months period did not extend beyond the end of the calendar year.

The new law changes this, by permitting the out-of-state driver to operate his car as long as the plates he is displaying are good in the state from whence he came.

Thus a motorist arriving here in January from New York with plates issued to him in his home state for that year, will be able to operate in California until the following January without getting new plates. This privilege is extended to all who secure a visitor's permit within five days after arrival.

This amendment, it is believed, will encourage more tourists to come to California.

Under the old law, the owner of out-of-state vehicle used for commercial purposes was required to obtain a California license immediately. This is changed under the new law to permit him to take out short-term licenses for 30, 60 or 90 days by paying a proportionate part of the regular annual fee.

This change is of decided benefit to the owner of a truck or other commercial vehicle who enters the State for short periods.

Registration certificates issued to the owner of the out-of-state car must be of a distinctive color and different from the colors issued for California cars. These will be blue for certificates of registration and golden rod for certificates of ownership.

Business conditions apparently are having little or no effect on California's annual "tourist crop" this season.

Records of the division show visitors' permits had been issued for 39,353 out-of-state cars up to July 1st of this year. It is estimated each car brings an average of three persons to the State.

Highway Bids and Awards for July

CALAVERAS COUNTY—Between 1.4 miles north of Calaveritas Creek and 1.4 miles south of Calaveritas Creek to be surfaced with bituminous treated crushed gravel or stone. About 2.8 miles in length. Dist. X, Rt. 65, Sec. B, C. E. Reed, Tracy, \$13,177; Wm. J. Schmidt, Berkeley, \$12,437; A. Teichert & Son, Inc., Sacramento, \$13,708. Contract awarded to Geo. French, Jr., Stockton, \$11,241.

COLUSA COUNTY—Between 12 miles and 5 miles west of Williams. About 6.6 miles to be surfaced with gravel. Dist. III, Rt. 15, Secs. D & E, Fred W. Nighbert, Bakersfield, \$63,111; Hemstreet & Bell, Marysville, \$64,937; A. Teichert & Son, Inc., Sacramento, \$53,337; Fredrickson & Watson Construction Co. and Fredrickson Bros., Oakland, \$47,550; Granite Construction Co., Ltd., Watsonville, \$67,570; Force Construction Co., Piedmont, \$25,550; Kennedy Construction Co., Oakland, \$59,031; C. W. Wood, Stockton, \$44,950. Contract awarded to Capital Construction Co., Sacramento, \$39,997.

EL DORADO COUNTY—Between Riverton and Kyburz. About 8.6 miles to be surfaced with bituminous treated crushed gravel or stone (road mixed). Dist. III, Rt. 11, Sec. G, C. E. Reed, Tracy, \$39,093; Hemstreet & Bell, Marysville, \$41,474; Harold Smith, St. Helena, \$38,409; A. Teichert & Son, Inc., Sacramento, \$41,990; F. W. Nighbert, Bakersfield, \$46,785. Contract awarded to Tiffany, McReynolds & Tiffany, San Jose, \$33,792.

EL DORADO COUNTY—Between Mays and Nevada State line. About 5.2 miles to be surfaced with bituminous treated selected surfacing and between Bay View Rest and one mile north of Eagle Falls. About 1.8 miles existing surfacing to be bituminous treated. Dist. III, Rts. 11, 38, Secs. K & B, Hemstreet & Bell, Marysville, \$46,450; Basalt Rock Co., Inc., Napa, \$42,423; Fred W. Nighbert, Bakersfield, \$41,968. Contract awarded to Force Construction Co., Piedmont, \$37,157.

IMPERIAL COUNTY—Between Dixieland and Holtville and between El Centro and 4 miles west of Westmoreland. About 43.2 miles of oil treated crushed gravel or stone borders to be constructed. Dist. VIII, Rts. 12, 27, 29, Secs. C, F, G, H & A, Oswald Bros., Los Angeles, \$160,892; Steele Finley, Santa Ana, \$141,912; Griffith Co., Los Angeles, \$150,356; Southwest Paving Co., Los Angeles, \$158,652; George Herz & Co., San Bernardino, \$138,137; Fred W. Nighbert, Bakersfield, \$162,765. Contract awarded to R. E. Hazard Construction Co., San Diego, \$135,587.

KERN COUNTY—Between Democrat Springs and Weldon. About 30.6 miles to be treated with heavy fuel oil. Dist. VI, Rt. 57, Secs. H & I, Square Oil Co., Inc., Los Angeles, \$23,871; G. W. Ellis, Los Angeles, \$12,296; P. J. Akmadzich, Los Angeles, \$11,660; Valley Paving and Construction Co., Fresno, \$11,532; Crane Service Co., Los Angeles, \$11,236; Fred W. Nighbert, Bakersfield, \$13,144. Contract awarded to Oilfields Trucking Co., Ltd., Taft, \$9,879.

LASSEN COUNTY—Between Doyle and Long Valley Creek. About 7.5 miles to be oiled, about 4.3 miles to be surfaced with selected material. Dist. II, Rt. 29, Secs. D & E, C. A. Ladeveze, Los Angeles, \$20,455; Tibbitts Construction Co., San Francisco, \$24,401; Long Transportation Co., Los Angeles, \$520,404. Contract awarded to Morrison-Knudsen Co. and Macdonald & Kahn, San Francisco, \$18,657.

LOS ANGELES COUNTY—Between Piru Creek and Gorman. About 12.5 miles to be graded. Dist. VII, Rt. 4, Secs. I & J, George Pollock Co., Sacramento, \$557,614; Von der Hellen & Pierson, Castaic, \$506,434; Gibbons & Reed Company, Burbank, \$629,065; H. W. Rohl Company, Los Angeles, \$503,075; Granfield, Farrar & Carlin, San Francisco, \$515,658; Healy, Tibbitts Construction Co., San Francisco, \$241,401; Long Transportation Co., Los Angeles, \$520,404. Contract awarded to Morrison-Knudsen Co. and Macdonald & Kahn, San Francisco, \$459,772.

MADERA COUNTY—Steel stringer bridge across Fresno River at Madera. Consisting of 10-41'-0" and 2-40'-9" spans on steel pile bents. Dist. VI, Rt. 4, Sec. D, Peter McMueh, San Francisco, \$45,540; Fredrickson & Watson Construction Co. and Fredrickson Bros., Oakland, \$40,694; J. S. Metzger & Son, Los Angeles, \$37,816; Merritt-Chapman & Scott Corp., San Pedro, \$42,568; A. W. Kitchen, San Francisco, \$38,866;

Gist & Bell, Arcadia, \$44,465; M. B. McGowan, San Francisco, \$39,757. Contract awarded to Gutleben Bros., Oakland, \$37,790.

MARIN AND SONOMA COUNTIES—Repair bridge across Petaluma Creek at Green Point. Replace floor on bascule span and repairs. Repairs and additions to operating equipment. Dist. IV, Rt. 8, Sec. A, Butte Construction Co., San Francisco, \$20,789; Healy, Tibbitts Construction Co., San Francisco, \$21,347; The Duncanson Harrelson Co., San Francisco, \$24,726. Contract awarded to Gutleben Bros., Oakland, \$19,828.

MARIPOSA COUNTY—Between Orange Hill School and Pain Flat. About 7.4 miles to be graded. Dist. VI, Rt. 18, Secs. A, I & J, McCray Co., Los Angeles, \$103,043; Kennedy Construction Co., Oakland, \$118,285; L. J. Lynch Construction Co., Piedmont, \$100,173; Robinson-Roberts Co., Los Angeles, \$112,895; L. W. Hesse, Merced, \$142,768; Contoules Construction Co., San Francisco, \$99,101; Triangle Rock and Gravel Co., San Bernardino, \$94,703; Gist & Bell, Arcadia, \$125,280. Contract awarded to Fredrickson & Watson Construction Co. and Fredrickson Bros., Oakland, \$91,311.

MONTEREY COUNTY—Reinforced concrete bridge across Granite Creek, about 14 miles south of Monterey. One 12' open spandrel arch span, two girder spans, each 14'; two girder spans, each 20'; two girder spans, each 20'. Dist. V, Rt. 56, Sec. H, Gutleben Bros., Oakland, \$35,146; Bodenhamer Construction Co., Oakland, \$40,179; Rocca & Calelli, San Rafael, \$40,387; R. B. McKenzie, Red Bluff, \$42,000; M. B. McGowan, San Francisco, \$40,446; Fred J. Maurer & Son, Inc., Eureka, \$39,677; Oberg Bros., Los Angeles, \$35,970; Hanrahan Co., San Francisco, \$35,308. Contract awarded to George J. Ulrich Construction Co., Modesto, \$33,705.

NEVADA COUNTY—Between westerly boundary and Toll House. About 2.5 miles to be graded and surfaced with untreated crushed gravel or stone. Dist. III, Rt. 15, Sec. A, Fredrickson & Watson Construction Co. and Fredrickson Bros., Oakland, \$114,487; Force Construction Co., Piedmont, \$97,487; Frank C. Cuffe, San Rafael, \$63,027; Kennedy Construction Co., Oakland, \$95,987. Contract awarded to Hemstreet & Bell, Marysville, \$90,762.

PLACER COUNTY—Between Colfax and Gold Run. About 9.1 miles to be surfaced with bituminous treated crushed gravel or stone (plant mixed). Dist. II, Rt. 37, Secs. B & C, Healy, Tibbitts Construction Co., San Francisco, \$101,310; Clark & Henry Construction Co., San Francisco, \$109,740; Hemstreet & Bell, Marysville, \$117,234; W. H. Hauser, Oakland, \$115,308; A. Teichert & Son, Inc., Sacramento, \$127,033. Contract awarded to Southwest Paving Co., Los Angeles, \$90,675.

RIVERSIDE COUNTY—Widen existing multiple span arch bridge across Santa Ana River near Riverside. Two 95'-0" spans, two 102'-0" and one 106'-0" spans on concrete piers and abutments with pile foundations. Dist. VIII, Rt. 19, Sec. A, Bodenhamer Construction Co., Oakland, \$120,920; Merritt, Chapman & Scott, San Pedro, \$133,031; R. H. Travers, Los Angeles, \$150,928; Matich Bros., Elsinore, \$116,096; Robinson, Roberts Co., Los Angeles, \$125,603; Oberg Bros., Los Angeles, \$116,683; Owl Truck Co., Inc., Compton, \$132,474; L. J. Lynch Cannon Engineering Co., Los Angeles, \$128,649. Contract awarded to Byerts & Dunn, Los Angeles, \$105,865.

SAN BERNARDINO COUNTY—Between 6 miles west of Baker and Halloran Summit. About 23.7 miles to be graded and surfaced with oil treated crushed gravel or stone. Dist. VIII, Rt. 31, Secs. K, L, M, Peninsula Paving Co., San Francisco, \$419,488; Gibbons & Reed Co., Burbank, \$445,955; Lane Transportation Co., Los Angeles, \$444,007; Southwest Paving Co., Los Angeles, \$423,902; Healy, Tibbitts Construction Co., San Francisco, \$462,749; Chas. U. Heuser, Glendale, \$410,065; George Herz & Co., San Bernardino, \$390,840; New Mexico Construction Co., Inc., Albuquerque, New Mexico, \$462,029; Morrison-Knudsen Co., Idaho, \$395,086; McCray Co., Los Angeles, \$466,231; Ishell Construction Co., Carson City, Nevada, \$494,478. Contract awarded to H. W. Rohl Co., Los Angeles, \$363,869.

SAN BERNARDINO COUNTY—Between Anderson St. and city limits of Redlands. About 3.48 miles. Fuel oil to be applied to the shoulders. Dist. VIII, Rt. 26,

National Analysis Shows Latest Auto Laws Vary in U. S.

ANATION-WIDE analysis of motor vehicle laws, including those passed at recent sessions of legislatures in forty-four states, should prove of intense interest to autoists and pedestrians as well.

Speed laws vary all the way from fifty miles an hour in North Dakota to the twenty-five mile prima facie limit in Missouri. Fourteen states, namely, Connecticut, Florida, Indiana, Iowa, Kansas, Maine, Michigan, Montana, Nevada, Oregon, Tennessee, Vermont, Wisconsin and Wyoming, have discarded the fixed speed limit and stipulate a rate of speed that is "reasonable and proper" in view of traffic conditions or that permits stopping within "the clear distance ahead."

RIGHT OF WAY

Concerning right of way, in general, vehicles approaching from the right have priority. Idaho, however, gives the right of way to cars on state highways.

Overtaking on hills or curves where view is obstructed is specifically prohibited in thirty-three states and the District of Columbia. In many states, no other act of carelessness brings more prompt action from state highway police.

STOP AT TRACKS

Ten states, namely, Alabama, Arkansas, Delaware, Florida, Georgia, Illinois, Louisiana, Mississippi, Pennsylvania and Tennessee, require a full stop before crossing railroad tracks, while six additional states and the District of Columbia require a full stop without special stop signs are erected.

Parking on the main traveled portion of the highway is a violation of the state code in a majority of cases, while in states where such parking is not definitely prohibited, it is required that fifteen feet of roadway be left clear.

MUST DIM LIGHTS

Regarding lighting, the law of fifteen states, namely, Arizona, Arkansas, Colorado, Florida, Illinois, Indiana, Kansas, Michigan, Montana, Nebraska, New Hampshire, New Mexico, North Dakota, Ohio and Oregon, requires that lights be dimmed when approaching vehicles. Oregon requires dimming of lights on wet pavements. Spotlights are prohibited in Kansas, North Carolina, Oklahoma, Wisconsin and in the cities of Missouri.

ROADS RULE THE WORLD; PRIESTS OF PROSPERITY

Good highways have been subject matter of many eulogies in the form of speeches, articles, engineers' reports, and books, but the finest and most concise tribute noted recently is credited to an Englishman whose name is unknown. He says:

Roads rule the world—not kings, nor courts, nor constables; not ships, nor soldiers. The road is the only royal line in a democracy, the only legislature that never changes, the only court that never sleeps, the only army that never quits, the first aid to the redemption of any nation, the exodus from stagnation in any society, the call from savagery in any tribe, the high priest of prosperity after the order of Melchisedec, without beginning of days or end of life.

The road is umpire in every war, and when the map is made it simply pushes on its great campaign of help, hope, brotherhood, efficiency and peace.

HIGHWAY BIDS AND AWARDS

Continued from Page 41

Sec. A, Square Oil Co., Los Angeles, \$956; California Road Oil Service Co., Wilmington, \$1,034; Pacific Tank Lines, Inc., Los Angeles, \$1,050; Gilmore Oil Co., Ltd., Los Angeles, \$1,159; California Crane Service, Los Angeles, \$1,167. Contract awarded to The Petrol Corporation, Los Angeles, \$906.

SAN DIEGO COUNTY—Between La Mesa and La Posta Creek. About 33.9 miles. Furnish and apply heavy fuel oil on each side of existing pavement. Dist. VII, Rt. 12, Secs. A, B, C, D & F, Oilfields Trucking Co., Ltd., Taft, \$18,297; Gilmore Oil Co., Ltd., Los Angeles, \$16,964; Pacific Tank Lines, Inc., Los Angeles, \$13,149. Contract awarded to Square Oil Co., Inc., Los Angeles, \$10,297.

SAN JOAQUIN COUNTY—About 0.3 miles near Ripon to be graded and paved with Portland cement concrete. Dist. X, Rt. 4, Sec. A, Pacific Construction Co., Oakland, \$12,975. Contract awarded to N. M. Ball, Porterville, \$10,922.

SANTA CLARA COUNTY—Between Coyote Creek and San Jose. About 1.4 miles long to be graded and paved with Portland cement concrete and asphalt concrete. Dist. IV, Rt. 5, Sec. A, Valley Paving and Construction Co., Fresno, \$62,679; Transula Paving Co., San Francisco, \$71,637; A. J. Raisen, San Jose, \$79,041. Contract awarded to Union Paving Co., San Francisco, \$62,426.

SANTA CLARA COUNTY—Reinforce concrete girder bridge across Coyote Creek at San Jose. Consists of 6 spans 34' long on concrete pile bents and concrete abutments and wing walls on pile foundations. Dist. IV, Rt. 5, Sec. A, Bodenhamer Construction Co., Oakland, \$37,178; Oberg Bros., Los Angeles, \$36,291; Healy, Tibbitts Construction Co., San Francisco, \$39,284; M. B. McGowan, San Francisco, \$38,214; A. W. Kitchen, San Francisco, \$37,181; Neves & Harp, Santa Clara, \$32,977; Rocca & Calletti, San Rafael, \$41,798; Peter McHugh, San Francisco, \$37,795; John Doyle, San Jose, \$38,963. Contract awarded to A. J. Raisen, San Jose, \$31,271.

SHASTA COUNTY—Across Seamans Gulch, about 23 miles east of Redding. 22 19' spans on frame bents with concrete pedestals. Dist. II, Rt. 28, Sec. A, Rolla Arbuckle, Anderson, \$21,402; J. P. Brennan, Redding, \$21,955; R. B. McKenzie, Red Bluff, \$19,378; Fred J. Maurer & Son, Inc., Eureka, \$20,773; John Berlinger, Orland, \$16,531; J. W. Hoopes, Sacramento, \$20,646; R. B. Boyd, San Diego, \$21,505; M. A. Jenkins, Sacramento, \$20,596. Contract awarded to Rufus J. Bean, Clipper Mills, \$15,358.

STUTTER COUNTY—Near the County Hospital. 0.3 miles to be graded and paved with asphalt concrete. Dist. III, Rt. 3, Sec. A, Hemstreet & Bell, Marysville, \$7,584. Contract awarded to Jones & Kin, Hayward, \$6,247.

July Water Applications and Permits

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of July, 1931.

HUMBOLDT AND TRINITY COUNTIES—Permit 3740, Application 6560. Trinity Loop Mining Company, Berkeley, Calif., July 7, 1931, for 150 c.f.s. from ten creeks in Secs. 22, 28, 27 and 34, T. 7 N., R. 6 E., H. B. M., and Secs. 4 and 9, T. 6 N., R. 6 E., H. B. M., for mining and domestic purposes. Estimated cost \$150,000.

LOS ANGELES COUNTY—Permit 3741, Application 6907. U. S. Angeles National Forest, Los Angeles, Calif., July 13, 1931, for 1300 gallons per day from Camp Spring in Sec. 13, T. 7 N., R. 16 W., S. B. M., for domestic purposes. Estimated cost \$100.

LOS ANGELES COUNTY—Permit 3742, Application 6908. U. S. Angeles National Forest, Los Angeles, Calif., July 13, 1931, for 1300 gallons per day from Ranger Spring in Sec. 18, T. 7 N., R. 15 W., S. B. M., for domestic purposes. Estimated cost \$50.

SAN DIEGO COUNTY—Permit 3743, Application 6928. V. I. Edwards, San Diego, Calif., July 13, 1931, for 0.25 c.f.s. from Beaver Creek in Sec. 25, T. 16 S., R. 1 E., S. B. M., for irrigation and domestic purposes. Estimated cost \$1,000.

MODOC COUNTY—Permit 3744, Application 6858. Thomas A. Somma, Canby, Calif., July 14, 1931, for 13,000 gallons per day from an unnamed stream in Sec. 9, T. 41 N., R. 9 E., M. D. M., for irrigation and domestic purposes.

MONO COUNTY—Permit 3745, Application 6773. Alice F. Hunewill, Bridgeport, Calif., July 16, 1931, for 200 gallons per day from an unnamed stream in Sec. 5, T. 3 N., R. 24 E., M. D. M., for domestic purposes. Estimated cost \$150.

EL DORADO COUNTY—Permit 3746, Application 6801. Frank L. Montague et al., Antioch, Calif., July 16, 1931, for 600 gallons per day from an unnamed spring in Sec. 29, T. 11 N., R. 16 E., M. D. M., for domestic purposes. Estimated cost \$30.

MONTEREY COUNTY—Permit 3747, Application 6837. Henrietta T. Austin, Salinas, Calif., July 17, 1931, for .075 c.f.s. from an unnamed stream in Sec. 2, T. 17 S., R. 2 E., M. D. M., for irrigation and domestic use on four acres.

TRINITY COUNTY—Permit 3748, Application 6788. Charles H. Miller, Chico, Calif., July 17, 1931, for 1500 gallons per day from an unnamed spring in Sec. 19, T. 1 S., R. 8 E., H. B. M., for domestic purposes. Estimated cost \$600.

TUOLUMNE COUNTY—Permit 3749, Application 6799. Oakland-Piedmont Council, Boy Scouts, Oakland, Calif., July 17, 1931, for 15,000 gallons per day from Middle Fork of Tuolumne River in Sec. 15, T. 1 S., R. 19 E., M. D. M., for domestic purposes. Estimated cost \$1,500.

SAN JOAQUIN COUNTY—Permit 3750, Application 6612. F. J. Dietrich et al., Stockton, Calif., July 21, 1931, for 1.44 c.f.s. from Calaveras River in Sec. 5, T. 2 N., R. 9 E., M. D. M., for irrigation use on 115.46 acres.

SAN JOAQUIN COUNTY—Permit 3751, Application 6623. L. F. Grimsley et al., Stockton, Calif., July 21, 1931, for 2.56 c.f.s. from Calaveras River in Sec. 4, T. 2 N., R. 9 E., M. D. M., for irrigation use on 204.69 acres.

SAN JOAQUIN COUNTY—Permit 3752, Application 6624. Ray and T. C. H. McGurk, Stockton, Calif., July 21, 1931, for 2.94 c.f.s. from Calaveras River in Section 33, T. 3 N., R. 9 E., M. D. M., for irrigation use on 223 acres. Estimated cost \$3,000.

MONO COUNTY—Permit 3753, Application 6883. O. P. Dyar, Pasadena, Calif., July 21, 1931, for 150 gallons per day from an unnamed stream in Sec. 17, T. 4 S., R. 27 E., M. D. M., for domestic purposes. Estimated cost \$50.

EL DORADO COUNTY—Permit 3754, Application 6898. United States El Dorado National Forest, Placerville, Calif., July 30, 1931, for 800 gallons per day from an unnamed spring in Sec. 21, T. 13 N., R. 17 E., M. D. M., for domestic and fire protection purposes. Estimated cost \$100.

EL DORADO COUNTY—Permit 3755, Application 6899. United States El Dorado National Forest, Placerville, Calif., July 30, 1931, for 800 gallons per day from Doane Springs in Sec. 2, T. 11 N., R. 17 E., M. D. M., for domestic purposes. Estimated cost \$150.

EL DORADO COUNTY—Permit 3756, Application 6900. United States El Dorado National Forest, Placerville, Calif., July 30, 1931, for 3200 gallons per day from Bryant Creek in Sec. 15, T. 11 N., R. 17 E., M. D. M., for domestic and fire protection purposes. Estimated cost \$500.

EL DORADO COUNTY—Permit 3757, Application 6903. United States El Dorado National Forest, Placerville, Calif., July 30, 1931, for 3000 gallons per day from Granite Lake Creek in Sec. 28, T. 13 N., R. 17 E., M. D. M., for domestic and fire protection purposes. Estimated cost \$450.

HUMBOLDT COUNTY—Permit 3758, Application 6796. Division of Highways, Sacramento, Calif., July 30, 1931, for 970 gallons per day from an unnamed spring in Sec. 28, T. 2 S., R. 3 E., H. B. M., for recreational purposes. Estimated cost \$250.

PLUMAS COUNTY—Permit 3759, Application 6950. C. E. McGrath and R. L. Morgan, Greenville, Calif., July 31, 1931, for 2 c.f.s. from Echo Creek in Sec. 35, T. 26 N., R. 8 E., M. D. M., for mining and domestic purposes.

Applications for permits to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of July, 1931.

SAN DIEGO COUNTY—Application 6959. Hector Abdelnour, Spring Valley, Calif., for 900 gallons per day from an unnamed spring tributary to Cottonwood Creek watershed. To be diverted in Sec. 1, T. 17 S., R. 2 E., S. B. B. and M., for domestic purposes.

MONTEREY COUNTY—Application 6990. John C. Evans, San Simeon, Calif., for 0.02 c.f.s. from an unnamed spring tributary to Pacific Ocean. To be diverted in Sec. 5, T. 24 S., R. 5 E., M. D. B. and M., for domestic purposes.

MONTEREY COUNTY—Application 6991. John C. Evans, San Simeon, Calif., for 0.01 c.f.s. from an unnamed spring tributary to Pacific Ocean. To be diverted in Sec. 32, T. 23 S., R. 5 E., M. D. B. and M., for domestic purposes. Estimated cost \$200.

EL DORADO COUNTY—Application 6992. E. S. Wilson, A. V. Wilde, Don Atterbury, Mary McMahon, V. J. Sincok, A. M. Cleghorn, R. M. Belby and A. J. Deller, c/o E. S. Wilson, Box 512, Davis, Calif., for 1500 gallons per day from Rocky Canyon tributary to South Fork of American River. To be diverted in Sec. 18, T. 11 N., R. 17 E., M. D. B. and M., for domestic purposes.

LOS ANGELES COUNTY—Application 6993. James H. Robert, 1357 W. 38th Pl., Los Angeles, Calif., for 0.05 c.f.s. and 5 ac. ft. per annum from Dume Creek tributary to Pacific Ocean. To be diverted in Sec. 13, T. 1 S., R. 19 W., S. B. B. and M., for domestic purposes. Estimated cost \$1,500.

MONO COUNTY—Application 6994. R. W. Brown, Box 402, Oceanside, Calif., for 150 gallons per day from Rock Creek tributary to Owens River. To be diverted in Sec. 32, T. 4 S., R. 30 E., M. D. B. and M., for domestic purposes. Estimated cost \$100.

MONTEREY COUNTY—Application 6995. E. J. and Gertrude Bowles, 1127 Broad St., San Luis Obispo, Calif., for 200 ac. ft. per annum from an unnamed spring tributary to Pacific Ocean. To be diverted in Sec. 32, T. 23 S., R. 5 E., M. D. B. and M., for domestic purposes. Estimated cost \$150.

PLUMAS COUNTY—Application 6996. William Rutherford, R. F. Gilbride, E. A. Murray, Dewey Baker, C. E. Wotten, J. L. Britano, L. E. Barr and H. P. Frye, c/o William Rutherford, P. O. Box 288, Sacramento, Calif., for 0.1 c.f.s. and 9 ac. ft. per annum from an unnamed stream tributary to Willow Creek, thence Middle Fork of Feather River. To be diverted in Sec. 15, T. 23 N., R. 7 E., M. D. B. and M., for mining and domestic purposes.

EL DORADO COUNTY—Application 6997. W. H. Welch, Kyburz (forward to Twin Bridges, c/o Spen-

Applications and Permits Granted

cer's Store), Calif., for 8 c.f.s. from Pyramid Creek tributary to South Fork of American River. To be diverted in Sec. 8, T. 11 N., R. 17 E., M. D. B. and M., for power and domestic purposes (9 h.p.). Estimated cost \$100.

CALAVERAS COUNTY—Application 6998. Giacomo Oneto, c/o Charles P. Snyder, Atty., San Andreas, for 0.05 c.f.s. from an unnamed spring tributary to North Fork of Tuolumne River. To be diverted in Sec. 23, T. 7 N., R. 17 E., M. D. B. and M., for domestic purposes.

EL DORADO COUNTY—Application 6999. R. P. Easley, 509 G St., Antioch, Calif., for 1200 gallons per day from a stream tributary to South Fork American River. To be diverted in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes.

INYO COUNTY—Application 7000. E. Hague and M. A. Stieger, Box 444, Trona, Calif., for 1 miner's inch from Redlands Spring. To be diverted in Sec. 18, T. 23 S., R. 45 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$2,000.

SIERIA COUNTY—Application 7001. John J. Connell, c/o R. F. Taylor, Downieville, Calif., for 0.1 c.f.s. from Swansea Tunnel tributary to Swansea Ravine and Middle Fork Yuba River. To be diverted in Sec. 3, T. 18 N., R. 10 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$200.

SAN DIEGO COUNTY—Application 7002. South Coast Land Company, a Corporation, c/o George O. Bauwens, Engineer, 412 Pacific Southwest Building, Long Beach, Calif., for 0.75 c.f.s. and 8 ac. ft. per annum from unnamed creek (sometimes called Fry Creek) tributary to San Luis Rey River. To be diverted in Sec. 22, T. 9 S., R. 1 W., S. B. B. and M., for irrigation and domestic purposes (63 acres). Estimated cost \$500.

PLUMAS COUNTY—Application 7003. J. B. Higgins, Quincy, Calif., for 8 c.f.s. from Blackhawk Creek tributary to Spanish Creek, thence Indian Creek and North Fork of Feather River. To be diverted in Sec. 27, T. 25 N., R. 9 E., M. D. B. and M., for mining purposes. Estimated cost \$1,000.

SISKIYOU COUNTY—Application 7004. Carl-David Mining Company, a Corporation, c/o Tebbe & Tebbe, Attns., Yreka, Calif., for 40 c.f.s. from Jaynes Canyon Creek, Uncle Tom's Cabin Creek, Rock Gulch and Deep Gulch tributary to West Fork of Beaver Creek. To be diverted in Sec. 5, T. 47 N., R. 9 W., M. D. B. and M., for power and domestic purposes (4545 h.p.).

SAN MATEO COUNTY—Application 7005. Humphrey Estates, Inc., 315 Montgomery St., San Francisco, Calif., for 195 c.f.s. per annum from Green Oaks Creek tributary to Pacific Ocean. To be diverted in Sec. 20, T. 9 S., R. 4 W., M. D. B. and M., for irrigation and stock watering purposes (475 acres). Estimated cost \$2,000.

SONOMA COUNTY—Application 7006. Hacienda, Inc. Hilton, Calif., for (1) 0.037, (2) 0.07, (3) 0.24 c.f.s. and (2) 40,000 gallons per annum from (1) unnamed stream (2) unnamed stream and (3) Russian River tributary to (1) and (2) Russian River and (3) Pacific Ocean. To be diverted in Sec. 1, T. 8 N., R. 10 W., M. D. B. and M., for irrigation and domestic purposes (19 acres).

TRINITY COUNTY—Application 7007. C. L. Brown, 600 S. Madison St., Pasadena, Calif., for 100 c.f.s. from Canyon Creek tributary to Trinity River, thence Klamath River. To be diverted in Sec. 17, T. 35 N., R. 10 W., M. D. B. and M., for mining and domestic purposes. Estimated cost \$150,000.

LOS ANGELES COUNTY—Application 7008. Charles P. Cooke, 1120 Las Palmas Ave., Los Angeles, Calif., for 1 c.f.s. from Piru Creek tributary to Santa Clara River. To be diverted in Sec. 13, T. 6 N., R. 18 W., S. B. B. and M., for industrial purposes (road construction). Estimated cost \$15,000.

SISKIYOU COUNTY—Application 7009. H. J. Barton, Box 517, Yreka, Calif., for (1) 5.0 (2) 8.75 and (3) 1.87 c.f.s. from (1) Jackson Creek, (2) South Fork Scott Creek and (3) Blue Jay Creek tributary to Scott Creek. To be diverted in Sec. (1) 10, T. 39 N., R. 9 W., M. D. B. and M., and Sec. (2) and (3) 34,

T. 40 N., R. 9 W., M. D. B. and M., for mining and domestic purposes.

SAN BERNARDINO COUNTY—Application 7010. H. C. Zech, 116 E. 31st St., Los Angeles, Calif., for 0.025 c.f.s. from unnamed spring tributary to Big Valley Drainage Area. To be diverted in Sec. 31, T. 2 N., R. 2 E., S. B. B. and M., for domestic purposes. Estimated cost \$2,500.

SHASTA COUNTY—Application 7011. State of California, Department of Public Works, Division of Highways, c/o C. H. Purcell, State Highway Engineer, Public Works Bldg., Sacramento, Calif., for 0.025 c.f.s. from unnamed spring tributary to Spring Creek, thence Clear Creek and Sacramento River. To be diverted in Sec. 23, T. 32 N., R. 6 W., M. D. B. and M., for domestic purposes.

MERCED COUNTY—Application 7012. East Side Canal and Irrigation Company, a Corporation, 315 Chancery Bldg., San Francisco, Calif., for 175 c.f.s. from McCoys Spillway, Arena Spillway, Livingston Drain (N. S. and main drain), Bear Creek, Owens Creek, Duck Creek and Deadman Creek tributary to San Joaquin River. To be diverted in Secs. 20, 21, 22, 27 and 30, T. 7 S., R. 11 E., M. D. B. and M.; Sec. 12, T. 8 S., R. 11 E., M. D. B. and M.; and Secs 19 and 30, T. 8 S., R. 12 E., M. D. B. and M., for irrigation purposes (49,503.74 acres).

EL DORADO COUNTY—Application 7013. Frank J. Murray and Edw. J. Schoenbacher, c/o Frank J. Murray, 640 36th St., Sacramento, Calif., for 200 gallons per day from Bull Creek tributary to South Fork of American River. To be diverted in Sec. 29, T. 11 N., R. 14 E., M. D. B. and M., for domestic purposes.

INYO COUNTY—Application 7014. John Amick, Independence, Calif., for 0.5 c.f.s. from Barrel Springs tributary to Mazourka Canyon, thence Owens River. To be diverted in Sec. 20, T. 12 S., R. 36 E., M. D. B. & M., for mining purposes. Estimated cost \$800.

KERN COUNTY—Application 7015. Board of Supervisors of Kern County, Bakersfield, Calif., for 0.40 c.f.s. from 2 springs. To be diverted in Sec. 29, T. 25 S., R. 22 E., M. D. B. and M., for domestic purposes.

HUMBOLDT COUNTY—Application 7016. Harry Pinkerton, 934 3d St., Eureka, Calif., for 0.02 c.f.s. from an unnamed stream tributary to Humboldt Bay. To be diverted in Sec. 20, T. 5 N., R. 1 E., H. B. and M., for domestic purposes. Estimated cost \$800.

MENDOCINO COUNTY—Application 7017. Frieda Farnett, Box 2, Gualala, Calif., for 100 gallons per day from Sea Side stream tributary to Pacific Ocean. To be diverted in Sec. 21, T. 11 N., R. 15 W., M. D. B. and M., for domestic purposes. Estimated cost \$500.

EL DORADO COUNTY—Application 7018. Mrs. B. M. Fountain, 2501 I St., Sacramento, Calif., for 400 gallons per day from an unnamed stream and spring tributary to South Fork of American River. To be diverted in Sec. 23, T. 11 N., R. 15 E., M. D. B. and M., for domestic purposes. Estimated cost \$50.

EL DORADO COUNTY—Application 7019. E. R. Hickey, G. L. Davenport and L. J. Caldwell, c/o E. R. Hickey, 609 3d St., Woodland, Calif., for 600 gallons per day from an unnamed stream tributary to South Fork of American River. To be diverted in Sec. 19, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes. Estimated cost \$75.

SAN BERNARDINO COUNTY—Application 7020. Henry W. Muhleisen, 401 W. P. Story Bldg., Los Angeles, Calif., for 0.007 c.f.s. from water developed in tunnel. To be diverted in Sec. 28, T. 8 N., R. 18 E., S. B. B. and M., for mining and domestic purposes. Estimated cost \$500.

SAN DIEGO COUNTY—Application 7021. Karl Feller, Azusa, Calif., for 0.02 c.f.s. from unnamed spring tributary to Temecula River. To be diverted in Sec. 12, T. 9 S., R. 1 E., S. B. B. and M., for irrigation and domestic purposes (50 acres). Estimated cost \$250.

FRESNO COUNTY—Application 7022. County of Fresno, c/o Board of Supervisors, Fresno, Calif., for 0.11 c.f.s. from San Joaquin River tributary to Suisun Bay. To be diverted in Sec. 22, T. 9 S., R. 22 E., M. D. B. & M., for domestic purposes (tubercular sanatorium purposes). Estimated cost \$14,000.

Semiannual Traffic Count on California State Highways, Taken July 12 and 13

(Addendum to California Highways and Public Works—August Issue, 1931)

By T. H. DENNIS, Maintenance Engineer

THE semiannual traffic count of the Division of Highways was taken July 12th and 13th between the hours of 6 a.m. and 10 p.m. each day throughout the State highway system. For purposes of analysis, the vehicles are segregated by hourly periods under the following classifications: California automobiles, foreign automobiles, light trucks, heavy trucks, trailers, buses and horse-drawn vehicles.

A comparison of the July, 1931, count with that of the same month a year ago, shows a decrease for all routes of 5.6 per cent on Sunday and 0.6 per cent on Monday. On the other hand the gasoline tax for comparable periods of 1930 and 1931 shows increased consumption approximating 6 per cent. This paradox may be explained by the gas war which prevailed during the spring months but which ended before the census was taken.

Of the 67 routes, 31 showed a gain on Sunday and 36 a loss. For the Monday count 40 routes gained and 27 lost.

The interstate connections were the only group to show a gain on both Sunday and Monday.

	Per cent gain-loss		No. Routes, gain-loss			
	Sunday	Monday	Gain	Loss	Gain	Loss
Main north and south routes.....	-8.1	+0.4	3	5	5	3
Laterals between inland and coast.....	-5.5	-2.5	12	19	18	13
Interstate connections.....	+3.1	+10.6	9	3	11	1
Recreational routes.....	-11.7	-19.2	7	9	6	10
Average, all routes.....	-5.6	-0.6	31	36	40	27

Gain or loss in traffic volume expressed as a percentage of the July, 1930, count for all State highway routes, is as follows:

Route	Per cent gain or loss			
	Sunday	Monday	Gain	Loss
1. Sausalito-Oregon Line.....	8.8	8.4		
2. San Francisco-San Diego.....	7.3	4.9		
3. Sacramento-Oregon Line.....	3.2	0.2		
4. Sacramento-Los Angeles.....	9.5	2.2		
5. Stockton-Santa Cruz.....	3.4	9.0		
6. Sacramento-Woodland Junction.....	25.6	18.4		
7. Tehama Junction-Bescia.....	14.9	9.1		
8. Ignacio-Cordella.....	11.8	4.5		
9. San Fernando-San Bernardino.....	3.8	5.0		
10. San Lucas-Sequoia National Park.....	10.4	5.9		
11. Sacramento-Riverton.....	7.1	13.0		
12. San Diego-El Centro.....	1.2	0.3		
13. Salda-Sonora.....	18.4	1.0		
14. Albany-Martinez.....	9.2	4.3		
15. Rt. 1, near Campella-Grass Valley.....	14.1	18.9		

Route	1931 Per cent gain or loss			
	Sunday	Monday	Gain	Loss
16. Hopland-Lakeport.....	16.4	17.7		
17. Roseville-Nevada City.....	4.9	16.5		
18. Merced-El Portal.....	22.9	8.7		
19. Rt. 9, W. of Claremont-Riverside.....	0.5	6.6		
20. Redding to Rt. 1 near Arcata.....	8.6	10.4		
21. Rt. 3, near Richvale-Quincy.....	1.8	9.4		
22. San Juan Bautista-Rt. 32.....	19.6	18.6		
23. Sausalito-Holop.....	17.3	26.8		
24. Rt. 4 near Lodi to Valley Springs.....	8.7	9.2		
25. Nevada City-Downville.....	4.4	11.4		
26. San Bernardino-El Centro.....	4.1	8.4		
27. El Centro-Yuma.....	32.7	19.7		
28. Redding-Nevada Line.....	12.0	11.3		
29. Red Bluff-Nevada Line.....	9.2	0.6		
31. San Bernardino-Jean.....	1.8	2.7		
32. Rt. 4, near Calistoga-Rt. 2 at Gilroy.....	16.8	14.6

\$1,500,000 *Allotted for Extra Work This Winter*

Heads of Families Will Be Given Employment for Five Months By Department of Public Works—Men to Be Used Near Community in Which They Live

By COLONEL WALTER E. GARRISON, Director of Public Works

IN FURTHERANCE of State Administration's plan to speed up all public work for the alleviation of unemployment, the Department of Public Works will provide part-time employment for an additional 3800 men during the winter months.

 The larger part of the work will fall under the immediate direction of the maintenance service of the Division of Highways. Something like \$1,500,000 has been appropriated for pay rolls.

The plan calls for men and hand tools. It represents work that under any condition or at any time would call for man power. It is not a machine job; there is discrimination neither for nor against machinery. The work schedule has been simply advanced by a year or more in order to give to the unemployed jobs at a time when jobs are most needed.

NOT CHARITY WORK

The work will not be done haphazard. It will not be created as a charity. The expenditure has been well planned. The emergency simply meets the work. The various jobs will be as carefully laid out and as carefully supervised as any done in the usual efficient construction and maintenance service.

 It is the intention of the Department of Public Works to distribute the improvement work over the State. As far as possible each locality will profit some from the wage returns; and each section will have its share of the improvement benefits.

FOR NEEDY MEN

The semiofficial relief agencies of the several counties and cities will be recognized in proposing work for needy men. In due time, they will be informed as to the quotas that can be cared for, and of the procedure necessary to contact the personal officers.

The invariable rule of employment will be that married men come both first and last.

Preference will positively be given to them. But single men who can prove that they are the sole support of dependents will not be excluded from consideration.

The plan contemplates three days work each week for the men, the crews being divided and working in alternate periods. The wage will be the going wage for laborers, which will probably be \$4 per day.

THROUGH THE WINTER

The Highway Division and its district aids are now working out the state-wide plan. It is expected that the organization will be ready for action by October 15th. Present indications are that the Division will be able to spread the work over a five months' period. This will carry many families through the winter.

 This expenditure of \$1,500,000 will not be in the nature of a gift by the State to the unemployed. The men will earn their money. The State will get dollar for dollar in the betterment of roads and highways.

In pressing the departments for action like that being taken by the Public Works Department, Governor Rolph is doing more than provide work for several thousands of men. He is pointing out to industry everywhere a wise plan to pursue—that of advancing work schedules to meet unemployment and showing confidence in the innate stability of our institutions.

DOING THEIR BIT

I do not doubt that our community leaders will cooperate with us in getting the best results in distributing the benefits of our extra labor program.

We do not for a minute fancy that these few thousand men at work will do more than assist in solving the big problem that lies ahead.

But Governor Rolph and the Department are determined to do their bit, and to do it

(Continued on page 33)

Secret Service Corps Wars on Fires; Incendiarism Blamed for Big Losses

ADDRESSING the "Stop Forest Fires" Committee at its recent session in Los Angeles, Chairman M. B. Pratt, in reporting for the work being done by the Division of Forestry, told the members present that, considering the acute fire menace of the year as warned against last May in the fire proclamation issued by Governor James Rolph, the fire situation had been kept quite well in hand.

The assertion of the State Forester is evidenced by the splendid low fire record maintained through the strenuous season in the southern portion of the State and the few fires occurring in the national forests prior to the July outbreak of incendiarism.

INCENDIARY ORIGIN

"Were it not for fires of incendiary origin in northern and central parts of the State," says Pratt, "the entire fire record of the year would have been held to one of the lowest in the history of fire prevention work."

Pratt contributes the causes of the incendiary outbreak this year to unemployment, boys craving excitement during periods of fires and the long standing desires of selfish interests to rid certain areas of brush for definite purposes.

Carelessness of fires along highways, railroads and stage routes, in logging operations and by sportsmen and recreationists along streams and in the forests, as direct causes of grain, brush and forest fires, has been greatly reduced in the opinion of both State and Federal forest officers, leaving incendiarism at the top of the list of man-caused fires in California this year as well as throughout the great Northwest.

PUBLIC EDUCATED

Forest officers openly express the opinion that the activities of the Department of Public Works in converting the highways into first lines of defense against fires and in educating the traveling public against throwing lighted materials from moving vehicles are getting direct results of a far-reaching nature.

With all man-caused fires, except incendiary origin, actually reduced to almost a minimum by the forces coordinated by Governor

Rolph, the California Fire Emergency Committee through the State Chamber of Commerce is now conducting a stringent campaign to wipe out incendiarism by changing public sentiment.

SECRET SERVICE

The backbone of the campaign in each county is the Vigilante Committee formed by the County Fire Emergency Committee along lines developed by the Placer County Fire Emergency Committee.

The secret service part of the campaign as outlined includes:

(1) State Forester Pratt has appointed a State Chief of 32 years' experience in law enforcement work in charge of the campaign.

(2) Each County Fire Emergency Committee has named a County Chief.

(3) Each County Chief has named a Secret Service Corps, limited in number and deputized as peace officers.

(4) The Vigilante Committee.

(5) A contact man named by the State Chamber.

DRASTIC MEASURES

The latest methods of modern police tactics in secret shadowing, secret patrol and secret signaling will be established between the secret service corps operating in the forests and the vigilantes operating throughout the county.

"I feel this is the most effective method of stopping incendiary fires that has yet been evolved," said the State Forester. "The people demand drastic measures, and the recent arrests and convictions already secured lead me to believe that public opinion will soon have the incendiary situation well under control."

"In the fire problem of California, public opinion must consider the depletion of the State funds in the budget for fire suppression; the deep inroad made on the State Emergency Fund badly needed for other purposes; the losses to counties in assessable valuations; the hindrances to future lumbering operations; destruction of valuable watersheds; destruction of wild life and keeping tourists out of the recreational grounds of the State."

Firebugs Cause Havoc Like This!

RED TONGUES OF DESTRUCTION. Three remarkable close-up photographs taken by the United States Forestry Service showing their men battling against forest fire. Number 1 is a crew of men advancing on the flames with hose attached to a pump engine at nearby stream. No. 2 shows what must be done when water is not available. The three men, armed with shovels, are rushing to a new point of attack, risking their lives to halt the devastation. In No. 3 the men are building a trail down to mineral soil in advance of the fire and throwing dirt on smoldering logs and brush to prevent spread of sparks. And incendiaries have caused most of this summer's fires!

Western State Water Engineers Meet In Sacramento Conference Oct. 28th

THE FOURTH Annual Conference of the Association of Western State Engineers will convene in Sacramento October 28th. It promises to be one of unusual interest not only to the Federal and State representatives, but to the public as well.

Conflicts between Federal and State jurisdiction over the use and control of water which have arisen in recent years will receive attention, as will conservation and administration of the public domain, forethought in the planning of water resources development, and a multiplicity of other subjects which are of vital interest and concern to public officials charged with the responsibility of administering the water resources of the western states and to all thoughtful citizens.

TO EXCHANGE THOUGHTS

The Association originated in the need of western state water officials for some agency or medium for exchange of thoughts and experiences on water matters. The seventeen states having membership are Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington and Wyoming—all of which are arid or semiarid and have many common problems arising from that fact.

Because a solution of these problems requires ready contact with and cooperation of the U. S. Bureau of Reclamation, the Division of Agricultural Engineering of the Department of the Interior, the U. S. Forest Service, the U. S. War Department, the Federal Power Commission, and the U. S. Geological Survey, those Federal offices each have named a representative to serve with the Association as associate member.

LENGTHY PROGRAMS

The Association first met during the Colorado River Conference at Denver in the fall of 1927, and there have since that time been three annual conferences, at Salt Lake City, Reno and Denver. This fourth conference which convenes in Sacramento, will meet October 28th, 29th and 30th.

The programs of previous conferences have included discussion of proper State control

and protection of individual appropriators of underground water, the relation of the Federal government to the states in the matter of control of water, interstate compacts, national legislation of common interest to arid states, duty of water with special reference to adjudication and administration, laws governing construction and operation of dams, measuring devices for apportionment of water, ownership status of return flow, the forecasting of run-off by the snow survey method, future reclamation policy, the proposal to cede unreserved Federal lands to the states, flood control and stream regulation, and many other related subjects.

The benefits of the Association have not been restricted to those intangible values arising out of discussion. The Association has moved with telling effect in connection with a number of important matters vital to the West. Its action in connection with the delay in publication of cooperative stream flow data and topographic maps of the U. S. Geological Survey has had a very tangible result in speeding up this work. Whereas, publication of stream flow data was formerly three and one-half to four years in arrears, the Survey now promises that at the close of this fiscal year, Water Supply Papers will be current. Progress is also being made in reducing arrearage in the publication of topographic maps and it is expected that very shortly one and one-half to two years will be cut from the time heretofore required for publication. The benefits to users of these data can scarcely be overemphasized.

LICENSE FEES

The Association also interested itself in the matter of Federal Power Commission license fees, which it appeared were not being distributed to the states in accordance with the allocation prescribed by the Federal Water Power Act. It has since been ruled by the Comptroller General of the United States that the fees were being erroneously distributed and California alone has already received some \$109,000 in fees which it would not otherwise have received. The allocation to the U. S. Reclamation Fund, which affects

If Your House Gets Shaky, Look Out!

It's the Little Termite Eating Dinner

Termites, deadly enemy of all things wooded and many that are not, are causing tremendous loss throughout California. The writer of this article, an authority on this insidious White Ant, tells a highly interesting and entertaining story of the destructive work of the insect and at the same time sets forth the remedies best fitted to halt the ravages of its attack.

By C. H. KROMER, Chief Structural Engineer, Division of Architecture

INSECT infestation of the wooden portions of certain of the State's buildings, has, within the past few years, given considerable concern to the Division of Architecture, especially since we have every reason to believe that these insects are increasing at an alarmingly accelerated rate. I refer particularly to termites, "or so-called White Ants," which attack the softer woods such as pine and, to a limited extent, redwood, and incidentally to the wood beetles which attack hardwood as, for example, maple or oak.

Timber is subject to the attack of numerous pests such as marine borers, fungus growths, and rot, but this attack is more or less in the open and controllable, whereas, the ravages of the termite are so insidious that often the first indication of their presence is a collapse of some portion of the structure. On the other hand, while the wood beetle is very unlikely to cause serious structural damage, it is rather aggravating to find hardwood floors or furniture reduced to dust. The termite works along the grain of the wood thereby providing passageways for his activities, whereas the wood beetle cuts across the grain of the wood remaining at the point of activity until it reaches maturity.

WOOD BECOMES POWDER

The wood beetles with which we have come in contact, such as the "Powder Post Beetle" and the "Death Watch Beetle," confine their attack almost entirely to the hardwoods, reducing them to a characteristic wood pow-

der. Their attack is entirely local and, since they spread very slowly, can usually be very easily controlled. However, very material damage may be done when they have been present in the wood for a long period of time.

Westminster Abbey, London, is an outstanding example where very serious damage was done by the "Death Watch Beetle." The hammer beam trusses and other structural framing were so badly eaten that very extensive repairs had to be made.

HE'LL GET YOU if you don't watch out. It's the Termite or so-called "White Ant" that is doing so much damage to buildings.

The adults are dark brown in color, about one-fifth inch or more in length, while the larvae are pale yellow in color and curled in shape. It is the larvae that do the damage to the wood. Each beetle has its own individual opening to the surface. Both the adult and larvae are a species of "Coelostethus," probably "Quadrulus."

The Powder Post Beetles belonging to the genus "Lyctus" are considered to be of the most economic importance. They can be eliminated by forcing Ortho or Parachlorobenzene into their workings through openings in the wood or by fumigation. A liberal application of pure kerosene oil is quite effective. Best results are obtained by removing infected wood and burning it.

EAT THROUGH TIMBERS

Contrary to popular belief, the small, blackish, white-winged insects swarming in large numbers in the Spring and Fall, after the first warm rains, are not ants or even distantly related to them. They will very prob-

What Makes the Wheels go Round?

Highly Organized Maintenance Shops

By AL BANKS, Assistant Deputy Director

FAR UP in the big hills, far out on the desert stretches and far along the broad thoroughfares of valley and coast, the motor vehicles of the Highway Division sing their song of unceasing activity. Anywhere and everywhere in the great State, the motorist meets them. These French gray machines travel far; and are work driven. Yet, always, they radiate power and purpose.

Four hundred and fifty passenger cars, eight hundred trucks and nearly two thousand pieces of equipment—these are some of

JUNK?—Well maybe it looks like it but the Highway Patrol won't be minus a car long—not after the boys at the Maintenance Shop get busy on "fixins."

the tools used by the brain and brawn of the Division.

Back of the efficiency of the motorized fleet are the mechanics of maintenance; and back of maintenance is a shop system.

BUSY AS BEEHIVES

The shop and the system are centered in the Headquarters Shop in Sacramento. Around it are grouped the shops of the ten divisions. In the Headquarters Shop there is service all the way from adjusting a carburetor to building a great forest fire fighting machine. The Sacramento Shop site comprises 117,500 square feet of space, of which 52,000 feet are under cover. It carries an annual pay roll of nearly a quarter of a million and hundreds of thousands of dollars in equipment purchases passed through the shop during the year.

The Headquarters Shop is something more

than a garage or repair station. It devises new tools for the road builders. It adapts or rebuilds equipment to suit their particular needs. It is a self-sustaining industry.

FIRE TRUCKS "DELIVER"

During the last 18 months the shop has built 25 motorized fire trucks, ranging all the way from the Ford type up to the heavy six-wheel Moreland. These trucks carry tanks of considerable capacity; their pumps are strong and they are equipped for every emergency. Speed and power, pressure and supply are combined to a marked degree. The power plants, the wheels and framework of the original trucks remain, but the whole purpose of the equipment has been made to serve the fire fighting service. The reconstructed trucks represent careful planning and expert mechanical service; and, best of all, those already in service have "delivered the goods" against the fire fiend of the hills.

The Equipment Department or shop system had its inception at the close of the World War when the Federal government distributed vast quantities of motor vehicles and other

PRESTO!—Here it is, just like new and Inspector Morrison can not understand how 'twas done as he and Officer I. C. Kimball take delivery from Al Montijo.

road building equipment and supplies to the several states. The original cost to the government of the equipment distributed was approximately \$5,000,000. Much of it, however, was received in a used condition and its actual value at the time of delivery was much below the cost. During the time this stock was being distributed, the principal

The top picture is a corner of one of the repair departments. Left center, F. E. Burnside, Superintendent, is telling R. H. Stalnaker, Equipment Engineer, that one about the Austin and the Buick. Next, a crew putting finishing touches to the twenty-fifth fire wagon built at the yards. Below, the heavy Equipment Shop, and right, the Paint Shop.

Federal Aid Money For Highways Paid When Work is Done

THE PREVALENT idea that Federal aid money for highways is an unconditional gift to the State is not true. The checks from Washington do not come in like Christmas gifts. The payments are on work already finished and paid for in the first instance by the State. They represent an approval payment on work initiated and carried through by the Highway Division under Federal approval. Always, the State must first earn the money by making its exhibit of work accomplished.

Up to August 1st of this year, the allocations of this fund to California had reached \$37,899,055, of which \$33,077,154 has been paid. Sometime in December, the balance, about \$4,500,000 is expected to reach the Division Treasury.

Federal aid for highways began in 1916 as a result of the government's recognition of the need of interstate and local roads for the movement of commerce in time of war. It was first predicated on the assumption of Federal interest in post roads, but was gradually developed to its present wide and liberal application. It was really not until 1921 that the system was raised to its present status of well defined policy and liberality.

Not alone the money, but the cooperation of the Federal engineers is invaluable to the great program. The coordination of Federal and State agencies is so well accomplished that their programs move in helpful unison.

STAKES OR STEAKS

This is just what happened, not so long ago, At the Highway Office, District I, you know.

The surveyors needed, stakes from redwood trees, (By the way, what others are as good as these?)

So phones Mr. Cramer to the Scotia Mill, "Have you any stakes there, and if so what will?"

"Just a minute, mister," comes back the reply, "We'll get you the butcher. He has a supply."

W.H.W.

The auto is a great moral force; it has practically stopped horse-stealing.

"You seem to have had a serious accident."
"Yes," said the bandaged person. "I tried to climb a tree in my motor car."

"What did you do that for?"

"Just to oblige a lady who was driving another car. She wanted to use the road."—*Wheel.*

By Poetry and Song He Moves Along, Does Chairman Earl Kelly

"WHICH three in that group of kids are our youngsters, dear?"

It's Earl Lee Kelly, talking to his wife. He's just returned from a highway tour as Chairman of the California Highway Commission.

And he's away from Redding so much since becoming a Governor  Ralph lieutenant that, with characteristic caution, he doesn't want to pick up and hug the wrong youngsters.

But seriously, Kelly is inspecting every mile of the California highway system and has covered more than half of it in seven months.

CARRIES FIVE SUITS

And his office force, running his private business for him, clocked him last month and found that he had spent 58 per cent of his working hours outside his office, busy in the affairs of his nonsalaried commissionership.

He's quite systematic in his travels. He carries at least five suits of clothes (who has five suits of clothes these days?) in a trunk on the back of his car and is quite an adept quick change artist.

Drives his own auto, mostly alone and composes his speeches while reeling off the miles. Loves poetry and generally, unless restrained by his friends, manages to inject two or three into every speech he makes.

PIPE THE PANTS

Is an ornament to the Rotarians because he's a singer and all Rotarians love to sing—or sing at something. He has an eight years' perfect membership in the Rotary Club.

And all the above is the peg  upon which to hang the picture on the opposite page, taken of Mr. Kelly when he was quite, quite young and a student at U. C., pants and all. This snapshot was stolen in true "yellow journal" style by a certain Shasta County politician and "sold" in true Scotch style to the editor as a "scoop" of the first water and importance.

Automobiles in unfit mechanical condition for driving are being removed from the highways of Delaware. By direction of the Secretary of State and the Delaware Safety Council, a greater part of the registered automobiles in the state were inspected and a warning issued that all drivers of cars not displaying the official windshield sticker of inspection will be stopped by the traffic officers.

HE WAS IN THE
U. C. GLEE CLUB,
CLASS OF 1915

HE ALSO TOTTED
THE BALL A BIT

Then...

WHAT A MAN he was in those days with the peg top college pants and all. It's the dignified and distinguished Earl Lee Kelly, Chairman of the California Highway Commission, the snap being taken many years ago. Mr. Kelly is traveling over every mile of State Highway and will then begin on county roads. He was once Mayor of Redding and has a host of friends in Northern California. As a poet his acquaintances declare he's a good singer.

THE NUMBER AND
VARIETY OF HIS
SUITS AMAZE THE
WORLD

THAT REMINDS ME OF THE
IMMORTAL WORDS...
"YOU TAKE THE HIGH ROAD..."

HE WORKS A POEM
OR TWO INTO EVERY
SPEECH

This is the second of a series of articles on the State's water problem. The first article, printed in last month's issue of *California Highways and Public Works*, dealt with the Governor's call to the citizens of the entire State to unite for a successful solution of the problem. This article deals with the Sacramento Valley and Sacramento-San Joaquin Delta situation. Like analyses will follow.

The Sacramento Valley and the Sacramento-San Joaquin Delta comprise the northerly part of that extensive mountain-girdled area known as the Great Central Valley of California. Due to favorable climatological conditions throughout the Sacramento Valley, dry farming has been more successfully carried on in the past than in the San Joaquin Valley and southern California. However, during the past two decades the irrigated area has greatly increased, and nearly 500,000 acres have been added to the irrigated acreage.

A great variety of crops are now produced in the Sacramento Valley. Many thousand acres of barley, wheat and oats are grown. In a great deal of the valley and foothill area conditions are especially favorable for growing many kinds of fruit. Peaches and pears are produced in large quantities. Thermal belts make possible the production of sub-tropical fruits including oranges, lemons and grapefruit. Almonds, prunes, vegetables, sugar beets and alfalfa are also important crops. The diversity of crops is indicative of the fertile soil and equable climate.

RECLAMATION AREA

The Sacramento-San Joaquin Delta is a reclaimed area of wonderfully productive soil; a vast vegetable garden with almost every known American vegetable, produced in immense quantities to supply the nearby markets and canneries. Ninety-five per cent of the world's supply of canning asparagus is grown in the delta.

The water problems of these two regions are closely related, as a large part of the water supply of the delta comes from the Sacramento River. During the past decade, in its investigation of the water resources of the State, the Division of Water Resources has made an inventory of all the waters within the State. In this work, committees of eminent consulting engineers familiar with the water problems of the Sacramento River Basin and the Sacramento-San Joaquin Delta have given their advice in outlining the investigations and have given their counsel on all phases of the problems. During the past two years the members of the committees were, G. A. Atherton, B. A. Etcheverry, J. D. Gallo-way, H. L. Haehl, F. C. Herrmann, W. L. Huber, J. B. Lippencott, T. H. Meaus and F. H. Tibbetts.

The mountainous drainage area of the Sacramento River Basin contains 21,369 square miles and contributes 34.8 per cent of the stream flow of California. In determining the water supply of the Sacramento Basin, study was made of a forty-year period from 1889 to 1929. This period starts with several wet years, contains both wet and dry cycles and including one of the longest and driest cycles of record. The mean seasonal run-offs are estimated to be as follows:

	<i>Acres-feet</i>
40-year mean—1889-1929.....	24,801,000
20-year mean—1909-1929.....	20,593,000
10-year mean—1919-1929.....	17,920,000
5-year mean—1924-1929.....	19,027,000

(Continued on page 20)

“State Water Problem Still Needs Adequate Broadcasting”

From San Francisco Chronicle, September 1st

THE GOVERNOR'S State-wide Water Committee has before it and within its powers the first essential before any positive action can be expected on the water question. This is to make the people of California realize their interest in action.

The facts in the California water problem are clear. The State has a good deal of water—but not in the right places. In some parts of the State is more water than is needed—in other parts not enough. Three-fourths of the State waters, to quote from the Governor's message, lie within the northerly third of the State, while three-fourths of the ultimate demand lies in the southerly two-thirds of the State.

Irrigation now absorbs the summer flow of the streams of southern California and of those entering the San Joaquin Valley. Irrigation from wells in both southern California and in the San Joaquin Valley has in many places lowered the underground supplies below the pumping limit. Irrigation absorbs the summer flow of the rivers entering the Sacramento Valley to an extent that barely leaves enough for navigation of the Sacramento River and not enough to prevent encroachment of ocean brine on the Suisun Bay towns and industries and on the farm lands of the river delta.

Most of these rivers run high in winter and spring with water which wastes to the sea. This is especially true of the Sacramento-American-Yuba-Feather-Pit system, which is the big river layout of California, with the watershed of most rain and snowfall.

The problem is to hold these winter and spring floods and distribute the water throughout the summer where it is needed. Schemes have been proposed to put storage dams on all these rivers. This would be ideal but is a large order at the moment. Besides, many or most of these streams offer no suitable reservoir sites over and above the ones now utilized by dams.

The largest unit of all, likewise the one with the greatest storage possibilities, is the Sacramento-Pit system, which now has no storage reservoirs. It is obviously the one for the first reservoir, the river on which the

most water can be stored for the money. After that probably comes the American River. At the southern end of the State the Hoover Dam will create an immense supply, which has only to be conveyed across the thirsty cultivated slope on the ocean side.

These are elements of the situation which are easily seen by anyone who will look around.

The problem now before the State is not to find these facts. It is to make the people of California understand the vital need of handling these facts to put the surplus waters to work where the lands are now going dry. Only a minor part of the population of California now realizes the case. This is composed principally of the people of the districts directly affected. They know. But the greater part of the citizenry of California either does not know or imagines it is not affected. Everyone in California is vitally affected, but it will take some work to get that fact home.

The Governor has appointed a very large and very representative advisory committee. For any ordinary purpose this committee would be too unwieldy. But for the first object confronting the State—to wake the people to the importance of prompt action—this body seems excellent. Individually its members have an opportunity—and a duty—to spread knowledge of the water problem and the pressing need of action.

TO BEAUTIFY ROADS

Beautification of 28 major boulevards in Los Angeles and vicinity is announced by the Division of Forestry of the Los Angeles County Park Department. The program calls for the planting of 26,135 trees within the next three months, which will mean the beautification of nearly every main thoroughfare leading into the metropolis. Such action will further beautify the highways for the 1932 Olympic Games visitors. Tens of thousands of these will come from Europe, where highway beautification is made a study, and their reaction to California's beauty doubtless will be influenced by the appearance of its roadsides.

Signboard at a railroad crossing: Go on and take a chance. You're unimportant.—*Exchange.*

“Officer—“What do you mean, young lady, driving down the street at fifty miles an hour?”
Sweet Young Thing—“Oh, sir, you must be mistaken—I only left the garage half an hour ago.”

Three Shifts Moving Telephone Cables To Permit Bridge Boring in October

THREE shifts of men, working night and day since June 30th on the emergency job of moving twelve huge telephone cables out of the path of the San Francisco-East Bay Bridge, are advancing with swift precision toward the goal set for September 30, when the work is to be completed.

"Seven down and five to go." That, in the language of golf, is the score in this difficult, somewhat spectacular game which these thirty-three men of The Pacific Telephone and Telegraph Co. are playing, if one of the most difficult jobs in western telephone history may be called playing, out in San Francisco Bay.

These three squads of men are right on schedule at the present writing. Seven cables have been cleared from 15 feet of mud at the bottom of the bay, lifted 100 feet to the surface of the water, and shifted 1000 feet north of the route held by telephone lines for nearly a half century.

As a result, unless unforeseen difficulties spring up between now and the end of September, the path of the great bridge will be cleared, ready for the next move in the work of erecting the \$75,000,000 structure, and completing it in 1937. This next move is the

start of borings for the bridge foundations. Borings will begin in October.

The ninety-day task has thus far lived up to the telephone company's expectation that it would be an extremely difficult one and that every precaution should be taken to prevent interruption to the telephone service

of a million and a half people in the bay area. Extreme care taken in planning and executing the work resulted in only two of the seven cables giving serious trouble when they were raised and moved under a strain for which they were not designed. Minor injuries to several other cables came at such times and in such ways as to cause little difficulty.

1200 WIRES IN CABLE

Of the two cables giving serious trouble, one was the largest size submarine cable now in use, carrying in its 1200 wires a peak capacity of 60,000 words a minute. All lines put out of commission by the two breaks were replaced in from fifteen minutes to

about an hour by hooking up spare "stand-by" wires held for such an emergency in other of the twelve cables, while repair crews, working through flood and ebb tides, had the voice ways mended with as little delay as possible.

When the huge 1200-wire cable went out, diver William Reed was prevented for four

BRIDGE BOARD TO MEET

TO DISCUSS the San Francisco-Oakland Bay Bridge and the controlling factors in the design of the structure, the Consulting Engineering Board will meet during the first week in October.

The conference will be held at the San Francisco bridge headquarters which were opened the middle of September.

The Consulting Board is being called together by Charles H. Purcell, State Engineer. It is composed of the following men, eminent in their profession:

Chairman, Ralph Modjeski of New York City; the firm of Moran & Proctor, Foundation Consultants, New York City; Leon S. Moisseiff, Consulting Structural Engineer; C. Derleth, Jr., Dean of Engineering at the University of California; H. J. Brunner, Consulting Engineer, San Francisco; Charles E. Andrew, State Bridge Engineer, and Charles H. Purcell.

BORINGS IN OCTOBER

Hero of War Works On Bottom of Bay Moving Big Cables

hours from descending to the bottom of the bay to locate the trouble, because of a swift tide racing past the telephone company's barge "Pacific," the "flagship" of the telephone fleet of five large and five small boats used for the cable moving.

Reed is a war hero. As a member of a squad of divers in the World War he went out from New York and repaired a hole in the side of a hospital ship returning from France with wounded soldiers. The ship had been rammed by another vessel. Reed

LINE'S BUSY

QUICK SERVICE—The Telephone Company putting finishing touches to a big job of moving phone cables out of the way of the Bay Bridge. At top, Diver William Reed (see the top of his helmet in the water) receiving telephoned instructions from Construction Superintendent F. O. Edmunds on the barge. And below, Edmunds has hooked up on a cable being spliced, to talk with headquarters ashore from the middle of San Francisco Bay.

also helped in the raising of the American submarine S-51, which sank off Providence, Rhode Island.

Down in the captain's cabin of the telephone barge, a large chart shows the telephone cables between San Francisco and Yerba Buena Island. These are the lines now being moved and Division Plant Manager E. E. Perkins and Division Construction Superintendent F. O. Edmunds watch with satisfaction as small colored wires, representing the cables are moved on this chart,

until now seven have been transferred, with five to go.

MUST DECLARE RADIOS

Motorists with radios attached to their cars must announce this fact to customs officers in going into Canada, and also pay a fee of \$1, according to an announcement by the Touring Bureau of the Automobile Club of Southern California. The fee is required for all radios in the northern country. It may be paid through postmasters in the larger cities and towns. After touring Canada, motorists should call attention to the radio so that it may be checked off their customs permit.

Proposals Asked for Investigating Foundation Sites for S. F. Bay Bridge

SEALED proposals will be received at the office of the Chief Engineer of the San Francisco Bay Bridge, 500 Sansome street, San Francisco, California, until 2 o'clock p.m., on October 7, 1931, at which time they will be publicly opened and read, for investigating the foundation sites for the San Francisco Bay Bridge, in accordance with the specifications therefor, to which special reference is made as follows:

Performing all necessary work and furnishing materials and equipment for investigating foundation sites for the San Francisco Bay Bridge consisting of diamond drill and jet borings, driving casings and test piles and loading piles with test loads.

HERE IS ESTIMATE

The Chief Engineer's estimate follows:

- | | |
|---------|--|
| Item 1. | 1550 lineal feet diamond drilling through bedrock. |
| Item 2. | 5000 lineal feet jet drilling from mean high water to bedrock. |
| Item 3. | 3300 lineal feet dry sample holes through 8-inch casing (casing to be furnished by the State). |
| Item 4. | 1 only, 9-pile cluster, loading platform and loading material. |
| Item 5. | 1 only, 42-inch diameter steel cylinder and one timber pile driven inside cylinder and loaded. |
| Item 6. | 2 each, timber piles driven to thirty (30) ton bearing capacity and loaded. |
| Item 7. | 2 each, timber piles 110 feet long, driven and loaded. |

The State will furnish casings as more explicitly set forth in the special provisions.

RIGHTS RESERVED

The foregoing quantities are approximate only, being given as a basis for the comparison of bids and the Department of Public Works does not, expressly or by implication, agree that the actual amount of work will correspond therewith, but reserves the right to increase or decrease the amount of any class or portion of the work as may be deemed necessary or expedient by the said Department of Public Works.

All bids are to be compared on the basis of the Chief Engineer's estimate of the quantities of work to be done.

In accordance with the provisions of Chapter 397, Statutes of 1931, the State has ascertained the general prevailing rate of wages applicable to the work to be done, which list may be obtained, together with plans, forms of proposal, bonds, contract and specifications at the office of the State Highway Engineer, Sacramento. They also may be seen at the office of the Chief Engineer, 500 Sansome street, San Francisco, and at the office of the District Engineer of the Division of Highways at Los Angeles; and at the office of the Associated General Contractors in San Francisco.

MUST BE LICENSED

Proposal forms will be issued only to those contractors who have furnished a verified statement of experience and financial condition in accordance with the provisions of Chapter 644, Statutes of 1929, and whose statements so furnished are satisfactory to the Department of Public Works.

Bids will not be accepted from a contractor who has not been licensed in accordance with the provisions of Chapter 791, Statutes of 1929, or to whom a proposal form has not been issued by the Department of Public Works.

A representative of the Chief Engineer will be available to accompany prospective bidders for an inspection of the work herein contemplated and contractors are urged to investigate the location, character and quantity of work to be done, with said representative. It is requested that arrangements for joint field inspection be made as far in advance as possible.

FORMS FURNISHED

No bid will be received unless it is made on a blank form furnished by the Chief Engineer. The special attention of prospective bidders is called to the "Proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids.

Gasoline tax receipts amounted to \$22,110,961 in the United States in 1930, as compared with \$448,183,249 in 1929 and \$318,041,556 in 1928.

All Roads Will Lead to California For Olympiad; 250,000 Cars Expected

Phew! Winter may be coming and the vacation season going but—

When one reads of the beauties of California seen along the numerous fine highways of the State, the urge to crank up the old car and hie out is on again. Scenery, romance, history—all touched upon in this article showing California's road preparation for the Tenth Olympiad at Los Angeles. And written by an engineer who, should he tire of building highways, seems well qualified for the Tourist Bureau or some other booster organization.

By G. T. McCOY, Principal Assistant Highway Engineer

THE WATCHWORD of the Caesars in 32 A. D. was "All roads lead to Rome." In 1932 the watchword of the world will be "All roads lead to California and the Tenth Olympiad in Los Angeles."

From July 30 to August 14, 1932, the world of amateur athletics will trek to the City of the Angels to witness the competition in this ancient classic performed beneath the sunny skies of California's southland.

In 1932 California expects to entertain fully three times the normal number of an-

DON'T KID McCOY on highways of California. He knows 'em from end to end. In the picture he's thinking of a real good boost thought for the next paragraph of the accompanying story.

nual visitors. This will mean that approximately two hundred fifty thousand foreign cars, carrying some seven hundred fifty thousand tourists, will come to California during the year of the Olympic Games.

NETWORK OF ROADS

To greet this caravan of thousands, California will spread before them a network of smooth, easily traversed highways, the main stems and laterals of which comprise the State highway system.

The forward-looking program of the Division of Highways has pushed construction on transcontinental routes and connecting roads within the State that they might be in excellent condition to care adequately for the increased traffic of 1932.

A comprehensive report of the improvements and proposed condition during the summer of 1932 is not the purpose of this article, but rather to place before the reader a panorama of the routes within the State highway system which lead into Los Angeles, with brief statements as to the type and condition of each.

Los Angeles is approached by modern highways which fan to all parts of California. On

Many Routes Open for Olympic Games

(Continued from preceding page)

any angle of approach the motorist will find wide, smooth, paved or surfaced roads through the entire State leading to the metropolitan center of southern California.

The most southerly route from the eastern states into California is the transcontinental highway, U. S. Route 80, from Savannah on the Atlantic seaboard through Shreveport, Dallas, El Paso and Phoenix to the California line at Yuma. Within California this route is in excellent condition. It passes from the crossing of the Colorado River at Yuma to the heart of the fertile Imperial Valley at El Centro. The highway is entirely paved and surfaced over this portion of the route with Portland cement or asphalt concrete or with bituminous treated crushed rock. Between the State line and El Centro two contracts covering 28 miles of asphalt concrete surfacing are now speeding towards completion, and a third, 6 miles in length, has just been completed.

VARIETY OF SCENERY

At El Centro the motorist has a choice of two routes on State highways into Los Angeles. The one, along the Mexican border to San Diego and thence northward along the coast, is a wide, smooth pavement throughout its entire length and presents a variety of scenery as well as the opportunity for a stop at California's most southern seaport—beautiful San Diego. The alternate route is more direct and traverses the desert east of the coastal range to San Bernardino. This road is also paved throughout its length and presents long stretches of straight highway with minimum grades.

Entering California by way of U. S. Route 66, which extends from Chicago through St. Louis, Tulsa and Albuquerque to Needles, the motorist will cross the southeasterly portion of the Mojave Desert with its captivating mystery of iridescent color on one of the finest desert highways in the West. During the past three years construction has been carried eastward on this route from San Bernardino. The construction of the last two unimproved sections, covering the 30 miles from Essex to one mile south of Klinefelter, now under construction, and the eight-miles between Devore and Alray, just south of Cajon Pass, which will be built this year, will bring this road to modern standards. This

desert highway has a roadbed width of 36 feet with a surface of bituminous treated crushed rock 20 feet wide.

MODERN STANDARDS

Connecting with U. S. Route 66 at Barstow is U. S. Route 99 which comes from Salt Lake City by way of Las Vegas, Nevada. In California, this road is a unit of the State system and has been brought to modern standards over nearly its entire length. Of the 118 miles between the State line and Barstow, 81 miles have been completed to modern standards or are now under construction. The same types of high grade desert construction have been used on this highway as have been so successfully used between Needles and San Bernardino.

Arriving at San Bernardino by one of the three routes above described, the State highway system offers the choice of two routes over the 70 miles into Los Angeles.

One is the Foothill Boulevard, which skirts the base of the Sierra Madre through Glendora and Monrovia to Pasadena. The other State highway lies a few miles to the south and passes through Pomona directly into Los Angeles.

BEAUTIFUL HOMES

Both of these routes are fast traffic boulevards with wide pavements of the highest standards. They pass through the very heart of the southern California citrus section and present the tourist with views of beautiful homes set among orange groves with purple ridges of lofty mountains to the north as a background.

The visitor to California, traveling over the southern route may, upon reaching Phoenix, Arizona, elect to reach the California line at Ehrenberg and cross the desert via the Blythe-Mecca lateral which connects with the El Centro-San Bernardino road north of the Salton Sea. This State highway is a good desert road with the 50 miles west of Blythe of modern construction having a bituminous treated crushed rock surface 20 feet wide.

The visitor, laying his course to the Olympic Games by way of San Diego, has a drive of 135 miles from San Diego to Los Angeles which is rich in beauty and historical interest.

From San Diego to San Juan Capistrano the State highway skirts the shore of the blue

Romance, Beauty, History on Highways

(Continued from preceding page)

Pacific following "El Camino Real" where, in the days of Spanish California, the sandaled feet of Franciscan Padres trekked the day's journey from one mission to another. This route is another of California's intercity boulevards, of which the State is justly proud. Paved with Portland cement or asphalt concrete, from 20 to 56 feet in width, with long radius curves and easy grades, this highway makes a delightful finale to a trip to the Pacific Coast.

Recent construction on this route has been of considerable aid in maintaining it to the highest standards and includes the construction of several grade separations, the new reinforced concrete bridge across the San Luis Rey River at Oceanside, the construction and paving of the Rose Canyon cut-off at the northerly city limits of San Diego and a large paving contract, now under way, between San Mateo Creek and Serra, in Orange County.

ROMANCE OF GOLD

An interesting approach to Los Angeles through central Nevada may be made by way of Reno and Carson City, entering California through West Walker Pass, north of Mono Lake. Or the entrance to California may be made through the old gold mining centers of Nevada, in the vicinity of Tonopah, by way of the Montgomery or Westgard passes south of Mono Lake.

All these approaches bring the motorist over improved roads into the long Owens Valley where they connect with the splendid State highway which runs the length of this valley and passes through the grotesque Red Rock Canyon into the northerly end of the Mojave Desert. This highway then circles the Tehachapi and connects with the central artery of the State highway system at Saugus, a few miles north of Los Angeles. Through the Owens Valley and as far south as Mojave this route is of recently constructed bituminous treated crushed rock. From Mojave to Los Angeles the highway is paved with Portland cement concrete.

From the eastern and middle western states the Lincoln Highway extends from Washington D. C., via Cincinnati, St. Louis, Kansas City and Pueblo through the Rockies to Salt Lake, thence to Carson City and into California along the south shore of azure Lake Tahoe.

Within California this route passes over the Sierra Nevadas at Echo Summit and drops down their western slopes through the beautiful canyon of the South Fork of the American River to picturesque Placerville, the historical old "Hangtown" of gold rush days in California, and thence over the broad Sacramento Valley to Sacramento, where it joins the smooth ribbon of the Golden State Highway which connects the State Capital with Los Angeles.

From the State line to Placerville this route has, within the past few years, been constructed to modern standards of mountain highway construction with a wide roadbed surfaced with bituminous treated crushed rock 18 to 22 feet wide.

ANOTHER POPULAR ROUTE

Between Placerville and Sacramento the road is paved with Portland cement and asphalt concrete.

The most popular northern route into California is over U. S. Route 40, the transcontinental highway from Baltimore via Columbus, Indianapolis, St. Louis, Kansas City, Denver, Salt Lake and Reno. This route enters California via Truckee just to the north of Lake Tahoe and crosses the Sierras over the beautiful Donner Summit. From here it winds down the western slopes of timber clad mountains, the finest of California's mountain highways, reaching Sacramento via Auburn.

The past several years have seen large reconstruction projects change this road from the winding wagon trail of the early fifties to a modern high-speed mountain highway. Seven railroad grade crossings have been eliminated and the road reconstructed on new alignment between the airport west of Emigrant Gap and Soda Springs, and new surfacing or pavement has been or is now being placed between Truckee and Hinton, Colfax and Gold Run, Newcastle and Auburn, Roseville and Rocklin and Sacramento and Sylvan School.

Some of the more adventurous tourists may elect to come to California via Yellowstone National Park. From the park the most direct route to this State is through Twin Falls, Boise and Ontario, entering California through Fandango Pass east of Alturas.

(Continued on page 26)

U. S. Officials will Attend Conference Here on October 28

(Continued from page 4)

all western states, has been increased to even a greater extent.

Through the action of the Association at the Denver meeting the publication of Miscellaneous Publication No. 103 of the U. S. Department Agr. (Summary of Irrigation District Statistics of Western States) was made possible and expedited in such way as to make it available to the recent sessions of the Congress and State Legislatures.

OFFICIALS TO ATTEND

Attendance of Dr. Elwood Mead, U. S. Commissioner of Reclamation, Vice Chairman Ralph P. Williamson of the Federal Power Commission, and Lieut. Col. Thos. M. Robins of the U. S. War Department, at the Sacramento meeting, and their participation with State representatives in the discussion of Federal and State policies with respect to reservoirs, power development, flood control, and navigation, gives promise of a particularly interesting and informative program on the opening day of the Conference.

Meetings of the Association are open to the public and in addition to the members and many Californians who have already indicated their intention to attend, there is the possibility of attendance by officials from some of the eastern states who are interested in the work of the Association.

Provision is being made for the entertainment of the wives of visiting delegates and guests, and Sacramento Section of the American Society of Civil Engineers will entertain at a dinner and social evening on Wednesday, October 28th. A motor trip as guests of the Pacific Gas & Electric Company is planned for Friday afternoon and Saturday, October 30th and 31st.

The officers of the Association are:

Edward Hyatt, State Engineer of California, President; George M. Bacon, State Engineer of Utah, Vice President; and Everett N. Bryan, Hydraulic Engineer of California State Division of Water Resources, Secretary. The Executive Committee is composed of the President, Vice President and Junior Past President M. C. Hinderlider, State Engineer of Colorado.

Pessimism Jolted By Great Success Of 1931 State Fair

PESSIMISM surely received a jolt when the State Fair of 1931 passed into history as one of the most successful in a half century of the institution. Animated Californians and out-of-state visitors thronged the grounds by the tens of thousands.

The big show was excellent in every department. The stock and agricultural features were aggressively prominent, but the manufacturers and commercial interests spread their wares most attractively. Informative displays and good salesmanship will undoubtedly return dividends.

ALL ARE REPRESENTED

Practically all departments of the State government were represented. The object was to bring to the people information as to the character of service being performed, and to encourage them in a more general use of the services which the State has in operation for their material and social welfare.

The Department of Public Works, embracing the Divisions of Highways, Architecture and Water Resources, had a large booth in the Western States Building. It was visited by thousands. The minimum estimate was 20,000.

MAP DRAWS CROWD

The walled enclosure, scenically decorated and with four entrances, was located at the main entrance. In the center was a topographical map showing the highways, location of State institutions, county lines and waterways. It was a real center of attraction. This map—nearly 40 feet in length—brought home to visitors the magnificent expanse of the Golden State and proved to be one of the features of the Fair.

The interior walls of the booth were pictorial. Photographs of highways completed and under construction featured the Highway Section. The Architecture Section showed State institutions, and the Water Resources pictured everything from irrigation scenes up to the Hetch Hetchy dams. Many of the photographs were colored and framed.

Headquarters Shop activities were shown in pictures, laboratory work in exhibits of test results, and financial phases of the great department's work in statistical statements in concise form. A large topographical map of the State showing the State-wide Water Plan was under examination all day long.

Many a man who is a five-ton truck at the office is nothing but a trailer at home.—*Motor Land.*

CALIFORNIA AT A GLANCE attracted considerable attention at the State Fair. Despite the fact the Department of Public Works lost practically all its exhibit material during the recent fire on the grounds, a highly creditable exhibition was prepared for the recent exposition. A large relief map, showing the mountains, rivers, lakes, highways and towns of this State, was the magnet for thousands. The astonishing feature was that the majority of those inspecting it were adults. This photograph shows the map and a section of the exhibit devoted to the Division of Highways.

IN THIS CORNER the Division of Water Resources on the left and that of Architecture, on the right, gave visual proof of the important work being done by these branches of the Department of Public Works. With maps, photographs and statistics these divisions told their story of achievement to multitudes that daily thronged the joint exhibits at the Fair.

Sacramento Valley Problem Analyzed

(Continued from page 10)

The uses of water in the Sacramento River Basin include those for municipal and domestic supplies, irrigation, industrial use, power development, navigation, the prevention of invasion of saline water into the delta, hydraulic mining and recreation. Of these, the use for irrigation purposes does, and probably will continue to predominate, and has, therefore, been used as the basis for estimating the water requirements of the basin.

In order to determine the ultimate requirements of the Sacramento Valley and the Sacramento-San Joaquin Delta, a classification survey was made of all lands in the valley and adjacent foothills to determine their adaptability for irrigation. More than merely a soil survey, the classification considered the effect of topography, alkali, and soil texture on the probable use of water on the land. Nearly nine million acres were classified, and from this work the net areas of irrigable lands in the valley and foothill areas and mountain valleys were determined. Of the 6,435,000 acres of agricultural lands, there is a net irrigable area of 4,266,000 acres that may at some time require a water supply. In comparison with this only 1,076,000 acres including the mountain valleys were irrigated in 1929.

WATER ESTIMATED

At the same time that the land classification was being made, a crop survey was carried on to determine the areas most suited for various crops. Estimates then were made of the areas which might ultimately be planted to certain crops or groups of crops. Water requirement for each crop was determined, both the amount of water actually used and the amount which it would be necessary to divert to supply this use.

By these means an estimate was made of the total amount of water required for each section of the Sacramento River Basin including the delta.

In addition to the water required for consumptive use in the delta, a sufficient supply of water flowing into Suisun Bay must be provided in order to repel the effect of tidal action in advancing salinity. In order to limit the increase of salinity at Antioch to a mean degree of not more than 100 parts chlorine per 100,000 parts of water, with decreasing salinity upstream, the annual amount of water required would total 2,390,000 acre-feet. This would be made up in large part from waste waters.

The ultimate annual gross water requirements for the Sacramento River Basin and Sacramento-San Joaquin Delta including requirements for salinity control would amount to 15,864,000 acre-feet.

STATE WATER PLAN

The State Water Plan for ultimate development of water resources of the Sacramento River Basin includes construction of ten reservoirs in the basin and one on Trinity River with a diversion from this stream to the Sacramento Valley. The operation of these reservoirs for flood control is contemplated in the State Plan, and would not materially impair their value for conservation purposes, nor materially decrease the amount or value of the electric energy generated by water released from them. An increased degree of protection to the areas subject to overflow, particularly those within the Sacramento Flood Con-

trol Project, and a substantial reduction in flood flows with decreased potential annual flood damages would result from the operation of these reservoirs for flood control.

In order to determine the amount of surplus water available in the Sacramento River Basin under conditions of ultimate development, a study was made covering the driest period of record, that from 1918 to 1929. Operations of all ultimate major units of the State Plan in the Sacramento River Basin were coordinated for several purposes: regulation of run-off to meet irrigation demands, reduction of flood flows, improvement of navigation and control of salinity.

HERE ARE RESULTS

The results of coordinated operation of these units shows the following results would have been accomplished:

1. A full and dependable supply would have been made available for the irrigation of every acre of irrigable land in the Sacramento Valley, foothills and mountain valleys.
2. Flood flows would be reduced from one-quarter to one-half at the dams.
3. Navigation would have been improved on the Sacramento River.
4. There would have been an annual flow into the delta of 6,000,000 to 15,000,000 acre-feet per year, depending upon the season, which would be more than sufficient for full use on the delta lands, and control of salinity to harmless amounts at the lower end of the delta. After supplying all these needs, there would have been a minimum surplus available in the driest year of 2,000,000 acre-feet and an annual mean surplus of 6,000,000 acre-feet for beneficial uses.

SALINE WATER INVASION

The most important water problem in the Sacramento River Basin is the invasion of saline water into the upper San Francisco Bay and delta channels. In addition to this, the increased irrigation development has caused such heavy drafts on the rivers during the summer months that navigation has been hampered and in some years there has been a serious shortage of irrigation water. All these problems, salinity control, navigation and deficiency in irrigation supply along the Sacramento River are closely allied.

The State Water Plan proposes for initial development in the Sacramento River Basin the construction of the Kennett Reservoir. The Kennett Dam would be 420 feet high, creating a reservoir of 2,940,000 acre-feet capacity. The estimated cost, including an afterbay and power plants is \$84,000,000. This is the most favorable and economic unit of the State Water Plan in the Sacramento River Basin adjudged feasible of construction when consideration is given to the number and extent of the benefits that would result from its operation.

CONTROL FLOODS

The reservoir could be operated to attain the following accomplishments:

What State Water Plan Proposes for Sacramento Region

1. Control floods in Sacramento River to 125,000 second-feet mean daily flow on day of flood crest, measured at Red Bluff, exceeded once in fourteen years on the average. The controlled flow exceeded once in 100 years on the average would be 187,000 second-feet, due to the uncontrolled run-off between Kennett Reservoir and Red Bluff. Flood flows in excess of 125,000 second-feet would be of short duration.
2. Maintain a navigable depth in the Sacramento River of five to six feet from the city of Sacramento to Chico Landing, with a substantial increase in depth from the latter point to Red Bluff.
3. Furnish in the Sacramento River an irrigation supply for the lands above Sacramento, without deficiency, up to 6000 second-feet in July, thus furnishing a supply in all years to all lands under irrigation along the Sacramento River above the delta. There would have been over 700,000 acre-feet more water available for these lands in 1924.
4. Furnish an irrigation supply, without deficiency, for the present requirements of the Sacramento-San Joaquin Delta.
5. Control salinity to the lower end of the Sacramento-San Joaquin Delta by release of water to maintain a fresh water flow past Antioch into Suisun Bay of not less than 3300 second-feet.
6. Make available in the delta a water supply, without deficiency, for the developed industrial and agricultural area along the south shore of Suisun Bay in Contra Costa County.
7. Make available an irrigation supply, without deficiency, in the delta sufficient in amount to fully supply the "crop lands" now being served from the San Joaquin River above the mouth of the Merced River. This would be conveyed to these lands by the San Joaquin River pumping system and would make possible the exportation of all the available supply in the San Joaquin River at Friant. This is not believed essential as an immediate step.
8. Generate 1,581,100,000 k.w. hours of hydroelectric energy per year on the average incidental to other uses, the sale of which would help defray the cost of the unit.

U. S. TAKES HAND

An independent investigation of the Sacramento, San Joaquin and Kern rivers, California, covering navigation, flood control, power development and irrigation is being made by the United States War Department. A partial report was submitted to Congress in February, 1921, and a complete report is expected to be submitted soon after Congress convenes in December. In the partial report, Major General Lytle Brown, Chief of Engineers, recommends that the Federal government contribute \$6,000,000 to the construction of Kennett dam in the interest of navigation.

The State's investigation has been made by the Department of Public Works, Col. Walter E. Garrison, Director, under the general direction of State Engineer, Edward Hyatt. The investigations have

HERE'S UNSUNG HERO! HE'S THE MAN DOING JOB OF MAINTENANCE

THE FOREST ranger, and the Canadian mounted police are lauded alike in printed romance and the silver screen, but there remains one hero of the west who is unsung. This is the highway maintenance workman, and he has a rough, dirty and unpleasant job. His work, often at inconvenient hours, many times is dangerous. When a road is washed out, day or night, he must be on deck working like mad that traffic may continue next day. Snowslides, cloudbursts, windstorms, or extremely high temperatures, find the workmen guarding and repairing your road. The sentinel waving the lantern late at night, the gang deep in the water of a swollen wash holding a bridge, the grimy man astride a scorching tractor seat when the thermometer is 120 each wears the invisible badge of courage.—*Palo Verde Valley Times*.

Howe Secretary of Highway Commission

John W. Howe has been named by Governor Rolph Secretary of the California Highway Commission, which position he assumed September 22d.

A Los Angeles newspaperman for sixteen years, during which time he occupied the positions of Assistant City Editor on the Los Angeles Examiner, Sunday Editor, Telegraph Editor, and recently Automobile Editor, Howe will become Editor of the CALIFORNIA HIGHWAYS AND PUBLIC WORKS BULLETIN starting with the next issue.

Prior to coming to California in 1915, Howe served on several New York newspapers, being eight years Day City Editor of the New York American.

Eric Cullenward who has been Secretary of the Commission for four months, recently was made Chief of the Bureau of Publications and Documents, a new bureau created by an act of the last Legislature to supervise and control publication of State documents other than those prepared by elected officers.

Husband—Good Heavens! Our daughter says in this telegram that she has eloped with a contortionist.
Wife—So that's what she meant when she said she was going to get something for the rumble seat.—*Motor Land*.

been outlined and supervised by A. D. Edmonston, Deputy State Engineer, and the investigation for the Sacramento River Basin has been executed under the immediate direction of T. B. Waddell, and salinity investigation of the Sacramento-San Joaquin Delta under the direction of Raymond Matthew.

Opening of Bartlett Springs Road Proves Signal for Community Dinner

WITH A LONG name and rejoicing over the opening of a long and whimsical road, the National Forest-Upper Lake-Bartlett Springs Highway Association members foregathered with invited guests at Bartlett Springs, Lake County, August 29th.

A safe road, a drivable highway, now threads the green draped mountains of Lake County between Upper Lake and the famous old resort. It is not a speedway, but it is

The officers of the association, J. A. Younggreen, President; and Roy Bucknell, Secretary, and Mrs. McMahon, were active hosts.

Present were; Congressman and Mrs. Lea of Santa Rosa; L. Brown, Highway Engineer, San Francisco; Chas. D. Hafferty, President Lake Co. Chamber of Commerce, Lakeport; Ben Bow, National Automobile Club; W. T. Smith, Supervisor, Lake County, Lakeport; J. A. McMinn, Redwood Empire

EVERYBODY HAPPY! They've just opened a new Lake County road and feel "mighty good."

Rear row (left to right): Al Banks, Frank Crayton, Don Younggreen, Lon Eichler, Roy Bucknell and H. H. Dunning. Front row: W. P. Mariner, W. T. Smith, Jack Frost, Mrs. Cal McMahon, James K. O'Brien and J. A. Younggreen.

no longer a trail; and it is such an improvement as to be a distinct achievement.

Thanks to the Federal Forest Aid Fund and the cooperation of the State Highway Division, the small sum of \$25,000 has been made to work wonders. It is a road of many, many curves, but it has a smooth and safe base and will improve under travel. Lake County folk and their neighbors feel "mighty good" over it. The work is practically finished.

COMMUNITY SPIRIT

The dinner at the springs brought together a representative company. Everybody was happy, and the addresses reflected a fine community spirit. Congressman Lea, a native of the section, made the principal address. State Senator Ingels spiced the program with some localized humor. Nearly every man present responded to the call of Chairman Younggreen.

Association, and Mrs. McMinn, Healdsburg; Victor Eichhoff, *The Press*, Lakeport; Mrs. Eichhoff, Yacht Club, Lakeport; Senator and Mrs. Ingels, Potter Valley; J. Frost, Manager of Bartlett; Arthur T. Poheim, Bartlett; Don Younggreen, Upper Lake; Lon Eichler, *Appeal-Democrat*, Marysville; Frank Crayton, President Colusa Chamber of Commerce, Colusa; W. P. Mariner, Supervisor, Lake County; Ed Enzenauer, Chairman Sonoma Board Supervisors, and Mrs. Enzenauer; H. H. Dunning, Marysville; Clyde Edmundson, General Manager Redwood Empire Association, and Mrs. Edmundson; Mrs. Cal. McMahon, Vice President Bartlett Springs Co.; Jas. K. O'Brien, President Tahoe-Ukiah Highway Association; A. L. Banks, Department of Public Works, Sacramento; Roy Bucknell, Postmaster Unupper Lake; J. A. Younggreen, Banker, Upper Lake.

Oil Spraying and Burning Clean Roadsides, Eliminate Fire Perils

DURING the past three years the Division of Highways Maintenance Department has made a systematic effort to conserve California's watershed, grazing and agricultural lands by the elimination of fire hazards adjacent to the roadways. The 1931 program, covering 1150 miles at a cost of \$80,000, extended into 46 counties of the State.

Prior to 1928 this work was on a somewhat limited scale and was mainly for the purpose of improving the appearance of the roadsides and only incidentally as a fire precaution. The serious fire losses of 1927 brought the matter forcibly to attention, and during the 1928 season the work was extended to include some major clearing of right of way as a fire precaution measure. The work that season covered 660 miles of roadsides.

MODE OF TREATMENT

The areas selected for treatment are generally opposite grain fields, pasture and heavy brush lands. The treatment is not applied through built up areas, orchard country or adjacent railroad rights of way which, in effect, constitute a natural firebreak.

The treatment consists of Diesel Oil of 27+ gravity applied to a nine-foot strip either side of the roadway at the rate of one-tenth to one-sixth gallon per square yard of surface treated. This is allowed to stand for a week after which the vegetation is fired. The application is made during the months of February and March while the vegetation is green so that when the treated area is burned fire will not spread to the adjacent fields.

EVERY PRECAUTION

The burning operations are conducted under very specific instructions and the crews so engaged are expected to use every precaution to protect traffic as well as trees, shrubs, fence posts and other inflammable property.

The development of proper equipment to spray considerable area at reasonable speed has required considerable experimenting. It was necessary that the spray be applied adjacent to the fence lines and that it be sufficiently flexible to use on cut and fill sections

of the foothill roads as well as the level-going valley turnpike sections.

The present outfit is a detachable trailer carrying pump and engine in addition to a turn-table and platform for the operator. The turn-table supports a telescopic outrigger arm which in turn carries a three-fourths-inch hose and spray bar consisting of a nine-foot section of three-fourths-inch steel tubing carrying eight orchard type spray jets. The outrigger may be extended or drawn in and may also be raised or rotated at the will of the operator. The spray bar also may be raised or lowered as desired.

13,000 GALLONS A DAY

The trailer and hose connections are so designed that transfer from an empty truck to a full one is only a matter of minutes. Outfits of this type are capable of spreading 13,000 gallons of distillate per eight-hour day.

The work of the Division of Highways in spraying and burning roadside vegetation to reduce fire hazards is supplemented by clearing in forest areas. Each fall and winter crews are engaged in cutting and burning slash and down timber within the State highway right of way. During the past winter a considerable sum was expended for this purpose out of the allotment made to relieve the unemployed, and it is expected to continue the work this winter with the relief forces which will be placed at work in October.

There are 7,947,000 miles of motor roads in the world.

Poor motorist—His life is full of unnecessary hardships. Just think, he has to wait until 1932 for a 1933 model car.

"What is a pedestrian?"
"It is a person with a wife, daughter, two sons, and a car."

An infernal machine is any kind of motor vehicle that ambles along the middle of the road at just about ten miles per hour.

Another reason why everybody wants a powerful car is to be able to get out of a parking place—by pushing half a dozen cars that have the brakes locked.
—*Motor Land*.

American products control approximately 90 per cent of the demand in Finland for automobile replacement parts, accessories and service appliances, according to Department of Commerce reports.

\$1,931,266 Income for Year in Shops

(Continued from page 6)

functions of the Equipment Department were the receiving and distribution of this second-hand equipment.

SELF-SUPPORTING

It is far different now. The responsibility has been gradually extended until at the present time the equipment service is a self-supporting subdivision of the Public Works Department.

The shop is not a factory. It maintains equipment, and it adapts it to special service. In building oilers, scrapers and fire trucks it has given evidence of ingenuity. It paints, repairs and services cars but it does not undertake body building or production in competition with specialized service. R. H. Stalnaker, the Equipment Engineer, who has developed the service, is not alone alert in delivering mechanical efficiency, but has a keen eye to the business angle. He is quoted as saying:

"The Equipment Department is self-supporting, subsisting solely upon the revenue it receives from the rental to other departments and divisions of its own possessions. The rentals collected cover an adequate depreciation reserve to retire all equipment at the end of its useful life, as well as to keep it in repair during the period of its use. These rentals are adjusted from time to time on the basis of experience.

YIELD SMALL SURPLUS

"During the past three fiscal years the rentals collected have yielded a small surplus over and above the expenses of the department and the depreciation reserve set aside. This surplus, after making a small deduction for contingencies, has been returned to the district responsible for its accumulation."

The average personnel of the department is about 350 men. There is a close system of inspection throughout, and the Accounting Department carries the cost and working history of every piece of equipment. Identified primarily with the Highway Division, the Headquarters Shop is, nevertheless, a State shop, serving every branch of the motorized service.

BUSINESS PROPOSITION

During the last fiscal year the Equipment Department collected in rentals for equip-

ment \$1,929,229. Miscellaneous revenue received amounted to \$2,037, bringing the total income of the department up to \$1,931,266. The operating expense of the department for the year was \$922,335. **There was set aside for depreciation and reserve \$892,178, and returned to the districts \$116,753.**

It is interesting to note that during the first 30 months of operation of the rental system and the control of equipment by a central headquarters 56.2 per cent of the rental received was expended for repairs to equipment and 13.2 per cent for administration and miscellaneous expenses, leaving 30.6 per cent available for depreciation reserve, while in a recent annual report there was shown to have been expended for repairs only 37.5 per cent and for administration and miscellaneous expenses 10.3 per cent, while the portion available for depreciation reserve had increased to 52.2 per cent.

HIGHLY ORGANIZED

The inventory value of the rental equipment in the hands of the Equipment Department at the end of the fiscal year amounted to approximately \$3,500,000. The replacement value of this equipment would be considerably higher as the appraised values are in all cases considerably below not only the original cost, but the replacement cost at this time, to the State.

F. E. Burnside, Shop Superintendent, has his men under close supervision, there being a foreman to the average group of twenty. He insists on study and improvement, and the smoothness with which work proceeds quickly attracts notice. He says, "Our work ranges from small instruments to gas shovels and fire trucks. It is up to us to adjust and adapt machinery to the Division's peculiar and varied needs, and to maintain it up to the most efficient point possible."

So immersed are men like Stalnaker and Burnside in their work that they have absorbed its many angles; and they are often called on to produce technical papers before societies interested in the vital phase they represent in Maintenance Service.

It must have been something of a blow to the father of six lovely daughters who, while reading a telegram from home announcing the birth of a seventh lovely daughter, looked up and saw the sign: "If you want a boy, call Western Union."—*Exchange*.

Build Roads NOW While Cost is Low And Men Need Work

EXPENDITURES on highways are profitable now because of the needs of the unemployed and the low cost of accomplishing needed road and street improvements, according to W. R. Smith, president of the American Road Builders' Association.

"Road building readily absorbs men engaged in all industries that are temporarily inactive. No special training is required for common labor on the roads and streets and, therefore, highway building is an ideal public work for the relief of unemployment. A man who is given a job does not lose his self-respect like one who is forced to accept charity.

"The recent statement of a representative of the American Society of Automotive Engineers that within a decade road speeds of 100 miles an hour are to be expected gives an idea of the additional burdens that are continually being placed on the highways. We may expect under such speed conditions express highways with marginal roads for slow traffic, much elimination of both highway and railroad grade crossings, and the relocation and widening of many highways to fit them to handle high speed traffic. The formula for highways, safe drivers plus safe vehicles plus safe roads equals safety, states the three elements that must be considered.

"Roads for the public can be built now at a much lower cost than in past years and it is highly improbable that the present conditions of depressed prices will continue indefinitely. The public can buy roads and streets now to advantage.

The expansion of the highway program needed to bring roads and street facilities up to the standard of motor vehicle improvement will do much to stimulate business."

BRIEF AND TO THE POINT

If people would whistle more and whine less; work more and worry less; boost more and beef less; give more and grab less; business would be better darn fast. (Signed) *Galen Starr Rose.*

A man who had been waiting patiently in the post office could not attract the attention of either of the girls behind the counter.

"The evening cloak," explained one of the girls to her companions, "was a redingote designed in gorgeous brocade, with fox fur and wide pagoda sleeves." At this point the long-suffering customer broke in with "I wonder if you could provide me with a neat red stamp with a dinkie perforated hem, the tout ensemble treated on the reverse side with gum arabic? Something about two cents."—*Wall Street Journal.*

CALIFORNIA HIGHWAYS AND PUBLIC WORKS

Address communications to California Highways and Public Works, P. O. Box 1103, Sacramento, California.

Vol. 9 SEPTEMBER, 1931 No. 9

THE ROAD PROGRAM

Programs of Federal, State and county governments for 1931 road construction call for a total expenditure of \$1,616,000,000, which is an increase of \$15,000,000 over the 1930 appropriations. The Federal contribution of \$249,897,000 is \$150,000,000 over 1930.

The problem of unemployment has been the most important factor in California for the increase in road budgets, and the farm-to-market movement has been another important issue for the State road program.

From the tourist standpoint Modocers travel the Alturas-Redding lateral can readily see how a part of the 1931 State appropriation is being spent.

Those who have lived here for the past five years have seen the road evolve from a wagon trail to a smooth and safe highway.

It might be said that the money we spend for roads gives us a better return than almost any other form of government tax expenditures. Quick and economical transportation of goods and persons is vital to social and economic progress. Particularly is this true of the rural areas where roads have been in essentially the same state of unimprovement since the horse and wagon days. Only by building inexpensive, but good roads, can farming sections be given a place in the march forward.—*Alturas Times.*

"Really, I can't play golf," the sweet young thing said. "I don't even know how to hold the caddy."

"Where's the car, Dad?" asked the son of an absent-minded professor.

"Why, dear me, I really don't know," he said, scratching his head in an effort to recall the past. "Did I take it out?"

"You certainly did. You drove it downtown this morning."

"Well, now, that is quite remarkable," said the professor. "I remember now that after I got out I turned round to thank the gentleman who had given me the lift and wondered where he had gone!"

—*Motor Land.*

State Prepared for Olympiad Traffic

(Continued from page 17)

Within California this route passes through an interesting volcanic country, replete with memories of the famous Modoc Indian War, to the head of the Sacramento Valley at Redding. The Redding-Alturas lateral is an improved oiled road well maintained and its scenic beauty well repays for its lack of pavement and high speed qualities.

From America's great northwest of Washington and Oregon connections are made with two main arteries of California's State highway system.

SCENIC ENTRANCE

The one enters California in the Siskiyou Mountains between Ashland, Oregon, and Yreka. This highway is of highest standards and, with the new construction just being completed along the rim of Shasta Canyon, presents a scenic entrance into the State. From Redding south the central artery of the State road system traverses the broad Sacramento Valley, with a choice of routes, equally well paved, on either side of the river, to the capital city.

From Sacramento the motorist may travel to Los Angeles by way of San Francisco and the Coast Route or he may take the shorter Valley Route known as the Golden State Highway. This section of the central stem of the highway network is a modern intercity boulevard of the highest type. Its reconstruction, throughout the fertile San Joaquin Valley with its thousands of acres of fruit, grain and vineyards, has been steadily pushed ahead.

FINE WIDE PAVEMENT

There are few stretches where the pavement is less than 20 feet wide or the roadbed less than 26 feet. The road is straight and smooth through the valley and crosses the Tehachapi Range by the famous Ridge Route which, in its present condition, presents wide pavements and broad curves and is all that could be desired of a mountain highway.

From the base of the mountains into Los Angeles this artery is, for the most part, a wide, three-lane pavement of Portland cement concrete.

The other route from Washington and Oregon enters California either by way of Marshfield on the coast, or by Grants Pass in

the mountains, to Crescent City, California's most northerly seaport.

"MOST" BEAUTIFUL

There is probably no more beautiful trip in California than this drive along the high bluffs overlooking the Pacific and through the famed redwood groves of Del Norte and Humboldt counties. This scenic highway extending along the 400 miles of coast from the Oregon line to San Francisco Bay has been graded, surfaced and paved so that it may be safely traversed by the most cautious of drivers. The past two years have seen a vast amount of construction over its entire length, both north and south of Eureka and throughout Marin County. It is not often that a highway of this high type can be found along a mountainous coast which offers the outlooks and vistas of beauty as found along California's Redwood Highway.

From cosmopolitan and enchanting San Francisco, the most obvious route to the southern metropolis of the State is the beautiful Coast Route.

ALONG SEASHORE

This intercity highway follows the San Francisco Peninsula to San Jose; thence through the peaceful Santa Clara and broad Salinas valleys, over the Coast Range and down to the broad shores of the Pacific at San Luis Obispo. From here the road skirts the ocean and passes through charming Santa Barbara and into Los Angeles, either by turning inland south of Ventura and entering the southern city through Hollywood, or by following the rugged shore line between Oxnard and Santa Monica.

Throughout its length this highway is a high-speed arterial.

The web of California's traffic lanes into the West's largest metropolis is of the highest type of modern construction, and the Administration and entire State point with pride to the forty-five hundred miles of paved and surfaced State highways which bind California into a unit. The visitor to the Olympic Games in southern California will enthusiastically verify our premise: "All roads lead to Los Angeles and the Tenth Olympiad."

Clever, Curious These Ants, and Deadly Workers

(Continued from page 5)

ably be found to be termites, and, if so, precautions should at once be taken to keep them away from frame structures, or, if they are already present, to get them out and keep them out. Numerous State buildings have already become badly infested to such an extent that, for one building located in the southern part of the State, the structural timbers were reduced to a mere shell and the building had to be condemned.

In this incidence, it was the "Kaloterms" or Dry Wood Type that was responsible.

Our principal problem, however, is one of prevention. Accordingly, certain requirements are being laid down in our specifications which will, we think, reduce the possibility of infestation to a minimum.

HARD TO CHECK

The writer has, for a number of years, been keenly interested in a study of the habits of the various species, common to the Pacific Coast, as it is only through such a knowledge that the type can be distinguished and the proper methods of control be used. Control is about all that can be hoped to be accomplished, and, even then, it is very doubtful whether certain types, such as the dry wood species, can be effectively checked.

We are informed by entomologists that the termite has existed for many millions of years, coming up through the different geological ages, and that they have probably existed ever since there has been any kind of carbonaceous growth in the world. Geologists as well as entomologists have identified them embedded in fossil amber. Traces of them have been found in the secondary as well as the tertiary geological periods. They are the most ancient of all existing life. Their civilization is not only the oldest, but the most curious, complex and intelligent that has ever appeared on this earth with the possible exception of man. It has certainly shown itself to be the best fitted to adapt itself to the difficulties of existence.

MANY KNOWN SPECIES

In spite of its misnomer, the White Ant, the termite, except for the reproducer which are black, approximate the color of the earth that it lives in, varying in size from 3 to 12 millimeters, according to the species. Entomologists state that there are 1200 to 1500 known species, of which forty-two have been found in the United States.

Thirteen species divided into four general classifications are common to the Pacific Coast. They have been exceedingly destructive in the tropical and sub-tropical countries for many years but it is only during the past decade that they have been cause for any concern in this country. This is due, primarily, to the destruction of our forests and the great increase of dead wood so that, conditions becoming more favorable to their growth, they have now reached the

LEUCOTERMES FLAVIPES—That's what they are. They've come up through the cracks between boards of infested floor and made crater-like openings. They're bad, real bad, these termites.

point where the damage to pole lines alone has run into hundreds of thousands of dollars.

The termites have been especially active in Pasadena, Pomona and other southern California cities. From southern California they have spread to Arizona and Texas. The pole line has probably been the infection center from which they are spreading to the buildings. They are also rapidly spreading northward.

HAS PECULIARITIES

Sacramento is becoming quite badly infected with the subterranean type and the writer has found one dwelling here which had been attacked by the dry wood type. He has found rotted wood termites as far north as Plumas County. The termites thus far found on the Pacific Coast are divided into the following general classifications, each class having its own peculiarities which must be considered in any measures taken to eradicate them. These classes are as follows:

1. Rotted Wood Termites "Genus Termopsis" which attack decayed or rotted wood. The termites of this class are the largest species in size.
2. Sound Wood or Dry Wood Termites "Kaloterms" which are divided into three varieties. They live in sound, dry wood and need no ground connections or moisture.
3. The Subterranean Termites "Reticulitermes" which live in the earth from which they come to attack timber, returning to their termitaries in the earth through tubes which they build from the ground to the point of attack. This type is the one that constitutes our greatest problem in the North.
4. The Desert Type "Leucotermes" which occur in the southern part of the State. They build tubes similar in character to those constructed by the Subterranean type.

There are many varieties in these types, as well

Dead and Rotted Wood Termites' Food

(Continued from preceding page)

as in the other types not found on the Coast. Cellulose or woody material constitute their sole food supply. They also use this material to line the walls of their tunnels and construct their termitaries, adding sand and other material strongly cemented together. In the Orient these structures cover as much as an acre of ground and are often 16' or more in height.

While the smaller varieties of termites are about the size of an ant, they are distinctively different in shape, entirely lacking the wasp-shaped body of the ant. They are soft-bodied, consisting of head, thorax and abdomen. Common with other insects they have six legs. They keep entirely out of the light, except during colonizing periods, always remaining concealed within the wood, their termitaries, or their shelter tubes.

EXTREMELY DESTRUCTIVE

The wood is frequently honeycombed, nothing being left but a shell of tissue paper thickness.

As far as is known, termites do not attack living timber but confine themselves to dead wood, rotted wood lying on the ground, or wood that has been cut preparatory to use, or that is being used by man. Having once gained access to a wooden structure, they continue to feed on the wood until it is a mere shell and collapses. It is said that they have completely destroyed wooden buildings in the Orient within two or three years.

It is the ant who is their greatest enemy, and at the same time, is responsible for their greatest development. There is a strong resemblance to the ant in the organization of their colonies and in their highly developed social instincts, with cast divisions of Queen, King, Alates, Soldiers and Workers. Their evolution from the lower to the higher forms can be very readily traced in the existing species.

KING AND QUEEN RULE

It has been observed that there are certain favorable locations that become infection centers for the termites and that at regular periods the reproductive castes swarm, growing wings and flying in large numbers from the colonies. New colonies are established by each pair, King and Queen, where conditions are favorable to their growth. After getting the initial start, they increase very rapidly. It has been estimated that a Queen Termite lays over a million eggs in one year, continuing at this rate for about three years when a new Queen takes her place. We are informed that in the absence of a reproductive, a new Queen can be created from one of the sterile castes.

The Subterranean Termites live almost entirely in the ground with which they maintain a connection while attacking timber. They usually first attack sound or decaying timber left on the ground as carpenters' refuse or as forms for basement walls and foundations. Either through form lumber or by means of earthenlike tubes, very easily distinguished by one familiar with them, they crawl up and infest the main portion of the building. Of course, if the main structure is built very close to the ground, their entry to the timber is that much easier. They also penetrate masonry walls where a poor grade of mortar has been used and then work up through interior of the walls.

POISON IS USED

The Division of Architecture requires, for new con-

struction, that all form lumber and carpenters' refuse shall be entirely removed from the basement area, that frame construction in the basement area shall be treated by combined wood preservative and termite poison, and that, in addition, the ground area under the building shall be treated so as to provide a poison zone through which the termites would have to pass either to reach the wood above or to return to the ground from the structure above. Where old structures are found to have been attacked, infected wood is removed and burned and the ground surface, both inside and immediately adjacent, is thoroughly impregnated with sodium arsenite, borax or other termite repellants.

The Subterranean Type can be positively controlled by eliminating moisture or dampness. Therefore, if their tubes are broken so that they are cut off from the ground, those present in the structure will die since they can not get back to the earth to obtain moisture. Of course, if there is leaky plumbing in the building, the termites can continue to live and multiply as long as the condition exists.

DON'T LIKE GASOLINE

When in doubt as to whether there are Subterranean Termites present in the locality in question, wood stakes can be driven into the ground to a depth of about 6 inches. Inspection of these stakes in about five or six weeks will tell if they are present.

It is known that termites have an aversion to gasoline and asphalt products. Certain poisons will destroy them and, as some varieties consume their dead, the effect of poison is far reaching. For this reason any poison used in combatting them should be in a somewhat dilute form so that they will live long enough after coming in contact with it to return to their termitaries and thereby reach the reproductive center.

The Dry Wood Termites are the most difficult of the types common to California to combat successfully due to their nondependence on a moisture supply. They have no ground contacts. They enter a structure in the upper portion through cracks, nail holes, etc., and immediately penetrate the wood.

OCCUPY LARGE AREAS

While they prefer sapwood, they also work to a certain extent in the heartwood of the timber. Consequently, their presence is not discovered until after the colony or colonies have spread over large areas and very material damage has been done.

In order to control them, all infected wood should be removed and burned and, where this is impossible, Orthodichlorobenzene should be forced into the workings, or Paris Green introduced by bellows. This last method is quite effective due to the habit of the termites of grooming one another. The Los Angeles Building Department recommends treating the wood with creosote or with a 25 per cent solution of sodium arsenite. Wood so treated should, however, be painted after the poison is applied if one is to be sure that the treatment will be permanently effective.

The highest airplane landing field in the United States has just been opened at an elevation of 9000 feet on South Fork Meadows in Inyo National Forest, states a forest service report.

They Eat Fire, These "Highwaymen"

Mr. S. V. Cortelyou,
Division Engineer,
Los Angeles, California.

Dear Sir:

I wish to call attention to the good work of your foreman, Mr. James A. Stauff, at a recent fire we had on the Roosevelt Highway near Las Flores Canyon. Two beach cabins were on fire which threatened to spread to other cabins in the vicinity, and although this was after hours, the fire occurring at about 5:30 p.m., Mr. Stauff very kindly offered his services and did some very excellent work in helping us put out the fire.

I wish to take this opportunity in saying that Mr. Stauff has always cooperated with our department in every way, and wish to thank him and your organization for the hearty cooperation shown us.

Very truly yours,

SPENCE D. TURNER,
County Forester and Fire Warden,
Los Angeles.

Mr. Frank Burnside,
Division of Highways,
Sacramento, California.

Dear Mr. Burnside:

I wish to take this opportunity to express to you my appreciation of the excellent work done on the Rubicon fire on the El Dorado Forest by the following men who were sent out from your shops:

Ed. Shick, Fred H. Dodson, Paul Fenwick, R. G. Russel, Tom Ceccattini, Jack Rowe, Graham Rider.

Ranger Morris reports that the above men rendered most excellent service and it was through their energy and enthusiasm that this fire was checked in the small acreage that it was. I might add that the mere fact of man power in a country like Rubicon Canyon is not an indicator of how soon a fire will be checked, but the push and snap and determination of the man power is the factor that counts, and these men showed all of these.

Very sincerely yours,

EDWIN F. SMITH,
Forest Supervisor, Placerville.

State Irrigation Districts get O.K.

California irrigation districts are in comparatively healthy shape and far from general collapse.

That is the statement of State Engineer Edward Hyatt contained in a bulletin, No. 21-B, dealing with irrigation problems throughout the State.

Ninety-three per cent of 1930 bond payments due were paid, says the bulletin, despite the fact that, in general, the returns from the land did not exceed 75 per cent of those of 1929.

The report says that certain districts, intrinsically solvent, should have an extension of credit or a reduction in interest rates or both, and that districts in bad financial condition will require adjustment of debts in comparison with the ability of the land to pay.

Falling off of returns from farm operations during 1930 are blamed by the Division of Water Resources for the poor financial condition of a few of the irrigation districts.

Watch Auto Lights! Here's Law Digest

Do the lights on your car comply with the law?

All vehicles must carry lights from one-half hour after sunset to one-half hour before sunrise. Two headlights are required in front and one red light in the rear. Red tail lights are also required on trailers. Red lights which are visible from the front are prohibited on private automobiles. A red tail light is always required on the rear of vehicles which are stopped on the open road in the nighttime, and also in a city, unless there is sufficient light to reveal substantial objects for two hundred feet.

Glaring headlights are prohibited. Headlights are deemed to be glaring or dazzling when any part of the main bright portion of the beam strikes an object higher than the lamp center twenty-five feet or more ahead of the vehicle.

Americans are forgetting how to walk. But those who still can walk are learning to jump, and that helps some.

Gunston: "How do you spend your income?"

Durkee: "About 30 per cent for shelter, 30 per cent for clothing, 40 per cent for food and 20 per cent for amusement."

Gunston: "But that adds up to 120 per cent."

Durkee: "That's right."

Mrs. Bleep—Are you a back-seat driver?
Mrs. Bleep—Indeed I'm not! I sit right where I can grab the wheel if he doesn't do what I tell him!

—Motor Land.

ARCHITECTURAL AWARDS For Month of August

List of projects handled by the Division of Architecture for which contracts were awarded by Colonel Walter E. Garrison, Director of Public Works, during the month of August, 1931.

August 4, 1931—H. E. Pynn—Cottage for caretaker, Mount Diablo State Park.....	\$3,167 00
August 6, 1931—Raymond Concrete Pile Co.—Pile foundation work, water tower at Farm, Agnews State Hospital....	3,885 00
August 6, 1931—Otis Elevator Co.—Plunger electric sidewalk elevator, new dining room, San Quentin State Prison.....	947 00
August 6, 1931—Pacific Elevator and Equipment Co.—Alterations to passenger elevator, State Capitol.....	2,750 00
August 6, 1931—Anton Johnson—General work, Detention Building, California Institution for Women.....	72,490 00
August 6, 1931—Hickman Bros.—Plumbing work, Detention Building, California Institution for Women.....	11,990 00
August 6, 1931—George L. Patterson—Electrical Work, Detention Building, California Institution for Women....	2,355 00
August 6, 1931—E. J. Mattocks—Drilling and testing water well, Agnews State Hospital.....	6,285 00
August 7, 1931—J. E. Welsh—Heating Work, Detention Building, California Institution for Women.....	10,964 00
August 7, 1931—Oliver S. Almie—Border Inspection Station, Department of Agriculture, Crescent City.....	8,738 00
Total.....	\$123,571 00

No advertisements for bids have been issued since July 17, 1931, pending the wage scale act becoming effective and establishing a prevailing wage scale.

TO BUILD IS TO PROSPER

Idle money will remain as long as men are kept idle, and a state, county or city without good roads is behind the times, said A. P. Greensfelder in an address before the annual convention of the American Road Builders' Association at Washington.

"Are we going to stand still or help our communities to climb out of the depression?" he asked. "Construction is the balance wheel of American industry and follows closely the trend of industrial conditions. The laborer in building highways demands gloves, shirts, shoes, bacon, bread and other necessities."

Grocer: You want a pound of ochre? Is it red ochre for painting bricks?

Small boy: No, it's tappy ochre wot Maw makes puddin' with.—*Exchange*.

A small crowd of taxpayers of perhaps 100, more or less, had called upon the county board to protest the condition of a certain road. After all had been heard, the chairman of the board in a polite manner said: "From all reports, I'd say the road was fairly good, taken as a whole."

"True," said the spokesman for the complainants, "but we want to use it as a road, not as a hole."

Long, Bitter Battle For Colorado Water Brought to an End

VICTORY for the Department of Public Works in settling the long battle over allocation of the waters of the Colorado River, was announced at the last meeting of the Governor's Council by Colonel Walter E. Garrison. His report which tells the story, follows:

It is with keen satisfaction that I am able to report settlement of the long fight over allocation of the waters of the Colorado River.

The agreement ends an extended and bitter battle between agricultural interests and big cities of southern California.

RECORD BREAKER

The accord reached might be called the most important settlement of a water controversy since the Colorado River Compact was signed in 1922.

In the amount of water involved, it far transcends anything which has hitherto ever been done in the history of this or any other state of this country.

The agreement affects the so-called agricultural group, comprising Chuckawalla, Palo Verde, Imperial and Coachella irrigation and water districts on the one side and the metropolitan group composed of the city of Los Angeles, the Metropolitan Water District of southern California, the city of San Diego and the county of San Diego on the other.

WASHINGTON'S REQUEST

This accord was worked out by the Department of Public Works at the request of the Secretary of the Interior. It had been impossible, apparently, for the interested parties to come to any understanding on division of the Colorado waters.

In November, 1930, we received a request from Washington, that the Department of Public Works adjudicate the matter and try to reconcile the views of those interests desiring to use the water.

As a consequence a series of conferences were held between the groups named above, Northcutt Ely, Executive Assistant of the Secretary of the Interior, legal and engineering representatives of the United States Bureau of Reclamation, and our department.

A complete set of priorities and amounts of water to be used by each of the interests whose plans are definite enough to be considered at this time was established.

The agreement does not allocate specifically all the water which California may expect under the Boulder Dam Act and the Colorado River Compact. But it does state that all the water not allocated by the agreement, shall be used for agricultural interests east of the Coast Range and therefore, leaves some water for possible future developments.

A magnetic road sweeper or nail picker operating over 1200 miles of state highways in North Dakota during a period of 60 days, collected almost 7 tons of metal. This is an average of about 12 pounds per mile of road.

The curfew tolls the knell of parting day,
A line of cars winds slowly o'er the lea;

A pedestrian plods his absent-minded way
And leaves the world quite unexpectedly.

—*Exchange*.

WATER RESOURCES

*Official Report
As Of
September 1, 1931*

That the immediate crisis in water shortage in the Sacramento-San Joaquin territory is over, is indicated in the regular monthly official report of the Division of Water Resources under Edward Hyatt. Many new low records were established during August, particulars concerning which are included in the report. Details of flood control and reclamation activities, tabulation of dam applications and news of the irrigation districts also are included:

During the past month the regular field work has continued in the Sacramento-San Joaquin district, comprising measurements of all diversions, stream flow, and return water throughout the territory.

The draft on the Sacramento River due to irrigation diversions reached its peak during the past month, averaging approximately 4000 sec. ft. from Red Bluff to Sacramento. With the reduced inflow at Red Bluff this draft took not only the inflow but practically all of the return flow in the lower stretches as well. Within the past few days there has been some reduction in the draft and it is thought that the crisis in water shortage has passed. Some of the rice fields have reached maturity and have already started to drain off the water.

The past month has witnessed the establishment of many new low stream flow records. The low flow at Verona, 20 miles above Sacramento, apparently was reached on July 23 and 24 when the flow was only 260 sec. ft. At this time the irrigation draft between Verona and Sacramento considerably exceeded the Verona plus the small American River inflow so that there was no flow in the river at Sacramento. Tidal cycle measurements of flow at Sacramento were made July 9-12, 15-16, 20-23. During the measurement July 9-12, a maximum upstream discharge at high tide of 3850 sec. ft. was measured. In this cycle of measurements also it was found that there was an upstream flow for a total of practically 12 hours. A float placed in the stream showed a total upstream movement of 6 miles.

GRADUAL DECREASE

Due to the recent reduction in draft, flow at Verona has now come up to about 600 sec. ft. At Red Bluff there has been a very gradual decrease with a new record low of 2600 sec. ft. on August 10, and no indication of a rise. The minimum flow of the San Joaquin River near Vernalis apparently appeared on July 28, with 200 sec. ft. flow. There has been a slight increase since that date. At the end of July, therefore, there was a flow to the delta of not more than 200 sec. ft. from the Sacramento and San Joaquin rivers. When it is considered that 3300 sec. ft. is needed at the lower end of Sherman Island to control salinity in the delta, and 3700 sec. ft. is

needed to supply the consumptive use in the delta at the peak of summer, making a total of 7000 sec. ft. needed to prevent salinity encroachment and supply delta consumptive use, the extent and rapidity of this season's salinity encroachment will be more readily understood.

USERS ANXIOUS

The salinity sampling in the delta has continued as in the past month, and has been extended where necessary to completely record the encroachment. The delta water users have been greatly concerned as to the results of the salinity tests and bulletins giving the results have therefore been sent to a mailing list of over 200 water users at approximately four-day intervals.

Many special samples have also been reported. Special salinity sampling traverses have been made from Paintersville Bridge to Sacramento at regular intervals to establish clearly the rate of encroachment. The traverse of August 10 showed that the point reached by salinity of 100 parts of chlorine per 100,000 was one-half mile above Courtland, and that the point where it was just beginning to show was two miles above Hood Ferry. Probably two-thirds of the delta area now lies below the line of 100 parts of chlorine per 100,000 used as the rough figure for the danger line in irrigation. Where the high salinity exists, practically all the irrigation has stopped except that for celery. Two special investigators have been placed in the field to determine, one in the delta and the other in the up-river territory, all facts which will furnish a definite report for the present season on the actual damage which may have been or will result from the water shortage.

The water conservation campaign along the river above Sacramento has continued and has been successful in keeping waste to practically nothing. The accompanying table shows the comparison between the 1931 and 1924 stream flow and salinity data.

Station	Discharge in sec. ft.			
	1931		1924	
Sacramento River at Red Bluff-----	8/10	2600	8/10	2900

Car's Serial Number Needed for License

The serial number of the car and number of cylinders will hereafter be required on all applications for auto license renewal and transfers of second-hand cars or registration of new cars.

This information will be required says Russell Bevans, Acting Registrar of Motor Vehicles, in order to comply with the new provisions of sections 37 and 41 of the Motor Vehicle Act effective August 14th.

New certificate forms for 1932 will have spaces in which this information will be inserted.

As licenses are renewed and transfers made on the old certificates which do not have these spaces it will be necessary for the motorist to write in the information on the face of the old certificate of registration.

Captain Elmer Little: "Did you get that fellow's number?"

Unnamed Patrolman: "Naw, he was too fast for me."

Captain: "But, gee, that was a pretty brown-eyed gal he had with him sitting in the rumble seat."

Nameless One: "She sure was."—*Earth Mover*.

Not One Complaint Received on Oiling

A little praise now and then is relished by the best of men.

The Department of Public Works was very pleased with the reaction of press and public to Governor Rolph's executive order halting oiling operations on all State highways during the Independence Day holiday period.

Now comes C. C. Cottrell, manager of the Highways Bureau of the California State Automobile Association, who, in a letter to C. H. Purcell, State Highway Engineer, has this to say:

Dear Mr. Purcell:

I am very happy to advise you that so far this year we have not received a single complaint of your oiling operations.

In view of the nature of the work and oftentimes an impatient motoring public, we think this is an excellent record and therefore wish to compliment the men in your department having charge of this work.

Laws of practically all states prohibit traveling down grade with gears in neutral.

Dollar for Dollar Return Assured in Winter Relief Plan

(Continued from page 1)

during the months when labor will be under its greatest stress.

Statistical data compiled under the direction of C. H. Purcell, Chief of the Division of Highways, reveals that during the year 1931 State highway construction in California will amount to \$37,200,000.

During the first seven months of the year, January 1st to July 31st, contracts were awarded for road construction amounting to \$14,400,000. Contracts awarded the first seven months of 1930 amounted to \$11,000,000.

By December 31st additional contracts will be awarded and projects advertised for bids amounting to \$15,350,000. In addition to work let by contract, the State will spend \$7,450,000 for maintenance and minor improvements.

The following tabulations, arranged according to the classifications of the American Association of State Highway Officials, show the progress of the State's highway program for the year:

MILEAGE OF HIGHWAYS COMPLETED AND LET TO CONTRACT

January 1, 1931, to July 31, 1931

	Miles com- pleted	Miles con- tracted
High Type (Pavement)-----	91	144
Low Type (Bituminous Treated and Untreated Rock Surface)	116	348
Graded-----	45	56
Total-----	252	548

Oiled to Lay Dust----- 1,685

PROGRAM OF HIGHWAY CONSTRUCTION

August 1, 1931, to December 31, 1931

	Miles to be contracted
High Type-----	158
Low Type-----	156
Graded-----	53
Total-----	367

Total to be contracted for in 1931----- 915

To accomplish this task of highway construction an average of 8000 men are continuously employed by the State and con-

Col. Walter E. Garrison

tractors. The maximum number employed at one time during the first seven months of the year was 8550.

"Children should be seen and not heard," grandpa warned little Willie.

"You let that child say anything he wants to," bristled his mother. "I sold three of his bright sayings last month."—*Forbes*.

Deacon Callahan took his wife to the races. Just as the horses were lining up at the barrier Mrs. Callahan grasped the deacon nervously by the arm, and in a voice which was filled with emotion asked him for a safety pin, meanwhile grabbing frantically after something that seemed to be slipping around the knees. Just then some one near by shouted: "They're off!" And Mrs. Callahan fainted.—*Labor*.

During the day Mrs. Brown discharged her old maid and hired a new one, who answered the door bell when Mr. Brown arrived home in the evening. He carried a bunch of roses which he handed to the maid, saying:

"Present these to Mrs. Brown, telling her I want to see her at once."

"All right," said the maid, "but you better make it snappy, because she expects the old man any minute now."

Vital Statistics on Dam Construction

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources during the month of August, 1931.

NEVADA COUNTY—Donner Lake Dam No. 301. Donner Lake Company, San Francisco, owner; buttress dam, 13 feet above streambed with a storage capacity of 11,000 acre-feet, situated on Donner Creek tributary to Truckee River in Sec. 18, T. 17 N., R. 16 E., M. D. B. and M., for storage purposes, for recreation use.

LASSEN COUNTY—Jessen Dam No. 252. Mrs. M. L. Cone, Red Bluff, California, owner; earth dam, 43 feet above streambed with a storage capacity of 1600 acre-feet, located in Sec. 17, T. 34 N., R. 9 E., M. D. B. and M., for storage purposes, for stock use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of August, 1931.

SANTA BARBARA COUNTY—La Patera Dam No. 751. Sherman P. Stow Co., Santa Barbara, California, owner; earth, 14.7 feet above streambed with a storage capacity of 162 acre-feet, situated on La Patera Depression in Sec. 7, T. 4 N., R. 28 W., S. B. E. and M., for storage purposes, for irrigation use. Estimated cost \$11,000, fees paid \$110.00.

SAN MATEO COUNTY—Cascade Creek Dam No. 607-2. Humphrey Estate, Inc., Pescadero, owner; hydraulic fill, 523 feet above streambed with a storage capacity of 52 acre-feet, situated on Cascade Creek tributary to Pacific Ocean in Sec. 21, T. 9 N., R. 4 W., M. D. B. and M., for storage purposes, for domestic and irrigation use. Estimated cost \$5,750, fees paid \$57.50.

TUOLUMNE COUNTY—Bigelow Lake Dam No. 550. Tuolumne County, Sonora, owner; gravity dam, 8 feet above streambed with a storage capacity of 460 acre-feet, situated on East Fork of Cherry River tributary to Tuolumne, located in Sec. 35, T. 4 N., R. 21 E., M. D. B. and M., for storage purposes, for fish conservation use. Estimated cost \$650, fees paid \$20.

TUOLUMNE COUNTY—Buck Lake Dam No. 550-2. Tuolumne County, Sonora, owner; gravity dam, 8 feet above streambed with a storage capacity of 360 acre-feet, situated on Buck Meadows Creek tributary to West Fork Cherry Creek in Sec. 24, T. 4 N., R. 20 E., M. D. B. and M., for storage purposes, for fish conservation use. Estimated cost \$700, fees paid \$20.

PLACER COUNTY—Pulp Mill Diversion Dam No. 97-106. Pacific Gas and Electric Company, San Francisco, owner; arch, 25 feet above streambed with a storage capacity of 3 acre-feet, situated on Canyon Creek tributary to North Fork American River. For diversion purposes, for power use. Estimated cost \$2,500, fees paid \$25.

SISKIYOU COUNTY—Iron Gate Dam No. 91-3. California-Oregon Power Company, San Francisco, owner; arch, 165 feet above streambed with a storage capacity of 59,000 acre-feet, situated on Klamath River tributary to Pacific Ocean in Sec. 9, T. 47 N., R. 5 W., M. D. B. and M., for diversion and storage purposes, for power use. Estimated cost \$1,500,000, fees paid \$6,000.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of August, 1931.

TUOLUMNE COUNTY—Kincaid Dam No. 97-72. Pacific Gas and Electric Company, San Francisco, owner; earth dam, situated on small creek tributary to Curtis Creek in Sec. 9, T. 1 N., R. 15 E., M. D. B. and M.

SHASTA COUNTY—Baldwin Dam No. 97-85. Pacific Gas and Electric Company, San Francisco, owner;

earth dam, located in Sec. 23, T. 31 N., R. 1 E., M. D. B. and M.

FRESNO COUNTY—Florence Lake Dam No. 104-9. Southern California Edison Company, Los Angeles, owner; multiple arch dam, situated on South Fork San Joaquin River tributary to San Joaquin River in Sec. 1, T. 8 S., R. 27 E., M. D. B. and M.

PLACER AND SACRAMENTO COUNTIES—Diversion Dam No. 324. North Fork Ditch Company, Sacramento, owner; gravity dam, situated on North Fork American River tributary to American River, located in Sec. 23, T. 12 N., R. 8 E., M. D. B. and M.

RIVERSIDE COUNTY—Mockingbird Dam No. 814. Gage Canal Company, Riverside, owner; earth, situated on Mockingbird Canyon in Sec. 20, T. 3 S., R. 5 W., S. B. E. and M.

SHASTA COUNTY—Buckhorn Lake Dam No. 97-86. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on North Canyon Creek tributary to Sacramento River in Sec. 19, T. 33 N., R. 2 E., M. D. B. and M.

SOLANO COUNTY—Lake Madigan Dam No. 14-2. City of Vallejo, owner; earth, situated on Wild Horse Creek tributary to Green Valley Creek in Sec. 9, T. 5 N., R. 3 W., M. D. B. and M.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of August, 1931.

YUBA COUNTY—Lake Francis Dam No. 97-3. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on Dobbins Creek tributary to Yuba River in Sec. 5, T. 17 N., R. 7 E., M. D. B. and M.

NEVADA COUNTY—White Rock Dam No. 97-49. Pacific Gas and Electric Company, San Francisco, owner; earth and rock dam, situated on North Creek tributary to Fordsyke, in Sec. 22, T. 18 N., R. 14 E., M. D. B. and M.

ALPINE COUNTY—Twin Lakes Dam No. 97-59. Pacific Gas and Electric Company, San Francisco, owner; arch dam, situated on branch of Silver Creek tributary to South Fork American River in Sec. 22, T. 10 N., R. 17 E., M. D. B. and M.

SANTA CLARA COUNTY—Lower Howell Dam No. 622-2. San Jose Water Works, San Jose, owner; earth dam, situated on Russell Creek tributary to Los Gatos Creek in Sec. 31, T. 8 S., R. 1 W., M. D. B. and M.

FRESNO COUNTY—Florence Lake Dam No. 104-9. Southern California Edison Company, Los Angeles, owner; multiple arch, situated on South Fork San Joaquin River tributary to San Joaquin in Sec. 1, T. 8 S., R. 27 E., M. D. B. and M.

PLACER AND SACRAMENTO COUNTIES—Diversion Dam No. 324. North Fork Ditch Company, Sacramento, owner; gravity, situated on North Fork American River tributary to American River in Sec. 23, T. 12 N., R. 8 E., M. D. B. and M.

TUOLUMNE COUNTY—Kincaid Dam No. 97-72. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on a small creek tributary to Curtis Creek in Sec. 9, T. 1 N., R. 15 E., M. D. B. and M.

EDWARD HYATT, State Engineer.

September 1, 1931.

A Chinese editor inclosed a rejection slip, when returning contributions, which read as follows:

"We have read your manuscript with infinite delight. Never before have we reveled in such a masterpiece. If we printed it the authorities would take it for a model and henceforth would never permit anything inferior to it. As it would be impossible to find its equal within 10,000 years, we are compelled though shaken with sorrow, to return your divine manuscript, and for so doing we beg 10,000 pardons."

—Pittsburgh Chronicle-Telegraph

In the Realm of Women—With a Hoe

SOCIETY SECTION! Having to do with the activities of the wife of a Maintenance Superintendent, Mrs. Tremper. Without expense to the State she has turned the place on the left into the beautiful home on the right. Some gardener!

Flowers and Blooms Win Recognition for R. A. Tremper's Wife

R. A. Tremper is the Maintenance Superintendent for District II. As such, he's pretty hard to beat.

But Mrs. Tremper—there's a Maintenance Superintendent!

When Mrs. Tremper moved into the cottage shown in the picture in 1927—well, it was a shelter alright but little else.

And now, four years later, the gardens surrounding her home are among the show places of Boulder Creek and its vicinity.

By constant work and perseverance, diligence and care, Mrs. Tremper has turned the grounds surrounding the Maintenance Yard into a veritable forest of bloom and color. Especially in the spring and the greater part of summer is to be found a riot of beautiful flowers and blossoms.

Under direction and advice of State Landscape Engineer H. D. Bowers, Maintenance Yard foremen and State highway employees are being encouraged to beautify State property. In several sections of California are to be found attractive gardens and lawns planted in spare time by State employees.

Mrs. Tremper's effort stands out, however.

SHADY NOOKS—Another view of the Boulder Creek home of the Tremper's, giving a further idea of the intensive work done to beautify the place.

"Times certainly have changed," sighed Carleton.

"How so?" asked Herz.

"Why, at a little party last night, the women talked politics, while the men got off in a corner and exchanged recipes."

Small boy (to his father): The world is round, isn't it?

Father: It is.

Boy: Then if I wanted to go east I could get there by going west, couldn't I?

Father: Yes, and when you grow up you will be a taxicab driver.—*National Motorist*.

A stranger applied at the police station for a lodging, and when asked his name, replied that it was Smith.

"Give me your real name," he was ordered.

"Well, said the applicant, "put me down as William Shakespeare."

"That's better," the officer told him. "You can't bluff me with that Smith stuff."—*Tit-Bits*.

"Do you know Vandewater has eleven children?"
"He's gone stork mad, hasn't he?"—*Exchange*.

Water Masters Regulate Rivers' Flow

The Feather River situation has called for considerable activity. The river went dry at Nicolaus on July 10 with several large diversions below Marysville depending on its flow. Conditions were investigated by the Water Supervisor's office and a meeting of a number of the lower water users was held in the State Engineer's office on July 21, and the State Engineer conducted a similar meeting at Oroville on July 22 at which the larger water users and representatives of the Sutter-Butte Canal Co., Western Canal Co., Pacific Gas and Electric Co., and the Railroad Commission were present.

ECONOMIES MADE

As a result of these meetings the Pacific Gas and Electric Co. released additional storage from Bucks Reservoir, the Sutter-Butte Canal Co. and Western Canal Co. made certain cuts in their diversions and water was sent down the river to a point below the Nicolaus bridge.

An agreement providing for a State Water Master to regulate diversions in accordance with reasonable duty of water and crop requirements was presented to the water users and signed by them. This water master under the direction of the Water Supervisor's office began work July 23. A schedule of rotation among the general crop diverters was placed in effect. Subsequently it was found that additional storage releases would be necessary to reach the pumps of the Sutter Basin Co. below Nicolaus, and through representations of this company to Pacific Gas and Electric Co., and in view of the fact that the distribution of water was under the control of the State Water Master, the power company released a large additional flow from Lake Almanor beginning July 30, 1931. This flow reached the Sutter Basin pumps.

Up to the present time through close regulation by the water master and cooperation on the parts of the Sutter-Butte Canal Co. and Pacific Gas and Electric Co., the water users have been successfully supplied. It appears probable that the Feather River situation may lead to an action for ultimate adjudication of the water rights on the river below Oroville.

CALIFORNIA COOPERATIVE SNOW SURVEYS

A small amount of office work has been done in continuation of that reported last month in relating snow survey and precipitation data to run-off. Other office work included the preparation of plans and

specifications for standard frame and log shelter cabins. A trip was made in cooperation with officials of Nevada Cooperative Snow Surveys to inspect the snow courses of the Walker River Basin. Many of the courses required clearing and all of them were re-marked with the new California cooperative signs and accurate sketches and descriptions of the courses were secured.

FEDERAL COOPERATION

In connection with the Federal-State cooperation for irrigation investigations a review was made of the report of 1930 work in the Sacramento-San Joaquin Delta. The report has been prepared for incorporation in the regular 1930 report of the Water Supervisor. There has been some discussion relative to the conduct of the investigation to determine the consumptive use of aquatic plants, and the results up to August 1, 1931, for the tule and cattail tanks have been received and reviewed.

In connection with the Federal-State cooperation for stream-gaging, a tentative program for the quality of water investigation throughout the State has been outlined and submitted to the U. S. Geological Survey for an estimate of cost. A trip was made to the Pit River Basin for the inspection of gaging stations that have been maintained up to the present under the State's Pit River Investigation. Four stations were selected for permanent maintenance by the U. S. Geological Survey after the close of the Pit River investigation.

A trip was made for the selection of sites for permanent gaging station installations on the Feather River at Nicolaus (replacing present weekly recorder) and on the Sacramento River just below Wilkins Slough. These two stations will be built by the U. S. Engineers, Second District, in accordance with cooperative arrangement between the State and Federal departments.

SACRAMENTO FLOOD CONTROL

The weir in the Wadsworth Canal, built for the Reclamation Board, has been completed and water is now being held to about one-half full height. An additional week will be allowed for the concrete to attain full strength before water will be carried to the final elevation. The pavement over the fills at the ends of the dam will not be placed until the fill is completely settled.

RUSSIAN RIVER JETTY

Bids were received for the construction of 225 feet of trestle for the railroad tract to extend the jetty, and contract was awarded to the Healy-Tibbitts Construction Company at a price of \$9,743. The contractor has commenced work and piles are being driven. This contract provides for the use of steel piles.

Irrigation Cooperation is Outlined

(Continued from preceding page)

DAMS

To date 771 applications for approval of existing dams have been filed; 76 for approval of plans and specifications for construction or enlargement; and 170 for approval of repairs or alterations.

a. Applications Received for Approval of Plans and Specifications for Construction of Dams.

Dam	Owner	County
North Side Water Company	North Side Water Co.	Los Angeles
San Vicente Creek	Coast Dairies and Land Co.	Santa Cruz
La Patera	Sherman P. Stow Co.	Santa Barbara
Cascade Creek	Humphrey Estate Co.	San Mateo

b. Applications Received for Approval of Plans for Repair or Alterations.

Dam	Owner	County
Lower Howell	San Jose Water Works	Santa Clara
White Rock	Pacific Gas and Electric Co.	Nevada
Florence Lake	Southern California Edison Co.	Fresno
Mocking Bird	Gage Canal Co.	Riverside
Kincaid	Pacific Gas and Electric Co.	Tuolumne
Baldwin	Pacific Gas and Electric Co.	Shasta
Diversion	North Fork Ditch Co.	Placer and Sacramento

c. Plans Approved for Repairs or Alterations.

Dam	Owner	County
Port Costa Balancing Reser.	California Water Service Co.	Contra Costa
Spaulding No. 1	R. D. Craig	Modoc
Alta Forebay	Pacific Gas and Electric Co.	Placer
Lake Strawberry	Pacific Gas and Electric Co.	Tuolumne
Relief	Pacific Gas and Electric Co.	Tuolumne
Duke Reservoir	Royal E. Williams	Modoc
Lake Francis	Pacific Gas and Electric Co.	Yuba
White Rock	Pacific Gas and Electric Co.	Nevada
Twin Lakes	Pacific Gas and Electric Co.	Alpine
Lower Howell	San Jose Water Works	Santa Clara

Orders Authorizing Use

Orders authorizing use of the following dams pending formal approval, have been issued by the State Engineer.

Dam	Owner	County
Whittier	City of Whittier	Los Angeles
Sunset Canyon	L. A. Co. Flood Control Dist.	Los Angeles

WATER RIGHTS

a. Applications to Appropriate.

During the month of July, 36 applications were received for the appropriation of water; 8 were canceled and 20 were approved; 9 permits were revoked and 16 licenses issued.

Applications which were of special interest received during the month included one from the East Side Canal and Irrigation Company seeking the appropriation of 75 cubic feet per second from McCoy Spillway, Arena Spillway, Livingston Drain, Bear, Owens, Duck and Deadman creeks for the irrigation of some 50,000 acres in Merced County; and another from C. L. Brown, 600 S. Madison street, Pasadena, seeking the appropriation of 100 cubic feet per second

from Canyon Creek at a point some 12 miles northwest of Weaverville for mining and domestic purposes, the estimated cost of this latter project being \$150,000. During the month a second project for mining and domestic purposes and estimated to cost \$150,000 received a permit. This latter project involves the appropriation of 150 cubic feet per second from various small tributaries of Trinity River in the vicinity of Willow Creek.

b. Adjudications.

Shasta River (Siskiyou County). Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). A hearing on the exceptions to the Division's report as referee has been set by the Superior Court for October 5, 1931.

Los Alamos Creek (Santa Barbara County). Division's report as referee has been submitted to the Superior court and a decree is expected in the near future.

Mill Creek (Modoc County). All but two of the water users have signed a stipulation for consent judgment.

Deep Creek (Modoc County). Distribution of the waters of Deep Creek was continued throughout the month in accordance with the trial schedule of allotments which was adopted for the 1931 season.

WATER DISTRIBUTION

Cedar, Davis, Deep, Emerson, Franklin, Mill, New Pine, Owl, Pine and Soldier Creeks (Modoc County). Water master service on these streams was continued throughout the month.

South Fork of Pit River (Modoc County). Supervision over diversions from the South Fork of Pit River was commenced August first, under authority of an agreement signed by all of the water users involved.

Parker Creek (Modoc County). Supervision over diversions from Parker Creek was commenced August fourth, under authority of a court order issued July 31, 1931, directing water master service under a former court decree.

North Fork of Cottonwood Creek (Shasta County). A petition for water master service within the North Fork of Cottonwood Creek Water District was received on August sixth. Supervision over diversions from the stream was commenced immediately thereafter.

WATER RESOURCES

b. Santa Clara Investigation. The Santa Clara Valley Water Conservation District with which the division is cooperating in the Santa Clara Valley Investigation is contemplating an election upon the issuance of bonds with which to finance the construction of conservation facilities. An engineer has been

State Water Plan Meetings Held

(Continued from preceding page)

employed and work of preparing estimates is in progress. The district has, however, expressed a desire that the division continue with the investigation along the lines of the past 18 months. Well readings taken throughout the valley early last spring indicated a recession of some 76½ feet in the ground water during the past 16 years, 12 feet of which occurred during the last 12 months. This recession of ground water it is estimated indicates a gross depletion of underground storage amounting to 700,000 acre-feet during the past 16 years, of which 110,000 acre-feet occurred during the last 12 months.

WATER RESOURCES REPORTS

During the month, the following has been accomplished on the publications of the Division of Water Resources under Chapter 832, Statutes of 1929:

Work has progressed on the preparation of manuscript of bulletins No. 26, "Sacramento River Basin"; No. 27, "Variation and Control of Salinity in Sacramento-San Joaquin Delta and Upper San Francisco Bay"; and No. 29, "San Joaquin River Basin." Manuscript on Bulletin No. 28, "Economic Aspects of a Salt Water Barrier below Confluence of Sacramento and San Joaquin Rivers," has been completed and transmitted to the Consulting Board for final corrections and revisions.

Bulletin No. 23, "Rainfall Penetration and Consumptive Use of Water in Santa Ana River Valley and Coastal Plain," has been printed. This bulletin is a progress report of cooperative activities carried on by the Division of Agricultural Engineering, Bureau of Public Roads of the U. S. Department of Agriculture. The report was prepared by H. F. Blaney, assisted by A. A. Young and C. A. Taylor under the supervision of W. W. McLaughlin, Associate Chief. The publication contains some 160 pages written in two parts. Part I deals with "Rainfall Penetration and Consumptive Use of Water on Valley Floors," and gives outlines of methods of procedure and the data collected to July 1, 1930, on numerous plots of varied vegetation in the Santa Ana Valley. Part II deals with "Evaporation and Transpiration Losses from Moist Areas," and sets forth the results of tank and field experiments carried on in the Santa Ana Valley. The work outlined in this bulletin is being continued under Chapter 636 of the Statutes of 1929 to obtain more complete data on the needs for and the conservation of the water resources of the Santa Ana Valley, with particular reference to rainfall and its uses and losses from cultivated and native vegetation.

The following bulletins are now printed and are available for distribution:

Bulletin No. 25—"Report to Legislature of 1931 on State Water Plan."

Bulletin No. 28A—"Industrial Survey to Upper San Francisco Bay Area With Special Reference to a Salt Water Barrier Below Confluence of Sacramento and San Joaquin Rivers."

Bulletin No. 31—"Santa Ana River Basin."

Bulletin No. 32—"South Coastal Basin."

Bulletin No. 33—"Rainfall Penetration and Consumptive Use of Water in Santa Ana River Valley and Coastal Plain."

Bulletin No. 34—"Permissible Annual Charges for Irrigation Water in Upper San Joaquin Valley."

Bulletin No. 35—"Permissible Economic Rate of Irrigation Development in California."

Bulletin No. 36—"Cost of Irrigation Water in California."

LEGISLATIVE COMMITTEE

Authorized under Chapter 71, Senate Concurrent Resolution No. 28, the Joint Legislative Committee on Water Resources, consisting of fourteen members, Senator B. S. Crittenden, Chairman, met in a series of public hearings and executive sessions in the State Building, Civic Center, San Francisco, from August 6th to August 15th, inclusive, during which time a large number of individuals appeared to submit views and opinions on the State Water Plan.

WATER STORAGE DISTRICTS

Of the large number of laws passed by the 1930-31 Legislature, affecting California irrigation districts and similar organizations throughout the State, the most important was the California Districts Securities Commission Act, which repealed the Bond Commission Act of 1913. The securities act provides for a commission of five members, consisting of the Attorney General, State Engineer, Superintendent of Banks and two members to be appointed by the Governor, each of whom shall have had at least five years' experience in irrigation district affairs as an officer or employee. The act defines the duties of the Commission in relation to the bonds of irrigation districts, and under what condition such bonds may be issued and certified as legal investments for public and trust funds. It also provides for certain activities of the Commission in the refinancing of districts and in the readjustment of the financial affairs of insolvent irrigation districts. The Commission as now constituted consists of U. S. Webb, Attorney General; Edward Rainey, Superintendent of Banks; Edward Hyatt, State Engineer; M. J. Dowd, Chief Engineer of Imperial Irrigation District; and H. E. Vogel, Director of Fresno Irrigation District.

An initial and organization meeting of the Commission was held at San Francisco on August 19th, at which Attorney General Webb was elected permanent chairman. At this meeting the refunding programs of the Oakdale and South San Joaquin irrigation districts were given consideration and approval. The action of the Commission does not carry with it the authority for the issuance of bonds, which authority is conditioned on the approval of the plan by the voters of the district at special bond elections.

CONTRACTING THE AIR. Hemstreet & Bell literally drop in on their men nowadays. For they have purchased an airplane and do their inspecting of contract work via this modern medium. The photograph shows (left to right) D. A. Hemstreet and J. W. Bell with Mr. Allen, the pilot, taking a breather before embarking again on a scheduled trip to their various projects.

NOW COMES the contractor who frankly admits he's "up in the air" most of the time.

Of course there are engineers who think most contractors are "up in the air" ALL of the time.

But Hemstreet & Bell of Marysville do most of their work while up in the air.

For they have purchased an airplane for the contracting business.

Thus is demonstrated a modern means of increasing efficiency by permitting closer supervision of scattered jobs and giving directing heads of the organization more time for active and constructive work.

For example:

Hemstreet & Bell have an asphalt plant at Singley, near the bar on the Eel River. Here asphalt treated crushed gravel is being produced for a surfacing job between Lofeta and Eureka.

For the purpose of inspecting and directing the operations on this contract and to make field studies of a project adjacent to Crescent City and another near Scotia, upon both of which the firm desired to prepare bids, the contractors left headquarters at Marysville after breakfast one morning last week.

They landed at the Eel River Bar at 9.30 a.m. At eleven o'clock, they left for Crescent City, spent two hours inspecting the proposed

job there and landed at Singley again at 3.30 p.m. One hour and a half was spent inspecting the proposed work at Scotia and some additional time at the Singley plant.

The contractors left about 5.30 and reached Marysville again before seven o'clock.

Moral—Nothing to do till tomorrow.

CARE BY DRIVERS

Constant watchfulness against the possibility of injuring a person or causing property damage is required of motorists, according to a ruling of the Supreme Court in an eastern state received by the California State Automobile Association. The decision held that a motorist who sees a car stop at the side of the highway must bring his own car immediately under control and take every reasonable precaution in passing the parked car to avoid injuring any person who might get out of the machine, or who might attempt to cross the highway in front of the motorist.

AUTOS IN FRANCE

While still ranking third in the total number of automobiles, France last year achieved the greatest percentage of increase in registration. France made an increase of 13.5 per cent, as compared with 0.5 per cent for the United States. In car totals the United States headed the list with 26,691,000, followed by Great Britain with 1,558,000, and France with 1,500,000. There is one car in France to every 28 persons and one to every 4.6 persons in this country.

The Golfer: They're all afraid to play me. What do you think my handicap is?

The Girl: Oh, I don't know. It may be your face.

Highway Bids and Awards for August

AMADOR COUNTY—Between Amador City and Martell, stockpiling crushed gravel. Dist. X, Rt. 65, Sec. B, C. E. Reed, Tracy, \$9,600. Contract awarded to Adams Construction Co., Angels Camp, \$8,100.

BUTTE COUNTY—Between Shasta Union School and 6 miles north, 6.6 miles to be widened with bituminous treated crushed gravel or stone. Dist. III, Rt. 3, Sec. D, Hemstreet & Bell, Marysville, \$30,290; A. Teichert & Son, Sacramento, \$28,992; Harms Bros., Galt, \$27,930; Clark & Henery Construction Co., San Francisco, \$30,386; F. W. Nighbert, Bakersfield, \$33,049. Contract awarded to United Contracting Co., Portland, \$26,952.

DIL NORTE COUNTY—Between Crescent City and one-half mile east of Elk Valley, 5.1 miles to be graded and surfaced with untreated crushed gravel. Dist. I, Rt. 1, Sec. C, Interstate Construction Co., Portland, Ore., \$115,297; Kern & Kibbe, Portland, Ore., \$131,311; W. H. Hauser, Oakland, \$154,740; Kennedy Construction Co., Oakland, \$115,781; Frank C. Cuffe, San Rafael, \$127,446; H. J. Boomer, San Francisco, \$134,196; Daniel Eyles, Biggs, \$143,469; Hemstreet & Bell, Marysville, \$119,565; Condules Const. Co., San Francisco, \$127,790; A. Guthrie & Co., Inc., Portland, Ore., \$140,370; C. T. Malcom, Mapleton, Ore., \$149,860; Steele Finley, Santa Ana, \$116,580. Contract awarded to Healy-Tibbitts Construction Co., San Francisco, \$113,969.

EL DORADO COUNTY—Between 14 Mile Stone and Fresh Pond, 3.2 miles to be surfaced with bituminous treated crushed gravel. Dist. III, Rt. 11, Sec. F, Fred W. Nighbert, Bakersfield, \$18,327; A. Teichert & Son, Inc., Sacramento, \$14,420; Chas. N. Chittenden, Napa, \$14,366; Tiffany-McReynolds, Tiffany, San Jose, \$18,257; Harms Bros., Galt, \$14,340. Contract awarded to C. E. Reed, Tracy, \$12,745.

HUMBOLDT COUNTY—Between Red Crest and Holmes Road, untreated crushed gravel or stone surfacing 1.4 miles. Dist. I, Rt. 1, Sec. D, Smith Bros., Eureka, \$10,811; J. W. Bertram, \$10,857. Contract awarded to Delose C. Kemp, Crescent City, \$7,740.

HUMBOLDT COUNTY—Between S. Scotia Bridge and Fortuna, 10.2 miles grading surfacing. Dist. I, Rt. 1, Secs. E, F, Healy-Tibbitts Construction Co., \$149,294; W. H. Fouser, Oakland, \$147,096. Contract awarded to Hemstreet & Bell, Marysville, \$118,323.

HUMBOLDT COUNTY—Bridge across the east branch of the South Fork of Eel River, 2.7 miles south of Garberville, consisting of one 102-foot concrete barrel arch span and two 46-foot concrete girder approach spans with walls faced with stone. Dist. I, Rt. 1, Sec. A, Peter McHugh, San Francisco, \$108,122; Smith Bros. Co., Eureka, \$97,936; M. B. McGowan, San Francisco, \$119,454. Contract awarded to Rocca & Coletti, San Rafael, \$86,320.

LAKE AND COLUSA COUNTIES—Between Abbott Mine and 12 miles west of Williams, surfacing with gravel base. Dist. III, Rt. 15, Secs. C, D, C. W. Wood, Stockton, \$59,719; C. Anili Co., Huntington Park, \$84,966; Hemstreet & Bell, Marysville, \$73,350; Larsen Bros., Galt, \$59,850; Force Construction Co., Piedmont, \$55,122; A. Teichert & Son, Sacramento, \$56,909; F. W. Nighbert, Bakersfield, \$92,906; Clark & Henery Construction Co., San Francisco, \$78,508. Contract awarded to Frederickson & Watson, Oakland, \$50,905.

LOS ANGELES COUNTY—Reinforced concrete bridge across Fern Canyon about 5 miles northeast of La Canada, consisting of one 120-foot open spandrel arch and seven 135-foot slab approach spans. Dist. VII, Rt. 61, Sec. A, General Engineering Corp., Los Angeles, \$35,474; Oberg Bros., Los Angeles, \$26,690; R. H. Travers, \$32,137; Franklin B. Gridley, Pasadena, \$32,999; Robinson Roberts Co., Los Angeles, \$29,153. Contract awarded to Houghton & Anderson, Los Angeles, \$23,958.

Gasoline consumption in the United States increased 5.3 per cent in 1930.

During the first six months of this year motor vehicle registration in San Mateo County brought the total for that area to 26,197. Passenger automobiles totaled 24,521, with the remainder consisting of various other types of vehicles, such as trucks, trailers, and motorcycles.

MONTEREY COUNTY—At the Spence Underpass about 0.2 of a mile from the State Highway to the county road grading and surfacing with crusher run base and bituminous treatment. Dist. V, Rt. 2, Sec. B, Granite Construction Co., Watsonville, \$4,110. Contract awarded to W. A. Dontanville, Salinas, \$3,461.

MONTEREY COUNTY—Reinforced concrete bridge across Bixby Creek, 18 miles south of Carmel, consisting of one 330-foot open spandrel arch span and nine 40-foot girder approach spans. Dist. V, Rt. 56, Sec. G, Geo. Pollock Co., Sacramento, \$212,975; Barrett & Hip, San Francisco, \$234,067; Hanrahan Co., San Francisco, \$286,432; Lindgren & Swinerton, San Francisco, \$257,400; Rocca & Coletti, San Rafael, \$269,103; Gutleben Bros., Oakland, \$216,575; Merritt-Chapman & Scott, San Pedro, \$258,000; Fredrickson & Watson Construction Co., Oakland, \$233,151; Guy F. Atkinson, San Francisco, \$228,650; Oberg Bros., Los Angeles, \$218,400; Weves & Harp, Santa Clara, \$265,475; MacDonald & Kahu Co., San Francisco, \$237,360. Contract awarded to Ward Engineering Co., San Francisco, \$203,334.

ORANGE COUNTY—Pedestrian subway under State Highway and tracks of Pacific Electric Ry. Dist. VII, Rt. 60, Sec. A, Need Construction Co., Wilmington, \$14,322; R. R. Bishop, Los Angeles, \$11,485; W. M. Ledbetter Los Angeles, \$14,852; Franklin B. Gridley, Pasadena, \$17,435. Contract awarded to E. A. Irish, Los Angeles, \$11,026.

ORANGE COUNTY—Bridge across north arm of Newport Bay, near Newport Beach, one 12-foot steel stringer removable span and thirty-four 19-foot timber spans with concrete deck on crescented pile bents. Dist. VII, Rt. 60, Sec. B, R. H. Travers, Los Angeles, \$71,345; George Herz Co., San Bernardino, \$72,119; Need Construction Co., Wilmington, \$69,935; General Emergency Corp., Los Angeles, \$78,242; Robinson Roberts Co., Los Angeles, \$76,278; R. R. Bishop, Long Beach, \$72,462; W. J. O'Neil, San Francisco, \$67,446; Merritt-Chapman & Scott, San Pedro, \$69,244. Contract awarded to J. S. Metzger & Son, San Gabriel, \$65,249.

PLUMAS COUNTY—Steel stringer bridge across Spanish Creek about 1.5 miles north of Keddie, Dist. II, Rt. 21, Sec. C, R. B. McKenzie, Red Bluff, \$102,852; Barrett & Hip, San Francisco, \$105,550; Robinson, Roberts Co., Los Angeles, \$103,479; Dyer Bros. Golden West Iron Works, San Francisco, \$102,049; M. B. McGowan, San Francisco, \$103,356; A. W. Kitchen, San Francisco, \$111,272. Contract awarded to Rocca & Coletti, San Rafael, \$92,780.

SAN BENITO COUNTY—Between 11 miles north of San Juan Bautista and Pajaro River, 3.1 miles shoulders to be oiled. Dist. V, Rt. 2, Sec. A, W. A. Dontanville, Salinas, \$6,908. Contract awarded to Granite Construction Co., Watsonville, \$5,984.

SAN DIEGO COUNTY—At Jacumba, 1.1 miles grading, paving with Portland cement concrete. Dist. VII, Rt. 12, Sec. G, Gist & Bell, Arcadia, \$109,551; D. B. Carroll, San Diego, \$123,024; George Herz & Co., San Bernardino, \$114,794; E. Paul Ford, San Diego, \$112,404; Matich Bros., Elsinore, \$117,019; Frank Moran, San Diego, \$123,646. Contract awarded to Walter Trepte, San Diego, \$106,704.

SAN LUIS OBISPO COUNTY—Between Hathaway Ave. and the California Polytechnic School, 0.6 of a mile to be graded and surfaced with bituminous macadam. Dist. V, W. A. Dontanville, Salinas, \$8,188; Wm. Raisch, San Luis Obispo, \$9,215; Santa Maria Construction Co., Santa Maria, \$9,368; Granite Construction Co., Watsonville, \$10,801. Contract awarded to Henry C. Dalessi, San Luis Obispo, \$8,023.

SANTA BARBARA COUNTY—Between Gaviota Canyon and Tecolote Creek, 9.6 miles crusher run borders. Dist. V, Rt. 2, Secs. E, F, and G, Santa Maria Construction Co., Santa Maria, \$30,855; Granite Construction Co., Watsonville, \$30,469. Contract awarded to Gist & Bell, Arcadia, \$29,425.

SANTA BARBARA COUNTY—Between Gaviota Pass and Zaca, 6.1 miles existing shoulders to be oiled treated. Dist. V, Rt. 2, Sec. D, Granite Construction Co., Watsonville, \$5,160; W. A. Dontanville, Salinas, \$5,295. Contract awarded to Santa Maria Construction Co., Santa Maria, \$4,200.

Highway Awards

Continued from preceding page

SANTA BARBARA COUNTY—Between Zaca and Wignmore, about 4 miles of existing shoulders to be oiled. Dist. V, Rt. 2, Sec. C, Granite Construction Co., Watsonville, \$5,569; W. A. Dontanville, Salinas, \$4,890. Contract awarded to Santa Maria Construction Co., \$4,200.

SANTA CLARA COUNTY—Between Gilroy and Pajaro River, 5.2 miles to have rock borders to be placed. Dist. IV, Rt. 2, Sec. C, Harris Bros., Galt, \$15,333; W. A. Dontanville, Salinas, \$12,329. Contract awarded to Granite Const. Co., Watsonville, \$10,538.

SHASTA COUNTY—Between Diddy Hill and Montgomery Creek, 9.3 miles to be surfaced with untreated crushed gravel or stone and material stockpiled. Dist. II, Rt. 28, Secs. A, B, C, N. M. Ball, Porterville, \$88,867; Hein Bros. & Basalt Rock Co., Petaluma, \$84,688; Fred W. Nighbert, Bakersfield, \$92,825; A. Milne, Portland, \$92,825; E. B. Bishop, Sacramento, \$88,850. Contract awarded to Hemstreet & Bell, Marysville, \$81,465.

TULARE COUNTY—Between Tipton Crossing and Tulare, 7.6 miles to be graded and paved with Portland cement concrete. Dist. VI, Rt. 4, Sec. B, Basich Bros., Torrance, \$287,920; Southern California Road Co., Los Angeles, \$311,905; Jahn & Bressi, Los Angeles, \$297,988; Peninsula Paving Co., San Francisco, \$312,761; Hanrahan Co., San Francisco, \$299,649; Valley Paving & Construction Co., Fresno, \$305,674; N. M. Ball & D. McDonald, Sacramento, \$300,664; C. W. Wood, Stockton, \$310,145; M. J. Bevanda, Stockton, \$276,088; Fredrickson & Watson Construction Co., Oakland, \$302,033; Gibbons & Reed Co., Burbank, \$332,590; McCray Co., Los Angeles, \$306,503; Thompson Bros., Fresno, \$289,944. Contract awarded to Union Paving Co., San Francisco, \$274,283.

TULARE COUNTY—Five reinforced concrete bridges between Tipton Crossing and Tulare, varying from 48 feet to 300 feet long. Dist. VI, Rt. 4, Sec. B, Jahn & Bressi, Los Angeles, \$51,446; Peninsula Paving Co., San Francisco, \$53,096; Hanrahan Co., San Francisco, \$53,458; George J. Ulrich Construction Co., Modesto, \$48,459; Merritt-Chapman & Scott, San Pedro, \$53,577; Bodenhamer Construction Co., Oakland, \$53,886; Fredrickson & Watson Construction Co., Oakland, \$48,559; C. Anil Co., Huntington Park, \$61,841; Oberg Bros., Los Angeles, \$57,585; Hartman Construction Co., Bakersfield, \$53,414. Contract awarded to J. S. Metzger & Son, Los Angeles, \$43,517.

VENTURA COUNTY—Undergrade crossing of S. P. Ry., about ½ mile west of El Rio. Dist. VII, Rt. 60, Sec. B, Silveria & Robbins, Ventura, \$74,850; Robinson Roberts Co., Los Angeles, \$79,845; Oberg Bros., Los Angeles \$74,781. Contract awarded to Merritt-Chapman & Scott, San Pedro, \$71,505.

Who Gets Tourists' \$\$\$? U.S. Analysis Shows Distribution

There seems to be some argument in various sections of the country among merchants as to who gets the tourist's dollar that may be spent in the community. The United States Department of Commerce has been making a study of this new industry and they give the following percentages as being about correct. It must be remembered that in some communities the actual figure will vary according to accommodations offered:

Retailer	25 per cent
Restaurant	20 per cent
Hotel or camp	17 per cent
Garage and filling station	12 per cent

MRS. JOHN H. SKEGGS, bride of Colonel John H. Skeggs of District IV, with headquarters in San Francisco. Mrs. Skeggs is the former Miss Ellanette Fagrellius of San Francisco, and was engaged in real estate activities before her marriage July 2d.

A young man who pleaded "joy riding" because he borrowed a car to meet his best girl and wanted to show off, got twelve months' hard labor. Courting trouble.—*National Motorist*.

A husband said to his wife: "I read here that 'Woman, without her man, is a savage.'"

She looked over his shoulder and said: "Now read that again."

And he read slower: "Woman! Without her, man is a savage."—*National Motorist*.

Transportation	10 per cent
Theaters and amusement	10 per cent
Confectionery	6 per cent
Total	100 per cent

Usually the retailer is the first one to say that his sales are not affected by the tourist. He is overlooking the fact that in his case the money does not go from first spender to merchant. He gets his volume from the pay envelope of the employee of the filling station, garage, hotels and restaurants.

—*Roads and Streets*.

August Water Applications and Permits

Applications for permits to appropriate water filed with the Department of Public Works, Division of Water Resources during the month of August, 1931.

TUOLUMNE COUNTY—Application 7025. Division of Highways, Sacramento, for 605 c.f.s. from Stoddard Springs tributary to North Fork of Tuolumne River to be diverted in Sec. 10, T. 3 N. R. 17 E., M. D. B. and M., for recreational purposes to supply public. Estimated cost \$200.

DEL NORTE COUNTY—Application 7026. Harry T. Wilkerson, 1268 S. Highland Ave., Los Angeles, for 50 c.f.s. from Hurdy Gurdy Creek tributary to South Fork of Smith River to be diverted in Sec. 19, T. 16 N., R. 3 E., H. B. and M., for mining and domestic purposes.

SIERRA COUNTY—Application 7027. T. W. Walther, c/o R. F. Taylor, Downieville, for 3.0 c.f.s. from Canyon Creek tributary to Yuba River to be diverted in Sec. 12, T. 21 N., R. 10 E., M. D. B. and M., for mining purposes. Estimated cost \$1,500.

EL DORADO COUNTY—Application 7028. Lawrence E. Kinnear, 309 4th St., Antioch, for 200 gallons per day from unnamed stream tributary to South Fork of American River to be diverted in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes. Estimated cost \$200.

EL DORADO COUNTY—Application 7029. Lawrence W. Mehaffey, 611 6th St., Antioch, for 200 gallons per day from unnamed stream tributary to South Fork of American River to be diverted in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes. Estimated cost \$200.

FRESNO COUNTY—Application 7030. Ambrose A. Cowan, c/o James M. Thueran, Atty., Fowler, for 2 c.f.s. from Mill Flat Creek tributary to Kings River to be diverted in Sec. 5, T. 13 S., R. 27 E., M. D. B. and M., for irrigation purposes. Estimated cost \$250.

NEVADA COUNTY—Application 7031. South Yuba Company, Ltd., c/o C. H. Shaw, Hotel Whitcomb, San Francisco, for 50 c.f.s. from South Yuba River tributary to Yuba River to be diverted in Sec. 8, T. 17 N., R. 11 E., M. D. B. and M., for mining purposes. Estimated cost \$10,000.

PLACER COUNTY—Application 7032. Paul H. Norboc, Room 605, 127 Montgomery St., San Francisco, for 250 c.f.s. 200,000 acre-feet per annum from Middle Fork of American River tributary to Sacramento River to be diverted in Sec. 36, T. 15 N., R. 13 E., M. D. B. and M., for power purposes. Estimated cost \$18,000,000.

PLACER COUNTY—Application 7033. Paul H. Norboc, Room 605, 127 Montgomery St., San Francisco, for 250 c.f.s. 200,000 acre-feet per annum from Middle Fork of American River tributary to Sacramento River to be diverted in Sec. 36, T. 15 N., R. 13 E., M. D. B. and M., for municipal purposes. Estimated cost \$15,000,000.

HUMBOLDT COUNTY—Application 7034. James L. Skiffington, Dyerville, for 0.012 c.f.s. from Little Creek tributary to Bull Creek to be diverted in Sec. 19, T. 1 S., R. 2 E., H. B. and M., for recreational purposes.

SAN DIEGO COUNTY—Application 7035. Marian Weber, Polomar Mountain, for 0.05 c.f.s. from springs tributary to Cutca Creek to be diverted in Sec. 29, T. 9 S., R. 1 E., S. B. B. and M., for domestic and irrigation purposes. Estimated cost \$1,000.

EL DORADO COUNTY—Application 7036. Geo. W. Harter and Mrs. W. W. Belshaw, c/o Geo. W. Harter, Antioch, for 400 gallons per day from a spring tributary to South Fork of American River to be diverted in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes. Estimated cost \$200.

VENTURA COUNTY—Application 7037. Evelyn Akin Robertson, P. O. Box 297, Ventura, for 1.0 c.f.s. from unnamed spring tributary to Cuyama River to be diverted in Sec. 12, T. 7 N., R. 24 W., S. B. B. and M., for recreational and domestic purposes. Estimated cost \$300.

SAN DIEGO COUNTY—Application 7038. United States, Cleveland National Forest, 310 Federal Bldg.,

San Diego, for 0.066 c.f.s. from Vallecitos Spring tributary to Vallecitos Creek to be diverted in Sec. 34, T. 14 S., R. 5 E., S. B. E. and M., for domestic purposes. Estimated cost \$2,000.

SANTA CLARA COUNTY—Application 7039. Santa Clara Valley Water Conservation District, c/o Herbert D. Jones, atty., Auzeais Bldg., San Jose, for 200 c.f.s. and 60,000 ac. ft. per annum from Coyote River tributary to San Francisco Bay to be diverted in Sec. 10, T. 9 S., R. 3 E., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$1,600,000.

SANTA CLARA COUNTY—Application 7040. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 30 c.f.s. and 9000 ac. ft. per annum from Arroyo Calero River tributary to Alamitos Creek to be diverted in Sec. 31, T. 8 S., R. 2 E., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$380,000.

SANTA CLARA COUNTY—Application 7041. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 30 c.f.s. and 6000 ac. ft. per annum from Almaden Creek tributary to Alamitos and Guadalupe Creek to be diverted in Sec. 10, T. 9 S., R. 1 E., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$135,000.

SANTA CLARA COUNTY—Application 7042. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 45 c.f.s. and 100 ac. ft. per annum from Guadalupe Creek tributary to San Francisco Bay to be diverted in Sec. 9, T. 8 S., R. 1 E., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$53,000.

SANTA CLARA COUNTY—Application 7043. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 110 c.f.s. and 650 ac. ft. per annum from Los Gatos Creek tributary to Guadalupe Creek to be diverted in Sec. 10, T. 8 S., R. 1 W., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$109,000.

SANTA CLARA COUNTY—Application 7044. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 52 c.f.s. and 520 ac. ft. per annum from Los Gatos Creek tributary to Guadalupe Creek to be diverted in Sec. 35, T. 7 S., R. 1 W., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$57,500.

SANTA CLARA COUNTY—Application 7045. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 50 c.f.s. and 4000 ac. ft. per annum from Stevens Creek tributary to San Francisco Bay to be diverted in Sec. 27, T. 7 S., R. 2 W., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$350,000.

SANTA CLARA COUNTY—Application 7046. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 50 c.f.s. and 2000 ac. ft. per annum from Stevens Creek tributary to San Francisco Bay to be diverted in Sec. 4, T. 8 S., R. 2 W., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$146,000.

SANTA CLARA COUNTY—Application 7047. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 200 c.f.s. and 60,000 ac. ft. per annum from Coyote River tributary to San Francisco Bay to be diverted in Sec. 10, T. 9 S., R. 3 E., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$1,080,310.

SANTA CLARA COUNTY—Application 7048. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzeais Bldg., San Jose, for 50 c.f.s. and 3500 ac. ft. per annum from Guadalupe Creek tributary to San Francisco Bay to be diverted in Sec. 19, T. 8 S., R. 1 E., M. D. B. and M., for irrigation and

domestic purposes. (133,000 acres.) Estimated cost \$377,170.

SANTA CLARA COUNTY—Application 7049. Santa Clara Valley Water Conservation District, c/o Herbert C. Jones, atty., Auzares Bldg., San Jose, for 20 c.f.s. and 1600 ac. ft. per annum from Calabazas Creek and Stevens Creek tributary to San Francisco Bay to be diverted in Sec. 34, T. 7 S., R. 2 W., M. D. B. and M., for irrigation and domestic purposes. (133,000 acres.) Estimated cost \$183,580.

PLACER COUNTY—Application 7050. R. A. Chipman, Nevada City, for 6.5 c.f.s. from Dutch Flat Canyon tributary to Bear River to be diverted in Sec. 34, T. 16 N., R. 10 E., M. D. B. and M., for mining purposes.

LAKE COUNTY—Application 7051. John R. Connelly, E. P. Smith and Stephen J. York, c/o John R. Connelly, Native Sons Bldg., Sacramento, for 0.1 c.f.s. and 5 ac. ft. per annum from unnamed spring tributary to Clear Lake to be diverted in Sec. 32, T. 15 N., R. 8 W., M. D. B. and M., for domestic purposes. Estimated cost \$2,500.

MENDOCINO COUNTY—Application 7052. H. M. Hartstone, Potter Valley, for 8000 gallons per day from Spicknard Spring tributary to Watenburg Creek, thence Eel River to be diverted in Sec. 25, T. 18 N., R. 12 W., M. D. B. and M., for irrigation and domestic purposes. (3 acres.) Estimated cost \$500.

MONO COUNTY—Application 7053. California Municipal Water Supply Co., Ltd., Riverside, for 200 c.f.s. from Lee Vining Creek tributary to Mono Lake to be diverted in Sec. 16, T. 1 N., R. 26 E., M. D. B. and M., for municipal and domestic purposes. Estimated cost \$40,000,000.

MONO COUNTY—Application 7054. California Municipal Water Supply Co., Ltd., Riverside, for 40 c.f.s. from (1) Walker Creek, (2) Gibbs Canyon Creek and (3) and (4) two unnamed streams between Walker Creek and Gibbs Canyon Creek tributary to Rush Creek to be diverted in Sec. (1) 5, T. 1 S., R. 26 E., M. D. B. and M., (2) in Sec. 21, T. 1 N., R. 26 E., M. D. B. and M., (3) in Sec. 32, T. 1 N., R. 26 E., M. D. B. and M., (4) in Sec. 33, T. 1 N., R. 26 E., M. D. B. and M. Estimated cost \$40,000,000.

MONO COUNTY—Application 7055. California Municipal Water Co., Ltd., Riverside, for 300 c.f.s. and 60,000 ac. ft. per annum from Rush Creek tributary to Mono Lake to be diverted in Sec. 26, T. 1 N., R. 26 E., M. D. B. and M., for municipal and domestic purposes. Estimated cost \$40,000,000.

MONO COUNTY—Application 7056. California Municipal Water Supply Co., Ltd., Riverside, for 40 c.f.s. from Parker and unnamed stream tributary to Rush Creek to be diverted in Sec. 9, T. 1 S., R. 26 E., M. D. B. and M., for municipal and domestic purposes. Estimated cost \$40,000,000.

LOS ANGELES COUNTY—Application 7057. Dr. Joseph A. Pollia, 269 S. Lake St., at W. Miramar, Los Angeles, for 0.135 c.f.s. from underground spring tributary to Mojave Desert Drainage Area to be diverted in Sec. 1, T. N., R. 11 W., S. B. B. and M., for irrigation and domestic purposes. (20 acres.) Estimated cost \$750.

TUOLUMNE COUNTY—Application 7058. United States, Stanislaus National Forest, Sonora, for 0.4 c.f.s. from North Fork of Tuolumne River tributary to Tuolumne to be diverted in Sec. 22, T. 4 N., R. 18 E., M. D. B. and M., for domestic purposes. Estimated cost \$5,000.

HUMBOLDT COUNTY—Application 7059. C. H. Barkdill, 417 Mutual Life Bldg., Seattle, Wash., for 50 c.f.s. from Mosquito Creek, Big Lake, Ammon Creek, Bear Trap and White Sides tributary to South Fork of Trinity River to be diverted in Secs. 33, 26, 27, 14 and 11, T. 5 N., R. 5 E., H. B. and M., for mining and domestic purposes.

TRINITY COUNTY—Application 7060. C. L. Brown, 600 S. Madison St., Pasadena, for 100 c.f.s. from Canyon Creek tributary to Trinity River, thence Klamath River to be diverted in Sec. 17, T. 35 N., R. 10 W., M. D. B. and M., for mining and domestic purposes. Estimated cost \$150,000.

HUMBOLDT COUNTY—Application 7061. Arthur McBride, Winford Ottley, Ralph Peters, c/o Allen and McNamara, attys., Yreka, for 10 c.f.s. from Five Mile Creek tributary to Klamath River to be diverted in Section 16, T. 11 N., R. 6 E., H. B. and M., for power purposes. (681 H.P.) Estimated cost \$1,200.

HUMBOLDT COUNTY—Application 7062. Arthur McBride, Winford Ottley, Ralph Peters and Geo. W. Smith, c/o Allen and McNamara, attys., Yreka, for 10 c.f.s. from Five Mile Creek tributary to Klamath River to be diverted in Sec. 16, T. 11 N., R. 6 E., H. B. and M., for mining purposes. Estimated cost \$1,200.

BUTTE COUNTY—Application 7063. Richvale Irrigation District, c/o Frank S. Robinson, Civil Eng., Chico, for 15 c.f.s. from Dry Creek tributary to Butte Creek to be diverted in Sec. 6, T. 19 N., R. 2 E., M. D. B. and M., for irrigation purposes. (17,000 acres.) Estimated cost \$2,000.

HUMBOLDT COUNTY—Application 7064. Humboldt Creamery Association, c/o W. Ernest Dickson, atty., 1st Nat. Bank Bldg., Eureka, for 1 c.f.s. from Eel River tributary to Pacific Ocean to be diverted in Sec. 29, T. 3 N., R. 1 W., H. B. and M., for industrial purposes. Estimated cost \$500.

SAN LUIS OBISPO COUNTY—Application 7065. City of San Luis Obispo, c/o J. B. Lippincott, Engr., Petroleum Securities Bldg., Los Angeles, for 300 ac. ft. per annum from Salinas River tributary to Pacific Ocean to be diverted in Sec. 36, T. 29 S., R. 13 E., M. D. B. and M., for municipal purposes.

MONO COUNTY—Application 7066. Cy Williams, c/o Roy Boothe, Forest Supervisor, Bishop, for 200 gallons per day from Rock Creek tributary to Owens River to be diverted in Sec. 32, T. 4 S., R. 30 E., M. D. B. and M., for domestic purposes.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources during the month of August, 1931.

MONO COUNTY—Permit 3760, Application 6782. Emma G. Parker, Bridgeport, August 4, 1931, for 0.1 c.f.s. from an unnamed stream in Sec. 32, T. 4 N., R. 24 E., M. D. B. and M., for irrigation on 4 acres. Estimated cost \$580.

CONTRA COSTA COUNTY—Permit 3761, Application 6884. Associated Oil Company, San Francisco, August 4, 1931, for 14.56 c.f.s. from Hastings Slough in Sec. 14, T. 2 N., R. 2 W., M. D. M., for industrial and incidental domestic. Estimated cost \$30,000.

PLACER COUNTY—Permit 3762, Application 6931. Fred E. Lazenby, Ogden, Utah, August 6, 1931, for 12 c.f.s. from 7 unnamed fresh water springs in Sec. 1, T. 13 N., R. 6 E., M. D. M., for irrigation and domestic on 10 acres. Estimated cost \$500.

SISKIYOU COUNTY—Permit 3763, Application 6635. Buzzard Hill Mine, Inc., Happy Camp, August 6, 1931, for 12.5 c.f.s. from Independence Creek in Sec. 32, T. 15 N., R. 7 E., H. M., for power. 319 T. H. P. to be developed. Estimated cost \$12,000.

SISKIYOU COUNTY—Permit 3764, Application 6636. Buzzard Hill Mine Inc., Happy Camp, August 6, 1931, for .05 c.f.s. from Independence Creek in Sec. 32, T. 15 N., R. 7 E., H. M. for irrigation on 4 acres. Estimated cost \$2,000.

SISKIYOU COUNTY—Permit 3765, Application 6637. Buzzard Hill Mine, Inc., Happy Camp, August 6, 1931, for .25 c.f.s. from Independence Creek in Sec. 32, T. 15 N., R. 7 E., H. M. for domestic and mining. Estimated cost \$12,000.

SANTA BARBARA COUNTY—Permit 3766, Application 6906. Union Realty Co., Santa Barbara, August 7, 1931, for 10,080 g.p.d. from an unnamed stream in Sec. 11, T. 5 N., R. 28 W., S. B. M., for irrigation and domestic on 5 acres. Estimated cost \$1,200.

HUMBOLDT COUNTY—Permit 3767, Application 6181. Benbow Power Co., Benbow, August 12, 1931, for 1.2 c.f.s. from Fish Creek in Sec. 6, T. 5 N., R. 4 E., H. M., for municipal purposes. Estimated cost \$26,000.

AN INACTIVE FUTURE

We'll surely be bored in the future
When we've no more forests to burn
And I know for spectacular action
Our spirits will tenderly yearn.

Now, mother and sister and brother,
Can throw lighted matches away;
Can jazz up the velvety twilight
And add to the heat of the day.

The hunter, the fisher, the tourist,
The toll of destruction may swell,
A campfire left burning untended,
Can raise unmistakable hell.

We're talking, and talking, and talking,
About the precautions we take,
But year after year in the forests
More havoc and ruin we make.

And each year the menace grows greater,
Our great, fragrant forests are few,
The watersheds dwindle and perish,
Our birds and our deer perish too.

And soon in the long weary summers
There'll be no more forests to burn,
So over those days of inaction
My spirit doth pensively yearn.

A. MERRIAM CONNER.

Progress, Aug. 20.)

APPLICATIONS AND PERMITS
GRANTED

(Continued from page 43)

LOS ANGELES COUNTY—Permit 3768, Application 6970. Harry M. Miller, Little Rock, California, August 12, 1931, for .05 c.f.s. from unnamed spring in Sec. 16, T. 4 N., R. 10 W., S. B. M., for domestic and irrigation on 2 acres.

SAN BERNARDINO COUNTY—Permit 3769, Application 6964. Robert M. Stapp, Lake Arrowhead, August 17, 1931, for 5170 g.p.d. from unnamed spring tributary to Little Bear Creek in Sec. 28, T. 2 N., R. 3 W., S. B. M., for domestic and recreational purposes. Estimated cost \$350.

HUMBOLDT COUNTY—Permit 3770, Application 6954. Peter H. Brandt, Fortuna, August 20, 1931, for 12,000 g.p.d. from Strong Creek in Sec. 2, T. 2 N., R. 1 W., H. M. for irrigation of 15 acres. Estimated cost \$500.

SIERRA COUNTY—Permit 3771, Application 6966. W. S. Coffin, Upland, August 21, 1931, for 3 c.f.s. from Rock Creek in Sec. 16, T. 19 N., R. 10 E., M. D. M., for mining purposes. Estimated cost \$600.

MONTEREY COUNTY—Permit 3772, Application 6804. Fort Klamath Meadows Co., Hollister, August 22, 1931, for 100 c.f.s. or 3 a.f. of irrigated land between October 1 and April 1 and or 10.87 c.f.s. between April 1 and October 1 of each season, total diversions shall not exceed 4000 a.f. in any one year from Peach Tree Creek in Sec. 12, T. 20 S., R. 10 E., M. D. M. for irrigation on 869.5 acres. Estimated cost \$3,000.

HUMBOLDT COUNTY—Permit 3773, Application 6849. Salyer Consolidated Mines Co., Salyer, August 25, 1931, for 50 c.f.s. from Campbell, Four Mile, Saxey, Deer Creek tributary to Trinity River in Secs. 16, 20 and 21, T. 6 N., R. 5 E., H. M. for mining purposes. Estimated cost \$200,000.

Remember Words of
Rolph; Says Paper

(Editorial in Byron Times)

Breaking all precedent by appealing to each and every citizen of California to lend his weight to a unified State water plan that will receive financial support from the Federal government, Governor Rolph has been the recipient of widespread acclaim.

His message is clear-cut and outlines in interesting detail what has already been accomplished toward the end that California may continue to progress and prosper.

The groundwork has been laid. Prominent legislators and citizens have been appointed. The congressional committee has been here and realizes the seriousness of the situation, and the California Water Resources Commission is now busy at work formulating such legislation as may be necessary and advisable to carry out a coordinated development of the waters of the State.

Each and every citizen now must do his and her part, remembering the words of Governor Rolph in his inaugural speech last January when he said, "we must not approach these problems in a narrow or sectional spirit."

Community leaders can accomplish much by visualizing the whole, and condemning selfish interests. It is in the hope that individuals will do so that the Governor has appealed to his 5,677,251 fellow Californians. Without their heartfelt sympathy and cooperation the water plan is doomed to failure. Each must do his part.

WARNINGS UNHEEDED

That motor vehicle accidents in traffic are preventable is indicated in the recent report of the State Railroad Commission showing that 52 per cent of the grade crossing fatalities in California last year occurred at crossings where warning signals notified motorists of approaching trains.

Drivers apparently were more careful at railroad crossings where no warnings were given, than where automatic signal devices have been installed.

Honey: That boy you were riding with has trouble with his vision?

Girl: Yeah, he sees parking spots before his eyes.
—State Lion.

There are more passenger automobiles in use in the United States than there are telephones, according to figures reported to the California State Automobile Association. There were 23,042,840 passenger cars on December 31, 1930, as compared with 20,098,059 telephones.

NEVADA COUNTY—Permit 3774, Application 6824. Gordon M. Bettles, Nevada City, August 25, 1931, for 3 c.f.s. from South Fork of Poorman Creek in Sec. 15, T. 18 N., R. 11 E., M. D. M., for power purposes. Estimated cost \$8,000.

By **A. L. BANKS**, Assistant Deputy Director of Public Works

CALLED from the dispirited ranks of unemployment, 3600 men are now mending, dressing and improving the highways of California. They face the winter in a mien of cheerfulness that was sadly lacking a few weeks ago. Better still, nearly 18,000 dependents have welcomed hope and comfort back to their homes. For, be it known, married men have been given every preference. The more children, the greater the consideration. Out of 40 men taken from Sacramento, every one had at least five children; some had seven and eight.

Governor Rolph's highway maintenance program calling for this extra labor will put about \$52 monthly into the pocket of every man in the big crew. The State Department of Public Works, Highway Division, has increased its daily pay roll by \$7,200 in order to meet this one item. Good old California!

Nor is this all. Every phase of highway and construction work has been speeded up. Literally millions of dollars in new contracts have been let the last few weeks. Authorizations are going out for new highways, for new buildings and for every form of State improvement.

Good Cooperation

But—speaking directly of the emergency work of the Public Works Department—the joy apparent among the department attaches in preparing for it was proof of their fine fibre. And the cooperation received from every part of the State made the work of preparation even easier.

The 3600 men called to the highway work were not taken from cities or communities on a basis of population. The district engineers had worked out their itemized programs. These were adjusted to terms of men and money. Work which ordinarily would not have been taken up until next year, was set up for immediate attention. The men were called by quota from points adjacent to the job in hand. In most instances the program

was so arranged as to enable the men to spend their nights at home—to take back to their families their full day's wage.

Old man machinery is out of luck, for the time being. The program for the next few months gives the right of way to hand labor. And it is a wholly legitimate clearance. Under any circumstance or at any time, the work in hand would have been done by hand power. And none of it is "made jobs."

Not Charity Work

Colonel Garrison has been insistent that the labor fit the going program of the division. He said it must be

carefully planned and as carefully supervised. This means that there is no charity in it. The State and its work-needy citizens are working in a reciprocal relationship.

In assembling the men, 145 mayors and about 90 Legion Posts and rural officials were contacted. A personal letter from the Governor went to each. He invited their cooperation, specifying that the men must be (1) bona fide residents of California, (2) married men or those with sole dependents, and (3) known to be acutely in need of employment.

A. L. BANKS

State Commissions and U. S. Board Get Into Action on Water Problem

INCREASINGLY active and State-wide interest in California's water problem has been evidenced during the past month. Governor Rolph has made several public addresses calling attention to the vital importance of obtaining an economically sound solution of the problem, and of the necessity for doing this with the least possible delay.

Governor Rolph's commission of citizens, known as the California Water Resources Commission, has organized and has held several meetings, two of which were joint meetings with the California Joint Legislative Water Committee. Both bodies are cooperating with each other, and have discussed plans for joint procedure.

The California Joint Legislative Water Committee held a number of public hearings in order that all phases of the problem be given consideration. One of the principal duties of the committee is the preparation of proposed legislation and constitutional amendments. The committee has been earnestly at work on the study of this phase of the problem.

CALLS FOR ACTION

The initial meeting of the commission was held in the office of the Governor in San Francisco, September 17, 1931. In addressing the members upon the duties of the commission, Governor Rolph said:

"The problem that you have before you for solution is the most important and pressing one in California today. * * * Immediate and energetic action is required to correct this unsatisfactory and unnecessary situation. It is no longer a local problem. It is one in which the State itself should take a part. The task that is assigned to you is to evolve a plan of action.

* * * * *

"The duties of your commission as set forth in Senate Concurrent Resolution No. 40 are:

1. To study and report upon the conservation, development and distribution of the water resources of the State, including particularly findings and recommendations as to the economic phases and such proposed legislation, resolutions and constitutional amendments as may be necessary to carry into effect a coordi-

nated plan for the development and distribution of the water resources of the State.

2. To meet with and collaborate with the Joint Legislative Water Resources Committee.
3. To cooperate and confer with the President of the United States and any board, commission, congressional committee or other agency of the United States which may have charge of activities in respect to water conservation, utilization, flood control or navigation.
4. To do any and all things necessary to make a full and complete investigation and report.

"It is my desire that you study and report upon all phases of the problem—engineering, economic, legal, financial and constitutional.

"To the fulfillment of your momentous task I pledge you my whole-hearted and unstinted support."

GOVERNOR AT MEETINGS

The chairman, Matt I. Sullivan, former Chief Justice of the Supreme Court of California presided. Shannon Crandall of Los Angeles was elected vice chairman and State Engineer Edward Hyatt, secretary.

The second meeting of the commission was a joint meeting at the invitation of the Joint Legislative Committee and held in San Francisco on September 28th. On the following day a joint meeting was held at Hotel Oakland, with members of the Honorary Advisory Committees appointed by Governor Rolph to assist the commission present. The Governor attended both meetings, outlined the principal features of the State-wide water problem, and assured the committee and commission of the whole-hearted support of the executive and the State departments.

The Honorary Advisory Committees met after the general meeting in the morning and organized by the selection of chairman, vice chairman and secretary. The former Governors Gillett, Pardee and Richardson were introduced by Governor Rolph and addressed the meeting, assuring those present of their interest in the problem and of their willingness to cooperate and assist in every way.

Both the Joint Legislative Water Committee and the Water Resources Commission were in session on September 30th at San Francisco.

(Continued on page 25)

Waste and Want--Cause and Result

DESTRUCTIVE AND COSTLY waste of California's greatest natural resource. This flood scene of March, 1928, shows a major California stream inundating valuable farm lands through a levee break. The flood peak on this stream was 211,000 cubic feet per second.

THE SAME STREAM in August, 1931. It became totally dry and left 4500 acres of highly improved lands without irrigation water. Storage reservoirs would conserve flood waters for use in areas of dire need and give an added degree of flood protection to local areas.

Marked Decrease in Fire Toll Credited to State Highway Prevention Work

AT A MEETING in San Bernardino on October 10th of the southern counties working with the California Fire Emergency Committee, State Forester M. B. Pratt asserted that the marked decrease in the number of fires this year attributed to carelessness on the part of smokers and campers was mostly due to Department of Public Works and the automobile merchants.

"The splendid press releases from the California Highway Patrol on the number of citations for throwing lighted materials from moving vehicles," said the State forester, "and honorable merits awarded highway patrolmen for putting out fires were educational measures of great value in the fire prevention campaign."

PRESS STORIES HELPED

"The press of the State during the fire season months continually carried news items of the oiling and burning in and along the rights-of-way of the State Highway System by the Division of Highways as a preventive to fire starting and as a fire break for fires starting elsewhere.

FIRST DEFENSE LINE

With over 2000 automobile dealers cautioning patrons against fire, the State Highway System proved itself to be a veritable first line of defense and Colonel Walter E. Garrison, director of Public Works, carried out his part as a member of the California Fire Emergency Committee to the letter with very definite results."

EDUCATIONAL CAMPAIGN

As carelessness in the use of the lighted cigarette and camp fire is mostly attributable to people living in cities and towns, it was announced at the San Bernardino meeting that the California Fire Emergency Committee through the county fire emergency committees would devote the winter months to an educational campaign with the volunteer fire departments of the cities and towns sponsoring the movement.

At a meeting of the Northern California Fireman's Association, a body representing all the towns north of San Francisco and

Sacramento to be held in Arbuckle early in December, a definite fire program will be arranged, aimed directly to reach the city folks using the highways in the forest fire season.

Fire organizations in the southern counties have been active for several years along such a line and forestry officials credit the low fire record maintained in southern California during the fire season just passed to the activity of fire organizations.

CLEANING COUNTY ROADS

With a State appropriation to the Department of Public Works for cleaning debris from the State highways and a Federal appropriation to each national forest for county roads within the national forests, cooperative agencies with the California Fire Emergency Committee are urging a State appropriation for the State forestry department to match county funds provided by law for the removal of debris from county roads outside of national forests.

The fire hazard removal campaign of the Division of Highways for 1931 extended into forty-six counties, covering 1150 miles at an expense of \$80,000. The spraying with oil and burning of roadside vegetation in the spring is followed in the fall and winter by clearing in forest areas. Crews are set to work cutting and burning slash and down timber within the State highway right of way.

During this winter a considerable sum will be expended for this purpose contributing to the relief of the unemployed.

STATES SHOW INCREASE

The mileage of State Highways surfaced during 1930 was 27,464, an increase over the preceding year, and State highway departments expended \$980,000,000 on roads in the year, an increase of 22 per cent over 1929, the bureau of public roads, Department of Agriculture, states.

Total State income for highway purposes during the year was \$1,136,673,437, and only nine states showed a decline in this income, the bureau said. The figures do not include work by counties, townships or other jurisdictions, it is explained.

"Why that net at the railroad crossing?"
"To catch auto parts."

How State Cooperates in Building Highways Through Municipalities

There were included in the present highway budget appropriations totaling \$2,700,000 for the improvement of State highways within the corporate limits of cities. All of these appropriations were set up on a cooperative basis allowing for participation by cities on the basis of agreements made through the State Highway Commission. The State's policy in this matter and details of the procedure for cooperation between State and city are clearly set forth in the following paper read by State Highway Engineer C. H. Purcell before the recent convention of the League of Municipalities at Del Monte.

By C. H. PURCELL, State Highway Engineer

ONE of the functions of a State Highway System is to connect centers of population. The State Highway System of California fulfills this function. The 202 cities of California served or connected by State highways represent 70 per cent of the total State population.

All of these cities are termini for local traffic originating in their immediate vicinity; most of them are the end of the journey for some through traffic. In nearly every case, however, a fairly well defined route through the municipality has been established, or has become such through usage, for traffic proceeding to a further destination. This route might be designated as the route of the State highway through the city.

ADDED THIRTY-SIX MILES

The total length of such routes within corporate limits is about 457 miles. Thirty-six miles of this total were added when the 800 miles of secondary highways were added to the State system this year. This mileage within the cities is about 6 per cent of the total State highway mileage.

Viewed thus, as a total, these figures present quite a different picture than when visioned, as we usually do, as individual units.

The first question which comes to our minds and which, obviously, has occurred to many before: Who has the responsibility of providing the required improvement on these through routes?

In the early days of State highway activity, this responsibility was definitely assigned to the community. But not many years later, when the mileage of improved State roads began to increase, when longer stretches of continuous pavement became more common,

C. H. PURCELL

then the short sections of unpaved or deteriorated pavement through communities which were financially unable to improve their streets, brought this question more forcibly to attention.

Although under authority of existing legislation and the bond acts, some improvement was done by the State within corporate limits of cities, the large mileage of incomplete State highways whose cost exceeded the available

(Continued on page 32)

Good vs. Bad Roads Reflected in Costs Of Operating Autos

PROOF that good roads are a paying investment from the highway user's point of view is shown by an analysis of automobile operation costs on various types of highways according to the American Road Builders' Association.

AVERAGE COST OF 800 CARS

From detailed cost records reported on about 800 automobiles operated in various parts of the United States, figures were prepared taking all factors into consideration, showing the average cost of automobile operation over all types of surfacing to be in cents per mile:

COST PER MILE	
Type of car	Cents
Light fours.....	6.02
Medium fours.....	6.42
Heavy fours.....	7.20
Light sixes.....	7.38
Medium sixes.....	8.40
Heavy sixes.....	9.45

Among the various items of operating cost, road condition is shown to have no effect on license, garage, interest and insurance. The increase in cost of maintenance and in depreciation of automobiles as the type of road becomes poorer is in somewhat the same ratio as the increase in gasoline consumption, shown above. In cost of tires and tubes comes the greatest increase, and it is estimated that where \$1 is expended for this item on improved roads of high type the cost is almost triple on roads without improvement, or \$2.90.

The division of cost items on an imaginary "average" automobile, based on annual mileage of 11,000, is shown as follows:

Item of cost	Cents per mile
Gasoline.....	1.31
Oil.....	0.22
Tires and tubes.....	0.64
Maintenance.....	1.72
Depreciation.....	1.39
License.....	0.14
Garage at \$4 per month.....	0.44
Interest at 6 per cent.....	0.36
Insurance (fire, theft, tornado).....	0.21
Total cents per mile.....	6.43

SAVING PER MILE

The saving shown in operation of such average automobile due to road improvement is, where roads without improvement are changed to intermediate type, 1.07 cents per mile, where intermediate type is changed to high type, 0.99 cents per mile, and where unimproved type is changed to high type, 2.06 cents per mile.

The cost tables range from 11 cents per mile, the cost of operation of a "heavy six" over unimproved roads, down to 5.10 cents, the cost of operating a "light four" over high type roads. This gives a conservative figure for the lightest car and the best road conditions obtainable, and for the heaviest car operating on unimproved roads.

No man's opinion is entirely worthless. Even a watch that won't run is right twice a day.

Miss Murray Swings Wicked Hoe, They Say, Up in Sutter County

THE visitor who comes to the executive offices of the Department of Public Works in Sacramento is greeted by a tall, comely, silver-haired woman with a smile. And what a smile!

It warms the cockles of your heart and makes you feel right at home, because sparkling eyes behind the big glasses through which she beams upon you radio an inaudible "Cheerio, my friend, glad to see you."

Miss Myrtle V. Murray is the dispenser of the exotic smile and as a valued member of the State government she has been greeting visitors in the same cordial way for twenty years.

Entering the State's employ as a girl she has seen a long procession of governors and directors come and go—five governors and six directors to be exact.

GOT EARLY START

In 1911 she started as a stenographer in the Highways Department, as it was then named. The staff consisted of the chief, an assistant and two stenographers. Then she went into Governor Johnson's office serving under him and Governor Stephens for eight years returning in 1921 to the newly organized Department of Public Works and became its highly efficient secretary.

In addition to her multifarious duties in that capacity, she is the boss and mother confessor of seven girl stenographers and that's some job in itself. But every girl who ever worked for her loves her, they declare, so that's the kind of a boss Miss Murray is.

KEEPS ALL SECRETS

And she can keep secrets of State just as well as she keeps the girl's secrets. Ask the reporters, they know.

If some week-end you are motoring through Sutter County and passing a large peach and prune ranch observe a tall, lithe woman busily hacking away at the orchard weeds—that's Miss Murray. She and her two sisters own forty-seven acres of bearing peach and prune trees and her one great diversion is to hie away from affairs of State on Saturday afternoons to play the role of the lady with the hoe among her beloved fruit trees.

You wouldn't believe it to look at her but they say she swings one of the wickedest hoes in all Sutter County.

GOVERNORS

SHE'S SEEN THEM
ALL COME AND
GO SINCE 1911

SECRETS

HER HEAD IS
FULL OF SECRETS
OF STATE

THERE ARE SMILES that make you happy and here's the real thing, exclusively produced and dispensed by Miss Myrtle V. Murray, secretary of the Department of Public Works. For twenty years she has been welcoming visitors to the executive offices of the department at Sacramento with this cheery smile. Her head just buzzes with secrets of State but she's a veritable genius at guarding them. She's the boss of seven girl stenographers, all of whom love her. And her hobby? You'd never guess it. Nothing less than ranching. She spends nearly every week-end swinging a mean hoe and spade on her fruit ranch.

SHE'S A RANCHER

MISS MURRAY

SHE'S LOVED BY
ALL SHE BOSSES

Nation's Highway Builders in Annual Session Back Employment Measures

The American Association of State Highway Officials is a distinguished organization composed of experienced authorities on highway construction and policies from all the states who gather in convention once a year to discuss such problems. Their conclusions are accepted as the voice of highway officialdom in all State, Federal and Congressional circles. The following report of the recent meeting at Salt Lake is made by one of the California delegation:

By C. C. CARLETON, Chief, Division of Contracts and Rights of Way

THE SEVENTEENTH annual meeting of the American Association of State Highway Officials was held in Salt Lake City, Utah, beginning Monday, September 28th, and closing on Thursday, October 1, 1931.

The California Highway Department was represented by Earl Lee Kelly, chairman, and Harry A. Hopkins, commissioner, of the California Highway Commission; C. H. Purcell, State Highway Engineer; T. E. Stanton, Materials and Research Engineer; Fred J. Grumm, Engineer of Surveys and Plans, and the writer.

While the numerous problems affecting State highway finance, construction, maintenance, protection and beautification were duly considered in general and section meetings, the dominant note of the convention was the aiding of employment throughout the country.

Mr. W. C. Markham, executive secretary of the American Association of State Highway Officials, echoed this note when he said in his address: "We have always been taught to measure road improvements by the yard. This year we are asked to reckon them by heart beats."

The opening address of the convention was made by Henry H. Blood, chairman, State Highway Commission of Utah, and retiring president of the American Association of

State Highway Officials. He urged that the present regular appropriations for Federal aid roads, forest roads and highways across the public domain be continued by Congress.

He urged also that the Federal government make as much money available as possible for emergency work. He asked that the new

emergency money be considered a direct appropriation to the states rather than a loan, as was the 1931 emergency appropriation, and declared that the efficiency with which the 1931 emergency appropriation of \$80,000,000 was spent justified more such funds.

He asked that the Federal government consider the advisability of making a portion of the Federal funds available for force account work, to give the highway departments a little more leeway in providing some emergency

projects in special instances.

He stated, however, that the contracting system should be maintained for the larger part of the work.

He suggested also that steps be taken to provide as much hand labor as is consistent with good economies, but warned that the highway departments and the Federal government should remember also that there is labor concerned in making road building machinery.

Mr. W. C. Markham, the executive secretary of the association, incorporated in his

Hopkins, Carleton and Grumm at Salt Lake

UNDER GOOD CONTROL is the portion of the Shellville Highway between Napa and Shellville where "Check" Meyer operates his Division of Highways courtesy car piloting traffic over the one-way strip beside new surfacing.

In the good old days when a road had to be repaired or reconstructed it was customary to fence it off with a big detour sign and let the motorist shift for himself. Sometimes an alternate rough road was provided for him through trees and fields.

The modern method of the California Public Works Department is different. It is founded on the policy of extending every courtesy to the motoring public. If possible only half of the road is closed at one time. When this policy was first put into effect motorists in trying to pass each other on the narrow strip would occasionally get off on the soft, unfinished portion. Hence the control car.

"CHECK" MEYER and His Control Car

Menace of Drunken Driver Increasing on State Highways

THE INCREASING menace of the drunken driver on the highways of this State is convincingly shown in the latest official report that 1481 motor accidents involving death or injury were caused by drunken drivers or drunken pedestrians during the first seven months of this year.

Of these accidents, 133 resulted in deaths. The other 1348 ranged from serious accidents that left their victims crippled for life, to those of a minor nature.

Of the drivers involved 1293 were listed as having been intoxicated. There were 188 drunken pedestrians involved.

Physicall defects either in drivers or pedestrians resulted in eight deaths and injuries to sixty-four individuals during the period.

The observation has been made by patrol officials that in traffic accidents involving a drunken pedestrian the pedestrian himself is usually the victim. Where intoxicated drivers are directing the motor vehicle an innocent person is frequently killed, while the drunken driver may escape injury entirely.

The number of drunken drivers is steadily increasing each month, according to the State records.

Good Roads Values Can't Be Expressed in Terms of Money

THE VALUE of good roads can not be expressed in money. Like all other good things, hard surfaced roads have immense collateral values. Collateral advantages and intangible values spring up around every useful enterprise. To this rule there are no exceptions, and good roads form a particularly happy illustration of its truth.

"Good roads answer the need of humanity for one of the three essentials of organized society—food, shelter and transportation, and roads serve all three. Good roads are lines of easy transportation and communication. They relieve the tedium and isolation of the country, and offer the blessings of rural life to the city worker. They form lines for the development of community interest. They foster and create community development; bring educational and recreational values to dwellers in the city and country alike; develop national and State patriotism."—Arthur M. Hyde, Secretary, U. S. Dept. of Agriculture.

BUILDING INCREASES

According to reports received by the Bureau of Labor Statistics of the United States Department of Labor from 338 identical cities having a population of 25,000 or over there was an increase of 13.4 per cent in the estimated cost of buildings for which permits were issued during the month of August, 1931, as compared with the preceding month.

On July 1, 1931, a total of 1,476,000 automobiles and motorcycles were registered in Germany. Of this number, 522,943 were passenger cars, 161,072 trucks, and 792,075 motorcycles.

Progress of Governor's \$5,000,000 Construction Program for 1931

By **W. K. DANIELS**, Deputy Chief, Division of Architecture

ONE OF the paramount public problems of the day being relief for the unemployed, it is quite appropriate at this time to make a brief analysis of what effort and accomplishment the Division of Architecture can show for its small part in unemployed relief by its operation of building construction, a business that employs nearly one hundred different crafts.

Building construction therefore being a major remedy for unemployment, Governor James Rolph, Jr., immediately after taking office on January 5, 1931, sponsored the legislation creating appropriations amounting to \$5,109,600 for State building construction. The several acts of Legislature making the appropriations were declared urgency measures and thereby made the moneys available immediately upon the signed approval of the Governor on January 16, 1931.

By the end of February, or approximately forty-three days later, the Division had a total of twelve projects ready for the taking of bids representing a construction valuation of \$826,200.

By the end of April the Division had an additional total of eighteen projects ready for the taking of bids, representing a construction valuation of \$782,625, making a total of thirty projects having a construction valuation of \$1,608,825 placed on the market of bidding within three and one-half months after funds were available.

Got Prompt Action

This would indicate the action taken by the Division in getting started promptly on the Governor's urgency building construction program.

By the end of August several of the projects had been completed ready for occupancy. Outstanding among these were the Poultry Building and the Live Stock Building constructed at Agricultural Park, Sacramento.

These buildings were not only ready for the poultry, sheep and swine one week before fair time, but had shrubs planted and grass growing around them also.

By the end of this year, 1931, practically all of the Governor's urgency building construction program will have been placed in the field of the building trades with the exception of the appropriation for the new State Hospital in southern California. This project must await a final selection of a proper site, and every effort is being made at this date to accomplish this important undertaking.

W. K. Daniels

One Hundred Going Projects

However, the Governor's so-called five million dollar building construction program was not all the Division had to offer in the way of construction work to relieve unemployment. Many building projects financed by former legislation had just started prior to the first of 1931 and several had not been started, so taken together with the new appropriations they created a very large amount of work under way in the construction field by July 1, 1931, a total approximately of one hundred projects representing a construction valuation of \$5,843,000.

By the first of the coming year the Division will have placed in the field of construction an additional amount of construction work of over \$4,000,000.

It is therefore a fact and an assurance that hundreds of mechanics have been and will be put to work during this year and part of next by the efforts of the State administration along its one line of many endeavors, that of building construction.

This accomplishment is even more apparent when consideration is given to a change of administration and reorganization which created new department heads, new procedures and new policies, which fact made the securing of necessary approvals of procedure a harder problem.

(Continued on page 15)

LOTS OF WORK for men of many crafts and trades is represented by these handsome structures, all of which have been put under construction since January 1 by the State Division of Architecture as part of Governor Rolph's \$5,000,000 building plan for 1931. Some have already been finished and all will be by the end of the year. No. 1 is a ward building of the Agnews State Hospital, under construction. No. 2 is the Poultry Building at Agricultural Park, Sacramento, finished. No. 3 is an annex to the State Office Building, Sacramento, under construction. No. 4 is a ward building of Mendocino State Hospital, under construction. No. 5 is a cottage for boys built and finished at Whittier State School. No. 6 is the new National Guard Armory in course of erection at Yuba City.

Consultants Approve Transbay Bridge Plans; Predict Saving Several Millions

By CHARLES E. ANDREW, Bridge Engineer of San Francisco-Oakland Bridge

VERY satisfactory progress is being made on the design work for the San Francisco-Oakland Bay Bridge.

Immediately after funds became available for this work, on August 15th an office was opened at 500 Sansome Street in San Francisco, and the formation of a design organization was started. Excellent office quarters were obtainable at very reasonable cost. Room is provided for a force of about 50 designers and draftsmen, with ample office space for executives and consulting board members.

The wide publicity given to this project has attracted many engineers and, as a consequence, a very large number of applications have been received from men of exceptional ability. Engineers in charge of the work have found it to be a major task to assemble these applications and select the men most fitted for the work in hand. Only those men having experience in structural design, particularly bridge work, can be used.

LOCAL MEN HIRED

Local engineers are being employed as far as possible, with the result to date that out of 33 employees only 4 are from without California, and practically all of the remaining 29 are from the bay cities.

The designing forces will be gradually recruited to a personnel of about 50 or 55 employees, and no trouble will be encountered in obtaining these additional men required locally. It is the intention of those in charge to adhere to the principle of employing only local engineers for additional positions available.

Work is progressing very rapidly on the studies of final layout for the structure. The Consulting Board, consisting of Mr. Modjeski, Moran & Proctor, Mr. Moisseiff, Professor Derleth, Jr., and Mr. Brunnier, have held their first meeting in consultation with the Chief Engineer, Mr. Purcell, Bridge Engineer Andrew, and Engineer of Design, Mr. Glenn B. Woodruff.

GENERAL PLAN APPROVED

The Consulting Board have approved the general cross-sections of the bridge and required traffic capacity, i.e., a double deck structure with 6 lanes of auto traffic on the upper deck and three lanes for auto trucks and two electric inter-urban tracks on the lower deck.

They also have approved the general lay-

out of span types as originally proposed, which contemplates the use of a suspension structure between San Francisco and Yerba Buena Island, and a cantilever structure and

TO INSPECT MODELS

GOVERNOR JAMES ROLPH, JR., on Wednesday, November 4, will visit the University of California to inspect the experimental models for the San Francisco-Oakland Bay bridge. He will be accompanied by the mayors of Berkeley, Alameda and San Francisco and his Bridge Authority composed of Lieutenant Governor Merriam, Director of Finance Vandegrift, Director of Public Works Garrison and Chairman Kelly of the California Highway Commission. The official party will also include the Transbay Bridge Citizens Committee headed by E. B. De Golia.

The bridge models have been constructed by Professor George E. Beggs of Princeton University in collaboration with University of California scientists and engineers of the California Department of Public Works under Charles H. Purcell, State Highway Engineer, and Charles E. Andrew, Department Bridge Engineer.

Photo courtesy San Francisco Call-Bulletin

YES, IT'S BRIDGE they're studying, but not the card game. These studious gentlemen comprise the Consulting Engineering Board called together by State Engineer Charles H. Purcell to discuss the controlling factors in the design of the San Francisco-Oakland Bay Bridge. The board is composed of the following men, all eminent in their profession: Standing, from left to right, are Leon Moisseiff, Consulting Structural Engineer; State Engineer Purcell; Charles E. Andrew, State Bridge Engineer, and Daniel E. Moran of Moran and Proctor, Foundation Consultants of New York City. Seated at the table, from left to right, are H. J. Brunnier, Consulting Engineer; Ralph Modjeska of New York City, Chairman of the Board, and C. Derleth, Jr., Dean of Engineering, University of California.

fixed spans between the Island and the mainland at Oakland.

Mr. Modjeska, Chairman of the Board of Consulting Engineers, has expressed the opinion that the cost of the bridge will be well within the original estimate made by the department, i. e., \$75,000,000. He believes that the final figure will be several millions less, and may run as low as \$65,000,000 to \$70,000,000.

This opinion from an engineer of world-wide prominence and long experience in the design and construction of the world's largest bridges is very gratifying to the engineers connected with the project, as well as the general public.

Wonderful cooperation is being given to the engineers in charge by the various government and civic bodies. Many important prob-

lems remain to be solved, and the State administration is doing everything in its power to expedite the work and make this great project a reality at the earliest possible moment.

There seem to be no insurmountable difficulties which can not be solved, and the engineers in charge feel certain that by 1937, or probably 1936, the bridge will be open to transbay traffic.

SEEK ACCIDENT CURE

An increase of 26 per cent in motor vehicle accidents for the first six months of this year, compared with a similar period last year, has stimulated the California Committee on Public Safety to seek the cooperation of the State Judicial Council to bring about a more even and rigid imposition of penalties in the courts for traffic violators as a means of promoting public safety. This course was decided upon at the meeting of the executive committee held in San Francisco.

New Cut-off Highway Route to End Dangers of San Juan Bottle Neck

By L. H. GIBSON, District Engineer

AS OUR California travelers have been growing more accustomed to the higher standards of highway construction, the old San Juan grade crossing the Gabilan Range on the Coast route, between Salinas and San Juan Bautista, has been becoming increasingly exasperating to motorists traveling between Los Angeles and San Francisco.

The old San Juan grade was constructed in 1915, and at that time was entirely adequate for the prevailing traffic. Due to the tremendous increase in motor vehicular travel, this grade has been obsolete for several years. Because of the long grades, narrow roadway and sharp curves, it is now a bottle neck on the Coast Highway and the scene of many unfortunate accidents.

Different Location

The elimination of the bottle neck is now being accomplished by construction of a new highway, 16.6 miles long, on an entirely different route. Of this distance, 11.1 miles is well along towards completion, and the contract for the remaining 5.5 miles has been awarded to the Peninsula Paving Company, builders of the first section. Construction of a new bridge across the San Benito River is part of the project.

This new highway route lies partly in Monterey County and partly in San Benito County. The general location is on the coast route (U. S. Route 101), about 100 miles south of San Francisco. The southerly end is two miles north of Salinas and it passes through the villages of Santa Rita, Prunedale and Dumbarton. Its northerly terminus is at its junction with the existing State highway three miles north of the mission town of San Juan Bautista.

Much Lower Elevation

Instead of crossing the Gabilan range of mountains, this cut-off passes over mesas and through a series of valleys in the foothills of that range. There is a saving in distance of 1.2 miles. The highest elevation reached is 550 feet, whereas the pass on the present San Juan grade route is at an elevation of 1050 feet.

Contrasted with the present route over the mountains, where frequent sharp curves allow

only a sight distance of 75 feet, the new highway with its long radius curvature and low gradient will permit motorists to travel at all points at the highest speed permitted by the California laws. The old grade will remain as part of the State highway system.

The new highway construction project follows partly along the route of the old "Camino Real" between Monterey and San Benito counties. It passes through a narrow gorge known as the "Pinecate Rocks" in San Benito County, romantically interesting because in the bandit days of California it was the scene of many stage holdups. Foot-holes in a prominent rock are still evident where bandits scaled it to hold up stages from a point of vantage. Twelve acres additional right of way was obtained at "The Rocks" to preserve for all times the beauties of this romantic spot.

Through Scenic Country

Much of the route is scenically beautiful—of a pastoral character—different than any other section along the coast route, consisting of small fruit and chicken ranches. On the mesas gnayule (Mexican rubber plant) and grain are extensively grown.

The new route will be particularly appreciated by truck owners, as to a large extent the old grade has prevented the use of trailers, and because of its grades has greatly increased the cost of truck travel.

The new route is so located that connecting highways will undoubtedly be constructed which will bring the San Francisco Bay district much closer to several cities of Monterey County. By the construction of a highway between four and five miles long between the new road and Castroville, several miles in distance and much time will be saved to travelers between San Francisco and the Monterey Peninsula.

Cut-off to Connect

Monterey County is already building an improved highway connecting the new route with Watsonville, and Watsonville will then be brought within nine miles of the coast highway. This latter cut-off will make possible a pleasurable circle tour starting at San Francisco, Oakland or San Jose, and passing along

TOUGH GOING was encountered by the contractor on this portion of the San Juan grade realignment out of Salinas where the route lay through a mountain swamp. In the above picture is shown machinery working in a heavily watered peat bog. Seemed impossible to ever put a road there, but the bog was scooped out, filled, and today is part of the fine new highway cut-off to be opened early next summer.

the coast from Santa Cruz to Watsonville, and returning via Gilroy and Morgan Hill.

Highest Standard Road

The new highway being constructed to eliminate the San Juan grade is of the highest standard in design. It consists of a graded width of 40 feet in cuts and 38 feet on fills. The Portland cement concrete pavement, 20 feet wide, is being laid in two 10-foot strips. Expansion joints are placed every 60 feet with weakened plane joints at 20-foot intervals. It is reinforced throughout against corner breaking and edge cracking. The 10-foot strips are 7 inches thick in the center and 9 inches at the edges.

Where the roadbed conditions are more unstable, the pavement is thickened to 9 inches in the center and 11 inches at the edges. Several wooden bridges with concrete decks are included in the drainage structures. Smaller drainage structures consist principally of concrete boxes and corrugated iron pipes. The cost of the project completed will be nearly \$1,000,000 and the new road will be opened early next summer.

Building Studies Cover Wide Field

(Continued from page 10)

The passing of the new Wage Scale Act also added a tremendous amount of office work involving labor studies and the securing of proper data and information to establish prevailing minimum wage scales for State projects. The wide field of operations was scattered from Mt. Shasta to San Diego, and all handled out of the Sacramento office. Also a great amount of time was necessarily given to reports, acting in an advisory capacity, surveys, studies and investigations of proposed sites of possible future activities which can not be listed in the construction valuation amounts given.

Nor is this accomplishment the work of any single individual, but the united effort of the organization personnel having a desire to be up and doing at all times. It is a happy privilege to be a small working part in the important machinery of State building construction.

Workers Called From All Over the State

(Continued from page 1)

They were asked to send their quota lists to Colonel Garrison. The response was gratifying. Also it disclosed in sombre reality the extent of unemployment. In one city where 40 men were called for, the mayor replied that he had 2200 worthy citizens on his waiting lists.

Soon on Job

As fast as the lists were received Colonel Garrison caused them to be copied, checked and certified to the district engineers. The district engineers were provided with cards with which to carry Colonel Garrison's notification to the men. In some instances the remoteness of the homes of the men occasioned a few days' delay; but the major part of the force was in motion by the fifteenth instant.

It is doubtful whether there was ever such a widespread and unique assembling of men. Here we read "Crescent City." Then, over the valley and Sierras to Alturas. Take your map and look up Garberville, Pepperwood and Smith River. They are all on the list. Susanville, Dunsuir, Auburn, Colusa and Marysville! Evidently we are moving south and taking in all the little places between. From Grass Valley over to Gilroy is some jump; but keep at it and take a look at the quotas of Santa Cruz, Livermore, Napa and Redwood City.

From Desert and Valley

We are too far down now to mention Quincy and Portola, San Juan, Paso Robles, King City and larger-sized towns down the south coast line. Getting over into the big valley, look up Delano, Maricopa, Lemoore, Goshen and Taft. They are all there, and with Fresno, Modesto, Merced and like larger cities. Who knows where are Grape Vine, Pixley, Oildale, Bodfish and a score of other little towns with which the engineers are familiar.

For jobs on the desert, San Bernardino heads the whole list with 150 men, due to the fact that some big work is under way in the direction of Arizona. But Brawley, Corona, Needles, Blythe and a dozen other sun-kissed towns are in with quotas. Then there's Saugus, Fallbrook, Palmdale and Lancaster. Bishop comes in strong. San Diego towns appear. Victorville and Coachella have nothing on Bear Valley.

In District No. 10 the call is all the way from Fairfield to Angel's Camp, from Oakdale to Sutter Creek.

Jobs Close to Home

For a post-graduate course in California geography, just study the quota lists worked out by the engineers for the Governor's call. And every quota of men is sent directly to a job that is relatively close to their homes.

The drawing of men from these interior points will also go far to avert further congestion of the unemployed in the more populous centers. It leaves them free to work out their local problems and puts them in a position to benefit more largely by such future measures as may be taken for the alleviation of unemployment.

The Governor, Director and Highway Commissioners are well aware that this program is but one helpful move in meeting the serious problem. The pressure for employment is great and widespread. It is

not possible to always make favorable response, even to applications that are pathetically appealing. The \$1,500,000 made available by the Commission for this particular undertaking fixes the limit to which the employing power can go.

The dollars must be divided by men and the limit is apparent.

Hopeful Signs

But there is a hopeful sign observable in the tone of letters from local officials. They seem to have caught the spirit of the Governor's move and are working on plans of their own along the same lines.

Supplementing the special program, the maintenance engineers have brought their regular working forces up to the maximum allowed by their budgets.

The 3600 men set to work are in addition to the 20,000 already engaged in the constructive service of the State. In his letters to the mayors, the Governor mentions 3800 men as the number to be called into action; and they will be as fast as the quotas are cleared to the engineers.

The responses of the Mayors are in fine spirit, and the promptness with which they sent in their lists materially assisted in launching the work on time.

AMENDED VERSION

Show me a paved road home,
I'm tired and I want to go to bed.
I just drove to town 'bout an hour ago,
In mud clear up to my head.

Wherever I chance to roam
Through sand and mud and loam,
You'll always hear me singing this song,
Build me a paved road home.

THIS DRIVER PLAYS SAFE

Hats are off in the automobile world to George Marketak, a truck driver of Chicago, who has just rounded out 250,000 miles of travel without so much as scratching the fender of his own or any other motor vehicle. His driving rules are: "Never try to beat the traffic. Steady driving will get you farther and faster than spurts. Always expect the other fellow to do the wrong thing. Allow ample room between your own car and that ahead of you. Never drive so fast that you can not stop in the distance you can see ahead. Even when you have the right of way, don't take too much for granted."

Census Taker: "Would you mind telling me if there is any insanity in your family, lady?"

Young Resident Engineer's Wife: "Well, no, not exactly. Only my husband thinks he's boss here at home."

Betty was taking her first ocean voyage, and for the first three days the sea was smooth as glass. On the fourth day out a squall came up and the good ship bounded around like a broncho.

"Mother," finally asked Betty, "what's the matter? Are we on a detour?"

Governor's Letter to the Mayors

Here is the letter expressing the spirit of California sent by Governor Rolph to the mayors throughout the State asking them to cooperate in his program for unemployment relief by sending names of married men out of jobs to the Department of Public Works according to the quotas allotted to their cities.

My Dear Mayor:

As Governor of California, I am deeply concerned over the present unemployment situation and particularly with the need of vigorous relief of our fellow citizens during the coming winter.

California should lead the way and stand out as one State in the Union willing to care for those citizens thrown out of honest employment by the present business depression.

At my request, the Department of Public Works has prepared a program of work for approximately 3800 men to be employed over a period of five months starting October 15th. Each man is to be given three days' work per week in or near the community in which he resides.

The funds available necessarily are limited and the employment planned, all hand work, will be upon maintenance work which otherwise would not have been reached for at least a year.

May I not count on you, as elected representative of the people of your community, to help make this program a success by personally selecting the men who require work, or by appointing a committee to perform that function? From your city ----- men will be employed.

To insure the greatest benefit, both to the State and your city, those employed must be able-bodied men, heads of families, who are citizens of the United States and who have been residents of California for at least one year.

I would appreciate it if you would communicate your acceptance to Walter E. Garrison, Director of Public Works; also enclose names and addresses of the men to be employed.

Thanking you for your interest in this matter, and assuring you of my continued interest in your city's welfare, I am

Very sincerely yours,

(Signed) JAMES ROLPH, JR.,
Governor.

Dangerous Hours for the Children

The most dangerous hours for children in the streets are from approximately 4 o'clock in the afternoon until 7 o'clock in the evening, according to an announcement by the National Safety Council.

Investigation shows that the kiddies straggle home from school, stopping every now and then for a game of tag or leapfrog, and if there is no better place available, they are quite likely to use the street for a playground. Traffic also becomes heavier late in the afternoon, and in winter early darkness comes.

Poor visibility at dusk, numerous cars in the street, and youngsters lingering after school hours, all contribute toward making the late afternoon a perilous time for kiddies in traffic.

Chosen to Preserve Beauty of Roadsides

The committee of the Western Association of State Highway Officials which will undertake a study of the conservation of roadside beauty and the securing of adequate rights of way for highways across public lands has been announced as follows:

Frank B. Durkee, General Right of Way Agent in the California Department of Public Works, Sacramento, chairman;

Roy Klein, State Highway Engineer of Oregon, Salem;

T. S. O'Connell, State Highway Engineer of Arizona, Phoenix.

The committee was authorized by a resolution adopted at the annual meeting held in San Francisco on July 10th and 11th. The appointments were made by Z. E. Seveison, State Highway Engineer of Wyoming and president of the Western Association of State Highway Officials.

Roberts: Has your car a good cooling system?

Woods: I should say so! You ought to see it knock the pedestrians cold!

Progress of Highway Projects on Coast Route Summarized

THE COAST HIGHWAY between Los Alamos and Wismore has been reconstructed for 3.7 miles with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. Basich Brothers Construction Company was the contractor.

The portion of the coast highway between Gaviota and one mile north of Las Cruces, 2.8 miles in length, has been reconstructed with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. Gist & Bell were the contractors. Within the limits of this project there is being constructed a new reinforced concrete bridge across Gaviota Creek in the narrow portion of the canyon. Paul M. White is the contractor under the supervision of the Bridge Department.

38 Miles Surfaced

On the Cuyama lateral, between the second crossing of the Cuyama River and the Kern County line, a distance of 38 miles, the road has been surfaced with crusher run base and oiled rock surface 18 feet and 20 feet in width. The Lang Transportation Company was the contractor.

On the coast highway, between Wigmore and Zaca, the earth shoulders have been treated with fuel oil by the road mix method. The contractor was the Santa Maria Construction Company.

On the coast highway, between Zaca and Gaviota Pass, the shoulders have been treated with fuel oil by the road mix method. The contractor was the Santa Maria Construction Company.

On the coast highway, between Gaviota Canyon and Tecolote Creek, oiled rock borders are being constructed on each side of the pavement. Gist & Bell are the contractors.

San Luis Obispo County—On the coast highway, between Atascadero and one-half mile south of Santa Margarita, 9.8 miles of road is being reconstructed with a 36-foot roadbed and a 20-foot second-story asphaltic concrete pavement. The contractor is the Hanrahan Company.

Bids are being received for the reconstruction of 5.8 miles of the coast highway between Arroyo Grande and Los Berros Creek with a 36-foot roadbed and a 20-foot reinforced Portland cement concrete pavement. This project will substitute for a very objectionable right-angle turn, a curve of 1800-foot radius, in Arroyo Grande and correct unsatisfactory alignment at other places. This will require new bridges across Arroyo Grande Creek and Berros Creek.

On the coast highway north of Paso Robles, a reinforced concrete bridge across San Marcos Creek is nearing completion. L. C. Clark and C. E. Doughty are the contractors.

At various places sunken concrete pavement is being raised by forcing cement and earth grout through openings drilled in the pavement. A special heavy pump is used for this and the work is apparently very satisfactory.

GIVE HIM A TICKET

"Don't you know your way around this town?" asked the sardonic traffic cop.

"No," answered Mr. Chuggins, "if I knew any way around it, you don't suppose I'd have gotten mixed up in it, do you?"—*Washington Star*.

In Memoriam

NORMAN S. HAMILTON of the engineering staff of District 5, Division of Highways was almost instantly killed September 14th by a heavily laden truck. His loss is deeply felt by his co-workers and friends in District 5 where he was admired for his many sterling qualities.

The deceased was born in 1896 in Westly, California, and after finishing the grades and high school work, completed his education at the University of California in 1921. After graduation, he worked for Butte County Highway Department, before coming into the State's service as draftsman in the District V office in December, 1928. He continued in that capacity until April, 1929, when he was assigned to field work, principally as inspector on various paving jobs in that district, and it was while so employed on the paving project between Santa Margarita and Atascadero, that he met his untimely death.

Mr. Hamilton is survived by his wife, Beatrice Levy Hamilton, and parents, Mr. and Mrs. Charles O. Hamilton of Oroville, to whom the heartfelt sympathy of his co-workers is extended in this time of bereavement.

MISS NELLIE DIAMANT, who had been employed in the District VII office of the Division of Highways since 1912, and who had been cashier for that district for a number of years, died suddenly of pneumonia on October 3d at the Hollywood Hospital.

Miss Diamant's death is sincerely regretted by the many friends she made during her long period of very faithful and efficient service with the California Highway Commission and the State Division of Highways.

As a mark of respect and esteem and to permit her many friends to attend the funeral services, the district office was closed from 10 a.m. to noon on Tuesday, October 6th.

DON'T BLAME TRUCKS

Automobile drivers who blame bus, truck, and taxicab drivers for accidents resulting from driving have another guess coming, according to an investigation of the increase in fatal highway accidents conducted by the manager of the educational department of the National Automobile Chamber of Commerce. These records show that taxicab operators last year reduced their 1929 accident record by 25 per cent, bus drivers reduced theirs by 19 per cent, and truck drivers by 14 per cent. This achievement is contrasted with the record of private motorists who last year increased theirs by 37 per cent.

SANTA CRUZ INCREASE

During the first six months of this year registration of motor vehicles in Santa Cruz County brought the total car ownership for that area to 15,631. There were 14,220 passenger automobiles registered up to June 30, last. The remainder of registered vehicles consisted of trucks, trailers, and motorcycles, according to the California State Automobile Association.

This is the third of a series of articles on the State's water problem published in California Highways and Public Works. The first dealt with the Governor's call to the entire citizenry of the State to unite in efforts to solve the problem. The second described the Sacramento Valley and Sacramento-San Joaquin Delta situation. This article deals with the complications confronting southern California. Other analyses will follow.

THE problem of a complete water supply in Southern California can be met only by importing water from other entirely outside sources. In this, the problem is the same as that which exists in southern San Joaquin Valley but in detail the problem is different and is vastly complicated. On the other hand since so large a portion of the wealth of the State exists in southern California, the matter of financing is not so difficult as that which attends an attempt to bring water to San Joaquin Valley.

The people of southern California while they would like financial assistance, feel competent to cope with the situation on their own resources and do what is necessary and economical to insure a water supply. The favorable vote on the recent bond issue of \$220,000,000 for Metropolitan Water District exemplifies this attitude.

The term "southern California" generally brings to mind Los Angeles but it should bring a picture of the desert in the eastern part of the State and as well the entire coastal area, two areas widely divergent in climate and conditions. Again, the coastal area separates into three well defined divisions each with its particular problem.

TWO DISTINCT AREAS

For discussion of water supply matters southern California is generally thought of as bounded on the north by the Tehachapi Mountains and by the north line of Ventura County. Santa Barbara County while gen-

erally considered in southern California presents a unique and separate problem and in this paper is not considered as it properly is one of the south central coast basins which have specific problems as to water supply.

The desert country divides into two distinct areas. To the north is Mohave Desert and to the south the Colorado Desert. The latter has two separate areas again in which the problem is essentially the same. The climate is the same and the only possible water supply the Colorado River.

The Mohave Desert is distinguished from the Colorado Desert by having slightly more rainfall and a more temperate climate. The local water supply for the entire Mohave Desert is thought to aggregate around 200,000 acre-feet which includes all the streams running off from the north of the San Gabriel and San Bernardino ranges. Even if this could be all utilized it is far from sufficient for the irrigable land and the cost of bringing water to this area is so great that no feasible plan has yet been conceived.

The Palo Verde Valley and Chuckwalla Mesa which two adjacent areas make up one of the major irrigable areas in the Colorado River Desert, comprise approximately 300,000 acres of land. A part of this is now irrigated and the water supply is sufficient for it all, but cost of extending irrigation to the higher lands has so far militated against their development.

The other large area is made up of the almost adjacent Imperial and Coachella

Reclamation of Sewage Promises Success

(Continued from preceding page)

valleys which lie in the great sink of Colorado Basin, all below sea level. The gross area susceptible of irrigation is 1,000,000 acres of which close to 500,000 acres are now irrigated. **It was the danger of flood overflows from the Colorado River to Imperial Valley which was one factor in causing the construction of Hoover Dam on Colorado River.**

Other items contributing to this were the vexations and difficulties encountered by the present Imperial Irrigation District in taking water from the Colorado River, carrying it through the Republic of Mexico and back into the United States. The Boulder Dam Act embodies a provision for construction of an All-American Canal which would cover the million acres in the two valleys without going into Mexico and at the present time the representatives of the Government and of the two valleys are meeting to formulate a contract for utilization of Colorado River water as controlled by Boulder Dam. If this contract is finally negotiated, construction of the canal will begin when Congress appropriates the money for it.

VENTURA SUPPLY LARGER

In the coastal area Ventura County separates naturally from the area to the south and relatively has a larger supply compared to the habitable and irrigable land than the coastal areas to the south. Next, south and east, there is what is termed South Coastal Basin which takes in the coastal areas of Los Angeles, San Bernardino, Orange and Riverside counties, the total a comparatively compact area in which the irrigated land is contained in a length of 90 miles at its greatest, and a width of 50 miles at its greatest. South of that lies San Diego County with the smallest water supply compared to the irrigable and habitable areas of any of the three coastal areas just mentioned.

The total irrigable and habitable area in the coastal area from Ventura County on the north to the international boundary on the south, is estimated to be 2,000,000 acres which will require 3,000,000 acre-feet of water if present practices in use are continued. The local feasible supplies aggregate 1,200,000 acre-feet which means that if the entire area is irrigated 1,800,000 acre-feet must be brought in from outside.

This amount might, however, be reduced by utilization of sewage which now goes to waste into the ocean. The matter of purification for use in irrigation or even for domestic use is now under experiment and promises to be successful. The cost of such reclamation together with distribution of the water from the outfall sewers at which points it is available, is probably as high per acre-foot as importation of water from outside.

RECLAMATION FEASIBLE

Ventura County requires only a small amount of importation to supply its full needs although if, as

seems possible, importation is cheaper than conservation of an extremely large percentage of its local supplies, water will be imported if it can be obtained, in preference to reclaiming the full local supply. In San Diego County it is probable that about 35 per cent of the entire local supply is now being conserved and that it may be feasible to reclaim 65 per cent or 75 per cent, due to the extremely high charge which may be paid for water in that vicinity. On the other hand it may be cheaper to import water from the Colorado River than to reclaim so large a percentage of local supplies.

To get accurate results in investigational work in the entire coastal belt of southern California is extremely difficult because of the peculiar conditions encountered there. Except for San Diego County, practically 90 per cent of the local supplies are utilized by drawing from underground reservoirs which are recharged by rainfall which falls upon them and by percolation from streams which flow across them. The extraordinary dependence upon underground supplies and the existence of such underground supplies bring complications into the problem and data must be gathered for many years before it is possible to draw definite conclusions as to any particular area although it may be very easy to draw a general conclusion as to the entire area.

DIFFICULT PROBLEM

When the imported supplies are brought in the matter of payment by those benefited will be a difficult problem because any water introduced at one point in South Coastal Basin, for instance, will benefit all interests lying below and nothing can be done to guard against this. This may mean that many people will be benefited without paying a proper amount for such benefit.

In anticipation of the problems which will be encountered, the State has been investigating the South Coastal Basin since 1923 and Ventura County since 1927. It is probable that these investigations will be continued for many years to come because it requires authoritative knowledge continuously gathered to solve the problem and because the matter is so extremely important.

The idea behind the State investigation in Ventura County is that a comprehensive plan for utilization of the water of the county in the county may be laid out and development go ahead on that basis until the limit of feasibility is reached. It happens that the boundaries of Ventura County bound the watersheds from which the water supplies of the county come so that while it is not felt that county boundaries should necessarily have anything to do with the matter, the physical conditions make it convenient to speak about a comprehensive plan for Ventura County.

In the South Coastal Basin, investigations have gone further in detail and intensiveness than in any other area, the State supplying between one-half and one-third of the money being spent on the work for development of the facts as to underground water supplies and possibilities of further utilizing local sources of supply. The work is done under the supervision of the Division of Water Resources.

The State has also investigated a route from Colorado River which would supply water to the

Colorado River Supply in Ten Years

(Continued from preceding page)

entire coastal area of southern California including Ventura County, South Coastal Basin and San Diego County and has surveyed a distribution system for such purposes.

The Metropolitan District and the city of Los Angeles have spent about \$2,000,000 or more in extremely detailed investigation and have selected another route entering the South Coastal Basin, however, at the same point as that chosen by the State. Recently a bond issue of \$220,000,000 was voted by the district for construction of an aqueduct. It is understood that by the terms of the bond issue no specific route was approved by the voters.

San Diego City and County have investigated a route coming directly from the proposed All-American Canal for Imperial Valley, crossing through the mountains directly east of San Diego and arriving at the coastal plain at sufficient elevation to water the agricultural land as far north as San Luis Rey River and as far south as the international boundary. At the present time arrangements have been made by the

city and county of San Diego to participate in the construction of the proposed All-American Canal which was previously referred to and thereby securing a portion of its capacity for the conduit in question.

RELIEF IN TEN YEARS

It is apparent therefore that the people of southern California are attacking the problem presented in an aggressive and forcible way and that within ten years at the most, outside supplies will have commenced to arrive in the coastal area. So far only a supply from the Colorado River has been investigated and it is to be doubted whether additional supplies from other sources will be necessary if the entire amount recommended by the Metropolitan District and also the entire amount recommended by the city and county of San Diego is brought in to the area.

The water supply to be imported from Colorado River for southern California ties that area into the great Colorado River problem which has been under discussion for a quarter century back and which is a national problem.

Casualties in Grade Crossing Accidents Cut 10 Per Cent

Money being spent in grade crossing separations in California is an important factor in highway construction work, according to a recent report of the State Railroad Commission.

There are now approximately 550 grade separations of various kinds in the State, including overhead and subway crossings of highways. The report also shows, however, 12,000 grade crossings in the State, as related to more than 2,000,000 motor vehicles in use, some 17,000 miles of main and branch line railways, some 6000 miles of State highways, and many miles of county and city roads.

More than \$3,200,000 was expended in grade separation work in 1929, the report shows. Of this total, the railroads contributed approximately \$1,400,000, the cities \$900,000, about \$480,000 was spent by the counties, and approximately \$450,000 by the State.

As a direct result of this protective work, Railroad Commission figures show a decrease of 6 per cent in grade crossing accidents in California, and a 10 per cent reduction in casualties, during 1930 over 1929. This record is remarkable, it is pointed out, in

view of the increase of approximately 20 per cent in the number of traffic accidents of all kinds occurring on the highways of the State during 1930.

Additional protective devices ordered by the Railroad Commission, greater care on the part of motorists at crossings, and general educational work of motoring organizations and other public bodies are other reasons to which the accident decrease at grade crossings may be attributed, it is said.

MORE CALIFORNIA CARS

California is one of the eight states out of 36 reported showing an increase in passenger car registration during the first six months of this year as compared with a similar period in 1930, it is announced by the California State Automobile Association. California's total registration of passenger cars reached 1,855,236.

Other states sharing in this indicated return of better business conditions include Connecticut, Florida, Maine, Maryland, Massachusetts, New Jersey, and Rhode Island.

When Noah sailed the waters blue,
He had his troubles, same as you;
For 40 days he drove the ark,
Before he found a place to park.

—Jackson Citizen-Patriot.

"Didn't you claim when you sold me this car that you'd replace anything that broke or was missing?"
"Yes, sir. What is it?"
"Well I want four front teeth and a collar bone."
—Boston Transcript.

Building a Highway Brings This Town a Business Boom

“WILLIAMS is in the midst of a temporary prosperity that is of a volume equal to that of many years. The chief cause is the widening and leveling of the ten-mile stretch of the Tahoe and Pacific highway between Williams and Maxwell.”

That was the cheery statement of C. E. King, progressive farmer and stockman of the Williams vicinity, according to an article in a recent issue of the *Woodland Democrat*. King was in Woodland looking after business interests.

“The highway improvement,” said King, “cost about \$30,000 a mile, or around \$300,000. The construction camp is just outside of Williams, but sufficiently near to create a small boom in town during the evenings. Williams perhaps is not only the busiest place in Colusa County at present, but the busiest, to the square inch, in this section of the State.”

IMMEDIATE RELIEF

Sometimes one is led to believe that Federal relief measures, intended for winter, will get to work about midsummer. That is, earmuffs and overcoats may be bought in August.

California moves quickly in common sense way, to ease up on unemployment. The State Highway Commission has appropriated \$1,500,000 to be used to employ a force of between 3500 and 4000 men on highway maintenance work in practically every county.

It is planned to work the men three days a week for a period of five months. Cooperation of the mayors of all cities will be sought in putting the men to work.

Married men with families will be given preference and the work will be performed in the immediate locality where the men reside.

It is the purpose to distribute this work so that every section of California will share in its benefits. Practically all of the \$1,500,000 will go for wages.—*Banning Herald*.

Is “engine” a masculine or feminine word? Depends on whether or not it rirs.

Jack: “Why did you quit calling on Eleanor?”

Fred: “Too many traffic signals.”

Jack: “Tuh?”

Fred: “Her father caught me kissing her and yelled ‘stop’ and then yelled ‘go,’ and her mother hung up a ‘no parking sign.’”

Vol. 9 OCTOBER, 1931 No. 10

INVEST IN ROADS

Better roads should be the watchword of all residents of northern California. Highway improvements should be uppermost particularly in the minds of the people of the coast area. With the possible exception of the dairy farms the tourists are bringing more money into this part of the State than any other one source of revenue. The better the roads the more tourists will come. There should be no memory of rough highways in the minds of travelers who have visited our county and returned again to their homes.

The roads of the coast section also should be improved as rapidly as possible because all-weather roads are necessary to the welfare and prosperity of the farmers who live there. The rains will begin coming in a few more weeks. If conditions this winter are as they always have been the rains will make some of the coast section roads absolutely impassable. This should not be.

Good roads are always a good investment. If the cost of better roads is properly distributed and the people who use them most can be made to pay their share of the cost and upkeep then everybody is benefited and nobody is hurt.

The people of the coast district should from this time on be “good road-minded.” But they should not burden themselves with improvements unless an equitable arrangement is made whereby the cost is distributed proportionately among all people who are benefited.—*Santa Rosa Republican*.

AUTOS IN SWEDEN

Sweden had more than 145,000 automobiles at the beginning of 1931, according to the government statistical bureau. In addition there are nearly 57,000 motorcycles. Especially in Stockholm the number of motor cars has grown rapidly. The capital now has more than 20,000 automobiles.

Gallant Rescue of Drowning Bather by Water Division Hero

DURING the recent period in which engineers connected with the stream flow measurement staff of the Division of Water Resources, Department of Public Works, were active, a group of persons were swimming in the Sacramento River above the I Street bridge. These bathers were near the point where two men were employed in recording at periods through the night tidal cycle measurements and river flow readings.

Duncan F. McCallum, junior hydraulic engineer, and William Cross, filling the shift from midnight to 8 a.m. had taken measurements and were recording their notes at 2 a.m. when they became aware of some excitement among members of the swimming party.

On hearing cries for help, both men ran along the shore searching the river with their flashlights. At last, they located a person struggling in the water at some distance from the shore. McCallum immediately plunged into the stream fully clothed, reaching a man who was just about to sink for the third time, and after a considerable struggle succeeded in bringing him to shore.

Then McCallum, assisted by Cross, proceeded with first aid measures to resuscitate the man who was in critical condition and after prolonged effort managed to revive him. When the man was able to speak he told the two engineers that a woman, Verna Pearl Brown had gone down into the water with him and was undoubtedly drowning.

In the meantime a small boat had put out from Wilbro Beach and after a short search the body of the woman was discovered floating in the water. The body was brought ashore and first aid efforts were made to resuscitate her. An emergency call was placed to secure a pulmotor from the Sacramento Fire Department. McCallum and Cross alternated in resuscitation work until about 7 a.m. when the pulmotor arrived from Sacramento but all efforts failed to revive her.

During the alternate spells of first aid work the men continued with the measurements of flow in the river until relieved by the oncoming shift about 8 a.m. McCallum stated modestly that had an alarm been given within sufficient time, it would have been possible to have also saved the woman.

The name of the man successfully rescued is David Schmidt of Sacramento.

DUNCAN F. McCALLUM, junior engineer, Division of Water Resources who plunged into Sacramento River at 2 a.m. and saved the life of a man sinking for the last time.

Highway Engineers to Convene Next Month

C. H. Purcell, State Highway Engineer, announces a meeting of the district engineers and heads of departments of the Division of Highways to be held in Sacramento on November 12 and 13. This is an annual gathering for the purpose of discussing problems of mutual benefit, possible changes in highway standards, the effect of new legislation, and other problems.

Subjects have been assigned to individuals who will prepare papers to be read and then followed by general discussion.

These meetings in the past have resulted in an appreciable amount of benefit and better understanding between headquarters' staff employees and district employees.

Several matters of special importance are expected to be taken up at this meeting.

State Employees of Sacramento Go Over The Top in Community Chest Drive

1 1 1 1 1 1

FIRST in the field and 100 per cent over the top was the record made by the State employees of Sacramento in the Community Chest campaign by each contributing one-quarter of a day's pay per month.

That was the report Governor Rolph was able to make in behalf of his official family, at the end of eight working days to the Chest workers at the luncheon on State Employees' Day, October 22d. The announcement was greeted with prolonged cheering.

"I am prouder than I can say," declared the Governor, "that my own household, the State employees in Sacramento, have responded so promptly and so generously to this most worthy cause."

The appointment by Governor Rolph of James I. Herz, Deputy Director of the State Department of Public Works as his Community Chest Colonel for State departments, was the pre-campaign signal for action by the employees.

A meeting of the Departmental Council of Sacramento Chapter of the State Employees' Association was called immediately and invited Deputy Director Herz and Community Chest officials to address them. In the executive session that followed it was decided to organize at once a subscription campaign among the various department groups to raise an allotted quota of \$31,000, compared with \$9,000 subscribed last year.

THREE TIMES MORE

It was figured that to raise this total—a sum more than three times greater than last year—a subscription amounting to one-quarter of a day's pay per month would be needed from each of the 2100 State employees in the Sacramento district.

With this goal in view and with the advice and encouragement of Mr. Herz a complete Community Chest solicitation organization was formed within the State Employees' Association headed by Spencer Burroughs, president of the Sacramento Chapter and attorney in the Water Resources Division of the Department of Public Works.

The general committee appointed was composed of executives of the Department.

CAMPAIGN COMMITTEE

T. E. Stanton, Highways Materials and Research Engineer and president of the California State Employees' Association, was made chairman of the speakers' bureau, with Fred J. Grumm, engineer of Surveys and Plans, as vice chairman; P. R. Green, chief draftsman, District II, Division of Highways, as secretary; E. R. Higgins, chief accountant, Department of Public Works, treasurer, and L. V. Campbell, office engineer, Division of Highways, chairman of the interdepartmental committee.

The committee membership also included a chairman from each of the nineteen groups of employees, comprising the State departments located in Sacramento.

A schedule of group meetings was promptly arranged at which the objective to be reached by a quarter of a day's pay per month was explained and the amount of the subscription left entirely up to the conscience and financial situation of each individual.

NEED REALIZED

From the outset there was evidenced in every group a general feeling that this year an extra effort ought to be made to supply the Chest with more funds and that every one should go the limit in giving.

The result of this spirit was quickly shown by the returns that came rolling in as group after group reported through their chairman. The departmental drive was begun on October 12th to be continued two weeks. On the first day 437 employees contributed \$8,742. On the second day 442 employees gave \$6,946.20. The third day produced \$6,765.87 and the fourth \$3,214.75 from 281 givers.

At the end of the first week, Colonel Herz was able to report that the total subscriptions had leaped to the generous figure of \$22,454.07. This sum represented 72 per cent of the entire quota and was contributed by 1013 persons.

At the Community Chest noon gathering, October 20th, Colonel Herz proudly announced that the pledges had increased nearly \$3,000 since the preceding day and had reached a total of \$25,668.

U.S. Engineers Study Great Valley Plan

(Continued from page 2)

That the United States Government is interested in solving California's most acute problem, conservation of water, was exhibited in September when members of the United States Board of Engineers for Rivers and Harbors visited California for the particular purpose of obtaining first-hand information on the Great Valley project of the State Water Plan and familiarizing themselves with its principal features.

Four members of this important board, Brigadier General Herbert Deakyne, Colonel Edward H. Schulz,

water problem. The entire Board of Engineers was greatly interested in the project, being familiar with it through the reports, and expressed their appreciation of the opportunity to personally inspect the entire project.

The local problems of water shortage were presented to the United States Board of Engineers at a luncheon meeting given at Fresno under the auspices of the Fresno Chamber of Commerce, at a breakfast given by the Stockton Chamber of Commerce and at

WITH THE ARMY ON SURVEY. This picture of the U. S. Army group that made a three-day tour studying the Great Valley project of the State Water Plan was taken at Mendota weir on the San Joaquin River. Left to right, they are Lieut. Colonel Thomas M. Robins, district engineer, Pacific Division; Brigadier General Herbert Deakyne, Captain Albert B. Jones, Colonel Edward H. Shulz and Lieut. Colonel Warren T. Hannum, members of the United States Board of Engineers for Rivers and Harbors who came from Washington; Major J. R. D. Matheson, California Debris Commission; C. I. Grimm, War Department District Engineer, and Captain W. A. Wood, district office of War Department.

Lieutenant Colonel Warren T. Hannum and Captain Albert B. Jones, made a three-day inspection trip extending from Bakersfield in the southern San Joaquin Valley to Redding at the northern end of the Sacramento Valley. Lieutenant Colonel Thomas M. Robins, division engineer of the South Pacific Division, Major J. R. D. Matheson, member California Debris Commission, Captain W. A. Wood and Mr. C. I. Grimm, principal engineer, District Office of the War Department, accompanied the party.

STUDY GREAT VALLEY PLAN

The War Department has been making an extensive investigation of the Great Valley project and has rendered a partial report to Congress. A final report will probably be submitted about the first of the coming year. The recommendation of the United States Board of Engineers will have an important bearing on Federal participation in the project. General Deakyne was formerly stationed in San Francisco as division engineer and is familiar with California's

a dinner in Sacramento given under the auspices of the Sacramento Chamber of Commerce.

Governor James Rolph, Jr., attended the Sacramento meeting and, in an address to the Board of Engineers, stressed the acuteness of the water problem and the importance of a sound solution of it to the State and the Federal Government, and of the importance of Federal assistance.

MADE RIVER TRIPS

The Board of Engineers, leaving Bakersfield on their inspection trip September 15, 1931, closely paralleled the location of the proposed San Joaquin River-Kern County Canal, inspected the highly developed agricultural areas that have been abandoned through lack of sufficient water and examined the dam site at Friant. From Fresno they came up the west side of San Joaquin Valley, stopping at Mendota Weir, and at the pumping system of the West Stanislaus Irrigation District. The irrigated lands on the west side of San

(Continued on page 30)

Pay Envelopes Vital to Households

(Continued from page 8)

annual report many facts and figures which may be of interest to California highway enthusiasts. Pointed excerpts from his address follow:

"The Federal government is capitalizing the information as to how many people have a livelihood because of increased Federal appropriations for highways, and the states have—many of them for the first time—found that not only the state departments but the contractors have a great army of workers on the roads whose pay envelopes are a vital matter to many a household."

Maine Holds Record

"On the first day of July there was one person employed on state highway work for every 369 people in the nation. (Editorial note: In California, one in every 734.)

"The largest number in any state at that time was one out of every 70 persons in the State of Maine. This has no reckoning of persons employed in road work by townships, counties, or cities, neither does it have anything to do with persons who are employed exclusively in preparing materials to be used in road construction. Likewise, this has no reference to people employed by the Federal government in road work, whether departmental in forests, Indian reservations, public domain or national parks."

"In addition to all this, the fact should not be overlooked that there are many industries scattered throughout the county which would have been closed down if it had not been for the demands made upon them to furnish materials for this road building program."

Surface Mileage Increase

"During the past calendar year the states have increased their surfaced mileage on the state systems by 25,997 miles, but while they were doing that the Legislature added 6390 more miles to the systems, and this had nothing to do with the wholesale job accomplished in North Carolina or the new idea township undertaking in the placid home of William Penn."

"In adding to the surfaced mileage during the past year the types of roads were as follows: gravel 5014, bituminous macadam 1076, bituminous concrete 1065, concrete 9462, and all other types 9380. We started this year with a state system of 321,723 miles; 29 per cent in pavement, a gain of 3 per cent over last year; gravel 31 per cent, a gain of 2 per cent over last year; sand clay and other types 12 per cent, a gain of 3 per cent over last year.

"This leaves 28 per cent still earth roads, or a net gain in surfaced mileage of but 8 per cent. However, this remaining 28 per cent of earth roads is 38 per cent graded to standard and supplied with proper small drainage structures."

Largest in History

"The total income for State Highway Department activities for the last calendar year was \$1,136,673,437. This is the largest income in the history of road building and does not include cash balances of \$286,490,000 distributed among all of the states except one.

"The receipts came from the following sources: 25.9 per cent from motor license fees, 36 per cent from gasoline taxes, 19.5 per cent from bonds, 5.3 per cent from local authorities, 0.9 per cent from state tax levy, 2.8 per cent from direct appropriations, 1.6 per cent miscellaneous, and Federal funds 8 per cent.

"The substantial increase of funds over the previous year came from all sources, and therefore while the Federal funds increased from \$77,572,691 to \$96,462,836 the percentage of Federal funds to the total was slightly less than in 1929."

Price No Measure

"A good road is needed over which to transport a load of wheat or cotton or cattle. The price the merchandise brings is not a measure of the need for the highway. The past year's experience shows that an increased road program not only takes the depression out of the highway, but it is the base course for many a hearthstone. Every part of our governmental structure has its share of responsibility in meeting the issue. The state highway departments are equipped for an increased task."

Samuel Eckels, Chief Engineer, Pennsylvania Department of Highways, in his address on the subject "The Addition of Roads to the State Highway System" described the manner of adding roads to the state highway system of Pennsylvania. He declared in favor of adding roads to state highway systems rather than providing state money for local subdivisions to expend on highways through the local authorities.

The last Pennsylvania Legislature passed legislation providing for the State of Pennsylvania to take over 20,000 miles of township highways for construction and maintenance at the expense of the state. This mileage, combined with the existing state mileage, gives the Pennsylvania Department of Highways a total state system of over 33,000 miles.

Vast Bridge Projects

Dr. D. B. Steinman of New York City, in an illustrated address, pictured the amazing strides made in bridge construction in fifty years. His address was of particular interest to the California delegates in view of the vast bridge projects now being undertaken in this State in constructing the two gigantic structures across San Francisco Bay—one between San Francisco and Oakland via Goat Island, and the other spanning the Golden Gate.

Charles H. Ross, attorney for the North Carolina state highway system, in his address declared that the development of farm-to-market roads is a "national need" for the proper coordination of railroad and motor vehicle transportation.

The last Legislature of North Carolina in a revolutionary piece of legislation turned over to the state highway officials the supervision and control of all county highways, including location, maintenance, and construction. County highway officials were abolished and the local tax theretofore raised for the support of county highway officials does not obtain.

Carolina Sets Precedent

This change in highway control adds 45,000 miles of county roads to be taken over together with all

Important Resolutions Adopted

The report of the American State Highway Officials Committee on Resolutions, of which committee Earl Lee Kelly, Chairman of the California Highway Commission, was a member, was adopted. These resolutions represent the resultant of the combined thought of the convention on a number of highway problems. Among the resolutions of particular interest to western states was one recommending that congressional authorizations for Federal aid highway building be continued for the fiscal years 1934 and 1935 at the rate of \$125,000,000 per year, the "same as provided for the last two fiscal years."

The convention also urged, in a resolution, that the limitation per mile on Federal participation in Federal aid highway construction be eliminated, and that "the Secretary of Agriculture be authorized to approve projects at 50 per cent of the cost of construction." Other resolutions passed were as follows:

"Whereas, The United States numbered routes as heretofore designated by this association, most of which are adequately marked, cover practically all of the main interstate highways in a manner that serves interstate travel satisfactorily to the traveling public; and

"Whereas, There are many associations being formed more or less selfishly and in most cases for profit endeavoring to promote other highways and designating them by names, which highways cross several states and follow for the most part designated U. S. numbered routes, none of which proposed highways will offer any help to the tourist for interstate travel, but only add to confusion by such designation; therefore, be it

"Resolved, That the American Association of State Highway Officials oppose the attempts to designate by names the present orderly system of highways and the naming of proposed highways following the same general lines as designated highways, and that the secretary of this association be directed to so inform each state highway department of the action of this

association taken at this seventeenth annual meeting."

"Whereas, The appropriation of Federal funds of \$3,000,000 for the construction of Federal lands highways across portions of the unreserved Federal lands in the public lands states is for one year only; and

"Whereas, Such appropriation is not sufficient to complete the interstate trunk highways across such areas; now, therefore, be it

"Resolved, By the American Association of State Highway Officials, that further appropriations, at an adequate rate, be provided until the purpose of such appropriations is accomplished."

"Whereas, The progress of construction on the forest highway system is not keeping pace with the progress being made on the Federal aid highways systems because of inadequate funds; now, therefore, be it

"Resolved, By the American Association of State Highway Officials, that annual authorizations for forest highways for the years 1934 and 1935 be continued at not less than the present rate."

county prisoners, prison camps, county road equipment, etc., by the state highway authorities.

Mr. Ross said, in part: "On July 1st of this year, by virtue of an act of the General Assembly of North Carolina of 1931, the control and responsibility for the maintenance and construction of all the public roads in North Carolina except the streets of cities and towns, was vested in the State Highway Commission, to be financed exclusively by motor vehicle and gasoline taxes. From and after that date it

became unlawful for any county or a subdivision thereof to levy any tax or to incur any indebtedness for the purpose of constructing or maintaining any public road or bridge.

"The complete centralization in the hands of one agency of all the public roads of the state is, I believe, without parallel in the legislative history of any of the states of the American Union.

"I submit, therefore, that North Carolina's adventure into the field of local roads points the way to a national need."

Cheers for the Boys on the Job

Members of Big Meadows Road Crew Help Repair Car of Camper Bound For City

Colonel Walter Garrison,
Director of Public Works,
Sacramento, California.

Dear sir:

Wish to express my appreciation for the good work accomplished by your men located near Big Meadows in assisting me in repairing my automobile which had evidently been tampered with during the night while camped at Big Meadows.

Had it not been for your men (namely Messrs. J. H. Gates, Superintendent Geo. McIvor, Wm. McBirney, Thomas Morales and Robt. Warner), I would have been in dire circumstances as it was very necessary I reach Stockton at an appointed time.

I can not speak too highly for the assistance rendered by these men and it is my desire to thank them as well as yourself for what has been done for me. It has been my pleasure to come in contact with real men.

Sincerely,

HARRY BATES,
Stockton, California.

Mr. Walter E. Garrison,
Director of Public Works,
Sacramento, California.

Dear friend:

We, the undersigned Board of Supervisors of Amador County, most heartily commend you and Mr. R. E. Pierce of Division 10 for the wonderful highway that you have just completed from Amador City to Martell.

It is a pleasure to travel this highway, we assure you, after traveling the old road so many years, which was so dangerous, and eliminating the steep grades.

We also want to thank you and Mr. Tom Dennis of the Maintenance Department for the wonderful surface that you have put on the highway from the Sacramento County line to Drytown.

We assure you that we voice the feelings of the people of Amador County and all who travel these highways, as we have heard so many favorable comments on the wonderful work your department has given our county.

If we can be of any assistance to you or your staff at any time, do not fail to call upon us.

Again thanking you and your staff, we remain,

Yours very truly,

D. V. RAMAZZOTTO, chairman,
JOHN ORR,
ARTHUR CLIFTON,
FRANK DEVENCENJI,
V. S. GARBARINI,
Board of Supervisors of Amador
County.

Road Foreman Works Through Rainy Night Rescuing Mired Cars On Mountain Road

Mr. E. Q. Sullivan, District Engineer,
Division of Highways,
San Bernardino, California.

Dear sir:

While on our way up to Lake Arrowhead on or about the night of September 1st, upon leaving San Bernardino, an extremely heavy rain started falling—by the time we reached Waterman Canyon, the electrical and rainstorm was terrific.

At a place called "Cholo Point" the road was completely inundated with mud, water, and rocks, and every car going in either direction immediately stalled.

After being hopelessly mired for some time, a man; one J. D. Moore appeared, who quickly distributed red lanterns about the wash in, and proceeded to obtain a large tractor which after infinite labor in a heavy downpour of rain was finally started and warmed up.

Mr. Moore then got busy, and despite personal discomforts and a thorough wetting; cheerfully and efficiently pulled a dozen or more cars to solid ground, where they might proceed after being stalled for some three hours.

We thought Moore should be rewarded with something more substantial than "thanks"—but he simply evaded by saying: "It's all in the day's work."

It would greatly please us if you would at some time convenient to yourself, personally express our appreciation and gratitude to this man, Mr. Moore, for his help on that night.

Yours truly,

THOS. H. BLOOMINGDALE,
Monterey Park, California.

State Highway Engineer,
Associated Realty Building,
Los Angeles, California.

Dear Sir:

I am taking this opportunity to express the appreciation of the Escondido people for the very good and very much needed work that has been done on the Inland Highway, near Escondido, by your road superintendent, Mr. Martin.

Some very bad bumps in the pavement have been taken out, and the shoulders smoothed, and the sides of the road cleared of weeds, so that it makes a very different highway. * * *

I've had a great many people stop in the Chamber of Commerce and comment on the work which has been done since your crew has been down here, so felt you would appreciate having the information.

Yours very truly,

MRS. PANSY P. CLAGGETT,
Secretary Escondido Chamber of Commerce,
Escondido, Calif.

Redwood Empire Association in Annual Meeting Plans Campaign for 1932

THAT highway development and the present crying need for relief of the unemployment situation go hand in hand, was the sense of an address by Colonel Walter E. Garrison, director of the State Department of Public Works, that was one of the highlights of the eleventh annual convention of the Redwood Empire Association at Sonoma Mission Inn last Thursday, Friday, Saturday and Sunday.

Colonel Garrison's address was delivered at the eleventh annual banquet of the Association Saturday evening where he and Earl Lee Kelly of Redding, chairman of the California Highway Commission, were among the principal speakers.

Chairman Kelly went to the convention as the personal representative of Governor James Rolph, Jr., who, because of a previous engagement, was unable to attend.

REPRESENTATIVE GROUP

Dr. Joseph M. Toner, Director of the California State Department of Institutions, was toastmaster at the banquet and a representative group of State officials were at the speakers' table, including Wallace Ware of Santa Rosa, State Civil Service Commissioner; State Highway Engineer C. H. Purcell; Highway Commissioner Timothy A. Reardon of San Francisco; Eric Cullenward, Chief of the Bureau of Publications and Documents, and Chief E. Raymond Cato, Division of Enforcement, Motor Vehicle Department.

Federal officials at the table were Dr. L. I. Hewes, Deputy Chief Engineer, United States Bureau of Public Roads, and his assistant, Levant Brown.

The convention, itself, was the biggest and best attended in the association's history, the unanimity all important matters considered at the many business sessions and meetings on Friday and Saturday, revealing in a striking manner the confidence and trust placed by the nine empire counties in the single leadership of the Redwood Empire Association.

At the annual meeting Saturday afternoon Harry Lutgens of San Rafael, newspaper publisher, one of the senior members of the

executive board of the Redwood Empire Association, Golden Gate Bridge director and leader in north bay county affairs, was unanimously elected president to succeed Edward Morris, of Willits.

TRIBUTE TO MORRIS

Mr. Morris, who had served as the association's chief executive for four successive years, was paid a glowing tribute upon his retirement. At Saturday night's banquet the officers and directors presented him with a handsome silver watch, suitably engraved with an expression of their appreciation and esteem. The presentation was made by Elliot M. Epstein, attorney for the association, who outlined the unselfish and fruitful efforts of Mr. Morris in behalf of the Redwood Empire Association.

22 MILES RECOMMENDED

Of wide general interest was the decision arrived at by the Shoreline Highway Association, in session Saturday morning with Newton P. Howe, of Point Arena, presiding, to recommend the incorporation of 22 miles of the Redwood Empire Shoreline Highway between Navarro and Fort Bragg into the State Secondary Highway System.

This recommendation was transmitted to the Nine Counties Highways Committee which met immediately following the Shoreline Highway Association and was later approved by the association. It will be taken up with the State Department of Public Works for inclusion in the 1933 biennium budget.

Other important highway matters recommended by the Nine Counties Committee and approved by the association included the relocation of the Redwood Highway between Waldo and Sausalito and through Sausalito to the present ferry terminals to break the so-called Sausalito "bottle neck"; realignment of the Redwood Highway through San Rafael, Petaluma and Santa Rosa to eliminate curves and speed up traffic; highway improvements in Del Norte County, including from Wilson Creek to The Bluffs, Crescent City south on the beach and reconstruction of Route 71, Coast Highway from Crescent City to the Oregon line.

U. S. Bureau Chief Discusses Federal Aid Allotments

(Continued from page 27)

Thomas H. MacDonald, Chief, U. S. Bureau of Public Roads, of Washington, D. C., delivered an address on the topic: "Relation of Highway Building and Utilization." It may not be amiss at this point to digress to mention a complimentary reference made to Mr. MacDonald at one of the banquets by United States Senator Reed Smoot, indicating the influence of Mr. MacDonald as head of the Federal Bureau of Public Roads on highway legislation at the national capitol.

Senator Smoot's tribute to Mr. MacDonald, which was an oral addendum to a written speech, struck the most popular chord of all, judged by the applause.

"Thank God," said Senator Smoot, "we have one man in the governmental service who, when he asks for an appropriation, has a reason and states it so clearly and with proof so convincing that there is little chance to refuse."

Space permits the inclusion of only salient paragraphs of Mr. MacDonald's address:

Federal Aid Employment

"The July employment on the state and Federal aid road programs of 386,000 men directly means a total of employment equivalent to 1,158,000 people. May, June, July and August held reasonably near this amount of employment."

In discussing Federal aid and the emergency appropriation of \$80,000,000 made by Congress last December, he said:

"In five months the \$80,000,000 advance fund, together with \$160,000,000 regular Federal aid and state funds, totaling \$240,000,000 had been put to work on wholly new work to provide employment in all the states.

"The states also continued construction and maintenance programs from state funds, and there are numerous uncompleted Federal aid projects carried over from the preceding year."

Federal Aid Program

On the 1st of July, 1931, the total going Federal aid program, including emergency and state funds, amounted to a total cost of about \$447,500,000, of which the total Federal share was \$275,250,000."

In discussing the actual employment furnished, Mr. MacDonald stated:

"Starting with a total of 148,600 employed on the state and Federal highway programs in January, 1931, there was a rapid increase as weather conditions permitted. In May the total passed 300,000, for July it was 386,659, and the August preliminary figure was 384,000. In July, 164,691 were employed on Federal and Federal aid projects, 112,681 on state and state aid construction, and 109,287 on maintenance. Figures for county and local work are not available.

More Mileage Needed

"Certain characteristics of the highway work for the last two years are worthy of note. Increased employment has been provided when most needed. Expansion of road building is sound, since adequate highways have not been overproduced and many miles more are needed.

Army Engineers Make Three Day Tour on Water Inspection

(Continued from page 25)

Joaquin Valley and the "grass lands" were viewed en route.

From Stockton a trip through the delta to Rio Vista was made on the United States Engineer Corps launch inspecting river and levee conditions in the delta and examining the construction under way on the Stockton Ship Canal. After leaving Rio Vista the party motored along the Sacramento River viewing flood control and navigation conditions, and inspecting weirs, by-passes and levees of the flood control system.

On the following day, examination was made of the flood control project north of Sacramento, continuing to Red Bluff where the Iron Canyon and Table Mountain dam sites were visited and examined. The Kennett dam site was also examined and the site and foundation conditions inspected.

Colonel Walter E. Garrison, Director of Public Works, State Engineer Edward Hyatt, Deputy State Engineers A. D. Edmonston and R. L. Jones, G. H. Jones, Raymond Matthew and T. B. Waddell of the Division of Water Resources, and Assemblyman Chester M. Kline, member of the Joint Legislative Water Resources Committee, were present on all or part of the trip and presented to the United States Board of Engineers the conditions of water shortage existing in the Great Valley and described features of the State Water Plan.

Public Prosperity Linked to Highways

The history of civilization is in large measure a story of the development of transportation. The story of public prosperity is linked with the public highway. So far as land communication is concerned, the fundamental agency, throughout this story, has been the public highway. For a period brief as history goes, it declined into merely local importance. The stage coach and public truckman gave place almost completely to the steam railroad. But during the past twenty years, the motor vehicle has brought back these carriers and has so expanded and intensified highway transportation as to make it, at least in certain fields, a formidable and often successful rival of the railway train. What another twenty years may bring in the development of the airways one dare not predict. But it is safe to say that the public highway will remain a prime necessity to a world increasingly dependent upon quick and economical transportation—a prime necessity, that is, to public prosperity.—*Mississippi Highways.*

Important amendments to the California irrigation district laws passed by the last Legislature and approved by Governor Rolph relative to the issuance and payment of bonds are described and explained in the official September report of the Division of Water Resources under State Engineer Edward Hyatt. Other activities of the division concerning water storage, conservation and irrigation, inspections, dam applications, flood control and maintenance are recounted in the report as follows:

Some 37 amendments to the California irrigation district laws were passed by the 1930-1931 Legislature and approved by Governor Rolph. Among the most important were those connected with the procedure for the issuance and payment of bonds. Under the law as now in effect any bond issue may be made to mature either serially or all at one time, and the maximum period for redemption has been extended to 50 years. Revenues for bond payments may be based in whole or in part on proceeds derived from contracts for the sale of water and/or electricity or from any other sources other than assessments, and such revenues when so allocated can not be used for any other purpose.

Irrigation districts may purchase with surplus funds any bonds not yet due, without advertising for bids. Provision is made for the direct exchange of district bonds for canals, irrigation works or other property. Some changes are also made in the procedure for assessment. Districts are permitted to collect a stand-by charge for service whether water is used or not. Assessments for depreciation are authorized. Authority is also given the directors to accept a partial redemption of land sold for delinquent assessments.

REVISING BULLETIN

The Division of Water Resources is engaged in a revision of Bulletin 18, "California Irrigation District Laws," which bulletin will embrace the California District Securities Act of 1931; also the California Irrigation District Act (and related laws), the Water Storage District Act, the Conservation District Act of 1923, the Conservation District Act of 1929, the Water District Act, and the County Water District Act, all as amended to 1931. These acts provide different forms of public organizations for the conservation of water by community effort.

Bulletin 21-B, a report on California irrigation districts for the year 1930, has been released. This is the third bulletin of this character issued by the State since 1928, and is published for the purpose of bringing up to January 1, 1931, authentic historical and statistical data on California irrigation districts, and

recording such other information as was obtained on irrigation district activities in 1930. There are 17 major reservoirs in use by irrigation districts, with capacities ranging from 2000 to 286,000 acre-feet, and with a total combined capacity of 1,210,000 acre-feet. Water stored in 1930 amounted to 695,000 acre-feet, or about 57 per cent of the combined capacities of the reservoirs. Diversions reported were 6,109,237 acre-feet by gravity, and 644,205 acre-feet pumped from streams and 339,841 from wells. The total water diverted in 1930 was 7,093,283 acre-feet of which 74.7 per cent was reported as distributed for irrigation and domestic use. The total cropped area reported was 2,168,713 acres of which 1,789,887 acres were irrigated. Thirty-four thousand acres more than for the previous year were irrigated. The districts contain a total estimated population of 324,000.

FIELD VISITS

Field visits for the purpose of conference or investigation of matters in their interest were made to the following districts: Walnut, Palmdale and Litterlock Creek irrigation districts, Los Angeles County; Newport Heights and Newport Mesa irrigation districts, Orange County; Bard Irrigation District, Imperial County; Beaumont Irrigation District, Riverside County; Alpaugh, Alta, Terra Bella, Vandallia and Lindsay-Strathmore irrigation districts, Tulare County; Fresno, Foothill, Tranquillity, James, Stinson, Riverdale, Consolidated and Laguna irrigation districts, Fresno County; Merced and El Nido irrigation districts, Merced County; Turlock Irrigation District, Stanislaus County; Hollister Irrigation District, San Benito County; East Contra Costa Irrigation District, Contra Costa County; Fair Oaks, Carmichael and Citrus Heights irrigation districts, Sacramento County.

DAMS

To date 774 applications have been received for approval of dams built prior to August 14, 1929; 84 applications for approval of plans for construction or enlargement and 180 applications for approval of repairs.

Applications for Approval of Plans for Construction of Dams.

\$2,700,000 for Through City Routes

(Continued from page 5)

revenues, limited the amount of such work. It was not until 1925 that definite legislation was provided for improvement of routes through cities at State expense. This, however, applied only to municipalities of less than 2500 population.

FOR THROUGH ROUTES

Primary function of the State highways is to provide for statewide or through traffic. Since such traffic uses routes through incorporated cities, the State Highway Department recognized that providing the proper service to this traffic extended the State's responsibility into the municipality. Accordingly there was included in the present highway budget for the 83d and 84th fiscal year biennium, liberal appropriations for improvement within municipalities of through routes.

The total of these appropriations is \$2,700,000. Some of this appropriation was budgeted in definite amounts to projects within cities for which agreements had been reached when the budget was prepared in December, 1930. The remaining amounts were based on estimates of tentatively suggested projects.

COOPERATIVE BASIS

All of these appropriation were set up on a cooperative basis, since both the municipality and the State are called on to assume responsibility. Traffic can be divided into two classes: Local and through. Local traffic is that class which operates on city streets with the purpose of transacting business with establishments fronting thereon. Provision for its accommodation is unquestionably the obligation of the local authority. Through traffic, or that class which is passing through the locality to another destination, should be cared for by the State.

On these fundamental principles is based the policy adopted by the State Division of Highways for cooperative participation in the improvement of routes through cities connecting State highway routes.

The authority and responsibility of the State Highway Commission concerning work within municipalities is definitely set forth in chapter 807 of the 1931 statutes, as follows:

HERE'S THE LAW

"Whenever the natural course of a State highway or State highway system runs or passes into

or through any municipality or contiguous municipalities the California Highway Commission shall have authority to complete such State highway or State highway system as a continuous highway or system and connect the portions of such highway or system on either side of such municipality and shall have authority to determine the location of such connecting portion either through or around the municipality as the commission may determine will be of the greatest benefit to traffic upon such State highway.

For the purpose of so completing any State highway or State highway system, the California Highway Commission shall have authority to acquire the necessary rights of way either within or without the corporate limits of a municipality by purchase, condemnation, or donation and to construct or improve such connecting portion to the same width and to the same standard as the State highway on either side of such municipality and the expense of any said acquisition, construction, or improvement may be paid out of any funds appropriated or available for the acquisition of rights of way, construction or improvement of said State highway or portion of the State highway system.

The legislative body of any municipality upon request of the California Highway Commission shall have authority to acquire any land or right of way by purchase, condemnation or donation needed for State highway purposes and lying within such municipality and the title to any said land or right of way may be taken in the name of the State or municipality and said municipality may also aid in the construction or improvement of any State highway therein by contributing any part of the expense thereof to the California Highway Commission out of any municipal funds available for the construction or improvement of streets within said municipality."

HERE'S THE PRACTICE

The policy adopted conforms to the provisions of the enactment. It is as follows:

"Upon the request of the city authority by proper resolution, the California Highway Commission will determine the location of a routing connecting the highways on either side of such municipality to form a continuous highway or highway system as will be of the greatest benefit to traffic upon such State highway; will adopt and take over such routing; will construct or improve such connecting portion to the same width or to the same standard as the State highway on either side of such municipality, paying for such improvement with State funds appropriated or available for such purpose.

On State highways which are main traffic routes, the municipality will be required to furnish to the State a right of way 80' in width, free of encumbrances and obstructions, and usable only for road or highway purposes. Sidewalk space, if desired, is to be provided by the municipality in addition and outside of the 80' right of way. The intent and purpose of this provision is that ultimate

Primary Needs all Revenues up to 1940

(Continued from preceding page)

development of the highway may be carried to a 76' width between curbs.

On State highways of less importance and carrying a limited volume of traffic, a modification of the above requirement may be made to the extent that sidewalk space may encroach on the 80' right of way but only to the extent that a 56' ultimate width of roadway is provided.

Where it is clearly evident that State or through traffic is sufficiently benefited or benefited in greater proportion than will be local traffic, the State may consider sharing in the cost or in the removal of obstructions of the 80' right of way.

Construction of curbs and sidewalks and the improvement by paving or surfacing of the remaining width of roadway between curbs not improved by the State will be an obligation of the municipality and should be defrayed from municipal funds available for such purpose. Installation, removal, or renewal of water, sewer, gas, and such other facilities under municipal jurisdiction shall be done at the expense of the municipality.

Upon completion of the improvement of the routing, the city is to resume jurisdiction and take back the improved routing and maintain the same."

TOTALS VAST SUM

On the basis of the provision in the new enactment that the State construct and improve the connecting route within the city to the same width and standard as the State highway on either side of the municipality, the total amount of State construction cost on the 457 miles of city thoroughfares, not including right of way or major structures, can be roughly approximated at from \$20,000,000 to \$25,000,000.

Over what period of time appropriations by the State must be continued to defray this total is difficult, at this time, to determine.

Our estimates of revenues and cost of bringing the State highway system to satisfactory standard for a ten-year period, as reported to the 1931 session of the Legislature, show that all revenues now accruing to the State for highway purposes, up to 1940, are necessary to bring the primary highways to adequate standard and that secondary highways will require a longer period for sufficient revenue to accumulate for their completion.

MODIFIES TIME PERIOD

The volume of traffic adjacent to and within the cities on State highway routings and consequent necessity for providing adequate service, established such projects as rather important ones in the State highway program. Comparisons of the relative importance of

such city projects and those on the State highway system will determine in a measure, their inclusion and place on the program and require a modification of the time period indicated above.

A misapprehension of the total amount of money available for expenditure on the State highway system may have been created by an incorrect understanding of the reports of the Board of Equalization estimates of assessment on gasoline, and the amount of revenues accruing to the State for State highway purposes. The present biennium setup, known as the 83d and 84th fiscal year biennium, extending from July 1, 1931, to June 30, 1933, may serve as an example of how this revenue is applied.

It is estimated that the total revenues for the two-year period for State highway purposes will amount to approximately \$63,322,500. This total is made up of the State's share of the original 2 cents gas tax, motor vehicle license fees, and motor bus franchise fees, amounting to \$31,522,500 for the two-year period; the 1 cent gas tax for construction purposes, amounting to \$23,400,000 and Federal aid estimated at \$8,400,000.

This last amount must first be earned by completion of construction projects before it is paid to the State. The amount available for allocation to actual construction and reconstruction projects out of this total, is \$39,362,744, or 62.17 per cent. Maintenance of the highways must be provided, which requires 21.38 per cent of the total revenue.

The law provides for a joint highway district fund, which amounts to 10 per cent of and is deducted from the revenue available for construction of secondary highways. Right of way makes up a considerable item. Preliminary engineering, construction engineering, and administration must also be provided for from this grand total of available revenues before construction projects can be budgeted. The basis on which the revenues are divided for various purposes, such as reconstruction, primary construction, secondary construction, are determined by law.

Prospective Maid: I'd like to work for you, ma'am, but you've only got a two-car garage. Where'd I put my car?

Mistress: Oh, well, you'd never do at all. We're in the habit of employing only servants who have their private chauffeurs.

Vital Statistics on Dam Construction

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of September, 1931.

INYO COUNTY—Big Pine Creek Reservoir Nos. 1 and 6-19. City of Los Angeles, Los Angeles, owner; rock, 4 feet above streambed with a storage capacity of 27 acre-feet, situated on Big Pine Creek tributary to Owens River in Sec. 33, T. 9 S., R. 32 E., M. D. B. and M., for storage purposes, for power and irrigation use.

LOS ANGELES COUNTY—Lovejoy Dam No. 783. Alexander Stewart, Palmdale, owner; concrete, 21 feet above streambed with a storage capacity of 46 acre-feet, located in Sec. 16, T. 6 N., R. 9 W., S. B. B. and M., for storage purposes, for irrigation use.

SAN MATEO COUNTY—Lake Elizabeth Dam No. 697-3. Humphrey Estates, Inc., Pescadero, owner; earth and rock dam, 20 feet above streambed with a storage capacity of 157 acre-feet, situated on unnamed ravine tributary to Cascade Creek in Sec. 20, T. 9 S., R. 4 W., M. D. B. and M., for storage purposes, for irrigation use.

NEVADA COUNTY—Pontoon Dam No. 61-15. Nevada Irrigation District, Grass Valley, owner; timber, 21 feet above streambed with a storage capacity of 140 acre-feet, situated on Canyon Creek tributary to South Yuba River in Sec. 13, T. 18 N., R. 12 E., M. D. B. and M., for storage purposes, for various uses.

Applications for approval of plans and specifications for construction or enlargement of dams.

TUOLUMNE COUNTY—Emigrant Lake Dam No. 550-3. Tuolumne County, Sonora, owner; gravity, 7 feet above streambed with a storage capacity of 1491 acre-feet, situated on North Fork of Cherry Creek tributary to Tuolumne River in Sec. 30, T. 4 N., R. 21 E., M. D. B. and M., for storage purposes, for fish conservation use. Estimated cost \$600, fees paid \$20.

TUOLUMNE COUNTY—Upper Emigrant Lake Dam No. 550-4. Tuolumne County, Sonora, owner; gravity, 8 feet above streambed with a storage capacity of 160 acre-feet, situated on North Fork of Cherry Creek tributary to Tuolumne River in Sec. 11, T. 4 N., R. 21 E., M. D. B. and M., for storage purposes, for fish conservation use. Estimated cost \$300, fees paid \$20.

TUOLUMNE COUNTY—Long Lake Dam No. 550-5. Tuolumne County, Sonora, owner; gravity, 8 feet above streambed with a storage capacity of 520 acre-feet, situated on West Fork of Cherry Creek tributary to Tuolumne River, for storage purposes, for fish conservation use. Estimated cost \$600, fees paid \$20.

ORANGE COUNTY—Irvine Conservation Dam No. 793-3. Irvine Company, Tustin, owner; earth, 28.5 feet above streambed with a storage capacity of 16,846 acre-feet, situated on stream tributary to Newport Bay, located in Lot 442, Block 57, Irvine's Subdivision. Estimated cost \$155,000, fees paid \$1,275. For storage purposes, for irrigation use.

LOS ANGELES COUNTY—Bouquet Canyon Dam No. 6-31. City of Los Angeles, Los Angeles, owner; earth, 200 feet above streambed with a storage capacity of 36,200 acre-feet, situated on Bouquet Creek tributary to Santa Clara River in Sec. 29, T. 6 N., R. 14 W., S. B. B. and M., for storage purposes, for municipal use. Estimated cost \$3,007,586, fees paid \$7,507.59.

LASSEN COUNTY—Loosley Pool Dam No. 258. F. H. Vestal, Pittville, owner; flashboard, 4 feet above streambed with a storage capacity of 500 acre-feet, situated on Pit River tributary to Sacramento in Sec. 18, T. 37 N., R. 6 E., M. D. B. and M., for diversion purposes, for irrigation use. Estimated cost \$300.

Applications for approval of plans and specifications for repair or alteration of dams.

NAPA COUNTY—Lake Camille Dam No. 1-5. Napa State Hospital, Imola, owner; earth, situated on unnamed creek tributary to Tulocay Creek and Napa River in Sec. 13, T. 5 N., R. 4 W., M. D. B. and M.

NAPA COUNTY—Fire Dam No. 1-7. Napa State Hospital, Imola, owner; earth, situated on unnamed creek tributary to Napa River in Sec. 13, T. 5 N., R. 4 W., M. D. B. and M.

NAPA COUNTY—Napa Middle Reservoir No. 1-8. Napa State Hospital, Imola, owner; earth, situated on unnamed creek tributary to Tulocay Creek and Napa River in Sec. 13, T. 5 N., R. 4 W., M. D. B. and M.

NAPA COUNTY—Napa Upper Reservoir No. 1-9. Napa State Hospital, Imola, owner; earth, situated on unnamed creek tributary to Tulocay Creek and Napa River in Sec. 13, T. 5 N., R. 4 W., M. D. B. and M.

SACRAMENTO COUNTY—Martin Dam No. 451. Hutchison et al, Slough House, owner; gravity, situated on Cosumnes River tributary to San Joaquin River in Sec. 35, T. 8 N., R. 8 E., M. D. B. and M.

SANTA CRUZ COUNTY—San Vicente Dam No. 632-2. Coast Dairies and Land Company, Davenport, owner; gravity, situated on San Vicente Creek in Rancho San Vicente and Arroyo de la Laguna.

LASSEN COUNTY—Buckhorn Dam No. 238. James L. Humphrey, Reno, owner; earth, situated on Painter Creek in Sec. 31, T. 36 N., R. 17 E., M. D. B. and M.

SOLANO COUNTY—Lake Chabot Dam No. 441. Vallejo Water Company, Oakland, owner; earth, situated on Blue Rock Spring tributary to Sulphur Springs, 1 1/2 miles north of Vallejo.

NEVADA COUNTY—Pontoon Dam No. 61-15. Nevada Irrigation District, Grass Valley, owner; timber, 21 feet above streambed with a storage capacity of 140 acre-feet, situated on Canyon Creek tributary to South Yuba in Sec. 13, T. 18 N., R. 12 E., M. D. B. and M.

EL DORADO COUNTY—Fallen Leaf Lake Dam No. 461. Anita M. Baldwin, Los Angeles, owner; concrete, situated on Taylor Creek tributary to Lake Tahoe in Sec. 1, T. 12 N., R. 17 E., M. D. B. and M.

SAN MATEO COUNTY—Burlingame Dam No. 611. California Water Service Company, San Francisco, owner; earth, situated on unnamed stream tributary to San Francisco Bay.

BUTTE COUNTY—Concow Dam No. 67. Thermalito and Table Mountain Irrigation Districts, Oroville, owner; arch, situated on Concow Creek tributary to West Branch Feather River in Sec. 15, T. 22 N., R. 5 E., M. D. B. and M.

MODOC COUNTY—Lauer Dam No. 128-2. Frank McArthur, Alturas, owner; earth dam, situated on unnamed drainage tributary to North Fork Pit River in Sec. 15, T. 44 N., R. 13 E., M. D. B. and M.

PLANS APPROVED

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of September, 1931.

LOS ANGELES COUNTY—Verdugo Wash No. 32-4. Los Angeles County Flood Control District, Los Angeles, owner; earth, 32 feet above streambed with a storage capacity of 108 acre-feet, situated on Verdugo Creek tributary to Los Angeles River in Rancho San Rafael, for debris storage purposes.

PLACER COUNTY—Pulp Mill Dam No. 97-106. Pacific Gas and Electric Company, San Francisco, owner; arch, 20 feet above streambed with a storage capacity of 1 acre-feet, situated on Canyon Creek tributary to North Fork American River in Sec. 36, T. 16 N., R. 10 E., M. D. B. and M., for diversion purposes, for power and irrigation use.

LOS ANGELES COUNTY—North Side Water Company Dam No. 782. North Side Water Company, Walnut, owner; earth dam, 8 feet above streambed with a storage capacity of 12 acre-feet, situated on South Fork San Jose Creek tributary to San Gabriel River in Rancho San Jose, for storage purposes, for irrigation use.

SAN DIEGO COUNTY—Monte Vista Dam No. 845. Sefton Investment Company, San Diego, owner; earth dam, 35 feet above streambed with a storage capacity

September Water Applications and Permits

Applications for permits to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of September, 1931.

TRINITY COUNTY—Application 7067. Buckeye Placer Mines, Inc., c/o N. W. Curson, president, Carrville, for 15 c.f.s. and 500 ac. ft. per annum from Little Boulder Creek tributary to Coffee Creek, thence Trinity River to be diverted in Sec. 15, T. 37 N., R. 8 W., M. D. B. and M., for mining purposes. Estimated cost \$12,500.

SISKIYOU COUNTY—Application 7068. L. E. Hallford, Happy Camp, for 3 c.f.s. from Phillips Gulch tributary to Oak Flat Creek, thence Klamath River to be diverted in Sec. 30, T. 16 N., R. 7 E., H. B. and M., for mining purposes. Estimated cost \$2,000.

LAKE COUNTY—Application 7069. E. P. Smith, Lakeport, for 0.2 c.f.s. and 5 ac. ft. per annum from an unnamed stream tributary to Clear Lake (through Clover Creek and Middle Creek) to be diverted in Sec. 15, T. 15 N., R. 9 W., M. D. B. and M., for irrigation and domestic purposes. (30 acres.) Estimated cost \$1,000.

EL DORADO COUNTY—Application 7070. George E. De Golia, 5960 Contra Costa Road, Oakland, for 200 gallons per day from unnamed stream tributary to South Fork of American River to be diverted in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes.

STANISLAUS COUNTY—Application 7071. Joe V. Cardozo, c/o Nathan B. McVay, atty., California Bldg., Modesto, for 1.0 c.f.s. from Stanislaus River tributary to San Joaquin River to be diverted in Sec. 29, T. 2 S., R. 8 E., M. D. B. and M., for irrigation purposes. (80 acres.) Estimated cost \$1,500.

NEVADA COUNTY—Application 7072. Relief Hill Mining Co., c/o Fletcher Hamilton, agent, North Bloomfield, for 100 c.f.s., 25 c.f.s. from each source, from (1) Rob Roy, (2) Deadman, (3) Roscoe and (4) Logan Canyons tributary to (1) and (2) Poormans', (3) and (4) South Fork of Yuba River to be diverted in Sec. (1) 25, (2) 26, (3) and (4) 34, T. 18 N., R. 10 E., M. D. B. and M., for mining and domestic purposes.

SAN BERNARDINO COUNTY—Application 7073. Arlington Mining Corporation, 740 South Broadway, Los Angeles, for 0.5 c.f.s. from Arrastre Creek tributary to Mojave Desert to be diverted in Sec. 27, T. 3 N., R. 2 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$25,000.

EL DORADO COUNTY—Application 7074. J. H. Blamey, 2417 22d St., Sacramento, for 200 gallons per day from Cody Creek tributary to Strawberry Creek, thence South Fork of American River to be diverted in Sec. 19, T. 11 N., R. 17 E., M. D. B. and M., for domestic purposes. Estimated cost \$75.

TRINITY COUNTY—Application 7075. Lee Nafzgar, Del Loma, for 6 c.f.s. from Langs Creek tributary to Trinity River to be diverted in Sec. 31, T. 5 N., R. 8 E., H. B. and M., for mining and domestic purposes. Estimated cost \$5,000.

NEVADA COUNTY—Application 7076. Edward Bickel, P. O. Box 881, Nevada City, for 15 c.f.s. from Little Greenhorn Creek tributary to Greenhorn Creek, thence Bear River to be diverted in Sec. 4, T. 16 N., R. 10 E., M. D. B. and M., for mining and domestic purposes.

EL DORADO COUNTY—Application 7077. R. G. Sproul and S. B. Freeborn, c/o S. B. Freeborn, Davis, for 600 g.p.d. from unnamed stream tributary to Upper Echo Lake to be diverted in Sec. 34, T. 12 N., R. 17 E., M. D. B. and M., for domestic purposes.

TEHAMA COUNTY—Application 7078. Thomas J. Fellow, 409 45th St., Oakland, for 0.037 c.f.s. from unnamed stream tributary to North Fork of Elder Creek, thence Elder Creek and Sacramento River to be diverted in Sec. 34, T. 12 N., R. 7 W., M. D. B. and M., for irrigation and domestic purposes. (1 acre.) Estimated cost \$300.

VENTURA COUNTY—Application 7079. Harry D. Howell and Eugenia J. Howell, c/o Clarke and Bowker, attys., 1216 Title Guarantee Bldg., Los Angeles, for 1/2 miners inch (0.0125 c.f.s.) from unnamed spring

tributary to Sisar Creek, thence Santa Paula Creek and Santa Clara River to be diverted in Sec. 31, T. 5 N., R. 21 W., S. B. E. and M., for domestic purposes. Estimated cost \$300.

EL DORADO COUNTY—Application 7080. B. W. Stone, 161 Ellis St., San Francisco, for total of 500 c.f.s. and 125,000 ac. ft. per annum from (1) Rubicon River, (2) Pilot Creek, (3) Gerle Creek, (4) Leon Lake, (5) Buck Island Lake, (6) Rock Bound Lake, (7) Little South Fork of Rubicon River tributary to American River Drainage to be diverted in Sec. 9, T. 13 N., R. 16 E.; Sec. 11, T. 12 N., R. 12 E.; Sec. 24, T. 13 N., R. 13 E.; Secs. 1, 31 and 34, T. 14 N., R. 14 E.; Sec. 4, T. 13 N., R. 15 E.; Sec. 2, T. 13 N., R. 14 E., M. D. B. and M., for municipal purposes.

PLACER COUNTY—Application 7081. Butte Mining Co., c/o Jas. P. Sweeney, atty., 681 Post St., San Francisco, for 30 c.f.s. from West Branch of El Dorado Creek tributary to North Fork of Middle Fork of American River to be diverted in Sec. 26, T. 15 N., R. 11 E., M. D. B. and M., for mining purposes. Estimated cost \$30,000.

PLUMAS COUNTY—Application 7082. R. A. Snyder, F. Anderson and A. Mattson, c/o Wm. Watson, C. E. Quincy, for 3 c.f.s. from South Fork of Poormans Creek tributary to Hopkins and Nelson Creeks to be diverted in Sec. 3, T. 22 N., R. 10 E., M. D. B. and M., for mining purposes. Estimated cost \$250.

TULARE COUNTY—Application 7083. The Regents of the University of California, a corp., c/o Calkins, Hagar, Hall and Linforth, attys., Crocker Bldg., San Francisco, for 1.0 c.f.s. from two small forks of Esham Creek tributary to Esham Creek, thence Kaweah River to be diverted in Sec. 16, T. 14 S., R. 28 E., M. D. B. and M., for domestic and recreational purposes. Estimated cost \$1,100.

SISKIYOU COUNTY—Application 7084. Marshall M. Crawford, Happy Camp, for 12.5 c.f.s. from China Creek tributary to Klamath River to be diverted in Sec. 9, T. 16 N., R. 8 E., H. B. and M., for irrigation and domestic purposes. Estimated cost \$1,500. (251 acres.)

SUTTER COUNTY—Application 7085. Fred H. Heiken, as county treasurer of Sutter County and trustee of the Bond Fund of Reclamation District 1500, Robbins, for 6.35 c.f.s. from West Dredger Cut of Sutter By-Pass tributary to Sacramento River to be diverted in Sec. 11, T. 13 N., R. 2 E., M. D. B. and M., for irrigation purposes. (254.135 acres.) Estimated cost \$3,500.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of September, 1931.

SANTA CRUZ COUNTY—Permit 3775, Application 2897. C. H. Widemann, San Francisco, Sept. 4, 1931, for 1.78 c.f.s. from Scott Creek in Sec. 19, T. 10 S., R. 3 W., M. D. M., for irrigation and domestic purposes on 463 acres.

SANTA CRUZ COUNTY—Permit 3776, Application 2898. C. F. Widemann, San Francisco, Sept. 4, 1931, for 0.6 c.f.s. from Scott Creek in Sec. 9, T. 10 S., R. 3 W., M. D. M., for irrigation and domestic purposes on 75 acres.

SANTA CRUZ COUNTY—Permit 3777, Application 2899. C. H. Widemann, San Francisco, Sept. 4, 1931, for 2.69 c.f.s. from Scott Creek in Sec. 18, T. 10 S., R. 3 W., M. D. M., for irrigation and domestic purposes on 215 acres.

SANTA CRUZ COUNTY—Permit 3778, Application 2900. C. H. Widemann, San Francisco, Sept. 4, 1931, for 0.31 c.f.s. from Scott Creek in Sec. 18, T. 10 S., R. 3 W., M. D. M., for irrigation and domestic purposes on 25 acres.

NEVADA COUNTY—Permit 3779, Application 6862. John K. Williams, Nevada City, Sept. 1, 1931, for 1.0 c.f.s. from Windup Canyon in Sec. 5, T. 16 N., R. 10 E., M. D. M., for mining purposes. Estimated cost \$150.

TUOLUMNE COUNTY—Permit 3780, Application 6929. F. W. and Stella G. Ross, Stockton, Sept. 12, 1931, for 0.08 c.f.s. from four unnamed springs and an

Applications and Permits Granted

(Continued from preceding page)

unnamed stream in Sec. 35, T. 1 S., R. 16 E., M. D. M., for irrigation and domestic purposes on 15 acres. Estimated cost \$100.

TULARE COUNTY—Permit 3781, Application 6980. Frank O. Shelden, Porterville, Sept. 14, 1931, for 200 gallons per day from a spring in Sec. 35, T. 20 S., R. 31 E., M. D. M., for domestic use on Lot 9 of McIntyre Recreational Area, Sequoia National Forest. Estimated cost \$35.

SAN DIEGO COUNTY—Permit 3782, Application 6779. Talmadge Losce, Julian, Sept. 15, 1931, for 1.5 c.f.s. from 6 springs and wells in Secs. 7 and 18, T. 14 S., R. 7 E., S. B. M., for irrigation and domestic on 120 acres. Estimated cost \$6000.

KERN COUNTY—Permit 3783, Application 6973. Clinton E. Albertson, Inyokern, Sept. 18, 1931, for 500 gallons per day from a well in Sec. 26, T. 27 S., R. 40 E., M. D. M., for mining use in Sec. 22. Estimated cost \$200.

LAKE COUNTY—Permit 3784, Application 6904. C. G. Haycock, 2674 27th St., Sacramento, Sept. 18, 1931, for 0.5 c.f.s. from Middle Creek in Sec. 31, T. 16 N., R. 9 W., M. D. M., for irrigation of 40.46 acres in Sec. 31.

TRINITY COUNTY—Permit 3785, Application 6775. Louis A. Mair, Denny, Sept. 19, 1931, for 3 c.f.s. from an unnamed stream in Sec. 8, T. 6 N., R. 7 E., H. M., for mining and domestic purposes in Sec. 8. Estimated cost \$2,000.

VENTURA COUNTY—Permit 3786, Application 6909. Hibbard S. Williams, Santa Paula, Sept. 21, 1931, for 1 c.f.s. from an unnamed spring in Sec. 18, T. 4 N., R. 20 W., S. B. M., for mining and domestic purposes in Sec. 18. Estimated cost \$1,000.

KERN AND VENTURA COUNTIES—Permit 3787, Application 6939. Florence Louise Cuddy, Lebec, Sept. 21, 1931, for 100,000 gallons per day from 4 unnamed springs tributary to Cuddy Canyon, to San Joaquin Valley in Sec. 28, T. 9 N., R. 20 W.; Sec. 3, T. 8 N., R. 20 W., Sec. 10, T. 8 N., R. 20 W., S. B. M., for domestic and recreational purposes. Estimated cost \$3,000.

CONTRA COSTA COUNTY—Permit 3788, Application 6617. John Fleuti, Moraga, Sept. 22, 1931, for 5000 gallons per day from Grizzly Creek in Sec. 15, T. 1 S., R. 2 W., M. D. M., for domestic purposes for 33 homes in Sec. 10. Estimated cost \$1,000.

SONOMA COUNTY—Permit 3789, Application 7006. Hacienda Inc., Hilton, Sept. 22, 1931, for 0.347 c.f.s. from two unnamed streams and Russian River in Sec. 26, T. 8 N., R. 10 W., M. D. and M., for domestic and irrigation purposes on 19 acres in Sec. 26.

TULARE COUNTY—Permit 3790, Application 6951. N. N. Redford, A. M. Griggs, R. Y. Roper, Exeter, Sept. 26, 1931, for 600 gallons per day from Monarch Creek tributary to East Fork of Kaweah River in Sec. 15, T. 17 S., R. 31 E., M. D. M., for domestic purposes.

DEL NORTE COUNTY—Permit 3791, Application 6947. Frank Johnston, Crescent City, Sept. 26, 1931, for 2.00 c.f.s. from Spite Creek, tributary to Middle Fork of Smith River in Sec. 17, T. 17 N., R. 3 E., H. M., for mining and domestic purposes.

FRESNO COUNTY—Permit 3792, Application 7022. County of Fresno, Fresno, Sept. 28, 1931, for 0.111 c.f.s. from San Joaquin River in Sec. 32, T. 9 S., R. 23 E., M. D. M., for domestic purposes at sanatorium. Estimated cost \$14,000.

Highway Bids and Awards for September

SAN BENITO COUNTY—Between southerly boundary and Pajaro River, about 5.5 miles to be graded and paved with Portland cement concrete. Dist. V, Rt. 2, Sec. B, Hanrahan Company, San Francisco, \$295,310; Morrison-Knudsen Co., Boise, Idaho, \$291,755; Isbell Construction Co., Carson City, Nevada, \$339,219; Guy F. Atkinson Co., San Francisco, \$320,318; Frederickson & Watson Construction Co., and Fredrickson Bros., Oakland, \$322,687; Granite Construction Co., Ltd., Watsonville, \$295,202; Healy-Tibbitts Construction Co., San Francisco, \$290,332. Contract awarded to Peninsula Paving Co., San Francisco, \$264,964.

HUMBOLDT COUNTY—Between Redwood Creek and Willow Creek, about 8.9 miles to be surfaced with untreated crushed gravel or stone. Dist. I, Rt. 20, Sec. C, Smith Bros. Co., Eureka, \$54,922; Healy-Tibbitts Construction Co., San Francisco, \$55,947; California Construction Co., San Francisco, \$52,584; Hemstreet & Bell, Marysville, \$52,337; D. McDonald, Sacramento, \$55,665; A. Milne, Portland, Oregon, \$48,727; E. B. Bishop, Sacramento, \$48,324. Contract awarded to Triangle Rock & Gravel Co., San Bernardino, \$34,251.

ORANGE COUNTY—Between Fullerton and western boundary, about 4.3 miles to be graded with Portland cement concrete and asphaltic cement concrete. Dist. VII, Rt. 2, Sec. F, Griffith Co., Los Angeles, \$112,005; George R. Curtis Paving Co., Los Angeles, \$124,061; R. J. Bianco, Manhattan Beach, \$118,262; Steele Finley, Santa Ana, \$120,069; Hall-Johnson Co., Alhambra, \$132,806. Contract awarded to Oswald Bros., Los Angeles, \$111,494.

SAN JOAQUIN COUNTY—Between westerly boundary and a point near Banta, 8.8 miles asphalt concrete surface to be planed. Dist. X, Rt. 5, Sec. A, Monte C. Abrams, Los Angeles, \$11,018; Standard Road Planning

Co., Los Angeles, \$5,348. Contract awarded to Asphalt Pavement Planing Co., Oakland, \$4,331.

ARCHITECTURAL AWARDS

For Month of September

List of projects handled by the Division of Architecture for which contracts were awarded by Colonel Walter E. Garrison, Director of Public Works, during the month of September, 1931.

Sonoma State Home, Eldridge—Ward building and addition to school building; buildings to be one story, reinforced concrete, clay tile roof. Contract for general work to Wm. Spivock, San Francisco, \$74,333; for plumbing to J. A. Pazio, Oakland, \$6,166; for electrical to Decker Electrical Construction, San Francisco, \$2,704; for heating to Frederick W. Snook, San Francisco, \$8,640.

"Mary," said Mrs. Newrich to the new maid, "you may take the dog out and give him some air."

"Yes Ma'am," acquiesced Mary. "And please, Ma'am, where will I find the nearest service?"—"Wall Street Journal."

A slow-pay customer sent the following note to his garage mechanic: "Please send car; if O. K., will send check."

The mechanic, however, was not doing any business on such risky terms, so he wrote back: "Send check, if O. K., will send car."

"Give Family Man Job" Is Plea

Colonel Walter E. Garrison, director of the Department of Public Works is enlisting the cooperation of the contractors of the State in carrying out Governor Rolph's intensive program for speedily putting more

men to work on State projects, especially married men with families. Since the first of the month, with every award of a contract Colonel Garrison is sending the following personal letter to the successful bidder:

Gentlemen:

In awarding the enclosed contract to you, it is respectfully requested that you give serious consideration to an objective of the present administration in its endeavor to help in relief measures for the unemployed, especially the married man with a family.

The local community is very much interested in this contract, both from the standpoint of a necessary improvement and for the possible help it may afford its local citizens in obtaining work, thereby relieving them of possible charitable assistance and also as a means of forwarding local business. It is believed that local citizens could be effectively employed on this work, especially in the unskilled labor classification, and I am certain that by applying to the Board of Supervisors or local city officials they will be able to submit a number of worthy cases for your interview and consideration of their fitness for the work.

Your support in this direction would be very much appreciated by Governor Rolph and myself.

Yours very truly,
WALTER E. GARRISON,
 Director.

Maintenance Crew on Fire Line all Night

The effective work done by maintenance crews of the Division of Highways in preventing and extinguishing forest fires has been acknowledged from many different sources. Another instance is reported in the following letter:

Mr. Jno. H. Skeggs,
 District Engineer,
 San Francisco, Cal.

Dear Sir:

Replying to your letter of October 7th (File 404.19) relative to a forest fire near Big Basin.

A fire near the boundary of the park on the China Basin road was discovered on the afternoon of October 3d. Our maintenance crew foreman, R. H. Dickie, and three men responded to a call for

help, reporting at 5 p.m. and continuing through the night until 11 a.m. Sunday when they were relieved. They again reported at 10 a.m. on October 5th continuing until 2 p.m., at which time the blaze was under complete control.

The fire burned over an area of several acres and actually entered the park at its northeast boundary. I learned that the maintenance crew was among the first on the ground, and am informed by park officials and others that their prompt action in reporting for duty and their efforts through the night was largely responsible for bringing the fire under an early control.

Yours very truly,

J. W. ADAMS, Supt.

Host: It's beginning to rain; you'd better stop for dinner.

Motoring Visitor: Oh, thanks very much, but it's not bad enough for that.

Dedication of Russian River Bridge At Jenner Proves Gala Occasion

CLOSE to 10,000 enthusiasts, representing every one of the nine Redwood Empire counties attended the opening and formal dedication of the new Russian River bridge, on the Redwood Empire's Shoreline Highway, at Jenner, Sonoma County, Sunday, October 4th.

The affair, which was sponsored jointly by the Redwood Empire Association, officers and directors of the Shoreline Joint Highway District, the Coast Chamber of Commerce, the Shoreline Highway Association, Associated Chambers of Commerce of Sonoma County, and the various chambers of commerce of Marin, Mendocino, Humboldt, Del Norte, Napa, Lake and San Francisco counties, marked the passage of a new milestone in Redwood Empire highway affairs.

V. J. CANEPA OFFICIATES

Supervisor Victor J. Canepa, of San Francisco, president of the Shoreline Highway Bridge District, which constructed the magnificent new span with State aid by the Department of Public Works, acted as chairman of the day and the list of speakers included notables, not only of the Redwood Empire, but of the Federal, State, county and city governments, and of municipalities in other portions of northern California.

A feature of the day was the attendance at the celebration of T. M. Jenner of Seattle, grandson of the late Dr. E. K. Jenner who settled at the site of the community now known as Jenner in 1854, and from whom it took its name.

At the bridge dedication Governor James Rolph, Jr., was represented by Dr. J. M. Toner, director of the Department of Institutions of the State of California.

REARDON PRESENTS IT

The bridge was presented to the motoring public of California by State Highway Commissioner Timothy A. Reardon, of San Francisco, and was christened with a bottle of Sonoma County mineral water by Miss June Osborne of the Coast Chamber of Commerce.

Outstanding leaders who participated in the bridge dedication included: Edward Morris, president of the Redwood Empire Associa-

tion; Newton P. Howe, president of the Shoreline Highway Association; Harry G. Ridgway, vice president of the Redwood Empire Association and president of Marvelous Marin, Inc.; Supervisor Fred Suhr, of San Francisco, president of the Shoreline Intercounty Highway District; Supervisors C. J. Gardiner, Marin; Fred Lowell, Sonoma; Charles Perkins, Mendocino; and B. F. Flint, Humboldt, directors of the Shoreline Intercounty Highway District, and George Sanborn, the district's secretary.

THROW OF NOTABLES

Others present were Supervisor Ed Enzenauer, chairman, Board of Supervisors Sonoma County; J. B. Piatt, chief engineer of the district; T. C. McCoy, representing the division engineer; Dan Lafferty, president of the California State Automobile Association; M. F. Looseley, president of the Coast Chamber of Commerce; State Senators Herbert F. Slater, of Santa Rosa and Arthur M. Breed, of Alameda County; Assemblyman Hubert B. Scudder of Sonoma County; Supervisor William Deysher, of Marin County, chairman of the board and president of the Redwood Empire Supervisors Unit; E. L. Finley, president of the Newspaper Publishers' Unit of the Redwood Empire Association and Stanley H. Jones, president of the Chamber of Commerce Unit of the Redwood Empire Association.

At the conclusion of the speaking program and after Miss Shoreline Highway christened the bridge, a cardboard replica of the old original two-car ferry which served the traveling public for 60 odd years, was towed down the river, burned and blown up in spectacular manner, signifying the passing of the ferry and the opening of the new modern bridge.

Charles P. Nolan, who came to California in 1865, and assisted in furnishing the material for the first ferry at Markham, which this bridge supplanted, was introduced from the speakers' stand. Mr. Nolan is one of the last of the old-time settlers of Sonoma County.

"Have you a skeleton in your closet?"
"No, it's out in the garage. I forgot to lock the doors last night and somebody took everything except two wheels and the frame."

THREE ROUSING CHEERS went up as the beautiful new bridge at the mouth of the Russian River near Jenner was dedicated and thrown open to traffic on Sunday, October 4th, ending another bottleneck on the Redwood Empire's Shoreline Highway. For sixty years a dinky ferryboat of two-car capacity has been the only means of crossing the river at that point. The new bridge as shown in the upper picture is a graceful span of steel and concrete. A portion of the large crowd numbering ten thousand or more that attended the dedication ceremonies is shown in the center while below is Supervisor Victor Canepa of San Francisco, president of Shoreline Joint Highway District No. 16, and Miss June Osborne of the Coast Chamber of Commerce, who christened the bridge with a bottle of Sonoma County mineral water. A pasteboard replica of the old ferryboat was towed out into the river, blown up and burned as the dedication ceremony ended.

New Plan Relieves Courts in Minor Light Violations

Motorists stopped on the highways hereafter by officers for minor violations of the headlight laws will be relieved from appearing in court, provided they have the proper adjustments made.

The arrangement, designed to relieve the court so that more time may be given to really serious violations of the motor laws, will be made possible by the issuance of "warning cards" to the offending motorist upon which the light adjustment required is noted.

Check Up Provided

These cards inform the motorist that he must have the adjustment made within a given number of days at an official headlight station. After the adjustment is made the authorized adjuster signs the card and it is mailed to the squad headquarters of the patrol from which the arresting officer is working.

If the card is not received within a reasonable length of time, the officer swears to a complaint and arrests the motorist. He then will be required not only to have the adjustment made to his lights, but to appear in court and, possibly, to pay a fine.

A careful "follow up" check of each case will be made by means of information taken down on a stub of the officer's book when the motorist is cited.

Relieves the Courts

Inspector Will R. Sharkey, Jr., head of the Bureau of Lights of the California Highway Patrol, who worked out the system, said it would have the effect of ridding the highways of defective, illegal and glaring lights without congesting the courts with such cases.

On light raids conducted by the patrol as many as 200 persons have been cited in a single evening by one squad, Sharkey explained. To throw this number of cases into a justice's court at one time means congestion and confusion.

"Besides it is poor practice to require a motorist to appear in court for a minor light violation which may have been caused through accident or inadvertence when the result sought can be accomplished by having the trouble attended to," Sharkey added.

"I want a very careful chauffeur—one who doesn't take the slightest risks," warned the would-be employer. "I'm your man, sir," answered the applicant. "Can I have my salary in advance?"—*Brooklyn Eagle.*

The Engineer

WHO is the man designs our pumps with judgment, skill and care?

Who is the man that builds 'em and keeps them in repair?

Who has to shut them down because the valve seats disappear

The bearing-wearing, gearing-tearing mechanical engineer.

WHO buys his juice for half a cent and wants to charge a dime?

Who, when we've signed the contract, can't deliver half the time?

Who thinks the loss of twenty-six per cent is nothing queer?

The volt-inducing, load-reducing electrical engineer.

WHO takes a transit out to find a sewer line to tap?

Who then with care extreme locates the junction on the map?

Who is it goes to dig it up and finds it nowhere near?

The mud-bespattered, torn and tattered civil engineer.

WHO thinks without his product we should all be in a lurch?

Who has a heathen idol which he designates research?

Who tints the creeks, perfumes the air, and makes the landscape drear?

The stink-evolving, grease-dissolving chemical engineer.

WHO is the man that will draw a plan for everything you desire

From a transatlantic liner to a hairpin made of wire,

With "ifs" and "ands," "howevers" and "buts" who makes his meaning clear?

The work-disdaining, fee-retaining consulting engineer.

WHO builds the road for fifty years that disappears in two,

Then changes his identity, so no one's left to sue?

Who covers all the traveled roads with filthy, oily smear?

The bump-providing, rough-on-riding highway engineer.

WHO takes the pleasure out of life and makes existence hell?

Who'll fire a real good-looking one because she can not spell?

Who substitutes a dictaphone for a coral tinted ear?

The penny-chasing, dollar-wasting efficiency engineer.

Thrill of the Chase at Bidders' Matinee

One of the colorful events of the week in the routine of the Department of Public Works is the bidders' matinee held every Wednesday in the large board room on the third floor.

Two o'clock is the hour set for the important business of opening bids submitted on proposed work. Long before the hour, however, the room is filled with some seventy or more contractors, material men, bond company agents and others interested in the results of the bidding contest. They sit there chatting, chaffing, smoking, apparently a care-free bunch but each one is secretly wondering if there's a "fox" in their midst.

At the department executives' table sits G. T. McCoy, principal assistant engineer, flanked by J. G. Standley, staff engineer; William Boch, assistant office engineer, and George T. Gunston, assistant secretary of the Highway Division and disbursing officer.

HUNT IS ON

When Mr. McCoy announces the bids are about to be opened, a deep silence suddenly pervades the room. Mr. Gunston takes a

THEY'RE "FOX HUNTING," these contractors, material dealers and others are eager for the chase. The scene is the regular afternoon meeting at the opening of awards in the Department of Public Works. The department executives in the lower picture who officiate on such occasions are (left to right) G. T. Gunston, assistant secretary and disbursing officer, Highway Division; J. G. Standley, staff engineer; G. T. McCoy, principal assistant engineer, and William Boch, assistant office engineer.

large sealed envelope from a pile in front of him containing the bids, opens it, extracts the bid, and a fat cashier's or certified check representing a liberal ten per cent of the bidder's

FLOOD CONTROL AND RECLAMATION

Maintenance of Sacramento Flood Control Project.

Routine maintenance work has been continued, including repairs to structures and irrigation of willows planted for bank protection. Repairs on several bridges have been commenced.

A small crew under the river foreman has been engaged in clearing and stumping a ten-acre tract in the Sacramento By-Pass.

BANK PROTECTION

Advice has been received from the California Debris Commission of the decision of the chief of engineers relative to the extent of bank protection to be undertaken by the Federal Government under existing law. That decision is expressed as follows: " * * * The Engineer Department will not without specific legislative authorization undertake the revetment of the banks of the Sacramento and its tributaries except for the protection of the weirs forming a part of the flood control project."

The result of this decision will be that, without further action by Congress, the Federal Government will do no bank protection work in the Sacramento or its tributaries above the mouth of Cache Slough. Necessary bank protection work must therefore be undertaken by the State in cooperation with local districts, with funds provided for flood control project maintenance.

During the past year the California Debris Commission has completed bank protection work on the Sacramento River between the mouth of Cache Slough and Sacramento costing approximately \$84,000. Continuation of this work has been stopped by the decision of the chief of engineers. As this change of policy has only been recently announced, no work has yet been set up under the new arrangement.

The construction of 229 feet of railroad trestle to extend the jetty being done under contract by the Healy Tibbets Construction Company, has been practically completed. Repairs to the shovel in the quarry and the railroad have been completed and the placing of rock in the jetty will commence at once.

WATER RIGHTS

Applications to Appropriate.

During the month of August 42 applications were received for the appropriation of water, 20 applications were denied and 15 were approved; three permits were revoked and one license was issued.

Adjudications.

Whitewater River (San Bernardino and Riverside counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). A hearing on the exceptions to the division's report as referee has been set by the Superior Court for October 5, 1931.

Oak Run Creek (Shasta County). Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Los Alamos Creek (Santa Barbara County). Division's report as referee has been submitted to the Superior Court and a decree is expected in the near future.

Davis Creek (Modoc County). A tentative decree has been circulated among counsel and is now under consideration by the Superior Court.

Mill Creek (Modoc County). All but one of the water users have signed a stipulation for consent judgment.

Deep Creek (Modoc County). Distribution of the waters of Deep Creek was continued throughout the month in accordance with the trial schedule of allotments which was adopted for the 1931 season.

Franklin Creek (Modoc County). Administration of the schedule of allotments for trial distribution during the 1931 irrigation season was continued throughout the month.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

During the past month the regular field work has continued, comprising measurements of all diversions, stream flow, and return water throughout the Sacramento-San Joaquin territory.

Flow of Sacramento Stream Increased

(Continued from preceding page)

Since the first of September, irrigation diversions have rapidly decreased and due to this and the drainage of the rice fields, the flow of the Sacramento River at Sacramento was increased to better than 2000 second-feet on September 10. No new salinity stations have been required but all regular stations, about sixty in number, have been maintained. In addition, many special samples have been taken at the request of various delta water users. The regular salinity bulletins have been sent out at about four-day intervals until recently. With the increasing river flow and reduction in irrigation draft, the interval between bulletins has been increased. Due to the increased flow at Sacramento, the salinity in the Upper Sacramento Delta has rapidly decreased but it has continued to increase at practically all of the San Joaquin Delta stations. There has been practically no increase in the flow to the delta of the San Joaquin River.

The special investigation has continued in the delta and up-river areas to determine the facts needed to establish the damage resulting from the present season's water shortage.

The accompanying tabulations of river discharge and salinity show a comparison between the measurements in August and September of this season and the records in September, 1924.

CALIFORNIA COOPERATIVE SNOW SURVEYS

Office work during the past month has included routine compilations, the preparation of sketch maps for snow courses in the Walker, South Kings and South American River basins.

In the field, a six-day reconnaissance trip was made in the South Kings River Basin and new snow survey courses were established at Copper Creek Summit, elevation 10,200 between the south and middle forks; Junction Meadows, elevation 8500 on Bubbs Creek; and Bullfrog Lake, elevation 10,700 two miles west of Kearsarge Pass. Negotiations are in progress for cooperation with the Forest Service for the construction of necessary shelter cabins and the survey of the new route to include these courses.

Jeff Davis Peak shelter cabin in the Mokelumne River Basin was completed during the month and accepted.

The snow course at Lake Lucille in the American River Basin was inspected, brushed out, resigned and sketched.

FEDERAL COOPERATION—STREAM GAGING

In connection with the Federal-State cooperation for stream gaging, a trip was made to the Lake Bowman area and agreement was reached between the State, the U. S. Geological Survey and the Nevada Irrigation District as to certain construction work needed at the Milton-Bowman outlet station and as to the future maintenance of the four stations in the Bowman area.

VENTURA COUNTY INVESTIGATION

Drilling of the Devil Canyon dam site was completed and the showing as to foundation is not satisfactory although it is not to be inferred that the site is condemned. Drilling was started with a Calyx drill at the Blue Gulch site and the driller is still in the wash gravel of the river bed. Drilling the Spring Creek site is progressing with a Diamond drill and core is quite satisfactory. Two holes have been put down and a third has been started. Other work on underground water in Ventura County investigation has proceeded in a routine way.

South Coastal Basin Investigation.

Work of determining capacity of underground basins and working up old records of rainfall and water table fluctuation is progressing satisfactorily.

SANTA CRUZ COUNTY—San Vicente Creek Dam No. 632-2. Coast Dairies and Land Company, Davenport, owner; gravity, situated on San Vicente Creek in Ranchos San Vicente and Arroyo de la Laguna.

MONTEREY COUNTY—Black Rock Dam No. 643. Monterey Stock and Game Association, Monterey, owner; earth, situated on Black Rock Creek tributary to Carmel River in Sec. 32, T. 17 S., R. 2 E., M. D. B. and M.

SOLANO COUNTY—Lake Chabot Dam No. 441. Vallejo Water Company, Oakland, owner; earth, situated on Blue Rock Spring, tributary to Sulphur Springs, 3 mile north of Vallejo.

NEVADA COUNTY—Pontoon Dam No. 61-15. Nevada Irrigation District, Grass Valley, owner; timber, 21 feet above streambed with a storage capacity of 140 + acre-feet, situated on Canyon Creek tributary to South Yuba River in Sec. 13, T. 18 N., R. 12 E., M. D. B. and M.

EL DORADO COUNTY—Fallen Leaf Lake Dam No. 461. Anita M. Baldwin, Los Angeles, owner; concrete, situated on Taylor Creek tributary to Lake Tahoe in Sec. 1, T. 12 N., R. 17 E., M. D. B. and M.

MODOC COUNTY—Courtwright Dam No. 155. R. Anchordoguy, Red Bluff, owner; earth dam, situated on Happy Camp Creek in Sec. 22, T. 42 N., R. 7 E., M. D. B. and M.

THE HIGHWAY

There's a long gray ribbon, with straight
white lines,

Which the Master Merchant unfurled
For pity of crowds and town-sick folk
With hands that tired and hearts that broke;
And it reaches the end of the world!

So He stands and smiles, that Mighty Man,
Unfurling His ribbon rolls;
And the ribbon coils go up and down
Through blossomy fields and village and town
For rest of our weary souls.

The red says "Stop!" but green says "Go!"
And the hills and fields are green;
So let's away, my lad! my lass!
The trees all beckon, and the young, young
grass
Calls "What a long time you have been!"

—Eleanor Preston Watkins.

Printed in the Women's City Club Magazine

"What Ho, the Fox" At Bidders' Matinee

(Continued from page 41)

figure. He announces the title of the job, the name of the bidder and the size of the check and passes the sheet to Mr. Standley who reads aloud the item prices and total figure of the bid.

The reading is followed with rapt attention while busy pencils jot down item prices and totals on blank forms for comparison with their own bids.

So the silent quest for the "fox" goes on till the last bid is read and the lowest bidder revealed. He is the man who has outfoxed them all in coralling the contract.

FOX IN THE OPEN

Instantly the silence is broken by a loud buzz of conversation and bustling about as rival bidders argue and bond house agents and material men besiege the "fox" for business.

Some rivals congratulate him, others commiserate with him declaring he'll "lose his socks" on the job. Thus the "fox" is caught in the open and the hunt is over.

With 150 to 200 going contracts constantly being accepted and new ones awarded, this scene is repeated at the California Department of Public Works nearly every week in the year with possibly one or two exceptions.

"Can I help you start that car? I know a lot about that make."

"Well, whisper it. There are ladies present."

\$66,000,000 *To Workers for Improvements*

The Department of Public Works in 1931 Has Set \$48,000,000 of This Amount in Motion Against the Unemployment Situation and \$18,000,000 Through the Counties

By JAMES I. HERZ, Deputy Director of Public Works

AN ORDERLY program of public improvements, advanced on schedule and expanded to the maximum of budget allowances, represents the California state administration's contact with the unemployment problem.

The situation, now growing in tenseness, was anticipated last January when Governor Rolph asked the Legislature to pass building appropriations as emergency measures and make the money immediately available for use.

Outstanding and independent of any figures hereafter mentioned, the San Francisco Bay Bridge, a \$75,000,000 project, was launched, given its preliminary financing, and is being now advanced to the stage of construction.

ALL WORK ADVANCED

The schedule for teachers colleges, hospitals, office buildings, armories and relief homes was advanced by a full year.

The \$48,000,000 program of the Department of Public Works was set in motion without delay. Every form of expenditure and construction was understood to have the creation of employment as a major objective. Today, \$46,000,000 of \$48,000,000 total has been expended or is accruing under contracts.

On the Division of Highways fell the principal responsibility for the expenditures of the millions and the employment of the tens of thousands of men. Facing the biennium

with an income of \$64,118,943.28, the Division was able to plan wisely, and the mobility of its funds enabled it to proceed without delay.

Equally important was the share of gas tax money falling by law to the several counties of the State. For the last biennium, this total was \$31,844,342.42. The money is apportioned to the counties on the basis of automobile registrations. It becomes the backbone of their local highway construction and maintenance.

NOT COOPERATIVE

It is not involved in cooperative highway districts or in such allocations as the Highway Division may make directly in aid of such projects as, for instance, the so-called "bottle neck" problem of San Francisco, relating to the congestion of traffic in the Colma-Daly City district. The State contributed \$200,000 to this enterprise, which, when matched by the local appropriation, makes a \$500,000 item to apply against the employment problem in that vicinity. Following the lead of the State, San Francisco voted \$2,000,000 bonds for relief work.

Los Angeles came forward in fine spirit with \$5,000,000 for emergency work as against the unemployment situation. The example and actual encouragement given to the several communities by the State, appears to have encouraged them to face the situation with practical relief measures.

James I. Herz

Beautiful Trees of Cherokee Lane Spared in Careful Paving Operations

By R. E. PIERCE, District Engineer

THE RECENT completion of grading and paving on Cherokee Lane, a portion of the Golden State Highway in San Joaquin County, north of Stockton, has demonstrated what can be done toward preserving existing trees and still not interfering with our standards of road section and drainage.

The greater portion of the 14 miles of the Cherokee Lane which is on the State highway system is lined with trees, some having been planted many years ago for shade purposes, others being a portion of the natural oaks which originally covered large areas of San Joaquin County, and others being orchard trees planted and maintained by the abutting property owners.

Before starting construction, a detailed field study of line and grade adjustments was made so as to preserve as many of the trees as possible.

"TURNPIKE" SECTION

The road cross-section is the so-called "turnpike" section, which makes use of practically the full width of the 100-foot right of way, by placing shallow draining ditches a foot inside the right of way and then carrying a flat slope from the shoulder edge to the bottom of the ditch.

Practically all the trees which came between the shoulder line, which is eight feet from the edge of the pavement, and the ditch were preserved, except some of the orchard trees which were in many cases planted so closely together that it was impracticable to work around them, and these were thinned out, making room for grading equipment and still not impairing the general effect.

Adjoining the east city limits of Lodi, a 76-foot width of pavement was built as a cooperative project in which city, county and State participated and here all the widening was done on the easterly side of Cherokee Lane to avoid disturbing the more highly developed property on the west. This made necessary the removal of most of the trees on the east side of the road. Also, north of Lodi, there was planted under permit from the State in

1921 a row of oriental plane trees on each side of the road for about one mile to the Mokelumne River. These were so close to the road that it was decided to adjust the center line of pavement to leave one row intact, the westerly row being eliminated.

In these two places it is planned to replace the trees removed by new trees to be planted by the State this fall in the proper position.

SAVED FRONT YARDS

A number of the residences along Cherokee Lane have nicely landscaped front yards with shrubs and lawn. All of these were left practically in their original condition by carrying the side drainage through a metal culvert under the yard.

In general, grades were adjusted so that the trees were not disturbed by filling or cutting around the roots. In cases where the slope came too low, a mound was filled around the base of the tree to protect it.

A considerable number of the trees which were left, while in the clear of the two-lane pavement (20 feet wide), will necessarily have to be removed when pavement is widened. It is the intention to plant new trees back of the trees which must eventually be removed so that when the time comes for taking them out, the new trees will have several years' growth, thus eliminating some of the objection to removal of the existing trees.

IN THREE CONTRACTS

The paving on Cherokee Lane was handled by three separate contracts, and the bridges under two contracts.

The joint paving project adjoining Lodi is the first 76-foot width Portland cement concrete pavement on the State highway in northern California. The State had already built a 20-foot pavement through this stretch before the district contract was started. The State contributed to the district the cost of two additional 10-foot lanes through this stretch, making their total participation on the basis of a 40-foot width.

In so far as we can learn, a State record was made on speed of paving the 5.55-mile section along Cherokee Lane.

"CONTRACTOR SPARE THAT TREE" was, in effect, the general order promulgated by the engineers of the Department of Public Works in planning the regrading and paving of fourteen miles of the Cherokee Lane section of the Golden State highway north of Stockton. Care was taken to preserve as far as possible all the arboreal beauty of the roadsides. Picture No. 1 shows how the draining ditch was carried in a pipe under a front yard to preserve lawn and trees. No. 2 shows oak trees saved near Live Oak. In No. 3, where the grading came too low, the trees are seen protected by mounds filled around their bases. No. 4 shows trees preserved near Houston school.

Governor Rolph Completes Visits to 58 County Seats, Keeping His Promise

PRECEDENT established; records broken!

Fifty-eight county seats of the fifty-eight counties of the State of California have now been visited by Governor James Rolph, Jr., an achievement never before accomplished by any Governor of this State!

Wednesday, November 18th, marked the establishment of this remarkable record of "Sunny Jim," accomplished just ten months after his inauguration.

On the last lap of this swing throughout the State which has taken him into every corner, every hamlet, every town and city of the great commonwealth of California, the Governor, accompanied by a number of his official family, visited Crescent City, Eureka, Ukiah, and Lakeport, on November 16, 17 and 18.

KEPT CAMPAIGN PROMISE

During the primary campaign, the Governor stumped the State from north to south, from east to west. He told his fellow Californians then that, if elected to the lofty office of Chief Executive of the State, he would again visit every community and particularly every county seat. He said the purpose of such visits would be, first, to thank the voters for their faith and confidence in him, and second, to learn first hand the problems faced by each community.

To keep his promise, he arose from a sick bed. For, just a few days before the scheduled last lap of the state-wide tour, his physician was doubtful if the Governor's health would permit the strain of such a journey. But the Governor was adamant. He insisted he must keep his engagements in Del Norte, Mendocino, and Lake counties. And despite cold, rain and sleet, through which he traveled the entire three days of this last lap, the Governor set out.

SPLENDID RECEPTIONS

His receptions everywhere throughout each town, have been extraordinary demonstrations of popular enthusiasm and appreciation. But those accorded him on this last trip, transcended any previous ones. For the people he visited realized that the Governor was taxing himself to keep his word. And their

response was more than generous. Everywhere he visited, hundreds turned out to greet him. At several of the luncheons and banquets given in his honor, scores were turned away for lack of accommodations, despite the fact that his audiences were forced to travel over wet and slippery roads to greet him.

Many sections of the State visited had never seen a Governor. Hundreds of little one-room school houses have been inspected and the children, sons and daughters of farmers, agriculturists, cattle raisers, and miners, have been addressed by the State's Chief Executive.

And his message to these little ones?

Their obligations to their parents and their teachers.

MESSAGE TO CHILDREN

He told them that California was second to no State in the generous and thorough education being given its young. He admonished them to shun evil companions and to grow up useful citizens. He told them they were living in a matchless age and urged them to take advantage of the opportunities offered them.

To his adult audiences, the Governor took this message:

"Have faith in California."

He outlined the possibilities of the State; he begged for support of an equitable State-wide water plan to the end that all sections of the State might be opened up for the huge population he predicted would come to California if given an adequate water supply.

He told of the efforts of the administration to cope with the unemployment situation and begged that support be given by all citizens to all relief and charity organizations.

He pictured the faith being shown in California by the big shipping interests who today are building a series of huge liners to ply along the pathways of trade and commerce from the ports of this State.

Accompanying the Governor on these trips, have been prominent members of his official family, to discuss with the citizens of various communities the problems relative to each section of the State.

Enthusiastic applause greeted the Governor's speeches, particularly when he said:

(Continued on page 44)

"Lone as God and White As a Winter's Moon"

That is the eloquently beautiful and poetic description given of Mt. Shasta shown looming in background of the accompanying picture with Castle Dome rearing its bald conical summit boldly in the foreground. This view is a bit of the scenic grandeur typical of the Castle Crags Wilderness State Park project near the northern boundary of Shasta County. It is a wild country of virgin timber and rugged mountains on the west slope of the Sacramento River canyon—a virtual wilderness. Castle Crags are on the west side of the Pacific Highway, the only real arterial of approach to this region. Governor Rolph and party visited the park on his tour of Shasta County.

NO HOLLYWOOD STUFF in this picture. It's real scenery as viewed from the Pacific Highway near Castella Portal of the Castle Crags Wilderness State Park project and the picture was taken during Governor Rolph's recent visit to Shasta County. The Governor and his party were standing on the Pacific Highway bridge over Castle Creek. In the party, from left to right, are Russell Bevans, Eric Cullenward, John McColl, Henry J. McGuiness, Earl Lee Kelly, E. Raymond Cato, Governor James Rolph, Jr., Charles H. Purcell and Colonel Walter E. Garrison.

Western State Engineers, Meeting in Sacramento, Pass Important Resolutions

THE Association of Western State Engineers, meeting at the State Capitol in Sacramento with Edward Hyatt, State Engineer of California, presiding, concluded its Fourth Annual Conference on October 30th. It was a meeting featured by record attendance, excellent papers, and lively discussion. Attention, as was to be expected, focused upon water matters and Federal-State relations with respect thereto.

Arizona, California, Colorado, Idaho, Kansas, Nevada, New Mexico, North Dakota, Oregon, Texas, Utah, Washington, Wyoming, the U. S. Geological Survey, the Division of Agricultural Engineering of the U. S. Department of Agriculture, the U. S. Bureau of Reclamation, the U. S. Forest Service, the U. S. Corps of Army Engineers, and the Federal Power Commission were represented officially by one or more delegates and there was a large attendance of visitors throughout each day of the conference.

RESOLUTIONS ADOPTED

The most important business transacted at the conference was the adoption of resolutions which are briefly summarized as follows:

RESOLUTION NO. 1 recommending changes in connection with the United States Weather Bureau with respect to more careful location of precipitation stations, a more accurate check of records prior to publication, an increase in research work, and the employment of more scientific personnel.

RESOLUTION NO. 2 reaffirming the previously announced position of the Association condemning efforts of Federal Bureaus to assert Federal ownership of unappropriated water and to avoid compliance with State laws and decisions of the courts with respect thereto.

RESOLUTION NO. 3 inviting Dr. Elwood Mead, U. S. Commissioner of Reclamation, to attend the next conference of the Association prepared to outline definitely the policy of the Bureau of Reclamation with respect to acquirement, adjudication, and administration of water rights of the bureau.

RESOLUTION NO. 4 requesting the Secretary of the Interior to name a "Director" in place of an "Acting Director" of the U. S. Geological Survey.

CALL FOR RESURVEY

RESOLUTION NO. 5 calling for a resurvey and readjustment of the U. S. Army gaging stations established pursuant to the provisions of House Document 308, 69th Congress, 1st Session; dis-

proving the provision in the appropriation bill of the current year requiring cooperating agencies to pay half the cost of publication of data; urging that henceforth Congress appropriate sufficient moneys to the Geological Survey that it can carry on all required Federal stream gaging and topographic mapping instead of parcelling this work out among various interested Federal agencies, and urging upon Congress that it appropriate sufficient moneys to the Geological Survey to complete a satisfactory base map of the United States in twenty years and that in this work the Survey be authorized to meet offers of cooperation on a fifty-fifty basis subject only to the condition that a reasonable proportion of the whole appropriation be divided equitably among all states having due regard to the unsurveyed areas in each and the importance of the work.

RESOLUTION NO. 6 endorsing the principle expressed in Senate Bill 4123 and H. R. 11718 proposing Federal relief for drainage and irrigation districts, and

RESOLUTION NO. 7 commending the President of the United States and the Congress for their efforts to reach a proper solution of the important question of disposal of public lands and urging upon them the most serious consideration of the report of the Committee on Conservation and Administration of the Public Domain.

OTHER TOPICS DISCUSSED

Members were greeted on the opening day by Lieutenant Governor Frank F. Merriam and Mayor C. H. S. Bidwell of Sacramento and Congressman Phil D. Swing dropped in during the course of the conference to pledge his support to the Association. Discussion of Federal and State policies with respect to water, occupied the attention of the conference.

George M. Bacon, State Engineer of Utah, was elected president succeeding Edward Hyatt, State Engineer of California, and Salt Lake City was selected as the next place of meeting. George S. Knapp, Chief Engineer of the Division of Water Resources of Kansas, was elected vice president succeeding Mr. Bacon, and Mr. Reid Jerman, Principal Assistant State Engineer of Utah, has been named Secretary to succeed Everett N. Bryan, Hydraulic Engineer of the California Division of Water Resources. Edward Hyatt, State Engineer of California, was elected to serve with the president and vice president as third member of the executive committee.

This is the fourth of a series of articles on the State's water problem to be published in *California Highways and Public Works*. The first dealt with Governor Rolph's call for united efforts by the entire State to solve the problem. The second and third articles described the situation confronting the Sacramento Valley, Sacramento-San Joaquin Delta and Los Angeles areas. This article is devoted to San Joaquin Valley conditions and the State water plan for improving them.

THE San Joaquin Valley, commencing at the junction of San Joaquin and Sacramento Rivers, sweeps southward between the Sierra Nevada and Coast Range, a distance of 250 miles to the horseshoe rim of the Tehachapi Mountains at the head of the valley. From 50 to 70 miles in width, the valley is an empire in itself, containing more than one-third of the agricultural lands of the State.

Favorable climatic conditions and fertile soils led to intensive development of many large areas of the valley. Scant rainfall forced the use of irrigation and more than one-third of the lands now under irrigation within the State are in this great valley. As the rainfall and water supply in the Coast Range are small, most of the irrigation development is on the east side, or adjacent to the San Joaquin River on the west side.

Irrigation development has taken a somewhat different course in the northern and southern parts of the valley. In the section northerly from the Chowchilla River near Madera direct diversions from the Sierra streams were used for irrigation until development had become sufficiently extensive to enable storage to be financed.

THREE RESERVOIRS

Reservoirs on three of the large east side tributaries have been constructed to sufficient capacity to insure a dependable water supply throughout the season for the present development. These reservoirs are the Melones Reser-

voir on the Stanislaus River with a capacity of 113,000 acre-feet, serving the Oakdale Irrigation District with a net irrigated area of 21,000 acres and the South San Joaquin Irrigation District with a net irrigated area of 54,300 acres; the Don Pedro Reservoir with a capacity of 290,000 acre-feet serving a net irrigated area of 205,000 acres in the Modesto and Turlock Irrigation Districts; and the Exchequer Reservoir on the Merced River with a capacity of 279,000 acre-feet serving a net irrigated area of 125,000 acres in the Merced Irrigation District.

In the southerly part or Upper San Joaquin Valley, ground water as well as surface supplies have been used. Originally artesian flows were found in many localities. Large areas have been developed through pumping from wells, and in many cases where the surface supply is small or uncertain it is supplemented by pumping during the latter part of the season.

Of the 1,200,000 acres now under irrigation in the Upper San Joaquin Valley, about one-third is served from surface supplies, one-third from streams and wells and one-third entirely from wells. In this area no mountain water storage has been developed for irrigation purposes alone. On the San Joaquin River, storage for power regulates some water for irrigation. Smaller amounts of power installation with little or no regulatory storage have been developed on the Kern and Kaweah rivers.

Buena Vista Lake in the trough of the valley stores flood waters of the Kern River for

(Continued on page 20)

75,000 Square Miles to be Mapped Costing \$1,660,000 and 14 Years Work

By **EVERETT N. BRYAN**, Hydraulic Engineer, Division of Water Resources

A DEFINITE program of topographic mapping in California has been agreed upon by the district office of the U. S. Geological Survey and the State Engineer's office having as its object the completion of a reasonable satisfactory topographic base map of the State of California.

The Federal government, through the local office of the U. S. Geological Survey, and the State of California, through the office of State Engineer, are carrying on this work on a dollar for dollar cooperative basis and the program arranged is the culmination of some five months effort beginning with a conference on May 8, 1931, to which all major agencies concerned with the production and use of these maps were invited to send representatives.

The U. S. Geological Survey, the State Engineer's office, the State Division of Highways, the Corps of Engineers U. S. Army, the California Forest Experiment Station, the California Economic Research Council, the State Division of Mines, the U. S. Forest Service and the College of Agriculture of the University of California were all represented by personal appearance at this conference and several other agencies made appearance by letter.

75,000 SQUARE MILES

The program arranged provides for the mapping of all previously unmapped areas, the remapping of all areas for which there are presently available only the U. S. Army tactical maps, the resurvey of all areas for which there are presently available only U. S. Geological Survey topographic maps of a scale of 1:250,000 surveyed prior to 1890, the completion of surveys made by the city of Los Angeles in San Bernardino, Riverside and Imperial counties, the resurvey of certain mining, recreational and forested areas in the northern Sierra done some 40 years ago, and the resurvey of highly developed areas in western San Bernardino and Riverside counties and

in San Diego County wherein there have been many cultural changes and there are presently available only small scale maps done 30 to 35 years ago. **Completion of the program involves the mapping of some 75,000 square miles or 47 per cent of the area of the State and it is estimated will cost \$1,660,000. On the basis of expenditures proposed during the current year it will require fourteen years, or until 1945, to complete the program.**

AREAS SCHEDULED

The more important general areas which are scheduled for mapping proceeding from north to south include the following:

1. The north coastal area for which there are now available only the U. S. Army tactical maps, which are wholly inadequate for general purposes.

2. The extreme northern and northern portions of California for which there are now available only the old U. S. Geological survey quadrangle sheets of a scale 1:250,000 done prior to 1890.

3. Previously unsurveyed or only partially surveyed areas in the Clear Lake to Redding Coast Range section, for which there are now no published maps available.

4. Recreational, mining and forested areas in the northern Sierra from Quincy south to Yosemite, for which there are presently available only U. S. Geological Survey Quadrangles done some 35 to 47 years ago.

5. Unmapped areas on southern San Joaquin Valley floor.

6. Areas in San Bernardino, Riverside, Orange and Imperial counties, for which there are now either no published maps or only those done 30 to 35 years ago.

Everett N. Bryan

Arrangement of the program required a determination of two very important factors—the scales which should be used and the order in which the work should be undertaken. While it was readily agreed that no new work should be done on the scale 1:250,000 (i.e., 4 miles to the inch) there was considerable room for choice between the larger scales and an earnest desire was manifested among the various users of the maps for large scale work.

There is, however, a very rapid increase in cost with an increase in scale and if the pro-

Slip of Pen Might Cost Him \$30,000 Yet Gunston Smiles

ALMOST any day of the week, George T. Gunston, disbursing officer of the Department of Public Works and assistant secretary of the California Highway Commission, can put his hand in a drawer of his desk and pull out a million dollars or so. On a recent Wednesday, bid opening day, he could exhibit \$2,500,000.

But while it's all perfectly good money, it's not cash or even currency—just contractors' checks deposited as guarantees with their bids. The total of them runs high on an afternoon when bids on a number of jobs are opened. Last week for instance the bidders on one job alone had up \$581,000. All of this paper is returned within twenty-four hours except the check of the lowest or successful bidder who gets his back when he furnishes a satisfactory bond upon the execution of the contract.

SIGNS 10,000 CHECKS

As disbursing officer Mr. Gunston sends out about 10,000 checks a month in payment of all types of departmental bills, disbursing approximately \$3,000,000 a month for highways alone. By the use of a multiple pen-holding mechanism he can sign five checks at a time. Figure out how long it takes him.

He has some queer experiences with contractors. One forgetful lowest bidder put his check in his pocket instead of in the bid envelope and of course lost the contract. Another was one cent short of the required amount and was ruled out. Another with \$35,000 up in securities was \$5 short on a job approximating \$350,000 and lost it.

CAPTAIN OF ARTILLERY

Handling all this paper representing the State's and other people's money is a ticklish job because Gunston is responsible for any mistake and a mistake might mean a trifle or thirty or forty thousand dollars, yet he sleeps o' nights and smiles.

For Gunston, a soldier, is endowed with the necessary courage for such a job. He served with the Washington National Guard during the war and is commander of Battery D, 143d Field Artillery, California National Guard of Sacramento, equipped with four 75 millimeter guns, manned by four officers and 66 men.

THERE'S MILLIONS IN IT, speaking of the big black safe, but not a dollar you can spend—all in the custody of George T. Gunston, disbursing officer of the Department of Public Works. He has handled as high as \$2,000,000 a day but all of it in bidder's guarantee checks, not a cent in cash or even currency.

31 States Changing License Plate Hues

Thirty-one states will change the color combination for automobile license plates in 1932, and 23 different motifs will be used throughout the country, indicating that almost every hue will be represented in next year's parade, according to a survey by the American Automobile Association.

The national motoring body pointed out that 13 states and the District of Columbia will retain the 1931 colors, reversing them as to background and lettering, indicating a trend back toward standardization of colors. California, in this group, will revert to black on orange.

Tons of Explosive Used to Stop Sinking of Alto-Waldo Road Fill

By J. H. SKEGGS, District Engineer

ONE of the most important links of the Redwood Highway constructed to date is the Alto-Waldo unit officially opened to the public November 22.

This section of road, although only 2.45 miles in length from northerly limits at Alto to southerly limits at Waldo called for the solution of many extremely original engineering and construction problems including the dynamiting of a fill to stop continued subsidence.

The project involved a bridge structure across Richardson Bay and fills across an arm of the bay between De Silva Island and the mainland north of the bridge.

The maintenance of fills constructed through marsh and tidelands has been a source of trouble and expense to the railroads for years. However, it is even more serious and baffling as a highway problem.

DROPS INTO MUD

Fills across marshes are usually sunk as far into the mud as the heavy equipment with which they are constructed will sink them. During construction they are brought to grade many times, only to have huge slices or sections to the fill shear off and drop several feet into the mud, displacing it and causing an upheaval on the sides. Finally a state of apparent floating stability is reached, but on opening the fill to the pounding of heavy traffic it commences a slow subsidence of only a few inches per year but steady and relentless over a long period of time. The railroads brought their tracks to grade by adding ballast but the remedy for a highway is not so simple.

The settlement of a fill is never exactly uniform. This in itself tends, by removing the support underneath and distorting the mass, to disintegrate the wearing surface.

It causes depressions which, even if slight, prevent surface drainage due to the wide roadway and the light crown allowable. These depressions cause puddles and splashing during wet weather and tend to further disintegrate the surface by water seeping through.

Until the subsidence has continued over a period of several years, and the road has

been repeatedly patched and smoothed up, it is not advisable to invest in a permanent or heavy type of pavement.

On this project across the arm of the bay, between De Silva Island and the mainland, the mud was sounded to a depth of fifty feet prior to construction.

During construction with the usual methods the mud was heaved several hundred feet outward on either side of the road grade and it was apparent that the problem of subsidence was to be particularly acute.

Although highway problems in the marshes of New Jersey were hardly comparable to those of California, due to the large percentage of vegetative matter composing the eastern marshes, it was considered advisable to bring to California Mr. J. A. Williams, District Construction Engineer of the New Jersey Highway Commission, for the purpose of consulting on blasting methods of sinking fills successfully used in New Jersey.

TONS OF EXPLOSIVE

The New Jersey methods had to be altered considerably to fit local conditions, but the results desired were the same.

Tons of 60 per cent nitroglycerin gelatin were used in blasting the mud from beneath the heavier fill material, settling it after several blasts to the hard bottom beneath. The fill was sounded after each blast to determine the effect of the shot.

The full value of this experiment will not be known until all the data has been compiled and analyzed, which includes the sounding of displaced material on the sides as well as that within the roadway section.

It is definitely known that a fill can be forced down to bottom even with the great depth of mud here encountered. It is hoped to determine from the massive data obtained on this project just what is the maximum depth to which a fill can be economically forced to produce final stability.

It is known that a portion of the roadway material was displaced with the mud and lost for roadway purposes. The amount of this should be determined from analysis of side borings. Portions of other fills on this project were partially sunk, but were not

SLOUGH OF DESPOND, this was for the engineers until they got mad and dynamited the fill that wouldn't fill on the newly-opened Alto-Waldo link of the Redwood Empire highway across an arm of Richardson Bay. Note the cracks showing the settling despite repeated dumping of hundreds of tons of road material. Tons of explosive finally blasted the way to hard bottom.

forced clear to the hard bottom in an effort to find a point of balance or stability without the extreme measures resorted to.

The public in riding this short section of highway can hardly be expected to realize the difficulties of its construction, the invisible forces of nature which had to be overcome. They can, however, enjoy the smooth wide surface, the picturesque bridge and the saving in time due to decreased distance, increased width, improved alignment and inherent safety features.

They should particularly appreciate the "braided crossing" at the southerly end of the bridge which will sort out with perfect safety 20 per cent of the traffic bound for Mill Valley and adjacent vicinity without any slackening in speed of that 20 per cent or the other 80 per cent speeding northward along the main highway.

This Alto-Waldo link receives and delivers traffic at the door of Sausalito. It saves in itself $1\frac{1}{4}$ miles distance over the existing route between these limits, but together with the San Rafael to Alto cutoff opened last

year saves 30 per cent of the distance or approximately 4 miles over the previous highway between Sausalito and San Rafael.

It reduces the curvature over 90 per cent between the two cities, providing alignment comparable to the best railroad alignment of the country, and embodies in basic engineering design the ultimate in safety features.

GOT THE DECISION

A farmer west of town had been using his tractor to pull mired motorists out of a mudhole at \$1 per jerk. More money in it than farming. A city drayman looked on with envious eyes and started competition. The tractor was the best mudhorse and got most of the business.

The drayman telephoned the county attorney, and asked if a man could operate a tractor on the public highway without a license. The county attorney looked up the law and found that "Tractors used for road work other than hauling material shall be exempt."—*Minnesota Highway News*.

He—That driver ahead must be Miss Flditch, my old school teacher.

She—Why?

He—She seems to be so reluctant about letting me pass.—*Motor Land*.

Pay Roll Dollar Reaches 42,000 Men

(Continued from page 1)

Within the last ten months, the Highway Commission has passed \$500,000 in direct aid to localities in the State, meaning that in each instance the sum has been more than matched by local enterprises and reflected back in the labor employing agencies.

OUT OF SAVINGS

In the progress of the year's work the Department saved \$1,500,000 out of its maintenance budget, due to falling prices of material and favorable work conditions. This sum was made immediately available for extra maintenance work on the highways.

During the month of October, 3600 married men were given employment on a part-time basis over a period of five months. These were in addition to the maximum on regular pay rolls. The personnel was selected by the mayors and American Legion officials from localities in the vicinity of the work to be done.

The pay roll of the Highway Division, all inclusive of its activities, now carries 14,000 employees. The pay rolls of contractors in the division carry about 12,000 more men. Going deeper into the inquiry, \$18,000,000 reaching the counties is estimated to have added directly about 7000 more men to the local pay roll, but the full results of the stimulus to county enterprise is reflected far beyond the actual personnel of the pay rolls.

Material men, transportation companies and technical labor have been drawn on heavily through this activity.

The \$48,000,000 schedule of the Department of Public Works, plus the \$18,000,000 fund going to the counties, means that under the accelerated program something like \$66,000,000 has been set in motion against the unemployment situation this year. Represented in this is something like \$10,000,000 of special appropriations made by the Legislature in extension of going building construction program.

There may have been larger amounts open for expenditure in the employment of labor, but it is doubtful that any have touched the taxpayer more lightly. Every phase of construction, building or maintenance, is on a pay-as-you-go plan. No bonds have been issued or any additional taxes imposed.

Back of this is the 3-cent gasoline tax and its auxiliary license money, which, for the last

WISCONSIN THANKS CALIFORNIA

Executives of the Department of Public Works are occasionally called upon by officials of other states for information concerning California methods and practices. Recently Chairman Thomas J. Pattison of the Wisconsin Highway Commission called on Adolph N. Sutro, District Right of Way agent at Los Angeles, and sends his thanks for the assistance given him in the following letter from the state capitol at Madison, Wisconsin:

Mr. Adolph N. Sutro
1111 Associated Realty Building
Los Angeles

My dear Mr. Sutro:

I wish to express my appreciation to you for the many valuable suggestions I received from you and from the members of the State Highway Department in Division No. 7, where I obtained a great deal of information which will be of value in the Highway Department of the State of Wisconsin, more particularly with reference to your plan of acquiring right of way. I have discussed your system with our Commission, and we are very much impressed and believe that we can follow your plan of acquiring right of way and save the State of Wisconsin a great deal of money. * * * This question of acquiring right of way in Wisconsin has for some time been a serious problem, and I believe that this plan will very materially reduce our costs of right of way.

I wish to thank you for the very fine consideration you gave me while at your office, and to say that I will be very glad to hear from you at any time.

Very truly yours,

WISCONSIN HIGHWAY COMMISSION
By Thos. J. Pattison, Chairman

biennium, netted the State \$64,000,000, and the counties \$31,000,000. This vast fund is apportioned by statute and goes directly to the disbursing agents of the Highway Department and to the counties.

The prompt distribution of these funds was made possible through adjustments and elimination of red-tape delays, thus meeting the Governor's insistence that the maximum amount of employment be provided at the earliest practical date.

It is accepted as a fact that of the millions of dollars being spent by California, fully 85 per cent ultimately reaches a labor pay roll.

Figures that Tell the Facts

The object of this tabulation is to show at a glance the far reaching distribution of State funds disbursed by the Department of Public Works. The total of employees or ultimate recipients of these funds as shown here is based on (1) department pay rolls, (2) contractors' pay rolls, (3) county construction and pay rolls aided by gas tax revenue, (4) joint highway district work aided by gas tax, and, (5) materialmen's pay rolls increased from like source. This total is not a pay roll count of individuals but a computation, in part, based on an accepted formula.

DEPARTMENT OF PUBLIC WORKS EMPLOYMENT RECORD FOR 1931

Public Works Department employees-----	14,000
State highway contractors' employees-----	12,000
County highway contractors' employees-----	7,000
County maintenance employees-----	4,000
Joint highway district enterprises-----	1,500
Special aid allocations-----	700
Materialmen's requirements-----	1,200
Building construction contracts-----	2,000
	<hr/> 42,400

1931-32 BIENNIAL PAY ROLL RESOURCES

Gas and subsidiary tax, biennium July 1, 1929-June 30, 1931-----	\$54,945,509 69
Federal aid allotments paid on completed projects-----	8,425,625 54
Revenues from cooperative projects-----	747,808 05
Gas and subsidiary tax paid to counties-----	31,844,342 42
Total-----	<hr/> \$95,963,285 70
Special legislative appropriation-----	10,000,000 00
Grand total-----	<hr/> \$105,963,285 70

Whole "Family" Invited to Xmas Party

THE "one big family" sentiment so marked at every gathering of Department of Public Works employees under the present administration has developed into plans for a big "Family Christmas Party" on December 23d at which Governor James Rolph, Jr., will be guest of honor and all employees of the Department are invited to be the guests of Colonel Walter E. Garrison, director, James I. Herz, deputy director, and executive heads of the department.

The party will be staged at the Elks Temple, Sacramento, and the merry Yuletide festivities will begin with a huge Christmas tree and entertainment for the kiddies in the afternoon at which Santa Claus will be present, of

course, and distribute presents, candy and ice cream to all the youngsters.

Then when the children have been taken home and snugly tucked into bed with visions of sugar plums, etc., the mothers and dads will return to the hall for the big dance that will last until the wee small hours with a lot of favors and merriment characteristic of Yuletide.

The big Christmas tree and piny decorations gathered from snow covered mountains will be provided by the maintenance crew of District Ten at Donner Summit.

It is pointed out that the efficiency of motor car engines has increased forty five per cent in five years. And the efficiency of drivers, how much?

Joint Hearings by State Water Bodies in South Evidence Keen Public Interest

EVIDENCE that the critical nature of California's water problem is being widely recognized and that the solution must come from a state-wide program of water conservation was shown by the public interest and attendance at the series of joint meetings held in southern California by the Governor's Water Commission and the Joint Legislative Water Committee on November 2, 3, 4 and 5. These meetings were programmed by the two bodies in order that they might

Joint Legislative Water Resources Committee, presided. Officials of San Diego County irrigation districts outlined some of their difficulties and stressed the need of further conservation of local waters. State assistance was requested in modifying the present riparian laws of the State, in order to allow proper conservation of the State's waters. The necessity of importing additional water from the Colorado River to meet the ultimate needs was brought out by city authorities.

GOVERNOR ROLPH'S COMMISSION officially titled the California Water Resources Commission as it appeared at a joint hearing in southern California with the legislative committee, is shown in this photograph. The members are: (front row, left to right) A. B. Tarpey, Vice Chairman Shannon Crandall, Chairman Matt I. Sullivan, James M. Burke, W. B. Matthews. In the rear row (left to right) are Jesse Poundstone, R. C. Harbison, Francis Carr, Major A. M. Barton, State Engineer Edward Hyatt, Jr.

hear from the citizens of the southern part of the State regarding their local problems of water shortage and their recommendations as to how proper conservation may be accomplished.

On November 2d at a joint session in San Diego, representative citizens of the city of San Diego and San Diego County presented the conservation and flood control problems of the city and county, particularly of the San Diego River and Mission Bay. Senator B. S. Crittenden, chairman of the California

PROBLEMS DISCUSSED

Assemblyman George B. Bowers made a short introductory talk and introduced the San Diego representatives. Tom Allen, Charles Hoopes, Colonel Ed Fletcher, Assemblyman Ed L. Head, B. D. Phelps, C. L. Myers, H. N. Savage, Hal G. Hotchkiss and Senator William E. Harper were among the speakers who discussed the San Diego River problems.

At the afternoon session, Mayor Austin assured the full cooperation of the city of

JOINT LEGISLATIVE COMMITTEE members who participated in water hearings in the south are shown above. In the front row, from left to right, are Assemblyman Edward Craig; Assemblyman Chester M. Kline; Senator B. S. Crittenden, chairman; Assemblyman Harold C. Cloudman; Assemblyman Robert L. Patterson. In the back row, left to right are Senator C. C. Baker; Senator Frank W. Mixer; Assemblyman Robert P. Easley; Joe Nolan, sergeant at arms; Assemblyman Frank S. Israel; Senator Andrew P. Schottky.

San Diego in working out a conservation program. Warren Lee Pierson, V. B. Westfall, A. H. Anthony of the Fallbrook Irrigation District and Thomas H. King, Consulting Engineer of San Diego, discussed the irrigation problems of this territory.

Following the joint meeting, an inspection trip was made through the San Diego River basin, visiting El Capitan and several other dam sites.

On the following morning, the Fallbrook Irrigation District was visited and the water shortage of this area was evidenced by the retrogression of highly developed orchards. The question of water rights has prevented conservation of flood waters and development of a proper water supply for this valuable section.

Proceeding to Riverside the second meeting in southern California was held to hear from the people of Riverside, San Bernardino, Orange and Imperial counties. Nearly one hundred citizens and officials of local organizations showed their interest by their attendance.

RIVERSIDE MEETING

The representatives from the different counties explained their viewpoint on the State Water Plan. Local problems in the Santa Ana River Basin, the Mojave River Basin, the Imperial Valley and the San Jacinto area

were outlined and discussed. Assemblyman Chester M. Kline, member of the Joint Legislative Water Committee presided.

William Jerome, O. T. Stephens and Ross Shafer spoke on the viewpoint and problems of Orange County. J. P. Hoffman of Mojave Valley, J. W. Sallee of Jacinto, Francis Cuttle of Riverside, Charles C. Childers of Imperial Valley, Mayor Joseph S. Long, Dr. Horace Porter, former Mayor of Riverside, Assemblyman A. E. Brock, J. J. Prendergast and H. H. Hale discussed the various phases of the problem.

James M. Burke and Francis Carr of the Governor's Commission, Senator Crittenden, and Assemblyman Robert P. Easley of the Joint Legislative Water Committee outlined the work of the Commission and Committee and of the necessity for developing a plan of conservation state-wide in its scope, that will be fair to all sections.

STATE PLAN OUTLINED

At the close of the meeting the official party went to Monrovia to attend a dinner meeting as guests of the Associated Chambers of Commerce of the San Gabriel Valley. Twenty-two municipalities of this valley were represented at the meeting. State Engineer Hyatt outlined the State Water Plan as recommended by the Department of Public Works and discussed the nature and costs of the units of the

Three Counties Join in Dedication Of New Sutter Basin Highway

GOVERNOR JAMES ROLPH, JR., journeyed from Sacramento to Robbins on Saturday morning, October 24, and formally opened the new Sutter Basin highway that brings the east and west sides of the valley in closer contact, links the Robbins district with Yuba City and Marysville and affords an all-year road between those cities and Woodland.

The section of road recently completed is a portion of a joint highway project from Robbins to Tudor in which Sutter and Yolo counties share the cost with the State.

A crowd of some three thousand enthusiastic citizens greeted the Governor, including official and civic representatives from Sutter, Yolo and Yuba counties. A caravan of seventy cars brought 350 residents of Woodland headed by Mayor H. I. Bobb, Fred Shaffer, Secretary-Manager of the Chamber of Commerce, and city and county officials.

ADDRESS BY GOVERNOR

Following a luncheon attended by the gubernatorial party and notables of the three counties, Governor Rolph addressed the assemblage telling them of the great pleasure the occasion afforded him and reciting the history and progress of the joint highway project that was started by Yolo and Sutter counties in 1929.

Other speakers were William O. Russell, chairman of the Yolo County Board of Supervisors; Arthur C. Huston, Sr., Woodland; A. A. McMullen, Yuba City Publisher; ex-Assemblyman Fred Noyes of Sutter County; Supervisor Frank B. Edson of Yolo County; Supervisor Frank H. Graves of Sutter County, chairman of the joint highway commission; W. T. Ellis, chairman of the Yuba County Board of Supervisors, and others.

At the conclusion of the speech making Governor Rolph left the platform and advancing to the center of the new highway severed the barrier ribbon, thus figuratively dedicating and opening the highway to traffic.

FREE BARBECUE

A free barbecue for which 1000 pounds of choice beef and 400 dozen rolls were supplied,

races in the community plunge and a football game added to the festivities attending the dedication.

The initial section of the road recently completed is that portion of the joint highway project from Robbins to Tudor, about ten miles. The improvement consists of grading to a proper roadway width and surfacing same with six inches of asphalt concrete surface on a crushed rock base when new construction is done or a comparable standard where widening is made. The total cost of the recent improvement is \$284,900.

COST DIVIDED

Of this amount, the State furnished \$100,000 and Sutter and Yolo counties the balance. Inasmuch as the assessments against the counties are spread over a period of five years, it was necessary for Sutter County to underwrite portions of the cost not borne by the State, until further county payments accrue.

With the completion of the present improvement, there is a continuous highway connecting the west side highway at Woodland with the east side highway at Yuba City. This shortens the present highway between the cities by about twenty miles. It furnishes easy communication between Yolo and Sutter counties. Over it will be accommodated a large volume of commercial traffic carrying products from a rich agricultural district. It was essential for the development of a school system throughout the year.

NEW BRIDGE NEEDED

For future work, there will be necessary some realignment between Robbins and Knights Landing. Widening of pavement between those points will also be advisable as traffic increases. When funds become available and authority can be secured from the War Department, a new bridge across the Sacramento River at Knights Landing will be advisable. The present roadway crosses the river on a bridge owned by the Southern Pacific.

The use of this bridge for highway purposes is under license that may be revoked. The bridge is narrow and inadequate.

A GREAT DAY it was for Robbins, Sutter County, when the newly completed link of the Sutter Basin highway was officially opened and dedicated at that town by Governor Rolph. A fine spirit of cooperation was shown by all the people of the Sutter Basin section in making the event a memorable occasion. Representative citizens from all parts of Yolo, Sutter and Yuba counties gathered in large numbers to greet Governor Rolph and enjoy a most interesting program that lasted throughout the day. These events included a free barbecue prepared for 2000 visitors, swimming races in the community pool and a football game, following the official luncheon tendered the Governor and his party. The upper picture shows the crowd that pressed around the speaker's stand being addressed by Governor Rolph whose figure is indicated by the arrow mark. Seated on the stand are the Supervisors from Yolo, Sutter and Yuba counties and other officials and notables on the list of speakers. The lower picture shows the Governor cutting the ribbon stretched across the highway, thus officially opening the new road link to traffic. Assisting in this ceremony are State Senator W. P. Rich of Marysville on the right of the Governor and on the left, County Supervisor E. E. Reeves of Yuba City.

Work Divided Between North and South

(Continued from page 8)

gram of mapping was to be completed in reasonable time with the funds which would probably be made available it was necessary to make some sacrifice on this point. In this connection the following comparative estimates of cost are of interest:

Field scale	Published scale	Cost per sq. mile
1:192,000	1:250,000 (4 mi. to 1 inch)	\$10 to \$15
1:96,000	1:125,000 (2 mi. to 1 inch)	\$15 to \$25
1:48,000	1:62,500 (1 mi. to 1 inch)	\$40 to \$60
1:31,680	1:31,680 ($\frac{1}{2}$ mi. to 1 inch)	\$50 to \$80

While the scales agreed upon in a few cases are not as large as desired by some of the users it will be noted that fourteen years are required to complete the program even with the smaller scales adopted.

DIVISION OF WORK

In the matter of order of mapping there was also some difficulty in arriving at a schedule which would be generally satisfactory. Each area and interest, impressed with the seriousness of its own need, would, if given its choice, place its own work first. It is manifestly unfair and impracticable, however, to confine all work for a great length of time to one section of the State.

In order to secure maximum efficiency in field work it is necessary to divide the work fairly equally between the northern and southern portions of the State, confining the winter work to southern California. It has appeared equitable and proper also to distribute the annual expenditures among the various interests such as agriculture, mining, forestry, recreation, etc. In the program of mapping agreed upon, therefore, the schedule of annual expenditures is divided fairly equally between the various geographical areas and interests.

The possibilities of expediting completion of this program by adoption of aerial methods in place of the ordinary ground surveys will not be overlooked. An area which will afford a reasonable test both in the matter of cover and slope has been selected in the vicinity of Clear Lake and it is expected that within the next few months aerial mapping will be given a test by which it will be possible to compare the new method with the old in matter of both cost and accuracy.

REVISION EXPERIMENT

Another experiment which will be tried as soon as weather conditions will permit and the work can be organized is that in connection with a cultural revision of some of the older quadrangles. In the vicinity of Lake Tahoe where there has been a very marked recreational development in recent years the only topographic sheets available are those surveyed more than 40 years ago. These are published on the 1:125,000 scale and it is believed the topography is sufficiently accurate that they can be made to serve present purposes reasonably well if the culture is revised to show the new roads, trails, settlements, etc. The Truckee sheet has been selected for this test and it is hoped to work out some method by which all adjoining sheets may be redone at reasonable cost.

In San Bernardino, Riverside and Imperial counties some 15,000 square miles have in recent years been surveyed by the city of Los Angeles in connection with its investigation of the Colorado River project. These surveys have not been published but blue print maps thereof are available on a scale of 1:125,000, lacking, however, the land lines and some of the other detail of the U. S. G. S. topographic sheets. It is expected to complete these surveys and publish the maps.

Experimentation will start within the year on the Hinkley quadrangle in the vicinity of Barstow in an effort to work out the best method and determine the cost.

As a necessary preliminary to proposed topographic mapping datum points must be established for elevation and for position. These datum points are permanent marks of which a list and descriptions may be obtained from the Geological Survey and they therefore are invaluable to California engineers. Local surveys for highways, canals, dams and reservoir sites and all other engineering projects can be referred to these permanent marks thus making each such survey in the State a part of an homogeneous whole.

The flapper, in a heavy sport roadster, came to a screaming stop in front of the traffic officer on a busy street. Said she:

"What's the big idea, flat foot, of no lights here?" Officer (annoyed): "I'm the light on this corner, lady."

Flapper: "Then turn green so I can cross!"—*Mississippi Highways.*

Sierra County Sees Good Significance in Governor's Visit

(Editorial in Downieville Messenger)

THE GOVERNOR'S visit to Downieville was the most important thing that has happened in Sierra County for many years. Its significance may not be fully comprehended by some, but to those in close touch with the situation it is of tremendous importance.

In the Governor's party were men who can do us the greatest amount of good; men like Col. Walter E. Garrison, Director of Public Works, and C. H. Purcell, State Highway Engineer and Chief of Division. These men and the Governor himself listened attentively to what was said by the speakers for Sierra County, who told of the county's needs. They not only listened, but they saw for themselves and gained a close-up, first-hand knowledge of conditions in this county.

They drove over our crooked roads, and agreed that they sorely needed fixing. They were told of how one of our supervisors is compelled to go through three counties and travel a distance of more than 70 miles to attend board meetings at the county seat, a distance of about 20 miles across the mountains. They were told how easy and inexpensive it would be to keep Yuba Pass open in the winter time, the most logical route across the mountains to Reno.

They were told that it would be wholly practical to solve the water problem, cure the financial depression in this State and allow the resumption of hydraulic mining at one and the same time by the building of restraining dams, thereby holding back the flood waters to be used when needed.

That the Governor and his party were impressed with what they heard and saw there is no doubt. There is little doubt, also, but that they will lend their friendly efforts in helping Sierra County with its problems. The Governor did not come here to win votes; the election is past. He came here prompted by a genuine desire to acquaint himself with the actual needs of the county, and to help us in any way he can.

"Freddie," said teacher, "give me a sentence using the word 'dilemma'."

Freddie had overheard certain remarks at home, and out of his subconscious store of worldly wisdom he drew this reply:

"People who hurry across railroad crossings dilemma sight quicker than people who stop, look and listen."
—*The Earth Mover.*

CALIFORNIA HIGHWAYS AND PUBLIC WORKS

Official journal of the Division of Highways of the Department of Public Works, State of California; published for the information of the members of the department and the citizens of California.

Editors of newspapers and others are privileged to use matter contained herein. Cuts will be gladly loaned upon request.

COLONEL WALTER E. GARRISON.....Director
JOHN W. HOWE.....Editor

Address communications to California Highways and Public Works, P. O. Box 1103, Sacramento, California.

Vol. 9 NOVEMBER, 1931 No. 11

CALIFORNIA LEADS

The public today demands pavements "as level as a floor" to permit comfort at driving speeds of 50 to 60 miles per hour. California has recognized this public demand and is now building them almost "as level as a floor," although each year sees improvements in surface smoothness.

Upon the completion of each project, its roughness is measured by an instrument called a "vialog." The instrument records the inches of vertical roughness per mile of pavement. The record in 1930 was 4.8 inch per mile and was made on two Portland cement concrete paving jobs, one north of Santa Maria in Santa Barbara County, and the other at Liberty Grade in Los Angeles County.

A roughness of 4.8 inch per mile of pavement is an average roughness of only one-fourth inch every 275 feet. That it is almost "as smooth as a floor" can be realized by comparing this with smoothness specifications. Most highway specifications require that the pavement shall be so smooth that it will not show a variation of over one-quarter inch on a 10-foot straightedge; yet they build them so smooth in California that there is only an equivalent roughness of one-quarter inch in 275 feet.

The season record for placing pavements was made on the Balboa Avenue-Torrey Pines Road in San Diego County. They placed a daily average of 935 feet of standard Portland cement concrete pavement during the time it took them to build the project. The average production per day for all Portland cement concrete paving jobs in the State was 698 feet.—*Roads and Streets.*

Pauline: Oh, look at the poor old man all bent over with rheumatism.

Paul: Rheumatism, my eye! It's Jack coming back from a ride in a rumble seat.—*Our Sun.*

Study Covers Supply for 40 Years

(Continued from page 7)

use on the lower lands served from this stream. Tulare Lake, a depression south of the ridge across the valley formed by the delta of the Kings River, receives part of the flood flow of that river and flood waters from all streams south to the Kern. Reclamation in Tulare Lake restricts the area of overflow in normal years and the water stored here is used on the adjacent lands.

STORAGE CONSIDERED

Storage for irrigation at or near the edge of the valley has been under active consideration for many years on the San Joaquin, Kings and Kern rivers. While the physical conditions are favorable, adjustments of water rights and difficulties in organization have delayed the construction of any of these works. The reduced run-off of recent years has also been a factor in the delay. However without storage, the waters of the streams have been put to a high degree of utilization about ninety per cent of the total run-off of the past fourteen years being used on several of these streams.

In the investigation of the water resources of the State made by the Division of Water Resources, an inventory of all waters of the State has been made, and the water requirements have been estimated in each of the seven basins into which the State has been divided. In the study of the San Joaquin Valley, an Engineering Advisory Board composed of eminent consulting engineers has materially aided in outlining the investigations and advised on all phases of the problems. During the past two years the members of this Committee have been, I. H. Althouse, W. H. Code, B. A. Etcheverry, F. C. Herrmann, H. L. Haeli, R. V. Meikle and G. L. Swendsen.

MOUNTAIN DRAINAGE AREA

The mountainous drainage area of the San Joaquin River Basin contains 18,178 square miles, and contributes 16.8 per cent of the stream flow of California. In determining the water supply of the San Joaquin Basin, a study was made of the forty year period from 1889-1929. This period starts with several wet years, contains both wet and dry cycles including one of the largest and driest cycles of record. The mean seasonal run-offs are estimated to be as follows:

	<i>Acres-foot</i>
40 year mean 1889-1929-----	11,980,000
20 year mean 1909-1929-----	10,160,000
10 year mean 1919-1929-----	8,547,000
5 year mean 1924-1929-----	8,137,000

The variety of uses of water in California possibly exceeds that of any other State in the Union. The predominant use, however, is that for irrigation, and undoubtedly this use will continue to predominate for many years; therefore it has been used as the basis for estimating the water requirements of this area.

In order to determine the ultimate future water requirements a complete classification of all lands in the San Joaquin Valley floor and adjacent foothills was made. A total area of 8,910,000 acres exclusive of the area in the Sacramento-San Joaquin Delta was examined and classified to determine the suitability of the lands for profitable development under irrigation. Of this gross area,

there is a net irrigable area of 5,704,000 acres that may at some time require a water supply. It is estimated that there were 2,033,000 acres or about one-third of this total net irrigable area, irrigated in 1929.

From a study of the average net use based on data collected for all the developed areas along the eastern side of upper San Joaquin Valley covering the period 1921-1929 and from supporting results in the lower San Joaquin Valley, the water requirements are estimated for the Upper San Joaquin Valley on the basis of an average seasonal allowance of two acre-feet per net acre of irrigable land.

RESULTS OF STUDIES

Similar studies were made for the Lower San Joaquin Valley and foothill areas and a gross allowance determined for all lands which might at some time be irrigated. In estimating the ultimate water requirements, it has been necessary to take into account the marked difference between the upper and lower portions thereof in the adequacy of local tributary streams to meet the ultimate irrigation demand and the availability of underground storage for the utilization of the water supplies. The gross and net allowances and net use per unit of area in the lower San Joaquin Basin vary with the geographic location of the irrigable areas with respect to water supply. These values have been established by studies of requirements in fully developed areas.

Based upon the net irrigable areas and the per acre requirements determined for each portion of the basin, the ultimate seasonal water requirements have been estimated for the San Joaquin River Basin excluding the Sacramento-San Joaquin Delta as follows:

Gross allowance in acre-feet..	13,326,000
Net allowance in acre-feet....	11,720,000
Net use in acre-feet.....	10,952,000

A comparison of the water supply and ultimate requirements show a deficiency in the San Joaquin River Basin.

The local supplies in the lower San Joaquin Valley for areas now under irrigation are generous in amount and dependable in occurrence.

In some portions of the upper San Joaquin, the use of water on present development exceeds the natural replenishment. Many farmers are finding it so costly to obtain an adequate supply of water that farms are being abandoned and are reverting to dry farming or pasture. Some 400,000 acres of highly developed land in this area are drawing from their underground supplies at a rate greater than the supply naturally available to them.

REVERT TO DESERT

Of these 400,000 acres, probably some 200,000 acres will go back to desert condition because there is only half enough water for the total area under cultivation. These 200,000 acres are worth more than \$50,000,000 and yield annually products having a value greater than \$20,000,000, three quarters of which are not in a class of those that are overproduced.

If retrogression is allowed to proceed on these farmed lands its effect will be felt in the urban areas

State Plan for Storage and Distribution

(Continued from preceding page)

in the immediate vicinity and in the large metropolitan areas—Los Angeles and San Francisco. The abandonment of these lands would result in a loss of several millions of dollars in annual returns to business in these metropolitan areas.

To meet this critical situation the State Water Plan proposes the purchase of the so-called "grass land" rights along the San Joaquin River. This water together with the water now wasted in the San Joaquin River after satisfying the demands of crop lands would have been sufficient during the 12 year period 1917-1929 (a cycle of drought) to meet the immediate needs of the 400,000 acres in the Upper San Joaquin requiring a supplemental water supply.

FRIANT RESERVOIR

Storage would be obtained by the construction of Friant Reservoir on the San Joaquin River about 20 miles northeasterly from Fresno. The dam proposed would be 252 feet high, creating a reservoir with a gross capacity of 400,000 acre-feet and a usable capacity of 270,000 acre-feet above elevation 467 feet, the diversion elevation of the San Joaquin River-Kern County Canal.

Distribution would be obtained through the San Joaquin River-Kern County Canal to Kern River with a maximum diversion capacity of 3000 second-feet and the Madera Canal with a maximum capacity of 1500 second-feet.

A small pumping system of 20 second-feet capacity is proposed to serve the Magunden-Edison area in Kern County. Kern River water made available by exchange with San Joaquin River water would be diverted from the East Side Canal.

A conveyance channel connecting the Sacramento and the San Joaquin rivers in the delta and a pumping system from the delta up the San Joaquin River are proposed.

The construction of the Sacramento-San Joaquin Delta cross channel will permit the transference of water from the Sacramento River to the San Joaquin Delta now connected by two channels of inadequate capacity, particularly when exportation of water from the delta to San Joaquin Valley is effected.

PUMPING SYSTEM PLANS

The San Joaquin River pumping system would consist of dams and pumping plants in the San Joaquin River as far upstream as the Merced River and artificially constructed channels from the Merced River to the Mendota Weir. This pumping system would deliver water to lands now being irrigated from the San Joaquin River. The furnishing of a Sacramento supply to these lands and the maintenance of fresh water in the Sacramento-San Joaquin Delta by the Kennett reservoir would permit the storage of San Joaquin River water in the Friant reservoir and its conveyance to the lands of water shortage in the upper San Joaquin Valley.

With the purchase of the so-called "grass land" rights, and by utilizing the surplus waters of the San Joaquin River, sufficient water would be obtained from these sources to meet the needs of the developed areas of deficient water supply at a cost less than that from any other source. By this plan the importation of water from the delta of the Sacramento and San Joaquin rivers would not

be required until there was a demand for additional waters to irrigate new lands.

Construction of the San Joaquin River pumping system, therefore, could be deferred. However, it should be included in the plan as an initial unit for the sake of insurance, because a succession of years drier than has been experienced in the past would result in an available supply less than estimated on the basis of the past eight or twelve years and would necessitate installation of the pumping system.

INITIAL PLAN COST

The capital costs of the physical units of the initial plan proposed for the Upper San Joaquin Valley, exclusive of cost of water rights and general expense, are as follows:

<i>Item</i>	<i>Capital cost</i>
Friant dam, reservoir and power plant...	\$15,500,000
San Joaquin River-Kern County Canal (concrete lined)-----	27,300,000
Madera canal (concrete lined)-----	2,500,000
Magunden-Edison pumping system.....	100,000
San Joaquin River pumping system (construction deferred)-----	15,000,000
Sacramento-San Joaquin Delta cross channel (construction deferred)-----	4,000,000
Total -----	\$64,400,000

In making provision for proper utilization of imported water, consideration should be given to the method of distributing both the "in season" water falling within the irrigation demand and the excess flows not within the irrigation demand, both in and out of season, for replenishment of ground water storage. It is proposed that the "in season" water falling within the irrigation demand be supplied to the irrigated lands by means of surface conduits and ditches in accord with the demand for irrigation water. The water outside of the irrigation demand would be introduced underground by application on absorptive lands for irrigation in greater quantities than net use requirements; through seepage losses from unlined canals and ditches, both existing and proposed; through absorption in stream beds of natural channels; and by the construction of spreading works or by other artificial means of accelerating percolation.

The water thus introduced underground would be recovered later by pumping. Areas of ground water storage therefore would require wells and pumping plants as under present conditions of development and utilization of the local water supplies. Under the proposed plan, however, the proportion of the mean annual supply which would be obtained by pumping, as well as the average pumping lift would be materially reduced.

The State's investigation has been made by the Department of Public Works, Colonel Walter E. Garrison, Director, under the general direction of State Engineer Edward Hyatt. The investigations have been outlined and supervised by A. D. Edmonston, Deputy State Engineer, and the investigation for the San Joaquin River Basin has been executed under the immediate direction of A. L. Trowbridge and Gerald H. Jones.

Highway District Engineers Thrash Out 21 Questions at Annual Conference

THE annual conference of District Engineers was held in Sacramento November 12th and 13th, all District Engineers and Departmental heads attending.

These conferences are held at least once each year for the purpose of affording the District Engineers and Departmental heads an opportunity for exchanging ideas on pertinent subjects, thus enabling each to profit by the others experience and also to insure uniformity of practice on common problems.

This year's conference was very successful and it is felt that everyone was benefited by the various discussions. Principal Assistant Engineer G. T. McCoy presided at the meeting. Addresses were made by Director of Public Works Col. Walter E. Garrison, State Highway Engineer C. H. Purcell, and Deputy Director James I. Herz, all of whom expressed appreciation of the problems confronting the District Engineers and gave assurance of their full support.

THOROUGH DISCUSSION

Prior to the meeting the various districts were requested to advise the chairman of any subjects they wished to bring up for discussion. From the suggestions received twenty-one subjects were selected, as indicated below, all of which were thoroughly discussed during the two-day session.

Probably the most mutually beneficial discussion was in regard to contractors' claims. In this discussion Mr. Purcell emphasized the necessity of the districts' foreseeing and keeping complete records regarding contractors' claims in advance of submitting the final estimate to headquarters; also of the absolute necessity for the resident engineer to put his instructions in writing on all matters where claims may ensue.

Another important subject which was clarified was the maintenance of detours, about which there had been apparently some misunderstanding and some little variance in practice among the various districts. It was pointed out that the policy was for the State to maintain existing roads which were used for detouring traffic around highway construction, any excess maintenance to be a part of the construction costs, although the maintenance work would be handled by the regular maintenance forces.

CONTRACTORS' OBLIGATION

In cases where traffic is not detoured, but carried through construction, the maintenance is solely the contractor's obligation until such time as the road is taken over for maintenance by the State. In cases where detours are constructed alongside of going work, the special provisions will govern; however, the usual policy will be for the contractor to construct the detour which will then be maintained by State forces, any excess maintenance cost being chargeable to the construction project.

The question of the possibility of exercising closer control of overbreak by writing into the specifications more definite provisions controlling blasting operations was discussed at length, the suggestion being made that much trouble would be averted by prohibiting the use of the coyote method. However, the

discussion did not bring out sufficient evidence to seemingly justify any changes in the specifications at this time, it being conceded that the present specifications with rigid inspection are generally proving very satisfactory.

Where a contractor opens up operations obviously with the intent of producing the maximum amount of overbreak, he should be informed at the start and in writing as to just what he will be paid for. It was the general feeling that regardless of how the specifications were written, there would be cases of unavoidable overbreak which legitimately should be paid for and that the practicability of any tighter specifications covering this feature is very questionable.

TWENTY-ONE TOPICS

In discussing equipment rental it was decided to reduce the present ten-day minimum monthly rental to five days.

The above are only few of the highlights of the two-day discussion, which included the following twenty-one subjects:

1. Earth work—reasonable policy with respect to allowance for overbreak, slides, excavation outside of authorized line. Methods of determining shrinkage and swell, proper design on marsh land, on mud flats.
 2. Claims on contracts—discussion relative to nature of claims encountered by this department.
 3. Personnel—reclassification, Probst reports, etc.
 4. Vacations and sick leave.
 5. Detours.
 6. Cooperative improvements through towns.
 7. Alien and prevailing wage laws.
 8. Intersections and connecting roads.
 9. Roadside beautification, tree planting, sign removing.
 10. Liability of officials because of defects in roads or structures, because of issuance of permits, etc.
 11. Service agreements—equipment rentals, moving of right of way encroachments, etc.
 12. Materials and research—discussion of studies now being carried on.
 13. Equipment Department—discussion of matters of general nature which may come up.
 14. Bridge Department—status of work and plans.
 15. District coordination in improving secondary roads which traverse more than one district.
 16. Cutback asphalt—oilmix—emulsions.
 17. Bituminous membrane curing.
 18. Rock or oiled shoulders as part of original contract in valley roads.
 19. Right of way.
 20. Standards and economics of highways as now being constructed as to location, cross section, and surfacing.
 21. Revisions in specifications.
- The engineers enjoyed the banquet at the Country Club on Thursday evening at which were present Highway Commissioners Harry A. Hopkins, Philip A. Stanton and Frank A. Tuttle.

THE BIG TEN of highway field executives—the District Engineers of the California Department of Public Works—are shown above as they gathered at headquarters for an annual conference that lasted two days. Seated in the front row from left to right are: State Highway Engineer C. H. Purcell, their chief, and the following District Engineers: Col. John H. Skeggs, San Francisco; S. V. Cortelyou, Los Angeles; L. H. Gibson, San Luis Obispo; C. H. Whitmore, Sacramento; F. W. Haselwood, Eureka; H. S. Comly, Redding; E. E. Wallace, Fresno; E. Q. Sullivan, San Bernardino; R. E. Pierce, Sacramento; F. G. Somner, Bishop. Standing in the rear row from left to right are: G. R. Winslow, Assistant Construction Engineer; J. G. Standley, Staff Engineer; G. T. McCoy, Principal Assistant Engineer; E. W. Withycomb, Assistant Construction Engineer; C. S. Pope, Construction Engineer; F. J. Grumm, Engineer of Surveys and Plans; F. W. Panhorst, Acting Bridge Engineer; R. M. Gillis, Assistant Construction Engineer; T. E. Stanton, Engineer of Materials and Research; J. H. Obermuller, Assistant Engineer of Surveys and Plans; T. H. Dennis, Maintenance Engineer; R. H. Stalnaker, Equipment Engineer; E. R. Higgins, Comptroller, Public Works Department; W. A. Smith and F. E. Quail, Assistant Maintenance Engineers.

Good Roads Boost Gasoline Totals

A striking proof of what good roads have done toward increasing automobile travel is furnished by the latest figures showing that the annual consumption of gasoline is now four times as much as it was ten years ago.

Motorists in California used 1,335,556,000 gallons of gasoline in 1930 as compared to 1,253,337,000 gallons in 1929.

For the country as a whole there were 15,761,400,000 gallons of gasoline consumed by motorists in 1930 as compared with 13,962,120,000 gallons in 1929, an increase of 5.3 per cent.

New York led the states in gasoline consumption last year with a total of 1,511,997,000 gallons, while California was second with a total consumption of 1,335,556,000 gallons.

The annual consumption of gasoline is four times as much as it was ten years ago, although the number of motor vehicles has increased only two and a half times.

\$1,960,500 Budgeted Work Put Underway

The Division of Highways is maintaining the year's record for getting all budgeted work under way. During the last month, construction and maintenance projects set in motion have a cost total of \$1,960,500. The record for the year now stands:

Construction	\$23,355,800
Maintenance	6,460,800
Carried over from 1930	9,402,600

**Total Jan. 1, 1931, to Nov.
20, 1931** \$39,219,200

Since October 23, work orders have been issued to a total of \$1,960,500. Projects advertised amount of \$1,333,600. During the coming month, the program calls for the advertising of construction work estimated to cost \$2,255,400.

"Do you know how to make a peach cordial?"
"Sure. Send her a box of candy."

San Francisco-Oakland Bridge Model

HERE is the first photograph of the model bridge from which designs are being shaped for the mammoth \$75,-000,000 San Francisco-Oakland Bay Bridge.

Built to a scale of one-thousandth the actual size of the bridge to be erected, models have been constructed at the Engineering Department of the University of California at Berkeley by the State Engineers' Department, Professor Davis of the University and his classes.

These models have been put to a series of tests to determine strains and stresses and, from the results noted in these experiments, the engineers will determine upon the type of structure to span San Francisco Bay.

WORK HAS STARTED

Already work on the design of the real structure has started as a result of these experiments. Various plan layouts of that portion that will stretch between Yerba Buena Island and San Francisco are being made and estimates of cost compiled.

Two general plans are being considered; one consisting of two simple suspension spans with a central anchorage, the two main spans

being approximately 2300 feet in length. The other, a single suspension span with a 3800-foot central span.

Preliminary figures indicate that the single suspension span with a 3800-foot central opening would be considerably more expensive and probably more flexible.

General layouts and estimates of these two types of structure are being intensively studied and will be in shape for a decision to be arrived at when the Consulting Board meets again.

MAKING LOAD TESTS

The photograph above, taken by Lawton & McClure of San Francisco, represents one-half the bridge. The weights hanging from the top wires are used to test loads on the top cables. The vertical dotted line carries the roadways and breaks up distortions under load.

Next in order may be seen a string of horizontal black weights. These represent the weight of trusses and roadway. The little white weights at the bottom are hung from pulleys to represent "wind loads." In other

First Photograph of Test Set-up

(Continued from preceding page)

words the effect on the bridge of an 100-mile-an-hour gale has been tested by means of this model.

The heavy solid white verticals represent the towers of the bridge and at the bottom the white pillars may be noted two counter weights which represent the resistance the two towers would have against horizontal deflection at the top.

BORINGS COMPLETED

While these experiments have been taking place, very good progress has been made by the firm of Duncanson-Harrelson Co., in borings in the bay. Three holes have been put down at the second pier off Yerba Buena Island and rock has been encountered from 130 to 140 feet in depth.

Two diamond drill holes are nearly completed just east of the island for the first pier, where rock is encountered at 40 feet.

This work is being carried on as rapidly as possible, the contractor using three continuous shifts and with reasonable weather conditions the borings should be completed by the first of February.

Results of the borings to date indicate a slightly better foundation condition than was anticipated.

CAISSON WORK

It is hoped that the next meeting of the Consulting Board will be called early in January when designs and estimates will be advanced sufficiently, it is believed, to permit of final determination of the plan layouts.

The design and inspection forces now number slightly over fifty engineers who, with the exception of four, are citizens of the State of California.

CYCLIST WANTS TO PAY

A bicycle rider with a conscience so strong that he wants to pay a tax to the state for use of the public highways is reported by Russell Bevans, acting registrar of the Department of Motor Vehicles. C. G. J. Wolfe of Vallejo sent a check for \$1 to Bevans with the explanation that it was "from one who wishes to pay his little bit for benefits received."

Unfortunately for Wolfe's conscience, however, there is no authority in the law to permit acceptance of fees from bicycle riders who use only leg power and Bevans returned the check to him.

Local Water Problems Heard in Detail

(Continued from page 15)

initial plan. E. C. Eaton, Frank Hays, Wm. A. Johnstone and J. L. Matthews participated in the discussion of the State Water Plan and of the local problems of conservation.

On November 4th and 5th a two-day joint session was held in Los Angeles. The following members of the Commission and Committee were in attendance:

COMMISSIONERS

Hon. Matt I. Sullivan, Chairman
James M. Burke
Francis Carr
Shannon Crandall
R. C. Harbison
W. B. Mathews
Jesse Poundstone
A. B. Tarpey

EX OFFICIO MEMBERS

Major A. M. Barton
Colonel Walter E. Garrison
Edward Hyatt, Secretary

MEMBERS OF COMMITTEE

Senator B. S. Crittenden, Chairman
Assemblyman Robert P. Easley
Assemblyman Robert L. Patterson
Senator C. C. Baker
Senator Ralph H. Clock
Senator Frank W. Mixer
Senator W. P. Rich
Senator Andrew R. Schottky
Senator Ralph E. Swing
Assemblyman Edward Craig
Assemblyman Harold C. Cloudman
Assemblyman John E. Frazier
Assemblyman Frank S. Israel
Assemblyman Chester M. Kline

Senator Crittenden presided. The various southern California problems including the Colorado River, the Imperial Valley, Los Angeles County and the Coastal Counties of Ventura, Santa Barbara and San Luis Obispo were discussed by the people of these sections. The meetings were well attended and local conditions explained in detail. Supervisor John R. Quinn of Los Angeles County and E. C. Eaton, chief engineer of the Los Angeles County Flood Control District, presented the conservation and flood control problems of that county.

METROPOLITAN VIEWS

Carl A. Davis, deputy city attorney of Los Angeles, and J. B. Lippincott, consulting engineer, presented various problems of the metropolitan area. C. L. Preisker, chairman of the Board of Supervisors of Santa Barbara

County, John A. Jamison, president of the Montecito Water District, and A. C. Harbison of Ventura County presented the local conditions and problems of the coastal counties.

The Commission and Committee met with the Board of Directors of the Los Angeles Chamber of Commerce at lunch on November 5th and with the Water Committee of the State Chamber of Commerce in the evening. Among the principal speakers at the State Chamber of Commerce meeting were Lieutenant Governor Merriam, A. E. Miot of the Tulare County Board of Trade, S. Parker Frisselle of Fresno, Dr. Grinnell of Montague, Leo Hensel of Imperial, E. N. Richmond of San Jose, Senator Crittenden, chairman of the Legislative Committee and Shannon Crandall, vice chairman of the Governor's Commission.

TOPICS OUTLINED

Harrison S. Robinson, chairman of the Chamber of Commerce Water Committee, presided. He outlined a number of topics pertinent to the State Water Plan and called upon representatives from various parts of the State for discussion. Following this a general discussion of the State Water Problem was held.

This series of meetings brought out several important problems of state-wide interest and showed that a great deal of interest is being taken and much consideration given to the State Water Problem by the citizens of the State. The Committee and Commission secured the viewpoint of many areas regarding the State Water Plan and of the necessity for a coordinated program of conservation.

The California Joint Legislative Water Committee adjourned to meet in San Francisco on November 20th, and the California Water Resources Commission adjourned to meet in San Francisco on November 18th.

His wife: "Well, just look at your flattened derby. What caused that?"

Equipment Salesman: "The depression."

His wife: "Yes? Going to even blame that on depression?"

Equipment Salesman: "The depression is right, and I stick to my story. And here it is. We—or rather, I—was driving along at about fifty miles per hour and along comes a concrete dip, and I and the derby went up faster than the top of the car, and for no other reason than the depression in the highway."—*Texas Highways*.

Gleaned From the Letter Box

The following resolution commending the Division of Highways for the completion of that portion of Route 42 from Saratoga Gap to Waterman Switch was forwarded by the Board of Supervisors of Santa Cruz County:

On motion of Supervisor Pinkham, duly seconded by Supervisor Morgan, the following resolution is adopted:

RESOLUTION

WHEREAS, the building of the State highway on the Saratoga Gap, Big Basin road, between what is known as Waterman Gap and Saratoga Gap, is now completed, and

WHEREAS, the completion of the unit between the said Waterman Gap and Saratoga Gap has greatly relieved the traffic on the Santa Cruz-Los Gatos highway, and

WHEREAS, the completion of the said road is of great benefit not only to the people in the county of Santa Cruz, but also to many thousands of people from surrounding vicinities; therefore be it

RESOLVED, that this Board of Supervisors send a letter of thanks along with a copy of this resolution to John H. Skeggs, the Division Engineer of the California State Highway Department, and to the California State Highway Department; and be it further

RESOLVED, that in the said letter this Board of Supervisors express their thanks for the cooperation of the said John H. Skeggs and the California State Highway Department in completing the said road in such a wonderful manner, and thereby relieving the county of Santa Cruz from a congested traffic situation which was heretofore difficult to handle in order to insure safety to the traveling public.

Passed this 23d day of October, 1931, by the following vote: Ayes: Supervisors Lewis, Morgan, Pinkham, Rostrom and Ley. Noes: None, absent, none.

GEORGE N. LEY,

Chairman of the Board of Supervisors.

Attest: H. E. MILLER,

Clerk of Said Board.

* * * * *

Col. John H. Skeggs, Division Engineer,
State Highway Department,
San Francisco, California.

Dear Sir: We wish to commend the work of A. Walsh, resident engineer, in charge of the construction of the Saratoga Summit to Waterman Gap highway.

We feel that Mr. Walsh managed the construction of the highway very efficiently and we appreciate the consideration he showed us at all times. During the entire job he was courteous and efficient, cooperating with us in every way.

We have heard nothing but commendation of Mr. Walsh, both from those in his employ and those he contacted while the construction was under way. We are extremely proud of this new highway, and we feel that Mr. Walsh had no small part in its early and satisfactory completion.

We congratulate you on having in your employ a man as capable and likeable as Mr. Walsh, and we wish him the utmost success.

Very truly yours,

SAN LORENZO VALLEY CHAMBER
OF COMMERCE.

By (Signed) REBECCA PERDEW,
Secretary.

* * * * *

Mr. Edward Hyatt, State Engineer,
State of California,
Sacramento.

Dear Sir: The undersigned water users of the lower Feather River during July and August of the present season were faced with the shortage of water in the Feather River never before known in California. The Feather River from a short distance below Marysville to the point where it empties into the Sacramento River became entirely dry. Unless water was obtained within a very few days a large acreage of orchards and general farm products which depended on water from the Feather River faced a very serious loss.

We brought the above matter to your attention and you exerted to the utmost not only the prestige and authority as prescribed in the office of the State Engineer, but went considerably beyond that and used your personal connections and friendship to secure additional water for us. Our water shortage was relieved by your securing the release of additional water from the reservoirs of the Pacific Gas and Electric Company and a curtailment on the part of some of the larger users on the river above us.

We, as the chief beneficiaries of your very excellent services rendered at this time, wish to express to you our appreciation of your very fine work and your broad conception of the duties of your office in coming to our rescue.

Very sincerely yours,

GEO. G. POLLOCK.

RIDE IN CAR, NOT ON IT

Automobiles are built to ride in, not on, says a warning from the National Safety Council. Adults usually show better sense, but schools boys, (and some girls too) seem to think that even if a car is filled up, it will carry a few more on the running board, the spare tire, or the bumpers. The danger is apparent. In their merriment they may loose their hold. Bumps and ruts may cause them to fall off. Tire carriers or bumpers may break. It is a mighty dangerous way to travel.

California Highway Commission Policy Told to State Chamber of Commerce

Among the speakers at the annual meeting of the State Chamber of Commerce at Los Angeles, November 5th, was Earl Lee Kelly of Redding, Chairman of the California Highway Commission. Tracing the development of the State from the first pioneers of the covered wagon period and the winding trails of the padres into a mighty empire of six million people with 20,000 miles of paved highways, Mr. Kelly devoted a portion of his speech to the general policy of the Highway Commission, as reproduced in the following article:

By **EARL LEE KELLY**, Chairman California Highway Commission

I THINK for a moment I would like to dwell upon four of the important or major points in the policy of Governor Rolph's Highway Commission.

First—Our ten-year program.

Second—The orderly addition of roads to the state highway system.

Third—Cooperative construction with towns and cities.

Fourth—Increasing the safety of our state highways.

First, the ten-year program. A study of what our State highway problems during the next ten years will be has just been completed, including a thorough investigation of the following:

A complete traffic count has been made as well as an estimate of the traffic which will develop during the next ten years, including both volume and kind. Having in mind the traffic which will develop during this period, a study of the entire State highway system has now been completed and improvements planned which will have to be made during such time to adequately carry traffic.

Estimates were prepared for the improvements so that a good idea of the costs during the next ten years is known. An estimate of the revenue for State highway purposes to be anticipated during this period based on present laws has been made. In preparing the biennial budget for the construction and improvement of the State highway system, the California Highway Commission and the Department of Public Works are guided by the information gathered in this study. Every budget is a forward step in developing the entire highway system of California.

Addition of Roads to the State System

In line with instructions from the Legislature and in accordance with the policy of

EARL LEE KELLY

Governor Rolph an engineering and economic study is now under way of roads which appear to be eligible for inclusion into the State highway system. The roads recommended to the Legislature for inclusion will be selected only after a thorough study of the entire State has been made.

By following this policy roads will be added to the State highway system on the basis of the most good to all the people of the state and not for political reasons. Our State highway system will be gradually

More Safety Being Built Into Highways All Over the State

expanded to serve on an equal basis all of the people of all of California.

Cooperation with Cities.

The present administration has adopted the policy of cooperating with cities and towns in the improving of streets which are on the routes of State highways through the towns and cities. During the present biennium the Commission has under way or under negotiations cooperative projects with thirty-six cities and towns located all over the State with a total of \$2,554,000 as the value of the State's share of the work.

Increasing Safety Factors

With increasing volume of traffic and the tendency toward higher speeds, the necessity for building safety into the highways is becoming more and more pronounced. With this in mind the department is emphasizing better and more uniform alignment, ample shoulders along the pavements (8-foot shoulder on our trunk roads and as much as possible on mountain roads) widening and super-elevating the pavement on curves, non-skid surfaces on pavement, marking traffic lanes and installing guard rails, etc.

In conclusion, we should be ever watchful that the revenues of the State highway system shall not be diverted to other than highway uses. Fairness to the motorist requires this and fairness to the State highway system itself makes the same demand. If these revenues are not so protected the completion of our State highway system will be delayed for many years to the consequent injury of the entire State of California.

ARCHITECTURAL AWARDS

For Month of October

California School for Deaf, Berkeley—Primary School Building and Academic Dining Hall: for general work awarded to K. E. Parker Co., San Francisco, \$162,000; for plumbing work to Mechanical Contracting Company, San Francisco, \$8,360; for heating and ventilating work, to Alta Electric and Mechanical Co., San Francisco, \$16,960; for electrical work, to Alta Electric Mechanical Co., San Francisco, \$14,485.

Border Inspection Station, Department of Agriculture, Hornbrook: for complete construction to T. B. Goodwin, San Francisco, \$7,764.

Norwalk State Hospital—Installation of water pipe line to Johnson and Reeves, Glendale, \$7,631.

Preston School of Industry, Lone—Installation of penstock line to California Corrugated Culvert Co., \$22,837.

Maintenance Crews Keep Donner Pass Open Despite Snow

THE first heavy snow fall of the season in the Donner Summit region of the Sierra that started about 2 a.m. Saturday morning, November 14th, found the Maintenance Department of the Division of Highways well equipped for handling snow removal work between Colfax and the State line. At Colfax there are stationed two trucks equipped with straight push plows and one tractor grader with blade and "V" plow. This equipment handles the section from Colfax to Airport and also any necessary work west to Auburn.

For the section from Airport to Donner Lake two Maintenance Stations are maintained, one at Yuba Pass and one at Donner Summit. Nine snow plows operate between these two points. These units consist of heavy trucks, four being mounted with straight blade push plows, two with "V" type push plows, two of the auger blower type units, and one rotary shovel type.

WORK PROMPTLY BEGUN

At Truckee there are two straight blade plows mounted on trucks and one rotary shovel type.

As soon as word was received that snow was falling the organization was assembled and work started. The Donner Summit road was open to through traffic Sunday morning—full two-way width maintained. The snow fall there was 2½ feet in the first storm and increased to 54 inches in the following three days. The road was closed Sunday night and again at intervals during the storm as a measure of safety and to permit maintenance crews to work.

The department urgently advises motorists not to attempt to use the pass roads unless equipped with chains. Although the snow is cleared away low temperatures produce an icy, slippery road surface. Cars without chains are turned back by Motor Patrol officers.

It is the intention to start work with the beginning of each storm, and open up the road as soon as possible after the storm ceases. Gates are in place at Airport and at Truckee, and as soon as storm conditions prevail these gates are closed and watchmen placed on duty.

Vital Statistics on Dam Construction

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of October, 1931.

LASSEN COUNTY—Ridenour Dam No. 259. S. D. Ridenour, Susanville, owner; earth, 17 feet above streambed with a storage capacity of 50 acre-feet, situated on unnamed drainage tributary to Susan River in Sec. 17, T. 29 S., R. 12 E., M. D. B. and M. For storage purposes, for irrigation and stock use.

MODOC COUNTY—McBrien Lake Dam No. 152-7. R. Lindauer, Alturas, owner; earth dam, 5 feet above streambed, situated on small ravine tributary to Pit River in Sec. 22, T. 42 N., R. 11 E., M. D. B. and M. For storage purposes, for irrigation use.

SANTA CRUZ COUNTY—Cowell Reservoir No. 23. City of Santa Cruz, Santa Cruz, owner; earth dam, 41 feet above streambed, High Street, City of Santa Cruz. For storage purposes, for municipal use.

SANTA CRUZ COUNTY—Bay St. Reservoir No. 23-2. City of Santa Cruz, Santa Cruz, owner; earth, 21 feet above streambed with a storage capacity of 117 acre-feet, located at Bay Street and Meder Street. For storage purposes, for municipal use.

MODOC COUNTY—Shelton Dam No. 170. A. A. Curtis, Canby, owner; flashboards, situated on Pit River tributary to Sacramento River in Sec. 36, T. 42 N., R. 9 E., M. D. B. and M. For diversion purposes, for irrigation use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources during the month of October, 1931.

LOS ANGELES COUNTY—San Gabriel Dam No. 2, 32-5. Los Angeles County Flood Control District, Los Angeles, owner; rockfill, 250 feet above streambed with a storage capacity of 14,000 acre-feet, situated on West Fork San Gabriel Canyon tributary to San Gabriel River in Section 19, T. 2 N., R. 10 W., S. B. B. and M. For storage purposes, for flood control use. Estimated cost \$1,800,000, fees paid \$6,300.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources during the month of October, 1931.

NAPA COUNTY—Lake Marie Dam No. 1-6. Napa State Hospital, Imola, owner; earth, situated on Tulocay Creek tributary to Napa River in Sec. 19, T. 5 N., R. 3 W., M. D. B. and M.

SAN MATEO COUNTY—Dennis Martin Dam No. 610. A. Schilling, Redwood City, owner; earth, situated on Dennis Martin Creek tributary to San Francisco Creek and El Corte Madera Ranch.

SAN JOAQUIN COUNTY—Davis Dam No. 572. Ferroggiaro and Podesta, Linden, owner; earth, situated on Shaw Creek tributary to Calaveras River in Sec. 6, T. 2 N., R. 3 E., M. D. B. and M.

PLUMAS COUNTY—Grass Lake Dam No. 284. Carnation Gold Mining Company, Blairsden, owner; earth, situated on Little Jamison Creek tributary to Jamison Creek in Sec. 36, T. 22 N., R. 11 E., M. D. B. and M.

MODOC COUNTY—Big Sage Dam No. 55. Hot Spring Valley Irrigation District, Alturas, owner; earth, situated on Rattle Snake Creek tributary to Pit River in Sec. 1, T. 41 N., R. 13 E., M. D. B. and M.

CONTRA COSTA COUNTY—Mt. Diablo Country Club Dam No. 583-2. Mt. Diablo Country Club, Diablo, owner; earth, situated on unnamed creek tributary to Green Valley Creek in Sec. 14, T. 1 S., R. 1 W., M. D. B. and M.

SONOMA COUNTY—Lake Ralphine Dam No. 422. Santa Rosa Water Works, Santa Rosa, owner; earth, located in T. 7 N., R. 7 W., M. D. B. and M.

MODOC COUNTY—McBrien River Dam No. 152-6. R. Lindauer, Alturas, owner; flashboards, situated on Pit River tributary to Sacramento in Sec. 16, T. 42 N., R. 11 E., M. D. B. and M.

SHASTA COUNTY—Buckhorn Lake Dam No. 97-86. Pacific Gas and Electric Company, owner; earth, 6 feet above streambed with a storage capacity of 400 acre-feet, situated on North Cow Creek tributary to Sacramento River in Sec. 19, T. 33 N., R. 2 E., M. D. B. and M. For storage purposes, for power use.

SANTA CLARA COUNTY—Lake Ranch Dam No. 622. San Jose Water Works, San Jose, owner; earth, situated on Beardsley Creek tributary to Los Gatos Creek in Sec. 23, T. 8 S., R. 2 W., M. D. B. and M.

SANTA CLARA COUNTY—Upper Howell Dam No. 622-3. San Jose Water Works, San Jose, owner; earth, situated on Rundell Creek tributary to Los Gatos Creek in Sec. 31, T. 8 S., R. 1 W., M. D. B. and M.

MODOC COUNTY—Caldwell Upper Pit Dam No. 156-5. G. L. Kramer, Bieber, owner; crib, situated on Pit River tributary to Sacramento River in Sec. 34, T. 42 N., R. 10 E., M. D. B. and M.

MENDOCINO COUNTY—Mendocino Middle Dam No. 1-3. Mendocino State Hospital, Talmage, owner; gravity, situated on Mill Creek tributary to Russian River in Sec. 31, T. 15 N., R. 11 W., M. D. B. and M.

LOS ANGELES COUNTY—Greenleaf Reservoir No. 18. City of Whittier, Whittier, owner; earth, situated on tributary to San Gabriel River in Sec. 16, T. 2 S., R. 11 W., S. B. B. and M.

SONOMA COUNTY—Lawler Dam No. 581-3. California Water Service Company, San Francisco, owner; earth, situated on Adobe Creek tributary to Petaluma Creek in Sec. 12, T. 5 N., R. 7 W., M. D. B. and M.

MODOC COUNTY—Shelton Dam No. 170. A. A. Curtis, Canby, owner; flashboards, situated on Pit River tributary to Sacramento, in Sec. 36, T. 42 N., R. 9 E., M. D. B. and M.

PLANS APPROVED

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of October, 1931.

TUOLUMNE COUNTY—Biglow Lake Dam No. 550. Tuolumne County, Sonora, owner; gravity, 8 feet above streambed with a storage capacity of 460 acre-feet; situated on East Fork Cherry River tributary to Tuolumne River in Sec. 35, T. 4 N., R. 21 E., M. D. B. and M. For storage purposes, for fish conservation use.

TUOLUMNE COUNTY—Buck Lake Dam No. 550-2. Tuolumne County, Sonora, owner; gravity, 8 feet above streambed, situated on Buck Meadows Creek tributary to W. Fork Cherry Creek in Sec. 24, T. 4 N., R. 20 E., M. D. B. and M. For storage purposes, for fish conservation use.

TUOLUMNE COUNTY—Emigrant Lake Dam No. 550-3. Tuolumne County, Sonora, owner; gravity, 7 feet above streambed with a storage capacity of 1491 acre-feet, situated on North Fork Cherry Creek tributary to Tuolumne River in Sec. 30, T. 4 N., R. 21 E., M. D. B. and M. For storage purposes, for fish conservation use.

TUOLUMNE COUNTY—Upper Emigrant Lake Dam No. 550-4. Tuolumne County, Sonora, owner, gravity 8 feet above streambed with a storage capacity of 160 acre-feet, situated on North Fork Cherry Creek tributary to Tuolumne River in Sec. 11, T. 4 N., R. 21 E., M. D. B. and M. For storage purposes, for fish conservation use.

TUOLUMNE COUNTY—Long Lake Dam No. 550-5. Tuolumne County, Sonora, owner; gravity, 3 feet above streambed with a storage capacity of 520 acre-feet, situated on West Fork Cherry Creek, tributary to Tuolumne River. For storage purposes, for fish conservation use.

LOS ANGELES COUNTY—Bouquet Canyon Dam No. 6-31. City of Los Angeles, Los Angeles, owner; earth, 170 feet above streambed with a storage capacity of 36,200 acre-feet, situated on Bouquet Creek tributary to Santa Clara River in Sec. 29, T. 6 N., R. 14 W., S. B. B. and M. For storage purposes, for municipal use.

\$6,916,996 for Southern Counties

Highway improvements totaling close to seven million dollars are scheduled for Southern California, all of which will be advertised for bids prior to April 1, 1932. This announcement was made in the report of the Department of Public Works presented at the Governor's Council meeting of November 24th. The projects which include grading, paving, widening, surfacing operation and bridge construction are as follows:

Description	Miles	Type	Amount
Carlsbad to Oceanside.....	0.3	Grade	\$5,300
Tecate Divide to Boulder Park....	14.6	Gr. and P. C. C. Pave.	440,000
Coyote Wells to Dixieland.....	14.7	Gr. and A. C. Pave	598,000
Cambria to San Simeon.....	8.6	Gr. and Surf.	210,000
Los Alamos Creek Bridge.....		Bridge	31,000
Plaza Garage Grade Separation....			50,000
Lemon Cove to Three Rivers.....	10.6	Gr. and Surf.	350,000
Grapevine Sta. to 3 miles south....	3.0	Gr. and Pave	520,000
Plaza Garage to Goshen and Plaza			
Garage to 0.3 of a mile westerly....	5.8	Gr. and Pave.	272,000
Las Flores Canyon to Santa Ynez..	7.4	Gr. and Pave.	294,400
Dana Point to Laguna Beach.....	5.6	Gr. and Pave.	470,000
Irvine to Tustin.....	5.7	Widen Pave.	184,096
Newport to Corona Del Mar.....	3.7	Gr. and Pave.	203,233
El Cajon to Las Coches Cr., portions	3.5	Gr. and Pave.	191,566
Oxnard to El Rio.....	1.1	Widen Pave.	26,400
Tujunga to La Canada.....	5.0	Gr. and Bridges	127,000
Canton Creek to Piru Creek.....		Bridges	492,103
San Diego to Oceanside.....	2.9	Pave. Exceptions	87,000
Ventura to El Rio.....	4.5	Gr. and Pave	100,000
Baker east 10 miles.....	10.0	Gr. and Surf.	334,498
Mecca-Blythe Road, portions.....	16.0	Gr. and Surf.	700,000
West entrance to San Bernardino..		Gr. and Pave.	150,000
6 mi. N. Imperial Co. line to Av. 62	8.3	Gr. and Pave.	481,400
Imperial Co. line to 6 mi. north....	6.0	Gr. and Pave.	390,000
Sepulveda Blvd. to Calabasas.....	10.5	Pave.	209,000

Total \$6,916,996

TRAFFIC SHOWS INCREASE

An increase of 1.9 per cent in the number of vehicles using the Minnesota trunk highways, is shown by the annual traffic census taken by the Minnesota highway department. Although the increase is not as large as in some years, Commissioner C. M. Babcock says it indicates that Minnesota is in better shape than some other states that have shown a decrease in their traffic counts.

DIDN'T GO OVER

She—You never hear of women cashiers running off with their employer's money.

He—Not often, but when it does happen they take the employer, too.—*Gridley Daily Globe*.

PREVENTION PAYS

W. H. Cameron, managing director of the National Safety Council, recently pointed out that the strength of the organized safety movement in the United States lies in the fact that "it is cheaper to prevent an accident than to pay for it."

As a rule, we look on accident prevention activity as being a humanitarian work—as a saver of lives. And that, of course, is the first need. But it likewise pays for itself, time and again, in plain dollars and cents.

How much time elapses between the changing of a traffic light from red to green and the honking of the horn in the car behind you? Figure in fractions of seconds.—*Judge*.

October Water Applications and Permits

Applications for permits to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of October, 1931.

MENDOCINO COUNTY—Application 7086. State of California, Department of Public Works, Division of Highways, c/o C. H. Purcell, State Highway Engineer, Public Works Building, Sacramento, California, for 500 gallons per day from unnamed spring tributary to South Fork of Eel River. To be diverted in Sec. 20, T. 24 N., R. 17 W., M. D. E. and M., for recreational purposes. Estimated cost \$250.

FRESNO COUNTY—Application 7087. Consolidated Irrigation District, c/o A. R. Stedman, Secretary, P. O. Box 638, Selma, California, for 5000 c. f. s. from San Joaquin River tributary to San Francisco Bay. To be diverted in Sec. 5, T. 11 S., R. 21 E., M. D. B. and M., for power purposes (148,000 H. P.). Estimated cost \$10,000,000.

SHASTA COUNTY—Application 7088. O. R. Smith, R. F. D. No. 1, Gerber, California, for 1000 acre-feet per annum from North Digger Creek tributary to Battle Creek, thence Sacramento River. To be diverted in Sec. 25, T. 30 N., R. 3 E., M. D. B. and M., for irrigation purposes (622.5 acres). Estimated cost \$60.

VENTURA COUNTY—Application 7089. Evelyn Akin Robertson, Box 997, Ventura, California, for 0.35 c. f. s. from unnamed spring tributary to Cuyama River. To be diverted in Sec. 12, T. 7 N., R. 24 W., S. B. E. and M., for irrigation and domestic purposes (10 acres). Estimated cost \$300.

CALAVERAS COUNTY—Application 7090. Harry D. Thompson, c/o Virgil M. Airola, Attorney, Whitlock Building, San Andreas, California, for 1000 gallons per day from Thompson Spring (developed by applicant). To be diverted in Sec. 6, T. 4 N., R. 13 E., M. D. B. and M., for irrigation and domestic purposes (1 acre). Estimated cost \$200.

HUMBOLDT COUNTY—Application 7091. John W. Bergin, Weaverville, California, for 150 c. f. s. from Willow Creek tributary to Trinity River. To be diverted in Sec. 14, T. 6 N., R. 4 E., H. B. B. and M., for mining purposes. Estimated cost \$150,000.

EL DORADO COUNTY—Application 7092. B. W. Stone, 161 Ellis Street, San Francisco, California, for total of 500 c. f. s. and 125,000 acre-feet per annum from (1) Rubicon River (2) Pilot Creek (3) Gerle Creek (4) Loon Lake (5) Buck Island Lake (6) Rock Bound Lake (7) Little South Fork of Rubicon River tributary to American River Drainage. To be diverted in Sec. 9, T. 13 N., R. 16 E., M. D. B. and M.; Sec. 11, T. 12 N., R. 12 E., M. D. B. and M.; Sec. 24, T. 13 N., R. 13 E., M. D. B. and M.; Secs. 1, 31 and 34, T. 14 N., R. 14 E., M. D. B. and M.; Sec. 4, T. 13 N., R. 15 E., M. D. B. and M.; and Sec. 2, T. 13 N., R. 14 E., M. D. B. and M., for municipal purposes.

PLACER COUNTY—Application 7093. C. T. Horgan, 574 47th Street, Oakland, California, for 2 c. f. s. from unnamed stream tributary to Middle Fork of American River. To be diverted in Sec. 8, T. 13 N., R. 10 E., M. D. B. and M., for irrigation purposes and domestic purposes (160 acres). Estimated cost \$500.

DEL NORTE COUNTY—Application 7094. H. L. Hawkins and Lee Brown, c/o H. L. Hawkins, 981 2d Street, Crescent City, California, for c. f. s. from Diamond Creek tributary to North Fork of Smith River. To be diverted in Section 11, T. 18 N., R. 2 E., H. B. and M., for mining and domestic purposes. Estimated cost \$20.

MENDOCINO COUNTY—Application 7095. W. M. Yorgason, Fort Bragg, California, for 4 miners inches from South Fork of Digger Creek tributary to Digger Creek, thence Pacific Ocean. To be diverted in Sec. 19, T. 18 N., R. 17 W., M. D. B. and M., for irrigation and domestic purposes ($\frac{1}{2}$ acre).

PLACER COUNTY—Application 7096. Carrie A. Gladding, Lincoln, California, for 3 c. f. s. and 200 acre-feet per annum from Cook Creek tributary to Feather River. To be diverted in Sec. 22, T. 13 N., R. 6 E., M. D. B. and M., for irrigation and domestic purposes (400 acres). Estimated cost \$4,000.

MONO COUNTY—Application 7097. Lucile E. Bogard, Hawthorne, Nevada, for 1.0 c. f. s. from unnamed springs tributary to Mono Lake. To be

diverted in Section 20, T. 3 N., R. 26 E., M. D. B. and M., for mining and domestic purposes.

MONO COUNTY—Application 7098. Lucile E. Bogard, Hawthorne, Nevada, for 1.0 c. f. s. from unnamed springs tributary to Mono Lake. To be diverted in Sec. 28, T. 3 N., R. 26 E., M. D. B. and M., for mining and domestic purposes.

SANTA CLARA COUNTY—Application 7099. Santa Clara Valley Water Conservation District, c/o Fred H. Tibbetts, Alaska Commercial Building, San Francisco, California, for 200 c. f. s. and 60,000 acre-feet per annum from Coyote River, tributary to San Francisco Bay. To be diverted in Sec. 10, T. 9 S., R. 3 E., M. D. B. and M., for irrigation and domestic purposes (133,000 acres). Estimated cost \$1,600,000.

SANTA CLARA COUNTY—Application 7100. Santa Clara Valley Water Conservation District, c/o Fred H. Tibbetts, Alaska Commercial Building, San Francisco, California, for 30 c. f. s. and 9000 acre-feet per annum from Arroyo Calero River, tributary to Alamos Creek. To be diverted in Sec. 31, T. 9 S., R. 2 E., M. D. B. and M., for irrigation and domestic purposes (133,000 acres). Estimated cost \$380,000.

SANTA CLARA COUNTY—Application 7101. Santa Clara Valley Water Conservation District, c/o Fred H. Tibbetts, Alaska Commercial Building, San Francisco, California, for 30 c. f. s. and 2500 acre-feet per annum from Almaden Creek tributary to Alamos and Guadalupe Creek. To be diverted in Section 10, T. 9 S., R. 1 E., M. D. B. and M., for irrigation and domestic purposes (133,000 acres).

SANTA CLARA COUNTY—Application 7102. Santa Clara Valley Water Conservation District, c/o Fred H. Tibbetts, Alaska Commercial Building, San Francisco, California, for 15 c. f. s. and 100 acre-feet per annum from Guadalupe Creek tributary to San Francisco Bay. To be diverted in Sec. 9, T. 8 S., R. 1 E., M. D. B. and M., for irrigation and domestic purposes (123,000 acres). Estimated cost \$53,500.

SANTA CLARA COUNTY—Application 7103. Santa Clara Valley Water Conservation District, c/o Fred H. Tibbetts, Alaska Commercial Building, San Francisco, California, for 50 c. f. s. and 3,500 acre-feet per annum from Guadalupe Creek tributary to San Francisco Bay. To be diverted in Sec. 19, T. 8 S., R. 1 E., M. D. B. and M., for irrigation and domestic purposes (133,000 acres). Estimated cost \$377,170.

SANTA CLARA COUNTY—Application 7104. Santa Clara Valley Water Conservation District, c/o Fred H. Tibbetts, Alaska Commercial Building, San Francisco, California, for 50 c. f. s. and 4,000 acre-feet per annum from Stevens Creek tributary to San Francisco Bay. To be diverted in Sec. 27, T. 7 S., R. 2 W., M. D. B. and M., for irrigation and domestic purposes (133,000 acres). Estimated cost \$350,000.

SISKIYOU COUNTY—Application 7105. Harry D. Maltis, Costella, California, for 1.0 c. f. s. from Cole Creek, tributary to South Fork of Indian Creek. To be diverted in Sec. 10, T. 17 N., R. 6 E., H. M., for mining and domestic purposes. Estimated cost \$20.

TUOLUMNE COUNTY—Application 7106. United States-Stanislus National Forest, Sonoma, California, for (1) 360 acre-feet per annum from Lower Buck Lake; (2) 520 acre-feet per annum from Long Lake; (3) 160 acre-feet per annum from Emigrant Meadow Lake; (4) 1491 acre-feet per annum from Emigrant Lake; and (5) 460 acre-feet per annum from Bigelow Lake tributary to Tuolumne River Watershed. To be diverted in Secs. (1) 26 and (2) 27, T. 4 N., R. 20 E., M. D. B. and M. and Secs. (3) 10, (4) 30 and (5) 35, T. 4 N., R. 21 E., M. D. B. and M., for maintenance of fish life and other recreational purposes.

LOS ANGELES COUNTY—Application 7107. H. H. Townsend, 6039 Hollywood Boulevard, Los Angeles, California, for 0.001 c. f. s. from unnamed spring tributary to Piru Creek. To be diverted in Sec. 19, T. 6 N., R. 17 W., S. B. B. and M., for domestic and stock raising purposes.

LAKE COUNTY—Application 7108. Elizabeth M. Robinson, c/o Chas. S. Gilmore, Attorney, Capital National Bank Building, Sacramento, California, for 0.10 c. f. s. from unnamed spring tributary to Clear Lake. To be diverted in Section 32, T. 15 N., R. 8 W., M. D. B. and M., for irrigation and domestic purposes.

Applications and Permits Granted

(Continued from preceding page)

ORANGE COUNTY—Application 7109. United States, Cleveland National Forest, 310 Federal Building, San Diego, California, for 0.003 c. f. s. from San Juan Creek tributary to Pacific Ocean. To be diverted in Sec. 3, T. 7 S., R. 6 W., S. B. E. and M., for domestic purposes. Estimated cost \$500.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of October, 1931.

SUTTER COUNTY—Permit 3793, Application 6892. Andreas C. H. Smith, Yuba City, Sutter County, California, October 3, 1931, for 1.10 c. f. s. from Feather River in Sec. 11, T. 14 N., R. 3 E., M. D. B. and M., for irrigation of 81.65 acres. Estimated cost \$1,500.

STANISLAUS COUNTY—Permit 3794, Application 6894. E. B. Henry, Route 3, Box 947, Modesto, California, October 5, 1931, for 0.70 c. f. s. from Tuolumne River, tributary of San Joaquin River in Sec. 7, T. 4 S., R. 8 E., M. D. B. and M., for domestic use and the irrigation of 58 acres. Estimated cost \$1,000.

BUTTE COUNTY—Permit 3795, Application 6887. Shelley E. Lee, Box C, Biggs, Calif., October 5, 1931, 3.00 c. f. s. from Lateral "A" Reclamation District 833 tributary to Butte Creek and Sacramento River in Sec. 18, T. 18 N., R. 2 E., M. D. B. and M., for the irrigation of 130.9 acres.

BUTTE COUNTY—Permit 3796, Application 6905. California Mutual Building and Loan Association of San Jose, California, October 5, 1931, for 14.78 c. f. s. from Lateral "A" Drainage Canal of Reclamation District No. 833 in Sec. 19, T. 18 N., R. 2 E., M. D. B. and M., for the irrigation of 591.2 acres.

EL DORADO COUNTY—Permit 3797, Application 6999. R. P. Easley et al., Antioch, Calif., October 7, 1931, for 800 gal. per day from an unnamed stream tributary to South Fork American River in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes at four lots. Estimated cost \$500.

EL DORADO COUNTY—Permit 3798, Application 7028. Lawrence B. Kinnear, 309 4th Street, Antioch, Calif., October 7, 1931, for 200 gal. per day from an unnamed stream tributary to South Fork American River in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes. Estimated cost \$200.

EL DORADO COUNTY—Permit 3799, Application 7036. George W. Harter and Mrs. W. W. Belshaw of Antioch, Calif., October 7, 1931, for 400 gals. per day from a spring tributary to South Fork American River in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes.

SIERRA COUNTY—Permit 3800, Application 6600. E. A. Humphreys, c/o R. F. Taylor, Downsville, Calif., October 7, 1931, for 25.00 c. f. s. from South Fork of North Fork of Yuba River, in Sec. 30, T. 20 N., R. 12 E., M. D. B. and M., for mining purposes. Estimated cost \$5,000.

SAN JOAQUIN COUNTY—Permit 3801, Application 6877. J. L. Blossom, and F. M. Lamb, c/o Ohm & Raab, 109 Weber Ave., Stockton, Calif., October 7, 1931, for 15.15 c. f. s. from North Canal tributary to Middle Branch of San Joaquin River in Sec. 35, T. 1 N., R. 4 E., M. D. B. and M., for irrigation of 1212.6 acres. Estimated cost \$14,000.

SUTTER COUNTY—Permit 3802, Application 6933. D. C. Smith, Meridian, Calif., October 7, 1931, for 3.00 c. f. s. from Butte Slough in Sec. 36, T. 16 N., R. 1 W., M. D. B. and M., for the irrigation of 238 acres. Estimated cost \$1,200.

BUTTE COUNTY—Permit 3803, Application 6945. K. Jacobsen, Gridley, Calif., October 8, 1931, for 3.00 c. f. s. from Main Drain of Reclamation District No. 2954 tributary to Sacramento River in Secs. 16 and 21, T. 17 N., R. 2 E., M. D. B. and M., for the irrigation of 632 acres. Estimated cost \$300.

TRINITY COUNTY—Permit 3804, Application 6978. Edward L. Schreckengost, Douglas City, Calif., October 8, 1931, for 2.00 c. f. s. from Brown Creek tributary to Trinity River in Section 18, T. 31 N., R. 9 W., M. D. B. and M., for mining purposes. Estimated cost \$600.

PLUMAS COUNTY—Permit 3805, Application 6996. Wm. Rutherford et al., c/o Wm. Rutherford, P. O. Box 288, Sacramento, Calif., October 8, 1931, for

0.10 c. f. s. and 9 acre-feet from unnamed stream tributary to Middle Fork Feather River in Sec. 16, T. 23 N., R. 7 E., M. D. B. and M., for mining and domestic purposes.

EL DORADO COUNTY—Permit 3806, Application 7013. Edward J. Schoenbacher, 3557 Folsom Blvd., and Frank J. Marry, 640 36th Street, Sacramento, Calif., October 8, 1931, for 400 gals. per day from Bull Creek tributary to South Fork American River in Sec. 29, T. 11 N., R. 14 E., M. D. B. and M., for domestic purposes.

SAN JOAQUIN COUNTY—Permit 3807, Application 6936. O. C. Cutts, Stockton, Calif., October 9, 1931, for 1.00 c. f. s. from San Joaquin River in Sec. 21, T. 1 N., R. 6 E., M. D. B. and M., for the irrigation of 79 acres. Estimated cost \$10,000.

EL DORADO COUNTY—Permit 3808, Application 7018. Mrs. B. M. Fountain, 2901 I Street, Sacramento, Calif., October 9, 1931, for 400 gals. per day from a spring tributary to South Fork American River in Sec. 23, T. 11 N., R. 15 E., M. D. B. and M., for domestic purposes. Estimated cost \$50.

TRINITY COUNTY—Permit 3809, Application 6982. Basil Froloff, Weaverville, Calif., October 9, 1931, for 12.50 c. f. s. from Rush Creek tributary to Trinity River in Sec. 21, T. 34 N., R. 9 W., M. D. B. and M., for mining and domestic purposes. Estimated cost \$50.

MONO COUNTY—Permit 3810, Application 6961. Rex M. Foster, Bridgeport, Calif., October 23, 1931, for 0.11 c. f. s. from Spring Creek tributary to Green Creek in Sec. 23, T. 3 N., R. 24 E., M. D. B. and M., for power purposes. Estimated cost \$25.

TRINITY COUNTY—Permit 3811, Application 6946. Trinity Placer Corporation Ltd., Los Angeles, Calif., October 26, 1931, for 100.00 c. f. s. from Soldier Creek, Fork of Soldier Creek, tributary to Trinity River in Sec. 25, T. 33 N., R. 11 W., M. D. B. and M., for mining and domestic purposes.

In Memoriam

CLIFFORD K. ALDRICH, Division of Architecture, received injuries in an automobile accident August 20, 1931, resulting in his death on August 22, 1931.

The deceased was born in 1881 in Creston, Iowa, where he lived and received his early education. After finishing high school, Mr. Aldrich completed his education at the Iowa State College, Chicago School of Architecture, Armour Institute and Art Institute receiving his degree in Architecture in 1903. He was a certified architect in California and a member of the American Institute of Architects.

Mr. Aldrich entered the service of the State of California with the Division of Architecture in 1908 and served well in various capacities until his death, at which time he was Superintendent of Building Construction at the California Polytechnic School, San Luis Obispo.

RAYMOND W. ZEHRING, draftsman in the office of District VII, Division of Highways, since June, 1931, and formerly employed as draftsman in the office of District III, died suddenly on October 13, 1931, of apoplexy while attending Reserve Officers' Training Camp at Monterey.

Longest Concrete Arch in State Among Carmel Coast Link Bridges

By JAMES GALLAGHER, Assistant Bridge Engineer

THE CALIFORNIA coast extending south from Carmel to the Big Sur is one of the most rugged and scenic bits of coastline in the State. It is a stretch of precipitous cliffs and bold headlands broken by deep gorges and inlets of the sea.

The building of this thirty mile section of the Coast Highway, known as State Highway Route No. 56 involves heavy construction and a number of bridge structures, one of which will have the longest concrete span in California.

Two of these bridges, the Garrapata Creek and Granite Creek are the first to be completed of five arch structures to be built during the present biennium.

Garrapata Creek Bridge was completed in November and is now open to traffic. The Granite Creek Bridge is scheduled for completion the middle of February but the contractor is well ahead of schedule and it is expected the bridge will be finished about the first of the year.

SPANS CREEK GORGE

The highway crosses Garrapata Creek thirteen miles south of Carmel. The creek is in a deep gorge extending inland 1000 feet or more from the ocean. The new bridge over this creek is an open spandrel reinforced concrete arch, span one hundred and fifty feet, with one twenty-five foot girder approach span on the north end and four twenty-five foot girder spans on the south.

The total length of the bridge is 285 feet and width of roadway 24 feet. The height of the roadway above the creek bed is about 85 feet. This new concrete bridge replaces an old narrow steel bridge which had become so badly rusted, due to its proximity to the ocean, that it was no longer safe for use and during the past year traffic has been detoured over a small temporary timber bridge at the head of the gorge.

OVER THE SEA

Granite Creek, eleven miles south of Carmel, is a small stream emptying into a narrow rocky ocean inlet. The steep sides of the inlet are granite into which caves have been eroded by the ocean waves. The center line of the highway crosses the head of this

inlet so that the sea will dash under the new bridge.

This reinforced concrete structure has an arch span of 120 feet with two 36-foot girder approach spans on the north and two 44-foot girder spans on the south. The total length of the bridge is 288 feet. The width of roadway is 24 feet. It is more than 100 feet from the level of the roadway to the bottom of the inlet.

This bridge is built on a horizontal curve of 4000 feet radius. The approach grades are 2½ per cent and 3 per cent connected by a 200 foot vertical curve. The old highway here winds up one side of the canyon and back on the other side with sharp turns and steep grades crossing the creek with only a small one span timber bridge.

Garrapata Creek Bridge was built by Hanrahan Company of San Francisco at a cost of approximately \$35,500, excluding approach grading. O. R. Bosso was resident engineer.

Granite Creek Bridge is being built by Geo. J. Ulrich Construction Company of Modesto, at a cost of \$33,700. W. E. Sutton is resident engineer.

LONGEST SPAN

Five miles south of Garrapata Creek a reinforced concrete arch is being built across Bixby Creek with a main span of 330 feet and nine 40-foot girder approach spans. This will be the longest concrete arch span on the California State Highways.

The contract price is \$203,334. Ward Engineering Co. of San Francisco are the contractors and I. O. Jahlstrom, resident engineer. This bridge is scheduled for completion in June, 1932.

About the first of the year bids will be received for an arch bridge over Rocky Creek, about one-half mile north of Bixby Creek. The Rocky Creek Bridge will cost in the neighborhood of \$100,000.

Plans are also being prepared for an arch bridge over Wildcat Creek five and one-half miles south of Carmel. This is a highly developed resident section and a special study is being made to have the bridge harmonize with its surroundings.

BEAUTIFUL BRIDGES, an imposing series of them, will mark the new State highway now in course of construction along the rugged coast between Carmel and San Simeon. One of the most scenic portions of the Pacific shoreline, this section is indented by arms of the sea and furrowed by deep gorges through which mountain streams reach the ocean making bridges necessary for a direct highway route. Five of them are required in a distance of thirty miles. Two of these are the Garrapata Creek Bridge shown at the top, a 285-foot structure, sixteen miles south of Carmel, completed and opened to traffic this month and the Granite Creek Bridge, eleven miles south of Carmel and 288 feet long, shown in the lower picture, which will be completed in February.

Highway Bids and Awards for October

ALAMEDA COUNTY—Between Greenville and Livermore, about 5.2 miles to be graded and paved with asphalt concrete. Dist. IV, Rt. 5, Sec. 4, Southern California Roads Co., Los Angeles, \$125,105; Valley Paving and Construction Co., Fresno, \$149,993; A. Teichert & Son, Inc., Sacramento, \$140,724; S. H. Palmer, San Francisco, \$167,349; California Construction Co., San Francisco, \$133,248; Heafey-Moore Co., Oakland, \$168,535; Hanrahan Co., San Francisco, \$121,862; Morrison-Knudsen Co., Boise, Idaho, \$178,144. Contract awarded to Jones and King, Hayward, \$116,828.

BUTTE AND GLENN COUNTIES—Reconstructing timber deck of one 313-foot 4-inch swing span and two 134-foot 9-inch approach spans of bridge across Sacramento River near Hamilton City. Dist. III, Rt. 47, Sec. A, Campbell Construction Co., Sacramento, \$9,666; Ralph Hunter, Sacramento, \$11,230; M. R. Peterson, Sacramento, \$11,542; Holdener Construction Co., Sacramento, \$10,265; John Berlinger, Orland, \$11,550; Lindgren & Swinerton, Inc., Sacramento, \$12,130; H. C. Martin, Sacramento, \$12,582; Gutliere Bros., Oakland, \$9,526; M. A. Jenkins, Sacramento, \$10,605; John W. Haltermann, Willows, \$9,327; P. F. Bender, North Sacramento, \$11,934. Contract awarded to R. B. McKenzie, Red Bluff, \$9,150.

GLENN COUNTY—Removing timber deck and rails of the three steel stringer bridges across draws between 20 and 22 miles east of Willows, constructing laminated timber floor, timber rails and adding steel stringers. Dist. III, Rt. 45, Sec. C, Tieslan Bros., Berkeley, \$9,724; J. P. Brennan, Redding, \$9,559; M. R. Peterson, Sacramento, \$9,816; M. A. Jenkins, Sacramento, \$9,270; Peter F. Bender, North Sacramento, \$9,105; Lindgren & Swinerton, Sacramento, \$9,429; H. Gould, Sacramento, \$10,790; John Berlinger, Orland, \$8,461; R. B. McKenzie, Red Bluff, \$9,308; J. W. Haltermann, Willows, \$8,785. Contract awarded to Hugh C. Martin, Sacramento, \$8,117.

LOS ANGELES COUNTY—Between La Canada and Mt. Wilson, about 1.4 miles to be treated with heavy fuel oil. Dist. VII, Rt. 1, Sec. A, J. A. Lazaveze, Los Angeles, \$1,800; Gilmore Oil Co., Ltd., Los Angeles, \$1,968; The Petrol Corporation, Los Angeles, \$2,004; Pacific Tank Lines, Inc., Los Angeles, \$2,220. Contract awarded to Square Oil Co., Inc., Los Angeles, \$1,248.

LOS ANGELES COUNTY—Washington Boulevard to El Segundo, 5.1 miles to be graded and paved with Portland cement concrete. Dist. VII, Rt. 60, Sec. C, Maceo Construction Co., Clearwater, \$320,624; Kovacevich & Price, Inc., South Gate, \$282,984; Matich Bros., Elshore, \$281,821; Gibbons & Reed Co., Burbank, \$322,171; Oswald Bros., Los Angeles, \$310,183; R. A. Watson, Los Angeles, \$310,845; McCray Co., Los Angeles, \$313,703; Sander Pearson, Santa Monica, \$318,191; Geo. R. Curtis Paving Co., Los Angeles, \$341,474; Griffith Co., Los Angeles, \$291,263; Basich Bros., Torrance, \$286,358. Contract awarded to John Bressi Construction Co., Inc., Los Angeles, \$273,473.

MENDOCINO COUNTY—Through Boonville, 1.10 miles to be graded and surfaced with screened gravel. Dist. IV, Rt. 48, Sec. B, Chas. N. Chittenden, Napa, \$14,161; Albert Helwig, Sebastopol, \$13,951. Contract awarded to Peter McHugh, San Francisco, \$11,569.

MERCED COUNTY—Three timber bridges near Los Banos, one of five 19-foot spans, one of sixteen 19-foot spans and one of twelve 19-foot spans. Dist. VI, Rt. 32, Secs. B and C, Peter McHugh, San Francisco, \$30,763; Fore Construction Co., Piedmont, \$40,109; W. Hoopes, Sacramento, \$34,004; L. C. Clark and C. E. Doughty, Visalia, \$32,154; M. B. McGowan, San Francisco, \$34,344; A. W. Kitchen, San Francisco, \$33,946; R. H. Travers, Los Angeles, \$36,265; Lord and Bishop, Sacramento, \$32,728; E. K. Angle, Dos Palos, \$31,687. Contract awarded to Thermotite Construction, Inc., San Jose, \$30,098.

MONTEREY COUNTY—At Bradley, about 0.5 mile to be graded and paved with Portland cement concrete. Dist. V, Rt. 2, Sec. I, W. A. Dontanville, Salinas, \$30,951; J. L. Conner, Monterey, \$34,825; Granite Construction Co., Ltd., Watsonville, \$28,469; Gist & Bell, Arcadia, \$34,878; Fred W. Nighbert, Bakersfield, \$38,594; C. W. Wood, Stockton, \$32,247; Lord and Bishop, Sacramento, \$31,164. Contract awarded to Steele Finley, Santa Ana, \$27,392.

MONTEREY COUNTY—Between Rocky Creek and San Remo Divide, about 8.3 miles to be graded and surfaced with selected material. Dist. V, Rt. 56, Secs. G-H, Maceo Construction Co., Clearwater, \$233,384; C. G. Willis & Sons, Los Angeles, \$240,001; Granfield, Farrar & Carlin, San Francisco, \$200,760; Granite Construction Co., Ltd., Watsonville, \$211,982; C. W. Wood, Stockton, \$228,522; Clark & Henery Construction Co., San Francisco, \$243,337; Hemstreet & Bell, Marysville, \$193,236; Peter McHugh, San Francisco, \$239,871; M. J. Murphy, Inc., Carmel, \$217,662; Chas. Harlowe, Jr., Oakland, \$237,215; S. H. Palmer, San Francisco, \$273,801; Healy-Tibbitts Construction Co., San Francisco, \$176,709; M. J. Bevanda, Stockton, \$153,862; Lang Transportation Co., Los Angeles, \$252,340; Lewis Construction Co., Los Angeles, \$233,339; Porter Bros. Corporation, San Francisco, \$275,112; J. L. Conner, Monterey, \$189,781; Guy F. Atkinson Co., San Francisco, \$232,589; Skeels & Graham Co., Roseville, \$233,579; von der Hellen & Pierson, Castaic, \$213,956; Contolous Construction Co., San Francisco, \$242,317; Ishell Construction Co., Carson, City, Nevada, \$225,679; Geo. Pollock Co., Sacramento, \$219,749; Larsen Bros., Galt, \$197,191; Morrison-Knudsen Co., Boise, Idaho, \$187,402. Contract awarded to D. McDonald, Sacramento, \$169,991.

ORANGE COUNTY—About 0.3 mile of highway embankment to be dredged from the channel known as the North Arm of Newport Bay. Dist. VII, Rt. 60, Sec. B. Contract awarded to Sparkes & McClellan, Newport Beach, \$9,100.

PLACER COUNTY—Between Newcastle and Wise Power House, about 2.7 miles; about 1.6 miles to be graded and about 2.7 miles to be paved with Portland cement concrete. Dist. III, Rt. 7, Sec. A, Watson, Stockton, \$109,783; Frederickson & Watson Construction Co., and Frederickson Bros., Oakland, \$103,131; N. M. Ball, Berkeley, \$103,333; John Doyle, San Jose, \$148,564; T. M. Morgan Paving Co., Los Angeles, \$127,604; Morrison-Knudsen Co., Boise, Idaho, \$113,774. Contract awarded to Hanrahan Co., San Francisco, \$102,962.

RIVERSIDE COUNTY—Near Bendel's Corner, from Mile Post 83.9 to Mile Post 85.4, 1.5 miles, heavy fuel oil to be applied to shoulders. Dist. VII, Rt. 26, Sec. G, Paulsen & March, Inc., Los Angeles, \$1,274; Square Oil Co., Inc., Los Angeles, \$1,266; Pacific Tank Lines, Inc., Los Angeles, \$1,508; Gilmore Oil Co., Ltd., Los Angeles, \$1,492. Contract awarded to The Petrol Corporation, Los Angeles, \$1,244.

SAN LUIS OBISPO COUNTY—Additions to be made to existing water and sanitary sewer systems in Arroyo Grand. Dist. V, Rt. 2, Sec. F. E. Peel, Los Angeles, \$1,997; Santa Maria Construction Co., Santa Maria, \$2,116; Frederickson & Watson Construction Co., Oakland, \$2,306. Contract awarded to Wm. Lane, Paso Robles, \$1,878.

SAN LUIS OBISPO COUNTY—Los Berros Creek to Arroyo Grande 5.8 miles to be graded and paved with Portland cement concrete. Dist. V, Rt. 2, Sec. F, Healy-Tibbitts Construction Co., San Francisco, \$282,862; M. J. Bevanda, Stockton, \$270,825; Gist & Bell, Arcadia, \$314,132; Granite Construction Co., Ltd., Watsonville, \$267,617; Clark & Henery Construction Co., San Francisco, \$291,652; C. W. Wood, Stockton, \$267,810; Southern California Roads Co., Los Angeles, \$268,499; Hanrahan Co., San Francisco, \$283,957; Morrison-Knudsen Co., Boise, Idaho, \$273,912; John Bressi Construction Co., Inc., Los Angeles, \$266,954. Contract awarded to Frederickson & Watson Construction Co., and Frederickson Bros., Oakland, \$264,016.

SAN MATEO AND SANTA CLARA COUNTIES—Between Redwood City and Oregon Avenue, 6.2 miles to be graded and paved with Portland cement concrete. Dist. IV, Rt. 68, Secs. D and A, C. W. Wood, Stockton, \$482,069; Peninsula Paving Co., San Francisco, \$408,360; Healy-Tibbitts Construction Co., San Francisco, \$521,078; Frederickson & Watson Construction Co., and Frederickson Bros., Oakland, \$458,678; N. M. Ball, Porterville, \$473,459; Southern California Roads Co., Los Angeles, \$456,600; Hanrahan Co., San Francisco, \$434,971. Contract awarded to Basich Brothers Construction Co., Torrance, \$406,625.

Highway Commission Holds Meeting and Hears Delegations in San Diego

FOLLOWING its announced policy of holding meetings in various parts of the State whenever circumstances permit and responding to requests from official and civic bodies of San Diego County for the consideration of certain road problems and projects in that section, the California Highway Commission held its regular meeting of October 29th in the city of San Diego. It was the first time the Commissioners have been able to convene outside of Sacramento headquarters since Governor James Rolph, Jr., appointed them to office.

The Commission and members of its legal clerical and engineering staffs were met the preceding afternoon at Del Mar by a reception committee from San Diego headed by Mayor Walter Austin and including Senator William Harper, Supervisors Thomas Hurley and Edward Hastings, Assemblymen Edward Head and George Bowers; County Surveyor Ernest Childs, Frank Forward, chairman of the San Diego Chamber of Commerce Harbor Committee; John L. Fox, director and acting chairman of the Chamber's highway committee, and T. C. Macaulay, manager of the Chamber.

ESCORTED TO CITY

The committee conveyed the greetings of the City and County of San Diego, the Chamber of Commerce and the citizens in general to the Commissioners and escorted them to the U. S. Grant Hotel where the Commission made its headquarters during its stay in San Diego.

That evening the Commission and staff members were guests at a banquet in the San Diego hotel given in their honor by the Chamber of Commerce and attended by prominent San Diegans, city and county officials and local representatives of the State Legislature.

John L. Fox presided and seated with him at the speakers' table were: Chairman Earl Lee Kelly of the Highway Commission, Commissioners Harry A. Hopkins of Taft, Philip A. Stanton of Anaheim, and Frank A. Tetley of Riverside; C. H. Purell, State Highway Engineer; C. C. Carleton, Chief of the Divi-

sion of Contracts and Rights of Way, State Department of Public Works; District Engineer S. V. Cortelyou, Division of Highways, Los Angeles; District Engineer, E. Q. Sullivan, Division of Highways, San Bernardino; and Russell Bevans, Registrar, Department of Motor Vehicles.

The principal address of the evening was made by Chairman Kelly of the Highway Commission who also conveyed the regrets of Colonel Walter E. Garrison, director of the Department of Public Works, and Commissioner Timothy A. Reardon of San Francisco at their enforced absence—Mr. Reardon through the sudden illness of his wife and Colonel Garrison because of his attendance at the meeting of Western Governors Conference at Portland, Oregon, where Governor Rolph's illness had prevented the latter's appearance among the scheduled speakers.

BIENNIUM PLANS

In his speech Chairman Kelly explained how during the present biennium approximately \$5,000,000 will be spent on roads in the general vicinity of San Diego in carrying out a comprehensive plan for the development and maintenance of highways in that county.

State Highway Engineer Purell told the assemblage that the Highway Commission is not engaged in a spending orgy but is working on a sound, orderly program of highway development, made possible by gas tax revenues, that will require some years to complete and comprises shortening of routes and changes in the major highway system.

Colonel Ed Fletcher, nestor of highway boosters in San Diego County, called upon to speak from the floor, told of pioneer day efforts to get good road connections between settled sections of the county. He expressed the hope that U. S. Highway 80, starting from the Atlantic coast near Savannah and bringing into San Diego the traffic over U. S. 90 from St. Augustine, Florida, where the Spaniards first landed in America, might be continued by a paved link from San Diego to Point Loma where Cabrillo first landed and planted the Spanish flag on the Pacific coast.

South Bay Chambers Urge Projects

(Continued from preceding page)

The necessity of keeping the gasoline tax money for State highway construction, and the advisability of tree-planting for beautification of highways were among topics discussed by others speakers, including Senator Harper who complimented the Commissioners on their record as "doers."

The regular monthly meeting of the Commission held next day in the Colonial Assembly room of the U. S. Grant Hotel was attended by some seventy-five citizens, officials and delegations from suburban communities.

A delegation from Long Beach headed by R. O. Baldwin, representing the Long Beach Chamber of Commerce presented a request for assistance in financing a link of the State highway through Long Beach.

A Ventura delegation, through D. C. Millan asked cooperation in a project that includes building a by-pass and widening and changing the present highway through that city.

ROUTE TO BORDER

A delegation including representatives of the South Bay Chambers of Commerce from Chula Vista and vicinity was heard on the question of final alignment of the State highway between National City and the border and a proposition for the opening of an old road running easterly by way of Dulzura, Potrero and Campo for a more direct connection with the Imperial Valley highway.

A request that San Diego County be reimbursed for a strip of highway extending 1500 feet north from the international line at San Ysidro being constructed according to State specifications at a cost not to exceed \$25,000, was presented by Chairman E. A. Hornbeek of the county board of supervisors. The Commission agreed to reimburse the county as soon as funds are available.

Supervisor Thomas Hurley explained a proposition for the joint purchase by State and county of the

Coronado Silver Strand for a State park and was informed concerning the procedure for the maintenance of the Strand road as a State highway.

GREETED BY GOVERNOR

After the meeting Chairman Kelly and the Commissioners were entertained by Mr. John Forward at a banquet at Agua Caliente attended by Chamber of Commerce, city, county and State officials, as fellow guests. The occasion was marked by the exchange of felicitations between Mr. Kelly and Governor Lerdo de Tejada, of Baja, California, who dropped in to extend his greetings.

On the following day, Friday, October 30th, the Commissioners inspected the route of the proposed link joining U. S. 80 with the coast at Point Loma and then journeyed some sixty miles east on U. S. 80 to Live Oak Springs to attend formal dedication ceremonies marking the completion of eight miles of paving comprising the last link of the all-paved highway between San Diego and Phoenix.

Hal Hobson, chairman of the National Road Committee of the Chamber of Commerce and manager of the San Diego branch of the Automobile Club of Southern California was chairman, and in attendance were county and Chamber of Commerce officials from San Diego, Imperial, El Centro, Brawley and Calexico.

In the evening Commissioners and staff were entertained by Councilmen J. V. Alexander, J. J. Russo and friends of San Diego.

On their way north next day, the Commission officials were guests of Commissioner and Mrs. Philip Stanton at a barbecue on the Stanton home ranch near Anaheim. More than 150 other guests were present representing a cross-section of distinguished political and social circles of southern California and a tribute to the esteem in which Commissioner and Mrs. Stanton are held by their fellow citizens.

Repairs or Alterations of Dams Approved

(Continued from page 30)

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of October, 1931.

MODOC COUNTY—Lauer Dam No. 128-2, Frank McArthur, Alturas, owner; earthfill, situated on unnamed drainage tributary to North Fork Pit River in Sec. 15, T. 44 N., R. 13 E., M. D. B. and M.

NAPA COUNTY—Lake Marie Dam No. 1-6, Napa State Hospital, Imola, owner; situated on Tulocay Creek tributary to Napa River in Sec. 19, T. 5 N., R. 3 W., M. D. B. and M.

SAN MATEO COUNTY—Burlingame Dam No. 611, California Water Service Company, San Francisco, owner; earth dam, situated on unnamed stream tributary to San Francisco Bay.

SAN JOAQUIN COUNTY—Davis Dam No. 572, Ferroggiaro and Podesta, Linden, owners; earth, situated on Shaw Creek tributary to Calaveras River in Sec. 6, T. 2 N., R. 9 E., M. D. B. and M.

SHASTA COUNTY—False Lake Dam No. 223, O. Merlo, Redding, owner; earth, situated on North Fork

Jenny Creek tributary to Sacramento River in Sec. 4, T. 31 N., R. 5 W., M. D. B. and M.

CONTRA COSTA COUNTY—Black Hills Dam No. 183-2, Mt. Diablo Country Club, Diablo, owner; earth situated on unnamed creek tributary to Green Valley Creek in Sec. 14, T. 1 S., R. 1 W., M. D. B. and M.

SONOMA COUNTY—Lake Ralphine Dam No. 422, Santa Rosa Water Works, Santa Rosa, owner; earth dam.

SHASTA COUNTY—Buckhorn Lake Dam No. 97-86, Pacific Gas and Electric Company, San Francisco, owner; earth, 6 feet above streambed with a storage capacity of 400 acre-feet, situated on North Cow Creek tributary to Sacramento, located in Sec. 19, T. 33 N., R. 2 E., M. D. B. and M. For storage purposes, for power use.

MODOC COUNTY—Big Sage Dam No. 55—Hot Spring Valley Irrigation District, Alturas, owner; earth, situated on Rattlesnake Creek tributary to Pit River in Sec. 1, T. 41 N., R. 13 E., M. D. B. and M.

PLUMAS COUNTY—Grass Lake Dam No. 284, Carnation Gold Mining Company, Blairsden, owner; earth dam, situated on Little Jamison Creek tributary to Jamison, located in Sec. 36, T. 22 N., R. 11 E., M. D. B. and M.

The Division of Water Resources under State Engineer Edward Hyatt has issued the first complete history of California water reclamation districts in a bulletin giving data beginning with the old swamp land fund districts and recording the financial status of present active districts. In the following report are included other important details of flood control, reclamation, dam applications and maintenance work and the news that tests show salinity in the upper Sacramento delta has greatly receded:

The Department of Public Works has released Bulletin No. 37, "Financial and General Data Pertaining to Irrigation, Reclamation and Other Public Districts in California." This bulletin was prepared under the direction of the California Irrigation and Reclamation Financing and Refinancing Commission, created by the Legislature in 1929.

In December, 1930, the commission reported to the Governor on the financial status of irrigation, reclamation and other agricultural districts, with conclusions and recommendations for legislation. Much of the legislation affecting such districts enacted by the 1930-31 Legislature and approved by the Governor, was based on the recommendations of the commission. Bulletin 37 is supplemental to the report to the Governor and records in full the data supporting the conclusions of the commission.

This is the first publication to bring together in complete form data concerning the history, organization and operation of California reclamation districts. The bulletin gives a brief history of all of the reclamation districts, beginning with the old swamp land fund districts, and records the present financial status of the 182 active California reclamation districts, with a brief discussion of the causes leading to the default of some of these districts.

REFUNDING PLANS

Two meetings of the Districts Securities Commission were held during the month, both of which were devoted principally to the consideration of a plan proposed by the Merced Irrigation District for refunding its bond issues amounting to a total of \$16,250,000.

The following districts approved refunding bond issues in special elections.

Nevada Irrigation District, Nevada County.....	\$8,100,000
South San Joaquin Irrigation District, San Joaquin County.....	4,791,250
Oakdale Irrigation District, Stanislaus County.....	2,320,000
Grenada Irrigation District, Siskiyou County.....	136,000

The proposal to issue \$93,000 in bonds by the Linden Irrigation District, San Joaquin County, was defeated at a special election, September 26.

DAMS

To date 777 applications have been received for approval of dams built prior to August 14, 1929; 86 applications for approval of plans for construction or enlargement; and 196 applications for repairs.

a. Applications for Approval of Plans for Construction of Dams.

Dam	Owner	County
Bouquet Canyon	City of Los Angeles	Los Angeles
Loosely Pool	T. H. Vestal et al	Lassen
San Gabriel No. 2	L. A. Co. Flood Control Dist.	Los Angeles

Bouquet Canyon Dam is to be a 200' earthfill, storing 36,200 acre-feet for use of the City of Los Angeles water supply.

San Gabriel No. 2 will be a rockfill dam 260 feet high. This is one of several lesser structures to be built in lieu of the proposed San Gabriel No. 1 dam, the site for which was disapproved by the State Engineer as one of his first official actions under the new law governing the supervision of dams, which went into effect in 1929.

b. Applications for Approval of Plans for Repairs or Alterations.

Fifteen such applications have been received during this period, indicating the willingness of owners to place their dams in first-class condition prior to the 1932 run-off season.

c. Nine applications for approval of plans for construction of dams have been approved during the period.

d. Sixteen applications for approval of plans for repairs or alterations of dams have been approved this month.

FLOOD CONTROL AND RECLAMATION

a. Maintenance of Sacramento Flood Control Project.

Routine maintenance work has been continued, including the conditioning of the drainage pumping plants.

Two crews of twenty men each have been started on maintenance clearing operations in the Sutter and Tisdale By-passes. In order to relieve unemployment, these crews are operating on a five day week basis and each man is permitted a total of ten days actual work. These men are registered at the courthouse in Yuba City under the direction of the Board of Supervisors and the men most in need of work are taken on.

Our regular maintenance crew is engaged in repairing the timber breakwater at the junction of the

(Continued on next page)

Water Sought for Hydraulic Mining

(Continued from preceding page)

Sutter and Tisdale By-passes. This consists of renewing certain brace piles and braces at a total cost of about \$900.

The work of clearing and stumping approximately twelve acres in the Sacramento By-pass has been completed.

b. Sacramento Flood Control Maintenance—Bank Protection.

Protective work at the ends of the dam across Heffner Slough on the Feather River at Hamilton Bend has been repaired and additional brush placed to prevent wash. The protective work constructed for Levee District No. 2 of Glenn County two years ago has been put in condition by tightening the cables and lashings holding the logs and brush in place.

c. Sacramento Flood Control Project.

The Reclamation Board has requested this Department to undertake clearing work in the lower part of Sutter By-pass at a cost of \$8,000, under Sec. 21 of Reclamation Board Act. This land will be permanently cleared by placing it in condition for cultivation.

d. Emergency Flood Control and Rectification of Rivers.

Bank protection work on the Mad River on the ranch of John Kane has been completed at a cost of approximately \$1,400.

Arrangements are now being made for the continuation of river rectification work on the San Jacinto River at a cost of about \$6,000, two-thirds of which will be contributed by local interests.

e. Mokelumne River.

Arrangements are being completed with San Joaquin County for a continuation of the work of clearing in the Mokelumne River channel, under Chapter 447, Statutes of 1929. Approximately \$4,500 will be expended for labor on this work.

f. Pajaro River.

Additional work in clearing the channel of the Pajaro River will be undertaken under Chapter 524, Statutes of 1929. The Counties of Santa Cruz and Monterey will each contribute \$1,000, the City of Watsonville \$500, and the State \$2,500, making a total of \$5,000 available for the work, which will commence on October 26.

g. Russian River Jetty.

The construction of the track trestle on the jetty at the mouth of the Russian River has been completed and the quarry and railroad have been in operation dumping stone into the jetty. A derrick having a capacity of twelve tons is now being erected for handling the larger stones to be placed on the south face of the jetty.

h. Flood Measurements and Gages.

The automatic water stage recorders maintained by this office during the winter season are now being placed in order and equipment is being assembled for making flood measurements. It is intended to organize and equip ten parties for this work, ready to go in the field on short notice.

WATER RIGHTS

a. Applications to Appropriate.

During the month of September, 19 applications to appropriate water were received, 21 were rejected and 18 were approved by the issuance of permits. During the same period 10 permits were revoked and 7 licenses were issued finally confirming the rights initiated by the pending permits.

The resumption of interest in hydraulic mining is indicated by 3 major applications filed for the appropriation of water for hydraulic mining. One of these is an application by Buckeye Placer Mines, Inc., to appropriate 15 cubic-feet per second and 500 acre-feet per annum from Little Boulder Creek, tributary to Coffee Creek and Trinity River, at an estimated cost of \$12,500. Another is an application by Arlington Mining Corporation, 740 South Broadway, Los Angeles, to appropriate 0.5 cubic-foot per second from Armestre Creek, tributary to Mojave Desert, at an estimated cost of \$25,000. Another is an application by Butte Mining Company, 68 Post Street, San Francisco, to appropriate 30 cubic-feet per second from West Branch of El Dorado Creek, tributary to North Fork of Middle Fork of American River, at an estimated cost of \$30,000.

ADJUDICATIONS

North Cow Creek (Shasta County). The North Cow Creek case came up for hearing in the Superior Court of Shasta County on October 13, 1931, and was postponed to October 26, 1931, to allow counsel time in which to file substitutions covering changes in ownership of certain lands involved in the case.

Clover Creek (Shasta County). The Clover Creek case has been set for hearing January 18, 1932, in the Superior Court of Shasta County.

Los Alamos Creek (Santa Barbara County). The decree of the Superior Court of Santa Barbara County adjudicating the water rights on Los Alamos Creek has been entered.

Davis Creek (Modoc County). A tentative decree has been circulated among counsel and is now under consideration by the Superior Court.

Mill Creek (Modoc County). All of the water users have signed the stipulation for consent judgment, and the Report of Referee is now in the course of preparation.

Deep Creek (Modoc County). Distribution of the waters of Deep Creek in accordance with the trial schedule of allotments, adopted for the 1931 season, was terminated on October 1.

Franklin Creek (Modoc County). Administration of the trial schedule of allotments, covering the distribution of the waters of Franklin Creek for the 1931 season, was discontinued on October 1.

New Pine Creek (Modoc County). The field investigation of the water supply and use of water on New Pine Creek was completed on October 1.

Eagle Creek (Modoc County). Field work on the Eagle Creek Investigation was completed October 1.

U. S. Cooperating in Snow Surveys

(Continued from preceding page)

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

The irrigation draft on the Sacramento River has continued to decrease until at present there is only a very small amount of late irrigation going on. The flow of the Sacramento River at Sacramento has correspondingly increased and on October 14 this flow amounted to 3600 second-feet. There has been but slight increase in the stream flow at the foothill stations on the rim of the valley.

The salinity in the Upper Sacramento Delta has greatly receded and the tests are showing a drop to three or four parts of chlorine per 100,000 as far down as the vicinity of Ryde. There has been some decrease in the lower Sacramento and San Joaquin Deltas but not in the Upper San Joaquin Delta. At some points in the latter location there has been a continued increase until very recently, indicating a "pocketed" condition of the salt. This results from the condition of very little increased flow to the Delta from the San Joaquin River. Sampling at Freepont, Hood Ferry, Walnut Grove, and Ryde stations in the Sacramento Delta was discontinued during the past month. The regular salinity bulletins to the Delta water users will probably be discontinued at the end of October.

The special field investigation to determine the extent of damage both in the up-river territory and throughout the Delta, due to the 1931 water shortage and salinity, has continued. It is necessary to obtain production and yield figures to complete the data of this investigation and many of these figures will not be available until November or later.

Except for the special damage survey it is planned that all field work will be completed the first of November.

The accompanying tabulations of river discharge and salinity show a comparison between the measurements in September and October of this season and the records in October, 1924.

CALIFORNIA COOPERATIVE SNOW SURVEYS

The principal activity on this work during the past month has been in the field in contacting the various cooperating agencies and getting all in readiness for the coming season's surveys.

In the Tuolumne and Merced River Basins in Yosemite National Park, arrangements were completed for cooperation between the Park Service, the Merced Irrigation District and the State. New snow survey courses were established, signed, and sketched, at Merced Lake, Moraine Meadow and Johnson Lake in the Merced Basin and at Wolverine Meadow on the Tiltail Trail in the Tuolumne Basin. To accomplish the survey of these new courses, new shelter cabins are under construction at Buck Camp and Camp 11. Arrangements were made for additional survey equipment and for stocking the cabins, etc.

Arrangements were recently completed for a new cooperation with the Forest Service in Sequoia National Forest. Under these arrangements the Forest Service will survey a new route including the Copper Creek Summit, Junction Meadow and Bullfrog Lake courses. To accomplish this, a new cabin is under construction at Glenn Flat on the Bubbs Creek Trail and repairs are being made to the stations at Cedar Grove and Kanawers. On the South Kings route surveyed through cooperation with the Sequoia National Park Service, new shelter cabins have recently been completed on Clover Creek and at Scaffold and Rowell Meadows.

Trips were made to the Mono and Owens basins to complete cooperative arrangements with the South Sierras Power Company and to Markleeville to complete the Mokelumne-Carson survey details.

FEDERAL COOPERATION

In connection with the Federal-State cooperation for irrigation investigations, an inspection was made during the past month of the work being conducted in the Sacramento-San Joaquin Delta. This includes an investigation of the consumptive use of water by Delta crops and by noneconomic vegetation such as tules and aquatic growths, as follows:

Asparagus Tanks on Richmond-Chase Tract.
Tule and Cattail Tanks at King Island.
Tule Tanks at Simmons Island.

Official Bodies Concur in Procedure

(Continued from preceding page)

Tule and Cattail Tanks in Reclamation District 999 near Clarksburg.

WATER RESOURCES

a. South Coastal Basin.

Work in the field continued in a routine way except that methods for analysis of water were changed and it is believed that the change will result in reducing the cost of this work to a considerable extent. Preparations are under way for publication of the first report shortly after January 1, 1932.

b. Santa Ana Flood Control Works.

The first structure on Santa Ana Basin flood control works was approved by the State Engineer during the month. This consists of a rock weir across Cucamonga Creek to divert water to spreading works on Cucamonga Cone. Cucamonga Creek is a tributary of Santa Ana River. The financing of the work is done jointly by the State, the County of San Bernardino and the local interests. The work is to follow the general plans laid out in Bulletin 31, Division of Water Resources, and must be approved by the State Engineer. Plans are under way locally for works of various kinds on the numerous creeks tributary to Santa Ana River and also on the main river.

c. Mohave River.

No field work was done during the year by State forces. Arrangements have been made with the Division of Agricultural Engineering and the Geological Survey, both Federal bureaus, to do the work necessary in the field. This is financed half and half by the government and by the State.

d. Ventura Investigation.

The principal work done during the month was drilling at Spring Creek and Blue Point dam sites, both on Piru Creek. Drilling was stopped at Devil Canyon site which was an alternate to Blue Point, as the showing was quite poor at this site. The remainder of the field work consisted of routine measurements and repair of some of the stream gaging stations.

Arrangements were made with the U. S. Division of Agricultural Engineering to make a determination of rainfall penetration on the valley floor in Ventura County. The experience gathered in other investigations of a like nature will be useful in reducing the cost of this work.

e. Salinas Valley Investigation.

The County of San Luis Obispo and the County of Monterey having deposited money with the State Treasurer which releases State money for the same purpose, under the budget bill, work was begun on a preliminary investigation of the water resources of the Salinas Valley. This investigation will continue for two years and at the end of that time it is hoped sufficient data will have been gathered to determine whether it is desirable to go ahead with a comprehensive program for the valley.

f. Santa Clara Valley Investigation.

At the request of the Santa Clara Valley Water Conservation District, with which the Division is

cooperating in the investigation of water resources matters in Santa Clara Valley, the depth to water was taken in 67 wells during the past month from which it is observed that there has taken place since March 1, 1931, a recession of 19.3' in the general ground water level of the valley.

STATE WATER PLAN

Pursuant to the desire of Governor James Rolph, Jr., the organization of the California Water Resources Commission and the several Honorary Advisory Committees named to deal with the water problems of California, has been attended with energetic activity. Widespread response has been manifested by all the membership of the foregoing groups of public-spirited citizens.

On September 28, a meeting of the California Water Resources Commission was held in the State Building, San Francisco, at which time a report was submitted by a subcommittee presenting a plan of procedure and organization which the Commission therewith adopted. In furtherance with the adopted plan of procedure and organization the California Water Resources Commission recessed to meet jointly with the California Joint Legislative Water Committee and the two bodies were addressed by Governor James Rolph, Jr., who directed emphatic attention to the effectiveness of full cooperation by both official bodies to accomplish prompt action in meeting the water problems of California. Upon the suggestion of Governor Rolph, a resolution was adopted by the combined bodies which commended the passage of the bond issue proposed by the Metropolitan Water District to construct the Colorado River Aqueduct.

BODIES COLLABORATE

Subcommittees were appointed by Chairman Crittenden of the Committee and Chairman Judge Sullivan of the Commission to confer on and arrange a plan of cooperative procedure. The two subcommittees concurred in recommendations that the two bodies collaborate at all times in the fullest practicable manner in accordance with the spirit of the resolutions under which each was created.

On September 29 a general meeting composed of the California Water Resources Commission, the California Joint Legislative Water Committee and the Honorary Advisory Committees appointed by Governor Rolph to cooperate with the California Water Resources Commission, was held at Hotel Oakland.

The Honorary Advisory Committee of Engineers has been requested to review and pass upon the State Water Plan as recommended by the Department of Public Works and to consider any modification thereof and to review any other water conservation plans that might be submitted to them.

The California Water Resources Commission met on October 9 to consider the economic phases of Kennett Reservoir, together with the value of electric energy that could be generated under hydroelectric development and the total probable revenues to be derived therefrom.

Sick Child Inspired Move for Lighting Highway Xmas Trees

THE highways of California will be brightened and at many places during the coming Yuletide season by myriads of outdoor lighted Christmas trees.

The Outdoor Christmas Tree Association of California was organized in 1926 by Clarence F. Pratt of San Francisco and was inspired by a little sick child who sent word to Mr. Pratt how much he enjoyed a tree the latter had lighted up on his front lawn.

The idea spread rapidly and was adopted by other cities as a community project; in some instances whole streets being thus illuminated with rows of lighted trees.

THRONGS OF MOTORISTS

For many years Altadena's mile of lighted Christmas trees has attracted thousands of motorists. Each night during the Christmas week the traffic officers have had to call out boy scouts to assist in handling the crowds. One-way traffic did not entirely clear up the situation.

When Golden Gate Park in San Francisco lighted a mile of its trees it required 25 minutes to drive the mile, although traffic officers tried to keep all cars moving. In Fresno, the Fig Garden Club promoted and lighted a mile of trees on Van Ness Avenue. The mile of lighted trees on The Alameda between San Jose and Santa Clara brings out thousands of motorists.

BRIGHTENS HIGHWAYS

Piedmont, In Alameda County, has lighted a group of trees. The Rotary Club of Gilroy has planned a half mile of Christmas trees on the Hecker Pass highway.

Many other communities and civic organizations are taking a whole-hearted interest in the Outdoor Christmas Tree spirit, which will noticeably dispell the clouds of our so-called winter depression. The northern part of the State as well as the southern part is showing an exceptionally early interest in this very worth-while movement, according to Mr. Pratt, who predicts that in a reasonably short time every California city will have its "mile of Christmas trees" on the highway leading into its city limits.

Teacher: Charlie, what does your father do when he finds anything wrong with his car?
Charlie (truthfully): He bawls Ma out.—*Auburn Journal-Republican*.

PIONEER TREE of the Outdoor Christmas Tree Association is this the fifty-foot cypress on the lawn of Clarence F. Pratt's home in San Francisco. When "Sandy" Pratt lighted it in 1926 a sick child sent word of the joy it gave him and started a movement that has caused the illumination of highway trees all over the state.

ENGINEERS READY

In times like these when general business conditions are lagging, and unemployment is a vexing problem, the engineer stands ready to lead the way out. Not with political nostrums but by planning and carrying out works that will provide the needed employment and leave the community richer and better prepared for the prosperous days to come.

Times are bound to improve. Already there are unmistakable signs of improvement in parts of our country. Not one dollar in doles should be given while there are public improvements of lasting value that can be done. There is scarcely a community in the country where such work can not be found.—*North Dakota Highway Bulletin*.

Twenty-six states now have highway patrols, composed of men whose primary duty is to enforce motor vehicle laws and promote safety on the highways.

Great Crowds Greet Governor on Tour to All County Seats

(Continued from page 4)

"I have come to thank you for your support in the recent election. I have come in good faith—not to seek votes, but to learn your problems first hand. I feel that many sections of the State can not properly present their community matters to a government constantly anchored in Sacramento.

"And so I have brought the government to you; I have come to counsel with you; I am accompanied by several members of my official family, here to discuss with you whatever issues affect their particular departments."

Upon his return to Sacramento Thursday, November 19, the Governor made the following comment to the press on his swing around the State:

"I have seen every mountain, stream, and valley in the State. I have met and talked with thousands of my fellow citizens. I feel that these visits to the county seats of California have done much to enable me better to administer the affairs of the State."

State Employees Nominate Officers

At a recent meeting of Sacramento Chapter of the State Employees Association nominations of officers for the ensuing year and arrangements for the chapter's annual dance were the principal matters discussed. The ticket nominated for election by letter ballot was as follows:

For President

Spencer Burroughs, Division of Water Resources

For Vice President

E. R. Higgins, Department of Public Works

For Second Vice President

Roy Womack, Department of Agriculture

Dan Sullivan, Division of Printing

P. R. Green, District 3, Division of Highways

For Secretary

E. W. Zumwalt, District 10, Division of Highways

For Treasurer

H. B. Weaver, Division of Highways

The date set for the annual dance is Saturday night, January 30, and an arrangements committee was appointed with E. Foster as chairman. Any profits resulting from the dance, it was decided, shall go into a special fund to provide other entertainment programs for Sacramento Chapter.

Rush Hour Traffic Cut 10 Per Cent by "McClintock Shift"

THE RUSH HOUR traffic relief plan recently installed in San Francisco has been made the subject of a bulletin issued by the Alfred Russel Erskine Bureau for Street Traffic Research in Harvard University. This bulletin has been published throughout the country. An excerpt follows:

San Francisco has recently accomplished one of the most fundamental and promising improvements in street traffic ever attempted in any city, according to transportation authorities. For the first time a city has succeeded in materially reducing the severity of the morning and afternoon rush hour demands on traffic and transportation facilities.

These movements, commonly known as peak loads, have long been considered as one of the inevitable evils of city life, resulting in inconvenience to thousands of travelers and in great waste in the maintenance of otherwise surplus equipment.

By the application of the so-called "McClintock shift," the similarity in the hours of retail and other types of business has been broken down and the rush hour flow of traffic has been reduced by more than ten per cent. One hundred and fifty business firms participated in the adjustment.

Ramps, She Wants, For Regaining Hats

State of California.

Division of Highways,
Sacramento, Calif.

Gentlemen:

Please will you run a few ramps off your Yolo causeway? I lost my new fall hat there as irrevocably as in midocean. We looked over—too far to jump—we went on, thinking it might be possible to drive back through the pasture land, but that was not possible, so another hat I had to buy in Redding. I only hope it fell to the lot of a goat—the greenness of it would certainly make its appeal. Ramps for the sake of future travelers!

Sincerely,

GLADYS TROUTMAN,
Monroe, Washington.

Hubby: You're going for a drive with me, aren't you?

Wife: I'm not the person to back out.

Hubby: No, it would be better for the garage if I did.

Department of Public Works Shows a Record Breaking Year
for Highway and Architectural Divisions

By COLONEL WALTER E. GARRISON, Director of Public Works

EXCEEDING by several millions of dollars the improvement record of any former year, the Public Works Department of the State of California will pass from 1931 into 1932 in full action against another impressive schedule of work.

Dollar marks and figures are the only symbols by which the story can be reduced to concrete form. But, back of the cold figures is the exhibit of work well done; and the diffusion of comfort and happiness to tens of thousands of families through the circulation of these dollars.

TOLD IN FIGURES

The work of the Highway Division is so continually under the eyes of millions that a summing up of its annual story must prove of special interest to Californians. This is written in mid-December. The totals about to be given (with the exception of an item of \$1,593,200 covering bids to be opened prior to January 1) are those on completed or going projects. That item is now read into the total as it will have been contracted by the time this reaches the reader.

The Division of Highways has transacted a business during 1931 that totals \$42,554,000. The items entering into the total are: Work under way \$24,648,200; bids to be opened prior to January, \$1,593,200; work carried

over from 1930, \$9,402,600; maintenance cost for the year, \$6,910,000.

Converted into terms of mileage, the record shows 803 miles of completed or progressing improvement. The items making this total follow: Graded, 70 miles; untreated crushed rock surface, 59 miles; bituminous treated crushed rock surface, 454 miles; bituminous macadam pavement, 7 miles; Portland cement concrete pavement, 138 miles; asphalt concrete pavement, 75 miles.

The California State Highway system comprises 7281 miles. Of this total, 3091 miles are paved; 1425 graded and merely surfaced with oil and crushed stone; 819 graded and macadamized—leaving 1946 miles ungraded and un-surfaced, practically untouched.

Responding to public demand, the Legislature each session makes an orderly inclusion of secondary road mileage. The last Legislature alone added roads that call for an expenditure of \$71,000,000. This vast amount covers only one biennium's increased demand on funds available for construction, recon-

struction and maintenance. The fine showing for 1931 is, after all, only a credit against a vast and increasing debit.

It follows that if the program is to go forward, the present sources of revenue, majoring in the gas tax, must remain unimpaired.

Colonel Walter E. Garrison

Fighting Snow on Mountain Highways With Latest Methods and Machinery

By T. H. DENNIS, Maintenance Engineer

For the first time in the history of California a determined effort is being made to keep Donner Pass on the Victory Highway through the Sierra Nevada range, open to traffic throughout the Winter. This famous gateway to Northern California traverses a heavy snowfall area ninety miles long and reaches a maximum elevation of 7135 feet at Donner Summit. The following article describes the methods and modern heavy equipment now in use battling snow on this and other mountain highways.

FOR NEARLY ten years the Division of Highways organization has been interested in the problem of snow removal. It was evident in 1922 that the increase in motor travel, coupled with the improvement of the mountain roads, would eventually justify keeping the main through routes open to traffic.

The first special equipment for this work was assigned the Pacific Highway between Dunsmuir and Weed in cooperation with Siskiyou County. Provision was also made for taking care of the occasional heavy storms which might block the Ridge Route between Los Angeles and Bakersfield. These two routes have comparatively light snowfall, although removal work is required each winter on the Pacific Highway where an elevation of about 3800 feet is reached.

Nothing special was done on the other routes for several years, except as roads could be opened with the regular tractor and grader equipment, as, for instance, the roads between Redding and Alturas, Redding and Arcata, and Nevada City to Downieville. The principal reason for this was not lack of appreciation of the benefits to traffic, but was due to the unimproved conditions of the mountain roads.

Narrow Road Handicaps

It is not possible to handle any great quantity of snow within the limits of a narrow, crooked road. Even if the road is free from

snow it is very difficult to keep it passable under California winter traffic conditions unless the road surface is rocked or paved. The next step in the snow removal work, therefore, was a concerted effort to keep certain snow routes open as late as possible in the fall, and to open them as soon as conditions permitted each spring.

This stage still holds for a number of the State routes and will continue to apply for some years to come.

This period gave the organization opportunity to try out various methods of work and types of equipment, as well as gain experience which is so essential to the success of snow removal operations.

Two years ago, equipment was allotted to the lateral between Red Bluff and Susanville so that the route was kept open throughout the winter. The road crosses two summits—one at Mineral and the other at Fredonia Summit, which is at an elevation of about 5000 feet. Last year, additional equipment, including two rotary shovel type

plows, truck mounted, was secured for the Donner Pass route between Sacramento and Reno. This road was opened several times during the winter season, it being closed only one month during the year to traffic. While gratifying to the traveling public, this success was possible only because of the unusually light snowfall and especially favorable winter conditions.

The completion of construction work during the

(Continued on page 16)

T. H. DENNIS

KING WINTER WORKS overtime on this Donner Summit area of his frigid domain. Here is a view of the Eastern Donner Grade taken from a point just below the Summit showing the snow-covered road that maintenance crews are keeping open to traffic and Donner Lake in the distance.

This fixed shovel rotary type machine keeps the road open on the Crest Route near Big Bear Lake, San Bernardino County.

Speed push plow from the Colfax station operating near Soda Springs on the Auburn-Truckee road.

SNOW FIGHTERS DIG IN to these comfortable quarters on the Donner Summit whenever they can call it a day. The house accommodates sixteen men and the roundhouse shed and machine shop houses ten big truck plows. Both buildings are steamheated.

Cajon Pass Curves Doomed, 59 of Them-- Improvement Involves Moving a Creek

By E. Q. SULLIVAN, District Engineer

CAJON PASS, historic gateway to southern California for all transcontinental traffic entering the State through Needles and Las Vegas, is again to be touched by the magic wand of modern engineering and have some of its narrow, winding stretches replaced by the highest type of State highway alignment and construction.

In addition to accommodating all transcontinental traffic entering over the National Old Trails and Arrowhead Trail, this famous old pass is the only outlet to those routes for east-bound traffic from Los Angeles and the San Bernardino Valley as well as a thoroughfare for airways and railways into and out of southern California.

Most Scenic Canyon

Sixteen miles in length with a rise of about 3000 feet, the pass crosses the spectacular San Andreas Fault with its high up-turned cliffs and seemingly loses itself among towering mountains where the upper reaches of the Mojave River flow down to the desert. Cajon or Box Canyon it was therefore called by the early Californians who knew it as an Indian trail, later used by Forty-niners and Mormon settlers.

It is a most scenic canyon with changing views of ever new beauty at every turn and rise, according to the season of the year—snow-capped mountains, violet-colored, misty hills, beautiful spring flowers or red holly berries, groups of sycamore and wild walnut trees, thousands of yucca plants and over all the hill-sides a thick, luxuriant growth of chaparral.

The present road was built in 1916 and was a marvelous improvement on the old ox-cart trail which meandered up the pass and then turning off to one side into Horse Thief Canyon continued its tortuous way across a creek and over a narrow grade up the gorge to the summit. Horse Thief Canyon was abandoned for the present route directly up the pass, which was taken over by the State ten years ago.

Record Height Cuts

In 1930, the upper three and one-half miles were relocated, eliminating a number of

rather steep switchbacks dangerous in wet weather. By means of great cuts, some of them of record-breaking heights in State highway construction, a direct, wide, high-gear grade was provided to the summit.

Now important improvements of the lower portion are to be made and have been let to contract, beginning near Alray, where two undergrade crossings are being constructed to make a safe crossing for the Santa Fe Railroad, which has used the pass for 46 years.

The line for the relocated highway sweeps up the pass in long, easy curves, reducing the number of present sharp turns and curves from 91 to 32. The new curves will be of such great radius as to make them safe and secure for motorists under all conditions of weather and traffic.

Mountain Playground

These factors will be especially appreciated in the winter when thousands of cars crowd the pass on week-ends bound for the snow sports at Big Pines, the Los Angeles County mountain playground to which the pass affords most direct access. The new highway will also eliminate the famous Blue Cut slide that has been a menace to travel and a blockade point for many years. This Blue Cut slide is a towering mass of crushed material of beautiful blue-green color, a result of the San Andreas Fault. So unstable is this mass that every rain brings down fresh slides on to the highway, narrowing and frequently entirely blocking the road. For many years the slide has been the cause of considerable expense for extra work entailed in keeping the highway open to traffic.

Moving a Creek

To cure this condition a major surgical operation will be performed upon Cajon Creek, which flows down through the pass. At Blue Cut slide the pass narrows, with the Santa Fe tracks occupying one bank of the creek and the highway running above the other.

Under the plans for the highway improvements the creek will be shifted into a new channel and the highway built on a fill across the old creek bed, thus placing the

CURVES ARE OUT of style with highway engineers, particularly the old-fashioned hairpin variety. Accordingly Cajon Pass, famous southern California gateway for transcontinental traffic through the mountains into the San Bernardino-Los Angeles areas, is to get a utilitarian beauty treatment from the highway doctors by which its curves will be reduced from ninety-one to thirty-two. The operation involves moving Cajon Creek out of its channel to permit location of the new highway a safe distance from Blue Cut slide, a mountainous mass of soft material that for years has been a menace to traffic, washing down upon the road during every rainstorm. The upper picture shows the new route near the slide, indicated by arrow. The diagram map shows the general route eliminating many curves and the location where Cajon Creek will be moved.

road at a safe distance of several hundred feet from the slide.

Then no longer will every rain bring a call from the Blue Cut slide for the maintenance crews to come and pull cars through the muck and rock debris blocking the road.

If, as an optometrist estimates, 72 per cent of the American people suffer from eye strain, it probably is due to looking for a place to park.—*Macon Journal*.

ROAD INTO ALASKA

From an engineering standpoint construction of roads in British Columbia and the Pacific Coast States in the proposed International Highway, is a feasible project. This is the statement of George Black, Canadian legislator and chairman of the Canadian-American Alaska Highway Committee. Existing roads in British Columbia and the Pacific Coast States form part of the proposed highway, eventually to be extended into South America.

Six Southern Delegations Heard by Highway Commission in Los Angeles

THE CALIFORNIA Highway Commission held its regular December meeting in Los Angeles on Friday, December 11, the second meeting in southern California following the first one held in San Diego in October.

Six delegations from various sections of the Southland and one from the North appeared before Commissioners Earl Lee Kelly of Redding, chairman; Timothy A. Reardon of San Francisco; Phillip A. Stanton of Anaheim; Harry A. Hopkins of Taft and Frank A. Tetley of Riverside. Sitting with the Commission were Colonel Walter E. Garrison, Director of Public Works; C. H. Purcell, State Highway Engineer; C. C. Carleton, Chief of the Division of Contracts and Rights of Way; District Engineer, S. V. Cortelyou of District VII and District Engineer, E. E. Wallace of District VI.

With the Commission's meetings open to the general public a number of citizens attended as spectators as was the case at San Diego and the hall on the second floor of Los Angeles headquarters in the Associated Realty Building was a busy scene from 10 a.m. to 5 p.m. with delegations and spectators coming and going.

JOINT HIGHWAY PROJECT

A delegation from Alameda and Contra Costa counties representing Joint Highway District No. 13 organized for the construction of a highway from Oakland with a tunnel at the Contra Costa County line asked a reconfirmation of an agreement for a \$300,000 State contribution to the project made when the district was organized. The delegation consisted of Redmond C. Staats, president of the district; Oscar Olsson, secretary; H. L. Hinman, treasurer; Archibald B. Tinning, attorney; George A. Posey, engineer and Ralph R. Arnold, associate engineer. On motion of Commissioner Reardon the Commission made \$150,000 available when the district is ready to commence work and the balance at a later date.

A delegation including Speed B. Leas, Cal. H. Antrim and F. M. Stuart of Fresno submitted figures for rights of way, relocation of a canal and construction of a turn-out on

the proposed State highway realignment between Fancher Creek and the southerly limits of the city on the railroad routing. As the figures came within the amount set as the maximum for that route as compared with an alternative route, the railroad routing was adopted on motion of Commissioner Hopkins.

ACTION DEFERRED

Mayor John Knox of Santa Monica, Mayor M. J. Johnson of Newport Beach, J. P. Greeley and Lew Wallace directors of the Newport Chamber of Commerce asked the Commission to arrange for the early beginning of construction on the highway and grade separation known as The Arches or Branagan Crossing at Newport Beach. The project is at the junction of the Coast Highway and the extension of Route 43 to Newport Beach and has been planned as a cooperative project with State, city and county participating. Mayor Johnson said the city could furnish the State with right of way but could not contribute funds. Action on the matter was accordingly deferred pending agreement on a new basis of cooperation.

A delegation headed by Mayor Clark of Redondo and including City Engineer Leonard of Torrance, Miss Smith of Lomita, Clifford Reid of Redondo, Ralph Graham, Mrs. Parkhurst and Miss Parkins of Wilmington appeared to inform the Commission that 85 per cent of the 100-foot right of way for the cooperative paying of State street between Wilmington, Lomita and Redondo had been secured and urging beginning of work. They were advised it was necessary for the cities to secure total right of way before the State could fulfill its obligation.

ALIGNMENT SOUGHT

Guy E. Leonard and R. V. Bashore of Bellflower asked the adoption of the Somerset avenue alignment through Bellflower in the event the connecting road link from Long Beach to Foothill Boulevard, east of Pasadena, is recommended to the Legislature for inclusion in the secondary road system.

A. C. Hardison and John Thille representing the Santa Clara Water Conservation dis-

New Acts Give Highway Rights Over School Lands; Other Procedure Aided

By FRANK B. DURKEE, General Right of Way Agent

THE RIGHT OF WAY Division in recent months has moved forward in several directions in its never-ending effort to acquire adequate rights of way for California State highways. Statutory authority now exists for the first time for grants of right of way across State school lands; procedure for acquiring easements over lands in probate has been shortened and made less expensive; advantage is being taken of Federal legislation to secure reservations of the public domain for highway purposes; securing of permits for rights of way within the national forests has been simplified.

In the first two instances, the procedure is based on acts of the Legislature which were approved by Governor James Rolph, Jr., last spring: 1. Acquisition of school lands for highway purposes. (Statutes of 1931, Chapter 672; Important Statutes, page 255.) 2. Dedication of property for highway purposes by executors, administrators and guardians (Sections 587 and 1515 of the Probate Code; Statutes of 1931, Chapter 1046, Important Statutes, page 256).

OVER SCHOOL LANDS

To understand the situation which has existed heretofore with reference to State school land, it should be borne in mind that these lands are grants to the State of Federal lands for the purpose of sale for the benefit of the common schools.

It has been the practice heretofore to construct State highways across school lands without authority. No definite width of right of way was secured because there was no means by which one might be obtained. Maps were filed with the Surveyor General to give notice of construction, but he had no authority to dispose of such lands except by outright sale to individual purchasers. He had no authority to make grants of either the fee or an easement to any department of the State government.

The statute referred to above authorizes the Division of State Lands, of the Department of Finance, to grant easements and rights of way to the Department of Public Works to or over the State's school lands "for the purposes of rights of way for high-

ways and for use in protecting highways from damage or destruction by natural forces."

NECESSARY PROCEDURE

A form of application, to be accompanied by the necessary descriptions and maps, has been agreed upon by the two departments concerned and the procedure to be followed in filing applications was outlined in a memorandum sent to all District Engineers and District Right of Way Agents, in October, 1931. The application must set forth a definite width of right of way defined by a center line description tied into a section corner.

The easements to be acquired will be executed by the Chief of the Division of Lands and will be placed of record the same as other similar grants of right of way acquired by the Department. Any patents issued upon the subsequent sale of the parcels crossed by a right of way so acquired will set forth the State's easement as a reservation.

Such reservation of the right of way in subsequent patents should obviate future disputes with school land purchasers over highway boundaries and widths, since such easements are now granted under statutory authority and hereafter will be a matter of record in the respective counties and in the Division of Lands as well.

CLEAR UP TITLES

Division Engineers have been urged to review all existing State highway in their respective divisions and to make application as soon as possible for right of way over any parcels of school land crossed by completed construction.

A number of applications already are on file with the Division of State Lands which has assured the Department of its desire to cooperate to clear up titles to highway right of way across all school land areas under its jurisdiction. Future construction, of course, may be similarly cleared as the highway program progresses.

The importance of this statute may be judged when it is understood that the State of California is the owner of approximately 750,000 acres of unsold school lands.

State Research Experts Develop Durable Traffic Line Paint Formula

By THOMAS E. STANTON, JR., Materials and Research Engineer

THERE is nothing which gives more comfort to the expert as well as the timid driver on our highways, day or night, than the traffic stripe which directs traffic along well defined lanes and which has caused such a unanimous demand on the part of the motoring public for more and better stripes that the Maintenance Department of the Division of Highways, under the direction of Maintenance Engineer T. H. Dennis, is now spending close to one hundred thousand dollars a year for this purpose alone.

The average layman looks upon the problem of maintaining such a stripe as comparatively simple and inexpensive.

It is true that the mechanical problems involved in the economical construction of the line have reached a high degree of perfection and that with a relatively small and inexpensive outfit it is now possible to apply many miles of a neat and accurately aligned stripe per day at a very low cost.

The labor of painting the stripe, however, represents less than 20 per cent of the entire cost, the other 80 per cent being the cost of the paint.

Not only does the paint constitute the great bulk of the cost of striping but so also does this material constitute the biggest problem the highway engineer has to face because it must have certain well-defined characteristics to make it of value for the purpose.

DRIES QUICKLY

In the first place, it must dry to such an extent in approximately one-half hour or less that it will not be injured by traffic. This accelerated drying requires that the lacquer type of paint be used instead of any of the well known oil paints, the quality of which have been developed to a high stage through

the use of now well understood standard high grade materials and methods of manufacture.

The use of oil, however, makes the paint slow drying and this drying time can not be shortened to the extent required for traffic lines without injury to the paint.

As a substitute for the oil paint there has, during recent years, been an extensive develop-

ment and use of the lacquer type wherever accelerated drying is desired such as for example in painting automobiles, furniture and traffic stripes.

The lacquer vehicle in which the white or colored pigment is ground consists of a nitro cellulose or a gum dissolved in some highly volatile solvent such as alcohol, benzol, acetone, etc. When spread on a surface in a thin sheet the solvent evaporates rapidly and leaves a hard residue.

Some solvents dissolve asphalt and, therefore, this type of solvent can not be used in the manufacture of traffic lacquers.

PAINT FLAKES OFF

Some gums leave a brittle residue which flakes readily after evaporation of the solvent. This type of gum can

not be used unless it is possible to add some ingredient which will act as a toughener. Any such adulteration produces a slower drying material and when used to excess may so lengthen the drying time as to render the product unusable as a traffic lacquer.

On the other hand, the residue, after the solvent has evaporated, must not be soft or sticky in the slightest degree; otherwise it will be readily discolored by dirt, grease and oil from the traffic which passes over it.

The residue must also be highly resistant to abrasive action, otherwise it will wear out in three to six months time and rapidly lose its value as a safety guide, thereby requiring

THOMAS E. STANTON, JR.

STUDYING WHITE LINES calls for chemical research and inventive genius. In the top picture, Retla Alter, junior testing engineer at the Department of Public Works laboratory, is shown directing lamp rays into the aperture at bottom of an apparatus he designed for testing the light-reflecting properties of different paints used for striping traffic lines. Fred T. Maddocks, senior engineer, is reading and recording measurements shown by meter dials. Below at right is a close-up of the apparatus revealing some of the electrical equipment that records light-reflecting properties by means of a photo-electric cell. Below is an abrasion meter apparatus. At left is a view of the broad white lines on Foothill Boulevard in Los Angeles County and below traffic is seen using the lanes on Bayshore Highway, San Mateo County.

Two Camps for the Unemployed Opened by Department of Public Works

AT THE INSTANCE of Governor Rolph a new departure in relief employment work has been started this month by the Division of Highways with the establishment of two camps for men who are willing to do part-time work for their meals and board. Each of the camps will care for 250 men and is located where the men can be used at hand labor on highway construction.

The first camp was started in Plumas County at Rich in the Feather River Canyon, using buildings that were put up last year for the relief employment camp at this point. The camp is operated by the State and the men are used in extending the work which was opened by the previous camp. Superintendent A. N. Lund, who directed this camp last year, is in charge with a small crew of regular foremen to supervise the work.

ON TOPOCK ROAD

The second camp is in San Bernardino County between Needles and Topock on State Route 58. In this camp the housing and feeding is being handled by a supply company of Los Angeles under contract with the State. The camp is in charge of Superintendent E. S. Gripper who handled the relief camp in Arroyo Seco near Los Angeles last year. The men are being used to widen cuts and improve the alignment on the highway near the camp.

Men for the Rich camp are being furnished by the City of San Francisco, and the City of Los Angeles is sending out the men for the Needles location. Under the agreements made by Col. Walter E. Garrison for the Division of Highways with the officials of these places, the cities are picking the men for the camps, paying their transportation to the camps, are responsible for medical care in case of sickness, and furnish clothing to needy cases. **The men must be American citizens and go to the camps voluntarily. The State uses the men for six hours a day on highway work and gives them their meals and board and an issue of tobacco. If a man does not work he is dropped from the camp.**

QUARTERS HEATED

The Rich camp is entirely of wood construction and the men are housed sixteen to a room.

The Needles camp is of tent construction with wood floors and side walls screened at the top, the quarters earing for eight men to a tent. In both camps the quarters are heated with stoves and electric lighted. Each man is given a spring cot, mattress, blankets, sheet blanket and pillow. **Hot showers are provided with stationary tubs for washing clothes. The State maintains a man in the camp who is a registered nurse competent to administer first aid in case of accident and attend to the minor troubles of the men. The meals are of the standard served in all State camps, of good wholesome food and well cooked.**

WILLING HANDS

With conditions in California better than in other parts of the country, and men figuring that they may be hungry but they will not freeze when they get here, there has been an enormous increase this year in the number of transient laborers entering the State who flock to the cities and become dependent on the free kitchens for their existence. A large percentage of these men are able and willing to work if they can only get the chance and it is for this type that the camps have been established. No one camp can begin to meet the problem that has developed, but similar camps are being operated by the cities and the State Department of Forestry; it is hoped that the combined efforts will result that men who are willing to work will not suffer.

NEW SIGNS PLACED

Since the new law became effective August 14, more than 2100 new State speed limit signs have been put in place by the signposting department of the Automobile Club of Southern California, it is revealed in a report just issued. These markers so far have been posted in 57 different communities or counties which have ordered them to date. In this special job more than 13,000 miles of highway have been covered by a fleet of 10 trucks engaged in this rush work to inform motorists of the new 20-25 and 45-mile speed limit regulations.

First Contractor: "I've just arranged to give a man \$3,000 if he will take all my worries off my hands."

Second Contractor: "That ought to be fine, but where are you going to get \$3,000 in this day and time for that?"

First Contractor: "Well that will be the first thing he will have to worry about."

IN A SCENIC PARADISE, the labor camp for unemployed at Rich is located on the banks of the Feather River. Opened and maintained by the Department of Public Works, the men have comfortable quarters in substantial, heated two-story bunk houses close to their highway work.

Experts Develop Durable Traffic Line Paint Formula

(Continued from page 8)

renewals at two or three times the ultimate cost per year of a line painted with a high grade, non-brittle abrasion-resisting lacquer which retains a high degree of visibility from nine months to a year.

RENEWAL PERIODS

Practically all lines where traffic is reasonably heavy require renewal in from nine months to a year. In many cases, where the traffic is exceptionally heavy and consists of a large percentage of truck traffic, renewals must frequently be made at intervals of three to six months.

The traffic line should also retain its color throughout its life. Thus, if a white line is desired it should remain white and not change to a yellow or dirty color through the action of the sun and other natural elements.

Because the use of lacquers for traffic lines is a comparatively recent development and no standard specifications have as yet been formulated which will insure a material complying with all of the desirable characteristics outlined above, the Materials and Research Department of the California Division of Highways has been conducting an extensive research of this problem for some

time. As a result of this investigational work a standard lacquer specification has been developed which, it is expected, will insure a high grade product with the resultant saving of thousands of dollars in cost and increase in utility.

G. H. P. Lichthardt, chief chemist at the laboratory, who is highly expert in his profession, has been carrying on an extensive investigation into the relative value of the commercially available gums and the proper solvents which must be used with these gums. Under Lichthardt's direction extensive tests have been made of the abrasive resistance of different lacquers when tested on the abrasion machine constructed at the laboratory.

To pass the specifications drawn up by Lichthardt, lacquer must not only pass a severe abrasive test, but must dry in from 15 to 30 minutes, have good flowage and covering properties, resist cracking under a severe bend test, resist disintegration in water and must not dissolve the asphalt in the pavement surface.

Further investigations have been conducted by Retla Alter of the laboratory staff to devise equipment for measuring the relative visibility of different surfaces by means of the photo electric cell. Very encouraging progress has been made in the development of equipment for this purpose which it is hoped may be perfected to such an extent that information of value can be secured which will enable a more intelligent selection to be made of the material best suited for specific cases.

Highways Not a "Cost of Government"

(Continued from page 1)

The gas tax does not become a burdensome surplus. It is not permitted to become an object of manipulation in the money market. It is cheerfully paid by the people, and then quickly returned to them in improvements.

Increasing demands for improved highways as well as the vast obligations already assumed by the State, render utterly untenable any proposition that, directly or indirectly, would reduce full gas tax accruals to the Highway Division.

The gas tax carries no bond interest. The roads go forward on a cash basis. There is an orderly plan working toward an ultimately completed system. There is a daily solvency of funds and a frank, open accounting with a satisfied public.

Highway expenditures are not a "cost of government"; they are for improvements aided by all and essential to the life of the State. The pay-as-you-go plan lays no burdens on the property of today or tomorrow. The disbursing of 85% of these millions to the ultimate laborer pays but does not increase taxes. An alert public opinion will continue to assure an undivided gas tax to the highways of California.

SOME BIG JOBS

Some of the outstanding features of the construction program during 1931 are of state-wide interest. On the Ridge Route alternate, Los Angeles County, the highway connecting Southern California with the San Joaquin Valley, between Castaic School and Tejon Pass and following the canyon to the west of the present road—work has progressed steadily. This section of the existing Ridge Route is 36.5 miles in length.

The new alignment will reduce it to 27 miles. Seven miles of grading has been accomplished. The new route will have large radius curves and easier grades. The grading is underway on the remaining 20 miles. Some idea of the immensity of this job may be indicated in the fact that it involves the moving of 4,000,000 cubic yards of earth in a mountainous region.

Another big job is the San Juan Grade alternate, in Monterey and San Benito counties. This is a link in the coast road connecting Los Angeles and San Francisco. It involves construction from 2 miles north of

Salinas to the Pajaro River, passing through San Miguel and Langley canyons. The existing road via San Juan Grade is 18 miles.

INCLUDES TWO BRIDGES

The new route will be only 16.6 miles and will be a vast improvement both in alignment and grades. The construction includes grading, paving and the building of two bridges. The work will be completed in 1932. The contract involves the moving of 800,000 cubic yards of earth and placing about 41,000 cubic yards of Portland cement concrete pavement.

On the Redwood Highway between Sausalito and San Rafael, Marin County, the Alto to Waldo link is the scene of interesting construction. The new line obviates the use of the Corte Madera Grade. This latter section was open to traffic November 22, 1931. The construction involved the building of an overhead crossing and bridge above the tracks of the Northwestern Pacific Railroad and across an arm of Richardson Bay; the construction of new road bed and the placing of bituminous macadam pavement. The unstable marsh lands adjacent to the bay necessitated the use of tons of dynamite to blast away the muck in order that a firm foundation could be found for the exceedingly heavy fills.

BUILDING LONG TUNNEL

The Newcastle tunnel on the Sacramento-Truckee road is an improvement of outstanding interest. It provides for a realignment of the highway at Newcastle by tunnelling under and through the solid granite hill on which the town is situated. The tunnel is 531 feet long. It has a 30-foot width pavement and a 3-foot sidewalk on either side. The tunnel is 21 feet high and is lined with Portland concrete cement. It eliminates one of the most tedious and dangerous points on the highway.

Another scheduled job on the Sacramento-Truckee road is that of the Gold Run to Airport link in Placer County. This is a new alignment between Gold Run and the Airport west of Emigrant Gap. The project will be the last link in the modernizing of the old pioneer trail into California via Donner Summit. It will run to the southeast of the present highway and follow the course of Canyon Creek and will be 11.5 miles in length. The bids for grading on this project were

(Continued on page 29)

Figures Tell Story of Year's Work

Last January Governor Rolph gave the command "full speed ahead." The Department of Public Works responded at once. The mechanism of its vast organization was set in motion. There has not been a let down of pressure during the year. Public improvements for the people and tens of millions of dollars distributed to labor have won public approval. All records have been broken. In the face of the "depression," the Department has built more highways, more new buildings and done more work of all kinds than in any other year. Eighty per cent of the cost has been met by the gas tax. The turnover has been rapid. Last month's tax pays for this month's work.

Here are some facts worth remembering:

Employed directly through departmental activities.....	46,000
Total business by Highway and Architectural divisions....	\$50,779,617

DIVISION OF HIGHWAYS

Work contracted and under way.....	\$24,648,200
Work awarded during December.....	1,593,200
Work carried over from 1931.....	9,402,600
Work, maintenance, all kinds.....	6,910,000

Highway Division grand total.....	\$42,554,000
-----------------------------------	--------------

MILEAGE RECORD FOR 1931

Asphalt concrete pavement.....	75 miles
Portland cement pavement.....	138 miles
Bituminous macadam pavement.....	7 miles
Bituminous crushed rock pavement.....	454 miles
Untreated crushed rock pavement.....	59 miles
Graded and prepared.....	70 miles
Total completed, progressing or contracted.....	803 miles

DIVISION OF ARCHITECTURE

Work let to contract in December.....	\$1,194,000
Work completed by December 16, 115 projects.....	4,420,098
Total construction (Jan. 1-Dec. 31—177 projects).....	8,225,617

DIVISION OF WATER RESOURCES

Estimated cost of private or corporate dams approved or supervised.....	\$19,000,000
New dams approved.....	50
Enlargements authorized.....	11

Highway work is on a pay-as-you go basis. It is not money collected by the tax collector; it bears no interest and does not lie idle in vaults. As fast as it accrues, it is put back in circulation, 85 per cent of it going ultimately to labor.

By-Pass Considered Logical Plan for Routing Through Traffic in Cities

By **FRED J. GRUMM**, Engineer of Surveys and Plans

When through traffic meets local traffic, then comes the tug of war—paraphrasing the old saw about the Greeks. The conflict is seen at the gates of every city, with resultant congestion where both classes of traffic are crowded into "Main Street." This perplexing problem of routing through traffic in urban areas and the relationship of the State Division of Highways and local planning bodies in solving it are discussed in the following paper delivered before the California League of Municipalities at Del Monte.

IN PLATO'S utopian scheme of government there was not included, to my recollection, a plan of the ideal city. Of course such concrete considerations should probably not be included in an abstract dream. Nevertheless, Plato's time would have been none too early to organize a planning commission, and it might have induced earlier and more earnest consideration of the problem.

Any planner today knows that in his planning work hindsight is not better than foresight. It may be easier to recognize the needs or more simple to decide what facilities will satisfy them, but it is more difficult to supply the solution and much more costly.

Like many other difficult problems, the problem of planning can be more readily solved by cooperation of the various agencies on whom these duties devolve. Especially so where responsibilities overlap, where the city and county or the State's obligations meet—and that is quite frequently.

CONFLICTING STREAMS

To plan for the State-wide traffic in the open country is relatively simple, but it is in the urban and city areas that all of the various organizations must work together to supply the necessary facilities. It is here that through traffic which has moved freely along the open highway begins to meet and mingle with the local traffic gradually accumulated by the main highway. It is at this point that the accumulation of traffic begins to present the more perplexing problems, where the travel artery

must function to satisfy various requirements, and the problem does not diminish in complexities as traffic reaches the streets and avenues of the city.

Let us consider these various classes of traffic and their needs. Generally we may speak of two classes: local and through traffic. Other kinds are substantially grouped under these two general classes, at least, their characteristics are essentially similar to those which can be ascribed to either local or through traffic.

LOCAL TRAFFIC DEMANDS

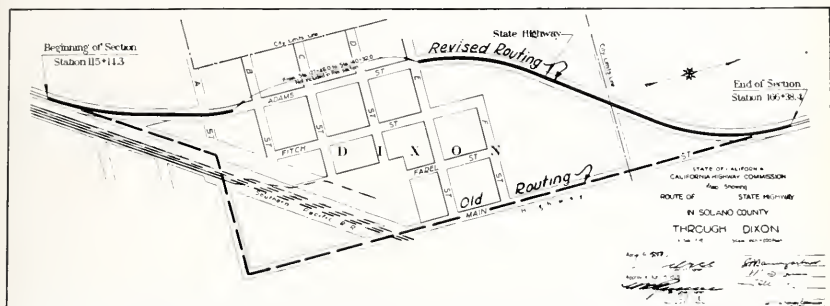

Requirements of local traffic, the operation of vehicles in the transaction of business within communities, are decidedly different from those of through traffic. Local traffic wants to transact business at the establishments fronting on the thoroughfares. It moves slowly for shorter distances, enters and departs from parking areas in front of such establishments. Through traffic wishes to proceed speedily, directly and unmolested on its way.

The merchants and business men of a community are dependent on the people in that community and the surrounding territory for support. These people are their customers. They constitute the local traffic. How many pairs of shoes does the merchant in Salinas or Fresno sell to the motorist traveling from San Francisco to Los Angeles? How many pounds of sugar the grocer, or even nuts and bolts, which might be used on a car, does the hardware merchant dispose of to the man driving through town?

FRED J. GRUMM

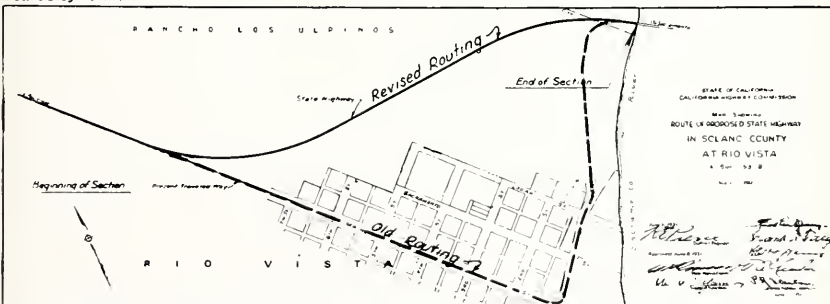

Revised Routes in Three Municipalities

THE OLD STATE HIGHWAY brought traffic into Main Street of the city of Dixon, Solano County, in a roundabout way necessitating two crossings of the Southern Pacific railroad tracks. The new route opened last year avoids the railroad tracks and Main Street and leads traffic through town by way of Adams Street.

THE PRESENT STATE HIGHWAY into Bakersfield leads from Union Avenue with a right-hand turn into the heart of the city where another right-hand turn is made. The proposed routing as shown above skirts the thickly built section and leads in an almost straight line from Union Avenue to the Beardsley Canal.

AT RIO VISTA in Solano County the through traffic to Sacramento that now goes through Main Street will by-pass the town in the new routing which has been accepted by all parties concerned. Work will begin in the Spring.

Donner Yearly Snow Averages 25 Feet

(Continued from page 2)

present year between Airport and Soda Springs made practical the consideration of keeping this road open between storms during the present winter. Donner Summit is 7135 feet above sea level, and extremely heavy snowfall and severe weather conditions may be expected any winter.

The snowfall area extends from west of Colfax to the California-Nevada State line, a total distance of nearly 90 miles. The elevation varies from 2500 feet at Colfax to 7135 feet at Donner Summit, and 5125 feet at the State line. Records of snowfall during the past sixty years show a maximum season's fall of 783 inches in 1879 to 1880, a minimum of 145 inches in 1880 to 1881, and 402 inches as an average winter fall for the entire period. A study of these records shows that some twenty to twenty-five feet of snowfall may be expected even in moderate winters.

There are records of snow falling at a rate of eight inches an hour at the higher altitudes and, if such a snowfall is accompanied by a wind of high velocity and low air temperatures, the situation becomes hazardous for anyone stranded in that area. From Colfax to Truckee accommodations for the traveling public are limited, particularly during the winter season. Although Emigrant Gap and Norden are railroad stations and there is a hotel at Soda Springs, accommodation could naturally not be expected for any large number of snowbound travelers.

Auger blower type heavy duty plow widening cut through deep drift during storm on the Summit.

Any attempt to keep such a road open was impracticable, since even if the snow was removed it would not have been feasible to maintain the surface in condition for traffic.

Each season has seen an advance in the reconstruction of this road to higher standards. The plans of each project were reviewed with the thought to provide a road section most favorable for snow removal work. Wherever possible the grade was established sufficiently above the adjoining surface so that advantage could be taken of the scouring action of the wind. Where it was necessary to go through cuts, the normal ditch section was widened and storage space thus provided for the snow which would be pushed off the traveled way.

This widened ditch section also provides additional drainage when the snow melts, thus aiding in the upkeep of the road. As mentioned previously, the surfacing placed on the road must be adequate not only to carry traffic, but support the heavy snow removal equipment with a minimum of winter maintenance. In addition, the shoulders beyond the pavement must be of crushed rock to permit equipment to operate off the pavement when clearing snow.

One Poor Unit

There still remains one unit not yet constructed to present day standards. This section is approximately twelve miles long, extending from Gold Run to Airport. The alignment is fair and a good oil surface has gradually been developed under maintenance which will carry traffic until the unit is reconstructed, starting early next year. However, the width and slopes make removal operations on this section more difficult than elsewhere on the road.

Snow removal work requires not only proper equipment and organization, but also proper facilities for caring for both men and equipment. The cold weather and constant strain from removing wet or frozen snow causes frequent breakdowns of equipment. Lack of repair facilities and spare parts at

Front view of an auger blower type rotary plow boring its way through the drifts on the Donner Grade.

Plan Made Feasible

An appreciation of these facts has caused the Maintenance Department to approach the problem with care and without undue optimism as to the ease of the task. As indicated above, information has been collected and experience gained during the past five years, anticipating the time when the work might be undertaken with fair prospects of success. When the plan was first considered, the road was of a comparatively low standard. It was unsurfaced, with sharp curves, steep grades, and many miles of narrow roadway.

Crews and Motors Man Four Stations

(Continued from preceding page)

Rear view of auger blower rotary clearing a wide swath through the Donner Summit forests.

the scene of action means a snow-blocked road. This side of the work has been brought forcibly to attention during several storms of the past two winter seasons.

The housing and shop facilities now available to carry on the work on this road are as follows:

COLFAX—At Colfax there is the regular maintenance station, which is headquarters for the Maintenance Superintendent. There is a standard bunk house and office and an eight-stall truck shed with oil house and blacksmith shop.

Truck Shed Heated

EMIGRANT GAP—At Yuba Pass Station, three miles east of Emigrant Gap, there is a truck shed 40' by 143' in size and a bunk house capable of housing sixteen men. The truck shed is sealed and a steam heating plant installed to heat not only the bunk house but the truck shed as well. Provision for making minor repairs to equipment is included in the truck shed layout at this point.

DONNER SUMMIT—The main headquarters of the snow removal work is located at Donner Summit about seventeen miles from the Yuba Pass maintenance site. The truck shed at this point is of the roundhouse type and includes a repair shop with pits and tools to handle major equipment repairs. A sixteen-man bunk house, similar to the Yuba pass layout, is connected to the truck shed by a covered passage. Both of these buildings are constructed to withstand the coldest weather and are steam heated.

TRUCKEE—At the Truckee Maintenance Station there is a 30' by 100' truck shed with steam heating plant, a standard oil house, and dwelling which is used as a bunk house.

The snow removal on the section of road from west of Colfax and east to Airport is handled from the Colfax site. The equipment assigned here consists of two 3½-ton trucks equipped with 10 foot straight blade push plows, and a dual drive tractor grader equipped with a 10-foot grader blade and "V" type plow.

Heavy Equipment

The crew at the Yuba Pass Station removes snow from Airport to a point midway between that station and Donner Summit. Their present equipment consists of one "V" type and two straight blade speed plows mounted on heavy four-wheel drive trucks, as well as one auger blower type of plow mounted on a 5-ton four-wheel drive truck.

The outfit at Donner Summit handles the section from nine miles west of the summit to the junction with the Tahoe City road, a short distance west of Truckee. The equipment here consists of one "V" type and two straight blade one-way speed plows, all mounted on 3½ ton four-wheel drive trucks, together with a shovel type rotary plow with "V" type blade mounted on a four-wheel drive truck and, in addition, an auger blower type of plow similarly mounted.

The Truckee crew removes snow on the section of road immediately west from Truckee to the State line and, in addition, takes care of the road between Truckee and Tahoe City, as well as a portion south of Tahoe City on the west side of Lake Tahoe. A truck shed and living quarters are also available at Tahoe City as an auxiliary to the Truckee layout. The equipment operated out of Truckee consists of two straight blade push plows and one shovel type rotary plow, all mounted on 3½ ton trucks.

Start With Storm

Effective snow removal work requires that the equipment start with the storm and continue until

Shovel rotary type truck plow doing its stuff on the Ridge Route near Caswells in Los Angeles County.

the storm has ceased and the road is clear. This means that the crews must be ready and equipment serviced, all in readiness for continuous operation for the duration of the storm. This fact accounts for the care and expense taken for the comfort of the men and facilities for housing and care of equipment.

Early in November, two sets of gates were erected across the highway—one at Airport and one just west of Truckee. Watchmen's shanties were in place

(Continued on page 38)

This is the fifth of a series of articles on the State's water problem. The first dealt with Governor Rolph's call for the united efforts of all sections of the State to help reach a solution. The second, third and fourth articles described, respectively, the situation in Sacramento Valley, Sacramento-San Joaquin Delta, Los Angeles and San Joaquin Valley regions. This is the first installment of the article discussing estimated costs of the immediate initial and complete initial developments of the State Water Plan for the Sacramento-San Joaquin Valley project. The second installment, dealing with the anticipated revenues and possible methods of financing the project, will appear in the next issue.

By A. D. EDMONSTON, Deputy State Engineer

IN EVOLVING a program for any project, whether it be a private or public enterprise, the financial feature is generally most important and one which should be most closely scrutinized. The capital and annual costs of the project and the anticipated revenues therefrom which would accrue to the project from its inception to the time when the project would be completely paid for are highly important and necessary features which should be ascertained as accurately as possible before the project is declared economically sound and financially feasible.

In Bulletin No. 25, "A report to the Legislature of 1931 on State Water Plan," issued by the Division of Water Resources of State Department of Public Works, and prepared under the direction of Col. Walter E. Garrison, Director of Public Works and Edward Hyatt, State Engineer, three projects are proposed for immediate development, namely; Colorado River Aqueduct, as outlined by the Metropolitan Water District of Southern California, Santa Ana River project and Great Central Valley (Sacramento-San Joaquin Valleys) project.

PROJECTS ADVANCED

Steps have been taken toward the construction of the first two projects. The Metro-

politan Water District of Southern California, on September 29, 1931, voted bonds in the sum of \$220,000,000 to bring water from the Colorado River. The Legislature of 1931, appropriated \$400,000 of state money to be matched by funds from San Bernardino, Riverside and Orange counties which would be used for the conservation and utilization of the flood waters of the Santa Ana River and its tributaries and for flood protection.

The California Water Resources Commission, appointed by Governor James Rolph, Jr., and the Joint Legislative Water Committee are studying the financial as well as other phases of the State Water Plan, including those of the Great Central Valley (Sacramento-San Joaquin Valleys) project. In this article, the discussion will be confined to the financial aspects of the latter project.

The project proposed for initial development in the Great Central Valley has been set up as a progressive development. It has been proposed to finance the entire project but defer construction of two of the units until such time as it may be necessary and desirable to build them. The first step is designated as the immediate initial development and the next step, which includes the two deferred units as the complete initial development.

Initial Water Plan Cost Estimates

(Continued from preceding page)

IMMEDIATE UNITS

The construction and operation of the units proposed for immediate development would solve the navigation and irrigation problems on the Sacramento River, salinity problem in the Sacramento-San Joaquin Delta and water supply problem in the industrial and agricultural areas on the south shore of Suisun Bay and relieve the stress in the irrigated areas in the Upper San Joaquin Valley.

The construction of the two deferred units would permit the delivery of additional water supplies to the Upper San Joaquin Valley for replenishment of underground storage, for perfecting the supplies in those areas in which there has been a temporary deficiency in surface supplies and the expansion of irrigated acreage when desired. It also would afford an opportunity for the restoration of navigation on the San Joaquin River for a distance of more than 90 miles.

COST OF THE PROJECT

In estimating the cost of any project, two factors are of prime concern. One is the prices paid for construction materials, labor, rights of way and water rights, and the other, the cost of money which is borrowed to finance the project. The costs of the first items are of more importance than is the second in the effect on the capital or first cost, because they represent about nine-tenths of the total whereas the second item only represents about one-tenth because of the relatively short period of construction. On the other hand, the interest charges, after the completion of the project, represent from one-half to three-fourths of the total annual charges.

The estimated costs of the physical works for this project are based on the costs of labor and material which prevailed in 1928 and 1929 and are somewhat higher than those prevailing at the present time. The interest rate for state financing was assumed at $4\frac{1}{2}$ per cent per annum which is about $\frac{1}{2}$ per cent higher than the rate which has usually prevailed but is about the rate for recent State bond issues.

The items for the immediate and complete initial developments are shown in the following tabulation. The figures include 25 per cent of direct costs for overhead charges and contingencies and interest at $4\frac{1}{2}$ per cent per annum during the period of construction.

Item	Capital Cost	
	Immediate Initial Development	Complete Initial Development
Kennett Reservoir, dam and power plants.....	\$84,000,000	\$84,000,000
Sacramento-San Joaquin Delta Cross Channel (deferred).....	-----	4,000,000
Contra Costa County Conduit.....	2,500,000	2,500,000
San Joaquin River Pumping system (deferred).....	-----	15,000,000
Friant Reservoir, dam and power plant.....	15,500,000	14,500,000
Madera Canal.....	2,500,000	2,500,000
San Joaquin River-Kern County Canal.....	27,300,000	27,300,000
Magunden-Edison Pumping System.....	100,000	100,000
General Expense and Water Rights.....	7,000,000	7,000,000
Totals.....	\$138,900,000	\$157,900,000

In order to show the effect of different rates of interest on the capital cost of the project, the following tabulation has been prepared for six rates as follows:

Annual Rate of Interest in per cent	Capital Cost Without Deductions for State or Federal Contributions	
	Immediate Initial Development	Complete Initial Development
3	\$134,500,000	\$152,900,000
$3\frac{1}{2}$	136,000,000	154,700,000
4	137,400,000	156,200,000
$4\frac{1}{2}$	138,900,000	157,900,000
5	140,400,000	159,600,000
6	143,300,000	162,900,000

A review of the figures in the foregoing table shows that a saving of \$4,400,000 could be made in the capital cost of the immediate initial development if the interest rate were reduced from $4\frac{1}{2}$ to 3 per cent per annum and that there would be an added cost of \$4,400,000 if the interest rate were increased to 6 per cent per annum. These differences in capital cost due to the use of 3 and 6 per cent interest rates instead of $4\frac{1}{2}$ per cent, represent about 3 per cent of the capital cost based on a $4\frac{1}{2}$ per cent rate. The corresponding differences in the capital cost for the complete initial development represent about the same per cent.

FEDERAL-STATE CONTRIBUTIONS

The foregoing estimates of the project are gross total costs without allowances for contributions from any source. In connection with the Kennett unit, contributions from both the Federal and State Governments may well be expected. In House Document No. 791, 71st Congress, 3d session, the Chief of Engineers of the War Department, recommends that the Federal Government contribute \$6,000,000 directly to the construction of the Kennett Dam in the interest of navigation on the Sacramento River.

Additional contributions from the Federal Government in the interest of flood control on Sacramento River and navigation and flood control on San Joaquin River could be anticipated which would reduce further the capital cost of the project. Also, it is generally assumed that the cost of relocating the State Highway at the Kennett Reservoir would be paid out of State Highway funds. The estimated cost of this work is \$3,400,000. The capital costs of the project with deduction for probable Federal and State contributions totaling \$9,400,000 would be as follows:

Annual Rate of Interest in per cent	Capital Cost With Deduction for Federal and State Contributions	
	Immediate Initial Development	Complete Initial Development
3	\$125,100,000	\$143,500,000
$3\frac{1}{2}$	126,600,000	145,300,000
4	128,000,000	146,800,000
$4\frac{1}{2}$	129,500,000	148,500,000
5	131,000,000	150,200,000
6	133,900,000	153,500,000

ANNUAL COSTS

The annual costs in operating the project would include the following items:

1. Interest on invested capital.
2. Amortization of investment.
3. Depreciation of physical works.
4. Operation and maintenance charges.

(Continued on next page)

U. S. Contribution Set at \$6,000,000

(Continued from preceding page)

The gross annual costs for rates of interest varying from 3 to 6 per cent per annum are given in the following tabulation. It was assumed in estimating these annual costs that an aggregate direct contribution to the project of \$9,400,000 would be made by Federal and State governments and it was assumed also that sinking fund bonds would be issued, which would be amortized in 40 years.

Annual Rate of Sinking Fund Interest in per cent	Interest Rate in per cent	Gross Annual Cost (40-year Amortization Period)	
		Immediate Initial Development	Complete Initial Development
3	3	\$6,416,000	\$8,676,000
3½	3½	7,333,000	9,748,000
4	4	8,241,000	10,791,000
4½	4	8,982,000	11,660,000
5	4	9,737,000	12,543,000
6	4	11,284,000	14,345,000

In the foregoing estimates, the gross annual costs are based on sinking fund bonds which would be amortized over a period of 40 years after completion of the project. If the amortization period were extended over a longer time the annual cost of the project would be substantially reduced. The State constitution permits the issuance of State bonds for a maximum maturity of 75 years.

DEPRECIATION FUND

There are included also in the estimates, amounts for the depreciation of the physical works. These amounts vary with the lives of the respective structures, but in all cases, the sinking fund established would be adequate to replace any particular structure at the end of its estimated life.

By providing such a depreciation fund, it might be possible to omit the inclusion of the provision for amortization of the capital investment. Such a procedure, however, would result in the issuance of refunding bonds, which, in the case of financing by State bond issue, would require an amendment to the State constitution.

The following table gives the annual costs of both the immediate initial and complete initial developments, calculated on State financing at a 4½ per cent interest rate with 75-year sinking fund bonds amortized over a 70-year period, and with refunding bonds. Direct contribution of \$9,400,000 from Federal and State governments was considered to have been made.

	Capital Cost	Gross Annual Cost Interest at 4½ per cent and 75-year sinking fund bonds	
			Interest at 4½ per cent and refunding bonds
Immediate Initial development.	\$129,500,000	\$7,975,000	\$7,622,000
Complete Initial development.	148,500,000	10,505,000	10,101,000

After all, the difference between learning to drive a car and learning to play golf is simply that when you are learning to play golf you don't hit anything.

Second garage mechanic: "An old timer?"

First garage mechanic: "Naw, a new generator."—*Motor Land.*

Good Use Found For the Maligned Back-seat Driver

The back-seat driver, while regarded as a meddling nuisance by many motorists, has at last found a strong and authoritative champion.

This defender is no less than Dr. Miller McClinton, director of the Erskine Traffic Bureau at Harvard University and formerly of San Francisco, who says that the inactive driver provides "four eyes instead of two and two attentions instead of one."

The Erskine Traffic Bureau specializes in surveys of new problems growing out of the automobile in modern life. The director claims that increasing speeds and the steadily growing number of cars on the highways make more and more eyes necessary. But what is needed is coordination of the front and back-seat drivers.

They should develop teamwork, the director says. Instead of "razzing" the one at the wheel and shouting at him, the rear pilot should serve in an advisory capacity, if the best results are to be obtained from their combined faculties for safety.

Moynahan Assistant Highway Patrol Chief

George F. Moynahan, veteran member of the State traffic force and a police officer for more than twenty years, has assumed his duties as Assistant Chief of the California Highway Patrol.

Moynahan, whose appointment was made by Chief E. Raymond Cato with the approval of Daniel J. O'Brien, Director of the Department of Motor Vehicles, and confirmed by Governor James Rolph, Jr., succeeds H. R. Youngblood, resigned.

The appointment was promotional in character, Moynahan having been serving as Assistant Supervisor of Traffic.

"Is there any truth in the report that Angus McTavish bought the corner filling station?"

"Well, I don't know for sure, but the 'free air' sign has been taken down."

Santa Claus Gives Governor Rolph a Beautiful Airplane

GOVERNOR JAMES ROLPH, JR. stole the limelight from Santa Claus at the afternoon Christmas tree party given to the children of the Department of Public Works "family" and in the evening led the dance for the grown-ups with Mrs. Rolph as his partner.

Children are a never-failing source of delight for the Governor wherever and whenever he meets them and he in turn has a happy faculty of fraternizing with them like a jolly big brother. He helped Santa Claus despoil the big Christmas tree of its bright baubles, toys and candies and had a merry time handing out gifts to the "family" children numbering nearly a thousand.

SURPRISE FOR GOVERNOR

Then Santa Claus turned the tables on the Governor. Pushing aside the thickest branches of the tree he extricated a large blue and gold airplane and presented it to "Sunny" Jim. The sides of the plane were decorated with the name "James Rolph, Jr." The Governor was as surprised and happy as any of the kids. The arrangements and expenses of the festivities given at the Elks Temple were handled by a committee of 150 hosts and hostesses comprised of Department of Public Works officials and their wives. A women's committee of 20 supervised the children's party, buying and wrapping all the gifts, toys and candies and regaling the tots with all the ice cream they could eat. Excess toys and goodies were later given to charitable organizations. The tree and pine garland decorations were provided by the Donner Summit maintenance crew of snow fighters.

In the evening the older folks enjoyed themselves with dancing and cards till the wee small hours. The first annual Christmas Party of this "one big family" of the Department of Public Works will go down in history labeled "a great success" with earnest wishes for many happy returns of the day.

OVER HISTORIC ROUTE

Country dotted with crumbling ruins of stage line stations and post offices of the pony express era half a century ago will be made more accessible to motorists by Riverside county's newly announced highway program in the Aguanga-Anza-Temecula region.

Commission Allots Cooperative Funds to Several Projects

(Continued from page 6)

trict of Ventura County protested against the location of the alternate Ridge Route in Piru Canyon on the ground that it passes through the Piru reservoir dam site. Mr. Hardison was heard in detail at great length on the matter.

In response to a request from City Attorney D. B. Roberts of Holtville that the State contribute to the paving of a portion of Palm avenue on the State highway from Yuma to El Centro through Holtville, about a block in length, at an estimated cost of \$1,590 for a 24-foot pavement, the Commission agreed to cooperate to that amount on motion of Commissioner Tetley.

COOPERATION GRANTED

A request of the Commission of the city of Fresno for a cooperative contribution of \$70,000 as the State's share in the construction of a subway under Southern Pacific tracks at Belmont crossing presented by Jean Vincenz, Commissioner of Public Works was granted on motion of Commissioner Hopkins.

Preceding the Los Angeles meeting the directors of the Automobile Club of Southern California entertained Commissioners, Director of Public Works Garrison and State Highway Engineer Purcell at dinner in the club headquarters building on Thursday evening. Following the session on Friday the Commission with members of the legal, engineering and clerical staffs attended the annual banquet and dance of the Los Angeles Chapter of the State Employees Association at which Governor Rolph was the guest of honor.

RISE OF REGISTRATION

The rapid rise of the motor vehicle since the beginning of this century is clearly shown by comparative automobile registration and population figures, according to statistics received by the California State Automobile Association. The population of the United States in 1900 was approximately 89,000,000 and the automobile registration only 8000. At the beginning of 1931 the population was 120,000,000, in round numbers, while the motor vehicle registration had grown to more than \$26,000,000.

Prospective Maid: I'd like to work for you, ma'am, but you've only got a two-car garage. Where'd I put my car?

Mistress: Oh, well, you'd never do at all. We're in the habit of employing only servants who have their private chauffeurs.

Coast Highway Projects Completed or Under Way in Four Counties

By L. H. GIBSON, District Engineer

ON THE COAST HIGHWAY in San Benito County, from the Monterey County line to the San Benito River, 5.5 miles in length, a new road is being constructed via the Pinate Rocks. The roadbed is thirty-six feet wide, with a twenty-foot Portland cement concrete pavement. This project, with a portion of the road in Monterey County 11.1 miles in length just being completed, will eliminate the old San Juan grade from the main Coast Highway.

Within the limits of the above work, a new reinforced concrete bridge across San Juan Creek and a new steel and reinforced concrete bridge across the San Benito River are under construction.

On the lateral highway from three miles north of Hollister to the Pacheco Pass road the road has been resurfaced with bituminous treated crushed stone surface.

Monterey County

A new steel and reinforced concrete bridge across the Salinas River at Bradley has been completed. The approaches to this bridge, 0.5 miles in length, are now under construction. The roadbed is 36 feet wide with a 20' Portland cement concrete pavement.

On the Roosevelt Highway along the coast between Rocky Creek and the San Remo Divide, the old road taken over by the State from Monterey County will be replaced by a new roadway now being constructed. The roadbed is 24 and 30 feet in width, with a selected material surface 20 feet wide by 8 inches thick.

On the Roosevelt Highway south of Carmel three reinforced concrete arch bridges are under construction at Garrapata Creek, at Granite Creek and at Bixby Creek. These bridges are all under the supervision of the Bridge Department.

San Luis Obispo County

On the Coast Highway north of Paso Robles a reinforced concrete bridge across San Marcos Creek has been completed under the supervision of the Bridge Department.

Work has been completed on 9.8 miles of the Coast Highway between Atascadero and

one and one-half miles south of Santa Margarita. The roadbed is 36 feet wide with a 20-foot asphaltic concrete pavement.

On the Coast Highway between Arroyo Grande and Los Berros Creek the road is being reconstructed with a 36-foot roadbed and a 20-foot reinforced Portland cement concrete pavement. New bridges across Arroyo Grande Creek and Los Berros Creek will be advertised soon to complete this project.

Surveys and plans are complete for the reconstruction of the Roosevelt Highway between Cambria and San Simeon.

Santa Barbara County

A major change of line is under construction on the Coast Highway between Los Alamos and one and one-half miles south of Santa Maria on a route through Solomon Canyon. The roadbed is 36 feet in width with a 20-foot reinforced Portland cement concrete pavement. The portion from Los Alamos to two miles north of Solomon Summit, 9.7 miles in length, is under way and bids on the portion from two miles north of Solomon Summit to one and one-half miles south of Santa Maria, six miles in length, were received on November 25, 1931. The road is very close to an air line between Los Alamos and Santa Maria and will be several miles east of the town of Orcutt.

Oiled rock borders on each side of the concrete pavement have been constructed on the Coast Highway between Gaviota Canyon and Teecolote Creek, a distance of 9.6 miles.

Work has been completed on surfacing with crusher run base and oiled rock surface 18 and 20 feet wide, 38 miles of the Cuyama lateral from the second crossing of the Cuyama River to the Kern County line.

Retail spending for automobiles and accessories ranks second only to food in the average family budget, according to reports of the Department of Commerce. Nearly 20 cents out of each dollar spent in retail establishments in 1929 went for automobiles or automotive products, it is revealed. The per capita sales of retail food stores amounted to \$92, while an average per individual during the year for automotive products was \$78.

Then there is the fellow who already thinks he knows the sure substitute for gasoline. He calls it shoe leather.—*Texas Highways*.

BOLD BANDITS of the olden days lurked in these picturesque Pincate Rocks located on a portion of the new road being built in San Benito County to eliminate the tortuous San Juan Grade. Bandit Rock, the conical mass in the foreground provided them a natural vantage point for a lookout. The new road has been carefully aligned to preserve all the scenic and historic values of the locality.

Courtesy An Aid to Safety on Highways

Highway courtesy, such as granting the right of way, signaling for turns and stops, having lights in proper adjustment, and remaining a safe distance behind the car ahead, will go far toward reducing the toll of deaths and injuries, according to a statement by the Public Safety Department of the Automobile Club of Southern California. An analysis of driving faults which contributed to automobile accidents in 1930 is cited in support of the statement.

More than 30 per cent of those involved in accidents last year did not have the right of way. This circumstance alone caused 173,909 accidents and resulted in 4085 fatalities and the injury of 202,795 persons.

Failing to give signals caused more than 7 per cent of the 1930 accidents, while cutting in caused a similar proportion of smashups.

Follow other vehicles only as closely as is reasonable and prudent and will permit you to stop safely if an emergency or other unusual condition is met on the road.

Jerry—I hear you've been studying for months how to increase your salary. How did it turn out?

Freddy—Poorly. The boss was studying at the same time how to cut down expenses.—*Chelsea Record*.

Two Billions Plus Saved by Surfacing

Allowing 15 miles travel on a gallon of gasoline, the 15,000,000,000 gallons consumed in 1930 carried motor vehicles 225,000,000 miles, according to the American Road Builders' statistical department. If half the travel is on the 700,000 miles of surfaced roads and the saving is 2 cents a mile, the saving to the public each year amounts to \$2,500,000,000, a sum in excess of the amount expended on highway maintenance and capital investment in better roads.

She drives a pretty car.
Does pretty reckless Maizy,
And another thing she drives,
Is other drivers crazy.

CALIFORNIA CARS INCREASE

California is one of the eight states out of 36 reported showing an increase in passenger car registration during the first six months of this year as compared with a similar period in 1930. Other states sharing in this indicated return of better business conditions include Connecticut, Florida, Maine, Maryland, Massachusetts, New Jersey, and Rhode Island.

"Doesn't anybody know anything about this car?" asked the stalled motorist in exasperation.
Bystander: "Nothing but some bum jokes."

"Why Not a Minor Improvement?" Says Engineer at a Loss for Funds

By H. A. WATERMAN, Assistant Construction Engineer

IN THE reconstruction budget for each biennium, there is always included an item which has varied from \$1,000,000 to approximately \$1,500,000 for minor project allocations, or what are more commonly known as "Minor Improvements." While most unassuming in title, these funds are of extreme importance to State highway operations and are rapidly increasing in popularity with the district engineers as time goes on.

Because of the nature of the work, the Construction Engineer has always been held responsible for the administration of this money and the results obtained; whereas the work is actually performed, for the most part, by maintenance forces, which are in a sense loaned to the Construction Department for the time being for that purpose.

MINOR IMPROVEMENT DEFINED

When the idea was first put into practice, it was necessary for the Construction Department to do considerable missionary work to see that the projects proposed by the districts came truly within the definition of such work, and that they were not confused with general or specific maintenance. While a certain amount of overlap with the latter is unavoidable, the Construction Department has always adhered strictly to the definition as outlined by the American Association of State Highway Officials, for "Additions and Betterments," which, in effect, is that such work must always add to the capital investment in the highway system and should not be temporary in nature.

Installations of new culverts or lengthening existing ones, widening and day-lighting dangerous mountain roads, placing the higher type of pavement borders, constructing short sections of highway on new alignment, etc., are typical examples of this type of improvement. At the present time, the funds expended on minor improvements are coming in particularly handy to certain of the districts in assisting the unemployment relief being conducted by the Division of Highways through the Maintenance Department. Authorizations for such work, however, are allowed only when it can be classed strictly as minor improvement.

TENTATIVE PROGRAMS REQUIRED

After the approval of the highway budget by the Legislature, the total amount of the minor project allocation shown in the reconstruction budget is apportioned to each district in accordance with its needs, as indicated by work done in previous years. Individual allotments are then authorized as requested and in line with yearly programs submitted in advance to the Construction Department. The districts are not required, however, to adhere exactly to these programs, providing emergencies arise, or more important work must be substituted for that originally planned. Proper explanations for the latter procedure, however, are always required.

The size of the allotments varies from a few hundred to as high as thirty or thirty-five thousand dollars, but, in general, the larger projects are not looked upon with favor, and, if such allotments are made, the work is let to contract, if possible, rather than performed by day labor forces, as heretofore explained.

Projects costing in the neighborhood of \$5,000 are more in agreement with the Minor Improvement policy, and the average of the projects throughout all the districts is generally not far from that figure. During the eighty-first-eighty-second biennium, for example, a total expenditure of \$1,006,660 was authorized, distributed among 254 work orders; the average being \$3,963 per project.

POPULAR WITH ALL

When one considers the flexibility of these funds, and the fact that there is nowhere else in the budget to which a district engineer can turn for small unbudgeted construction expenditures, arising either as emergencies or simply because they have been inadvertently overlooked, it is no wonder that minor improvements are popular. And small as the projects are in comparison with the usual run of highway contracts, there is no part of the biennium set-up so well adapted to correcting small and oftentimes irritating defects in the highway as the Minor Improvement fund.

Strangely enough, these small projects seem to make a great impression on the average motorist.

SURE TO PLEASE motorists, is this minor improvement on the State highway near Deadman's Springs, Amador County, where a sharp open curve was flattened out for safer driving.

"BLIND BUT DANGEROUS" would have been a fitting warning sign for this curve on the State highway east of Jackson, Amador County, before a rectifying operation classed as a minor improvement corrected it.

A FLOOD VICTIM, this culvert in Orange County, though widened and deepened, was almost washed out.

NOW IT STANDS UP, having been rebuilt as a minor improvement without interrupting traffic.

Many Notable By-Pass Routes Cited

(Continued from page 14)

The streets and roads in the area where business establishments have congregated are there primarily for the service of the customers of these establishments—local traffic. This traffic, by the manner in which it moves and operates, causes more or less congestion depending on the capacity of the street and the bargains offered. Why then force through traffic—one requiring entirely different accommodations—on to the streets designed and devoted to the purpose of serving business? It only interferes with and hinders local traffic, must consequently detract from the volume of business transacted and occasions delay and aggravation to through traffic.

Widening the artery is only temporary relief—a palliative, not a cure. Widening introduces additional complications involving pedestrians and cross traffic. Separation of the two types of traffic is indicated as the proper ultimate solution. It will result eventually, if not by planning, then by a gradual change in the character of business.

As through traffic increases and finds no other provision for its accommodation, it discourages local traffic and finally forces it and the business supported by it from the thoroughfare.

Planning and designing a separation of these classes of traffic is certainly much more desirable than creating economic loss. The first, local traffic, is already provided for. The logical plan then is to make additional provision for the second, through traffic. Its requirements are freedom from congestion and interference, directness, speed.

BY-PASS LOGICAL

The by-pass route is the logical solution. The by-pass does not necessarily mean the by-passing of the entire community. It means a route which will avoid the congested areas, direct and free from interference. There should be afforded ample opportunity to enter or depart to or from the business and commercial area for vehicles desiring to do so.

The by-pass road should probably diverge from the main thoroughfare entering the congested area at a point which will avoid the bulk of the local traffic.

Various types of by-pass routes have been constructed and are in use today. A notable

example is the main highway from St. Louis to Kansas City. Practically every town along the route is by-passed for through traffic and, at the same time, easy access is provided for traffic to reach these communities. In our own State we have numerous examples. The Newhall-Saugus by-pass route, avoiding the smaller towns of Newhall and Saugus, saves a distance of at least four miles for the through traveler. A by-pass of the town of Carlsbad, on the Coast Highway between Los Angeles and San Diego, takes through traffic out of the congested area and, at the same time, effects a marked improvement in alignment. By-pass of the business district in Dixon not only avoids the congested main street but also eliminates two hazardous railroad crossings of a main line railroad.

Mr. E. E. East, Chief Engineer of the Automobile Club of Southern California, suggests the following as a basis for studies having to do with by-passing a city or town:

BASIS FOR STUDIES

"For a town of appreciable size, our studies have developed the following facts, which in most instances may be taken as the basis for studies having to do with by-passing any particular city or town.

First, by far the greater number of all vehicles entering or leaving any given town or city are local.

Second, these local vehicles are entering the town or city for the purpose of transacting business, or as their destination.

Third, this local travel entering and leaving the city, together with vehicles operating within the city boundaries, represents the automobile purchasing travel, and as such should be afforded a maximum of convenience.

Fourth, the remainder of the motorists have a destination in view, and forcing them down 'Main Street' inconveniences purchasing travel, to the ultimate loss of business on the street."

The Automobile Club of Southern California has analyzed traffic movements in Los Angeles County. Dividing the county into five concentric areas, observing and analyzing movements of motor vehicles over the several boundaries, they found:

"The movement during the year 1930, expressed in number of vehicles daily, is in round numbers as follows: in and out of the county, 75,900; in and out of the metropolitan area, 305,900; in and out of the residential area, 705,700; in and out of the outer congested area, 618,700; in and out of the central business area, 531,500. Cars entering the county represent about 11 per cent of those entering the residential area."

Action Needed to Secure Coast Routes

(Continued from preceding page)

PRESENTS PROBLEM

Here is presented a problem for consideration of the county or regional planning commission. The large volume of traffic encountered at the outskirts of the city in what is still urban area must be collected or dispersed. It must be brought to or carried away from the main highway, the State highway, leading to other centers of population. Provision must be made to send it expeditiously to the destinations which it desires to reach.

If our main thoroughfares, designed for the expeditious movement of traffic over long distances, are to continue to function in that capacity, the improvements and establishment of enterprises along the highway should be so controlled that the minimum interference will result. Establishing setback lines may be one remedy, at least a preventive.

A plan of highway improvement, such as is being considered for a section of State highway in Santa Barbara County through Montecito, offers an excellent solution. Essentially, it is planned to carry through traffic on the central portion of the right of way and to provide for local traffic on side roads separated from the through traffic lanes by planted parking strips.

ZONING POSSIBLE

Zoning restrictions may be the means which will prevent the conversion of the highway into a congested business street at least so long as it does not hinder the natural growth and development of the territory. When the natural development envelopes a section of highway to such an extent that it must be given over to business, a by-pass road for through traffic should be ready for relief of congestion.

To preserve the aesthetic values, regulations of the character of improvement are needed. Hot dog shacks, dilapidated, fantastic structures housing every kind of enterprise certainly do not soothe the eye, although their products may temporarily cheer the stomach. The State and federal government are cooperating for the preservation of scenic, aesthetic and recreational values through the national forests.

A policy recently promulgated by the national Forest Service contemplates ac-

complishment of this object by reserving a 400-foot wide strip of land along the highway on which no encroachments will be permitted. Special use permits, issued for locations along the highway, will provide restrictions and regulations concerning the type of improvement to be installed.

COAST VALUES LEAPING

Reference to scenic and recreational values suggests another matter of interest: California has a thousand miles of coast line wonderfully beautiful and picturesque. If properly preserved and developed, it will be of great value to the people of this State.

Along one of the State highways, sections of this coast have reached the astounding value of \$1,000 and more per foot of ocean front, or \$5,000,000 per mile. Speculators, inspired by these values, are buying up attractive sections of coast ahead of highway construction. Establishment of such values forces acceptance of location and alignment decidedly inferior to what might be obtained if timely action is taken. There is still opportunity along many miles of coast to obtain a location for highways returning maximum value to the public, but such action must not be too long delayed.

In the planning and designing for these various needs, one of the most important factors is a thorough and definite knowledge of traffic movement. It is not sufficient that we know only the amount, but we should also determine the origin, destination and character. Such data are most vital in determining the location, standard, character or type of the highway.

RESPONSIBILITY REALIZED

The problems above briefly outlined have come to our attention as those in which the State, the cities and counties have a common interest. Their solution requires cooperative action. Existing legislation makes it possible for local authority to amplify State efforts and to protect the rights of the public.

The State Division of Highways realizes that its responsibility does not cease when it has built the State highway to the city's door. But it also realizes that the local planning commission is in closer touch with the needs of its community.

At the Second Pillar of Architecture

By **FREDERICK M. GREEN**, Assistant Structural Engineer

THE THREE great pillars that support architecture may be named Wisdom, Strength and Beauty.

The architect by wisdom contrives the plan of the building to the end that it may serve the purpose for which it is intended. In

modern parlance this element of the design is called Utility.

Strength has reference to the stability of the structure; the capacity of the foundation soil to sustain the weight of the building, the capacity of each column, beam and girder safely to carry the loads imposed upon it, the ability of the materials entering into the structure to resist wear after year the stresses induced by the loads imposed.

Frederick M. Green

BEAUTY AND STRENGTH

Beauty—well we all know what beauty is—but who shall succeed in expressing in mere words that intangible elegance and harmony that we call beauty.

It is the duty of the structural engineer to attend at the second pillar, that called Strength. The architect must be left free to solve the problems of utility and, as an artist, to capture and imprison in the dense matter of the building as much of beauty as circumstances permit. It is the function of the structural engineer to design a structure that will embody in the form conceived by the artist, the strength needed to sustain that form.

ALWAYS A PROBLEM

At a wedding the bride is supposed to wear "something old and something new, something borrowed and something blue." Some architectural designs are a bit like that. Often they contain something old, something new, and something borrowed—and sometimes something blue, but in the kaleidoscopic com-

The Thinker

Back of the beating hammer
By which the steel is wrought,
Back of the workshops' clamor
The seeker may find the thought.
The thought that is ever master
Of iron and steam and steel,
That rises above disaster
And tramples it under its heel!

The drudge may fret and tinker,
Or labor with lusty blows,
But back of him stands the thinker,
The clear-eyed man who knows:
For into each plow or saber,
Each piece and part and whole,
Must go the brains of Labor
Which gives the work a soul!

Back of the motor's humming,
Back of the belts that sing,
Back of the hammer's drumming,
Back of the cranes that swing,
There is an eye which scans them,
Watching through stress and strain,
There is a mind which plans them—
Back of the brawn, the brain!

Might of the roaring boiler,
Force of the engine's thrust,
Strength of the sweating toiler,
Greatly in these we trust,
But back of them stands the schemer,
The thinker who drives things through;
Back of the job—the dreamer,
Who's making the dream come true!

—By **BERTON BRALEY**
—in *California Engineer*

bination of these old and new, there results always a new problem for the structural engineer.

As no two artists ever dreamed the same dream, so no two building designs are ever exactly alike. The variety is infinite. There is always something new to which the basic principle of structural engineering must be applied, always a new search for the answer to the problem "How to make the artist's dream come true" to the end that neither weight nor load, wind nor shock, heat nor cold, or any other thing shall prevail against the strength of the building but rather that it shall stand for all the years of its usefulness—a safe and serviceable creation.

Major Projects Reaching Completion

(Continued from page 12)

opened December 23. With the paving of this section, the project will present a modern pavement from Sacramento to the State line near Reno.

The Governor's relief employment program, financed by an allocation of \$1,500,000 for extra maintenance work, is well under way. With variations in totals due to personal or local conditions, between 3200 and 3600 men have been given employment and the quotas are now in the process of being brought to their maximum of 4000.

ARCHITECTURE DIVISION

The year's story of the Division of Architecture is one of activity. A condensed statement shows:

By December 30, the Division of Architecture will have had under actual construction since January 1, 1931, a total construction of \$8,225,617, representing 177 projects.

At this time, December 16, 115 of these projects have been completed at a construction value of \$4,420,098.

During the current month, the Division of Architecture will have placed on the bidding market, building projects of a construction value in the total of \$1,194,000. These will include the new hospital building for the Veterans' Home.

In January, bids will be called on projects having an additional construction value of \$681,000.

WATER DIVISION ACTIVITIES

As a result of a ten years investigation of the water resources of California, the State Engineer filed a summary report on the State Water Plan with the 49th Session of the California Legislature, accompanied by texts of supplementary reports containing the detail and bearing on water resources conditions in various sections of California.

One of Governor Rolph's first declarations was that the water problem is paramount.

In furtherance of the State water conservation plan, and following up the results of ten years investigation of resources, the Governor appointed a water conservation committee of seven members to proceed at once to Washington and confer with the federal authorities with the view of securing their cooperation with the State government. The committee proceeded to Washington in Febru-

ary. The result of their efforts was reflected in the tour made through California by the congressional committee on appropriations for the Department of the Interior. The congressmen were attended by several federal officials and members of the legislative committee, and during July, traversed the State from south to north.

COMMISSION APPOINTED

Two months later a corps of U. S. engineers for rivers and harbors made a close inspection of the situation. Anticipating the need of enabling legislation for the State plan, the Governor appointed the California Water Resources Commission, with six ex-official members from among State officials. Likewise, the Governor appointed sixteen honorary advisory committees representing practically all interests and localities.

In addition to these bodies, a joint legislative committee of fourteen members has been in collaboration with the commission appointed by the Governor. The meetings have been harmonious, and it is believed that constructive progress has been made.

The Water Resources Division is not a State disbursing agency. The work of its staff is advisory and supervisory. However, they pass on a vast amount of work financed by corporate and private investors.

During 1931, dams proposed carried an estimated cost of \$19,000,000. Since August 1929, the staff has passed on about \$34,000,000 of this class of improvements. During the same period, 787 dam applications have been offered for approval, and 214 applications for repairs or alterations. Of these, 181 have been approved. For the year, 61 applications have been approved, 50 being for new dams and 11 for enlargements.

OUTLOOK BRIGHTER

In connection with the supervision of irrigation districts by the State Engineer, the year has brought authorization by the California Districts Securities Commission for the funding of \$15,931,250 of bonds. A critical situation in the districts was met and the outlook is much brighter than for years. In addition, bonds of the par value of \$629,000 were validated and expenditures in the sum of \$987,100 approved, and certification given to \$650,000 of current issues.

Highway Bids and Awards for November

HUMBOLDT COUNTY—Reconstructing bridge across Bel River at Robinson's Ferry, consisting of twenty-two 24' timber spans, three 250' steel truss spans and twenty-three 19' timber spans. Dist. I, Rt. 1, Sec. E, Fred J. Maurer & Son, Inc., Eureka, \$29,360; Smith Bros. Company, Eureka, \$24,966; W. J. O'Neil, San Francisco, \$29,985; C. W. Wood, Stockton, \$27,040; Pacific Bridge Co., Portland, Oregon, \$29,225. Contract awarded to Mercer-Fraser Co., Eureka, \$20,752.

MONO COUNTY—From Casa Diablo Hot Springs to Crestview, 5.8 miles grading and surfacing bituminous treated gravel. Dist. IX, Rt. 23, Sec. EF. Daniel Bayles, Biggs, \$164,872; Southern Calif. Roads Co., Los Angeles, \$154,117; Hemstreet and Bell, Marysville, \$177,205; Jack Casson, Hayward, \$215,045; W. H. Hauser, Oakland, \$176,496; Larsen Bros., \$163,961; A. Teichner & Son, Sacramento, \$159,714; Skeels & Graham, Roseville, \$161,854; Fred W. Nighbert, Bakersfield, \$195,375; Gist & Bell, Arcadia, \$183,755; C. C. Willis & Sons, Los Angeles, \$206,402; Mecca Const. Co., Clearwater, \$189,985; Isbell Const. Co., Carson City, Nev., \$193,168. Contract awarded to Morrison-Knudsen, Boise, Idaho, \$142,169.

RIVERSIDE COUNTY—At the Shaver's Summit Maintenance site, water supply well to be drilled and furnished complete. Dist. VIII, Rt. 64, Sec. E, A. A. Barnett, Temecula, \$7,600; Roscoe Bloss Co., Los Angeles, \$4,030. Contract awarded to Lyon Bros., Los Angeles, \$3,000.

SAN BENITO COUNTY—Two bridges 8 miles south of Gilroy, a reinforced concrete girder bridge across San Juan Creek consisting of one 34' and two 23' spans; the other across San Benito River, consisting of three 100' steel and ten 40' reinforced concrete spans. Dist. V, Rt. 2, Sec. B, Force Construction Co., Piedmont, \$102,120; Gist & Bell, Arcadia, \$92,090; M. E. McGowan, San Francisco, \$94,995; Gutleben Bros., Oakland, \$90,095; Bodenhamer Construction Co., Oakland, \$92,825; Smith Bros. Company, Eureka, \$102,766; Healy-Tibbitts Construction Co., San Francisco, \$91,015; A. W. Kitchen, San Francisco, \$92,471; A. J. Raisch, San Jose, \$90,639; Neves & Harp, Santa Clara, \$103,783; C. W. Wood, Stockton, \$104,028; Lord and Fishon, Sacramento, \$99,868; Oberg Bros., Los Angeles, \$109,481. Contract awarded to George J. Ulrich Construction Co., Modesto, \$87,966.

SAN BERNARDINO COUNTY—At the Baker Maintenance site, water supply well to be drilled and furnished complete. Dist. VIII, Rt. 31, Sec. K. Contract awarded to J. W. Burkhardt, Victorville, \$747.

SAN BERNARDINO COUNTY—Devore to Alray, about 10.9 miles to be graded and surfaced with selected oil-treated material. Dist. VIII, Rt. 31, Sec. B, Hemstreet & Bell, Marysville, \$448,986; von der Hellen & Pierson, Castaic, \$367,923; Gist & Bell, Arcadia, \$424,686; Lang Transportation Co., Los Angeles, \$333,418; Granfield, Sarrar & Carlin, San Francisco, \$397,882; Gibbons & Reed Co., Burbank, \$379,413; Macco Construction Co., Clearwater, \$358,146; Griffith Co., Los Angeles, \$341,964; H. W. Rohl Co., Los Angeles, \$349,251; Lewis Construction Co., Los Angeles, \$330,838; Jahn & Bressi Construction Co., Inc., Los Angeles, \$353,697; Southern California Roads Co., Los Angeles, \$341,750; Morrison-Knudsen Co., Boise, Idaho, \$361,471; George Pollock Co., Sacramento, \$342,640. Contract awarded to Healy-Tibbitts Construction Co., San Francisco, \$321,514.

SAN DIEGO COUNTY—Between Del Mar and Solano Beach, about 0.6 mile to be graded and paved with Portland cement concrete. Dist. VII, Rt. 2, Sec. A, Basich Bros. Construction Co., Torrance, \$42,660; E. Paul Ford, East San Diego, \$39,940; Steele Finley, Santa Ana, \$41,349; Iglesias Bros., Inc., San Diego, \$37,921; C. E. Butterfield, San Pedro, \$44,512; Oberg Bros., Los Angeles, \$43,945. Contract awarded to B. G. Carroll, San Diego, \$37,480.

SAN DIEGO COUNTY—About 0.25 mile of roadbed to be widened and heavy fuel oil to be applied through Encinitas between "D" and "A" Streets. Dist. VII, Rt. 2, Secs. A & B, H. E. Cox & Son, Pasadena, \$3,564. Contract awarded to Cozens & Hammond, Encinitas, \$2,607.

SANTA BARBARA COUNTY—Between Los Alamos and 2 miles north of Solomon Summit, 9.7 miles to be graded and paved with Portland cement concrete.

Dist. V, Rt. 2, Secs. C, M & L, Matich Bros., Elsinore, \$337,349; Thomas C. Rogers, Los Angeles, \$376,585; Sander Pearson, Santa Monica, \$371,726; McCray Co., Los Angeles, \$341,649; Griffith Co., Los Angeles, \$344,427; Morrison-Knudsen Co., Boise, Idaho, \$345,460; Hanrahan Co., San Francisco, \$332,111; Peninsula Paving Co., San Francisco, \$316,343; C. W. Wood, Stockton, \$312,375; Macco Construction Co., Clearwater, \$325,409; N. M. Ball, Porterville, \$338,229; Basich Bros., Torrance, \$307,216; Granite Construction Co., Ltd., Watsonville, \$320,998; Jahn & Bressi Construction Co., Inc., Los Angeles, \$313,477; Southern California Roads Co., Los Angeles, \$327,947; Kovacevich and Price, Inc., Southgate, \$343,956; Frederickson & Watson Construction Co., and Frederickson Bros., Oakland, \$335,289; Healy-Tibbitts Construction Co., San Francisco, \$332,030. Contract awarded to M. J. Bevanda, Stockton, \$306,711.

SHASTA COUNTY—Reinforced concrete girder bridge at Clear Creek, about 18 miles west of Redding, consisting of four 52' spans on concrete piers and bents. Dist. II, Rt. 20, Sec. A, M. B. McGowan, San Francisco, \$22,448; R. B. McKenzie, Red Bluff, \$24,493; John Berlinger, Orland, \$22,685; Smith Bros. Co., Eureka, \$27,632; Fred J. Maurer & Son, Inc., Eureka, \$24,990; Rolla Arubuckle, Anderson, \$21,136; Skeels & Graham Co., Roseville, \$24,682; Holdener Construction Co., Sacramento, \$27,753; Peter McHugh, San Francisco, \$26,734; Whited & Whited, Santa Rosa, \$22,472. Contract awarded to J. P. Brennan, Redding, \$20,822.

SISKIYOU COUNTY—Bridge across Beaver Creek 15.5 miles west of Junction Rt. 3, consisting of three 50' steel beam spans on concrete bents. Dist. II, Rt. 46, Sec. D, J. P. Brennan, Redding, \$31,242; F. J. Maurer & Son, Inc., Eureka, \$33,347; Gist & Bell, Arcadia, \$34,230; J. Berlinger, Orland, \$27,430; Albert Young, Yreka, \$39,500; R. B. McKenzie, Red Bluff, \$34,910. Contract awarded to J. W. Hoopes, Sacramento, \$31,035.

SISKIYOU COUNTY—Bridge across Klamath River at Walker, consisting of one 320' steel truss span on concrete piers and six 19' timber approach spans. Dist. II, Rt. 46, Sec. D, Smith Bros. Co., Eureka, \$29,119; John Berlinger, Orland, \$27,518; M. B. McGowan, San Francisco, \$27,555; C. W. Wood, Stockton, \$30,000; J. P. Brennan, Redding, \$27,167. Contract awarded to Gutleben Bros., Oakland, \$20,728.

TRINITY COUNTY—Between Weaverville and Grass Valley Creek, crushed gravel or stone in stock piles. Dist. II, Rt. 20, Secs. A-B, James W. Bertram, Weott, \$12,112; E. B. Bishop, Sacramento, \$12,612. Contract awarded to S. R. Eastwood & S. Eastwood, Redding, \$12,015.

VENTURA COUNTY—Reinforced concrete girder bridge across Arroyo Calleguas 1 mile east of Camarillo, consisting of one 60' span and two 30' spans. Dist. VII, Rt. 2, Sec. B, Nead Construction Co., Wilmington, \$28,426; Gist & Bell, Arcadia, \$28,639; R. R. Bishop, Long Beach, \$28,848. Contract awarded to Merritt-Chapman & Scott Corporation, San Pedro, \$25,755.

Why some motor vehicle drivers continually have accidents while other drivers rarely, if ever, have any is one of the puzzling problems for consideration by the annual Safety Congress in Chicago. The material for this subject came from a recent study of a group of commercial fleet operators. This revealed that about one-third of the drivers checked had no accidents whatever; another one-third averaged two accidents each; while the remainder of the group ranged from three to ten accidents each.

"Which do you like better, balloon tires or high pressure tires?"

"Why, I like balloon tires better."

"But they claim that balloon tires reduce the power of the car."

"Well, I don't care if it does—I am a pedestrian," —*Texas Highways.*

Favorable action on the State water plan by the California Irrigation Districts Association, approval of the sale of irrigation district bonds and new contracts, by the District Securities Commission, and a series of joint meetings in Southern California by Governor Rolph's California Water Resources Commission and the Joint Legislative Water Committee are features of the monthly report of the Division of Water Resources under State Engineer Edward Hyatt. The report includes details of flood control, reclamation and maintenance work and news of the increased flow of the Sacramento and San Joaquin rivers as follows:

The California Irrigation Districts Association held its biennial meeting at Marysville on November 13 and 14. Most of the time of the session was given to the discussion of the State Water Plan and to an explanation of procedure under the irrigation District Act as amended by the 1911 Legislature.

The State Water Plan was briefly explained by State Engineer Hyatt and discussed at some length by Senators Crittenden, Rich and others. The Association unanimously adopted a resolution favoring the "ultimate conservation of the water resources of the State through cooperation of the Federal government and the State of California with local agencies to carry out progressively a comprehensive plan, said plan to be fair, just and economically sound, and to preserve to each area having surplus water a sufficient supply for its future development and not to interfere with existing water rights." The association also pledged its cooperation to Governor Rolph and his water commission and to the Joint Legislative Committee in working out the plan.

REQUESTS APPROVAL

At a meeting of the Districts Securities Commission on October 27, favorable action was taken on requests for approval as follows:

Cordua Irrigation District—Sale or exchange of \$64,000 principal amount of district refunding bonds at \$0.90.

Nevada Irrigation District—Private sale of \$50,000 principal amount of district bonds at \$0.90.

Turlock Irrigation District—New contracts with the San Joaquin Light and Power Company and the Pacific Gas and Electric Company from the sale and purchase of power.

Lindsay-Strathmore Irrigation District—Contracts for the purchase of 230 shares of stock of the Peoples Ditch Company.

Visits for the purpose of considering matters in their interests were made to the following districts:

Waterford irrigation district, Stanislaus County; West Side and Linden irrigation districts, San Joaquin County; Carpenter and Serrano irrigation districts, Orange County; Vista, Santa Fe and San Dieguito irrigation districts, San Diego County.

DAMS

To date 780 applications have been received for approval of dams built prior to August 14, 1929; 87 applications for approval of plans for construction or enlargement; and 203 applications for repairs.

Applications Received for Approval of Plans for Enlargement of Dams

Dam	Owner	County
McGowan	First National Bank	Tehama

Applications Received for Approval of Plans for Repairs or Alterations

Dam	Owner	County
Greenleaf	City of Whittier	Los Angeles
Lawler	Calif. Water Service Co.	Sonoma
Shelton	A. A. Curtis	Modoc
Lower St. Helena	Town of St. Helena	Napa
Jameson Lake	Carnation Gold Mining Co.	Plumas
El Casco	G. O. Trautzel	Riverside
San Pablo	East Bay Municipal Utility District	Contra Costa

Plans for the construction of the Bouquet Canyon Dam, to be built by the city of Los Angeles, were approved on October 29, 1931. This will be a large earthfill structure 170 feet high with a storage capacity of 36,200 acre feet.

Sixteen applications for approval of plans for repairs or alterations were approved during this period. Repairs necessary to place dams in shape for the winter season have been completed.

FLOOD CONTROL AND RECLAMATION

Maintenance of Sacramento Flood Control Project.

Routine maintenance work has been carried on, including the conditioning of the drainage pumping plants and painting the buildings at these plants.

Maintenance clearing operations in the Sutter and Tisdale by-passes have been continued with two crews of twenty men each. As an unemployment relief measure, these crews are operating on a five-day week basis and each man is permitted a total of ten days actual work at \$4 per day.

A gang of nine men is engaged in leveling a portion of the area recently cleared and stumped in the Sacramento By-pass, so that it can be plowed and cultivated as a means of permanently doing away with maintenance costs.

The Reclamation Board has granted a lease to the Division for 3.18 acres one mile from Sutter City, on

(Continued on page 40)

November Water Applications and Permits

Applications for permits to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of November, 1931.

TULARE COUNTY—Application 7110. U. S. Sequoia National Forest, c/o Frank P. Cunningham, supervisor, Porterville, for 1200 gallons per day from unnamed spring tributary to South Fork of Middle Fork Tule River to be diverted in section 34, T. 20 S., R. 31 E., M. D. B. and M., for domestic purposes. Estimated cost \$200.

MODOC COUNTY—Application 7111. E. G. Scammon, Herman Schadler, Curtis Mathews, W. J. Wadhams, C. A. Moister and H. E. Bennett, c/o E. G. Scammon, mgr. Land Dept. Red River Lumber Co., Westwood, for 25 c.f.s. from Cowhead Creek tributary to Cowhead Lake to be diverted in section 16, T. 47 N., R. 17 E., M. D. B. and M., for irrigation purposes. (2600 acres.)

NEVADA COUNTY—Application 7112. Edward Bickel, P. O. Box 881, Nevada City, for 2000 gallons per day from unnamed spring tributary to Osborn Creek, thence Little Greenhorn Creek, Greenhorn Creek and Bear River to be diverted in section 5, T. 16 N., R. 10 E., M. D. B. and M., for mining and domestic purposes.

NEVADA COUNTY—Application 7113. Edward Bickel, P. O. Box 881, Nevada City, for 15 c.f.s. from Little Greenhorn Creek tributary to Greenhorn Creek, thence Bear River to be diverted in section 4, T. 16 N., R. 10 E., M. D. B. and M., for mining and domestic purposes.

BUTTE COUNTY—Application 7114. Richvale Irrigation District, Richvale, for 15 c.f.s. from Dry Creek tributary to Butte Creek to be diverted in section 6, T. 19 N., R. 2 E., M. D. B. and M., for irrigation purposes. (500 acres.) Estimated cost \$2,000.

INYO COUNTY—Application 7115. Standard Oil Company of California, a corporation, c/o W. F. Vane, 225 Bush St., San Francisco, for 40,000 gallons per day from Last Chance Springs (3 springs) tributary to Death Valley Watershed to be diverted in section 2, T. 8 S., R. 39 E., M. D. B. and E., for mining and domestic purposes. Estimated cost \$500.

HUMBOLDT COUNTY—Application 7116. Arthur McBride, Winford Otley, Ralph Peters and Geo. W. Smith, c/o Allen and McNamara, attys., Yreka, for 10 c.f.s. from Five Mile Creek tributary to Klamath River to be diverted in section 16, T. 11 N., R. 6 E., H. B. and M., for power purposes. (681 h.p.) Estimated cost \$1200.

CALAVERAS COUNTY—Application 7117. Claude Rogers, P. O. Box 43, Station A, Berkeley, for 7.8 c.f.s. from Mokelumne River tributary to San Joaquin River to be diverted in section 1, T. 4 N., R. 9 E., M. D. B. and M., for mining and domestic purposes.

TRINITY COUNTY—Application 7118. Calvin H. Baskind, 417 Mutual Life Building, Seattle, Washington, for (1) 30, (2) 4, (3) 6, (4) 6, (5) 4, total 50 c.f.s. from (1) Mosquito Creek, (2) Big Lake, (3) Ammon Creek, (4) White Sides, (5) Bear Trap Creek tributary to South Trinity River to be diverted in sections 33, 26, 27, 11 and 14, T. 5 N., R. 5 E., M. D. B. and M., for mining and domestic purposes.

KERN COUNTY—Application 7119. Harold B. Herschman, c/o Leonard E. Weisenburg, 4816 Cramer Ave., North Hollywood, for 5 c.f.s. from Red Rock Canyon tributary to Mojave Desert Drainage Area to be diverted in section 2, T. 30 S., R. 37 E., M. D. B. and M., for mining and domestic purposes.

SIERRA COUNTY—Application 7120. Walter Hayter, Comptonville, for 3.0 c.f.s. from Big Humburg Creek tributary to N. Fork Yuba River to be diverted in section 15, T. 19 N., R. 9 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$1,500.

TUOLUMNE COUNTY—Application 7121. Milo H. Neidig, c/o R. C. Baermeister, Sonora Inn, Sonora, for 3 c.f.s. from South Fork of Stanislaus River tributary to Stanislaus River to be diverted in section 24, T. 3 N., R. 15 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$2,500.

MONO COUNTY—Application 7122. Governor F. B. Balzar, Carson City, Nevada, for 200 gallons per day

from small unnamed stream tributary to Lower Twin Lake to be diverted in section 5, T. 3 N., R. 24 E., M. D. B. and M., for domestic purposes.

SISKIYOU COUNTY—Application 7123. William M. Clark, Happy Camp, for 1.0 c.f.s. from Tanners Gulch tributary to S. Fork Indian Creek, thence Indian Creek and Klamath River to be diverted in section 13, T. 17 N., R. 6 E., M. D. B. and M., for mining purposes. Estimated cost \$100.

SAN JOAQUIN COUNTY—Application 7124. Hunt Bros. Packing Company, c/o Chickering and Gregory, attys., Merchants Exchange Building, San Francisco, for 3.9 c.f.s. from Mormon Slough tributary to San Joaquin River to be diverted in section 7, T. 2 N., R. 9 E., M. D. B. and M., for irrigation purposes. (313.5 acres.) Estimated cost \$5,000.

EL DORADO COUNTY—Application 7125. B. W. Stone, 161 Ellis St., San Francisco, for 5000 c.f.s. and 125,000 ac. ft. per annum from (1) Rubicon River, (2) Pilot Creek, (3) Gerle Creek, (4) Loon Lake, (5) Buck Island Lake, (6) Rock Bound Lake, (7) Little S. Fork Rubicon River tributary to American River Drainage to be diverted in section 9, T. 13 N., R. 16 E., section 11, T. 12 N., R. 12 E., section 24, T. 13 N., R. 13 E., sections 11, 31 and 34, T. 14 N., R. 14 E., section 4, T. 13 N., R. 15 E., section 2, T. 13 N., R. 14 E., M. D. B. and M. for municipal purposes.

SAN DIEGO COUNTY—Application 7126. John Allen and Almira E. Crawford, Box 54, Potrero, for 26 ac. ft. per annum from Camp Creek tributary to Tecate River to be diverted in section 24, T. 18 S., R. 4 E., S. B. B. and M. for recreational and domestic purposes. Estimated cost \$1,000.

SAN BERNARDINO COUNTY—Application 7127. H. C. Zech, 116 E. 31st St., Los Angeles, for 0.0625 c.f.s. from unnamed spring tributary to Bear Valley or Baldwin Lake to be diverted in section 31, T. 2 N., R. 2 E., H. B. and M., for domestic purposes. Estimated cost \$2,500.

BUTTE COUNTY—Application 7128. O. J. Laing, Paradise, for 3.0 c.f.s. from Springs tributary to Coon Hollow Creek, thence W. Branch N. Fork Feather River, N. Fork Feather River, Feather River and Sacramento River to be diverted in section 9, T. 25 N., R. 5 E., M. D. B. and M., for mining purposes. Estimated cost \$10,000.

SIERRA COUNTY—Application 7129. H. L. Berkey, c/o Jas. P. Sweeney, 68 Post Street, San Francisco, for 60 c.f.s. from Canyon Creek tributary to Yuba River to be diverted in section 18, T. 21 N., R. 10 E., M. D. B. and M., for mining purposes. Estimated cost \$60,000.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources during the month of November, 1931.

TEHAMA COUNTY—Permit 3812, Application 7078. Thomas J. Pellew, 409 45th St., Oakland, November 7, 1931, for 0.037 c.f.s. from unnamed stream, tributary to Elder Creek, thence Sacramento River in section 34, T. 25 N., R. 7 W., M. D. B. and M., for irrigation of 1 acre. Estimated cost \$300.

INYO COUNTY—Permit 3813, Application 6896. Leo Kikut, Olancha, November 12, 1931, for 0.12 c.f.s. from unnamed spring, tributary to Owens Lake in section 26, T. 18 S., R. 36 E., M. D. B. and M., for irrigation of 10 acres. Estimated cost \$400.

RIVERSIDE COUNTY—Permit 3814, Application 6922. R. A. Merchant, 224 Oak St., Monrovia, November 19, 1931, for 0.12 c.f.s. from seepage water tributary to Santa Ana River in section 9, T. 3 S., R. 5 W., S. B. B. and M., for irrigation of 10 acres.

STANISLAUS COUNTY—Permit 3815, Application 7071. Joe V. Cordoza, Rt. 2, Box 1254, Modesto, November 19, 1931, for 1.00 c.f.s. from Stanislaus River, tributary to San Joaquin River in section 20, T. 2 S., R. 8 E., M. D. B. and M., for irrigation of 80 acres. Estimated cost \$1,500.

TRINITY COUNTY—Permit 3816, Application 6953. L. E. Wheeler and W. M. McChumber, Denny, November 21, 1931, for 1.00 c.f.s. from S. Fork of East Fork of New River, tributary to Trinity River in section 8, T. 36 N., R. 12 W., M. D. B. and M., for mining. Estimated cost \$700.

Vital Statistics on Dam Construction

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources during the month of November, 1931.

LASSEN COUNTY—Emerson Dam No. 255. Tro Emerson, Susanville, owner; earth, 17 feet above streambed with a storage capacity of 260 acre feet, tributary to Susan River in section 16, T. 29 N., R. 12 E., M. D. B. and M., for storage purposes, for irrigation use.

ORANGE COUNTY—Basin "A" Dam No. 795. Union Oil Company, Los Angeles, owner; earth, 14 feet above streambed, located in section 10, T. 3 S., R. 10 W., S. B. B. and M.

ORANGE COUNTY—Basin "B" Dam No. 795-2. Union Oil Company, Los Angeles, owner; earth, 13 feet above streambed, located in section 10, T. 3 S., R. 10 W., S. B. B. and M.

ORANGE COUNTY—Basin "C" Dam No. 795-3. Union Oil Company, Los Angeles, owner; earth, 12 feet above streambed, located in section 10, T. 3 S., R. 10 W., S. B. B. and M.

ORANGE COUNTY—Basin "D" Dam No. 795-4. Union Oil Company, Los Angeles, owner; earth, 13 feet above streambed, located in section 11, T. 3 S., R. 10 W., S. B. B. and M.

TEHAMA COUNTY—McGowan Dam No. 262. First National Bank, Santa Ana, owner; earth, 10.5 feet above streambed with a storage capacity of 20 acre feet, situated on Battle Creek, tributary to Sacramento River in section 9, T. 29 N., R. 4 E., M. D. B. and M., for storage purposes, for recreation use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources during the month of November, 1931.

TEHAMA COUNTY—McGowan Dam No. 262. First National Bank, Santa Ana, owner; 12.5 feet above streambed with a storage capacity of 35 acre feet, situated on Battle Creek, tributary to Sacramento River in section 9, T. 29 N., R. 4 E., M. D. B. and M., for storage purposes, for recreation use. Estimated cost \$500, fees paid \$20.

SAN DIEGO COUNTY—El Capitan Dam No. 8-7. City of San Diego, San Diego, owner; earth and rock, 197 feet above streambed with a storage capacity of 118,000 acre feet, situated on San Diego River in section 7, T. 15 S., R. 2 E., S. B. B. and M., for storage purposes for municipal use. Estimated cost \$3,226,595.25, fees paid \$7,726.60.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources during the month of November, 1931.

NAPA COUNTY—Lower St. Helena Dam No. 16-2. Town of St. Helena, St. Helena, owner; earth, situated on tributary of York Creek, tributary to Napa River, located in Rancho Carne Humana.

PLUMAS COUNTY—Jamison Lake Dam No. 201. Carnation Gold Mining Co., Ltd., Blairsden, owner; earth, situated on Little Jamison Creek, tributary to Jamison Creek in section 1, T. 21 N., R. 11 E., M. D. B. and M.

RIVERSIDE COUNTY—El Casco Dam No. 822. G. O. Trauzettel, Redlands, owner; earth, situated on San Timoteo Creek, tributary to Santa Ana River in section 20, T. 2 S., R. 2 W., M. D. B. and M.

CONTRA COSTA COUNTY—San Pablo Dam No. 31-6. East Bay Municipal Utility District, Oakland, owner; earth, situated on San Pablo Creek, tributary to San Francisco Bay, located in Rancho El Sobrante.

SAN DIEGO COUNTY—Cuyamaca Dam No. 56. La Mesa, Lemon Grove and Spring Valley Irrigation District, San Diego, owner; earth, situated on Boulder Creek, tributary to San Diego River in T. 13, R. 4 E., S. B. B. and M.

SAN DIEGO COUNTY—Helix Dam No. 56-4. La

Mesa, Lemon Grove and Spring Valley Irrigation District, San Diego, owner; earth, located in section 21, T. 16 S., R. 1 W., S. B. B. and M.

SAN DIEGO COUNTY—Larger Lemon Grove Dam No. 56-7. La Mesa, Lemon Grove and Spring Valley Irrigation District, San Diego, owner; earth, located in section 25, T. 16 S., R. 2 W., S. B. B. and M.

SAN DIEGO COUNTY—Smaller Lemon Grove Dam No. 56-8. La Mesa, Lemon Grove and Spring Valley Irrigation District, San Diego, owner; earth, located in section 20, T. 16 S., R. 1 W., S. B. B. and M.

LAKE COUNTY—Buckshort Dam No. 392. Richard Detert, San Francisco, owner; earth, situated on Buckshort Creek, tributary to Putah Creek in section 9, T. 10 N., R. 6 W., M. D. B. and M.

SAN MATEO COUNTY—Flioli Dam No. 617. Flioli, Inc., San Mateo, owner; earth, situated on branch of Laguna Creek, tributary to San Mateo Creek in section 30, T. 5 S., R. 4 W., M. D. B. and M.

PLANS APPROVED

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources during the month of November, 1931.

LASSEN COUNTY—Loosely Pool Dam No. 258. T. H. Vestal, et al., Pittville, owner; concrete, 4 feet above streambed with a storage capacity of 120 acre feet, situated on Pit River, tributary to Sacramento in section 18, T. 37 N., R. 6 E., M. D. B. and M., for diversion purposes, for irrigation use.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources during the month of November, 1931.

SONOMA COUNTY—Lawler Dam No. 581-3. Calif. Water Service Co., San Francisco, owner; earth, situated on Adobe Creek, tributary to Petaluma Creek in section 12, T. 5 N., R. 7 W., M. D. B. and M.

LOS ANGELES COUNTY—Greenleaf Dam No. 18. City of Whittier, Whittier, owner; earth, tributary to San Gabriel River in section 16, T. 2 S., R. 11 W., S. B. B. and M.

PLUMAS COUNTY—Eureka Dam No. 283. Plumas Eureka Corp., Grass Valley, owner; earth and rock, situated on Eureka Creek, tributary to Feather River in T. 22 N., R. 11 E., M. D. B. and M.

NAPA COUNTY—St. Helena Dam No. 16-2. Town of St. Helena, St. Helena, owner; earth, tributary to Napa River, located in Rancho Carne Humana.

CONTRA COSTA COUNTY—San Pablo Dam No. 31-6. East Bay Municipal Utility District, Oakland, owner; earth, situated on San Pablo Creek, tributary to San Francisco Bay, located in Rancho El Sobrante.

SHASTA COUNTY—Baldwin Dam No. 97-85. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on no stream.

MODOC COUNTY—Upper Caldwell River Dam No. 154-5. G. L. Kramer, Bebe, owner; flashboard, situated on Pit River, tributary to Sacramento River in section 34, T. 42 N., R. 10 E., M. D. B. and M.

PLUMAS COUNTY—Jamison Lake Dam No. 284-3. Carnation Gold Mining Co., Ltd., Blairsden; earth, situated on Little Jamison Creek tributary to Jamison Creek in T. 21 N., R. 11 E., M. D. B. and M.

MEETING OF RESEARCH BOARD

The eleventh annual meeting of the Highway Research Board, National Research Council, met December 10 and 11, 1931, in Washington, D. C. The sessions were devoted to discussions of reports of research activities in relation to highway finance, transportation, design, materials and construction, maintenance and traffic.

How State Cares for 130,000 Trees Privately Planted Along Highways

, , , , , ,

THE PLANTING of many live Christmas trees on lawns and roadsides during the Christmas season brought requests for information as to the practice of the Department of Public Works relative to tree-planting by individuals and evidenced the widespread interest in this phase of roadside beautification.

The extent of this public interest in the arboreal beauty of our highways is best exemplified by the fact that since 1920, civic or other public bodies of California have planted nearly 700 miles of highway roadsides to trees. This represents nearly 70,000 trees. In addition, there were about 60,000 older trees which had been planted by tree lovers, making a total of 130,000 trees to be cared for by the maintenance forces.

The initial expense of planting and maintenance during the first year is borne by the parties interested. At the end of this period the State assumes their entire care, and replacement in event of loss.

The extent of this responsibility is appreciated, when it is known that some \$71,500 was expended during the past year for the care and replacement of the plantings, a sum representing 1.3 per cent of the total annual maintenance allotment.

AN EXACTING TASK

Generally the trees are spaced at 50-foot intervals, being placed alternately on the right and left sides of the roadway, with necessary elimination for visibility at crossings and road intersections. The care of these trees is very exacting and is usually assigned to the individual foreman in whose territory they occur. Assisting in the direction of this work is the arboriculturist, reporting to the maintenance engineer.

Special tree watering equipment having a movable discharge pipe enables watering to be done from the driver's seat, a tank truck of 1200 gallons usually being sufficient to water some thirty to forty trees. This watering must be performed every four to six weeks during the period from June to October. Aside from irrigation and cultivation many precautions are necessary for the protection

of young trees against insect pests, damage by squirrels, gophers, moles and loose stock driven along the highway. The hazard of fire is also great.

LOCATION IMPORTANT

Particular attention is given the location of plantings to eliminate any possible interference with the ultimate development of the pavement. With this in mind, new plantings are discouraged on rights of way less than eighty feet wide. On eighty-foot rights of way the trees are planted between the curb and right of way line, thirty-one feet out from the pavement center.

All roadside trees are inspected at intervals and particular note made of any trees within reach of the traveled way that are in any way a menace. Wherever hazard exists the trees are either removed, or trimmed and dangerous limbs cabled back to insure safety.

As load clearances require a clear height of 13½ feet above the pavement, systematic pruning and trimming are being followed to provide this clearance and at the same time develop a symmetrical, worth while tree. Where power or telephone lines occur within rights of ways planted to trees, the tree height is limited to 40 feet and all trimming for wire clearance is done by the utility company under permit and inspection of the Division of Highways.

SUITABLE SPECIES

Observations extending over a period of years indicate the suitability of the following tree species for the localities specified:

Valley sections: European Sycamore, California Black Walnut, Black Locust, Arizona Ash.

Coastal section: Coast Redwood, European Sycamore, Black Walnut, Blue Gum, Red Gum, Coast Live Oak, Silver Maple.

Desert section: Black Locust, Arizona Ash, Blue Gum, Red Gum, Black Acacia, Athol.

In addition to the care of trees, the Division of Highways organization is planting shrubs and vines on cuts and fills, particularly at subways and similar structures. In many cases, this work will reduce the upkeep cost at such locations.

State-wide Highway Developments Discussed at Annual Conference

THE MEETING of the State-wide Highway Committee of the California State Chamber of Commerce in connection with the annual conference at Los Angeles November 5-6, was one of the most comprehensive gatherings for discussion of highway development problems in California that the State has yet seen. With all sections of the State represented the meeting presented a cross section of all interests concerned in highway construction.

A roll call showed 84 in attendance including more than 30 county supervisors and representatives of the automobile clubs, various civic organizations and State and federal departments.

Earl Lee Kelly, chairman of the California Highway Commission, and Charles H. Purcell, state highway engineer, discussed the program and progress under the biennial budget.

FEDERAL AID MOTION

Dr. L. J. Hewes, deputy chief engineer of the U. S. Bureau of Public Roads, made a very complete report on the federal aid system, and Bruce B. Burnett, forest highway engineer, reported on the forest system. Following Dr. Hewes' report on the federal aid system, a resolution was passed as follows:

"That the State Chamber of Commerce urge the continuation of the present annual appropriation for federal and forest roads, and to take such measures as the Board of Directors may approve to aid in the accomplishment of this purpose."

Under the subject of additions to the secondary system, the method of procedure and the report of the progress made to date was explained by Mr. Purcell. Reports from Regional Councils indicated that the present policy of orderly additions based upon engineering studies, was being supported generally throughout the State, and that the regional highway committees are working in close cooperation with the Highway Department in the study of local projects.

Reports of the grade crossing study were made by W. K. Etter, manager of the Santa Fe Railroad Company; J. B. Hunter, trans-

portation engineer of the California Railroad Commission, and Harry A. Mitchell, president of the Sacramento Northern Railroad Company.

Mr. Mitchell made a notable report on the effective law enforcement in connection with grade crossings which resulted in a reduction of 16 per cent in grade crossing accidents for the first six months of this year compared with the same period last year. Following Mr. Mitchell's report, a resolution was passed commending him on the work done and the character of the report.

Orra E. Monnette, Colonel Charles Wing and Earl Lee Kelly reported very definite progress made by this committee on its present program for the designation and registration of historical land markers and the erection of suitable highway diversion signs. The committee is hopeful that historical highway diversion markers in California will have been erected prior to the 1932 Olympiad and is coordinating the work of various civic organizations engaged in this endeavor throughout the State.

BILL HURTS CALIFORNIA

A number of other important items such as the question of the State taking into the State highway system all city streets forming a direct connection to the State system, the inclusion of county roads in the State system, etc., were discussed. A number of these matters were referred to the State-wide Highway Committee for further study and recommendation.

A special subcommittee was appointed to study the effect of the Scott-Levitt Bill, which bill now provides that 90 per cent of the road on which expenditures can be made must be on public lands. This bill is working a particular hardship on approach roads to California national parks. In view of the immediate urgency for action on this matter, the committee requested that its chairman be authorized to take such action as necessary to protect California's interests.

Sunday School Teacher: Does any boy know what the children of Israel were looking for when they went into the wilderness?

Willie: Yes, ma'm. Parking space.—*Arizonian*.

Trunk Highway Protection Assured

(Continued from page 7)

Clearing of title to rights of way over lands involved in probate proceedings and over the property of minors always has been troublesome. Condemnation often has been resorted to in friendly cases in order to clear the title to the easement desired. An executor, administrator or guardian could execute a valid grant of right of way only after securing a court order authorizing a sale, advertising and taking of bids. Such procedure not only has increased the cost of rights of way which in numerous instances should have been donated, but has delayed many a highway project unnecessarily.

The two sections of the new Probate Code cited above permit executors, administrators and guardians to grant rights of way without consideration, whenever such a grant is for the advantage, benefit and best interests of the estate. The grant may be made upon an order of court after notice. Advertising and taking of bids, in the cases of such donations, is not necessary.

Such procedure will save much time and expense in many instances; right of way agents in the field should not fail to call these sections of the code to the attention of attorneys and other representatives of estates when dealing for such rights of way.

FEDERAL PROVISIONS

Section 17 of the Federal Highway Act, commonly called the Federal Aid Act, provides for the reservation of areas of public lands of the national government for rights of way and for sources of materials for federal aid highways, of which California has nearly 5000 miles.

As far as rights of way are concerned, in the past, advantage has not been taken of this offer of the federal government. Highways have been constructed across the public domain under the old act of 1866 which provides no definite width or method of giving notice to the Land Office that the grant has been accepted.

The General Land Office, in the Department of the Interior, recently announced that reservations of rights of way of a width of four hundred (400) feet would be made across unappropriated and unreserved federal lands whenever applications are submitted under Section 17.

The district offices were instructed by memorandum, in August, 1931, to clear the title to rights of way for all federal aid highways in California located across the public domain by submitting to headquarters necessary data for making such applications. This work is now under way and such applications are being forwarded to the Department of the Interior, through the Bureau of Public Roads of the Department of Agriculture, as provided by the federal statute.

Protection of the great interstate trunk highways from future encroachments and interference will thus be assured.

WITHIN NATIONAL FORESTS

Permits for the construction of highways through the national forests is another matter which has been given consideration. Formerly, applications for such permits were prepared in the district offices and forwarded to Sacramento for signature and submission to the Regional Office of the United States Forest Service in San Francisco. From the Regional Office they were returned to the local Forest Supervisor for review and recommendation before action was taken by the Regional Forester.

After a discussion of the matter with officials of the Forest Service, it was agreed that applications for such permits might be made by the district engineers and submitted directly to the supervisors of the forests involved. Thus, when the application arrives at the Regional Forest Office, it is accompanied by the report of the local Forest Supervisor.

PERMITS SPEEDED

Permits for use of road building materials to be obtained within the forests are handled in the same way. This procedure has relieved the central office at Sacramento of considerable unnecessary routine and has speeded up the issuance of such permits.

Cooperation also has been given to obtaining rights of way across Indian lands and various other Federal reservations, including reservoir and power site withdrawals. Federal rulings relative to such matters are being obtained and studied to the end that the procedure required by the Federal Government shall be followed in all cases.

Way to Kill the Goose That Lays Gold Highway Eggs

STATE SENATOR BREED does well to fight any suggestion to dip into the gas tax for purposes other than those agreed upon between the State and the motorists. The gas tax is going to need careful safeguarding or the goose that lays the highway eggs will be killed.

Hungry eyes turn constantly on the gas tax. Plots are being laid all the time. This tax turns out so much money, is collected so easily and so far has been extracted with so little pain to the subject that it is a great temptation to politicians seeking money to spend.

The vital point to remember is this: The gas tax is painless only because it is spent for the motorists. The moment any portion of the money is filched away from the highways the tax will become not only painful but tyrannical. The tax is a contract. The motorists agreed to it willingly on the explicit understanding that it was to be used solely for the roads. They will have a right to revolt if the money is diverted. The way to kill the gas tax is to load it with burdens for which the motorists, as motorists, have no proper responsibility.—*San Francisco Chronicle*.

Car's Serial Number Needed for License

A change in the forms of 1932 automobile registration certificates is announced by Russell Bevans, registrar of the Department of Motor Vehicles, to comply with a new section of the law requiring that the serial number and number of cylinders be stated on all applications for license renewal, transfers of secondhand cars and registration of new cars.

In applying for new plates the motorist should write in the number of cylinders after the line "Make" on the old certificate. The serial number should be written in below the line "Date Issued."

The city banker stopped at the village filling station for gas and then chatted with the proprietor while a young boy checked his tires and radiator.

"I suppose this hired man is your boy?" he said.
"That's not a hired man," said the villager, who had read of city banks, "that's our first vice president in charge of air and water."—*Exchange*.

Vol. 9 DECEMBER, 1931 No. 12

HEALTHY ROADS

A report to the American Chemical Society states that silicosis, an illness due to breathing dust, is more widespread than was hitherto believed.

Silicosis is caused by silica, a white crystalline substance composed of oxygen and silicon, the two most abundant elements in the earth's crust. They are believed either to dissolve in the lung or to form a colloid, a substance of glue-like consistency which floats in the lung tissue fluids. The resulting irritation creates scar tissue, and once established silicosis is permanent. The disease is usually progressive and frequently culminates in the dreaded tuberculosis.

Silicosis, of course, is most prevalent among industrial workers such as drillers and muckers in subways. But this menace to our health is faced, to a lesser degree, by all of us when we travel over dusty roads—and silica is especially plentiful in sand, of which many roads are partly composed.

This is just one more reason for pushing the good roads movement. Eliminating the dust and dirt by even inexpensively bound top surface, we have always known adds much to comfort, and we now learn it is an aid to health.—*Los Angeles Journal of Commerce*.

HER MISTAKE

Highway department stenographer: "Now, before we start this ride, I want to tell you that I don't smoke, drink or flirt. I visit no wayside inns, and I expect to be back home by 10 o'clock."

The new date: "You're mistaken."

Highway department stenographer: "You mean that I do any of those things?"

The new date: "No. I mean about starting for this ride."—*Texas Highways*.

"Honestly, that husband of mine is so exasperating! He asked me to meet him here with the car and I've been waiting ever since six o'clock—it's seven now!"

"What time were you supposed to meet him?"

"At five o'clock."—*Motor Land*.

Steam Heated Plant Protects Crew and Motors on Donner

(Continued from page 17)

at these locations and telephones installed. With the first sign of a severe storm, the gates are closed to all traffic and the equipment is lined up and ready to start.

It has been found that traffic not only is seriously in danger on Donner Summit during a storm, but that its movement interferes with the progress of snow removal work, as the equipment must be operated at high speeds and there is scant time to lend aid to motorists who get into difficulties at this time. When the storm is over and the roadway clear, the gates are opened.

At Other Points

While the severe conditions on Donner Summit require special equipment and organization, modern equipment is also maintained and operated as required at a number of other locations in addition to those mentioned. Snow is cleared on the main line of the Pacific Highway, the Ridge Route south of Bakersfield, the Redwood Highway east of Crescent City, and the State Highway between San Diego and El Centro, as well as the Red Bluff-Susanville, Redding-Alturas, Downieville and Trinity laterals.

For the benefit of those living in the valley who wish to enjoy the winter sports of the foothill region, an open road is maintained to Big Trees on the Ebbetts Pass road, to Riverton on the Placerville-Lake Tahoe road, and from Pooleys to Long Barn on the Sonora Pass road. Removal is also performed on the Crest Drive out of San Bernardino for those who seek their winter sports in the vicinity of Lake Arrowhead and Big Bear Lake, both lakes being above an elevation of 7000 feet. The equipment used on these routes varies from ordinary grading equipment to truck and tractor plows, both straight blades and rotaries.

Cost Per Inch

In all, twenty 4-wheel and ten 2-wheel drive trucks, seventeen 5-ton and seven 10-ton tractors are used, operating thirty-two push plows and seven rotaries of various types. During the past season over \$92,000 has been expended for the removal of snow at an average cost per inch mile of \$1.27.

The equipment and facilities provided cover some 600 miles of heavy snowfall area where there is normally sufficient snowfall to require the use of this equipment each winter to keep traffic moving.

At any time of severe storms we may be called upon to plow snow on an additional 1400 miles. The entire maintenance organization, with trucks, tractors, and graders, is available for such an emergency.

One of the best authorities on vacations advises that he would rather be sunburned on his vacation any time than get tanned on a week-end, especially if the latter is taken on a ranch.—*Texas Highways*.

And then there was the sweet young thing, taking the examination for a driver's license, who was asked: "If your brakes suddenly failed to work while you were going downhill, what would you do?"

She hesitated only a moment, then smiled brightly and answered: "Why that's easy; I'd jump out and put a big stone under the wheel."—*Motor Trades*.

New Alto-Waldo Road and Bridge Dedicated With Gala Pageantry

CALIFORNIA highway commissioners, officials and engineers took an active part in the double highway and bridge dedication ceremonies and celebrations Sunday, November 22d, when the new Alto-Waldo unit of Route 1, Redwood Highway over Richardson Bay was formally opened to traffic, following which the new hard surfaced portion from Tamalpais Valley to Marin Beaches was dedicated.

Earl Lee Kelly, chairman of the California Highway Commission and personal representative of Governor James Rolph, Jr., headed the official State party, which included Highway Commissioners Timothy Reardon of San Francisco and Harry A. Hopkins of Taft; Bridge Engineer Charles E. Andrew; District Engineer John H. Skeggs; Maintenance Engineer Fosgate and others.

Dedication and opening to traffic of these important highway units was the occasion for a colorful and spectacular celebrations in which several thousand men and women and hundreds of automobiles participated together with state, federal and county officials, representatives of chambers of commerce and civic organizations, and leaders of the entire San Francisco and north bay area.

Jointly Sponsored

The dedication was jointly sponsored by the Redwood Empire Association, the California Redwood Association, Marvelous Marin, Inc., and the Stinson Beach Progressive Club.

An outstanding feature of the dedicatory program was the christening of the Richardson Bay California Redwood bridge, built of California redwood timbers, which spans Richardson Bay, two miles north of Sausalito, by Mrs. Harry Lutgens of San Rafael, wife of the president of the Redwood Empire Association.

Under the direction of Charles Kenyon, chairman of a special committee named by the sponsors of the highway fete, a pageant depicting the evolution of highway transportation was staged as the crowning feature of the day's activities.

Indians on horseback, mounted Spanish vaqueros, cowboys, covered wagons, ox teams and other primitive means of transportation led the line of march.

Lunched at Beach

Harry G. Ridgway, president of Marvelous Marin, acted as master of ceremonies at the Alto-Waldo sector dedication.

Following the dedication of the Alto-Waldo sector a caravan of more than 200 automobiles was conveyed by a detachment of State highway patrolmen, under Captain A. F. O'Connor over the newly paved Shoreline unit to Stinson Beach, where a picnic luncheon was served under the willows and a second dedicatory program staged, with Newman Fitzhenry, of the Stinson Beach Progressive Club, garbed as a Spanish Don, acting as master of ceremonies.

Music was furnished at both programs by the bands of the Tamalpais Union High School and the San Rafael High School, while the uniformed drum corps of the Native Sons and the Native Daughters of the Golden West added to the color of the occasion.

Participants in the pageant included students of the two high schools, members of the Order of Red Men, the American Legion and of various Marin County service clubs and organizations.

A MONUMENT OF REDWOOD is this new bridge across an arm of Richardson Bay on the recently opened Alto-Waldo unit of Route 1, Redwood Highway. Most appropriately, it is built almost entirely of redwood timbers. More than 2,000,000 feet of this fine product of California's forests was used in its construction, only the central drawbridge span requiring resort to steel. The road was opened with appropriate dedication ceremonies on November 22 and the bridge duly christened Richardson Bay California Redwood Bridge by Mrs. Harry Lutgens wife of the president of the Redwood Empire Association.

Plan Better Roads for Baja California

Proposed highway improvements in Lower California, Mexico, are set forth in an announcement by Governor Augustin Olachea, the recently appointed head of Mexico's peninsula state.

Among the road projects named by the Mexican executive are construction of a highway between Tijuana and Ensenada; improvement of 850 miles of road between Tijuana and La Paz; paving of roads below the border in accordance with San Diego County highway standards, to conform to that county's highway system; and to provide extensions into the northern part of Lower California.

Salesman: Do you prefer a sedan or a roadster?

Customer: I really can't say.

Salesman: I understand. I'm married myself.

First bridge player: But I understand that Jane married a model husband.

Second bridge player: That's what she thought at the time, but he turned out to be a sport model.—*Exchange.*

ARCHITECTURAL AWARDS

For Month of November

State Printing Plant, Sacramento—Addition to plant; ventilating work to Carpenter and Mendenhall, Sacramento \$63,330; for complete plumbing, heating and ventilating work to Carpenter and Mendenhall, Sacramento, \$11,900; for electrical work to M. P. Canon, Sacramento, \$10,475.

Sonoma State Home, Eldridge—Repairs to boiler setting, awarded to Dee Engineering Company, San Francisco, \$595.

Sonoma State Home, Eldridge—Fire house: contract for general work to Petaluma Construction Company, Petaluma, \$10,975; for complete plumbing and heating to Ray Kynoch, Petaluma \$1,999; for electrical to Karl F. Stolling, Santa Rosa, \$558.

Pacific Colony, Spadra—Water well, contract to Lyon Bros. of Los Angeles, \$2,800.

Agnews State Hospital—Water tower, to J. F. Shepherd, Stockton, \$22,900.

Norwalk State Hospital—Ward No. 20; contract for general work to W. J. Esser, Long Beach, \$39,675; for plumbing to Hickman Bros. San Pedro, \$5,058; for electrical to Walter H. Smith, Long Beach, \$1,515; for heating to Walter H. Smith, \$8,495.

Mendocino State Hospital, Talmage—Laundry building; for general work to The Minton Co., Palo Alto, \$20,576; for combined heating and plumbing, to The Turner Co., San Francisco, \$3,523; for electrical work to Superior Electric Co., San Francisco, \$1,880.

The difference between Lot's wife and the lady driver is this: The former looked back and turned into a pillar of salt. The latter looked back and turned into a telegraph pole.—*Laughing Gas.*

Ten Parties to Measure Flood Control

(Continued from page 31)

which a maintenance headquarters will be erected at an estimated cost of \$10,500. The work of grading is to be commenced at once.

Sacramento Flood Control.

The Reclamation Board has requested this department to undertake clearing work in the Yolo By-pass along the Southern Pacific railroad at a cost of \$1,000, under section 21 of the Reclamation Board Act.

Emergency Flood Control and Rectification of Rivers.

Work has commenced on the continuation of the river rectification on the San Jacinto River, to cost about \$6,000, two-thirds of which is contributed by local interests.

Arrangements have been made for immediate commencement of clearing in the channel of the Santa Ynez River, in cooperation with the county of Santa Barbara. A total of \$3,000 will be expended.

Mokelumne River.

Clearing in the Mokelumne River channel, under Chapter 447, Statutes of 1929, has been carried on in collaboration with San Joaquin County. A total of about \$5,000 will be expended.

Pajaro River.

Clearing in the Pajaro River channel, under Chapter 524, Statutes of 1929, has continued during this period. The total cost of this work will be \$4,000.

Russian River Jetty.

The construction of a 12-ton derrick in the quarry has been completed and two 20-ton gear dump rock cars have been secured. Stones ranging in size from 6 to 12 tons are now being placed in considerable numbers in the jetty, most of the rock, however, ranging in size up to 5 tons, being handled in the old 6-ton cars. The rock work has continued during the entire period.

Flood Measurements and Gages.

Preparations are complete for taking flood flow measurements if they are required, equipment being complete for ten field parties. Routine care of the water stage recorders maintained by the office is being continued.

WATER RIGHTS

Applications to Appropriate.

During the month of October, 24 applications to appropriate water were received, 16 were canceled, 19 were approved and 8 permits were revoked.

The applications received included one by Consolidated Irrigation District proposing an appropriation from San Joaquin River in Fresno County for power purposes at an estimated cost of \$10,000,000. Another application of unusual importance was one filed by John W. Bergin, proposing an appropriation from Willow Creek, tributary of Trinity River, in Humboldt County, for mining purposes at an estimated cost of \$150,000. A rather unusual application was received from Stanislaus National Forest proposing appropriations by means of storage in Lower Buck Lake, Long

Lake, Emigrant Meadow Lake, Emigrant Lake, and Bigelow Lake at the head waters of tributaries of Tuolumne River in Tuolumne County for the purpose of increasing the summer flow at the headwaters of these streams for the maintenance of fish life and other recreational purposes. The application of J. L. Blossom and F. M. Lamb, proposing to appropriate from North Canal, a branch of the Middle Branch of the San Joaquin River in San Joaquin County, for the irrigation of 1200 acres at an estimated cost of \$14,000 was approved as was also an application by O. C. Cutts proposing an appropriation from San Joaquin River in San Joaquin County for the irrigation of 79 acres at an estimated cost of \$10,000.

In response to the request for progress reports forwarded to permittees and licensees a total of 851 reports were received during the month.

ADJUDICATIONS

Shasta River (Siskiyou County). Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties). Case pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). The North Cow Creek case came up for hearing in the Superior Court of Shasta County on October 26, 1931. The matters at issue were settled by stipulation and entry of the Court's decree is now pending.

Oak Run Creek (Shasta County). Case pending in the Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County). The Clover Creek case has been set for hearing January 18, 1932, in the Superior Court of Shasta County.

Butte Creek (Siskiyou County). Case pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Davis Creek (Modoc County). A tentative decree has been circulated among counsel and is now under consideration by the Superior Court.

Mill Creek (Modoc County). The Division's report as referee, containing a proposed decree, was filed with the Superior Court of Modoc County on November 17, 1931.

Deep Creek (Modoc County). The Division's report covering the distribution of the waters of Deep Creek, in accordance with the trial schedule of allotments adopted for the 1931 season, is in the course of preparation.

Franklin Creek (Modoc County). The Division's report on the distribution of the water of Franklin Creek for the 1931 season is being prepared.

New Pine Creek (Modoc County). The report on the water supply and use of water on New Pine Creek, covering the field investigation conducted on that stream during the 1931 season, has been commenced.

Eagle Creek (Modoc County). The report on the water supply and use of water on Eagle Creek is being prepared.

Pit River (Modoc and Lassen Counties). The reports on the supervision of diversions from Pit River

Sacramento Delta Salinity Recedes

(Continued from preceding page)

in South Fork Valley, Hot Springs Valley and Big Valley for the 1931 season are being prepared.

Little Shasta River and Lower Shasta River (Siskiyou County). Reports covering water master service on these streams during the 1931 season have been partially completed.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

The regular field work comprising measurements of all diversions, stream flow and return water throughout the Sacramento-San Joaquin territory, was practically completed at the first of November and the office work in preparation of the 1931 report is now in progress.

The special field investigation to determine the extent of damage both in the up-river territory and throughout the Delta due to the 1931 water shortage and salinity, is still in progress. The obtaining of production and yield data required to complete the investigation and the necessity for contacting the large number of landowners throughout the Delta have prolonged this work.

On November 1 the flow of the Sacramento River at Sacramento had increased to 6900 second-feet and the San Joaquin River near Vernalis was flowing 600 second-feet, making a total discharge of 7500 second-feet to the Delta.

The salinity has been slowly receding in the lower Sacramento River Delta but has remained almost at a standstill in the middle San Joaquin Delta. During the past month the recession in salinity has permitted the discontinuance of sampling at Howard Ferry, Sutter Slough, Little Holland Ferry, and Tyler Island Ferry in the Sacramento Delta and at Durham Ferry Bridge, Brandt Bridge and Whitehall in the upper San Joaquin Delta. At present, sampling is being conducted at forty-seven channel stations and six interior drainage stations. The accompanying table shows the comparison between the salinity at the middle of October and November of this year and at the middle of November, 1924.

SALINITY—SACRAMENTO-SAN JOAQUIN DELTA

Station	Parts of Chlorine per 100,000			
	10/14/31	11/14/31	11/14/24	
O and A Ferry-----	1140	815	166	
Collinsville-----	830	525	66	
Three Mile Slough Bridge-----	375	246	16	
Rio Vista Bridge-----	292	128	5	
Isleton Bridge-----	177	4	4	
Antioch-----	785	535	70	
Webb Pump-----	400	185	88	
Central Landing-----	99	73	16	
Middle River Post Office-----	229	198	114	
Rindge Pump-----	155	84	32	

CALIFORNIA COOPERATIVE SNOW SURVEYS

During the past month, all field work in contacting the various cooperating agencies, stocking shelter

cabins, distribution of equipment and forms, and layout of new snow survey courses in preparation for the 1932 Spring surveys has been completed.

A trip was made to Mono and Owens rivers basins to check over, re-mark and prepare sketches for permanent record, all snow courses surveyed in cooperation with Southern Sierras Power Company.

In the Yuba and Feather basins a trip was made to complete the stocking of shelter cabins and the Webber Lake and Webber Peak courses were brushed out, re-marked, and sketched.

Contact was made with the personnel of the Nevada cooperative survey to complete the arrangements for the Nevada-California surveys.

A reconnaissance was made in the American River Basin and new snow survey courses were established in the Silver Creek drainage at Icehouse and on the Silver Creek-Rubicon divide at Loon Lake, Gerle, Orelli's and Long Meadow. Arrangements were completed for the initial survey of these courses in 1932.

WATER RESOURCES

Ventura Investigation. The principal feature of this work during the month has been the drilling of dam sites. Drilling has been completed on the Devil and French Flat reservoir sites and work is now in progress on the Blue Point site.

Salinas Valley Investigation. A large amount of preliminary data have been gathered on water levels, locations of wells, reservoir sites and methods best adapted to prosecuting the work.

Pit River Investigation (Modoc and Lassen counties). Work on the report covering the three years investigation, October 1, 1928, to October 1, 1931, was continued throughout the month. Compilation of the stream flow and diversion records collected during the 1930-1931 season has been completed.

Napa Valley Investigation. This investigation continued throughout the month in a routine way with the reading of typical wells throughout the valley and the measurement of stream flow.

Santa Clara Valley Investigation. A resurvey of the ground water level throughout Santa Clara Valley was made on November 5, 6 and 7, which indicated a recovery of 0.8 foot on the average since September 17. There was, however, a considerable variation in different wells, the maximum recovery recorded in any instance being 40.3 feet and the maximum recession 15.4 feet.

STATE WATER PLAN

The members of the California Water Resources Commission have been actively engaged during the past month in a study of the State-wide plan for conserving California's water resources, and an orderly method for their distribution and utilization.

The Commission met at the State Building, Civic Center, San Francisco, on October 23 and arranged a series of public meetings. These meetings were held jointly with the California Joint Legislative Water Committee in the U. S. Grant Hotel, San Diego, November 2; Mission Inn at Riverside, November 3; and in the Railroad Commission Courtroom, Los

Water Meetings in South Bring Out Large Attendance

(Continued from preceding page)

Angeles, on November 4 and 5. In addition to these meetings, on November 3 members of the California Water Resources Commission and the Joint Legislative Water Committee were guests of the San Gabriel Associated Chambers of Commerce at a dinner given at the Elks Club, Monrovia, and at a dinner as guests of the Water Committee of the California State Chamber of Commerce held at the Hotel Alexandria on November 5.

These meetings were programmed by the two bodies in order that they might hear from the citizens of the southern part of the State regarding their local problems of water shortage and receive recommendations as to methods by which the water resources of this area may be conserved and utilized. Evidence that the critical nature of California's water problem is being widely recognized and that the solution must come from a State-wide program of water conservation was shown by the public interest and attendance at these meetings held in southern California by the Governor's Water Commission and the Joint Legislative Water Committee on November 2, 3, 4 and 5.

SAN DIEGO SUPPLY

At San Diego, data were submitted on the flood control and domestic water supply problems of San Diego and the surrounding area.

Representatives of Fallbrook irrigation district and La Mesa irrigation district, both adjacent to San Diego, presented the difficulties encountered in their efforts to secure additional water supplies.

At Riverside on November 3, representatives appeared in behalf of water conservation for Orange, San Bernardino, Riverside and Imperial counties.

Problems of the Mojave River Basin were presented by the San Jacinto Flood Control Association. The problems of the Santa Ana River Basin were presented by Mr. Francis Cattle, president of the Water Conservation Association of San Bernardino, Riverside and Orange counties, while Mr. Chas. Childers, attorney for the Imperial irrigation district, explained the problems confronting Imperial County and the Imperial irrigation district.

LOS ANGELES MEETINGS

On November 4 and 5, the last of the series of joint meetings was held in Los Angeles. At these hearings water problems in the region of Ventura, Santa Barbara, San Luis Obispo, Mono County, Inyo County and Los Angeles County were heard.

The Honorary Advisory Committees recently appointed by Governor Rolph for a study of the State-wide plan have given excellent cooperation and made rapid progress. Conferences were held in the State Engineer's office on November 16 and 17 with the subcommittee of the Honorary Engineering Advisory Committee, consisting of Messrs. J. B. Lippincott, B. A. Etcheverry and R. V. Meikle. Engineering data and recommendations included in the report to the Legislature of 1931 were reviewed and a report will be rendered by this subcommittee to the Honorary Advisory Committee of Engineers.

Studies are being continued on a tentative draft of a proposed constitutional amendment under which the State Water Plan may proceed to realization.

Governor Wields a Shovel at Ground- Breaking Ceremony

GOVERNOR James Rolph, Jr., stepped down from the speakers' platform to turn the first shovelful of earth in the official ground-breaking ceremony for an addition to the State Printing Plant on O Street, Sacramento.

He peeled off his coat, seized a shovel and dug in. Before he could lift the shovelful, an official of a local labor union stepped from the crowd and stopped him. He asked the Governor if he had a union card. The Governor, not a bit nonplussed, pulled out a wallet, extracted a union card and showed it. He added with some pride that he could show cards of a number of other unions and that every garment he wore bore a union label.

Governor Rolph then proceeded to load a wheelbarrowful of earth, haul it away and dump it.

The ground-breaking ceremony on December 23d was attended by a crowd of citizens, print shop employees and city, county, State and Federal officials including Mayor Bidwell of Sacramento; City Manager James S. Dean; Postmaster Harold J. McCurry; Director of Agriculture Dudley Moulton; Director of Public Works Walter E. Garrison; Deputy Director James I. Herz; Chief E. Raymond Cato of the California Motor Patrol; State Architect George B. McDougall and J. M. Welsh, superintendent of the State Printing Plant, representing Harry Hammond, State Printer.

Colonel Garrison acted as chairman and introduced the Governor and the other speakers. In his speech Governor Rolph said it was an inspiration to be present at the commencement of construction of a building that would give employment to hundreds of men and women at a time when the hearts of men were sorely tried and public officials were being tested as they never had been before in trying to perform the duties placed upon their shoulders in the State capital.

He was hopeful that the occasion also marked the turning of the tide toward better times when men would again be prosperous and happy in their work.

The new building will be a three-story steel and concrete structure costing \$120,000.

Judge: You *know* you were traveling less than 25?
Defendant: I *know* I was—I didn't hear a word from the back seat.

How a Good Barber Became a Better Blue-print Maker

FROM head barber to head blue-print maker for the State of California is some leap vocationally speaking but it was successfully made by Frank J. Butler presiding genius of the blue-print room on the fourth floor of the Department of Public Works headquarters. His story is a romance of politics.

Butler started in the barbering business in Sacramento in 1876, opening the old Ale Vaults Barber Shop near the southeast corner of Third and J streets. Later he ran the Golden Eagle shop and subsequently the Capital Hotel shop. He was a good barber and a good "mixer." His shops became a rendezvous for the social and political celebrities of the day. Especially during legislative sessions were they the meeting-place for men whose names were as familiar as household words in the Golden State. Frank knew them all and called most of them by their first names.

CALLS HIM HIRAM

Among them was Hiram Johnson. Frank had given him his first hair cut as a boy and his first shave. When Johnson became Governor he insisted that Frank give up barbering and become his office messenger at the Capitol.

"I told Hiram I was doing very well and didn't think I'd like the job," says Frank. "'Well, you come on over. I know you'll like it, and I want you,' he said. Well, I didn't like the office work and told Hiram I wanted to quit. 'Go up and try the blue-print room. I think you'll like it up there,' replied Hiram.

"I didn't know anything about blue-prints but I went down to a big firm in San Francisco and learned all about how to make them. Then I came back and told Hiram if he'd fix me up with a modern continuous press I'd take the job and save money for the State."

HIE MADE GOOD

That was twenty-one years ago. Butler took the job, got the press and made good both in word and deed. It was costing the State twenty cents a sheet and he reduced the cost to eight cents. Work piled up and he got a second press and an assistant. Now both can't keep up with the growing demand.

BLUE PRINTER but he's not blue. Frank J. Butler, chief of the blue-print room in the Public Works Department, is as cheery and genial as he was twenty-one years ago when his friend Hiram Johnson, then Governor, induced him to close his barber shop and accept service with the State.

WATER PERMITS ISSUED

(Continued from page 32)

SIERRA COUNTY—Permit 3817, Application 7601. John J. Connell, c/o R. F. Taylor, Downville, Sierra Co., November 24, 1931, for 0.10 c.f.s. from Swansea Tunnel, tributary to Swansea Ravine, thence to Middle Fork of Yuba River in section 3, T. 18 N., R. 10 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$200.

MENDOCINO COUNTY—Permit 3818, Application 7617. Miss Frieda Larnett, Gualala, Mendocino Co., November 24, 1931, for 237 gallons per day from Sea Side Stream, tributary to Pacific Ocean in section 21, T. 11 N., R. 15 W., M. D. B. and M., for domestic purposes. Estimated cost \$500.

TUOLUMNE COUNTY—Permit 3819, Application 7623. State of California, Division of Highways, Sierra No. 10, Sacramento, November 24, 1931, for 0.005 c.f.s. from Stoddard Spring. Estimated cost \$200.

INYO COUNTY—Permit 3820, Application 7614. John Amick, Independence, Inyo Co., November 28, 1931, for 0.50 c.f.s. from Barrel Spring tributary to Mazourka Canyon, thence to Owens River in section 29, T. 12 S., R. 36 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$800.

INYO COUNTY—Permit 3821, Application 6428. C. H. Darenso and Edward Schober, 514 Commercial Exchange Bldg., Los Angeles, November 30, 1931, for 0.50 c.f.s. from unnamed spring, Grape Vine Spring, tributary to no stream in sections 10 and 15, T. 21 S., R. 39 E., M. D. B. and M., for domestic and irrigation of 40 acres. Estimated cost \$5,000 to \$8,000.

District Six Reports Progress of Varied Road Improvements

By E. E. WALLACE, District Engineer

THE construction of three bridges and an overhead grade separation are among the important improvements now under way in District Six which embraces six counties. The projects advanced in the various counties are as follows:

KERN COUNTY—Improvement between Grapevine and Bakersfield, a distance of 30 miles, consisting of widening roadbed to 36 feet and placing 6-foot cut-back shoulders on each side of the 20-foot pavement has been completed.

PAVEMENT WIDENED

TULARE COUNTY—Placing of $3\frac{1}{2}$ miles of cut-back rock borders from the west line of Tulare County on Route No. 10 about nine miles east of Hanford has been completed and is considered a desired improvement. This resulted in widening the old 15-foot pavement to a width of 21 feet.

Between Tipton Crossing and Tulare, a distance of 7.6 miles, work is progressing on new location east of the Southern Pacific Railroad, which is designed to eliminate two grade crossings.

Bridges and concrete structures are progressing very rapidly and grading is in progress.

Contract between Goshen and Kingsburg, involving widening of roadbed to 36 feet, and resurfacing to 20 feet, has been practically completed with the exception of the shoulder oiling. This improvement has greatly increased safety to traffic due to the widened roadbed and pavement and the elimination of the dangerous shoulder conditions.

SAFER HIGHWAY

The southerly half of the project passes through alkali land and the soil is extremely dangerous during wet weather. As the new improvement involved a large amount of embankment, it was possible to import a better grade of soil for the shoulders and by oiling the shoulders 8 feet in width beyond the pavement edge, there is practically 36 feet of roadway which is in good condition for travel, even in wet weather.

FRESNO COUNTY—Work is progressing with satisfactory speed on Kings River Road, even in the face of adverse weather conditions. Over 5 feet of snow has fallen in the higher elevations, although there is considerably less at the point where construction operations are in progress. A new 1½-yard Diesel shovel arrived at Camp No. 19 on December 10, 1931, and will soon be in operation. Very low temperatures have prevailed, the camp having reported 8 degrees below zero on several occasions.

COMPLETING BRIDGE

MADERA COUNTY—New bridge over the Fresno River north of Madera is practically complete and is understood will be ready for acceptance in the very near future.

Bids were opened for completing the line change and approaches on December 9, 1931.

MERCED COUNTY—Work of constructing an

In Memoriam

W. B. MATHEWS, member of the California Water Resources Commission, passed away December 9, 1931.

Mr. Mathews was appointed by Governor James Rolph, Jr., on August 24, 1931, to this Commission, known as the Governor's Citizens Water Commission. The State's loss occasioned by the passing of this eminent citizen has been fittingly expressed by the Governor.

"In the death of Mr. W. B. Mathews, the Nation and the State have suffered an irreparable loss. No man has contributed more to the solution of the tremendous water problems of California and indeed of the entire Southwest than Mr. Mathews.

"As general counsel of the Bureau of Water and Power of the City of Los Angeles he bore a vitally important part, in the face of apparently unsurmountable obstacles, in obtaining for that city its present water supply.

"When it became evident that this supply was inadequate for future needs, he was a leader in the organization and successful development to date of the great Metropolitan Water District, formed to bring into Southern California from the Colorado River a supply of water adequate for its needs for all time.

"With all of these tremendous problems of more or less local interest he still found time to contribute of his great ability and energy to the solution of the entire Colorado River development and the project for State-wide development of the water resources of California.

"He served as a Member of the Colorado River Commission, the Federal-State Water Commission for California, and at the time of his death was actively engaged as a member of the present State Water Resources Commission. In February last he was a member of the Commission sent by me to Washington to present the general water problem of California to the Federal Government.

"To all of these great services he brought splendid ability, untiring energy, and a high ideal of civic duty and responsibility. It will be difficult, if not impossible to replace him in the work which remains to be done, but he leaves behind accomplishments priceless to his community and the State."

overhead grade separation 2 miles east of Merced on the Yosemite Lateral, Route No. 18, is nearing completion and will probably be open to traffic on January 1, 1932.

Work of constructing three bridges at the San Joaquin Overflow and High Line Canal, east and west of Los Banos is now in progress under supervision of the Bridge Department.

MARIPOSA COUNTY—Good progress is being made in grading new location between Orange Hill School and Pain Flat.
